CRITO: I have no objection, Socrates, if you really think well of the plan.
But first explain to me what the wisdom of the two men is, to give me
some idea of what we are going to learn.

SOCRATES: You shall hear at once, since I can't pretend that I paid no
attention to the pair. As a matter of fact, I did just that and remember
e what was said and will try to recount the whole thing from the beginning.
As good luck would have it, I was sitting by myself in the undressing-
room just where you saw me and was already thinking of leaving. But
when I got up, my customary divine sign put in an appearance. So I
273 sat down again, and in a moment the two of them, Euthydemus and
Dionysodorus, came in, and some others with them, disciples of theirs,
who seemed to me pretty numerous. When the pair came in, they walked
around the cloister, and they had not yet made more than two or three
turns when in came Clinias, who, as you rightly say, has grown a lot.
Following him were a good many others, lovers of his, and among them
Ctesippus, a young man from Paeania—he's a well-bred fellow except for
b a certain youthful brashness. From the doorway Clinias caught sight of

me sitting alone and came straight up and sat down on my right, just as
you describe it. When Dionysodorus and Euthydemus saw him, at first
they stood talking to each other and glancing at us every so often (I was
keeping a good eye on them) but after a while they came over and one
of them, Euthydemus, sat down next to the boy, and his brother next to
me on my left, and the rest found places where they could. Since I hadn't c
seen the two for quite a time, I gave them a good welcome, and then I
said to Clinias, You know, Clinias, that the wisdom of these two men,
Euthydemus and Dionysodorus, has to do with important matters and
not mere trivia. They know all about war, that is, the things a man ought
to know who means to be a good general, such as the formations of troops
and their command and how to fight in armor; and besides this, they can
make a man capable of looking out for himself in court if anyone should
do him an injury.

They obviously thought little of me for saying this, because they both d
laughed and glanced at each other, and Euthydemus said, We are not any
longer in earnest about these things, Socrates—we treat them as diversions.

I was astonished and said, Your serious occupation must certainly be
splendid if you have important things like these for your diversions! For
heaven's sake, tell me what this splendid occupation is!

Virtue, Socrates, is what it is, he said, and we think we can teach it
better than anyone else and more quickly.

Good heavens, I said, what a claim you make! Wherever did you find e
this godsend? I was still thinking of you, as I just said, as men particularly
skilled in fighting in armor, and so I spoke of you in this way. When you
visited us before, I remember that this was what you claimed to be. But
now if you really have this other wisdom, be propitious—you see, I am
addressing you exactly as though you were gods because I want you
to forgive me for what I said earlier. But make sure, Euthydemus and 274
Dionysodorus, that you are telling the truth—the magnitude of your claim
certainly gives me some cause for disbelief.

Rest assured, Socrates, that things are as we say.

Then I count you much happier in your possession of this wisdom than
the Great King in that of his empire! But tell me just this: do you plan to
give a demonstration of this wisdom, or what do you mean to do?

We are here for that very purpose, Socrates: to give a demonstration, b
and to teach, if anyone wants to learn.

I give you my word that everyone who does not have this wisdom will
wish to have it: first myself, then Clinias here, and, in addition to us, this
fellow Ctesippus and these others, I said, pointing to the lovers of Clinias
who were already grouped around us. This had come about because Ctesip-
pus had taken a seat a long way from Clinias, and when Euthydemus
leaned forward in talking to me, he apparently obscured Ctesippus' view c
of Clinias, who was sitting between us. So Ctesippus, who wanted to look
at his darling, as well as being interested in the discussion, sprang up first
and stationed himself right in front of us. When the others saw him doing

this, they gathered around too, not only Clinias' lovers but the followers
d of Euthydemus and Dionysodorus as well. These were the ones I pointed to
when I told Euthydemus that everyone was ready to learn. Then Ctesippus
agreed very eagerly and so did all the rest, and all together they besought
the pair to demonstrate the power of their wisdom.

So I said, Euthydemus and Dionysodorus, do your absolute best to
gratify these people and give a demonstration—and do it for my sake too.
To give a complete one would obviously be a lengthy business; but tell
e me just this: are you able to make only that man good who is already
persuaded that he ought to take lessons from you, or can you also make
the man good who is not yet persuaded on this point, either because he
believes that this thing, virtue, cannot be taught at all, or because he thinks
that you two are not its teachers? Come tell me, does the task of persuading
a man in this frame of mind both that virtue can be taught, and that you
are the ones from whom he could learn it best, belong to this same art or
to some other one?

It belongs to this same art, Socrates, said Dionysodorus.

275 Then, Dionysodorus, I said, you and your brother are the men of the
present day best able to exhort a man to philosophy and the practice
of virtue?

This is exactly what we think, Socrates.

Then put off the rest of your display to another time and give us a
demonstration of this one thing: persuade this young man here that he
ought to love wisdom and have a care for virtue, and you will oblige both
me and all the present company. The boy's situation is this: both I and all
these people want him to become as good as possible. He is the son of
b Axiochus (son of the old Alcibiades) and is cousin to the present Alcibi-
ades—his name is Clinias. He is young, and we are anxious about him,
as one naturally is about a boy of his age, for fear that somebody might
get in ahead of us and turn his mind to some other interest and ruin him.
So you two have arrived at the best possible moment. If you have no
objection, make trial of the boy and converse with him in our presence.

When I had spoken, in almost these exact words, Euthydemus answered,
c with a mixture of bravery and confidence. It makes no difference to us,
Socrates, so long as the young man is willing to answer.

As a matter of fact, he is quite used to that, I said, since these people here are always coming to ask him all sorts of questions and to converse with him. So he is pretty brave at answering.

As to what happened next, Crito, how shall I give you an adequate
description of it? It is no small task to be able to recall such wisdom in
d detail, it was so great. So I ought to begin my account as the poets do, by
invoking the Muses and Memory. Well, Euthydemus, as I remember, began
something like this: Clinias, which are the men who learn, the wise or
the ignorant?

Being confronted with this weighty question, the boy blushed and looked at me in doubt. And I, seeing that he was troubled, said, Cheer up, Clinias,

and choose bravely whichever seems to you to be the right answer—he e
may be doing you a very great service.

Just at this moment Dionysodorus leaned a little toward me and, smiling all over his face, whispered in my ear and said, I may tell you beforehand, Socrates, that whichever way the boy answers he will be refuted.

While he was saying this, Clinias gave his answer, so that I had no 276
chance to advise the boy to be careful; and he answered that the wise were the learners.

Then Euthydemus said, Are there some whom you call teachers, or not?

He agreed that there were.

And the teachers are teachers of those who learn, I suppose, in the same way that the music master and the writing master were teachers of you and the other boys when you were pupils?

He agreed.

And when you were learning, you did not yet know the things you were learning, did you?

No, he said.

And were you wise when you did not know these things? b

By no means, he said.

Then if not wise, ignorant?

Very much so.

Then in the process of learning what you did not know, you learned while you were ignorant?

The boy nodded.

Then it is the ignorant who learn, Clinias, and not the wise, as you suppose.

When he said this, the followers of Dionysodorus and Euthydemus c
broke into applause and laughter, just like a chorus at a sign from their director. And before the boy could well recover his breath, Dionysodorus took up the argument and said, Well then, Clinias, when the writing master gave you dictation, which of the boys learned the piece, the wise or the ignorant?

The wise, said Clinias.

Then it is the wise who learn, and not the ignorant, and you gave Euthydemus a wrong answer just now.

Whereupon the supporters of the pair laughed and cheered very loudly d
indeed, in admiration of their cleverness. We, on the other hand, were panic-struck and kept quiet. Euthydemus, observing our distress, and in order to confound us further, would not let the boy go but went on questioning him and, like a skillful dancer, gave a double twist to his questions on the same point, saying, Do those who learn learn the things they know or the things they do not know?

And Dionysodorus again whispered to me in a low voice, This is another, e
Socrates, just like the first.

Mercy on us, I said, the first question certainly seemed good enough!

All our questions are of this same inescapable sort, Socrates, he said.

And this, no doubt, is the reason why your pupils admire you so much, I said.

Just then Clinias answered Euthydemus that the learners learned what they do not know, whereupon Euthydemus put him through the same course of questions as before.

277 What then, he said, don't you know your letters?

Yes, he said.

Then you know them all?

He agreed.

Whenever anyone dictates anything, doesn't he dictate letters?

He agreed.

b Then doesn't he dictate something you know, if you really know them all?

He agreed to this too.

Well then, he said, you are not the one who learns what someone dictates, are you, but the one who doesn't know his letters is the one who learns?

No, he said, I am the one who learns.

Then you learn what you know, he said, if you in fact do know all your letters.

He agreed.

Then your answer was wrong, he said.

Euthydemus had barely said this when Dionysodorus picked up the argument as though it were a ball and aimed it at the boy again, saying, Euthydemus is completely deceiving you, Clinias. Tell me, isn't learning the acquisition of the knowledge of what one learns?

Clinias agreed.

And what about knowing? he said. Is it anything except having knowledge already?

c He agreed.

Then not knowing is not yet having knowledge?

He agreed with him.

And are those who acquire something those who have it already or those who do not?

Those who do not.

And you have admitted, haven't you, that those who do not know belong to the group of those who do not have something?

He nodded.

Then the learners belong to those who acquire and not to those who have?

He agreed.

Then it is those who do not know who learn, Clinias, and not those who know.

d Euthydemus was hastening to throw the young man for the third fall when I, seeing that he was going down and wanting to give him a chance to breathe so that he should not turn coward and disgrace us, encouraged him, saying, Don't be surprised, Clinias, if these arguments seem strange

to you, since perhaps you don't take in what the visitors are doing with
you. They are doing exactly what people do in the Corybantic mysteries
when they enthrone a person they intend to initiate. If you have been
initiated you know that there is dancing and sport on these occasions; and
now these two are doing nothing except dancing around you and making e
sportive leaps with a view to initiating you presently. So you must now
imagine yourself to be hearing the first part of the sophistic mysteries. In
the first place, as Prodicus says, you must learn about the correct use of
words; and our two visitors are pointing out this very thing, that you did
not realize that people use the word "learn" not only in the situation in
which a person who has no knowledge of a thing in the beginning acquires 278
it later, but also when he who has this knowledge already uses it to inspect
the same thing, whether this is something spoken or something done. (As
a matter of fact, people call the latter "understand" rather than "learn,"
but they do sometimes call it "learn" as well.) Now this, as they are pointing
out, had escaped your notice—that the same word is applied to opposite
sorts of men, to both the man who knows and the man who does not.
There was something similar to this in the second question, when they
asked you whether people learn what they know or what they do not b
know. These things are the frivolous part of study (which is why I also
tell you that the men are jesting); and I call these things "frivolity" because
even if a man were to learn many or even all such things, he would be
none the wiser as to how matters stand but would only be able to make
fun of people, tripping them up and overturning them by means of the
distinctions in words, just like the people who pull the chair out from
under a man who is going to sit down and then laugh gleefully when
they see him sprawling on his back. So you must think of their performance c
as having been mere play. But after this they will doubtless show you
serious things, if anyone will, and I shall give them a lead to make sure
they hand over what they promised me. They said they would give a
demonstration of hortatory skill, but now it seems to me that they must
have thought it necessary to make fun of you before beginning. So, Euthy-
demus and Dionysodorus, put an end to this joking; I think we have had d
enough of it. The next thing to do is to give an exhibition of persuading
the young man that he ought to devote himself to wisdom and virtue. But
first I shall give you two a demonstration of the way in which I conceive
the undertaking and of the sort of thing I want to hear. And if I seem to
you to be doing this in an unprofessional and ridiculous way, don't laugh
at me—it is out of a desire to hear your wisdom that I have the audacity
to improvise in front of you. Therefore, you and your disciples restrain e
yourselves and listen without laughing; and you, son of Axiochus, an-
swer me:

Do all men wish to do well? Or is this question one of the ridiculous ones I was afraid of just now? I suppose it is stupid even to raise such a question, since there could hardly be a man who would not wish to do well.

No, there is no such person, said Clinias.

Well then, I said, the next question is, since we wish to do well, how are we to do so? Would it be through having many good things? Or is this question still more simple-minded than the other, since this must obviously be the case too?

He agreed.

279 Well then, what kinds of existing things are good for us? Or perhaps this isn't a difficult question and we don't need an important personage to supply the answer because everybody would tell us that to be rich is a good—isn't that so?

Very much so, he said.

b And so with being healthy, and handsome, and having a sufficient supply of the other things the body needs?

He agreed.

And, again, it is clear that noble birth, and power, and honor in one's country are goods.

He agreed.

Then which goods do we have left? I said. What about being self-controlled and just and brave? For heaven's sake tell me, Clinias, whether you think we will be putting these in the right place if we class them as goods or if we refuse to do so? Perhaps someone might quarrel with us on this point—how does it seem to you?

They are goods, said Clinias.

c Very well, said I. And where in the company shall we station wisdom? Among the goods, or what shall we do with it?

Among the goods.

Now be sure we do not leave out any goods worth mentioning.

I don't think we are leaving out any, said Clinias.

But I remembered one and said, Good heavens, Clinias, we are in danger of leaving out the greatest good of all!

Which one is that? He said.

Good fortune, Clinias, which everybody, even quite worthless people, says is the greatest of the goods.

You are right, he said.

d And I reconsidered a second time and said, son of Axiochus, you and I have nearly made ourselves ridiculous in front of our visitors.

How so? he said.

Because in putting good fortune in our previous list we are now saying the same thing all over again.

What do you mean?

Surely it is ridiculous, when a thing has already been brought up, to bring it up again and say the same things twice.

What do you mean by that?

Wisdom is surely good fortune, I said—this is something even a child would know.

He was amazed—he is still so young and simple-minded.

I noticed his surprise and said, You know, don't you, Clinias, that flute e
players have the best luck when it comes to success in flute music?

He agreed.

And the writing masters at reading and writing?

Certainly.

What about the perils of the sea—surely you don't think that, as a general rule, any pilots have better luck than the wise ones?

Certainly not.

And again, if you were on a campaign, with which general would you 280
prefer to share both the danger and the luck, a wise one or an ignorant one?

With a wise one.

And if you were sick, would you rather take a chance with a wise doctor or with an ignorant one?

With a wise one.

Then it is your opinion, I said, that it is luckier to do things in the company of wise men than ignorant ones?

He agreed.

So wisdom makes men fortunate in every case, since I don't suppose she would ever make any sort of mistake but must necessarily do right and be lucky—otherwise she would no longer be wisdom.

We finally agreed (I don't know quite how) that, in sum, the situation b
was this: if a man had wisdom, he had no need of any good fortune in
addition. When we had settled this point, I went back and asked him how
our former statements might be affected. We decided, I said, that if we
had many good things, we should be happy and do well.

He agreed.

And would the possession of good things make us happy if they were c
of no advantage to us, or if they were of some?

If they were of some advantage, he said.

And would they be advantageous to us if we simply had them and did not use them? For instance, if we had a great deal of food but didn't eat any, or plenty to drink but didn't drink any, would we derive any advantage from these things?

Certainly not, he said.

Well then, if every workman had all the materials necessary for his
particular job but never used them, would he do well by reason of possess-
ing all the things a workman requires? For instance, if a carpenter were
provided with all his tools and plenty of wood but never did any carpentry,
could he be said to benefit from their possession? d

Not at all, he said.

Well then, if a man had money and all the good things we were mentioning just now but made no use of them, would he be happy as a result of having these good things?

Clearly not, Socrates.

So it seems, I said, that the man who means to be happy must not only have such goods but must use them too, or else there is no advantage in having them.

You are right.

e Then are these two things, the possession of good things and the use
of them, enough to make a man happy, Clinias?

They seem so to me, at any rate.

If, I said, he uses them rightly, or if he does not?

If he uses them rightly.

Well spoken, I said. Now I suppose there is more harm done if someone
uses a thing wrongly than if he lets it alone—in the first instance there is
281 evil, but in the second neither evil nor good. Or isn't this what we maintain?

He agreed that it was.

Then what comes next? In working and using wood there is surely nothing else that brings about right use except the knowledge of carpentry, is there?

Certainly not.

And, again, I suppose that in making utensils, it is knowledge that produces the right method.

He agreed.

And also, I said, with regard to using the goods we mentioned first—
b wealth and health and beauty—was it knowledge that ruled and directed
our conduct in relation to the right use of all such things as these, or some
other thing?

It was knowledge, he said.

Then knowledge seems to provide men not only with good fortune but also with well-doing, in every case of possession or action.

He agreed.

Then in heaven's name, I said, is there any advantage in other possessions
without good sense and wisdom? Would a man with no sense profit more
if he possessed and did much or if he possessed and did little?[3] Look at
c it this way: if he did less, would he not make fewer mistakes; and if he
made fewer mistakes, would he not do less badly, and if he did less badly,
would he not be less miserable?

Yes, indeed, he said.

And in which case would one do less, if one were poor or if one were rich?

Poor, he said.

And if one were weak or strong?

Weak.

If one were held in honor or in dishonor?

In dishonor.

And if one were brave and self-controlled would one do less, or if one were a coward?

A coward.

3. Omitting *noun echōn* at b8.

Then the same would be true if one were lazy rather than industrious?
He agreed.
And slow rather than quick, and dull of sight and hearing rather than d
keen?
We agreed with each other on all points of this sort.
So, to sum up, Clinias, I said, it seems likely that with respect to all the
things we called good in the beginning, the correct account is not that in
themselves they are good by nature, but rather as follows: if ignorance
controls them, they are greater evils than their opposites, to the extent that
they are more capable of complying with a bad master; but if good sense
and wisdom are in control, they are greater goods. In themselves, however, e
neither sort is of any value.
It seems, he said, to be just as you say.
Then what is the result of our conversation? Isn't it that, of the other
things, no one of them is either good or bad, but of these two, wisdom is
good and ignorance bad?
He agreed.
Then let us consider what follows: since we all wish to be happy, and 282
since we appear to become so by using things and using them rightly, and
since knowledge was the source of rightness and good fortune, it seems
to be necessary that every man should prepare himself by every means
to become as wise as possible—or isn't this the case?
Yes, it is, he said.
And for a man who thinks he ought to get this from his father much
more than money, and not only from his father but also from his guardians b
and friends (especially those of his city and elsewhere who claim to be
his lovers), and who begs and beseeches them to give him some wisdom,
there is nothing shameful, Clinias, nor disgraceful if, for the sake of this,
he should become the servant or the slave of a lover or of any man, being
willing to perform any honorable service in his desire to become wise. Or
don't you think so? I said.
You seem to me to be absolutely right, said he.
But only if wisdom can be taught, Clinias, I said, and does not come to c
men of its own accord. This point still remains for us to investigate and
is not yet settled between you and me.
As far as I am concerned, Socrates, he said, I think it can be taught.
I was pleased and said, I like the way you talk, my fine fellow, and you
have done me a good turn by relieving me of a long investigation of this
very point, whether or not wisdom can be taught. Now then, since you
believe both that it can be taught and that it is the only existing thing
which makes a man happy and fortunate, surely you would agree that it d
is necessary to love wisdom and you mean to do this yourself.
This is just what I mean to do, Socrates, as well as ever I can.
When I heard this I was delighted and said, There, Dionysodorus and
Euthydemus, is my example of what I want a hortatory argument to
be, though amateurish, perhaps, and expressed at length and with some

difficulty. Now let either of you who wishes give us a demonstration of the same thing in a professional manner. Or if you do not wish to do that,
e then start where I left off and show the boy what follows next: whether he ought to acquire every sort of knowledge, or whether there is one sort that he ought to get in order to be a happy man and a good one, and what it is. As I said in the beginning, it is of great importance to us that this young man should become wise and good.

283 This is what I said, Crito, and I paid particular attention to what should come next and watched to see just how they would pick up the argument and where they would start persuading the young man to practice wisdom and virtue. The elder of the two, Dionysodorus, took up the argument first and we all gazed at him in expectation of hearing some wonderful words immediately. And this is just what happened, since the man began
b an argument which was certainly wonderful, in a way, Crito, and worth your while to hear, since it was an incitement to virtue.

Tell me, Socrates, he said, and all you others who say you want this young man to become wise—are you saying this as a joke or do you want it truly and in earnest?

This gave me the idea that they must have thought we were joking earlier when we asked them to talk to the boy, and that this was why they
c made a joke of it and failed to take it seriously. When this idea occurred to me, I insisted all the more that we were in dead earnest.

And Dionysodorus said, Well, take care, Socrates, that you don't find yourself denying these words.

I have given thought to the matter, I said, and I shall never come to deny them.

Well then, he said, you say you want him to become wise?

Very much so.

And at the present moment, he said, is Clinias wise or not?

He says he is not yet, at least—he is a modest person, I said.

d But you people wish him to become wise, he said, and not to be ignorant?

We agreed.

Therefore, you wish him to become what he is not, and no longer to be what he is now?

When I heard this I was thrown into confusion, and he broke in upon me while I was in this state and said, Then since you wish him no longer to be what he is now, you apparently wish for nothing else but his death. Such friends and lovers must be worth a lot who desire above all things that their beloved should utterly perish!

e When Ctesippus heard this he became angry on his favorite's account and said, Thurian stranger, if it were not a rather rude remark, I would say "perish yourself" for taking it into your head to tell such a lie about me and the rest, which I think is a wicked thing to say—that I could wish this person to die!

Why Ctesippus, said Euthydemus, do you think it possible to tell lies?

Good heavens yes, he said, I should be raving if I didn't.

When one speaks the thing one is talking about, or when one does not speak it?

When one speaks it, he said. 284

So that if he speaks this thing, he speaks no other one of things that are except the very one he speaks?

Of course, said Ctesippus.

And the thing he speaks is one of those that are, distinct from the rest?

Certainly.

Then the person speaking that thing speaks what is, he said.

Yes.

But surely the person who speaks what is and things that are speaks the truth—so that Dionysodorus, if he speaks things that are, speaks the truth and tells no lies about you.

Yes, said Ctesippus, but a person who speaks these things, Euthydemus, b does not speak things that are.

And Euthydemus said, But the things that are not surely do not exist, do they?

No, they do not exist.

Then there is nowhere that the things that are not are?

Nowhere.

Then there is no possibility that any person whatsoever could do anything to the things that are not so as to make them be[4] when they are nowhere?

It seems unlikely to me, said Ctesippus.

Well then, when the orators speak to the people, do they do nothing?

No, they do something, he said.

Then if they do something, they also make something? c

Yes.

Speaking, then, is doing and making?

He agreed.

Then nobody speaks things that are not, since he would then be making something, and you have admitted that no one is capable of making something that is not. So according to your own statement, nobody tells lies; but if Dionysodorus really does speak, he speaks the truth and things that are.

Yes indeed, Euthydemus, said Ctesippus, but he speaks things that are only in a certain way and not as really is the case.

What do you mean, Ctesippus? said Dionysodorus. Are there some d persons who speak of things as they are?

There certainly are, he said—gentlemen and those who speak the truth.

Now then, he said, are not good things well and bad things ill?

He agreed.

And you admit that gentlemen speak of things as they are?

Yes, I do.

4. Reading *hōste kai einai* at b6.

Then good men speak ill of bad things, Ctesippus, if they do in fact speak of them as they are.

They certainly do, he said—at any rate they speak ill of bad men. If you
e take my advice you will take care not to be one of them in case the good
speak ill of *you*. For rest assured that the good speak ill of the bad.

And do they speak greatly of the great and hotly of the hot? asked Euthydemus.

Very much so, said Ctesippus, and what is more, they speak coldly of persons who argue in a frigid fashion.

You, Ctesippus, said Dionysodorus, are being abusive, very abusive indeed.

I am certainly doing no such thing, Dionysodorus, he said, since I like
you, I am merely giving you a piece of friendly advice and endeavouring
285 to persuade you never to say, so rudely and to my face, that I want my
most cherished friends to die.

Since they seemed to be getting pretty rough with each other, I started
to joke with Ctesippus and said, Ctesippus, I think we ought to accept
what the strangers tell us, if they are willing to be generous, and not to
quarrel over a word. If they really know how to destroy men so as to
make good and sensible people out of bad and stupid ones, and the two
b of them have either found out for themselves or learned from someone
else a kind of ruin or destruction by which they do away with a bad man
and render him good, if, as I say, they know how to do this—well, they
clearly do, since they specifically claimed that the art they had recently
discovered was that of making good men out of bad ones—then let us
concede them the point and permit them to destroy the boy for us and
make him wise—and do the same to the rest of us as well. And if you
c young men are afraid, let them "try it on the Carian,"[5] as they say, and I
will be the victim. Being elderly, I am ready to run the risk, and I surrender
myself to Dionysodorus here just as I might to Medea of Colchis.[6] Let him
destroy me, or if he likes, boil me, or do whatever else he wants, but he
must make me good.

And Ctesippus said, I too, Socrates, am ready to hand myself over to
the visitors; and I give them permission to skin me even more thoroughly
than they are doing now so long as my hide will in the end become not
d a wineskin (which is what happened to Marsyas),[7] but a piece of virtue.
And yet Dionysodorus here thinks I am cross with him. It's not that I'm
cross—I'm simply contradicting the things he said which I find objectionable. So, my fine Dionysodorus, don't call contradiction abuse—abuse is something quite different.

5. That is, try it on the dog or on a guinea pig.

6. Medea persuaded the daughters of Pelias to cut up their father and boil him in a cauldron, telling them that in this way they would renew his youth.

7. Marsyas, a satyr, challenged Apollo to a musical contest. Apollo, having won the contest, flayed his opponent alive. Cf. Herodotus, vii.26.

And Dionysodorus answered, Are you making your speech on the assumption that there exists such a thing as contradiction, Ctesippus?

I certainly am, he said, decidedly so. And do you think there is none, e
Dionysodorus?

Well you, at any rate, could not prove that you have ever heard one person contradicting another.

Do you really mean that? he answered. Well then, just listen to Ctesippus contradicting Dionysodorus, if you want to hear my proof.[8]

And do you undertake to back that up?

I certainly do, he said.

Well then, he went on, are there words to describe each thing that exists?

Certainly.

And do they describe it as it is or as it is not?

As it is.

Now if you remember, Ctesippus, he said, we showed a moment ago 286
that no one speaks of things as they are not, since it appeared that no one speaks what does not exist.

Well, what about it? said Ctesippus. Are you and I contradicting each other any the less?

Now would we be contradicting, he said, if we were both to speak the[9] description of the same thing? I suppose we would be saying the same things in that case.

He agreed.

But when neither of us speaks the description of the thing, would we b
be contradicting then? Or wouldn't it be the case that neither of us had the thing in mind at all?

He agreed to this too.

But when I speak the description of the thing whereas you speak another description of another thing, do we contradict then? Or is it the case that I speak it but that you speak nothing at all? And how would a person who does not speak contradict one who does?

Ctesippus fell silent at this, but I was astonished at the argument and
said, How do you mean, Dionysodorus? The fact is that I have heard this c
particular argument from many persons and at many times, and it never ceases to amaze me. The followers of Protagoras made considerable use of it, and so did some still earlier. It always seems to me to have a wonderful way of upsetting not just other arguments, but itself as well. But I think I shall learn the truth about it better from you than from anyone else. The argument amounts to claiming that there is no such thing as false speaking, doesn't it? And the person speaking must either speak the truth or else not speak?

He agreed.

8. Reading *akouōmen nun ei* at e5.

9. Accepting the addition of ⟨*ton*⟩ before *tou* at a5.

d Now would you say it was impossible to speak what is false, but possible to think it?

No, thinking it is not possible either, he said.

Then there is absolutely no such thing as false opinion, I said.

There is not, he said.

Then is there no ignorance, nor are there any ignorant men? Or isn't this just what ignorance would be, if there should be any—to speak falsely about things?

It certainly would, he said.

And yet there is no such thing, I said.

He said there was not.

Are you making this statement just for the sake of argument, Dionysodorus—to say something startling—or do you honestly believe that there is no such thing as an ignorant man?

e Your business is to refute me, he said.

Well, but is there such a thing as refutation if one accepts your thesis that nobody speaks falsely?

No, there is not, said Euthydemus.

Then it can't be that Dionysodorus ordered me to refute him just now, can it? I said.

How would anyone order a thing which doesn't exist? Are you in the habit of giving such orders?

The reason I've raised the point, Euthydemus, is that I'm rather thickwitted and don't understand these fine clever things. And perhaps I'm about to ask a rather stupid question, but bear with me. Look at it this way: if
287 it is impossible to speak falsely, or to think falsely, or to be ignorant, then there is no possibility of making a mistake when a man does anything? I mean that it is impossible for a man to be mistaken in his actions—or isn't this what you are saying?

Certainly it is, he said.

This is just where my stupid question comes in, I said. If no one of us makes mistakes either in action or in speech or in thought—if this really is the case—what in heaven's name do you two come here to teach? Or
b didn't you say just now that if anyone wanted to learn virtue, you would impart it best?

Really, Socrates, said Dionysodorus, interrupting, are you such an old Cronus[10] as to bring up now what we said in the beginning? I suppose if I said something last year, you will bring that up now and still be helpless in dealing with the present argument.

Well you see, I said, these arguments are very difficult (as is natural, since they come from wise men) and this last one you mention turns out to be particularly difficult to deal with. Whatever in the world do you mean by the expression "be helpless in dealing with," Dionysodorus?
c Doesn't it clearly mean that I am unable to refute the argument? Just tell

10. As the father of Zeus whom Zeus dethroned, Cronus is a symbol of the out-of-date.

me, what else is the sense of this phrase "I am helpless in dealing with the argument"?

But at least it is not very difficult to deal with *your* phrase,[11] he said, so go ahead and answer.

Before you answer me, Dionysodorus? I said.

You refuse to answer then? he said.

Well, is it fair?

Perfectly fair, he said.

On what principle? I said. Or isn't it clearly on this one, that you have come here on the present occasion as a man who is completely skilled in arguments, and you know when an answer should be given and when it d
should not? So now you decline to give any answer whatsoever because you realize you ought not to?

You are babbling instead of being concerned about answering, he said. But, my good fellow, follow my instructions and answer, since you admit that I am wise.

I must obey then, I said, and it seems I am forced to do so, since you are in command, so ask away.

Now are the things that have sense those that have soul, or do things without soul have sense too?

It is the ones with soul that have sense.

And do you know any phrase that has soul? he asked.

Heavens no, not I.

Then why did you ask me just now what was the sense of my phrase? e

I suppose, I said, for no other reason than that I made a mistake on account of being so stupid. Or perhaps I did not make a mistake but was right when I spoke as if phrases had sense? Are you saying that I made a mistake or not? Because if I did not make one you will not refute me no matter how wise you are, and you will be "helpless in dealing with the argument." And if I did make one, you said the wrong thing when you claimed it was impossible to make mistakes—and I'm not talking 288
about things you said last year. So, Dionysodorus and Euthydemus, I said, it looks as if this argument has made no progress and still has the old trouble of falling down itself in the process of knocking down others. And your art has not discovered how to prevent this from happening in spite of your wonderful display of precision in words.

And Ctesippus said, Your manner of speech is certainly remarkable, O b
men of Thurii or Chios, or from wherever and however you like to be styled, because it matters nothing to you if you talk complete nonsense.

I was worried in case there might be hard words, and started to pacify Ctesippus once again, saying, Ctesippus, let me say to you the same things I was just saying to Clinias, that you fail to recognize how remarkable the strangers' wisdom is. It's just that the two of them are unwilling to give us a serious demonstration, but are putting on conjuring tricks in imitation

11. Removing the brackets in c3 and accepting the emendation of *g'ou* for *tōi*.

c of that Egyptian sophist, Proteus.[12] So let us imitate Menelaus and refuse to release the pair until they have shown us their serious side. I really think some splendid thing in them will appear whenever they begin to be in earnest, so let us beg and exhort and pray them to make it known. As for me, I think I ought once again to take the lead and give an indication
d of what sort of persons I pray they will show themselves to be. Beginning where I left off earlier, I shall do my best to go through what comes next so as to spur them to action and in hopes that out of pity and commiseration for my earnest exertions they may be earnest themselves.

So, Clinias, I said, remind me where we left off. As far as I can remember it was just about at the point where we finally agreed that it was necessary to love wisdom, wasn't it?

Yes, he said.

Now the love of wisdom, or philosophy, is the acquisition of knowledge, isn't that so? I said.

Yes, he said.

e Well, what sort of knowledge would we acquire if we went about it in the right way? Isn't the answer simply this, that it would be one which will benefit us?

Certainly, he said.

And would it benefit us in any way if we knew how to go about and discover where in the earth the greatest quantities of gold are buried?

Perhaps, he said.

But earlier,[13] I said, we gave a thorough demonstration of the point that even if all the gold in the world should be ours with no trouble and without digging for it, we should be no better off—no, not even if we knew how
289 to make stones into gold would the knowledge be worth anything. For unless we also knew how to use the gold, there appeared to be no value in it. Or don't you remember? I said.

Yes, I remember very well, he said.

Nor does there seem to be any value in any other sort of knowledge which knows how to make things, whether money making or medicine or any other such thing, unless it knows how to use what it makes—isn't this the case?

He agreed.

b And again, if there exists the knowledge of how to make men immortal, but without the knowledge of how to use this immortality, there seems to be no value in it, if we are to conclude anything from what has already been settled.

We agreed on all this.

12. In *Odyssey* iv.456 ff. Proteus, a sea deity, refuses to assume his proper shape until he has transformed himself into a lion, a dragon, a panther, an enormous pig, into water, and into a tree.

13. At 280d, although the point made was more general.

Then what we need, my fair friend, I said, is a kind of knowledge which combines making and knowing how to use the thing which it makes.

So it appears, he said.

Then it seems not at all needful for us to become lyre makers and skilled c
in some such knowledge as that. For there the art which makes is one thing and that which uses is another; they are quite distinct although they deal with the same thing. There is a great difference between lyre making and lyre playing, isn't there?

He agreed.

And it is equally obvious that we stand in no need of the art of flute making, since this is another of the same kind.

He said yes.

Seriously then, said I, if we were to learn the art of writing speeches, is this the art which we would have to get if we are going to be happy?

I don't think so, said Clinias in answer.

On what ground do you say this? I asked. d

Well, he said, I notice that certain speech writers have no idea of how to use the particular speeches they themselves have written, in the same way that the lyre makers have no idea of how to use their lyres. And in the former case too, there are other people who are capable of using what the speech writers have composed but are themselves unable to write. So it is clear that in regard to speeches too, there is one art of making and another of using.

You seem to me, I said, to have sufficient ground for stating that the art of speech writing is not the one a man would be happy if he acquired. And yet it was in this connection that I expected the very knowledge we
have been seeking all this time would put in an appearance. Because, as e
far as I am concerned, whenever I have any contact with these same men who write speeches, they strike me as being persons of surpassing wisdom, Clinias; and this art of theirs seems to me something marvelous and lofty. Though after all there is nothing remarkable in this, since it is part of the
enchanters' art and but slightly inferior to it. For the enchanters' art consists 290
in charming vipers and spiders and scorpions and other wild things, and in curing diseases, while the other art consists in charming and persuading the members of juries and assemblies and other sorts of crowds. Or do you have some other notion of it? I said.

No, he said, it seems to me to be just as you say.

Where should we turn next, then? I asked. To which one of the arts?

I find myself at a loss, he said.

But I think I have discovered it, said I.

Which one is it? said Clinias.

The art of generalship seems to me, I said, to be the one which, more b
than any other, a man would be happy if he acquired.

It doesn't seem so to me, he said.

How is that? said I.

Well, this art is a kind of man hunting.

What then? I said.

No art of actual hunting, he said, extends any further than pursuing
and capturing: whenever the hunters catch what they are pursuing they
are incapable of using it, but they and the fishermen hand over their prey
c to the cooks. And again, geometers and astronomers and calculators (who
are hunters too, in a way, for none of these make their diagrams; they
simply discover those which already exist), since they themselves have no
idea of how to use their prey but only how to hunt it, hand over the task
of using their discoveries to the dialecticians—at least, those of them do
so who are not completely senseless.

Well done, I said, most handsome and clever Clinias! And is this really the case?

d Very much so. And the same is true of the generals, he said. Whenever
they capture some city, or a camp, they hand it over to the statesmen—
for they themselves have no idea of how to use the things they have
captured—just in the same way, I imagine, that quail hunters hand theirs
over to quail keepers. So, he said, if we are in need of that art which will
itself know how to use what it acquires through making or capturing, and
if it is an art of this sort which will make us happy, then, he said, we must
look for some other art besides that of generalship.

e Crito: What do you mean, Socrates? Did that boy utter all this?

Socrates: You're not convinced of it, Crito?

Crito: Good heavens no! Because, in my opinion, if he spoke like that, he needs no education, either from Euthydemus or anyone else.

Socrates: Dear me, then perhaps after all it was Ctesippus who said this, and I am getting absent-minded.

291 Crito: Not my idea of Ctesippus!

Socrates: But I'm sure of one thing at least, that it was neither Euthydemus nor Dionysodorus who said it. Do you suppose, my good Crito, that some superior being was there and uttered these things—because I am positive I heard them.

Crito: Yes, by heaven, Socrates, I certainly think it was some superior being, very much so. But after this did you still go on looking for the art? And did you find the one you were looking for or not?

b Socrates: Find it, my dear man—I should think not! We were really
quite ridiculous—just like children running after crested larks; we kept
thinking we were about to catch each one of the knowledges, but they
always got away. So why should I recount the whole story? When we got
to the kingly art and were giving it a thorough inspection to see whether
it might be the one which both provided and created happiness, just there
we got into a sort of labyrinth: when we thought we had come to the end,
c we turned round again and reappeared practically at the beginning of our
search in just as much trouble as when we started out.

Crito: And how did this come about, Socrates?

Socrates: I shall tell you. We had the idea that the statesman's art and the kingly art were the same.

Crito: And then what?

Socrates: It was due to this art that generalship and the others handed over the management of the products of which they themselves were the craftsmen, as if this art alone knew how to use them. It seemed clear to us that this was the art we were looking for, and that it was the cause of
right action in the state, and, to use the language of Aeschylus, that this d
art alone sits at the helm of the state, governing all things, ruling all things, and making all things useful.[14]

Crito: And wasn't your idea a good one, Socrates?[15]

Socrates: You will form an opinion, Crito, if you like to hear what happened to us next. We took up the question once again in somewhat this fashion: Well, does the kingly art, which rules everything, produce
some result for us, or not? Certainly it does, we said to each other. Wouldn't e
you say so too, Crito?

Crito: Yes, I would.

Socrates: Then what would you say its result was? For instance, if I should ask you what result does medicine produce, when it rules over all the things in its control, would you not say that this result was health?

Crito: Yes, I would.

Socrates: And what about your own art of farming, when it rules over
all the things in its control—what result[16] does it produce? Wouldn't you 292
say that it provides us with nourishment from the earth?

Crito: Yes, I would.

Socrates: Now what about the kingly art; when it rules over all the things in its control—what does it produce? Perhaps you won't find the answer quite so easy in this case.

Crito: No, I certainly don't, Socrates.

Socrates: Nor did we, Crito. But you are aware of this point at least, that if this is to be the art we are looking for, it must be something useful.

Crito: Yes indeed.

Socrates: And it certainly must provide us with something good?

Crito: Necessarily, Socrates.

Socrates: And Clinias and I of course agreed that nothing is good except b
some sort of knowledge.

Crito: Yes, you said that.

Socrates: Then the other results which a person might attribute to the statesman's art—and these, of course, would be numerous, as for instance, making the citizens rich and free and not disturbed by faction—all these appeared to be neither good nor evil;[17] but this art had to make them wise

14. The reference is probably to *Seven Against Thebes*, 2.

15. Writing *Oukoun* with acute accent on the first syllable rather than circumflex on the second in d4.

16. Removing the brackets in a1.

17. Cf. 281d–e.

and to provide them with a share of knowledge if it was to be the one
c that benefited them and made them happy.

CRITO: True enough. So you agreed on this for the moment at any rate, according to your account.

SOCRATES: And does the kingly art make men wise and good?

CRITO: Why not, Socrates?

SOCRATES: But does it make all people good, and in every respect? And is it the art which conveys every sort of knowledge, shoe making and carpentry and all the rest?

CRITO: I don't think so, Socrates.

d SOCRATES: Then what knowledge does it convey? And what use are we to make of it? It must not be the producer of any of those results which are neither good nor bad, but it must convey a knowledge which is none other than itself. Now shall we try to say what in the world this is, and what use we are to make of it? Is it agreeable to you if we say it is that by which we shall make others good?

CRITO: Certainly.

SOCRATES: And in what respect will they be good and in what respect useful, as far as we are concerned? Or shall we go on to say that they will
e make others good and that these others will do the same to still others? But in what conceivable way they are good is in no way apparent to us, especially since we have discredited what are said to be the results of the statesman's art. It is altogether a case of the proverbial "Corinthus, son of Zeus";[18] and, as I was saying, we are in just as great difficulties as ever, or even worse, when it comes to finding out what that knowledge is which will make us happy.

CRITO: Mercy on us, Socrates, you seem to have got yourselves into a frightful tangle.

293 SOCRATES: As far as I was concerned, Crito, when I had fallen into this difficulty, I began to exclaim at the top of my lungs and to call upon the two strangers as though they were the Heavenly Twins to rescue both myself and the boy from the third wave[19] of the argument and to endeavor in every conceivable way to make plain what this knowledge can be which we ought to have if we are going to spend the remainder of our lives in the right way.

CRITO: And what about it? Was Euthydemus willing to reveal anything to you?

b SOCRATES: Of course! And he began his account, my friend, in this generous manner: Would you prefer, Socrates, to have me teach you this knowledge you have been in difficulties over all this time, or to demonstrate that you possess it?

O marvellous man, I said, is this in your power?

18. The expression was proverbial for any sort of vain repetition.

19. For the first two, see 292a and 292d–e. The Heavenly Twins (Dioscuri) were regarded as protectors of seamen.

Very much so, he said.

Then for heaven's sake demonstrate that I possess it! I said. That will be much easier than learning for a man of my age.

Then come answer me this, he said: Is there anything you know?

Oh, yes, I said, many things, though trivial ones.

That will serve the purpose, he said. Now do you suppose it possible for any existing thing not to be what it is?

Heavens no, not I. c

And do you know something? he said.

Yes, I do.

Then you are knowing, if you really know?

Of course, as far as concerns that particular thing.

That doesn't matter, because mustn't you necessarily know everything, if you are knowing?

How in heaven's name can that be, said I, when there are many other things I don't know?

Then if there is anything you don't know, you are not knowing.

In just that matter, my friend, I said.

Are you any the less not knowing for all that? said he. And just now you said you were knowing, with the result that you are the man you are, and then again you are not, at the same time and in respect to the d
same things.

Very good, Euthydemus—according to the proverb, "whatever you say is well said."[20] But how do I know that knowledge we were looking for? Since it is impossible both to be and not to be the same thing, if I know one thing I know absolutely everything—because I could not be both knowing and not knowing at the same time—and since I know everything, I also have this knowledge. Is this what you mean, and is this your piece of wisdom?

You are refuted out of your own mouth, Socrates, he said. e

But Euthydemus, I said, aren't you in the same condition? Because I would not be at all vexed at anything I might suffer in company with you and this dear man Dionysodorus. Tell me, don't you two know some existing things, and aren't there others you don't know?

Far from it, Socrates, said Dionysodorus.

What's that? I said. Do you know nothing at all?

On the contrary, he said.

Then you know everything, I said, since you know something? 294

Yes, everything, he said, and you also know everything if you really know even one thing.

O heavens, said I, how marvellous! And what a great blessing has come to light! But it can't be true that all the rest of mankind either know everything or nothing?

20. Reading *panta legeis* at d3.

Well, he said, I don't suppose they know some things and not others and are thus knowing and not knowing at the same time.

But what follows? I asked.

Everyone, he said, knows everything, if he really knows something.

b By the gods, Dionysodorus, I said—for I realize that you are both now in earnest, although I have provoked you to it with some difficulty—do you two really know everything? Carpentry and shoe making, for instance?

Yes indeed, he said.

So you are both able to do leather stitching?

Heavens yes, and we can do cobbling, he said.

And do you also have the sort of information which tells the number of the stars and of the sands?

Of course, he said. Do you think we would fail to agree to that too?

c Here Ctesippus interrupted: For goodness' sake, Dionysodorus, give me some evidence of these things which will convince me that you are both telling the truth.

What shall I show you? he asked.

Do you know how many teeth Euthydemus has, and does he know how many you have?

Aren't you satisfied, he said, with being told that we know everything?

Not at all, he answered, but tell us just this one thing in addition and prove that you speak the truth. Because if you say how many each of you has, and you turn out to be right when we have made a count, then we shall trust you in everything else.

d Well, they weren't willing to do it, since they thought they were being laughed at, but they claimed to know every single thing they were questioned about by Ctesippus. And there was practically nothing Ctesippus did not ask them about in the end, inquiring shamelessly whether they knew the most disgraceful things. The two of them faced his questions very manfully, claiming to know in each case, just like boars when they are driven up to the attack. The result was that even I myself, Crito, was
e finally compelled, out of sheer disbelief, to ask whether Dionysodorus even knew how to dance, to which he replied that he certainly did.

I don't suppose, I said, that at your age you are so far advanced in wisdom as to somersault over swords or be turned about on a wheel?

There is nothing I cannot do, he said.

And do you know everything just at the present moment, I asked, or is your knowledge also a permanent thing?

It is permanent as well, he said.

And when you were children and had just been born, did you know everything?

They both answered yes at the same moment.

295 Now the thing struck us as unbelievable; and Euthydemus asked, Are you incredulous, Socrates?

Well, I would be, I said, except for the probability that you are both wise men.

But if you are willing to answer my questions, he said, I will prove that you agree to these remarkable things too.

But, said I, there is nothing I would like better than to be refuted on these points. Because if I am unaware of my own wisdom, but you are going to demonstrate that I know everything and know it forever, what greater godsend than this would I be likely to come across my whole life long?

Then answer, he said.

Ask away, I am ready. b

Well then, Socrates, he said, when you have knowledge, do you have it of something, or not?

I have it of something.

And do you know by means of that by which you have knowledge, or by means of something else?

By means of that by which I have knowledge. I suppose you mean the soul, or isn't this what you have in mind?

Aren't you ashamed, Socrates, he said, to be asking a question of your own when you ought to be answering?

Very well, said I, but how am I to act? I will do just what you tell me. Now whenever I don't understand your question, do you want me to answer just the same, without inquiring further about it?

You surely grasp something of what I say, don't you? he said. c

Yes, I do, said I.

Then answer in terms of what you understand.

Well then, I said, if you ask a question with one thing in mind and I understand it with another and then answer in terms of the latter, will you be satisfied if I answer nothing to the purpose?

I shall be satisfied, he said, although I don't suppose *you* will.

Then I'm certainly not going to answer, said I, until I understand the question.

You are evading a question you understand all along, he said, because you keep talking nonsense and are practically senile.

I realized he was angry with me for making distinctions in his phrases, d because he wanted to surround me with words and so hunt me down. Then I remembered that Connus, too, is vexed with me whenever I don't give in to him, and that as a result, he takes fewer pains with me because he thinks I am stupid. And since I had made up my mind to attend this man's classes too, I thought I had better give in for fear he might think me too uncouth to be his pupil. So I said, Well, Euthydemus, if you think e this is how to do things, we must do them your way, because you are far more of an expert at discoursing than I, who have merely a layman's knowledge of the art. So go back and ask your questions from the beginning.

And you answer again from the beginning, he said. Do you know what you know by means of something, or not?

I know it by means of the soul, I said.

296 There he is again, he said, adding on something to the question! I didn't
ask you by what you know, but whether you know by means of something.

Yes, I did give too much of an answer again, I said, because I am so uneducated. Please forgive me and I shall answer simply that I know what I know by means of something.

And do you always know by this same means, said he, or is it rather the case that you know sometimes by this means and sometimes by another?

Always, whenever I know, I said, it is by this means.

Won't you stop adding things on again? he said.

But I'm afraid that this word "always" may trip us up.

b It won't do it to us, he said, but to you, if anyone. Come along and
answer: do you always know by this means?

Always, I said, since I have to withdraw the "whenever."

Then you always know, by this means. And since you are always knowing, the next question is, do you know some things by this means by which you know and others by some other means, or everything by this one?

Absolutely everything by this one, said I—those that I know, that is.

There it is again, he said—here comes the same qualification.

Well I take back the "those that I know," I said.

No, don't take back a single thing, he said—I'm not asking you any
c favors. Just answer me this: would you be capable of knowing "absolutely
everything," if you did not know everything?

It would be remarkable if I did, said I.

And he said, Then add on everything you like now, because you admit that you know absolutely everything.

It seems I do, I said, especially since my "those that I know" has no effect, and I know everything.

And you have also admitted that you always know (by means of that by which you know), whenever you know, or however else you like to put it, because you have admitted that you always know and know all things at the same time. It is obvious that you knew even when you were
d a child and when you were being born and when you were being conceived.
And before you yourself came into being and before the foundation of heaven and earth, you knew absolutely everything, if it is true that you always know. And, by heaven, he said, you always will know, and will know everything, if I want it that way.

I hope you will want it that way, most honorable Euthydemus, said I, if you are genuinely telling the truth. But I don't quite believe in your ability to bring it off unless your brother Dionysodorus here should lend a helping hand—perhaps the two of you might be able to do it. Tell me,
e I went on: with respect to other things I see no possibility of disputing
with men of such prodigious wisdom by saying that I do not know everything, since you have stated that I do; but what about things of this sort, Euthydemus—how shall I say I know that good men are unjust? Come tell me, do I know this, or not?

Oh yes, you know it, he said.

Know what? said I.

That the good are not unjust.

Yes, I've always known that, I said. But this isn't my question—what 297
I'm asking is, where did I learn that the good *are* unjust?

Nowhere, said Dionysodorus.

Then this is something I do not know, I said.

You are ruining the argument, said Euthydemus to Dionysodorus, and this fellow here will turn out to be not knowing, and then he will be knowing and not knowing at the same time. And Dionysodorus blushed.

But you, I said, what do you say, Euthydemus? Your all-knowing brother b
doesn't appear to be making a mistake, does he?

Am I a brother of Euthydemus? said Dionysodorus, interrupting quickly.

And I said, Let that pass, my good friend, until Euthydemus instructs me as to how I know that good men are unjust, and don't begrudge me this piece of information.

You are running away, Socrates, said Dionysodorus, and refusing to answer.

And with good reason, said I, because I am weaker than either of you,
so that I do not hesitate to run away from you both together. I am much c
more worthless than Heracles, who was unable to fight it out with both the Hydra, a kind of lady-sophist who was so clever that if anyone cut off one of her heads of argument, she put forth many more in its place, and with another sort of sophist, a crab arrived on shore from the sea—rather recently, I think. And when Heracles was in distress because this creature was chattering and biting on his left, he called for his nephew
Iolaus to come and help him, which Iolaus successfully did. But if my d
Iolaus should come, he would do more harm than good.

And when you have finished this song and story, said Dionysodorus, will you tell me whether Iolaus is any more Heracles' nephew than yours?

Well, I suppose it will be best for me if I answer you, Dionysodorus, I said, because you will not stop asking questions—I am quite convinced of that—out of an envious desire to prevent Euthydemus from teaching me that piece of wisdom.

Then answer, he said.

Well, I said, my answer is that Iolaus was the nephew of Heracles, but e
as for being mine, I don't see that he is, in any way whatsoever. Because my brother, Patrocles, was not his father, although Heracles' brother, Iphicles, does have a name which is somewhat similar.

And Patrocles, he said, is your brother?

Yes indeed, said I—we have the same mother, though not the same father.

Then he both is and is not your brother.

Not by the same father, my good friend, I said, because his father was Chaeredemus and mine was Sophroniscus.

But Sophroniscus and Chaeredemus were both fathers? he asked.

Certainly, I said—the former was mine and the latter his. 298

Then was Chaeredemus other than a father? he said.

Other than mine at any rate, said I.

Then he was a father while he was other than a father? Or are you the same as a stone?

I'm afraid you will show that I am, I said, although I don't feel like one.

Then are you other than a stone? he said.

Yes, quite other.

Then isn't it the case that if you are other than a stone, you are not a stone, he said, and if you are other than gold, you are not gold?

That's true.

Then Chaeredemus is not a father if he is other than a father, he said.

So it seems that he is not a father, said I.

b Because if Chaeredemus *is* a father, said Euthydemus, interrupting, then, on the other hand, Sophroniscus, being other than a father, is not a father, so that you, Socrates, are without a father.

Here Ctesippus took up the argument, saying, Well, isn't your father in just the same situation? Isn't he other than my father?

Far from it, said Euthydemus.

What! Is he the same? he asked.

The same, certainly.

c I should not agree with that. But tell me, Euthydemus, is he just my father, or the father of everyone else as well?

Of everyone else as well, he replied. Or do you think the same man is both a father and not a father?

I was certainly of that opinion, said Ctesippus.

What, he said—do you think that a thing can be both gold and not gold? Or both a man and not a man?

But perhaps, Euthydemus, said Ctesippus, you are not uniting flax with flax, as the proverb has it. Because you are making an alarming statement if you say your father is the father of all.

But he is, he replied.

Just of men, said Ctesippus, or of horses and all the other animals?

d All of them, he said.

And is your mother their mother?

Yes, she is.

And is your mother the mother of sea urchins?

Yes, and so is yours, he said.

So you are the brother of gudgeons and puppies and piglets.

Yes, and so are you, he said.

And your father turns out to be a boar and a dog.

And so does yours, he said.

You will admit all this in a moment, Ctesippus, if you answer my questions, said Dionysodorus. Tell me, have you got a dog?

Yes, and a brute of a one too, said Ctesippus.

e And has he got puppies?

Yes indeed, and they are just like him.

And so the dog is their father?

Yes, I saw him mounting the bitch myself, he said.

Well then: isn't the dog yours?

Certainly, he said.

Then since he is a father and is yours, the dog turns out to be your father, and you are the brother of puppies, aren't you?

And again Dionysodorus cut in quickly to keep Ctesippus from making some reply first and said, Just answer me one more small question: Do you beat this dog of yours?

And Ctesippus laughed and said, Heavens yes, since I can't beat you!

Then do you beat your own father? he asked.

There would certainly be much more reason for me to beat yours, he 299
said, for taking it into his head to beget such clever sons. But I suppose, Euthydemus, that the father of you and the puppies has benefited greatly from this wisdom of yours!

But he has no need of a lot of good things, Ctesippus—he does not, and neither do you.

Nor you either, Euthydemus? he asked.

Nor any other man. Tell me, Ctesippus, do you think it a good thing b
for a sick man to drink medicine whenever he needs it, or does it seem to you not a good thing? And do you think it good for a man to be armed when he goes to war rather than to go unarmed?

It seems good to me, he said. And yet I think you are about to play one of your charming tricks.

The best way to find out is to go ahead and answer, he said. Since you admit that it is a good thing for a man to drink medicine whenever he needs it, then oughtn't he to drink as much as possible? And won't it be fine if someone pounds up and mixes him a wagon load of hellebore?[21]

And Ctesippus said, Very true indeed, Euthydemus, if the man drinking c
is as big as the statue at Delphi!

It also follows, he said, that since it is a good thing to be armed in war, a man ought to have as many spears and shields as possible, if it really is a good thing?

It really does seem to be so, said Ctesippus. But surely you don't believe this yourself, Euthydemus? Wouldn't you prefer one shield and one spear?

Yes, I would.

And would you also arm Geryon and Briareus[22] in this fashion? he asked. I thought you and your companion here were cleverer than that, considering that you both fight in armor.

21. A plant with both poisonous and medicinal properties, a proverbial treatment for mental disorders.

22. Briareus was a hundred-handed monster who aided Zeus against the Titans. Geryon was a three-headed or three-bodied monster whose cattle were stolen by Heracles.

d Euthydemus was silent, but Dionysodorus went back to the answers Ctesippus had given earlier and asked, And what about gold, then? In your opinion is it a good thing to have?

Yes indeed, and, in this case, lots of it, said Ctesippus.

Well then, oughtn't one to have good things always and everywhere?

Very much so, he said.

And you admit that gold is also one of the good things?

Yes, I have admitted that already, he said.

Then one should have it always and everywhere, and especially in
e oneself? And wouldn't a man be happiest of all if he had three talents of gold in his stomach, and a talent in his skull, and a stater of gold in each eye?

Well, they do say, Euthydemus, said Ctesippus, that among the Scythians the happiest and best are the men who have a lot of gold in their own skulls (the same way that you were talking a moment ago about the dog being my father); and, what is still more remarkable, the story is that they also drink out of their own gilded skulls and gaze at the insides of them, having their own heads in their hands![23]

300 Tell me, said Euthydemus, do the Scythians and the rest of mankind see things capable of sight or incapable?[24]

Capable, I suppose.

And do you do so too? he asked.

Yes, so do I.

And do you see our cloaks?

Yes.

Then these same cloaks are capable of sight.

Remarkably so, said Ctesippus.

Well, what do they see? he said.

Nothing at all. And you, perhaps, don't suppose you see *them*,[25] you are such a sweet innocent. But you strike me, Euthydemus, as having fallen asleep with your eyes open; and if it is possible to speak and say nothing, you are doing exactly that.

b But surely it is not possible for there to be a speaking of the silent, said Dionysodorus.[26]

Entirely impossible, said Ctesippus.

Then neither is there a silence of the speaking?

Still less so, he answered.

23. The Scythians' habit of using the gilded skulls of their enemies as cups is described by Herodotus, iv.65.

24. The Greek phrase translated "capable of sight" here can be understood as either active (capable of seeing) or passive (capable of being seen). The argument to follow exploits this ambiguity.

25. Reading *horan auta* in that order at a6.

26. The "speaking of the silent" here, like the "silence of the speaking" just below, must be heard as ambiguous between "speaking done by the silent" and "speaking about silent things." The argument to follow exploits this ambiguity.

But whenever you mention stones and wood and pieces of iron, are you not speaking of the silent?

Not if I go by the blacksmiths' shops, he said, because there the pieces of iron are said to speak out and cry aloud if anyone handles them. So here, thanks to your wisdom, you were talking nonsense without being aware of it. But prove me the other point, how there can be a silence of the speaking.

(I had the notion that Ctesippus was very much keyed up on account c
of his favorite being there.)

Whenever you are silent, said Euthydemus, are you not silent with respect to all things?

Yes, I am, he said.

Therefore, you are also silent with respect to the speaking, if "the speaking" is included in all things.

What, said Ctesippus, all things are not silent, are they?

I imagine not, said Euthydemus.

Well then, my good friend, do all things speak?

All the speaking ones, I suppose.

But, he said, this is not my question—I want to know, are all things silent, or do they speak?

Neither and both, said Dionysodorus, breaking in, and I'm convinced d
you will be helpless in dealing with that answer.

Ctesippus gave one of his tremendous laughs and said, Euthydemus, your brother has made the argument sit on both sides of the fence and it is ruined and done for! Clinias was very pleased and laughed too, which made Ctesippus swell to ten times his normal size. It is my opinion that Ctesippus, who is a bit of a rogue, had picked up these very things by overhearing these very men, because there is no wisdom of a comparable sort among any other person of the present day.

And I said, Clinias, why are you laughing at such serious and beauti- e
ful things?

Why Socrates, have you ever yet seen a beautiful thing? asked Dionysodorus.

Yes indeed, Dionysodorus, I said, and many of them.

And were they different from the beautiful, he asked, or were they the 301
same as the beautiful?

This put me in a terrible fix, which I thought I deserved for my grumbling. All the same I answered that they were different from the beautiful itself, but at the same time there was some beauty present with each of them.

Then if an ox is present with you, you are an ox? And because I am present with you now, you are Dionysodorus?

Heaven forbid, said I.

But in what way, he said, can the different be different just because the different is present with the different?

Are you in difficulties there? I said. (I was so eager to have the wisdom b
of the pair that I was already trying to copy it.)

How can I not be in difficulties? he said. Not only I but everyone else must be, when a thing is impossible.

What are you saying, Dionysodorus? I said. Isn't the beautiful beautiful and the ugly ugly?

Yes, if I like, he said.

And do you like?

Certainly, he said.

Then isn't it also the case that the same is the same and the different
c different? Because I don't imagine that the different is the same, but I thought even a child would hardly doubt that the different is different. But you must have neglected this point deliberately, Dionysodorus, since in every other respect you and your brother strike me as bringing the art of argument to a fine pitch of excellence, like craftsmen who bring to completion whatever work constitutes their proper business.

You know then, he said, what the proper business of each craftsman is? For instance, you know whose business it is to work metal?

Yes, I do—the blacksmith's.

Well then, what about making pots?

The potter's.

And again, to slaughter and skin, and to boil and roast the pieces after cutting them up?

d The cook's, I said.

Now if a man does the proper business, he said, he will do rightly?

Very much so.

And the proper business in the case of the cook is, as you say, to cut up and skin?[27] You did agree to that didn't you?

Yes, I did, I said, but forgive me.

Then it is clear, he said, that if someone kills the cook and cuts him up, and then boils him and roasts him, he will be doing the proper business. And if anyone hammers the blacksmith himself, and puts the potter on
e the wheel, he will also be doing the proper business.

By Posidon, I exclaimed, you are putting the finishing touches on your wisdom! And do you think that such skill will ever be mine?

And would you recognize it, Socrates, he asked, if it did become yours?

If only you are willing, I said, I clearly would.

What's that, said he—do you think you know your own possessions?

Yes, unless you forbid it—for all my hopes must begin with you and end with Euthydemus here.

And do you consider those things to be yours over which you have
302 control and which you are allowed to treat as you please? For instance, an ox or a sheep: do you regard these as yours because you are free to

27. The Greek here is ambiguous between "it's proper for a cook to cut up and skin" and "it's proper to cut up and skin a cook." This English must be heard as having the same two readings.

sell them or give them away or sacrifice them to any god you please? And if you could not treat them in this fashion, then they would not be yours?

And because I knew that some fine thing would emerge from their questions, and, at the same time, because I wanted to hear it as quickly as possible, I said, This is exactly the case—it is only things like these which are mine.

Very well, he said. You give the name of living beings to all things that have a soul, don't you?

Yes, I said.

And you admit that only those living beings are yours over which you b
have power to do all these things I mentioned just now?

I admit it.

And he pretended to pause as though he were contemplating some weighty matter, and then said, Tell me, Socrates, do you have an ancestral Zeus?[28]

I had a suspicion (a correct one as it turned out) of the way in which the argument would end, and I began to make a desperate effort to escape, twisting about as though I were already caught in the net.

No, I have not, Dionysodorus, I said.

Then you are a miserable sort of fellow, and not even an Athenian, if c
you have no ancestral gods nor shrines, nor any of the other things of this sort which befit a gentleman.

Enough of that, Dionysodorus—mind your tongue and don't give me a lecture which is prematurely harsh. I certainly do have altars; and I have shrines, both domestic and ancestral, and everything else of the kind, just like the other Athenians.

Well, what about the other Athenians? he said. Doesn't each of them have an ancestral Zeus?

None of the Ionians use that expression, I said, neither those who are colonists from the city nor we ourselves. We do have an ancestral Apollo
because of Ion's parentage,[29] but Zeus is not given the name of "ancestral" d
by us. Rather we call him "defender of the house" or "of the tribe," and we also have an Athena "of the tribe."

Oh, that will do, said Dionysodorus, since you do appear to have an Apollo and a Zeus and an Athena.

Certainly, said I.

Then these would be your gods? he said.

My ancestors, I said, and my masters.

28. The Greek word translated "ancestral" here and in the following was applied in different parts of the Greek world to the specific divinities worshipped there as "hereditary" protectors, the "fathers" of the people. But it also had a different application to Zeus in particular, as protector of the rights of ancestors. The argument to follow exploits this ambiguity.

29. Ion was the son of Apollo by Creusa. (Cf. Euripides, *Ion* 61–75.)

But at any rate they are yours, he said. Or didn't you admit that they were?

Yes, I admitted it, I said. What is going to happen to me?

e Then these gods, he said, are also living beings? Because you have admitted that everything which has a soul is a living being. Or don't these gods have a soul?

Oh yes, they do, I said.

Then they are living beings?

Yes, living beings, I said.

And you have agreed that those living beings are yours which you have a right to give away and to sell and to sacrifice to any god you please.

Yes, I agreed to that, I said—there is no retreat for me, Euthydemus.

303 Then come tell me straightway, he said: since you admit that Zeus and the other gods are yours, then do you have the right to sell them or give them away or treat them in any way you like, as you do with the other living creatures?

Then I, Crito, lay speechless, just as if the argument had struck me a blow. But Ctesippus ran to my aid, saying, Bravo, Heracles, what a fine argument! And Dionysodorus said, Is Heracles a bravo, or is a bravo Heracles? And Ctesippus said, By Posidon, what marvelous arguments! I give up—the pair are unbeatable.

b Whereupon, my dear Crito, there was no one there who did not praise to the skies the argument and the two men, laughing and applauding and exulting until they were nearly exhausted. In the case of each and every one of the previous arguments, it was only the admirers of Euthydemus who made such an enthusiastic uproar; but now it almost seemed as if the pillars of the Lyceum applauded the pair and took pleasure in their
c success. Even I myself was so affected by it as to declare that I had never in my life seen such wise men; and I was so absolutely captivated by their wisdom that I began to praise and extol them and said, O happy pair, what miraculous endowment you possess to have brought such a thing to perfection in so short a time! Among the many other fine things which belong to your arguments, Euthydemus and Dionysodorus, there is one which is the most magnificent of all, that you care nothing for the many,
d or in fact, for men of consequence or reputation, but only for persons of your own sort. And I am convinced that there are very few men like you who would appreciate these arguments, but that the majority understand them so little that I feel sure they would be more ashamed to refute others with arguments of this sort than to be refuted by them. And then there is this other public-spirited and kindly aspect of your performance; whenever you deny that there is anything beautiful or good or white, and that the
e different is in any way different, you do in fact completely stitch up men's mouths, as you say. But since you would appear to stitch up your own as well, you are behaving in a charming fashion and the harshness of your words is quite removed. But the greatest thing of all is that your skill is such, and is so skillfully contrived, that anyone can master it in a very

short time. I myself found this out by watching Ctesippus and seeing how
quickly he was able to imitate you on the spur of the moment. This ability 304
of your technique to be picked up rapidly is a fine thing,[30] but not something
which lends itself well to public performance. If you will take my advice,
be careful not to talk in front of a large group; the listeners are likely to
master it right away and give you no credit. Better just talk to each other
in private, or, if you must have an audience, then let no one come unless
he gives you money. And if you are sensible you will give your disciples b
the same advice, never to argue with anyone but yourselves and each
other. For it is the rare thing, Euthydemus, which is the precious one, and
water is cheapest, even though, as Pindar said, it is the best.[31] But come,
said I, and see to admitting Clinias and me to your classes.

After saying these things, Crito, and making a few other brief remarks,
we separated. Now figure out a way to join us in attending their classes, c
since they claim to be able to instruct anyone who is willing to pay, and
say that neither age nor lack of ability prevents anyone whatsoever from
learning their wisdom easily. And, what is specially relevant for you to
hear, they say that their art is in no way a hindrance to the making of money.

Crito: Well, Socrates, I am indeed a person who loves listening and
who would be glad to learn something; but all the same I am afraid that
I also am not one of Euthydemus' sort. Instead I am one of those you d
mentioned who would rather be refuted by arguments of this kind than
use them to refute. Now it seems ridiculous to me to give you advice, but
I want to tell you what I heard. When I was taking a walk one of the men
who was leaving your discussion came up to me (someone who has a
high opinion of himself for wisdom and is one of those clever people who
write speeches for the law courts) and he said, Crito, aren't you a disciple
of these wise men? Heavens no, I said—there was such a crowd that I
was unable to hear, even though I stood quite close. And yet, he said, it
was worth hearing. What was it? I asked. You would have heard men e
conversing who are the wisest of the present day in this kind of argument.
And I said, what did they show you? Nothing else, said he, than the sort
of thing one can hear from such people at any time—chattering and making
a worthless fuss about matters of no consequence. (These are his approxi-
mate words.) But surely, I said, philosophy is a charming thing. Charming,
my innocent friend? he said—why it is of no value whatsoever! And if 305
you had been present, I think you would have been embarrassed on your
friend's account, he acted so strangely in his willingness to put himself at
the disposal of men who care nothing about what they say, but just snatch
at every word. And these men, as I was just saying, are among the most
influential people of the present day. But the fact is, Crito, he said, that
both the activity itself and the men who engage in it are worthless and

30. Omitting *to sophon* at a1.

31. *Olympian* I.1.

b ridiculous. Now as far as I am concerned, Socrates, the man is wrong to
criticize the activity and so is anyone else who does so. But to be willing
to argue with such people in front of a large crowd does seem to me
worthy of reproach.

Socrates: Crito, men like these are very strange. Still, I don't yet know
what to say in return. What sort of man was this who came up and attacked
philosophy? Was he one of those clever persons who contend in the law
courts, an orator? Or was he one of those who equip such men for battle,
a writer of the speeches which the orators use?

c Crito: He was certainly not an orator, no indeed. Nor do I think he has
ever appeared in court. But they say he understands the business—very
much so—and that he is a clever man and can compose clever speeches.

Socrates: Now I understand—it was about this sort of person that I was
just going to speak myself. These are the persons, Crito, whom Prodicus
describes as occupying the no-man's-land between the philosopher and
the statesman. They think that they are the wisest of men, and that they
not only are but also seem to be so in the eyes of a great many, so that
d no one else keeps them from enjoying universal esteem except the followers
of philosophy. Therefore, they think that if they place these persons in the
position of appearing to be worth nothing, then victory in the contest for
the reputation of wisdom will be indisputably and immediately theirs,
and in the eyes of all. They think they really are the wisest, and whenever
they are cut short in private conversation, they attribute this to Euthydemus
and his crew. They regard themselves as very wise, and reasonably so,
since they think they are not only pretty well up in philosophy but also
e in politics. Yes, their conceit of wisdom is quite natural because they think
they have as much of each as they need; and, keeping clear of both risk
and conflict, they reap the fruits of wisdom.

Crito: And so, Socrates, do you think there is anything in what they say?
For surely it can't be denied that their argument has a certain plausibility.

306 Socrates: Plausibility is just what it does have, Crito, rather than truth.
It is no easy matter to persuade them that a man or anything else which
is between two things and partakes of both is worse than one and better
than the other in the case where one of the things is good and the other
evil; and that in the case where it partakes of two distinct goods, it is
worse than either of them with respect to the end for which each of the
two (of which it is composed) is useful. It is only in the case where the
b thing in the middle partakes of two distinct evils that it is better than
either of those of which it has a share. Now if philosophy is a good, and
so is the activity of a statesman (and each has a different end), and those
partaking of both are in between, then these men are talking nonsense,
since they are inferior to both. If one is good and the other bad, then they
are better than the practitioners of the latter and worse than those of the
former; while if both are bad, there is some truth in what they say, but
c otherwise none at all. I don't suppose they would agree that both [philoso-
phy and politics] are bad, nor that one is bad and the other good. The fact

of the matter is that, while partaking of both, they are inferior to both with respect to the object for which either politics or philosophy is of value; and that whereas they are actually in the third place, they want to be regarded as being in the first. However, we ought to forgive them their ambition and not feel angry, although we still ought to see these men for what they are. After all, we ought to admire every man who says anything sensible, and who labors bravely in its pursuit. d

Crito: All the same, Socrates, as I keep telling you, I am in doubt about what I ought to do with my sons. The younger one is still quite small, but Critobulus is at an age when he needs someone who will do him good. Now whenever I am in your company your presence has the effect of leading me to think it madness to have taken such pains about my children in various other ways, such as marrying to make sure that they would be e of noble birth on the mother's side, and making money so that they would be as well off as possible, and then to give no thought to their education. But on the other hand, whenever I take a look at any of those persons who set up to educate men, I am amazed; and every last one of them strikes me as utterly grotesque, to speak frankly between ourselves. So 307 the result is that I cannot see how I am to persuade the boy to take up philosophy.

Socrates: My dear Crito, don't you realize that in every pursuit most of the practitioners are paltry and of no account whereas the serious men are few and beyond price? For instance, doesn't gymnastics strike you as a fine thing? And money making and rhetoric and the art of the general?

Crito: Yes, of course they do.

Socrates: Well then, in each of these cases don't you notice that the b majority give a laughable performance of their respective tasks?

Crito: Yes indeed—you are speaking the exact truth.

Socrates: And just because this is so, do you intend to run away from all these pursuits and entrust your son to none of them?

Crito: No, this would not be reasonable, Socrates.

Socrates: Then don't do what you ought not to, Crito, but pay no attention to the practitioners of philosophy, whether good or bad. Rather give serious consideration to the thing itself: if it seems to you negligible, c then turn everyone from it, not just your sons. But if it seems to you to be what I think it is, then take heart, pursue it, practice it, both you and yours, as the proverb says.

# PROTAGORAS

*This is the dramatic masterpiece among Plato's 'Socratic' dialogues. It depicts Socrates debating the great sophist Protagoras, with Hippias and Prodicus, two other very famous sophists, in active attendance. An excited flock of students and admirers looks on. Plato gives us deep and sympathetic portraits of both his principal speakers—and neither comes off unscathed.*

*A sophist is an educator. Protagoras offers to teach young men 'sound deliberation' and the 'art of citizenship'—in other words, as Socrates puts it, human 'virtue', what makes someone an outstandingly good person. But can this really be taught? Is virtue—as it ought to be if it* can *be taught—an expertise, a rationally based way of understanding, deliberating about and deciding things for the best? Socrates doubts that virtue can be taught at all, and all the more that Protagoras can teach it. Protagoras is committed to holding that it can be—by him—and he expounds an extremely attractive myth about the original establishment of human societies to show how there is room for him to do it. But he is also deeply cautious in the practice of his educator's art—almost his first words in the dialogue are a long oration on the importance to a sophist of caution as he offers himself publicly as the teacher of a city's youth. Can he then be bold enough to answer Socrates' questions about human virtue in such a way as to articulate an account that will sustain his claims to teach it? In the protracted dialectical exchange that follows, Protagoras distinguishes several virtues, all parts of that human virtue that he teaches, and insists, against Socrates' urging, that not all of these (in particular, not courage) are to be thought of as knowledge or wisdom. That, after all, is the popular view of the matter—so, in his caution, Protagoras sticks with that, or tries to, to the bitter end, resisting as long as he can Socrates' elaborate efforts to show that courage, too, like the rest of virtue, is nothing but wisdom. But if Protagoras is right, how can virtue in general, and courage in particular, be the sort of rationally based expertise that it has to be if it can be taught? It appears that Protagoras would have done better to follow his own convictions about virtue—that all of it is teachable—riding roughshod over popular opinion where necessary to show how all the parts of human virtue are wisdom or knowledge. In fact, Socrates shows himself to be much more an ally of Protagoras on the question of the nature of human virtue than at first appears. He is deeply committed, more deeply indeed than Protagoras, to Protagoras' initial claim that virtue is a rationally based expertise at deliberation and decision. But how, then, can he have been right to doubt whether virtue is teachable? Aren't all rationally based*

*expertises acquired by teaching? (In reflecting on this question, readers will want to consult also the* Meno.*)*

*Thus both speakers get their comeuppance—Socrates for denying that virtue is teachable, Protagoras for denying that it is wisdom. The whole matter has to be rethought. At the end, we are sent back to the beginning, to go over the old ground once more, as Socrates himself has just done in retelling the events of the day to his unnamed friend and to us readers. One thing has been established, though—precisely what Socrates set out to discover in accompanying his friend Hippocrates to Callias' house to confront Protagoras: even if virtue* can *be taught, no one should entrust himself to Protagoras to learn it, since he does not even have a coherent view of what it is.*

*This Socrates, like that of* Gorgias, *has more substantial theoretical commitments than the Socrates of other 'Socratic' dialogues. He does not limit himself to examining the opinions of others, but argues, as something he is committed to, however revisably, that all virtue is one, namely a single knowledge, that acting against one's own convictions—'weakness of will'—is impossible, and that our 'salvation in life' depends upon an 'art of measurement' that will overcome the power of appearance and get us to act rightly always. The dialogue invites us to ponder these theses, to work out for ourselves Socrates' reasons for holding to them—and to question whether he is right to do so.*

*J.M.C.*

FRIEND: Where have you just come from, Socrates? No, don't tell me. 309
It's pretty obvious that you've been hunting the ripe and ready Alcibiades.[1] Well, I saw him just the other day, and he is certainly still a beautiful man—and just between the two of us, 'man' is the proper word, Socrates: his beard is already filling out.

SOCRATES: Well, what of it? I thought you were an admirer of Homer, b
who says that youth is most charming when the beard is first blooming[2]—which is just the stage Alcibiades is at.

FRIEND: So what's up? Were you just with him? And how is the young man disposed towards you?

SOCRATES: Pretty well, I think, especially today, since he rallied to my side and said a great many things to support me.[3] You're right, of course: I *was* just with him. But there's something really strange I want to tell you

Translated by Stanley Lombardo and Karen Bell.

1. Alcibiades (c. 450–404 B.C.), Athenian general, noted in his youth for his beauty and intellectual promise. See his encomium of Socrates in *Symposium* 215a ff. for more details on their relationship, as Plato understood it.

2. *Iliad* xxiv.348; *Odyssey* x.279.

3. See below, 336b and 347b.

about. Although we were together, I didn't pay him any mind; in fact, I forgot all about him most of the time.

c Friend: How could anything like that have happened to the two of you? You surely haven't met someone else more beautiful, at least not in this city.

Socrates: Much more beautiful.

Friend: What are you saying? A citizen or a foreigner?

Socrates: A foreigner.

Friend: From where?

Socrates: Abdera.

Friend: And this foreigner seems to you more beautiful than the son of Clinias?

Socrates: How could superlative wisdom not seem surpassingly beautiful?

Friend: What! Have you been in the company of some wise man, Socrates?

d Socrates: The wisest man alive, if you think the wisest man is—Protagoras.

Friend: What are you saying? Is Protagoras in town?

Socrates: And has been for two days.

Friend: And you've just now come from being with him?

310 Socrates: That's right, and took part in quite a long conversation.

Friend: Well, sit right down, if you're free now, and tell us all about it. Let the boy make room for you here.

Socrates: By all means. I'd count it a favor if you'd listen.

Friend: And vice versa, if you'd tell us.

Socrates: That would make it a double favor then. Well, here's the story.

b This morning just before daybreak, while it was still dark, Hippocrates,[4] son of Apollodorus and Phason's brother, banged on my door with his stick, and when it was opened for him he barged right in and yelled in that voice of his, "Socrates, are you awake or asleep?"

Recognizing his voice, I said, "Is that Hippocrates? No bad news, I hope."

"Nothing but good news," he said.

"I'd like to hear it," I said. "What brings you here at such an hour?"

"Protagoras has arrived," he said, standing next to me.

"Day before yesterday," I said. "Did you just find out?"

c "Yes! Just last evening." As he said this he felt around for the bed and sat at my feet and continued: "That's right, late yesterday evening, after I got back from Oenoë. My slave Satyrus had run away from me. I meant to tell you that I was going after him, but something else came up and made me forget. After I got back and we had eaten dinner and were about to get some rest, *then* my brother tells me Protagoras has arrived. I was
d getting ready to come right over to see you even then, until I realized it was just too late at night. But as soon as I had slept some and wasn't dead-tired any more, I got up and came over here right away."

4. This Hippocrates is known to us only from this one dialogue.

Recognizing his fighting spirit and his excitement, I asked him: "So what's it to you? Has Protagoras done anything wrong to you?"

He laughed and said, "You bet he has, Socrates. He has a monopoly on wisdom and won't give me any."

″But look," I said, "if you meet his price he'll make you wise too."

″If only it were as simple as that," he said, "I'd bankrupt myself and e
my friends too. But that's why I'm coming to you, so you will talk to him for me. I'm too young myself, and besides, I've never even seen Protagoras or heard him speak. I was still just a child the last time he was in town. He's such a celebrity, Socrates, and everyone says he's a terribly clever 311
speaker. Why don't we walk over now, to be sure to catch him in? I've heard he's staying with Callias, son of Hipponicus. Come on, let's go."

"Let's not go there just yet," I said. "It's too early. Why don't we go out here into the courtyard and stroll around until it's light? Then we can go. Protagoras spends most of his time indoors, so don't worry; we're likely to catch him in."

So we got up and walked around the courtyard. I wanted to see what b
Hippocrates was made of, so I started to examine him with a few questions. "Tell me, Hippocrates," I said. "You're trying to get access to Protagoras, prepared to pay him a cash fee for his services to you. But what is he, and what do you expect to become? I mean, suppose you had your mind set on going to your namesake, Hippocrates of Cos, the famous physician, to c
pay him a fee for his services to you, and if someone asked you what this Hippocrates is that you were going to pay him, what would you say?"

"I would say a physician," he said.

"And what would you expect to become?"

"A physician."

"And if you had a mind to go to Polyclitus of Argos or Phidias of Athens to pay them a fee, and if somebody were to ask you what kind of professionals you had in mind paying, what would you say?"

"I would say sculptors."

"And what would you expect to become?"

"A sculptor, obviously."

″All right," I said. "Here we are, you and I, on our way to Protagoras, d
prepared to pay him cash as a fee on your behalf, spending our own money, and if that's not enough to persuade him, our friends' money as well. Suppose someone notices our enthusiasm and asks us: 'Tell me, Socrates and Hippocrates, what is your idea in paying Protagoras? What e
is he?' What would we say to him? What other name do we hear in reference to Protagoras? Phidias is called a sculptor and Homer a poet. What do we hear Protagoras called?"

"A sophist is what they call him, anyway, Socrates."

"Then it is as a sophist that we are going to pay him?"

"Yes."

″And if somebody asks you what you expect to become in going to 312
Protagoras?"

He blushed in response—there was just enough daylight now to show him up—and said, "If this is at all like the previous cases, then, obviously, to become a sophist."

"What? You? Wouldn't you be ashamed to present yourself to the Greek world as a sophist?"

"Yes, I would, Socrates, to be perfectly honest."

"Well, look, Hippocrates, maybe this isn't the sort of education you
b expect to get from Protagoras. Maybe you expect to get the kind of lessons
you got from your grammar instructor or music teacher or wrestling coach.
You didn't get from them technical instruction to become a professional,
but a general education suitable for a gentleman."

"That's it exactly! That's just the sort of education you get from Protagoras."

"Then do you know what you are about to do now, or does it escape you?" I said.

"What do you mean?"

c "That you are about to hand over your soul for treatment to a man who
is, as you say, a sophist. As to what exactly a sophist is, I would be
surprised if you really knew. And yet, if you are ignorant of this, you
don't know whether you are entrusting your soul to something good
or bad."

"But I think I do know," he said.

"Then tell me what you think a sophist is."

"I think," he said, "that, as the name suggests, he is someone who has an understanding of wise things."

d "Well, you could say the same thing about painters and carpenters, that
they understand wise things. But if someone asked us 'wise in what re-
spect?' we would probably answer, for painters, 'wise as far as making
images is concerned,' and so on for the other cases. And if someone asked,
'What about sophists? What wise things do they understand?'—what
would we answer? What are they expert at making?"

"What else, Socrates, should we say a sophist is expert at than making people clever speakers?"

"Our answer would then be true, but not sufficient, for it requires another
e question: On what subject does the sophist make you a clever speaker?
For example, a lyre-player makes you a clever speaker on his subject of
expertise, the lyre. Right?"

"Yes."

"All right then. On what subject does a sophist make you a clever speaker?"

"It's clear that it's the same subject that he understands."

"Likely enough. And what is this subject that the sophist understands and makes his student understand?"

"By God," he said, "I really don't know what to say."

313 I went on to my next point: "Do you see what kind of danger you are
about to put your soul in? If you had to entrust your body to someone

and risk its becoming healthy or ill, you would consider carefully whether
you should entrust it or not, and you would confer with your family and
friends for days on end. But when it comes to something you value more
than your body, namely your soul, and when everything concerning b
whether you do well or ill in your life depends on whether it becomes
worthy or worthless, I don't see you getting together with your father or
brother or a single one of your friends to consider whether or not to entrust
your soul to this recently arrived foreigner. No, you hear about him in
the evening—right?—and the next morning, here you are, not to talk about
whether it's a good idea to entrust yourself to him or not, but ready to
spend your own money and your friends' as well, as if you had thought
it all through already and, no matter what, you had to be with Protagoras, c
a man whom you admit you don't know and have never conversed with,
and whom you call a sophist although you obviously have no idea what
this sophist is to whom you are about to entrust yourself."

"I guess so, Socrates, from what you say."

"Am I right, then, Hippocrates, that a sophist is a kind of merchant who
peddles provisions upon which the soul is nourished? That's what he
seems like to me."

"But what is the soul nourished on, Socrates?"

"Teachings, I would say. And watch, or the sophist might deceive us d
in advertising what he sells, the way merchants who market food for the
body do. In general, those who market provisions don't know what is
good or bad for the body—they just recommend everything they sell—
nor do those who buy (unless one happens to be a trainer or doctor). In
the same way, those who take their teachings from town to town and sell
them wholesale or retail to anybody who wants them recommend all their
products, but I wouldn't be surprised, my friend, if some of these people
did not know which of their products are beneficial and which detrimental e
to the soul. Likewise those who buy from them, unless one happens to be
a physician of the soul. So if you are a knowledgeable consumer, you can
buy teachings safely from Protagoras or anyone else. But if you're not,
please don't risk what is most dear to you on a roll of the dice, for there 314
is a far greater risk in buying teachings than in buying food. When you
buy food and drink from the merchant you can take each item back home
from the store in its own container and before you ingest it into your body
you can lay it all out and call in an expert for consultation as to what
should be eaten or drunk and what not, and how much and when. So b
there's not much risk in your purchase. But you cannot carry teachings
away in a separate container. You put down your money and take the
teaching away in your soul by having learned it, and off you go, either
helped or injured. Anyway, these are the questions we should look into,
with the help of our elders. You and I are still a little too young to get to
the bottom of such a great matter. Well, let's do what we had started out
to do and go hear this man; and after we have heard him, we can talk
with some others also. Protagoras isn't the only one there. There's Hippias c

of Elis too, and also Prodicus of Ceos, I believe. And many others as well, wise men all."

Having agreed on this, we set out. When we got to the doorway we stood there discussing some point which had come up along the road and which we didn't want to leave unsettled before we went in. So we were standing there in the doorway discussing it until we reached an agreement,
d and I think the doorman, a eunuch, overheard us. He must have been annoyed with all the traffic of sophists in and out of the house, because when we knocked he opened the door, took one look at us and said, "Ha! More sophists! He's busy." Then he slammed the door in our faces with both hands as hard as he could. We knocked again, and he answered through the locked door, "Didn't you hear me say he's busy?" "My good
e man," I said, "we haven't come to see Callias, and we are not sophists. Calm down. We want to see Protagoras. That's why we've come. So please announce us." Eventually he opened the door for us.

When we went in we found Protagoras walking in the portico flanked by two groups. On one side were Callias, son of Hipponicus, and his
315 brother on his mother's side, Paralus, son of Pericles, and Charmides,[5] son of Glaucon. On the other side were Pericles' other son, Xanthippus, Philippides, son of Philomelus, and Antimoerus of Mende, Protagoras' star pupil who is studying professionally to become a sophist. Following behind and trying to listen to what was being said were a group of what seemed to be mostly foreigners, men whom Protagoras collects from the
b various cities he travels through. He enchants them with his voice like Orpheus, and they follow the sound of his voice in a trance. There were some locals also in this chorus, whose dance simply delighted me when I saw how beautifully they took care never to get in Protagoras' way. When he turned around with his flanking groups, the audience to the rear would split into two in a very orderly way and then circle around to either side and form up again behind him. It was quite lovely.

c And then I perceived (as Homer[6] says) Hippias of Elis, on a high seat in the other side of the colonnade. Seated on benches around him were Eryximachus,[7] son of Acumenus, Phaedrus of Myrrhinus, Andron, son of Androtion, a number of Elians and a few other foreigners. They seemed to be asking Hippias questions on astronomy and physics, and he, from his high seat, was answering each of their questions point by point.

d And not only that, but I saw Tantalus too, for Prodicus of Ceos was also in town. He was in a room which Hipponicus had formerly used for storage, but because of the number of visitors Callias had cleared it out

5. For Charmides (d. 403 B.C.), see the *Charmides* and its Introductory Note.

6. *Odyssey* xi.601. Socrates' reference below to "seeing Tantalus" is another quotation from the same passage, in which Odysseus reports what he saw in his descent into the underworld.

7. Eryximachus is a doctor; he appears in Plato's *Symposium*, as does his friend Phaedrus, on whom see also the dialogue *Phaedrus*.

and made it into a guest room. Prodicus was still in bed and looked to be
bundled up in a pile of sheepskin fleeces and blankets. Seated on couches
next to him were Pausanias[8] from Cerames, and with Pausanias a fairly e
young boy, well-bred I would say, and certainly good-looking. I think I
heard his name is Agathon, and I wouldn't be surprised if he were Pausan-
ias' young love. So this boy was there, and the two Adeimantuses,[9] sons
of Cepis and Leucolophides, and there seemed to be some others. What
they were talking about I couldn't tell from outside, even though I really 316
wanted to hear Prodicus, a man who in my opinion is godlike in his
universal knowledge. But his voice is so deep that it set up a reverberation
in the room that blurred what was being said.

We had just arrived when along came Alcibiades the Beautiful (as you
call him, and I'm not arguing) and Critias son of Callaeschrus.[10] So when
we were inside and had spent a little more time looking at everything, b
we went up to Protagoras, and I said, "Protagoras, Hippocrates here and
I have come to see you."

"Do you want to talk with me alone or with others present?" he said.

"It doesn't make any difference to us," I said. "Listen to what we've come for, and decide for yourself."

"Well, then, what have you come for?" he asked.

"Hippocrates is from here, a son of Apollodorus and a member of a
great and well-to-do family. His own natural ability ranks him with the
best of anyone his age. It's my impression that he wants to be a man of c
respect in the city, and he thinks this is most likely to happen if he associates
himself with you. So now you must decide. Should we discuss this alone
or in the presence of others?"

"Your discretion on my behalf is appropriate, Socrates. Caution is in
order for a foreigner who goes into the great cities and tries to persuade
the best of the young men in them to abandon their associations with d
others, relatives and acquaintances, young and old alike, and to associate
with him instead on the grounds that they will be improved by this associa-
tion. Jealousy, hostility, and intrigue on a large scale are aroused by such
activity. Now, I maintain that the sophist's art is an ancient one, but that
the men who practiced it in ancient times, fearing the odium attached to
it, disguised it, masking it sometimes as poetry, as Homer and Hesiod
and Simonides did, or as mystery religions and prophecy, witness Orpheus
and Musaeus, and occasionally, I've noticed, even as athletics, as with e
Iccus of Tarentum and, in our own time, Herodicus of Selymbria (originally
of Megara), as great a sophist as any. Your own Agathocles, a great sophist,
used music as a front, as did Pythoclides of Ceos, and many others. All 317

8. Pausanias and Agathon are among those who give speeches in praise of love in the *Symposium*.

9. The first of these is unknown, the second was later an Athenian general in the Peloponnesian War.

10. For Critias (c. 460–403) see the *Charmides* and its Introductory Note.

of them, as I say, used these various arts as screens out of fear of ill will.
And this is where I part company with them all, for I do not believe that
they accomplished their end; I believe they failed, in fact, to conceal from
the powerful men in the cities the true purpose of their disguises. The
b masses, needless to say, perceive nothing, but merely sing the tune their
leaders announce. Now, for a runaway not to succeed in running away,
but to be caught in the open, is sheer folly from the start and inevitably
makes men even more hostile than they were before, for on top of every-
thing else they perceive him as a real rogue. So I have come down the
completely opposite road. I admit that I am a sophist and that I educate
c men, and I consider this admission to be a better precaution than denial.
And I have given thought to other precautions as well, so as to avoid,
God willing, suffering any ill from admitting I am a sophist. I have been
in the profession many years now, and I'm old enough to be the father of
any of you here. So, if you do have a request, it would give me the
greatest pleasure by far to deliver my lecture in the presence of everyone
in the house."

d It looked to me that he wanted to show off in front of Prodicus and
Hippias, and to bask in glory because we had come as his admirers, so
I said, "Well, why don't we call Prodicus and Hippias over, and their
companions, so that they can listen to us?"

"By all means!" said Protagoras.

"Then you want to make this a general session and have everyone take
seats for a discussion?" Callias proposed this, and it seemed like the only
thing to do. We were all overjoyed at the prospect of listening to wise
men, and we laid hold of the benches and couches ourselves and arranged
e them over by Hippias, since that's where the benches were already. Mean-
while Callias and Alcibiades had gotten Prodicus up and brought him
over with his group.

When we had all taken our seats, Protagoras said, "Now, then, Socrates,
since these gentlemen also are present, would you please say what it was
you brought up to me a little while ago on the young man's behalf."

318 "Well, Protagoras," I said, "as to why we have come, I'll begin as I did
before. Hippocrates here has gotten to the point where he wants to be
your student, and, quite naturally, he would like to know what he will
get out of it if he does study with you. That's really all we have to say."

Protagoras took it from there and said, "Young man, this is what you
will get if you study with me: The very day you start, you will go home
b a better man, and the same thing will happen the day after. Every day,
day after day, you will get better and better."

When I heard this I said, "What you're saying, Protagoras, isn't very
surprising, but quite likely. Why, even you, though you are so old and
wise, would get better if someone taught you something you didn't happen
to know already. But what if the situation were a little different, and
Hippocrates here all of a sudden changed his mind and set his heart on
c studying with this young fellow who has just come into town, Zeuxippus

of Heraclea, and came to him, as he now comes to you, and heard from
him the very same thing as from you—that each day he spent with him
he would become better and make progress. If Hippocrates asked him in
what way he would become better, and toward what he would be making
progress, Zeuxippus would say at painting. And if he were studying with
Orthagoras of Thebes and he heard from him the same thing as he hears
from you and asked him in what he would be getting better every day he
studied with him, Orthagoras would say at flute-playing. It is in this way d
that you must tell me and the young man on whose behalf I am asking
the answer to this question: If Hippocrates studies with Protagoras, exactly
how will he go away a better man and in what will he make progress
each and every day he spends with you?"

Protagoras heard me out and then said, "You put your question well,
Socrates, and I am only too glad to answer those who pose questions well.
If Hippocrates comes to me he will not experience what he would if he
studied with some other sophist. The others abuse young men, steering e
them back again, against their will, into subjects the likes of which they
have escaped from at school, teaching them arithmetic, astronomy, geome-
try, music, and poetry"—at this point he gave Hippias a significant look—
"but if he comes to me he will learn only what he has come for. What I
teach is sound deliberation, both in domestic matters—how best to manage 319
one's household, and in public affairs—how to realize one's maximum
potential for success in political debate and action."

"Am I following what you are saying?" I asked. "You appear to be
talking about the art of citizenship, and to be promising to make men
good citizens."

"This is exactly what I claim, Socrates."

"Well, this is truly an admirable technique you have developed, if indeed
you have. There is no point in my saying to you anything other than b
exactly what I think. The truth is, Protagoras, I have never thought that
this could be taught, but when you say it can be, I can't very well doubt
it. It's only right that I explain where I got the idea that this is not teachable,
not something that can be imparted from one human being to another. I
maintain, along with the rest of the Greek world, that the Athenians are
wise. And I observe that when we convene in the Assembly and the city
has to take some action on a building project, we send for builders to
advise us; if it has to do with the construction of ships, we send for
shipwrights; and so forth for everything that is considered learnable and c
teachable. But if anyone else, a person not regarded as a craftsman, tries
to advise them, no matter how handsome and rich and well-born he might
be, they just don't accept him. They laugh at him and shout him down
until he either gives up trying to speak and steps down himself, or the
archer-police remove him forcibly by order of the board. This is how they
proceed in matters which they consider technical. But when it is a matter d
of deliberating on city management, anyone can stand up and advise them,
carpenter, blacksmith, shoemaker, merchant, ship-captain, rich man, poor

man, well-born, low-born—it doesn't matter—and nobody blasts him for
presuming to give counsel without any prior training under a teacher. The
e reason for this is clear: They do not think that this can be taught. Public
life aside, the same principle holds also in private life, where the wisest
and best of our citizens are unable to transmit to others the virtues that
they possess. Look at Pericles,[11] the father of these young men here. He
320 gave them a superb education in everything that teachers can teach, but
as for what he himself is really wise in, he neither teaches them that himself
nor has anyone else teach them either, and his sons have to browse like
stray sacred cattle and pick up virtue on their own wherever they might
find it. Take a good look at Clinias, the younger brother of Alcibiades
here. When Pericles became his guardian he was afraid that he would be
corrupted, no less, by Alcibiades. So he separated them and placed Clinias
in Ariphron's house and tried to educate him there. Six months later he
b gave him back to Alcibiades because he couldn't do anything with him.
I could mention a great many more, men who are good themselves but have
never succeeded in making anyone else better, whether family members or
total strangers. Looking at these things, Protagoras, I just don't think that
virtue can be taught. But when I hear what you have to say, I waver; I
think there must be something in what you are talking about. I consider
you to be a person of enormous experience who has learned much from
others and thought through a great many things for himself. So if you can
clarify for us how virtue is teachable, please don't begrudge us your explanation."

c "I wouldn't think of begrudging you an explanation, Socrates," he replied.
"But would you rather that I explain by telling you a story, as an
older man to a younger audience, or by developing an argument?"

The consensus was that he should proceed in whichever way he wished.
"I think it would be more pleasant," he said, "if I told you a story.

d "There once was a time when the gods existed but mortal races did not.
When the time came for their appointed genesis, the gods molded them
inside the earth, blending together earth and fire and various compounds
of earth and fire. When they were ready to bring them to light the gods
put Prometheus and Epimetheus in charge of decking them out and assigning
to each its appropriate powers and abilities.

"Epimetheus begged Prometheus for the privilege of assigning the abilities
himself. 'When I've completed the distribution,' he said, 'you can
inspect it.' Prometheus agreed, and Epimetheus started distributing abilities.

e "To some he assigned strength without quickness; the weaker ones he
made quick. Some he armed; others he left unarmed but devised for them
321 some other means for preserving themselves. He compensated for small
size by issuing wings for flight or an underground habitat. Size was itself
a safeguard for those he made large. And so on down the line, balancing

11. The great Athenian statesman and general (c. 495–429).

his distribution, making adjustments, and taking precautions against the possible extinction of any of the races.

"After supplying them with defenses against mutual destruction, he
b devised for them protection against the weather. He clothed them with thick pelts and tough hides capable of warding off winter storms, effective against heat, and serving also as built-in, natural bedding when they went to sleep. He also shod them, some with hooves, others with thick pads of bloodless skin. Then he provided them with various forms of nourishment, plants for some, fruit from trees for others, roots for still others. And there were some to whom he gave the consumption of other animals as their sustenance. To some he gave the capacity for few births; to others, ravaged by the former, he gave the capacity for multiple births, and so ensured the survival of their kind.

c "But Epimetheus was not very wise, and he absentmindedly used up all the powers and abilities on the nonreasoning animals; he was left with the human race, completely unequipped. While he was floundering about at a loss, Prometheus arrived to inspect the distribution and saw that while the other animals were well provided with everything, the human race was naked, unshod, unbedded, and unarmed, and it was already the day on which all of them, human beings included, were destined to emerge
d from the earth into the light. It was then that Prometheus, desperate to find some means of survival for the human race, stole from Hephaestus and Athena wisdom in the practical arts together with fire (without which this kind of wisdom is effectively useless) and gave them outright to the human race. The wisdom it acquired was for staying alive; wisdom for living together in society, political wisdom, it did not acquire, because that was in the keeping of Zeus. Prometheus no longer had free access to the high citadel that is the house of Zeus, and besides this, the guards there were
e terrifying. But he did sneak into the building that Athena and Hephaestus shared to practice their arts, and he stole from Hephaestus the art of fire
322 and from Athena her arts, and he gave them to the human race. And it is from this origin that the resources human beings needed to stay alive came into being. Later, the story goes, Prometheus was charged with theft, all on account of Epimetheus.

"It is because humans had a share of the divine dispensation that they alone among animals worshipped the gods, with whom they had a kind of kinship, and erected altars and sacred images. It wasn't long before they were articulating speech and words and had invented houses, clothes,
b shoes, and blankets, and were nourished by food from the earth. Thus equipped, human beings at first lived in scattered isolation; there were no cities. They were being destroyed by wild beasts because they were weaker in every way, and although their technology was adequate to obtain food, it was deficient when it came to fighting wild animals. This was because they did not yet possess the art of politics, of which the art of war is a part. They did indeed try to band together and survive by founding cities. The outcome when they did so was that they wronged each other, because

c they did not possess the art of politics, and so they would scatter and
again be destroyed. Zeus was afraid that our whole race might be wiped
out, so he sent Hermes to bring justice and a sense of shame to humans,
so that there would be order within cities and bonds of friendship to unite
them. Hermes asked Zeus how he should distribute shame and justice to
humans. 'Should I distribute them as the other arts were? This is how the
others were distributed: one person practicing the art of medicine suffices
for many ordinary people; and so forth with the other practitioners. Should
d I establish justice and shame among humans in this way, or distribute it
to all?' 'To all,' said Zeus, 'and let all have a share. For cities would never
come to be if only a few possessed these, as is the case with the other arts.
And establish this law as coming from me: Death to him who cannot
partake of shame and justice, for he is a pestilence to the city.'

"And so it is, Socrates, that when the Athenians (and others as well)
are debating architectural excellence, or the virtue proper to any other
professional specialty, they think that only a few individuals have the right
e to advise them, and they do not accept advice from anyone outside these
select few. You've made this point yourself, and with good reason, I might
add. But when the debate involves political excellence, which must proceed
323 entirely from justice and temperance, they accept advice from anyone, and
with good reason, for they think that this particular virtue, political or
civic virtue, is shared by all, or there wouldn't be any cities. This must be
the explanation for it, Socrates.

"And so you won't think you've been deceived, consider this as further
evidence for the universal belief that all humans have a share of justice
and the rest of civic virtue. In the other arts, as you have said, if someone
claims to be a good flute-player or whatever, but is not, people laugh at
b him or get angry with him, and his family comes round and remonstrates
with him as if he were mad. But when it comes to justice or any other
social virtue, even if they know someone is unjust, if that person publicly
confesses the truth about himself, they will call this truthfulness madness,
whereas in the previous case they would have called it a sense of decency.
c They will say that everyone ought to claim to be just, whether they are
or not, and that it is madness not to pretend to justice, since one must
have some trace of it or not be human.

"This, then, is my first point: It is reasonable to admit everyone as an
adviser on this virtue, on the grounds that everyone has some share of it.
Next I will attempt to show that people do *not* regard this virtue as natural
or self-generated, but as something taught and carefully developed in
those in whom it is developed.

d "In the case of evils that men universally regard as afflictions due to
nature or bad luck, no one ever gets angry with anyone so afflicted or
reproves, admonishes, punishes, or tries to correct them. We simply pity
them. No one in his right mind would try to do anything like this to
someone who is ugly, for example, or scrawny or weak. The reason is, I
assume, that they know that these things happen to people as a natural

process or by chance, both these ills and their opposites. But in the case
of the good things that accrue to men through practice and training and e
teaching, if someone does not possess these goods but rather their corres-
ponding evils, he finds himself the object of anger, punishment, and re-
proof. Among these evils are injustice, impiety, and in general everything 324
that is opposed to civic virtue. Offenses in this area are always met with
anger and reproof, and the reason is clearly that this virtue is regarded as
something acquired through practice and teaching. The key, Socrates, to
the true significance of punishment lies in the fact that human beings
consider virtue to be something acquired through training. For no one b
punishes a wrong-doer in consideration of the simple fact that he has done
wrong, unless one is exercising the mindless vindictiveness of a beast.
Reasonable punishment is not vengeance for a past wrong—for one cannot
undo what has been done—but is undertaken with a view to the future,
to deter both the wrong-doer and whoever sees him being punished from c
repeating the crime. This attitude towards punishment as deterrence im-
plies that virtue is learned, and this is the attitude of all those who seek
requital in public or in private. All human beings seek requital from and
punish those who they think have wronged them, and the Athenians, your
fellow citizens, especially do so. Therefore, by my argument, the Athenians
are among those who think that virtue is acquired and taught. So it is
with good reason that your fellow citizens accept a blacksmith's or a
cobbler's advice in political affairs. And they do think that virtue is acquired d
and taught. It appears to me that both these propositions have been suffi-
ciently proved, Socrates.

"Now, on to your remaining difficulty, the problem you raise about
good men teaching their sons everything that can be taught and making
them wise in these subjects, but not making them better than anyone else
in the particular virtue in which they themselves excel. On this subject,
Socrates, I will abandon story for argument. Consider this: Does there or e
does there not exist one thing which all citizens must have for there to be
a city? Here and nowhere else lies the solution to your problem. For if
such a thing exists, and this one thing is not the art of the carpenter, the
blacksmith, or the potter, but justice, and temperance, and piety—what I 325
may collectively term the virtue of a man, and if this is the thing which
everyone should share in and with which every man should act whenever
he wants to learn anything or do anything, but should not act without it,
and if we should instruct and punish those who do not share in it, man, b
woman, and child, until their punishment makes them better, and should
exile from our cities or execute whoever doesn't respond to punishment
and instruction; if this is the case, if such is the nature of this thing, and
good men give their sons an education in everything but this, then we
have to be amazed at how strangely our good men behave. For we have
shown that they regard this thing as teachable both in private and public
life. Since it is something that can be taught and nurtured, is it possible
that they have their sons taught everything in which there is no death

penalty for not understanding it, but when their children are faced with
c the death penalty or exile if they fail to learn virtue and be nurtured in it—
and not only death but confiscation of property and, practically speaking,
complete familial catastrophe—do you think they do not have them taught
this or give them all the attention possible? We must think that they
do, Socrates.

"Starting when they are little children and continuing as long as they
d live, they teach them and correct them. As soon as a child understands
what is said to him, the nurse, mother, tutor, and the father himself fight
for him to be as good as he possibly can, seizing on every action and word
to teach him and show him that this is just, that is unjust, this is noble,
that is ugly, this is pious, that is impious, he should do this, he should
not do that. If he obeys willingly, fine; if not, they straighten him out with
threats and blows as if he were a twisted, bent piece of wood. After this
e they send him to school and tell his teachers to pay more attention to his
good conduct than to his grammar or music lessons. The teachers pay
attention to these things, and when the children have learned their letters
and are getting to understand writing as well as the spoken language,
they are given the works of good poets to read at their desks and have to
326 learn them by heart, works that contain numerous exhortations, many
passages describing in glowing terms good men of old, so that the child
is inspired to imitate them and become like them. In a similar vein, the
music teachers too foster in their young pupils a sense of moral decency
and restraint, and when they learn to play the lyre they are taught the
b works of still more good poets, the lyric and choral poets. The teachers
arrange the scores and drill the rhythms and scales into the children's
souls, so that they become gentler, and their speech and movements become
more rhythmical and harmonious. For all of human life requires a high
degree of rhythm and harmony. On top of all this, they send their children
to an athletic trainer so that they may have sound bodies in the service
c of their now fit minds and will not be forced to cowardice in war or other
activities through physical deficiencies.

"This is what the most able, i.e., the richest, do. Their sons start going
d to school at the earliest age and quit at the latest age. And when they quit
school, the city in turn compels them to learn the laws and to model their
lives on them. They are not to act as they please. An analogy might be
drawn from the practice of writing-teachers, who sketch the letters faintly
with a pen in workbooks for their beginning students and have them write
the letters over the patterns they have drawn. In the same way the city
has drawn up laws invented by the great lawgivers in the past and compels
them to govern and be governed by them. She punishes anyone who goes
beyond these laws, and the term for this punishment in your city and
e others is, because it is a corrective legal action, 'correction.'

"When so much care and attention is paid to virtue, Socrates, both in public and private, are you still puzzled about virtue being teachable? The wonder would be if it were not teachable.

"Why, then, do many sons of good fathers never amount to anything?
I want you to understand this too, and in fact it's no great wonder, if what
I've just been saying is true about virtue being something in which no one 327
can be a layman if there is to be a city. For if what I am saying is true—
and nothing could be more true: Pick any other pursuit or study and reflect
upon it. Suppose, for instance, there could be no city unless we were all
flute-players, each to the best of his ability, and everybody were teaching
everybody else this art in public and private and reprimanding the poor
players and doing all this unstintingly, just as now no one begrudges or b
conceals his expertise in what is just and lawful as he does his other
professional expertise. For it is to our collective advantage that we each
possess justice and virtue, and so we all gladly tell and teach each other
what is just and lawful. Well, if we all had the same eagerness and generos-
ity in teaching each other flute-playing, do you think, Socrates, that the
sons of good flute-players would be more likely to be good flute-players
than the sons of poor flute-players? I don't think so at all. When a son
happened to be naturally disposed toward flute-playing, he would progress c
and become famous; otherwise, he would remain obscure. In many cases
the son of a good player would turn out to be a poor one, and the son of
a poor player would turn out to be good. But as flute-players, they would
all turn out to be capable when compared with ordinary people who had
never studied the flute. Likewise you must regard the most unjust person
ever reared in a human society under law as a paragon of justice compared d
with people lacking education and lawcourts and the pervasive pressure
to cultivate virtue, savages such as the playwright Pherecrates brought on
stage at last year's Lenaean festival. There's no doubt that if you found
yourself among such people, as did the misanthropes in that play's chorus,
you would be delighted to meet up with the likes of Eurybatus and e
Phrynondas[12] and would sorely miss the immorality of the people here.
As it is, Socrates, you affect delicate sensibilities, because everyone here
is a teacher of virtue, to the best of his ability, and you can't see a single
one. You might as well look for a teacher of Greek; you wouldn't find a 328
single one of those either. Nor would you be any more successful if you
asked who could teach the sons of our craftsmen the very arts which they
of course learned from their fathers, to the extent that their fathers were
competent, and their friends in the trade. It would be difficult to produce
someone who could continue their education, whereas it would be easy
to find a teacher for the totally unskilled. It is the same with virtue and
everything else. If there is someone who is the least bit more advanced in
virtue than ourselves, he is to be cherished.

"I consider myself to be such a person, uniquely qualified to assist others b
in becoming noble and good, and worth the fee that I charge and even
more, so much so that even my students agree. This is why I charge
according to the following system: a student pays the full price only if he c

12. Historical persons, conventional paradigms of viciousness.

wishes to; otherwise, he goes into a temple, states under oath how much
he thinks my lessons are worth, and pays that amount.

"There you have it, Socrates, my mythic story and my argument that
virtue is teachable and that the Athenians consider it to be so, and that it
is no wonder that worthless sons are born of good fathers and good sons
of worthless fathers, since even the sons of Polyclitus, of the same age as
d Paralus and Xanthippus here, are nothing compared to their father, and
the same is true for the sons of other artisans. But it is not fair to accuse
these two yet; there is still hope for them, for they are young."

Protagoras ended his virtuoso performance here and stopped speaking.
I was entranced and just looked at him for a long time as if he were going
to say more. I was still eager to listen, but when I perceived that he had
really stopped I pulled myself together and, looking at Hippocrates, barely
e managed to say: "Son of Apollodorus, how grateful I am to you for suggest-
ing that I come here. It is marvelous to have heard from Protagoras what
I have just heard. Formerly I used to think there was no human practice
by which the good become good, but now I am persuaded that there is,
except for one small obstacle which Protagoras will explain away, I am
329 sure, since he has explained away so much already. Now, you could hear
a speech similar to this from Pericles or some other competent orator if
you happened to be present when one of them was speaking on this
subject. But try asking one of them something, and they will be as unable
to answer your question or to ask one of their own as a book would be.
Question the least little thing in their speeches and they will go on like
bronze bowls that keep ringing for a long time after they have been struck
and prolong the sound indefinitely unless you dampen them. That's how
b these orators are: Ask them one little question and they're off on another
long-distance speech. But Protagoras here, while perfectly capable of deliv-
ering a beautiful long speech, as we have just seen, is also able to reply
briefly when questioned, and to put a question and then wait for and
accept the answer—rare accomplishments these.

"Now, then, Protagoras, I need one little thing, and then I'll have it all,
if you'll just answer me this. You say that virtue is teachable, and if there's
c any human being who could persuade me of this, it's you. But there is
one thing you said that troubles me, and maybe you can satisfy my soul.
You said that Zeus sent justice and a sense of shame to the human race.
You also said, at many points in your speech, that justice and temperance[13]
and piety and all these things were somehow collectively one thing: virtue.
d Could you go through this again and be more precise? Is virtue a single
thing, with justice and temperance and piety its parts, or are the things I
have just listed all names for a single entity? This is what still intrigues me."

13. The Greek term is *sōphrosunē*. For Plato, *sōphrosunē* was a complex virtue involving self-control and moderation of the physical appetites, as well as good sense and self-knowledge.

"This is an easy question to answer, Socrates," he replied. "Virtue is a single entity, and the things you are asking about are its parts."

"Parts as in the parts of a face: mouth, nose, eyes, and ears? Or parts as in the parts of gold, where there is no difference, except for size, between parts or between the parts and the whole?"

"In the former sense, I would think, Socrates: as the parts of the face e
are to the whole face."

"Then tell me this. Do some people have one part and some another, or do you necessarily have all the parts if you have any one of them?"

"By no means, since many are courageous but unjust, and many again are just but not wise."

"Then these also are parts of virtue—wisdom and courage?"

"Absolutely, and wisdom is the greatest part." 330

"Is each of them different from the others?"

"Yes."

"And does each also have its own unique power or function? In the analogy to the parts of the face, the eye is not like the ear, nor is its power or function the same, and this applies to the other parts as well: They are not like each other in power or function or in any other way. Is this how
it is with the parts of virtue? Are they unlike each other, both in themselves b
and in their powers or functions? Is it not clear that this must be the case, if our analogy is valid?"

"Yes, it must be the case, Socrates."

"Then, none of the other parts of virtue is like knowledge, or like justice, or like courage, or like temperance, or like piety?"

"Agreed."

"Come on, then, and let's consider together what kind of thing each of c
these is. Here's a good first question: Is justice a thing or is it not a thing? I think it is. What about you?"

"I think so too."

"The next step, then: Suppose someone asked us, 'Protagoras and Socrates, tell me about this thing you just named, justice. Is it itself just or unjust?' My answer would be that it is just. What would your verdict be? The same as mine or different?"

"The same."

"Then justice is the sort of thing that is just. That's how I would reply to the questioner. Would you also?"

"Yes."

"Suppose he questioned us further: 'Do you also say there is a thing d
called piety?' We would say we do, right?"

"Right."

" 'Do you say this too is a thing?' We would say we do, wouldn't we?"

"That too."

" 'Do you say that this thing is by nature impious or pious?' Myself, I
would be irritated with this question and would say, 'Quiet, man! How e

could anything else be pious if piety itself is not?' What about you? "Wouldn't you answer in the same way?"

"Absolutely."

"Suppose he asked us next: 'Then what about what you said a little while ago? Maybe I didn't hear you right. I thought you two said that the parts of virtue are related to each other in such a way that no part resembles
331 any other.' I would answer, 'There's nothing wrong with your hearing, except that I didn't say that. Protagoras here said that in answer to my question.' If he were to say then, 'Is he telling the truth, Protagoras? Are you the one who says that one part of virtue is not like another? Is this dictum yours?' how would you answer him?"

"I would have to admit it, Socrates."

"Well, if we accept that, Protagoras, what are we going to say if he asks next, 'Isn't piety the sort of thing that is just, and isn't justice the sort of thing that is pious? Or is it the sort of thing which is not pious? Is piety
b the sort of thing to be not just, and therefore unjust, and justice impious?' What are we going to say to him? Personally, I would answer both that justice is pious and piety is just, and I would give the same answer on your behalf (if you would let me), that justice is the same thing as piety, or very similar, and, most emphatically, that justice is the same kind of thing as piety, and piety as justice. What do you think? Will you veto this answer, or are you in agreement with it?"

c "It's not so absolutely clear a case to me, Socrates, as to make me grant that justice is pious, and piety just. It seems a distinction is in order here. But what's the difference? If you want, we'll let justice be pious and piety just."

"Don't do that to me! It's not this 'if you want' or 'if you agree' business I want to test. It's you and me I want to put on the line, and I think the argument will be tested best if we take the 'if' out."

d "Well, all right. Justice does have some resemblance to piety. Anything at all resembles any other thing in some way. There is a certain way in which white resembles black, and hard soft, and so on for all the usual polar opposites. And the things we were just talking about as having
e different powers or functions and not being the same kinds of things—the parts of the face—these resemble each other in a certain way, and they are like each other. So by this method you could prove, if you wanted to, that these things too are all like each other. But it's not right to call things similar because they resemble each other in some way, however slight, or to call them dissimilar because there is some slight point of dissimilarity."

I was taken aback, and said to him, "Do you consider the relationship between justice and piety really only one of some slight similarity?"

332 "Not exactly, but not what you seem to think it is either."

"Well, then, since you seem to me to be annoyed about this, let's drop it and consider another point that you raised. Do you acknowledge that there is such a thing as folly?"

"Yes."

"And diametrically opposed to it is wisdom?"

"It seems so to me."

"And when people act correctly and beneficially, do they seem to you to be acting temperately or the opposite?"

"Temperately."

"Then it is by temperance that they act temperately?"

"It has to be." b

"And those who do not act correctly act foolishly, and those who act this way do not act temperately?"

"I agree."

"And the opposite of acting foolishly is acting temperately?"

"Yes."

"And foolish behavior is done with folly, just as temperate behavior is done with temperance?"

"Yes."

"And if something is done with strength, it is done strongly; if done with weakness, it is done weakly?"

"I agree."

"If it is done with quickness, it is done quickly, and if with slowness, slowly?"

"Yes."

"So whatever is done in a certain way is done from a certain quality, c and whatever is done in the opposite way is done from its opposite?"

"I agree."

"Then let's go. Is there such a thing as beauty?"

"Yes."

"Is there any opposite to it except ugliness?"

"There is not."

"Is there such a thing as goodness?"

"There is."

"Is there any opposite to it except badness?"

"There is not."

"Is there such a thing as a shrill tone?"

"There is."

"Is there any opposite to it except a deep tone?"

"No, there is not."

"So for each thing that can have an opposite, there is only one opposite, d not many?"

"I agree."

"Suppose we now count up our points of agreement. Have we agreed that there is one opposite for one thing, and no more?"

"Yes, we have."

"And that what is done in an opposite way is done from opposites?"

"Yes."

"And have we agreed that what is done foolishly is done in a way opposite to what is done temperately?"

"We have."

"And that what is done temperately is done from temperance, and what is done foolishly is done from folly?"

"Agreed."

e "And it's true that if it's done in an opposite way, it is done from an opposite?"

"Yes."

"And one is done from temperance, the other from folly?"

"Yes."

"In an opposite way?"

"Yes."

"From opposites?"

"Yes."

"Then folly is the opposite of temperance?"

"It seems so."

"Well, then, do you recall our previous agreement that folly is the opposite of wisdom?"

"Yes, I do."

"And that one thing has only one opposite?"

"Of course."

333 "Then which of these propositions should we abandon, Protagoras? The proposition that for one thing there is only one opposite, or the one stating that wisdom is different from temperance and that each is a part of virtue, and that in addition to being distinct they are dissimilar, both in themselves and in their powers or functions, just like the parts of a face? Which should we abandon? The two statements are dissonant; they
b are not in harmony with one another. How could they be, if there is one and only one opposite for each single thing, while folly, which is a single thing, evidently has two opposites, wisdom and temperance? Isn't this how it stands, Protagoras?"

He assented, although very grudgingly, and I continued:

"Wouldn't that make wisdom and temperance one thing? And a little while ago it looked like justice and piety were nearly the same thing. Come on, Protagoras, we can't quit now, not before we've tied up these loose ends. So, does someone who acts unjustly seem temperate to you in that he acts unjustly?"

c "I would be ashamed to say that is so, Socrates, although many people do say it."

"Then shall I address myself to them or to you?"

"If you like, why don't you debate the majority position first?"

"It makes no difference to me, provided you give the answers, whether it is your own opinion or not. I am primarily interested in testing the argument, although it may happen both that the questioner, myself, and my respondent wind up being tested."

At first Protagoras played it coy, claiming the argument was too hard d
for him to handle, but after a while he consented to answer.

"Let's start all over, then," I said, "with this question. Do you think some people are being sensible[14] when they act unjustly?"

"Let us grant it," he said.

"And by 'sensible' you mean having good sense?"

"Yes."

"And having good sense means having good judgment in acting unjustly?"

"Granted."

"Whether or not they get good results by acting unjustly?"

"Only if they get good results."

"Are you saying, then, that there are things that are good?"

"I am."

"These good things constitute what is advantageous to people?"

"Good God, yes! And even if they are not advantageous to people, I e
can still call them good."

I could see that Protagoras was really worked up and struggling by now and that he was dead set against answering any more. Accordingly, I carefully modified the tone of my questions.

"Do you mean things that are advantageous to no human being, Protago- 334
ras, or things that are of no advantage whatsoever? Do you call things like that good?"

"Of course not," he said. "But I know of many things that are disadvantageous to humans, foods and drinks and drugs and many other things, and some that are advantageous; some that are neither to humans but one or the other to horses; some that are advantageous only to cattle; some only to dogs; some that are advantageous to none of these but are so to trees;
some that are good for the roots of a tree, but bad for its shoots, such as b
manure, which is good spread on the roots of any plant but absolutely ruinous if applied to the new stems and branches. Or take olive oil, which is extremely bad for all plants and is the worst enemy of the hair of all animals except humans, for whose hair it is beneficial, as it is for the rest of their bodies. But the good is such a multifaceted and variable thing
that, in the case of oil, it is good for the external parts of the human body c
but very bad for the internal parts, which is why doctors universally forbid their sick patients to use oil in their diets except for the least bit, just enough to dispel a prepared meal's unappetizing aroma."

When the applause for this speech of Protagoras had died down, I said,
"Protagoras, I tend to be a forgetful sort of person, and if someone speaks d
to me at length I tend to forget the subject of the speech. Now, if I happened to be hard of hearing and you were going to converse with me, you would think you had better speak louder to me than to others. In the same way,

14. The Greek term is *sōphronein*, a verb related to the noun *sōphrosunē* (temperance).

now that you have fallen in with a forgetful person, you will have to cut your answers short if I am going to follow you."

"How short are you ordering me to make my answers? Shorter than necessary?"

"By no means."

"As long as necessary?"

e "Yes."

"Then should I answer at the length I think necessary or the length you think necessary?"

"Well, I have heard, anyway, that when you are instructing someone
335 in a certain subject, you are able to speak at length, if you choose, and never get off the subject, or to speak so briefly that no one could be briefer. So if you are going to converse with me, please use the latter form of expression, brevity."

"Socrates, I have had verbal contests with many people, and if I were to accede to your request and do as my opponent demanded, I would not be thought superior to anyone, nor would Protagoras be a name to be reckoned with among the Greeks."

b I could see he was uncomfortable with his previous answers and that he would no longer be willing to go on answering in a dialectical discussion, so I considered my work with him to be finished, and I said so: "You know, Protagoras, I'm not exactly pleased myself that our session has not gone the way you think it should. But if you are ever willing to hold a discussion in such a way that I can follow, I will participate in it with you. People say of you—and you say yourself—that you are able to discuss
c things speaking either at length or briefly. You are a wise man, after all. But I don't have the ability to make those long speeches: I only wish I did. It was up to you, who have the ability to do both, to make this concession, so that the discussion could have had a chance. But since you're not willing, and I'm somewhat busy and unable to stay for your extended speeches—there's somewhere I have to go—I'll be leaving now. Although I'm sure it would be rather nice to hear them."

d Having had my say, I stood up to go, but as I was getting up, Callias took hold of my wrist with his right hand and grasped this cloak I'm wearing with his left. "We won't let you go, Socrates," he said. "Our discussions wouldn't be the same without you, so please stay here with us, I beg you. There's nothing I would rather hear than you and Protagoras in debate. Please do us all a favor."

e By now I was on my feet and really making as if to leave. I said, "Son of Hipponicus, I have always admired your love of wisdom, and I especially honor and hold it dear now. I would be more than willing to gratify you, if you would ask me something that is possible for me. As it is, you might as well be asking me to keep up with Crison of Himera, the champion sprinter, or to compete with the distance runners, or match strides with the couriers who run all day long. What could I say, except that I want it
336 for myself more than you want it for me, but I simply cannot match these

runners' pace, and if you want to watch me running in the same race with
Crison, you must ask him to slow down to my speed, since I am not able
to run fast, but he is able to run slowly. So if you have your heart set on
hearing me and Protagoras, you must ask him to answer my questions
now as he did at the outset—briefly. If he doesn't, what turn will our b
dialogue take? To me, the mutual exchange of a dialogue is something
quite distinct from a public address."

"But you see, Socrates, Protagoras has a point when he says that he
ought to be allowed, no less than you, to conduct the discussion as he
sees fit."

At this point Alcibiades jumped in and said: "You're not making sense,
Callias. Socrates admits that long speeches are beyond him and concedes c
to Protagoras on that score. But when it comes to dialectical discussion
and understanding the give and take of argument, I would be surprised
if he yields to anyone. Now, if Protagoras admits that he is Socrates' inferior
in dialectic, that should be enough for Socrates. But if he contests the point,
let him engage in a question-and-answer dialogue and not spin out a long
speech every time he answers, fending off the issues because he doesn't
want to be accountable, and going on and on until most of the listeners d
have forgotten what the question was about, although I guarantee you
Socrates won't forget, no matter how he jokes about his memory. So I
think that Socrates has a stronger case. Each of us ought to make clear his
own opinion."

After Alcibiades it was Critias, I think, who spoke next: "Well, Prodicus
and Hippias, it seems to be that Callias is very much on Protagoras' side, e
while Alcibiades as usual wants to be on the winning side of a good fight.
But there's no need for any of us to lend partisan support to either Socrates
or Protagoras. We should instead join in requesting them both not to break
up our meeting prematurely."

Prodicus spoke up next: "That's well said, Critias. Those who attend 337
discussions such as this ought to listen impartially, but not equally, to
both interlocutors. There is a distinction here. We ought to listen impartially
but not divide our attention equally: More should go to the wiser speaker
and less to the more unlearned. For my part, I think that the two of you b
ought to debate the issues, but dispense with eristics. Friends debate each
other on good terms; eristics are for enemies at odds. In this way our
meeting would take a most attractive turn, for you, the speakers, would
then most surely earn the good opinion, rather than the praise, of those
of us listening to you. For a good opinion is guilelessly inherent in the
souls of the listeners, but praise is all too often merely a deceitful verbal
expression. And then, too, we, your audience, would be most cheered, but c
not pleased, for to be cheered is to learn something, to participate in some
intellectual activity, and is a mental state; but to be pleased has to do with
eating or experiencing some other pleasure in one's body."

Prodicus' remarks were enthusiastically received by the majority of us,
and then the wise Hippias spoke: "Gentlemen, I regard all of you here

d present as kinsmen, intimates, and fellow citizens by nature, not by convention. For like is akin to like by nature, but convention, which tyrannizes the human race, often constrains us contrary to nature. Therefore it would be disgraceful for us to understand the nature of things and not—being as we are the wisest of the Greeks and gathered here together in this veritable hall of wisdom, in this greatest and most august house of the
e city itself—not, I say, produce anything worthy of all this dignity, but bicker with each other as if we were the dregs of society. I therefore implore and counsel you, Protagoras and Socrates, to be reconciled and to compromise, under our arbitration, as it were, on some middle course.
338 You, Socrates, must not insist on that precise, excessively brief form of discussion if it does not suit Protagoras, but rather allow free rein to the speeches, so that they might communicate to us more impressively and elegantly. And you, Protagoras, must not let out full sail in the wind and leave the land behind to disappear into the Sea of Rhetoric. Both of you
b must steer a middle course. So that's what you shall do, and take my advice and choose a referee or moderator or supervisor who will monitor for you the length of your speeches."

Everyone there thought this was a fine idea and gave it their approval. Callias said he wouldn't let me go, and they requested me to choose a moderator. I said it would be unseemly to choose someone to umpire our speeches. "If the person chosen is going to be our inferior, it is not right for an inferior to supervise his superiors. If he's our peer that's no good
c either, because he will do the same as we would and be superfluous. Choose someone who's our superior? I honestly think it's impossible for you to choose someone wiser than Protagoras. And if you choose someone who is not his superior but claim that he is, then you're insulting him. Protagoras is just not the insignificant sort of person for whom you appoint a supervisor. For myself, I don't care one way or another. But you have your heart set on this conference and these discussions proceeding, and
d if that's going to happen, this is what I want to do. If Protagoras is not willing to answer questions, let him ask them, and I will answer, and at the same time I will try to show him how I think the answerer ought to answer. When I've answered all the questions he wishes to ask, then it's his turn to be accountable to me in the same way. So if he doesn't seem ready and willing to answer the actual question asked, you and I will unite in urgently requesting him, as you have requested me, not to ruin
e our conference. This will not require any one supervisor, since you will all supervise together."

Everyone agreed this was the thing to do. Protagoras wanted no part of it, but he had to agree to ask questions, and when he had asked enough, to respond in turn with short answers.

339 So he began to ask questions something like this: "I consider, Socrates, that the greatest part of a man's education is to be in command of poetry, by which I mean the ability to understand the words of the poets, to know when a poem is correctly composed and when not, and to know how to

analyze a poem and to respond to questions about it. So my line of questioning now will still concern the subject of our present discussion, namely virtue, but translated into the sphere of poetry. Now, Simonides somewhere says to Scopas, the son of Creon of Thessaly:

> *For a man to become good truly is hard,* b
> *in hands and feet and mind foursquare,*
> *blamelessly built . . .*

Do you know this lyric ode, or shall I recite it all for you?"

I told him there was no need, for I knew the poem, and it happened to be one to which I had given especially careful attention.

"Good," he said. "So, do you think it's well made or not?"

"Very well made."

"And do you think it's well made if the poet contradicts himself?"

"No."

"Take a better look then." c

"As I've said, I'm already familiar enough with it."

"Then you must know that at some point later in the ode he says:

> *Nor is Pittacus' proverb in tune*
> *however wise a man he was.*
> *Hard it is to be good, he said.*

"You do recognize that both these things are said by the same person?"

"I do."

"Well, do you think that the latter is consistent with the former?"

"It seems so to me," I said (but as I said it I was afraid he had a point there). "Doesn't it seem so to you?"

"How can anyone who says both these things be consistent? First, he d asserts himself that it is hard for a man truly to become good, and then, a little further on in his poem he forgets and criticizes Pittacus for saying the same thing as he did, that it is hard for a man to be good, and refuses to accept from him the same thing that he himself said. And yet, when he criticizes him for saying the same thing as himself, he obviously criticizes himself as well, so either the earlier or the later must not be right."

Protagoras got a noisy round of applause for this speech. At first I felt e as if I had been hit by a good boxer. Everything went black and I was reeling from Protagoras' oratory and the others' clamor. Then, to tell you the truth, to stall for time to consider what the poet meant, I turned to Prodicus and, calling on him, "Prodicus," I said, "Simonides was from your hometown, wasn't he? It's your duty to come to the man's rescue, 340 so I don't mind calling for your help, just as Homer says Scamander called Simoïs to help him when he was besieged by Achilles:

*Dear brother, let's buck this hero's strength together.*[15]

So also do I summon your aid, lest to our dismay Protagoras destroy
b Simonides. But really, Prodicus, Simonides' rehabilitation does require your special art, by which you distinguish 'wanting' from 'desiring' and make all the other fine distinctions that you did just a while ago. So tell me if you agree with me, because it's not clear to me that Simonides does in fact contradict himself. Just give us your offhand opinion. Are becoming and being the same or different?"

"Good heavens, different."

"All right. Now, in the first passage, Simonides declared as his own opinion that it is hard for a man truly to become good."

c "That's right," Prodicus said.

"Then he criticizes Pittacus not for saying the same thing as himself, as Protagoras thinks, but for saying something different. Because Pittacus did not say that it is hard to *become* good, as Simonides said, but to *be* good. As Prodicus here says, being and becoming are not the same thing, Protago-
d ras. And if being is not the same as becoming, Simonides does not contradict himself. Perhaps Prodicus and many others might agree with Hesiod that it is difficult to become good:

*The gods put Goodness where we have to sweat*
*To get at her. But once you reach the top*
*She's as easy to have as she was hard at first.*"[16]

Prodicus applauded me when he heard this, but Protagoras said, "Your rehabilitation, Socrates, has a crippling error greater than the one you are correcting."

"Then I've done my work badly," I said, "and I am the ridiculous sort of physician whose cure is worse than the disease."

"That's exactly right," he said.

e "How so?" said I.

"The poet's ignorance would be monumental if he says the possession of virtue is so trivial when everyone agrees it is the hardest thing in the world."

Then I said, "By heaven, Prodicus' participation in our discussion
341 couldn't be more timely. It may well be, Protagoras, that Prodicus' wisdom is of ancient and divine origin, dating back to the time of Simonides or even earlier. But although your experience is very broad, it does not seem to extend to this branch of wisdom, which I have been schooled in as a pupil of Prodicus. And now it appears that you do not understand that Simonides may well have not conceived of the word 'hard' as you do. In

15. *Iliad* xxi.308.

16. *Works and Days* 289, 291–92.

much the same way Prodicus corrects me each time I use the word 'terrible'
to praise you or someone else, as, for example, 'Protagoras is a terribly b
wise man.' When I say that, he asks me if I am not ashamed to call good
things terrible. For terrible, he says, is bad. No one ever speaks of terrible
wealth, or terrible peace, or terrible well-being, but we do hear of terrible
disease, terrible war, and terrible poverty, 'terrible' here being 'bad.' So
perhaps the Ceans and Simonides conceived of 'hard' as 'bad' or something
else that you do not understand. Let's ask Prodicus. He's just the right
person to consult on Simonides' dialect. Prodicus, what did Simonides c
mean by 'hard'?"

"Bad."

"Then this is why he criticizes Pittacus for saying it is hard to be good,
just as if he had heard him say it is bad to be good. Right, Prodicus?"

"What else do you think Simonides meant, Socrates? He was censuring
Pittacus, a man from Lesbos brought up in a barbarous dialect, for not
distinguishing words correctly."

"Well, Protagoras, you hear Prodicus. Do you have anything to say d
in response?"

"You've got it all wrong, Prodicus," Protagoras said. "I am positive that
Simonides meant by 'hard' the same thing we do: not 'bad,' but whatever
is not easy and takes a lot of effort."

"Oh, but I think so too, Protagoras," I said. "This is what Simonides
meant, and Prodicus knows it. He was joking and thought he would test
your ability to defend your own statement. The best proof that Simonides e
did not mean that 'hard' is 'bad' is found in the very next phrase,
which says:

*God alone can have this privilege.*

He cannot very well mean that it is bad to be good if he then says that
God alone has this privilege. Prodicus would call Simonides a reprobate
for that and no Cean at all. But I would like to tell you what I think 342
Simonides' purpose is in this ode, if you would like to test my command
(to use your term) of poetry. If you'd rather, though, I'll listen to you."

Protagoras heard me out and said, "If you please, Socrates," and then
Prodicus, Hippias, and the others urged me on.

"All right, then," I said, "I will try to explain to you what I think this
poem is about. Philosophy, first of all, has its most ancient roots and is
most widespread among the Greeks in Crete and Lacedaemon, and those b
regions have the highest concentration of sophists in the world. But the
natives deny it and pretend to be ignorant in order to conceal the fact that
it is by their wisdom that they are the leaders of the Greek world, something
like those sophists Protagoras was talking about. Their public image is
that they owe their superiority to their brave fighting men, and their reason
for promoting this image is that if the real basis for their superiority were
discovered, i.e., wisdom, everyone else would start cultivating it. This is

top secret; not even the Spartanizing cults in the other cities know about
c it, and so you have all these people getting their ears mangled aping the
Spartans, lacing on leather gloves, exercising fanatically and wearing short
capes, as if Sparta's political power depended on these things. And when
the citizens in Sparta want some privacy to have free and open discussions
with their sophists, they pass alien acts against any Spartanizers and other
foreigners in town, and conceal their meetings from the rest of the world.
d And so that their young men won't unlearn what they are taught, they
do not permit any of them to travel to other cities (the Cretans don't either).
Crete and Sparta are places where there are not only men but women also
who take pride in their education. You know how to test the truth of my
contention that the Spartans have the best education in philosophy and
e debate? Pick any ordinary Spartan and talk with him for a while. At first
you will find he can barely hold up his end of the conversation, but at
some point he will pick his spot with deadly skill and shoot back a terse
remark you'll never forget, something that will make the person he's
talking with (in this case you) look like a child. Acute observers have
known this for a long time now: To be a Spartan is to be a philosopher
343 much more than to be an athlete. They know that to be able to say something
like that is the mark of a perfectly educated man. We're talking about men
like Thales of Miletus, Pittacus of Mytilene, Bias of Priene, our own Solon,
Cleobulus of Lindus, Myson of Chen, and, the seventh in the list, Chilon
of Sparta. All of these emulated, loved, and studied Spartan culture. You
b can see that distinctive kind of Spartan wisdom in their pithy, memorable
sayings, which they jointly dedicated as the first fruits of their wisdom to
Apollo in his temple at Delphi, inscribing there the maxims now on every-
one's lips: 'Know thyself' and 'Nothing in excess.'

"What is my point? That the characteristic style of ancient philosophy
c was laconic brevity. It was in this context that the saying of Pittacus—*It
is hard to be good*—was privately circulated with approval among the sages.
Then Simonides, ambitious for philosophical fame, saw that if he could
score a takedown against this saying, as if it were a famous wrestler, and
get the better of it, he would himself become famous in his own lifetime.
So he composed this poem as a deliberate attack against this maxim. That's
how it seems to me.

"Let's test my hypothesis together, to see whether what I say is true. If
d all the poet wanted to say was that it is hard to become good, then the
beginning of the poem would be crazy, for he inserted there an antithetical
particle.[17] It doesn't make any sense to insert this unless one supposes that
Simonides is addressing the Pittacus maxim as an opponent. Pittacus says
it is hard to be good; Simonides rebuts this by saying, 'No, but it is hard

17. The first line of Simonides' ode, "For a man to become good truly is hard," is in fact introduced with a contrasting particle, not translated here. Socrates does not quote the continuation (and the lines have not survived elsewhere), so we do not know what sort of contrast was intended.

for a man to become good, Pittacus, truly.' Notice that he does not say e
truly good; he is not talking about truth in the context of some things being truly good and other things being good but not truly so. This would create an impression of naivete very unlike Simonides. The position of 'truly' in the verse must be a case of hyperbaton. We have to approach this maxim of Pittacus by imagining him speaking and Simonides replying,
something like this: Pittacus: 'Gentlemen, it is hard to be good.' Simonides: 344
'What you say is not true, Pittacus, for it is not being but becoming good, in hands and feet and mind foursquare, blamelessly built—that is hard truly.' This way the insertion of the antithetical particle makes sense, and the 'truly' feels correct in its position at the end. Everything that comes after is evidence for this interpretation. The poem is full of details that
testify to its excellent composition; indeed, it is a lovely and exquisitely b
crafted piece, but it would take a long time to go through it from that point of view. Let's review instead the overall structure and intention of the ode, which is from beginning to end a refutation of Pittacus' maxim.

"A few lines later he states (imagine he is making a speech): 'To become
good truly is hard, and although it may be possible for a short period of c
time, to persist in that state and to be a good man, as you put it, Pittacus, is not humanly possible. God alone can have this privilege,

*But that man inevitably is bad*
*whom incapacitating misfortune throws down.*

" 'Whom does incapacitating misfortune throw down when it comes to, say, the command of a ship? Clearly not the ordinary passenger, who is always susceptible. You can't knock down someone already supine; you
can only knock down someone standing up and render him supine. In the d
same way, incapacitating misfortune would overthrow only someone who is capable, not the chronically incapable. A hurricane striking a pilot would incapacitate him, a bad season will do it to a farmer, and the same thing applies to a doctor. For the good is susceptible to becoming bad, as another poet testifies:

*The good man is at times bad, at times good.*

" 'But the bad is not susceptible to becoming bad; it must always be bad.
So that when incapacitating misfortune throws down a man who is capable, e
wise, and good, he must "inevitably be bad." You say, Pittacus, that it is hard to be good; in fact, to become good is hard, though possible, but to be good is impossible.

*Faring well, every man is good;*
*Bad, faring ill.*

" 'What does it mean to fare well in letters; what makes a man good at
345 them? Clearly, the learning of letters. What kind of faring well makes a
good doctor? Clearly, learning how to cure the sick. 'Bad, faring ill': who
could become a bad doctor? Clearly, someone who is, first, a doctor and,
second, a good doctor. He could in fact become a bad doctor, but we who
are medical laymen could never by faring ill become doctors or carpenters
b or any other kind of professional. And if one cannot become a doctor by
faring ill, clearly one cannot become a bad one either. In the same way a
good man may eventually become bad with the passage of time, or through
hardship, disease, or some other circumstance that involves the only real
kind of faring ill, which is the loss of knowledge. But the bad man can
never become bad, for he is so all the time. If he is to become bad, he must
c first become good. So the tenor of this part of the poem is that it is
impossible to be a good man and continue to be good, but possible for
one and the same person to become good and also bad, and those are best
for the longest time whom the gods love.'

"All this is directed at Pittacus, as the next few lines of the poem make even clearer:

*Therefore never shall I seek for the impossible,*
*cast away my life's lot on empty hope, a quixotic quest*
*for a blameless man among those who reap*
*the broad earth's fruit,*
d *but if I find him you will have my report.*

This is strong language, and he keeps up his attack on Pittacus' maxim throughout the poem:

*All who do no wrong willingly*
*I praise and love.*
*Necessity not even the gods resist.*

This is spoken to the same end. For Simonides was not so uneducated as
e to say that he praised all who did nothing bad willingly, as if there were
anyone who willingly did bad things. I am pretty sure that none of the
wise men thinks that any human being willingly makes a mistake or
willingly does anything wrong or bad. They know very well that anyone
who does anything wrong or bad does so involuntarily. So also Simonides,
346 who does not say that he praises those who willingly do nothing bad;
rather he applies the term 'willingly' to himself. He perceived that a good
man, an honorable man, often forces himself to love and praise someone
utterly different from himself, one's alienated father perhaps, or mother,
or country. Scoundrels in a similar situation are almost happy to see their
parents' or country's trouble and viciously point it out and denounce it
b so that their own dereliction of duty toward them will not be called into
question. They actually exaggerate their complaints and add gratuitous to

unavoidable hostility, whereas good men conceal the trouble and force themselves to give praise, and if they are angry because their parents or country wronged them, they calm themselves down and reconcile themselves to it, and they force themselves to love and praise their own people. I think that Simonides reflected that on more than one occasion he himself had eulogized some tyrant or other such person, not willingly but because c
he had to. So he is saying to Pittacus: 'Pittacus, it is not because I am an overcritical person that I am criticizing you, since,

*enough for me a man who is not bad*
*nor too intractable, who knows civic Right, a sound man.*
*I shall not blame him,*
*for I am not fond of blame.*
*Infinite the tribe of fools,'*

the implication being that a censorious person would have his hands full blaming them.

*'All is fair in which foul is not mixed.'*

The sense here is not that all is white in which black is not mixed, which d
would be ludicrous in many ways, but rather that he himself accepts without any objection what is in between. 'I do not seek,' he says,

*'for a blameless man among those who reap*
*the broad earth's fruit,*
*but if I find him you will have my report.'*

The meaning is that 'on those terms I will never praise anyone, but I am happy with an average man who does no wrong, since I willingly

*praise and love all'—*

—note the Lesbian dialect form of the verb 'praise,' since he is addressing e
Pittacus—

*'all who do no wrong'*

(this is where the pause should be, before 'willingly')

*'willingly*
*I praise and love*

but there are some whom I praise and love unwillingly. So if you spoke something even moderately reasonable and true, Pittacus, I would never

347 censure you. But the fact is that you have lied blatantly yet with verisimili-
tude about extremely important issues, and for that I do censure you.'

"And that, Prodicus and Protagoras," I concluded, "is what I think was
going through Simonides' mind when he composed this ode."

b Then Hippias said, "I am favorably impressed by your analysis of this
ode, Socrates. I have quite a nice talk on it myself, which I will present to
you if you wish."

"Yes, Hippias," Alcibiades said, "some other time, though. What should
be done now is what Socrates and Protagoras agreed upon, which is for
Socrates to answer any questions Protagoras may still have to ask, or if
he so chooses, to answer Socrates' questions."

c Then I said, "I leave it up to Protagoras, but if it's all right with him,
why don't we say good-bye to odes and poetry and get back to what I
first asked him, a question, Protagoras, which I would be glad to settle in
a joint investigation with you. Discussing poetry strikes me as no different
from the second-rate drinking parties of the agora crowd. These people,
largely uneducated and unable to entertain themselves over their wine by
d using their own voices to generate conversation, pay premium prices for
flute-girls and rely on the extraneous voice of the reed flute as background
music for their parties. But when well-educated gentlemen drink together,
you will not see girls playing the flute or the lyre or dancing, but a group
that knows how to get together without these childish frivolities, convers-
e ing civilly no matter how heavily they are drinking. Ours is such a group,
if indeed it consists of men such as most of us claim to be, and it should
require no extraneous voices, not even of poets, who cannot be questioned
on what they say. When a poet is brought up in a discussion, almost
everyone has a different opinion about what he means, and they wind up
arguing about something they can never finally decide. The best people
348 avoid such discussions and rely on their own powers of speech to entertain
themselves and test each other. These people should be our models. We
should put the poets aside and converse directly with each other, testing
the truth and our own ideas. If you have more questions to ask, I am ready
to answer them; or, if you prefer, you can render the same service to me,
and we can resume where we broke off and try to reach a conclusion."

b I went on in this vein, but Protagoras would not state clearly which
alternative he preferred. So Alcibiades looked over at Callias and said,
"Callias, do you think Protagoras is behaving well in not making it
clear whether he will participate in the discussion or not? I certainly
don't. He should either participate or say he is not going to, so we
will know how he stands, and Socrates, or whoever, can start a discussion
with someone else."

c It looked to me that Protagoras was embarrassed by Alcibiades' words,
not to mention the insistence of Callias and practically the whole company.
In the end he reluctantly brought himself to resume our dialogue and
indicated he was ready to be asked questions.

"Protagoras," I said, "I don't want you to think that my motive in talking with you is anything else than to take a good hard look at things that continually perplex me. I think that Homer said it all in the line,

*Going in tandem, one perceives before the other.*[18] d

Human beings are simply more resourceful this way in action, speech, and thought. If someone has a private perception, he immediately starts going around and looking until he finds somebody he can show it to and have it corroborated. And there is a particular reason why I would rather talk with you than anyone else: I think you are the best qualified to
investigate the sort of things that decent and respectable individuals ought e
to examine, and virtue especially. Who else but you? Not only do you consider yourself to be noble and good but, unlike others who are themselves decent and respectable individuals yet unable to make others so, you are not only good yourself but able to make others good as well, and you have so much self-confidence that instead of concealing this skill, as
others do, you advertise it openly to the whole Greek world, calling yourself 349
a sophist, highlighting yourself as a teacher of virtue, the first ever to have deemed it appropriate to charge a fee for this. How could I not solicit your help in a joint investigation of these questions? There is no way I could not.

"So right now I want you to remind me of some of the questions I first
asked, starting from the beginning. Then I want to proceed together to b
take a good hard look at some other questions. I believe the first question was this: Wisdom, temperance, courage, justice, and piety—are these five names for the same thing, or is there underlying each of these names a unique thing, a thing with its own power or function, each one unlike any
of the others? You said that they are not names for the same thing, that c
each of these names refers to a unique thing, and that all these are parts of virtue, not like the parts of gold, which are similar to each other and to the whole of which they are parts, but like the parts of a face, dissimilar to the whole of which they are parts and to each other, and each one having its own unique power or function. If this is still your view, say so; if it's changed in any way, make your new position clear, for I am certainly
not going to hold you accountable for what you said before if you want d
to say something at all different now. In fact, I wouldn't be surprised if you were just trying out something on me before."

"What I am saying to you, Socrates, is that all these are parts of virtue, and that while four of them are reasonably close to each other, courage is completely different from all the rest. The proof that what I am saying is true is that you will find many people who are extremely unjust, impious, intemperate, and ignorant, and yet exceptionally courageous."

18. *Iliad* x.224.

e “Hold it right there,” I said. “This is worth looking into. Would you say courageous men are confident, or something else?”

“Confident, yes, and ready for action where most men would be afraid.”

“Well, then, do you agree that virtue is something fine, and that you offer yourself as a teacher of it because it is fine?”

“The finest thing of all, unless I am quite out of my mind.”

“Then is part of it worthless and part of it fine, or all of it fine?”

“Surely it is all as fine as can be.”

350 “Do you know who dives confidently into wells?”

“Of course, divers.”

“Is this because they know what they are doing, or for some other reason?”

“Because they know what they are doing.”

“Who are confident in fighting from horseback? Riders or nonriders?”

“Riders.”

“And in fighting with shields? Shieldmen or nonshieldmen?”

“Shieldmen, and so on down the line, if that’s what you’re getting at. Those with the right kind of knowledge are always more confident than those without it, and a given individual is more confident after he acquires it than he was before.”

b “But haven’t you ever seen men lacking knowledge of all of these things yet confident in each of them?”

“I have, all too confident.”

“Is their confidence courage?”

“No, because courage would then be contemptible. These men are out of their minds.”

“Then what do you mean by courageous men? Aren’t they those who are confident?”

c “I still hold by that.”

“Then *these* men who are so confident turn out to be not courageous but mad? And, on the other side, the wisest are the most confident and the most confident are the most courageous? And the logical conclusion would be that wisdom is courage?”

“You are doing a poor job of remembering what I said when I answered your questions, Socrates. When I was asked if the courageous are confident, I agreed. I was not asked if the confident are courageous. If you had asked
d me that, I would have said, ‘Not all of them.’ You have nowhere shown that my assent to the proposition that the courageous are confident was in error. What you did show next was that knowledge increases one’s confidence and makes one more confident than those without knowledge. In consequence of this you conclude that courage and wisdom are the same thing. But by following this line of reasoning you could conclude that strength and wisdom are the same thing. First you would ask me if
e the strong are powerful, and I would say yes. Then, if those who know how to wrestle are more powerful than those who do not, and if individual wrestlers became more powerful after they learn than they were before.

Again I would say yes. After I had agreed to these things, it would be open to you to use precisely these points of agreement to prove that wisdom is strength. But nowhere in this process do I agree that the powerful are strong, only that the strong are powerful. Strength and power are not 351
the same thing. Power derives from knowledge and also from madness and passionate emotion. Strength comes from nature and proper nurture of the body. So also confidence and courage are not the same thing, with the consequence that the courageous are confident, but not all those who are confident are courageous. For confidence, like power, comes from skill (and from passionate emotion and madness as well); courage, from nature and the proper nurture of the soul."

"Would you say, Protagoras, that some people live well and others b
live badly?"

"Yes."

"But does it seem to you that a person lives well, if he lives distressed and in pain?"

"No, indeed."

"Now, if he completed his life, having lived pleasantly, does he not seem to you to have lived well?"

"It seems that way to me."

"So, then, to live pleasantly is good, and unpleasantly, bad?" c

"Yes, so long as he lived having taken pleasure in honorable things."

"What, Protagoras? Surely you don't, like most people, call some pleasant things bad and some painful things good? I mean, isn't a pleasant thing good just insofar as it is pleasant, that is, if it results in nothing other than pleasure; and, on the other hand, aren't painful things bad in the same way, just insofar as they are painful?"

"I don't know, Socrates, if I should answer as simply as you put the d
question—that everything pleasant is good and everything painful is bad. It seems to me to be safer to respond not merely with my present answer in mind but from the point of view of my life overall, that on the one hand, there are pleasurable things which are not good, and on the other hand, there are painful things which are not bad but some which are, and a third class which is neutral—neither bad nor good."

"You call pleasant things those which partake of pleasure or produce e
pleasure?"

"Certainly."

"So my question is this: Just insofar as things are pleasurable are they good? I am asking whether pleasure itself is not a good."

"Just as you always say, Socrates, let us inquire into this matter, and if your claim seems reasonable and it is established that pleasure and the good are the same, then we will come to agreement; otherwise we will disagree."

"Do you wish to lead this inquiry, or shall I?"

"It is fitting for you to lead, for it is you who brought up the idea."

"All right, will this help to make it clear? When someone evaluates a 352
man's health or other functions of the body through his appearance, he

looks at the face and extremities, and might say: 'Show me your chest and back too, so that I can make a better examination.' That's the kind of investigation I want to make. Having seen how you stand on the good and the pleasant, I need to say something like this to you: Come now,
b Protagoras, and reveal this about your mind: What do you think about knowledge? Do you go along with the majority or not? Most people think this way about it, that it is not a powerful thing, neither a leader nor a ruler. They do not think of it in that way at all; but rather in this way: while knowledge is often present in a man, what rules him is not knowledge but rather anything else—sometimes anger, sometimes pleasure, some-
c times pain, at other times love, often fear; they think of his knowledge as being utterly dragged around by all these other things as if it were a slave. Now, does the matter seem like that to you, or does it seem to you that knowledge is a fine thing capable of ruling a person, and if someone were to know what is good and bad, then he would not be forced by anything to act otherwise than knowledge dictates, and intelligence would be sufficient to save a person?"

"Not only does it seem just as you say, Socrates, but further, it would
d be shameful indeed for me above all people to say that wisdom and knowledge are anything but the most powerful forces in human activity."

"Right you are. You realize that most people aren't going to be convinced by us. They maintain that most people are unwilling to do what is best, even though they know what it is and are able to do it. And when I have asked them the reason for this, they say that those who act that way do
e so because they are overcome by pleasure or pain or are being ruled by one of the things I referred to just now."

"I think people say a lot of other things erroneously too, Socrates."

353 "Come with me, then, and let's try to persuade people and to teach them what is this experience which they call being overcome by pleasure, because of which they fail to do the best thing when they know what it is. For perhaps if we told them that what they were saying isn't true, but is demonstrably false, they would ask us: 'Protagoras and Socrates, if this is not the experience of being overcome by pleasure, but something other than that, what do you two say it is? Tell us.' "

"Socrates, why is it necessary for us to investigate the opinion of ordinary people, who will say whatever occurs to them?"

b "I think this will help us find out about courage, how it is related to the other parts of virtue. If you are willing to go along with what we agreed just now, that I will lead us toward what I think will turn out to be the best way to make things clear, then fine; if you are not willing, I will give it up."

"No, you are right; proceed as you have begun."

c "Going back, then; if they should ask us: 'We have been speaking of "being overcome by pleasure." What do you say this is?' I would reply to them this way: 'Listen. Protagoras and I will try to explain it to you. Do you hold, gentlemen, that this happens to you in circumstances like

these—you are often overcome by pleasant things like food or drink or
sex, and you do those things all the while knowing they are ruinous?'
They would say yes. Then you and I would ask them again: 'In what sense
do you call these things ruinous? Is it that each of them is pleasant in itself d
and produces immediate pleasure, or is it that later they bring about
diseases and poverty and many other things of that sort? Or even if it
doesn't bring about these things later, but gives only enjoyment, would
it still be a bad thing, just because it gives enjoyment in whatever way?'
Can we suppose then, Protagoras, that they would make any other answer
than that bad things are bad not because they bring about immediate
pleasure, but rather because of what happens later, disease and things
like that?"

"I think that is how most people would answer." e

" 'And in bringing about diseases and poverty, do they bring about
pain?' I think they would agree."

"Yes."

" 'Does it not seem to you, my good people, as Protagoras and I maintain,
that these things are bad on account of nothing other than the fact that 354
they result in pain and deprive us of other pleasures?' Would they agree?"

Protagoras concurred.

"Then again, suppose we were to ask them the opposite question: 'You
who say that some painful things are good, do you not say that such things
as athletics and military training and treatments by doctors such as cautery,
surgery, medicines, and starvation diet are good things even though pain-
ful?' Would they say so?"

"Yes."

" 'Would you call these things good for the reason that they bring about b
intense pain and suffering, or because they ultimately bring about health
and good condition of bodies and preservation of cities and power over
others and wealth?' Would they agree?"

"Yes."

" 'These things are good only because they result in pleasure and in the
relief and avoidance of pain? Or do you have some other criterion in view,
other than pleasure and pain, on the basis of which you would call these
things good?' They say no, I think." c

"And I would agree with you."

" 'So then you pursue pleasure as being good and avoid pain as bad?' "

"Yes."

" 'So this you regard as bad, pain, and pleasure, you regard as good,
since you call the very enjoying of something bad whenever it deprives
us of greater pleasures than it itself provides, or brings about greater pains d
than the very pleasures inherent in it? But if you call the very enjoying of
something bad for some other reason and with some other criterion in
view than the one I have suggested, you could tell us what it is; but you
won't be able to.' "

"I don't think they'll be able to either."

" 'And likewise concerning the actual state of being in pain? Do you
call the actual condition of being in pain good, whenever it relieves pains
e greater than the ones it contains or brings about greater pleasures than its
attendant pains? Now, if you are using some other criterion than the one
I have suggested, when you call the very condition of being pained good,
you can tell us what it is; but you won't be able to.' "

"Truly spoken."

"Now, again, gentlemen, if you asked me: 'Why are you going on so
much about this and in so much detail?' I would reply, forgive me. First
of all, it is not easy to show what it is that you call 'being overcome by
355 pleasure,' and then, it is upon this very point that all the arguments rest.
But even now it is still possible to withdraw, if you are able to say that
the good is anything other than pleasure or that the bad is anything other
than pain. Or is it enough for you to live life pleasantly without pain? If
it is enough, and you are not able to say anything else than that the good
and the bad are that which result in pleasure and pain, listen to this. For
I say to you that if this is so, your position will become absurd, when you
b say that frequently a man, knowing the bad to be bad, nevertheless does
that very thing, when he is able not to do it, having been driven and
overwhelmed by pleasure; and again when you say that a man knowing
the good is not willing to do it, on account of immediate pleasure, having
been overcome by it. Just how absurd this is will become very clear, if we
do not use so many names at the same time, 'pleasant' and 'painful,' 'good'
and 'bad'; but since these turned out to be only two things, let us instead
c call them by two names, first, 'good' and 'bad,' then later, 'pleasant' and
'painful.' On that basis, then, let us say that a man knowing bad things
to be bad, does them all the same. If then someone asks us: 'Why?' 'Having
been overcome,' we shall reply. 'By what?' he will ask us. We are no longer
able to say 'by pleasure,'—for it has taken on its other name, 'the good'
instead of 'pleasure'—so we will say and reply that 'he is overcome . . .'
'By what?' he will ask. 'By the good,' we will say, 'for heaven's sake!' If
d by chance the questioner is rude he might burst out laughing and say:
'What you're saying is ridiculous—someone does what is bad, knowing
that it is bad, when it is not necessary to do it, having been overcome by
the good. So,' he will say, 'within yourself, does the good outweigh the
bad or not?' We will clearly say in reply that it does not; for if it did, the
person who we say is overcome by pleasure would not have made any
mistake. 'In virtue of what,' he might say, 'does the good *outweigh* the bad
e or the bad the good? Only in that one is greater and one is smaller, or
more and less.' We could not help but agree. 'So clearly then' he will say,
'by "being overcome" you mean getting more bad things for the sake of
fewer good things.'[19] That settles that, then.

19. The Greek translated "for the sake of" here is *anti*: it might alternatively be translated "in exchange for."

"So let's now go back and apply the names 'the pleasant' and 'the painful' to these very same things. Now let us say that a man does what before we called 'bad' things and now shall call 'painful' ones, knowing they are painful 356
things, but being overcome by pleasant things, although it is clear that they do not outweigh them. But how else does pleasure outweigh pain, except in relative excess or deficiency? Isn't it a matter (to use other terms) of larger and smaller, more or fewer, greater or lesser degree?

"For if someone were to say: 'But Socrates, the immediate pleasure is very much different from the pleasant and the painful at a later time,' I would reply, 'They are not different in any other way than by pleasure b
and pain, for there is no other way that they could differ. Weighing is a good analogy; you put the pleasures together and the pains together, both the near and the remote, on the balance scale, and then say which of the two is more. For if you weigh pleasant things against pleasant, the greater and the more must always be taken; if painful things against painful, the fewer and the smaller. And if you weigh pleasant things against painful, and the painful is exceeded by the pleasant—whether the near by the remote or the remote by the near—you have to perform that action in which the pleasant prevails; on the other hand, if the pleasant is exceeded c
by the painful, you have to refrain from doing that. Does it seem any different to you, my friends?' I know that they would not say otherwise."

Protagoras assented.

"Since this is so, I will say to them: 'Answer me this: Do things of the same size appear to you larger when seen near at hand and smaller when seen from a distance, or not?' They would say they do. 'And similarly for thicknesses and pluralities? And equal sounds seem louder when near at hand, softer when farther away?' They would agree. 'If then our well- d
being depended upon this, doing and choosing large things, avoiding and not doing the small ones, what would we see as our salvation in life? Would it be the art of measurement or the power of appearance? While the power of appearance often makes us wander all over the place in confusion, often changing our minds about the same things and regretting our actions and choices with respect to things large and small, the art of measurement in contrast, would make the appearances lose their power e
by showing us the truth, would give us peace of mind firmly rooted in the truth and would save our life.' Therefore, would these men agree, with this in mind, that the art of measurement would save us, or some other art?"

"I agree, the art of measurement would."

"What if our salvation in life depended on our choices of odd and even, when the greater and the lesser had to be counted correctly, either the same kind against itself or one kind against the other, whether it be near or remote? 357
What then would save our life? Surely nothing other than knowledge, specifically some kind of measurement, since that is the art of the greater and the lesser? In fact, nothing other than arithmetic, since it's a question of the odd and even? Would these men agree with us or not?"

Protagoras thought they would agree.

"Well, then, my good people: Since it has turned out that our salvation
b in life depends on the right choice of pleasures and pains, be they more
or fewer, greater or lesser, farther or nearer, doesn't our salvation seem,
first of all, to be measurement, which is the study of relative excess and
deficiency and equality?"

"It must be."

"And since it is measurement, it must definitely be an art, and knowledge."

"They will agree."

"What exactly this art, this knowledge is, we can inquire into later;
that it is knowledge of some sort is enough for the demonstration which
c Protagoras and I have to give in order to answer the question you asked
us. You asked it, if you remember, when we were agreeing that nothing
was stronger or better than knowledge, which always prevails, whenever
it is present, over pleasure and everything else. At that point you said that
pleasure often rules even the man who knows; since we disagreed, you
went on to ask us this: 'Protagoras and Socrates, if this experience is not
d being overcome by pleasure, what is it then; what do you say it is? Tell
us.' If immediately we had said to you 'ignorance,' you might have laughed
at us, but if you laugh at us now, you will be laughing at yourselves. For
you agreed with us that those who make mistakes with regard to the
choice of pleasure and pain, in other words, with regard to good and bad,
do so because of a lack of knowledge, and not merely a lack of knowledge
e but a lack of that knowledge you agreed was measurement. And the
mistaken act done without knowledge you must know is one done from
ignorance. So this is what "being overcome by pleasure" is—ignorance in
the highest degree, and it is this which Protagoras and Prodicus and
Hippias claim to cure. But you, thinking it to be something other than
ignorance, do not go to sophists yourselves, nor do you send your children
to them for instruction, believing as you do that we are dealing with
something unteachable. By worrying about your money and not giving it
to them, you all do badly in both private and public life.'

358 "This is how we would have answered the many. Now, I ask you,
Hippias and Prodicus, as well as Protagoras—this is your conversation
also—to say whether you think what I say is true or false." They all thought
that what I said was marvelously true.

"So you agree that the pleasant is good, the painful bad. I beg indulgence
of Prodicus who distinguishes among words; for whether you call it 'pleas-
b ant' or 'delightful' or 'enjoyable,' or whatever way or manner you please
to name this sort of thing, my excellent Prodicus, please respond to the
intent of my question." Prodicus, laughing, agreed, as did the others.

"Well, then, men, what about this? Are not all actions leading toward living painlessly and pleasantly honorable and beneficial? And isn't honorable activity good and beneficial?"

They agreed.

"Then if the pleasant is the good, no one who knows or believes there c
is something else better than what he is doing, something possible, will go on doing what he had been doing when he could be doing what is better. To give in to oneself is nothing other than ignorance, and to control oneself is nothing other than wisdom."

They all agreed.

"Well, then, do you say that ignorance is to have a false belief and to be deceived about matters of importance?"

They all agreed on this.

"Now, no one goes willingly toward the bad or what he believes to be d
bad; neither is it in human nature, so it seems, to want to go toward what one believes to be bad instead of to the good. And when he is forced to choose between one of two bad things, no one will choose the greater if he is able to choose the lesser."

They agreed with all of that too.

"Well, then, is there something you call dread or fear? And I address this to you, Prodicus. I say that whether you call it fear or dread, it is an expectation of something bad."

Protagoras and Hippias thought that this was true of both dread and e
fear, but Prodicus thought it applied to dread, but not to fear.

"Well, it does not really matter, Prodicus. This is the point. If what I have said up to now is true, then would anyone be willing to go toward what he dreads, when he can go toward what he does not? Or is this impossible from what we have agreed? For it was agreed that what one fears one holds to be bad; no one goes toward those things which he holds to be bad, or chooses those things willingly."

They all agreed. 359

"Well, Prodicus and Hippias, with this established, let Protagoras defend for us the truth of his first answer. I don't mean his very first answer, for then he said that while there are five parts of virtue, none is like any other, but each one has its own unique power or function. I'm not talking about
this now, but about what he said later. For later he said that four of them b
are very similar to each other, but one differs very much from the others, namely courage. And he said that I would know this by the following evidence: 'You will find, Socrates, many people who are extremely impious, unjust, intemperate, and ignorant, and yet exceptionally courageous; by this you will recognize that courage differs very much from all the other parts of virtue.' I was very surprised at his answer then, and even more so now that I have gone over these things with you. I asked him then if
he said that the courageous were confident. And he said, 'Yes, and ready c
for action too.' Do you remember giving this answer?"

He said he did.

"Well, then, tell us, for what actions are the courageous ready? The same actions as the cowardly?"

"No."

"Different actions?"

"Yes."

"Do the cowardly go forward to things which inspire confidence, and the courageous toward things to be feared?"

"So it is said by most people."

d "Right, but I am not asking that. Rather, what do *you* say the courageous go boldly toward: toward things to be feared, believing them to be fearsome, or toward things not to be feared?"

"By what you have just said, the former is impossible."

"Right again; so, if our demonstration has been correct, then no one goes toward those things he considers to be fearsome, since not to be in control of oneself was found to be ignorance."

He agreed.

e "But all people, both the courageous and the cowardly, go toward that about which they are confident; both the cowardly and the courageous go toward the same things."

"But, Socrates, what the cowardly go toward is completely opposite to what the courageous go toward. For example, the courageous are willing to go to war, but the cowardly are not."

"Is going to war honorable or is it disgraceful?"

"Honorable."

"Then, if it is honorable, we have agreed before, it is also good, for we agreed that all honorable actions were good."

"Very true, and I always believed this."

360 "And rightly; but who would you say are not willing to go to war, war being honorable and good?"

"The cowardly."

"If a thing is noble and good, is it also pleasant?"

"That was definitely agreed upon."

"So, the cowardly, with full knowledge, are not willing to go toward the more honorable, the better, and more pleasant?"

"If we agree to that, we will undermine what we agreed on earlier."

"What about the courageous man: Does he go toward the more honorable, the better, and more pleasant?"

"We must agree to that."

"So, generally, when the courageous fear, their fear is not disgraceful; nor when they are confident is their confidence disgraceful."

b "True."

"If not disgraceful, is it honorable?"

He agreed.

"If honorable, then also good?"

"Yes."

"Whereas the fear and confidence of the cowardly, the foolhardy, and madmen are disgraceful?"

He agreed.

"Is their confidence disgraceful and bad for any reason other than ignorance and stupidity?"

"No, it isn't." c

"Now then; that through which cowardly people are cowardly, do you call it cowardice or courage?"

"Cowardice."

"And aren't cowards shown to be so through their ignorance of what is to be feared?"

"Absolutely."

"So they are cowards because of that ignorance?"

He agreed.

"You agreed that it is through cowardice that they are cowards?"

He said he did.

"So, can we conclude that cowardice is ignorance of what is and is not to be feared?"

He nodded.

"Now, courage is the opposite of cowardice." d

He said yes.

"So then, wisdom about what is and is not to be feared is the opposite of this ignorance?"

He nodded again.

"And this ignorance is cowardice?"

He nodded again, very reluctantly.

"So the wisdom about what is and is not to be feared is courage and is the opposite of this ignorance?"

He would not even nod at this; he remained silent.

And I said, "What's this, Protagoras? Will you not say yes or no to my question?"

"Answer it yourself."

"I have only one more question to ask you. Do you still believe, as you e
did at first, that some men are extremely ignorant and yet still very courageous?"

"I think that you just want to win the argument, Socrates, and that is why you are forcing me to answer. So I will gratify you and say that, on the basis of what we have agreed upon, it seems to me to be impossible."

"I have no other reason for asking these things than my desire to answer
these questions about virtue, especially what virtue is in itself. For I know 361
that if we could get clear on that, then we would be able to settle the question about which we both have had much to say, I—that virtue cannot be taught, you—that it can.

"It seems to me that our discussion has turned on us, and if it had a voice of its own, it would say, mockingly, 'Socrates and Protagoras, how
ridiculous you are, both of you. Socrates, you said earlier that virtue cannot b
be taught, but now you are arguing the very opposite and have attempted to show that everything is knowledge—justice, temperance, courage—in

which case, virtue would appear to be eminently teachable. On the other hand, if virtue is anything other than knowledge, as Protagoras has been trying to say, then it would clearly be unteachable. But, if it turns out to be wholly knowledge, as you now urge, Socrates, it would be very surprising indeed if virtue could not be taught. Now, Protagoras maintained at first
c that it could be taught, but now he thinks the opposite, urging that hardly any of the virtues turn out to be knowledge. On that view, virtue could hardly be taught at all.'

"Now, Protagoras, seeing that we have gotten this topsy-turvy and
d terribly confused, I am most eager to clear it all up, and I would like us, having come this far, to continue until we come through to what virtue is in itself, and then to return to inquire about whether it can or cannot be taught, so that Epimetheus might not frustrate us a second time in this inquiry, as he neglected us in the distribution of powers and abilities in your story. I liked the Prometheus character in your story better than Epimetheus. Since I take promethean forethought over my life as a whole, I pay attention to these things, and if you are willing, as I said at the beginning, I would be pleased to investigate them along with you."

e "Socrates, I commend your enthusiasm and the way you find your way through an argument. I really don't think I am a bad man, certainly the last man to harbor ill will. Indeed, I have told many people that I admire you more than anyone I have met, certainly more than anyone in your generation. And I say that I would not be surprised if you gain among men high repute for wisdom. We will examine these things later, whenever you wish; now it is time to turn our attention elsewhere."

362 "That is what we should do, if it seems right to you. It is long since time for me to keep that appointment I mentioned. I stayed only as a favor to our noble colleague Callias."

Our conversation was over, and so we left.

# GORGIAS

*Gorgias was a famous teacher of oratory and the author of oratorical display pieces. He had served his native Leontini in Greek Sicily on embassies, including one to Athens in 427* B.C., *when his artistically elaborate prose style made a great and lasting impression. We loosely consider him a 'sophist', like the intellectuals whom Plato gathers together at Callias' house in* Protagoras, *but Plato pointedly reports Gorgias' teaching as restricted to the art of public speaking: he did not offer to instruct young people in 'virtue'—the qualities, whatever they were, that made a good person overall and a good citizen. Nonetheless, as Plato also makes clear, he praised so highly the speaking abilities that his own teaching imparted that one could pardon ambitious young Athenians like Callicles if they thought that, by learning oratory from him, they would know everything a man needs in order to secure for himself the best life possible. And, as we learn from* Meno, *he did have striking things to say about the nature of, and differences between, virtue in men and women, old persons and young, and so on. So in the end not much separates him from the other itinerant teachers that, with him, we classify as 'sophists'.*

*Socrates begins by skeptically seeking clarification from the elderly, respected Gorgias about the nature and power of his 'craft'—the skill at persuading people massed in assemblies and juries about what is good and what is right. Gorgias is trapped in a contradiction when he admits that the true, skilled orator must* know *(and not merely speak persuasively on) his most particular subjects—right and wrong, justice and injustice in the lawcourts. When Gorgias bows out, a fellow rhetorician takes over his side of the argument—the young and rambunctious Polus, a real person. His name means 'colt'—almost too good to be true! Polus is intoxicated with the thought that rhetoric gives the power to do what one pleases, even injustice if that suits the situation. Against him, Socrates insists that in fact it is better to suffer injustice than to do it—and, unable to deny this consistently, Polus in his turn falls to Socrates' dialectic. In the remainder of the dialogue—more than half—Socrates contends with Callicles, apparently also a real person, though we hear nothing about him outside this dialogue. The discussion develops into a contentious and sometimes bitter dispute about which way of life is best—the selfish, domineering, pleasure-seeking one that Callicles associates with his own unbounded admiration for rhetorical skill, or the philosophical life that Socrates champions, committed to the objective existence of justice and the other virtues and devoted to learning about and living in accordance with them. Socrates struggles and struggles to undermine Callicles' views. He tries to bring Callicles to admit that some of*

*his own deepest convictions commit him to agreeing with Socrates: Socrates thinks he knows better than Callicles what Callicles* really *believes. In giving vent to strongly worded assertions of his own moral commitments, he seems to adopt a conception of 'irrational' desires like that of* Republic *IV, incompatible with the views he works with in the other 'Socratic' dialogues. Callicles, though personally well disposed, is equally vehement and contemptuous in rejecting Socrates' outlook—he refuses to succumb to the toils of Socratic logic. If the methods of argument Socrates employs here produce at best an uneasy standoff, the different methods of* Republic *II–IX may seem to Plato to offer a resolution.*

Gorgias *is so long, complex, and intellectually ambitious that it strains the confines of a simple 'Socratic' dialogue—a portrait of Socrates carrying out moral inquiries by his customary method of questioning others and examining their opinions. Here Socrates is on the verge of becoming the take-charge, independent philosophical theorist that he is in such dialogues as* Phaedo *and* Republic. *Like those two works,* Gorgias *concludes with an eschatological myth, affirming the soul's survival after our death and its punishment or reward in the afterlife for a life lived unjustly or the reverse.*

*In* Phaedrus *Socrates makes connected but different arguments about the nature and value of rhetoric. Whereas in* Gorgias *Socrates paints an unrelievedly negative picture of the practice of rhetoric, in* Phaedrus *he finds legitimate uses for it, so long as it is kept properly subordinate to philosophy.*

*J.M.C.*

447 Callicles: This, they say, is how you're supposed to do your part in a war or a battle, Socrates.

Socrates: Oh? Did we "arrive when the feast was over," as the saying goes? Are we late?[1]

Callicles: Yes, and a very urbane one it was! Gorgias gave us an admirable, varied presentation[2] just a short while ago.

Socrates: But that's Chaerephon's fault, Callicles. He kept us loitering about in the marketplace.

Translated by Donald J. Zeyl. Text: E. R. Dodds, Oxford (1959).

1. The setting of the dialogue is not clear. We may suppose that the conversation takes place outside a public building in Athens such as the gymnasium (see the reference to persons "inside" at 447c and 455c).

In the exchange that opens the dialogue, Callicles and Socrates are evidently alluding to a Greek saying, unknown to us, the equivalent of the English phrase, "first at a feast, last at a fray." Cf. Shakespeare, *Henry IV, Part 1*, Act 4, Sc. 2.

2. Gk. *epideiknusthai*. An *epideixis* was a lecture regularly given by sophists as a public display of their oratorical prowess.

Chaerephon: That's no problem, Socrates. I'll make up for it, too. Gorgias is a friend of mine, so he'll give us a presentation—now, if you see fit, or else some other time, if you like. b

Callicles: What's this, Chaerephon? Is Socrates eager to hear Gorgias?

Chaerephon: Yes. That's the very thing we're here for.

Callicles: Well then, come to my house any time you like. Gorgias is staying with me and will give you a presentation there.

Socrates: Very good, Callicles. But would he be willing to have a discus-
sion with us? I'd like to find out from the man what his craft can accomplish, c
and what it is that he both makes claims about and teaches. As for the other thing, the presentation, let him put that on another time, as you suggest.

Callicles: There's nothing like asking him, Socrates. This was, in fact, one part of his presentation. Just now he invited those inside to ask him any question they liked, and he said that he'd answer them all.

Socrates: An excellent idea. Ask him, Chaerephon.

Chaerephon: Ask him what?

Socrates: What he is. d

Chaerephon: What do you mean?

Socrates: Well, if he were a maker of shoes, he'd answer that he was a cobbler, wouldn't he? Or don't you see what I mean?

Chaerephon: I do. I'll ask him. Tell me, Gorgias, is Callicles right in saying that you make claims about answering any question anyone might put to you?

Gorgias: He is, Chaerephon. In fact I just now made that very claim, 448
and I say that no one has asked me anything new in many a year.

Chaerephon: In that case I'm sure you'll answer this one quite easily, Gorgias.

Gorgias: Here's your chance to try me, Chaerephon.

Polus: By Zeus, Chaerephon! Try me, if you like! I think Gorgias is quite worn out. He's only just now finished a long discourse.

Chaerephon: Really, Polus? Do you think you'd give more admirable answers than Gorgias?

Polus: What does it matter, as long as they're good enough for you? b

Chaerephon: Nothing at all! You answer us then, since that's what you want.

Polus: Ask your questions.

Chaerephon: I will. Suppose that Gorgias were knowledgeable in his brother Herodicus' craft. What would be the right name for us to call him by then? Isn't it the same one as his brother's?

Polus: Yes, it is.

Chaerephon: So we'd be right in saying that he's a doctor?

Polus: Yes.

Chaerephon: And if he were experienced in the craft of Aristophon the son of Aglaophon or his brother, what would be the correct thing to call him?

Polus: A painter, obviously.

c CHAEREPHON: Now then, since he's knowledgeable in a craft, what is it, and what would be the correct thing to call him?

POLUS: Many among men are the crafts experientially devised by experience, Chaerephon. Yes, it is experience that causes our times to march along the way of craft, whereas inexperience causes them to march along the way of chance. Of these various crafts various men partake in various ways, the best men partaking of the best of them. Our Gorgias is indeed in this group; he partakes of the most admirable of the crafts.

d SOCRATES: Polus certainly appears to have prepared himself admirably for giving speeches, Gorgias. But he's not doing what he promised Chaerephon.

GORGIAS: How exactly isn't he, Socrates?

SOCRATES: He hardly seems to me to be answering the question.

GORGIAS: Why don't you question him then, if you like?

SOCRATES: No, I won't, not as long as you yourself may want to answer. I'd much rather ask you. It's clear to me, especially from what he has said, that Polus has devoted himself more to what is called oratory than to discussion.

e POLUS: Why do you say that, Socrates?

SOCRATES: Because, Polus, when Chaerephon asks you what craft Gorgias is knowledgeable in, you sing its praises as though someone were discrediting it. But you haven't answered what it is.

POLUS: Didn't I answer that it was the most admirable one?

SOCRATES: Very much so. No one, however, asked you what Gorgias' craft is like, but what craft it is, and what one ought to call Gorgias. So,
449 just as when Chaerephon put his earlier questions to you and you answered him in such an admirably brief way, tell us now in that way, too, what his craft is, and what we're supposed to call Gorgias. Or rather, Gorgias, why don't you tell us yourself what the craft you're knowledgeable in is, and hence what we're supposed to call you?

GORGIAS: It's oratory, Socrates.

SOCRATES: So we're supposed to call you an orator?

GORGIAS: Yes, and a good one, Socrates, if you really want to call me "what I boast myself to be," as Homer puts it.[3]

SOCRATES: Of course I do.

GORGIAS: Call me that then.

b SOCRATES: Aren't we to say that you're capable of making others orators too?

GORGIAS: That's exactly the claim I make. Not only here, but elsewhere, too.

SOCRATES: Well now, Gorgias, would you be willing to complete the discussion in the way we're having it right now, that of alternately asking questions and answering them, and to put aside for another

3. *Iliad* vi.211.

time this long style of speechmaking like the one Polus began with? Please don't go back on your promise, but be willing to give a brief answer to what you're asked.

GORGIAS: There are some answers, Socrates, that must be given by way
of long speeches. Even so, I'll try to be as brief as possible. This, too, in c
fact, is one of my claims. There's no one who can say the same things
more briefly than I.

SOCRATES: That's what we need, Gorgias! Do give me a presentation of this very thing, the short style of speech, and leave the long style for some other time.

GORGIAS: Very well, I'll do that. You'll say you've never heard anyone make shorter speeches.

SOCRATES: Come then. You claim to be knowledgeable in the craft of
oratory and to be able to make someone else an orator, too. With which d
of the things there are is oratory concerned? Weaving, for example, is
concerned with the production of clothes, isn't it?

GORGIAS: Yes.

SOCRATES: And so, too, music is concerned with the composition of tunes?

GORGIAS: Yes.

SOCRATES: By Hera, Gorgias, I do like your answers. They couldn't be shorter!

GORGIAS: Yes, Socrates, I daresay I'm doing it quite nicely.

SOCRATES: And so you are. Come and answer me then that way about oratory, too. About which, of the things there are, is *it* knowledge?

GORGIAS: About speeches. e

SOCRATES: What sort of speeches, Gorgias? Those that explain how sick people should be treated to get well?

GORGIAS: No.

SOCRATES: So oratory isn't concerned with all speeches.

GORGIAS: Oh, no.

SOCRATES: But it does make people capable of speaking.

GORGIAS: Yes.

SOCRATES: And also to be wise in what they're speaking about?

GORGIAS: Of course.

SOCRATES: Now does the medical craft, the one we were talking about 450
just now, make people able both to have wisdom about and to speak about
the sick?

GORGIAS: Necessarily.

SOCRATES: This craft, then, is evidently concerned with speeches too.

GORGIAS: Yes.

SOCRATES: Speeches about diseases, that is?

GORGIAS: Exactly.

SOCRATES: Isn't physical training also concerned with speeches, speeches about good and bad physical condition?

GORGIAS: Yes, it is.

SOCRATES: In fact, Gorgias, the same is true of the other crafts, too. Each
b of them is concerned with those speeches that are about the object of the particular craft.

GORGIAS: Apparently.

SOCRATES: Then why don't you call the other crafts oratory, since you call any craft whatever that's concerned with speeches oratory? They're concerned with speeches, too!

GORGIAS: The reason, Socrates, is that in the case of the other crafts the knowledge consists almost completely in working with your hands and activities of that sort. In the case of oratory, on the other hand, there isn't any such manual work. Its activity and influence depend entirely on
c speeches. That's the reason I consider the craft of oratory to be concerned with speeches. And I say that I'm right about this.

SOCRATES: I'm not sure I understand what sort of craft you want to call it. I'll soon know more clearly. Tell me this. There are crafts for us to practice, aren't there?

GORGIAS: Yes.

SOCRATES: Of all the crafts there are, I take it that there are those that consist for the most part of making things and that call for little speech, and some that call for none at all, ones whose task could be done even silently. Take painting, for instance, or sculpture, or many others. When
d you say that oratory has nothing to do with other crafts, it's crafts of this sort I think you're referring to. Or aren't you?

GORGIAS: Yes, Socrates. You take my meaning very well.

SOCRATES: And then there are other crafts, the ones that perform their whole task by means of speeches and that call for practically no physical work besides, or very little of it. Take arithmetic or computation or geometry, even checkers and many other crafts. Some of these involve speeches to just about the same degree as they do activity, while many involve speeches more. All their activity and influence depend entirely on speeches.
e I think you mean that oratory is a craft of this sort.

GORGIAS: True.

SOCRATES: But you certainly don't want to call any of *these* crafts oratory, do you, even though, as you phrase it, oratory is the craft that exercises its influence through speech. Somebody might take you up, if he wanted to make a fuss in argument, and say, "So you're saying that arithmetic is oratory, are you, Gorgias?" I'm sure, however, that you're not saying that either arithmetic or geometry is oratory.

451 GORGIAS: Yes, you're quite correct, Socrates. You take my meaning rightly.

SOCRATES: Come on, then. Please complete your answer in the terms of my question. Since oratory is one of those crafts which mostly uses speech, and since there are also others of that sort, try to say *what* it is that oratory, which exercises its influence through speeches, is about. Imagine someone asking me about any of the crafts I mentioned just now, "Socrates, what
b is the craft of arithmetic?" I'd tell him, just as you told me, that it's one of

those that exercise their influence by means of speech. And if he continued, "What are they crafts about?" I'd say that they're about even and odd, however many of each there might be. If he then asked, "What is the craft you call computation?" I'd say that this one, too, is one of those that exercise their influence entirely by speech. And if he then continued, "What is it about?" I'd answer in the style of those who draw up motions in the Assembly that in other respects computation is like arithmetic—for it's c
about the same thing, even and odd—yet it differs from arithmetic insofar as computation examines the quantity of odd and even, both in relation to themselves and in relation to each other. And if someone asked about astronomy and I replied that it, too, exercises its influence by means of speech, then if he asked, "What are the speeches of astronomy about, Socrates?" I'd say that they're about the motions of the stars, the sun and the moon, and their relative velocities.

Gorgias: And you'd be quite right to say so, Socrates.

Socrates: Come, Gorgias, you take your turn. For oratory is in fact one d
of those crafts that carry out and exercise their influence entirely by speech, isn't it?

Gorgias: That's right.

Socrates: Tell us then: what are they crafts about? Of the things there are, which is the one that these speeches used by oratory are concerned with?

Gorgias: The greatest of human concerns, Socrates, and the best.

Socrates: But that statement, too, is debatable, Gorgias. It isn't at all clear yet, either. I'm sure that you've heard people at drinking parties e
singing that song in which they count out as they sing that "to enjoy good health is the best thing; second is to have turned out good looking; and third"—so the writer of the song puts it—"is to be honestly rich."

Gorgias: Yes, I've heard it. Why do you mention it?

Socrates: Suppose that the producers of the things the songwriter 452
praised were here with you right now: a doctor, a physical trainer, and a financial expert. Suppose that first the doctor said, "Socrates, Gorgias is telling you a lie. It isn't his craft that is concerned with the greatest good for humankind, but mine." If I then asked him, "What are you, to say that?" I suppose he'd say that he's a doctor. "What's this you're saying? Is the product of your craft really the greatest good?" "Of course, Socrates," I suppose he'd say, "seeing that its product is health. What greater good for humankind is there than health?" And suppose that next in his turn b
the trainer said, "I too would be amazed, Socrates, if Gorgias could present you with a greater good derived from his craft than the one I could provide from mine." I'd ask this man, too, "What are you, sir, and what's your product?" "I'm a physical trainer," he'd say, "and my product is making people physically good-looking and strong." And following the trainer the financial expert would say, I'm sure with an air of considerable scorn for all, "Do consider, Socrates, whether you know of any good, Gorgias' c
or anyone else's, that's a greater good than wealth." We'd say to him, "Really? Is that what you produce?" He'd say yes. "As what?" "As a

financial expert." "Well," we'll say, "is wealth in your judgment the greatest good for humankind?" "Of course," he'll say. "Ah, but Gorgias here disputes that. He claims that his craft is the source of a good that's greater than yours," we'd say. And it's obvious what question he'd ask next. "And
d what is this good, please? Let Gorgias answer me that!" So come on, Gorgias. Consider yourself questioned by both these men and myself, and give us your answer. What is this thing that you claim is the greatest good for humankind, a thing you claim to be a producer of?

GORGIAS: The thing that is in actual fact the greatest good, Socrates. It is the source of freedom for humankind itself and at the same time it is for each person the source of rule over others in one's own city.

SOCRATES: And what is this thing you're referring to?

e GORGIAS: I'm referring to the ability to persuade by speeches judges in a law court, councillors in a council meeting, and assemblymen in an assembly or in any other political gathering that might take place. In point of fact, with this ability you'll have the doctor for your slave, and the physical trainer, too. As for this financial expert of yours, he'll turn out to be making more money for somebody else instead of himself; for you, in fact, if you've got the ability to speak and to persuade the crowds.

453 SOCRATES: *Now* I think you've come closest to making clear what craft you take oratory to be, Gorgias. If I follow you at all, you're saying that oratory is a producer of persuasion. Its whole business comes to that, and that's the long and short of it. Or can you mention anything else oratory can do besides instilling persuasion in the souls of an audience?

GORGIAS: None at all, Socrates. I think you're defining it quite adequately. That is indeed the long and short of it.

b SOCRATES: Listen then, Gorgias. You should know that I'm convinced I'm one of those people who in a discussion with someone else really want to have knowledge of the subject the discussion's about. And I consider you one of them, too.

GORGIAS: Well, what's the point, Socrates?

SOCRATES: Let me tell you now. You can know for sure that I don't know what this persuasion derived from oratory that you're talking about is, or what subjects it's persuasion about. Even though I do have my suspicions about which persuasion I think you mean and what it's about, I'll still ask
c you just the same what you say this persuasion produced by oratory is, and what it's about. And why, when I have my suspicions, do I ask you and refrain from expressing them myself? It's not you I'm after, it's our discussion, to have it proceed in such a way as to make the thing we're talking about most clear to us. Consider, then, whether you think I'm being fair in resuming my questions to you. Suppose I were to ask you which of the painters Zeuxis is. If you told me that he's the one who paints pictures, wouldn't it be fair for me to ask, "Of what sort of pictures is he the painter, and where?"

GORGIAS: Yes, it would.

d SOCRATES: And isn't the reason for this the fact that there are other painters, too, who paint many other pictures?

Gorgias: Yes.

Socrates: But if no one besides Zeuxis were a painter, your answer would have been a good one?

Gorgias: Of course.

Socrates: Come then, and tell me about oratory. Do you think that oratory alone instills persuasion, or do other crafts do so too? This is the sort of thing I mean: Does a person who teaches some subject or other persuade people about what he's teaching, or not?

Gorgias: He certainly does, Socrates. He persuades most of all.

Socrates: Let's talk once more about the same crafts we were talking e
about just now. Doesn't arithmetic or the arithmetician teach us everything that pertains to number?

Gorgias: Yes, he does.

Socrates: And he also persuades?

Gorgias: Yes.

Socrates: So arithmetic is also a producer of persuasion.

Gorgias: Apparently.

Socrates: Now if someone asks us what sort of persuasion it produces and what it's persuasion about, I suppose we'd answer him that it's the persuasion through teaching about the extent of even and odd. And we'll be able to show that all the other crafts we were just now talking about 454
are producers of persuasion, as well as what the persuasion is and what it's about. Isn't that right?

Gorgias: Yes.

Socrates: So oratory isn't the only producer of persuasion.

Gorgias: That's true.

Socrates: In that case, since it's not the only one to produce this product but other crafts do it too, we'd do right to repeat to our speaker the question we put next in the case of the painter: "Of what sort of persuasion is oratory a craft, and what is its persuasion about?" Or don't you think it's right to repeat that question? b

Gorgias: Yes, I do.

Socrates: Well then, Gorgias, since you think so too, please answer.

Gorgias: The persuasion I mean, Socrates, is the kind that takes place in law courts and in those other large gatherings, as I was saying a moment ago. And it's concerned with those matters that are just and unjust.

Socrates: Yes, Gorgias, I suspected that this was the persuasion you meant, and that these are the matters it's persuasion about. But so you won't be surprised if in a moment I ask you again another question like this, about what seems to be clear, and yet I go on with my questioning— c
as I say, I'm asking questions so that we can conduct an orderly discussion. It's not you I'm after; it's to prevent our getting in the habit of second-guessing and snatching each other's statements away ahead of time. It's to allow you to work out your assumption in any way you want to.

Gorgias: Yes, I think that you're quite right to do this, Socrates.

Socrates: Come then, and let's examine this point. Is there something you call "to have learned"?

Gorgias: There is.

Socrates: Very well. And also something you call "to be convinced"?

d Gorgias: Yes, there is.

Socrates: Now, do you think that to have learned, and learning, are the same as to be convinced and conviction, or different?

Gorgias: I certainly suppose that they're different, Socrates.

Socrates: You suppose rightly. This is how you can tell: If someone asked you, "Is there such a thing as true and false conviction, Gorgias?" you'd say yes, I'm sure.

Gorgias: Yes.

Socrates: Well now, is there such a thing as true and false knowledge?

Gorgias: Not at all.

Socrates: So it's clear that they're not the same.

Gorgias: That's true.

e Socrates: But surely both those who have learned and those who are convinced have come to be persuaded?

Gorgias: That's right.

Socrates: Would you like us then to posit two types of persuasion, one providing conviction without knowledge, the other providing knowledge?

Gorgias: Yes, I would.

Socrates: Now which type of persuasion does oratory produce in law courts and other gatherings concerning things that are just and unjust? The one that results in being convinced without knowing or the one that results in knowing?

Gorgias: It's obvious, surely, that it's the one that results in conviction.

Socrates: So evidently oratory produces the persuasion that comes from
being convinced, and not the persuasion that comes from teaching, concern-
455 ing what's just and unjust.

Gorgias: Yes.

Socrates: And so an orator is not a teacher of law courts and other gatherings about things that are just and unjust, either, but merely a persuader, for I don't suppose that he could teach such a large gathering about matters so important in a short time.

Gorgias: No, he certainly couldn't.

Socrates: Well now, let's see what we're really saying about oratory.
b For, mind you, even I myself can't get clear yet about what I'm saying.
When the city holds a meeting to appoint doctors or shipbuilders or some
other variety of craftsmen, that's surely not the time when the orator will
give advice, is it? For obviously it's the most accomplished craftsman who
should be appointed in each case. Nor will the orator be the one to give
advice at a meeting that concerns the building of walls or the equipping
of harbors or dockyards, but the master builders will be the ones. And
when there is a deliberation about the appointment of generals or an
c arrangement of troops against the enemy or an occupation of territory, it's
not the orators but the generals who'll give advice then. What do you say
about such cases, Gorgias? Since you yourself claim both to be an orator

and to make others orators, we'll do well to find out from you the characteristics of your craft. You must think of me now as eager to serve your interests, too. Perhaps there's actually someone inside who wants to become your pupil. I notice some, in fact a good many, and they may well be embarrassed to question you. So, while you're being questioned by me, consider yourself being questioned by them as well: "What will we get if d
we associate with you, Gorgias? What will we be able to advise the city on? Only about what's just and unjust or also about the things Socrates was mentioning just now?" Try to answer them.

Gorgias: Well, Socrates, I'll try to reveal to you clearly everything oratory can accomplish. You yourself led the way nicely, for you do know, don't you, that these dockyards and walls of the Athenians and the equipping e
of the harbor came about through the advice of Themistocles and in some cases through that of Pericles, but not through that of the craftsmen?[4]

Socrates: That's what they say about Themistocles, Gorgias. I myself heard Pericles when he advised us on the middle wall.

Gorgias: And whenever those craftsmen you were just now speaking 456
of are appointed, Socrates, you see that the orators are the ones who give advice and whose views on these matters prevail.

Socrates: Yes, Gorgias, my amazement at that led me long ago to ask what it is that oratory can accomplish. For as I look at it, it seems to me to be something supernatural in scope.

Gorgias: Oh yes, Socrates, if only you knew all of it, that it encompasses and subordinates to itself just about everything that can be accomplished. b
And I'll give you ample proof. Many a time I've gone with my brother or with other doctors to call on some sick person who refuses to take his medicine or allow the doctor to perform surgery or cauterization on him. And when the doctor failed to persuade him, I succeeded, by means of no other craft than oratory. And I maintain too that if an orator and a doctor came to any city anywhere you like and had to compete in speaking in the assembly or some other gathering over which of them should be appointed doctor, the doctor wouldn't make any showing at all, but the c
one who had the ability to speak would be appointed, if he so wished. And if he were to compete with any other craftsman whatever, the orator more than anyone else would persuade them that they should appoint him, for there isn't anything that the orator couldn't speak more persuasively about to a gathering than could any other craftsman whatever. That's how great the accomplishment of this craft is, and the sort of accomplishment it is! One should, however, use oratory like any other competitive skill, Socrates. In other cases, too, one ought not to use a competitive skill d
against any and everybody, just because he has learned boxing, or boxing and wrestling combined, or fighting in armor, so as to make himself be superior to his friends as well as to his enemies. That's no reason to strike, stab, or kill one's own friends! Imagine someone who after attending

4. Themistocles and Pericles were Athenian statesmen of the fifth century B.C.

wrestling school, getting his body into good shape and becoming a boxer,
went on to strike his father and mother or any other family member or
friend. By Zeus, that's no reason to hate physical trainers and people who
e teach fighting in armor, and to exile them from their cities! For while
these people imparted their skills to be used justly against enemies and
wrongdoers, and in defense, not aggression, their pupils pervert their
457 strength and skill and misuse them. So it's not their teachers who are
wicked, nor does that make the craft guilty or wicked; those who misuse
it, surely, are the wicked ones. And the same is true for oratory as
well. The orator has the ability to speak against everyone on every
subject, so as in gatherings to be more persuasive, in short, about
b anything he likes, but the fact that he has the ability to rob doctors or
other craftsmen of their reputations doesn't give him any more of a
reason to do it. He should use oratory justly, as he would any competitive
skill. And I suppose that if a person who has become an orator goes
on with this ability and this craft to commit wrongdoing, we shouldn't
hate his teacher and exile him from our cities. For while the teacher
c imparted it to be used justly, the pupil is making the opposite use of
it. So it's the misuser whom it's just to hate and exile or put to death,
not the teacher.

SOCRATES: Gorgias, I take it that you, like me, have experienced many
discussions and that you've observed this sort of thing about them: it's
not easy for the participants to define jointly what they're undertaking to
d discuss, and so, having learned from and taught each other, to conclude
their session. Instead, if they're disputing some point and one maintains
that the other isn't right or isn't clear, they get irritated, each thinking
the other is speaking out of spite. They become eager to win instead of
investigating the subject under discussion. In fact, in the end some have
a most shameful parting of the ways, abuse heaped upon them, having
given and gotten to hear such things that make even the bystanders upset
with themselves for having thought it worthwhile to come to listen to such
e people. What's my point in saying this? It's that I think you're now saying
things that aren't very consistent or compatible with what you were first
saying about oratory. So, I'm afraid to pursue my examination of you, for
fear that you should take me to be speaking with eagerness to win against
458 you, rather than to have our subject become clear. For my part, I'd be
pleased to continue questioning you if you're the same kind of man I am,
otherwise I would drop it. And what kind of man am I? One of those who
would be pleased to be refuted if I say anything untrue, and who would
be pleased to refute anyone who says anything untrue; one who, however,
wouldn't be any less pleased to be refuted than to refute. For I count being
refuted a greater good, insofar as it is a greater good for oneself to be
delivered from the worst thing there is than to deliver someone else from
it. I don't suppose there's anything quite so bad for a person as having
false belief about the things we're discussing right now. So if you say
b you're this kind of man, too, let's continue the discussion; but if you think
we should drop it, let's be done with it and break it off.

Gorgias: Oh yes, Socrates, I say that I myself, too, am the sort of person you describe. Still, perhaps we should keep in mind the people who are present here, too. For quite a while ago now, even before you came, I gave them a long presentation, and perhaps we'll stretch things out too long if c
we continue the discussion. We should think about them, too, so as not to keep any of them who want to do something else.

Chaerephon: You yourselves hear the commotion these men are making, Gorgias and Socrates. They want to hear anything you have to say. And as for myself, I hope I'll never be so busy that I'd forego discussions such as this, conducted in the way this one is, because I find it more practical to do something else.

Callicles: By the gods, Chaerephon, as a matter of fact I, too, though d
I've been present at many a discussion before now, don't know if I've ever been so pleased as I am at the moment. So if you're willing to discuss, even if it's all day long, you'll be gratifying me.

Socrates: For my part there's nothing stopping me, Callicles, as long as Gorgias is willing.

Gorgias: It'll be to my shame ever after, Socrates, if I weren't willing, when I myself have made the claim that anyone may ask me anything he wants. All right, if it suits these people, carry on with the discussion, and e
ask what you want.

Socrates: Well then, Gorgias, let me tell you what surprises me in the things you've said. It may be that what you said was correct and that I'm not taking your meaning correctly. Do you say that you're able to make an orator out of anyone who wants to study with you?

Gorgias: Yes.

Socrates: So that he'll be persuasive in a gathering about all subjects, not by teaching but by persuading?

Gorgias: Yes, that's right. 459

Socrates: You were saying just now, mind you, that the orator will be more persuasive even about health than a doctor is.

Gorgias: Yes I was, more persuasive in a gathering, anyhow.

Socrates: And doesn't "in a gathering" just mean "among those who don't have knowledge"? For, among those who do have it, I don't suppose that he'll be more persuasive than the doctor.

Gorgias: That's true.

Socrates: Now if he'll be more persuasive than a doctor, doesn't he prove to be more persuasive than the one who has knowledge?

Gorgias: Yes, that's right.

Socrates: Even though he's not a doctor, right? b

Gorgias: Yes.

Socrates: And a non-doctor, I take it, isn't knowledgeable in the thing in which a doctor is knowledgeable.

Gorgias: That's obvious.

Socrates: So when an orator is more persuasive than a doctor, a non-knower will be more persuasive than a knower among non-knowers. Isn't this exactly what follows?

Gorgias: Yes it is, at least in this case.

Socrates: The same is true about the orator and oratory relative to the other crafts, too, then. Oratory doesn't need to have any knowledge of the
c state of their subject matters; it only needs to have discovered some device to produce persuasion in order to make itself appear to those who don't have knowledge that it knows more than those who actually do have it.

Gorgias: Well, Socrates, aren't things made very easy when you come off no worse than the craftsmen even though you haven't learned any other craft but this one?

Socrates: Whether the orator does or does not come off worse than the others because of this being so, we'll examine in a moment if it has any
d bearing on our argument. For now, let's consider this point first. Is it the case that the orator is in the same position with respect to what's just and unjust, what's shameful and admirable, what's good and bad, as he is about what's healthy and about the subjects of the other crafts? Does he lack knowledge, that is, of what these are, of what is good or what is bad, of what is admirable or what is shameful, or just or unjust? Does he employ devices to produce persuasion about them, so that—even though he doesn't know—he seems, among those who don't know either, to know more than
e someone who actually does know? Or is it necessary for him to know, and must the prospective student of oratory already be knowledgeable in these things before coming to you? And if he doesn't, will you, the oratory teacher, not teach him any of these things when he comes to you—for that's not your job—and will you make him seem among most people to have knowledge of such things when in fact he doesn't have it, and to seem good when in fact he isn't? Or won't you be able to teach him oratory at all, unless he knows the truth about these things to begin with? How
460 do matters such as these stand, Gorgias? Yes, by Zeus, do give us your revelation and tell us what oratory can accomplish, just as you just now said you would.

Gorgias: Well, Socrates, I suppose that if he really doesn't have this knowledge, he'll learn these things from me as well.

Socrates: Hold it there. You're right to say so. If you make someone an orator, it's necessary for him to know what's just and what's unjust, either beforehand, or by learning it from you afterwards.

Gorgias: Yes, it is.

b Socrates: Well? A man who has learned carpentry is a carpenter, isn't he?

Gorgias: Yes.

Socrates: And isn't a man who has learned music a musician?

Gorgias: Yes.

Socrates: And a man who has learned medicine a doctor? And isn't this so too, by the same reasoning, with the other crafts? Isn't a man who has learned a particular subject the sort of man his knowledge makes him?

Gorgias: Yes, he is.

Socrates: And, by this line of reasoning, isn't a man who has learned what's just a just man too?

Gorgias: Yes, absolutely.

SOCRATES: And a just man does just things, I take it?

GORGIAS: Yes.

SOCRATES: Now isn't an orator necessarily just, and doesn't a just man c
necessarily want to do just things?

GORGIAS: Apparently so.

SOCRATES: Therefore an orator will never want to do what's unjust.

GORGIAS: No, apparently not.

SOCRATES: Do you remember saying a little earlier that we shouldn't complain against physical trainers or exile them from our cities if the boxer d
uses his boxing skill to do what's unjust, and that, similarly, if an orator uses his oratorical skill unjustly we shouldn't complain against his teacher or banish him from the city, but do so to the one who does what's unjust, the one who doesn't use his oratorical skill properly? Was that said or not?

GORGIAS: Yes, it was.

SOCRATES: But now it appears that this very man, the orator, would never e
have done what's unjust, doesn't it?

GORGIAS: Yes, it does.

SOCRATES: And at the beginning of our discussion, Gorgias, it was said that oratory would be concerned with speeches, not those about even and odd, but those about what's just and unjust. Right?

GORGIAS: Yes.

SOCRATES: Well, at the time you said that, I took it that oratory would never be an unjust thing, since it always makes its speeches about justice. But when a little later you were saying that the orator could also use 461
oratory unjustly, I was surprised and thought that your statements weren't consistent, and so I made that speech in which I said that if you, like me, think that being refuted is a profitable thing, it would be worthwhile to continue the discussion, but if you don't, to let it drop. But now, as we subsequently examine the question, you see for yourself too that it's agreed that, quite to the contrary, the orator is incapable of using oratory unjustly and of being willing to do what's unjust. By the Dog, Gorgias, it'll take b
more than a short session to go through an adequate examination of how these matters stand!

POLUS: Really, Socrates? Is what you're now saying about oratory what you actually think of it? Or do you really think, just because Gorgias was too ashamed not to concede your further claim that the orator also knows what's just, what's admirable, and what's good, and that if he came to him without already having this knowledge to begin with, he said that he would teach him himself, and then from this admission maybe some c
inconsistency crept into his statements—just the thing that gives you delight, you're the one who leads him on to face such questions—who do you think would deny that he himself knows what's just and would teach others? To lead your arguments to such an outcome is a sign of great rudeness.

SOCRATES: Most admirable Polus, it's not for nothing that we get ourselves companions and sons. It's so that, when we ourselves have grown older and stumble, you younger men might be on hand to straighten our lives

up again, both in what we do and what we say. And if Gorgias and I are
d stumbling now in what we say—well, you're on hand, straighten us up again. That's only right. And if you think we were wrong to agree on it, I'm certainly willing to retract any of our agreements you like, provided that you're careful about just one thing.

Polus: What do you mean?

Socrates: That you curb your long style of speech, Polus, the style you tried using at first.

Polus: Really? Won't I be free to say as much as I like?

e Socrates: You'd certainly be in a terrible way, my good friend, if upon coming to Athens, where there's more freedom of speech than anywhere else in Greece, you alone should miss out on it here. But look at it the other way. If you spoke at length and were unwilling to answer what you're asked, wouldn't I be in a terrible way if I'm not to have the freedom
462 to stop listening to you and leave? But if you care at all about the discussion we've had and want to straighten it up, please retract whatever you think best, as I was saying just now. Take your turn in asking and being asked questions the way Gorgias and I did, and subject me and yourself to refutation. You say, I take it, that you know the same craft that Gorgias knows? Or don't you?

Polus: Yes, I do.

Socrates: And don't you also invite people to ask you each time whatever they like, because you believe you'll answer as one who has knowledge?

Polus: Certainly.

b Socrates: So now please do whichever of these you like: either ask questions or answer them.

Polus: Very well, I shall. Tell me, Socrates, since you think Gorgias is confused about oratory, what do you say it is?

Socrates: Are you asking me what *craft* I say it is?

Polus: Yes, I am.

Socrates: To tell you the truth, Polus, I don't think it's a craft at all.

Polus: Well then, what do you think oratory is?

c Socrates: In the treatise that I read recently, it's the thing that you say has produced craft.[5]

Polus: What do you mean?

Socrates: I mean a knack.[6]

Polus: So you think oratory's a knack?

Socrates: Yes, I do, unless you say it's something else.

Polus: A knack for what?

Socrates: For producing a certain gratification and pleasure.

Polus: Don't you think that oratory's an admirable thing, then, to be able to give gratification to people?

5. Alternatively, " . . . it's something of which you claim to have made a craft."

6. Gk. *empeiria*, translated "experience" at 448c.

Socrates: Really, Polus! Have you already discovered from me what
I say it is, so that you go on to ask me next whether I don't think it's admi- d
rable?

Polus: Haven't I discovered that you say it's a knack?

Socrates: Since you value gratification, would you like to gratify me on a small matter?

Polus: Certainly.

Socrates: Ask me now what craft I think pastry baking is.

Polus: All right, I will. What craft is pastry baking?

Socrates: It isn't one at all, Polus. Now say, "What is it then?"

Polus: All right.

Socrates: It's a knack. Say, "A knack for what?"

Polus: All right.

Socrates: For producing gratification and pleasure, Polus. e

Polus: So oratory is the same thing as pastry baking?

Socrates: Oh no, not at all, although it *is* a part of the same practice.

Polus: What practice do you mean?

Socrates: I'm afraid it may be rather crude to speak the truth. I hesitate
to do so for Gorgias' sake, for fear that he may think I'm satirizing what
he practices. I don't know whether this is the kind of oratory that Gorgias
practices—in fact in our discussion a while ago we didn't get at all clear 463
on just what he thinks it is. But what *I* call oratory is a part of some
business that isn't admirable at all.

Gorgias: Which one's that, Socrates? Say it, and don't spare my feelings.

Socrates: Well then, Gorgias, I think there's a practice that's not craftlike,
but one that a mind given to making hunches takes to, a mind that's bold
and naturally clever at dealing with people. I call it flattery, basically. I b
think that this practice has many other parts as well, and pastry baking,
too, is one of them. This part *seems* to be a craft, but in my account of it
it isn't a craft but a knack and a routine. I call oratory a part of this, too,
along with cosmetics and sophistry. These are four parts, and they're
directed to four objects. So if Polus wants to discover them, let him do so. c
He hasn't discovered yet what sort of part of flattery I say oratory is.
Instead, it's escaped him that I haven't answered that question yet, and
so he goes on to ask whether I don't consider it to be admirable. And I
won't answer him whether I think it's admirable or shameful until I first
tell what it is. That wouldn't be right, Polus. If, however, you do want to
discover this, ask me what sort of part of flattery I say oratory is.

Polus: I shall. Tell me what sort of part it is.

Socrates: Would you understand my answer? By my reasoning, oratory d
is an image of a part of politics.

Polus: Well? Are you saying that it's something admirable or shameful?

Socrates: I'm saying that it's a shameful thing—I call bad things shameful—since I must answer you as though you already know what I mean.

Gorgias: By Zeus, Socrates, I myself don't understand what you mean, either!

e SOCRATES: Reasonably enough, Gorgias. I'm not saying anything clear
yet. This colt here is youthful and impulsive.

GORGIAS: Never mind him. Please tell me what you mean by saying that oratory is an image of a part of politics.

SOCRATES: All right, I'll try to describe my view of oratory. If this isn't
464 what it actually is, Polus here will refute me. There is, I take it, something
you call *body* and something you call *soul*?

GORGIAS: Yes, of course.

SOCRATES: And do you also think that there's a state of fitness for each of these?

GORGIAS: Yes, I do.

SOCRATES: All right. Is there also an apparent state of fitness, one that isn't real? The sort of thing I mean is this. There are many people who *appear* to be physically fit, and unless one is a doctor or one of the fitness experts, one wouldn't readily notice that they're not fit.

GORGIAS: That's true.

SOCRATES: I'm saying that this sort of thing exists in the case of both the
body and the soul, a thing that makes the body and the soul seem fit when
b in fact they aren't any the more so.

GORGIAS: That's so.

SOCRATES: Come then, and I'll show you more clearly what I'm saying,
if I can. I'm saying that of this pair of subjects there are two crafts. The
one for the soul I call politics; the one for the body, though it is one, I
can't give you a name for offhand, but while the care of the body is a
single craft, I'm saying it has two parts: gymnastics and medicine. And in
politics, the counterpart of gymnastics is legislation, and the part that
c corresponds to medicine is justice. Each member of these pairs has features
in common with the other, medicine with gymnastics and justice with
legislation, because they're concerned with the same thing. They do, how-
ever, differ in some way from each other. These, then, are the four parts,
and they always provide care, in the one case for the body, in the other
for the soul, with a view to what's best. Now flattery takes notice of them,
and—I won't say by *knowing*, but only by *guessing*—divides itself into four,
d masks itself with each of the parts, and then pretends to be the characters
of the masks. It takes no thought at all of whatever is best; with the lure
of what's most pleasant at the moment, it sniffs out folly and hoodwinks
it, so that it gives the impression of being most deserving. Pastry baking
has put on the mask of medicine, and pretends to know the foods that
are best for the body, so that if a pastry baker and a doctor had to compete
in front of children, or in front of men just as foolish as children, to
determine which of the two, the doctor or the pastry baker, had expert
knowledge of good food and bad, the doctor would die of starvation. I
465 call this flattery, and I say that such a thing is shameful, Polus—it's you
I'm saying this to—because it guesses at what's pleasant with no consider-
ation for what's best. And I say that it isn't a craft, but a knack, because
it has no account of the nature of whatever things it applies by which it

applies them,[7] so that it's unable to state the cause of each thing. And I
refuse to call anything that lacks such an account a craft. If you have any
quarrel with these claims, I'm willing to submit them for discussion.

So pastry baking, as I say, is the flattery that wears the mask of medicine. b
Cosmetics is the one that wears that of gymnastics in the same way; a
mischievous, deceptive, disgraceful and ill-bred thing, one that perpetrates
deception by means of shaping and coloring, smoothing out and dressing
up, so as to make people assume an alien beauty and neglect their own,
which comes through gymnastics. So that I won't make a long-style speech,
I'm willing to put it to you the way the geometers do—for perhaps you c
follow me now—that what cosmetics is to gymnastics, pastry baking is to
medicine; or rather, like this: what cosmetics is to gymnastics, sophistry
is to legislation, and what pastry baking is to medicine, oratory is to justice.
However, as I was saying, although these activities are naturally distinct
in this way, yet because they are so close, sophists and orators tend to be
mixed together as people who work in the same area and concern them-
selves with the same things. They don't know what to do with themselves,
and other people don't know what to do with them. In fact, if the soul
didn't govern the body but the body governed itself, and if pastry baking d
and medicine weren't kept under observation and distinguished by the
soul, but the body itself made judgments about them, making its estimates
by reference to the gratification it receives, then the world according to
Anaxagoras would prevail, Polus my friend—you're familiar with these
views—all things would be mixed together in the same place, and there
would be no distinction between matters of medicine and health, and
matters of pastry baking.[8]

You've now heard what I say oratory is. It's the counterpart in the soul
to pastry baking, its counterpart in the body. Perhaps I've done an absurd e
thing: I wouldn't let you make long speeches, and here I've just composed
a lengthy one myself. I deserve to be forgiven, though, for when I made
my statements short you didn't understand and didn't know how to deal
with the answers I gave you, but you needed a narration. So if I don't
know how to deal with your answers either, you must spin out a speech, 466
too. But if I do, just let me deal with them. That's only fair. And if you
now know how to deal with my answer, please deal with it.

Polus: What is it you're saying, then? You think oratory is flattery?

Socrates: I said that it was a *part* of flattery. Don't you remember, Polus, young as you are? What's to become of you?

Polus: So you think that good orators are held in low regard in their cities, as flatterers?

Socrates: Is this a question you're asking, or some speech you're be- b
ginning?

7. The translation here follows the mss, rejecting Dodds' emendation.

8. Anaxagoras' book began with the words "All things were together," describing the primordial state of the universe.

POLUS: I'm asking a question.

SOCRATES: I don't think they're held in any regard at all.

POLUS: What do you mean, they're not held in any regard? Don't they have the greatest power in their cities?

SOCRATES: No, if by "having power" you mean something that's good for the one who has the power.

POLUS: That's just what I do mean.

SOCRATES: In that case I think that orators have the least power of any in the city.

POLUS: Really? Don't they, like tyrants, put to death anyone they want,
c and confiscate the property and banish from their cities anyone they see fit?

SOCRATES: By the Dog, Polus! I can't make out one way or the other with each thing you're saying whether you're saying these things for yourself and revealing your own view, or whether you're questioning me.

POLUS: I'm questioning you.

SOCRATES: Very well, my friend. In that case, are you asking me two questions at once?

POLUS: What do you mean, two?

SOCRATES: Weren't you just now saying something like "Don't orators,
d like tyrants, put to death anyone they want, don't they confiscate the property of anyone they see fit, and don't they banish them from their cities?"

POLUS: Yes, I was.

SOCRATES: In that case I say that these are two questions, and I'll answer you both of them. I say, Polus, that both orators and tyrants have the least
e power in their cities, as I was saying just now. For they do just about nothing they want to, though they certainly do whatever they see most fit to do.

POLUS: Well, isn't this having great power?

SOCRATES: No; at least Polus says it isn't.

POLUS: I say it isn't? I certainly say it is!

SOCRATES: By . . . , you certainly don't! since you say that having great power is good for the one who has it.

POLUS: Yes, I do say that.

SOCRATES: Do you think it's good, then, if a person does whatever he sees most fit to do when he lacks intelligence? Do you call this "having great power" too?

POLUS: No, I do not.

SOCRATES: Will you refute me, then, and prove that orators do have
467 intelligence, and that oratory is a craft, and not flattery? If you leave me unrefuted, then the orators who do what they see fit in their cities, and the tyrants, too, won't have gained any good by this. Power is a good thing, you say, but you agree with me that doing what one sees fit without intelligence is bad. Or don't you?

POLUS: Yes, I do.

Socrates: How then could it be that orators or tyrants have great power in their cities, so long as Socrates is not refuted by Polus to show that they do what they want?

Polus: This fellow— b

Socrates: —denies that they do what they want. Go ahead and refute me.

Polus: Didn't you just now agree that they do what they see fit?

Socrates: Yes, and I still do.

Polus: Don't they do what they want, then?

Socrates: I say they don't.

Polus: Even though they do what they see fit?

Socrates: That's what I say.

Polus: What an outrageous thing to say, Socrates! Perfectly monstrous!

Socrates: Don't attack me, my peerless Polus, to address you in your own style. Instead, question me if you can, and prove that I'm wrong. c
Otherwise you must answer me.

Polus: All right, I'm willing to answer, to get some idea of what you're saying.

Socrates: Do you think that when people do something, they want the thing they're doing at the time, or the thing for the sake of which they do what they're doing? Do you think that people who take medicines prescribed by their doctors, for instance, want what they're doing, the act of taking the medicine, with all its discomfort, or do they want to be healthy, the thing for the sake of which they're taking it?

Polus: Obviously they want their being healthy.

Socrates: With seafarers, too, and those who make money in other ways, d
the thing they're doing at the time is not the thing they want—for who wants to make dangerous and troublesome sea voyages? What they want is their being wealthy, the thing for the sake of which, I suppose, they make their voyages. It's for the sake of wealth that they make them.

Polus: Yes, that's right.

Socrates: Isn't it just the same in all cases, in fact? If a person does anything for the sake of something, he doesn't want this thing that he's
doing, but the thing for the sake of which he's doing it? e

Polus: Yes.

Socrates: Now is there any thing that isn't either *good*, or *bad*, or, what is between these, *neither good nor bad*?

Polus: There can't be, Socrates.

Socrates: Do you say that wisdom, health, wealth and the like are good, and their opposites bad?

Polus: Yes, I do.

Socrates: And by things which are neither good nor bad you mean things which sometimes partake of what's good, sometimes of what's bad,
and sometimes of neither, such as sitting or walking, running or making 468
sea voyages, or stones and sticks and the like? Aren't these the ones you mean? Or are there any others that you call things neither good nor bad?

Polus: No, these are the ones.

Socrates: Now whenever people do things, do they do these intermediate things for the sake of good ones, or the good things for the sake of the intermediate ones?

b Polus: The intermediate things for the sake of the good ones, surely.

Socrates: So it's because we pursue what's good that we walk whenever we walk; we suppose that it's better to walk. And conversely, whenever we stand still, we stand still for the sake of the same thing, what's good. Isn't that so?

Polus: Yes.

Socrates: And don't we also put a person to death, if we do, or banish him and confiscate his property because we suppose that doing these things is better for us than not doing them?

Polus: That's right.

Socrates: Hence, it's for the sake of what's good that those who do all these things do them.

Polus: I agree.

Socrates: Now didn't we agree that we want, not those things that we
c do for the sake of something, but that thing for the sake of which we do them?

Polus: Yes, very much so.

Socrates: Hence, we don't simply want to slaughter people, or exile them from their cities and confiscate their property as such; we want to do these things if they are beneficial, but if they're harmful we don't. For we want the things that are good, as you agree, and we don't want those that are neither good nor bad, nor those that are bad. Right? Do you think that what I'm saying is true, Polus, or don't you? Why don't you answer?

Polus: I think it's true.

d Socrates: Since we're in agreement about that then, if a person who's a tyrant or an orator puts somebody to death or exiles him or confiscates his property because he supposes that doing so is better for himself when actually it's worse, this person, I take it, is doing what he sees fit, isn't he?

Polus: Yes.

Socrates: And is he also doing what he wants, if these things are actually bad? Why don't you answer?

Polus: All right, I don't think he's doing what he wants.

e Socrates: Can such a man possibly have great power in that city, if in fact having great power is, as you agree, something good?

Polus: He cannot.

Socrates: So, what I was saying is true, when I said that it is possible for a man who does in his city what he sees fit not to have great power, nor to be doing what he wants.

Polus: Really, Socrates! As if *you* wouldn't welcome being in a position to do what you see fit in the city, rather than not! As if *you* wouldn't be envious whenever you'd see anyone putting to death some person he saw fit, or confiscating his property or tying him up!

Socrates: Justly, you mean, or unjustly?

Polus: Whichever way he does it, isn't he to be envied either way? 469

Socrates: Hush, Polus.

Polus: What for?

Socrates: Because you're not supposed to envy the unenviable or the miserable. You're supposed to pity them.

Polus: Really? Is this how you think it is with the people I'm talking about?

Socrates: Of course.

Polus: So, you think that a person who puts to death anyone he sees fit, and does so justly, is miserable and to be pitied?

Socrates: No, I don't, but I don't think he's to be envied either.

Polus: Weren't you just now saying that he's miserable?

Socrates: Yes, the one who puts someone to death unjustly is, my friend, b
and he's to be pitied besides. But the one who does so justly isn't to
be envied.

Polus: Surely the one who's put to death unjustly is the one who's both to be pitied and miserable.

Socrates: Less so than the one putting him to death, Polus, and less than the one who's justly put to death.

Polus: How can that be, Socrates?

Socrates: It's because doing what's unjust is actually the worst thing there is.

Polus: Really? Is *that* the worst? Isn't suffering what's unjust still worse?

Socrates: No, not in the least.

Polus: So you'd rather want to suffer what's unjust than do it?

Socrates: For my part, I wouldn't want either, but if it had to be one c
or the other, I would choose suffering over doing what's unjust.

Polus: You wouldn't welcome being a tyrant, then?

Socrates: No, if by being a tyrant you mean what I do.

Polus: I mean just what I said a while ago, to be in a position to do whatever you see fit in the city, whether it's putting people to death or exiling them, or doing any and everything just as you see fit.

Socrates: Well, my wonderful fellow! I'll put you a case, and you criticize d
it. Imagine me in a crowded marketplace, with a dagger up my sleeve,
saying to you, "Polus, I've just got myself some marvelous tyrannical
power. So, if I see fit to have any one of these people you see here put to
death right on the spot, to death he'll be put. And if I see fit to have one
of them have his head bashed in, bashed in it will be, right away. If I see
fit to have his coat ripped apart, ripped it will be. That's how great my
power in this city is!" Suppose you didn't believe me and I showed you e
the dagger. On seeing it, you'd be likely to say, "But Socrates, *everybody*
could have great power that way. For this way any house you see fit
might be burned down, and so might the dockyards and triremes of the
Athenians, and all their ships, both public and private." But then *that's*
not what having great power is, doing what one sees fit. Or do you think
it is?

POLUS: No, at least not like that.

470 SOCRATES: Can you then tell me what your reason is for objecting to this sort of power?

POLUS: Yes, I can.

SOCRATES: What is it? Tell me.

POLUS: It's that the person who acts this way is necessarily punished.

SOCRATES: And isn't being punished a bad thing?

POLUS: Yes, it really is.

SOCRATES: Well then, my surprising fellow, here again you take the view that as long as acting as one sees fit coincides with acting beneficially, it is good, and this, evidently, is having great power. Otherwise it is a bad
b thing, and is having little power. Let's consider this point, too. Do we agree that sometimes it's better to do those things we were just now talking about, putting people to death and banishing them and confiscating their property, and at other times it isn't?

POLUS: Yes, we do.

SOCRATES: This point is evidently agreed upon by you and me both?

POLUS: Yes.

SOCRATES: When do you say that it's better to do these things then? Tell me where you draw the line.

POLUS: Why don't you answer that question yourself, Socrates.

c SOCRATES: Well then, Polus, if you find it more pleasing to listen to me, I say that when one does these things justly, it's better, but when one does them unjustly, it's worse.

POLUS: How hard it is to refute you, Socrates! Why, even a child could refute you and show that what you're saying isn't true!

SOCRATES: In that case, I'll be very grateful to the child, and just as grateful to you if you refute me and rid me of this nonsense. Please don't falter now in doing a friend a good turn. Refute me.

POLUS: Surely, Socrates, we don't need to refer to ancient history to refute
d you. Why, current events quite suffice to do that, and to prove that many people who behave unjustly are happy.

SOCRATES: What sorts of events are these?

POLUS: You can picture this man Archelaus, the son of Perdiccas, ruling Macedonia, I take it?

SOCRATES: Well, if I can't picture him, I do hear things about him.

POLUS: Do you think he's happy or miserable?

SOCRATES: I don't know, Polus. I haven't met the man yet.

e POLUS: Really? You'd know this if you had met him, but without that you don't know straight off that he's happy?

SOCRATES: No, I certainly don't, by Zeus!

POLUS: It's obvious, Socrates, that you won't even claim to know that the Great King[9] is happy.

9. The King of Persia, whose riches and imperial power embodied the popular idea of supreme happiness.

Socrates: Yes, and that would be true, for I don't know how he stands in regard to education and justice.

Polus: Really? Is happiness determined entirely by that?

Socrates: Yes, Polus, so I say anyway. I say that the admirable and good person, man or woman, is happy, but that the one who's unjust and wicked is miserable.

Polus: So on your reasoning this man Archelaus is miserable? 471

Socrates: Yes, my friend, if he is in fact unjust.

Polus: Why of course he's unjust! The sovereignty which he now holds doesn't belong to him at all, given the fact that his mother was a slave of Alcetas, Perdiccas' brother. By rights he was a slave of Alcetas, and if he wanted to do what's just, he'd still be a slave to Alcetas, and on your reasoning would be happy. As it is, how marvelously "miserable" he's turned out to be, now that he's committed the most heinous crimes. First
he sends for this man, his very own master and uncle, on the pretext of b
restoring to him the sovereignty that Perdiccas had taken from him. He entertains him, gets him drunk, both him and his son Alexander, his own cousin and a boy about his own age. He then throws them into a wagon, drives it away at night, and slaughters and disposes of them both. And although he's committed these crimes, he remains unaware of how "miserable" he's become, and feels no remorse either. He refuses to become "happy" by justly bringing up his brother and conferring the sovereignty
upon him, the legitimate son of Perdiccas, a boy of about seven to whom c
the sovereignty was by rights due to come. Instead, not long afterward, he throws him into a well and drowns him, telling the boy's mother Cleopatra that he fell into the well chasing a goose and lost his life. For this very reason now, because he's committed the most terrible of crimes of any in Macedonia, he's the most "miserable" of all Macedonians instead of the happiest, and no doubt there are some in Athens, beginning with
yourself, who'd prefer being any other Macedonian at all to being Arch- d
elaus.

Socrates: Already at the start of our discussions, Polus, I praised you because I thought you were well educated in oratory. But I also thought that you had neglected the practice of discussion. And now is *this* all there is to the argument by which even a child could refute me, and do you suppose that when I say that a person who acts unjustly is not happy, I now stand refuted by you by means of *this* argument? Where did you get that idea, my good man? As a matter of fact, I disagree with every single thing you say!

Polus: You're just unwilling to admit it. You really do think it's the way e
I say it is.

Socrates: My wonderful man, you're trying to refute me in oratorical style, the way people in law courts do when they think they're refuting some claim. There, too, one side thinks it's refuting the other when it produces many reputable witnesses on behalf of the arguments it presents, while the person who asserts the opposite produces only one witness, or

none at all. This "refutation" is worthless, as far as truth is concerned, for
472 it might happen sometimes that an individual is brought down by the
false testimony of many reputable people. Now too, nearly every Athenian
and alien will take your side on the things you're saying, if it's witnesses
you want to produce against me to show that what I say isn't true. Nicias
the son of Niceratus will testify for you, if you like, and his brothers along
with him, the ones whose tripods are standing in a row in the precinct of
b Dionysus. Aristocrates the son of Scellias will too, if you like, the one to
whom that handsome votive offering in the precinct of Pythian Apollo
belongs. And so will the whole house of Pericles, if you like, or any other
local family you care to choose. Nevertheless, though I'm only one person,
I don't agree with you. You don't compel me; instead you produce many
false witnesses against me and try to banish me from my property, the
truth. For my part, if I don't produce you as a single witness to agree with
what I'm saying, then I suppose I've achieved nothing worth mentioning
c concerning the things we've been discussing. And I suppose you haven't
either, if I don't testify on your side, though I'm just one person, and you
disregard all these other people.

There is, then, this style of refutation, the one you and many others
accept. There's also another, one that I accept. Let's compare the one with
the other and see if they'll differ in any way. It's true, after all, that the
matters in dispute between us are not at all insignificant ones, but pretty
nearly those it's most admirable to have knowledge about, and most shame-
ful not to. For the heart of the matter is that of recognizing or failing to
d recognize who is happy and who is not. To take first the immediate question
our present discussion's about: you believe that it's possible for a man
who behaves unjustly and who is unjust to be happy, since you believe
Archaelaus to be both unjust and happy. Are we to understand that this
is precisely your view?

POLUS: That's right.

SOCRATES: And I say that that's impossible. This is one point in dispute
between us. Fair enough. Although he acts unjustly, he'll be happy—that
is, if he gets his due punishment?

POLUS: Oh no, certainly not! That's how he'd be the most miserable!

e SOCRATES: But if a man who acts unjustly doesn't get his due, then, on
your reasoning, he'll be happy?

POLUS: That's what I say.

SOCRATES: On my view of it, Polus, a man who acts unjustly, a man who
is unjust, is thoroughly miserable, the more so if he doesn't get his due
punishment for the wrongdoing he commits, the less so if he pays and
receives what is due at the hands of both gods and men.

473 POLUS: What an absurd position you're trying to maintain, Socrates!

SOCRATES: Yes, and I'll try to get you to take the same position too, my
good man, for I consider you a friend. For now, these are the points we
differ on. Please look at them with me. I said earlier, didn't I, that doing
what's unjust is worse than suffering it?

Polus: Yes, you did.

Socrates: And you said that suffering it is worse.

Polus: Yes.

Socrates: And I said that those who do what's unjust are miserable, and was "refuted" by you.

Polus: You certainly were, by Zeus!

Socrates: So you think, Polus. b

Polus: So I *truly* think.

Socrates: Perhaps. And again, you think that those who do what's unjust are happy, so long as they don't pay what is due.

Polus: I certainly do.

Socrates: Whereas I say that they're the most miserable, while those who pay their due are less so. Would you like to refute this too?

Polus: Why, that's even more "difficult" to refute than the other claim, Socrates!

Socrates: Not difficult, surely, Polus. It's impossible. What's true is never refuted.

Polus: What do you mean? Take a man who's caught doing something unjust, say, plotting to set himself up as tyrant. Suppose that he's caught, c
put on the rack, castrated, and has his eyes burned out. Suppose that he's subjected to a host of other abuses of all sorts, and then made to witness his wife and children undergo the same. In the end he's impaled or tarred. Will he be happier than if he hadn't got caught, had set himself up as tyrant, and lived out his life ruling in his city and doing whatever he liked, a person envied and counted happy by fellow citizens and aliens alike? d
Is *this* what you say is impossible to refute?

Socrates: This time you're spooking me, Polus, instead of refuting me. Just before, you were arguing by testimony. Still, refresh my memory on a small point: if the man plots to set himself up as tyrant *unjustly*, you said?

Polus: Yes, I did.

Socrates: In that case neither of them will ever be the happier one, neither the one who gains tyrannical power unjustly, nor the one who pays what is due, for of two miserable people one could not be happier than the other. But the one who avoids getting caught and becomes a e
tyrant is the more miserable one. What's this, Polus? You're laughing? Is this now some further style of refutation, to laugh when somebody makes a point, instead of refuting him?

Polus: Don't you think you've been refuted already, Socrates, when you're saying things the likes of which no human being would maintain? Just ask any one of these people.

Socrates: Polus, I'm not one of the politicians. Last year I was elected to the Council by lot, and when our tribe was presiding and I had to call for a vote, I came in for a laugh. I didn't know how to do it. So please 474
don't tell me to call for a vote from the people present here. If you have no better "refutations" than these to offer, do as I suggested just now: let me have my turn, and you try the kind of refutation I think is called for.

For I do know how to produce one witness to whatever I'm saying, and that's the man I'm having a discussion with. The majority I disregard. And I do know how to call for a vote from one man, but I don't even
b discuss things with the majority. See if you'll be willing to give me a refutation, then, by answering the questions you're asked. For I do believe that you and I and everybody else consider doing what's unjust worse than suffering it, and not paying what is due worse than paying it.

POLUS: And I do believe that I don't, and that no other person does, either. So you'd take suffering what's unjust over doing it, would you?

SOCRATES: Yes, and so would you and everyone else.

POLUS: Far from it! I wouldn't, you wouldn't, and nobody else would, either.

c SOCRATES: Won't you answer, then?

POLUS: I certainly will. I'm eager to know what you'll say, in fact.

SOCRATES: So that you'll know, answer me as though this were my first question to you. Which do you think is worse, Polus, doing what's unjust or suffering it?

POLUS: I think suffering it is.

SOCRATES: You do? Which do you think is more shameful, doing what's unjust or suffering it? Tell me.

POLUS: Doing it.

SOCRATES: Now if doing it is in fact more shameful, isn't it also worse?

POLUS: No, not in the least.

d SOCRATES: I see. Evidently you don't believe that *admirable* and *good* are the same, or that *bad* and *shameful* are.

POLUS: No, I certainly don't.

SOCRATES: Well, what about this? When you call all admirable things admirable, bodies, for example, or colors, shapes and sounds, or practices, is it with nothing in view that you do so each time? Take admirable bodies first. Don't you call them admirable either in virtue of their usefulness, relative to whatever it is that each is useful for, or else in virtue of some pleasure, if it makes the people who look at them get enjoyment from looking at them? In the case of the admirability of a body, can you mention anything other than these?

e POLUS: No, I can't.

SOCRATES: Doesn't the same hold for all the other things? Don't you call shapes and colors admirable on account of either some pleasure or benefit or both?

POLUS: Yes, I do.

SOCRATES: Doesn't this also hold for sounds and all things musical?

POLUS: Yes.

SOCRATES: And certainly things that pertain to laws and practices—the admirable ones, that is—don't fall outside the limits of being either pleasant or beneficial, or both, I take it.

475 POLUS: No, I don't think they do.

SOCRATES: Doesn't the same hold for the admirability of the fields of learning, too?

Polus: Yes indeed. Yes, Socrates, your present definition of the admirable in terms of pleasure and good is an admirable one.

Socrates: And so is my definition of the shameful in terms of the opposite, pain and bad, isn't it?

Polus: Necessarily so.

Socrates: Therefore, whenever one of two admirable things is more admirable than the other, it is so because it surpasses the other either in one of these, pleasure or benefit, or in both.

Polus: Yes, that's right.

Socrates: And whenever one of two shameful things is more shameful
than the other, it will be so because it surpasses the other either in pain b
or in badness. Isn't that necessarily so?

Polus: Yes.

Socrates: Well now, what were we saying a moment ago about doing what's unjust and suffering it? Weren't you saying that suffering it is worse, but doing it more shameful?

Polus: I was.

Socrates: Now if doing what's unjust is in fact more shameful than suffering it, wouldn't it be so either because it is more painful and surpasses the other in pain, or because it surpasses it in badness, or both? Isn't that necessarily so, too?

Polus: Of course it is.

Socrates: Let's look at this first: does doing what's unjust surpass suffer- c
ing it in pain, and do people who do it hurt more than people who suffer it?

Polus: No, Socrates, that's not the case at all!

Socrates: So it doesn't surpass it in pain, anyhow.

Polus: Certainly not.

Socrates: So, if it doesn't surpass it in pain, it couldn't at this point surpass it in both.

Polus: Apparently not.

Socrates: This leaves it surpassing it only in the other thing.

Polus: Yes.

Socrates: In badness.

Polus: Evidently.

Socrates: So, because it surpasses it in badness, doing what's unjust would be worse than suffering it.

Polus: That's clear.

Socrates: Now didn't the majority of mankind, and you earlier, agree d
with us that doing what's unjust is more shameful than suffering it?

Polus: Yes.

Socrates: And now, at least, it's turned out to be worse.

Polus: Evidently.

Socrates: Would you then welcome what's worse and what's more shameful over what is less so? Don't shrink back from answering, Polus. You won't get hurt in any way. Submit yourself nobly to the argument, as you would to a doctor, and answer me. Say yes or no to what I ask you.

Polus: No, I wouldn't, Socrates. e

Socrates: And would any other person?

Polus: No, I don't think so, not on this reasoning, anyhow.

Socrates: I was right, then, when I said that neither you nor I nor any other person would take doing what's unjust over suffering it, for it really is something worse.

Polus: So it appears.

Socrates: So you see, Polus, that when the one refutation is compared with the other, there is no resemblance at all. Whereas everyone but me
476 agrees with you, you are all I need, although you're just a party of one, for your agreement and testimony. It's you alone whom I call on for a vote; the others I disregard. Let this be our verdict on this matter, then. Let's next consider the second point in dispute between us, that is whether a wrongdoer's paying what is due is the worst thing there is, as you were supposing, or whether his not paying it is even worse, as I was.

Let's look at it this way. Are you saying that paying what is due and being justly disciplined for wrongdoing are the same thing?

Polus: Yes, I do.

b Socrates: Can you say, then, that all just things aren't admirable, insofar as they are just? Think carefully and tell me.

Polus: Yes, I think they are.

Socrates: Consider this point, too. If somebody acts upon something, there also has to be something that has something done to it by the one acting upon it?

Polus: Yes, I think so.

Socrates: And that it has done to it what the thing acting upon it does, and in the sort of way the thing acting upon it does it? I mean, for example, that if somebody hits, there has to be something that's being hit?

Polus: There has to be.

Socrates: And if the hitter hits hard or quickly, the thing being hit is
c hit that way, too?

Polus: Yes.

Socrates: So the thing being hit gets acted upon in whatever way the hitting thing acts upon it?

Polus: Yes, that's right.

Socrates: So, too, if somebody performs surgical burning, then there has to be something that's being burned?

Polus: Of course.

Socrates: And if he burns severely or painfully, the thing that's being burned is burned in whatever way the burning thing burns it?

Polus: That's right.

Socrates: Doesn't the same account also hold if a person makes a surgical cut? For something is being cut.

Polus: Yes.

Socrates: And if the cut is large or deep or painful, the thing being cut
d is cut in whatever way the cutting thing cuts it?

Polus: So it appears.

SOCRATES: Summing it up, see if you agree with what I was saying just now, that in all cases, in whatever way the thing acting upon something acts upon it, the thing acted upon is acted upon in just that way.

POLUS: Yes, I do agree.

SOCRATES: Taking this as agreed, is paying what is due a case of being acted upon or of acting upon something?

POLUS: It must be a case of being acted upon, Socrates.

SOCRATES: By someone who acts?

POLUS: Of course. By the one administering discipline.

SOCRATES: Now one who disciplines correctly disciplines justly? e

POLUS: Yes.

SOCRATES: Thereby acting justly, or not?

POLUS: Yes, justly.

SOCRATES: So the one being disciplined is being acted upon justly when he pays what is due?

POLUS: Apparently.

SOCRATES: And it was agreed, I take it, that just things are admirable?

POLUS: That's right.

SOCRATES: So one of these men does admirable things, and the other, the one being disciplined, has admirable things done to him.

POLUS: Yes.

SOCRATES: If they're admirable, then, aren't they good? For they're either 477
pleasant or beneficial.

POLUS: Necessarily so.

SOCRATES: Hence, the one paying what is due has good things being done to him?

POLUS: Evidently.

SOCRATES: Hence, he's being benefited?

POLUS: Yes.

SOCRATES: Is his benefit the one I take it to be? Does his soul undergo improvement if he's justly disciplined?

POLUS: Yes, that's likely.

SOCRATES: Hence, one who pays what is due gets rid of something bad in his soul?

POLUS: Yes.

SOCRATES: Now, is the bad thing he gets rid of the most serious one?
Consider it this way: in the matter of a person's financial condition, do b
you detect any bad thing other than poverty?

POLUS: No, just poverty.

SOCRATES: What about that of a person's physical condition? Would you say that what is bad here consists of weakness, disease, ugliness, and the like?

POLUS: Yes, I would.

SOCRATES: Do you believe that there's also some corrupt condition of the soul?

POLUS: Of course.

Socrates: And don't you call this condition injustice, ignorance, cowardice, and the like?

Polus: Yes, certainly.

Socrates: Of these three things, one's finances, one's body, and one's
c soul, you said there are three states of corruption, namely poverty, disease, and injustice?

Polus: Yes.

Socrates: Which of these states of corruption is the most shameful? Isn't it injustice, and corruption of one's soul in general?

Polus: Very much so.

Socrates: And if it's the most shameful, it's also the worst?

Polus: What do you mean, Socrates?

Socrates: I mean this: What we agreed on earlier implies that what's most shameful is so always because it's the source either of the greatest pain, or of harm, or of both.

Polus: Very much so.

Socrates: And now we've agreed that injustice, and corruption of soul
d as a whole, is the most shameful thing.

Polus: So we have.

Socrates: So either it's most painful and is most shameful because it surpasses the others in pain, or else in harm, or in both?

Polus: Necessarily so.

Socrates: Now is being unjust, undisciplined, cowardly, and ignorant more painful than being poor or sick?

Polus: No, I don't think so, Socrates, given what we've said, anyhow.

Socrates: So the reason that corruption of one's soul is the most shameful
e of them all is that it surpasses the others by some monstrously great harm and astounding badness, since it doesn't surpass them in pain, according to your reasoning.

Polus: So it appears.

Socrates: But what is surpassing in greatest harm would, I take it, certainly be the worst thing there is.

Polus: Yes.

Socrates: Injustice, then, lack of discipline and all other forms of corruption of soul are the worst thing there is.

Polus: Apparently so.

Socrates: Now, what is the craft that gets rid of poverty? Isn't it that of financial management?

Polus: Yes.

Socrates: What's the one that gets rid of disease? Isn't it that of medicine?

478 Polus: Necessarily.

Socrates: What's the one that gets rid of corruption and injustice? If you're stuck, look at it this way: where and to whom do we take people who are physically sick?

Polus: To doctors, Socrates.

Socrates: Where do we take people who behave unjustly and without discipline?

POLUS: To judges, you mean?

SOCRATES: Isn't it so they'll pay what's due?

POLUS: Yes, I agree.

SOCRATES: Now don't those who administer discipline correctly employ a kind of justice in doing so?

POLUS: That's clear.

SOCRATES: It's financial management, then, that gets rid of poverty, medicine that gets rid of disease, and justice that gets rid of injustice and indiscipline. b

POLUS: Apparently.

SOCRATES: Which of these, now, is the most admirable?

POLUS: Of which, do you mean?

SOCRATES: Of financial management, medicine, and justice.

POLUS: Justice is by far, Socrates.

SOCRATES: Doesn't it in that case provide either the most pleasure, or benefit, or both, if it really is the most admirable?

POLUS: Yes.

SOCRATES: Now, is getting medical treatment something pleasant? Do people who get it enjoy getting it?

POLUS: No, I don't think so.

SOCRATES: But it *is* beneficial, isn't it?

POLUS: Yes.

SOCRATES: Because they're getting rid of something very bad, so that it's c worth their while to endure the pain and so get well.

POLUS: Of course.

SOCRATES: Now, would a man be happiest, as far as his body goes, if he's under treatment, or if he weren't even sick to begin with?

POLUS: If he weren't even sick, obviously.

SOCRATES: Because happiness evidently isn't a matter of getting rid of something bad; it's rather a matter of not even contracting it to begin with.

POLUS: That's so.

SOCRATES: Very well. Of two people, each of whom has something bad d in either body or soul, which is the more miserable one, the one who is treated and gets rid of the bad thing or the one who doesn't but keeps it?

POLUS: The one who isn't treated, it seems to me.

SOCRATES: Now, wasn't paying what's due getting rid of the worst thing there is, corruption?

POLUS: It was.

SOCRATES: Yes, because such justice makes people self-controlled, I take it, and more just. It proves to be a treatment against corruption.

POLUS: Yes.

SOCRATES: The happiest man, then, is the one who doesn't have any badness in his soul, now that this has been shown to be the most serious kind of badness.

POLUS: That's clear.

SOCRATES: And second, I suppose, is the man who gets rid of it. e

POLUS: Evidently.

SOCRATES: This is the man who gets lectured and lashed, the one who pays what is due.

POLUS: Yes.

SOCRATES: The man who keeps it, then, and who doesn't get rid of it, is the one whose life is the worst.

POLUS: Apparently.

SOCRATES: Isn't this actually the man who, although he commits the most
479 serious crimes and uses methods that are most unjust, succeeds in avoiding being lectured and disciplined and paying his due, as Archelaus according to you, and the other tyrants, orators, and potentates have put themselves in a position to do?

POLUS: Evidently.

SOCRATES: Yes, my good man, I take it that these people have managed to accomplish pretty much the same thing as a person who has contracted very serious illnesses, but, by avoiding treatment manages to avoid paying what's due to the doctors for his bodily faults, fearing, as would a child,
b cauterization or surgery because they're painful. Don't you think so, too?

POLUS: Yes, I do.

SOCRATES: It's because he evidently doesn't know what health and bodily excellence are like. For on the basis of what we're now agreed on, it looks as though those who avoid paying what is due also do the same sort of thing, Polus. They focus on its painfulness, but are blind to its benefit and are ignorant of how much more miserable it is to live with an unhealthy
c soul than with an unhealthy body, a soul that's rotten with injustice and impiety. This is also the reason they go to any length to avoid paying what is due and getting rid of the worst thing there is. They find themselves funds and friends, and ways to speak as persuasively as possible. Now if what we're agreed on is true, Polus, are you aware of what things follow from our argument? Or would you like us to set them out?

POLUS: Yes, if you think we should anyhow.

SOCRATES: Does it follow that injustice, and doing what is unjust, is the worst thing there is?

d POLUS: Yes, apparently.

SOCRATES: And it has indeed been shown that paying what is due is what gets rid of this bad thing?

POLUS: So it seems.

SOCRATES: And that if it isn't paid, the bad thing is retained?

POLUS: Yes.

SOCRATES: So, doing what's unjust is the second worst thing. Not paying what's due when one has done what's unjust is by its nature the first worst thing, the very worst of all.

POLUS: Evidently.

SOCRATES: Now wasn't this the point in dispute between us, my friend?
e You considered Archelaus happy, a man who committed the gravest crimes without paying what was due, whereas I took the opposite view, that whoever avoids paying his due for his wrongdoing, whether he's Archelaus

or any other man, is and deserves to be miserable beyond all other men, and that one who does what's unjust is always more miserable than the one who suffers it, and the one who avoids paying what's due always more miserable than the one who does pay it. Weren't these the things I said?

Polus: Yes.

Socrates: Hasn't it been proved that what was said is true?

Polus: Apparently.

Socrates: Fair enough. If these things are true then, Polus, what is the 480
great use of oratory? For on the basis of what we're agreed on now, what a man should guard himself against most of all is doing what's unjust, knowing that he will have trouble enough if he does. Isn't that so?

Polus: Yes, that's right.

Socrates: And if he or anyone else he cares about acts unjustly, he should voluntarily go to the place where he'll pay his due as soon as
possible; he should go to the judge as though he were going to a doctor, b
anxious that the disease of injustice shouldn't be protracted and cause his soul to fester incurably. What else can we say, Polus, if our previous agreements really stand? Aren't these statements necessarily consistent with our earlier ones in only this way?

Polus: Well yes, Socrates. What else are we to say?

Socrates: So, if oratory is used to defend injustice, Polus, one's own or that of one's relatives, companions, or children, or that of one's country
when it acts unjustly, it is of no use to us at all, unless one takes it to be c
useful for the opposite purpose: that he should accuse himself first and foremost, and then too his family and anyone else dear to him who happens to behave unjustly at any time; and that he should not keep his wrongdoing hidden but bring it out into the open, so that he may pay his due and get well; and compel himself and the others not to play the coward, but to grit his teeth and present himself with grace and courage as to a doctor for cauterization and surgery, pursuing what's good and admirable without taking any account of the pain. And if his unjust behavior merits flogging,
he should present himself to be whipped; if it merits imprisonment, to be d
imprisoned; if a fine, to pay it; if exile, to be exiled; and if execution, to be executed. He should be his own chief accuser, and the accuser of other members of his family, and use his oratory for the purpose of getting rid of the worst thing there is, injustice, as the unjust acts are being exposed. Are we to affirm or deny this, Polus?

Polus: I think these statements are absurd, Socrates, though no doubt e
you think they agree with those expressed earlier.

Socrates: Then either we should abandon those, or else these necessarily follow?

Polus: Yes, that's how it is.

Socrates: And, on the other hand, to reverse the case, suppose a man had to harm someone, an enemy or anybody at all, provided that he didn't suffer anything unjust from this enemy himself—for this is something to be on guard against—if the enemy did something unjust against another

481 person, then our man should see to it in every way, both in what he does
and what he says, that his enemy does not go to the judge and pay his
due. And if he does go, he should scheme to get his enemy off without
paying what's due. If he's stolen a lot of gold, he should scheme to get
him not to return it but to keep it and spend it in an unjust and godless
way both on himself and his people. And if his crimes merit the death
penalty, he should scheme to keep him from being executed, preferably
never to die at all but to live forever in corruption, but failing that, to have
b him live as long as possible in that condition. Yes, this is the sort of thing
I think oratory is useful for, Polus, since for the person who has no intention
of behaving unjustly it doesn't seem to me to have much use—if in fact
it has any use at all—since its usefulness hasn't in any way become apparent
so far.

Callicles: Tell me, Chaerephon, is Socrates in earnest about this or is
he joking?

Chaerephon: I think he's in dead earnest about this, Callicles. There's
nothing like asking him, though.

Callicles: By the gods! Just the thing I'm eager to do. Tell me, Socrates,
c are we to take you as being in earnest now, or joking? For if you *are* in
earnest, and these things you're saying are really true, won't this human
life of ours be turned upside down, and won't everything we do evidently
be the opposite of what we should do?

Socrates: Well, Callicles, if human beings didn't share common experi-
ences, some sharing one, others sharing another, but one of us had some
d unique experience not shared by others, it wouldn't be easy for him to
communicate what he experienced to the other. I say this because I realize
that you and I are both now actually sharing a common experience: each
of the two of us is a lover of two objects, I of Alcibiades, Clinias' son,[10]
and of philosophy, and you of the *demos* [people] of Athens, and the Demos
who's the son of Pyrilampes. I notice that in each case you're unable to
contradict your beloved, clever though you are, no matter what he says
e or what he claims is so. You keep shifting back and forth. If you say
anything in the Assembly and the Athenian *demos* denies it, you shift your
ground and say what it wants to hear. Other things like this happen to
you when you're with that good-looking young man, the son of Pyrilampes.
You're unable to oppose what your beloveds say or propose, so that if
somebody heard you say what you do on their account and was amazed
at how absurd that is, you'd probably say—if you were minded to tell
482 him the truth—that unless somebody stops your beloveds from saying
what they say, you'll never stop saying these things either. In that case
you must believe that you're bound to hear me say things like that, too,
and instead of being surprised at my saying them, you must stop my
beloved, philosophy, from saying them. For she always says what you
now hear me say, my dear friend, and she's by far less fickle than my

10. See *Symposium* 215a–219d.

other beloved. As for that son of Clinias, what he says differs from one
time to the next, but what philosophy says always stays the same, and
she's saying things that now astound you, although you were present b
when they were said. So, either refute her and show that doing what's
unjust without paying what is due for it is *not* the ultimate of all bad
things, as I just now was saying it is, or else, if you leave this unrefuted,
then by the Dog, the god of the Egyptians, Callicles will not agree with
you, Callicles, but will be dissonant with you all your life long. And yet
for my part, my good man, I think it's better to have my lyre or a chorus
that I might lead out of tune and dissonant, and have the vast majority
of men disagree with me and contradict me, than to be out of harmony c
with myself, to contradict myself, though I'm only one person.

CALLICLES: Socrates, I think you're grandstanding in these speeches,
acting like a true crowd pleaser. Here you are, playing to the crowd now
that Polus has had the same thing happen to him that he accused Gorgias
of letting you do to him. For he said, didn't he, that when Gorgias was
asked by you whether he would teach anyone who came to him wanting d
to learn oratory but without expertise in what's just, Gorgias was ashamed
and, out of deference to human custom, since people would take it ill if
a person refused, said that he'd teach him. And because Gorgias agreed
on this point, he said, he was forced to contradict himself, just the thing
you like. He ridiculed you at the time, and rightly so, as I think anyhow.
And now the very same thing has happened to him. And for this same
reason *I* don't approve of Polus: he agreed with you that doing what's
unjust is more shameful than suffering it. As a result of this admission he e
was bound and gagged by you in the discussion, too ashamed to say what
he thought. Although you claim to be pursuing the truth, you're in fact
bringing the discussion around to the sort of crowd-pleasing vulgarities
that are admirable only by law and not by nature. And these, nature and
law, are for the most part opposed to each other, so if a person is ashamed 483
and doesn't dare to say what he thinks, he's forced to contradict himself.
This is in fact the clever trick you've thought of, with which you work
mischief in your discussions: if a person makes a statement in terms of
law, you slyly question him in terms of nature; if he makes it in terms of
nature, you question him in terms of law. That's just what happened here,
on the question of doing what's unjust versus suffering it. While Polus
meant that doing it is more shameful by law, you pursued the argument
as though he meant by nature. For by nature all that is worse is also more
shameful, like suffering what's unjust, whereas by law doing it is more
shameful. No, no man would put up with suffering what's unjust; only a b
slave would do so, one who is better dead than alive, who when he's
treated unjustly and abused can't protect himself or anyone else he cares
about. I believe that the people who institute our laws are the weak and
the many. So they institute laws and assign praise and blame with them-
selves and their own advantage in mind. As a way of frightening the more c
powerful among men, the ones who are capable of having a greater share,

out of getting a greater share than they, they say that getting more than one's share is "shameful" and "unjust," and that doing what's unjust is nothing but trying to get more than one's share. I think they like getting an equal share, since they are inferior.

These are the reasons why trying to get a greater share than most is said to be unjust and shameful by law and why they call it doing what's
d unjust. But I believe that nature itself reveals that it's a just thing for the better man and the more capable man to have a greater share than the worse man and the less capable man. Nature shows that this is so in many places; both among the other animals and in whole cities and races of men, it shows that this is what justice has been decided to be: that the superior rule the inferior and have a greater share than they. For what sort of justice did Xerxes go by when he campaigned against Greece, or
e his father when he campaigned against Scythia? Countless other such examples could be mentioned. I believe that these men do these things in accordance with the nature of what's just—yes, by Zeus, in accordance with the law of nature, and presumably not with the one we institute. We mold the best and the most powerful among us, taking them while they're still young, like lion cubs, and with charms and incantations we subdue
484 them into slavery, telling them that one is supposed to get no more than his fair share, and that that's what's admirable and just. But surely, if a man whose nature is equal to it arises, he will shake off, tear apart, and escape all this, he will trample underfoot our documents, our tricks and charms, and all our laws that violate nature. He, the slave, will rise up
b and be revealed as our master, and here the justice of nature will shine forth. I think Pindar, too, refers to what I'm saying in that song in which he says that

*Law, the king of all,*
*Of mortals and the immortal gods*

—this, he says,

*Brings on and renders just what is most violent*
*With towering hand. I take as proof of this*
*The deeds of Heracles. For he . . . unbought . . .*

His words are something like that—I don't know the song well—he says that Heracles drove off Geryon's cattle, even though he hadn't paid for
c them and Geryon hadn't given them to him, on the ground that this is what's just by nature, and that cattle and all the other possessions of those who are worse and inferior belong to the one who's better and superior.

This is the truth of the matter, as you will acknowledge if you abandon philosophy and move on to more important things. Philosophy is no doubt a delightful thing, Socrates, as long as one is exposed to it in moderation at the appropriate time of life. But if one spends more time with it than

he should, it's a man's undoing. For even if one is naturally well favored
but engages in philosophy far beyond that appropriate time of life, he
can't help but turn out to be inexperienced in everything a man who's to d
be admirable and good and well thought of is supposed to be experienced
in. Such people turn out to be inexperienced in the laws of their city or
in the kind of speech one must use to deal with people on matters of
business, whether in public or private, inexperienced also in human plea-
sures and appetites and, in short, inexperienced in the ways of human
beings altogether. So, when they venture into some private or political
activity, they become a laughingstock, as I suppose men in politics do e
when they venture into your pursuits and your kind of speech. What
results is Euripides' saying, where he says that "each man shines" in this
and "presses on to this,

> *allotting the greatest part of the day to this,*
> *where he finds himself at his best."*

And whatever a man's inferior in, he avoids and rails against, while he 485
praises the other thing, thinking well of himself and supposing that in this
way he's praising himself. I believe, however, that it's most appropriate
to have a share of both. To partake of as much philosophy as your education
requires is an admirable thing, and it's not shameful to practice philosophy
while you're a boy, but when you still do it after you've grown older and
become a man, the thing gets to be ridiculous, Socrates! My own reaction b
to men who philosophize is very much like that to men who speak haltingly
and play like children. When I see a child, for whom it's still quite proper
to make conversation this way, halting in its speech and playing like a
child, I'm delighted. I find it a delightful thing, a sign of good breeding,
and appropriate for the child's age. And when I hear a small child speaking
clearly, I think it's a harsh thing; it hurts my ears. I think it is something
fit for a slave. But when one hears a man speaking haltingly or sees him c
playing like a child, it strikes me as ridiculous and unmanly, deserving
of a flogging. Now, I react in the same way to men who engage in philoso-
phy, too. When I see philosophy in a young boy, I approve of it; I think
it's appropriate and consider such a person well-bred, whereas I consider
one who doesn't engage in philosophy ill-bred, one who'll never count
himself deserving of any admirable or noble thing. But when I see an older d
man still engaging in philosophy and not giving it up, I think such a man
by this time needs a flogging. For, as I was just now saying, it's typical
that such a man, even if he's naturally very well favored, becomes unmanly
and avoids the centers of his city and the marketplaces—in which, accord-
ing to the poet,[11] men attain "preeminence"—and, instead, lives the rest

11. Homer, *Iliad* ix.441.

e of his life in hiding, whispering in a corner with three or four boys, never uttering anything well-bred, important, or apt.

Socrates, I do have a rather warm regard for you. I find myself feeling what Zethus, whose words I recalled just now, felt toward Amphion in Euripides' play. In fact, the sorts of things he said to his brother come to my mind to say to you. "You're neglecting the things you should devote yourself to, Socrates, and though your spirit's nature is so noble, you show yourself to the world in the shape of a boy. You couldn't put a speech
486 together correctly before councils of justice or utter any plausible or persuasive sound. Nor could you make any bold proposal on behalf of anyone else." And so then, my dear Socrates—please don't be upset with me, for it's with good will toward you that I'll say this—don't you think it's shameful to be the way I take you to be, and others who ever press on too far in philosophy? As it is, if someone got hold of you or of anyone else like you and took you off to prison on the charge that you're doing something unjust when in fact you aren't, be assured that you wouldn't have any use for yourself. You'd get dizzy, your mouth would hang open
b and you wouldn't know what to say. You'd come up for trial and face some no good wretch of an accuser and be put to death, if death is what he'd want to condemn you to. And yet, Socrates, "how can this be a wise thing, the craft which took a well-favored man and made him worse," able neither to protect himself nor to rescue himself or anyone else from the gravest dangers, to be robbed of all of his property by his enemies,
c and to live a life with absolutely no rights in his city? Such a man one could knock on the jaw without paying what's due for it, to put it rather crudely. Listen to me, my good man, and stop this refuting. "Practice the sweet music of an active life and do it where you'll get a reputation for being intelligent. Leave these subtleties to others"—whether we should call them just silly or outright nonsense—"which will cause you to live in empty houses,"[12] and envy not those men who refute such trivia, but those
d who have life and renown, and many other good things as well.

SOCRATES: If I actually had a soul made of gold, Callicles, don't you think I'd be pleased to find one of those stones on which they test gold? And if this stone to which I intended to take my soul were the best stone and it agreed that my soul had been well cared for, don't you think I could know well at that point that I'm in good shape and need no further test?

e CALLICLES: What's the point of your question, Socrates?

SOCRATES: I'll tell you. I believe that by running into you, I've run into just such a piece of luck.

CALLICLES: Why do you say that?

SOCRATES: I know well that if you concur with what my soul believes,
487 then that is the very truth. I realize that a person who is going to put a soul to an adequate test to see whether it lives rightly or not must have three qualities, all of which you have: knowledge, good will, and frankness.

12. Here and just above Callicles again quotes or adapts Euripides' *Antiope*.

I run into many people who aren't able to test me because they're not
wise like you. Others are wise, but they're not willing to tell me the truth,
because they don't care for me the way you do. As for these two visitors,
Gorgias and Polus, they're both wise and fond of me, but rather more b
lacking in frankness, and more ashamed than they should be. No wonder!
They've come to such a depth of shame that, because they are ashamed,
each of them dares to contradict himself, face to face with many people,
and on topics of the greatest importance. You have all these qualities,
which the others don't. You're well-enough educated, as many of the
Athenians would attest, and you have good will toward me. What's my c
proof of this? I'll tell you. I know, Callicles, that there are four of you
who've become partners in wisdom, you, Teisander of Aphidnae, Andron
the son of Androtion, and Nausicydes of Cholarges. Once I overheard you
deliberating on how far one should cultivate wisdom, and I know that
some such opinion as this was winning out among you: you called on
each other not to enthusiastically pursue philosophizing to the point of d
pedantry but to be careful not to become wiser than necessary and so
inadvertently bring yourselves to ruin. So, now that I hear you giving me
the same advice you gave your closest companions, I have sufficient proof
that you really do have good will toward me. And as to my claim that
you're able to speak frankly without being ashamed, you yourself say so
and the speech you gave a moment ago bears you out. It's clear, then, that
this is how these matters stand at the moment. If there's any point in our e
discussions on which you agree with me, then that point will have been
adequately put to the test by you and me, and it will not be necessary to
put it to any further test, for you'd never have conceded the point through
lack of wisdom or excess of shame, and you wouldn't do so by lying to
me, either. You are my friend, as you yourself say, too. So, our mutual
agreement will really lay hold of truth in the end. Most admirable of all,
Callicles, is the examination of those issues about which you took me to
task, that of what a man is supposed to be like, and of what he's supposed
to devote himself to and how far, when he's older and when he's young. 488
For my part, if I engage in anything that's improper in my own life, please
know well that I do not make this mistake intentionally but out of my
ignorance. So don't leave off lecturing me the way you began, but show
me clearly what it is I'm to devote myself to, and in what way I might
come by it; if you catch me agreeing with you now but at a later time not
doing the very things I've agreed upon, then take me for a very stupid
fellow and don't bother ever afterward with lecturing me, on the ground b
that I'm a worthless fellow.

Please restate your position for me from the beginning. What is it that you and Pindar hold to be true of what's just by nature? That the superior should take by force what belongs to the inferior, that the better should rule the worse and the more worthy have a greater share than the less worthy? You're not saying anything else, are you? I do remember correctly?

CALLICLES: Yes, that's what I was saying then, and I still say so now, too.

Socrates: Is it the same man you call both "better" and "superior"? I
c wasn't able then, either, to figure out what you meant. Is it the stronger ones you call superior, and should those who are weaker take orders from the one who's stronger? That's what I think you were trying to show then also, when you said that large cities attack small ones according to what's just by nature, because they're superior and stronger, assuming that *superior*, *stronger* and *better* are the same. Or is it possible for one to be better
d and also inferior and weaker, or greater but more wretched? Or do "better" and "superior" have the same definition? Please define this for me clearly. Are *superior*, *better* and *stronger* the same or are they different?

Callicles: Very well, I'm telling you clearly that they're the same.

Socrates: Now aren't the many superior by nature to the one? They're the ones who in fact impose the laws upon the one, as you were saying yourself a moment ago.

Callicles: Of course.

Socrates: So the rules of the many are the rules of the superior.

Callicles: Yes, they are.

e Socrates: Aren't they the rules of the better? For by your reasoning, I take it, the superior are the better.

Callicles: Yes.

Socrates: And aren't the rules of these people admirable by nature, seeing that they're the superior ones?

Callicles: That's my view.

Socrates: Now, isn't it a rule of the many that it's just to have an equal share and that doing what's unjust is more shameful than suffering it, as
489 you yourself were saying just now? Is this so or not? Be careful that you in your turn don't get caught being ashamed now. Do the many observe or do they not observe the rule that it's just to have an equal and not a greater share, and that doing what's unjust is more shameful than suffering it? Don't grudge me your answer to this, Callicles, so that if you agree with me I may have my confirmation from you, seeing that it's the agreement of a man competent to pass judgment.

Callicles: All right, the many do have that rule.

b Socrates: It's not only by law, then, that doing what's unjust is more shameful than suffering it, or just to have an equal share, but it's so by nature, too. So it looks as though you weren't saying what's true earlier and weren't right to accuse me when you said that nature and law were opposed to each other and that I, well aware of this, am making mischief in my statements, taking any statement someone makes meant in terms of nature, in terms of law, and any statement meant in terms of law, in terms of nature.

Callicles: This man will not stop talking nonsense! Tell me, Socrates, aren't you ashamed, at your age, of trying to catch people's words and of
c making hay out of someone's tripping on a phrase? Do you take me to mean by people being *superior* anything else than their being *better*? Haven't

I been telling you all along that by "better" and "superior" I mean the same thing? Or do you suppose that I'm saying that if a rubbish heap of slaves and motley men, worthless except perhaps in physical strength, gets together and makes any statements, then these are the rules?

Socrates: Fair enough, wisest Callicles. Is this what you're saying?

Callicles: It certainly is.

Socrates: Well, my marvelous friend, I guessed some time ago that it's d
some such thing you mean by "superior," and I'm questioning you because I'm intent upon knowing clearly what you mean. I don't really suppose that you think two are better than one or that your slaves are better than you just because they're stronger than you. Tell me once more from the beginning, what *do* you mean by the *better*, seeing that it's not the stronger? And, my wonderful man, go easier on me in your teaching, so that I won't quit your school.

Callicles: You're being ironic, Socrates. e

Socrates: No I'm not, Callicles, by Zethus—the character you were invoking in being ironic with me so often just now! But come and tell me: whom do you mean by *the better*?

Callicles: I mean the worthier.

Socrates: So do you see that you yourself are uttering words, without making anything clear? Won't you say whether by *the better* and *the superior* you mean *the more intelligent*, or some others?

Callicles: Yes, by Zeus, they're very much the ones I mean.

Socrates: So on your reasoning it will often be the case that a single 490
intelligent person is superior to countless unintelligent ones, that this person should rule and they be ruled, and that the one ruling should have a greater share than the ones being ruled. This is the meaning I think you intend—and I'm not trying to catch you with a phrase—if the one is superior to these countless others.

Callicles: Yes, that's what I do mean. This is what I take the just by nature to be: that the better one, the more intelligent one, that is, both rules over and has a greater share than his inferiors.

Socrates: Hold it right there! What can your meaning be this time? b
Suppose we were assembled together in great numbers in the same place, as we are now, and we held in common a great supply of food and drink, and suppose we were a motley group, some strong and some weak, but one of us, being a doctor, was more intelligent about these things. He would, very likely, be stronger than some and weaker than others. Now this man, being more intelligent than we are, will certainly be better and superior in these matters?

Callicles: Yes, he will.

Socrates: So should he have a share of this food greater than ours c
because he's better? Or should he be the one to distribute everything because he's in charge, but not to get a greater share to consume and use up on his own body if he's to escape being punished for it? Shouldn't he,

instead, have a greater share than some and a lesser one than others, and if he should happen to be the weakest of all, shouldn't the best man have the least share of all, Callicles? Isn't this so, my good man?

d CALLICLES: You keep talking of food and drink and doctors and such nonsense. That's not what I mean!

SOCRATES: Don't you mean that the more intelligent one is the better one? Say yes or no.

CALLICLES: Yes, I do.

SOCRATES: But not that the better should have a greater share?

CALLICLES: Not of food or drink, anyhow.

SOCRATES: I see. Of clothes, perhaps? Should the weaver have the biggest garment and go about wearing the greatest number and the most beautiful clothes?

CALLICLES: What do you mean, clothes?

SOCRATES: But when it comes to shoes, obviously the most intelligent,
e the best man in that area should have the greater share. Perhaps the cobbler should walk around with the largest and greatest number of shoes on.

CALLICLES: What do you mean, shoes? You keep on with this nonsense!

SOCRATES: Well, if that's not the sort of thing you mean, perhaps it's this. Take a farmer, a man intelligent and admirable and good about land. Perhaps he should have the greater share of seed and use the largest possible quantity of it on his own land.

CALLICLES: How you keep on saying the same things, Socrates!

SOCRATES: Yes, Callicles, not only the same things, but also about the same subjects.

491 CALLICLES: By the gods! You simply don't let up on your continual talk of shoemakers and cleaners, cooks and doctors, as if our discussion were about them!

SOCRATES: Won't you say whom it's about, then? What does the superior, the more intelligent man have a greater share of, and have it justly? Will you neither bear with my promptings nor tell me yourself?

CALLICLES: I've been saying it all along. First of all, by the ones who are the superior I don't mean cobblers or cooks, but those who are intelligent
b about the affairs of the city, about the way it's to be well managed. And not only intelligent, but also brave, competent to accomplish whatever they have in mind, without slackening off because of softness of spirit.

SOCRATES: Do you see, my good Callicles, that you and I are not accusing each other of the same thing? You claim that I'm always saying the same things, and you criticize me for it, whereas I, just the opposite of you, claim that you never say the same things about the same subjects. At one
c time you were defining the better and the superior as the stronger, then again as the more intelligent, and now you've come up with something else again: the superior and the better are now said by you to be the braver. But tell me, my good fellow, once and for all, whom you mean by the better and the superior, and what they're better and superior in.

Callicles: But I've already said that I mean those who are intelligent
in the affairs of the city, and brave, too. It's fitting that they should be the d
ones who rule their cities, and what's just is that they, as the rulers, should
have a greater share than the others, the ruled.

Socrates: But what of themselves, my friend?

Callicles: What of *what*?

Socrates: Ruling or being ruled?

Callicles: What do you mean?

Socrates: I mean each individual ruling himself. Or is there no need at
all for him to rule himself, but only to rule others?

Callicles: What do you mean, rule himself?

Socrates: Nothing very subtle. Just what the many mean: being self-
controlled and master of oneself, ruling the pleasures and appetites e
within oneself.

Callicles: How delightful you are! By the self-controlled you mean the
stupid ones!

Socrates: How so? There's no one who'd fail to recognize that I mean
no such thing.

Callicles: Yes you do, Socrates, very much so. How could a man prove
to be happy if he's enslaved to anyone at all? Rather, this is what's admira-
ble and just by nature—and I'll say it to you now with all frankness—that
the man who'll live correctly ought to allow his own appetites to get as
large as possible and not restrain them. And when they are as large as 492
possible, he ought to be competent to devote himself to them by virtue of
his bravery and intelligence, and to fill them with whatever he may have
an appetite for at the time. But this isn't possible for the many, I believe;
hence, they become detractors of people like this because of the shame
they feel, while they conceal their own impotence. And they say that lack
of discipline is shameful, as I was saying earlier, and so they enslave men
who are better by nature, and while they themselves lack the ability to
provide for themselves fulfillment for their pleasures, their own lack of b
courage leads them to praise self-control and justice. As for all those who
were either sons of kings to begin with or else naturally competent to
secure some position of rule for themselves as tyrants or potentates, what
in truth could be more shameful and worse than self-control and justice
for these people who, although they are free to enjoy good things without
any interference, should bring as master upon themselves the law of the
many, their talk, and their criticism? Or how could they exist without
becoming miserable under that "admirable" regime of justice and self- c
control, allotting no greater share to their friends than to their enemies,
and in this way "rule" in their cities? Rather, the truth of it, Socrates—the
thing you claim to pursue—is like this: wantonness, lack of discipline, and
freedom, if available in good supply, are excellence and happiness; as for
these other things, these fancy phrases, these contracts of men that go
against nature, they're worthless nonsense!

d SOCRATES: The way you pursue your argument, speaking frankly as you
do, certainly does you credit, Callicles. For you are now saying clearly
what others are thinking but are unwilling to say. I beg you, then, not to
relax in any way, so that it may really become clear how we're to live.
Tell me: are you saying that if a person is to be the kind of person he
should be, he shouldn't restrain his appetites but let them become as large
as possible and then should procure their fulfillment from some source or
e other, and that this is excellence?

CALLICLES: Yes, that's what I'm saying.

SOCRATES: So then those who have no need of anything are wrongly said to be happy?

CALLICLES: Yes, for in that case stones and corpses would be happiest.

SOCRATES: But then the life of those people you call happiest is a strange one, too. I shouldn't be surprised that Euripides' lines are true when he says:

*But who knows whether being alive is being dead*
*And being dead is being alive?*

493 Perhaps in reality we're dead. Once I even heard one of the wise men say
that we are now dead and that our bodies are our tombs, and that the
part of our souls in which our appetites reside is actually the sort of thing
to be open to persuasion and to shift back and forth. And hence some
clever man, a teller of stories, a Sicilian, perhaps, or an Italian, named this
part a jar [*pithos*], on account of its being a persuadable [*pithanon*] and
b suggestible thing, thus slightly changing the name. And fools [*anoētoi*] he
named uninitiated [*amuētoi*], suggesting that that part of the souls of fools
where their appetites are located is their undisciplined part, one not tightly
closed, a leaking jar, as it were. He based the image on its insatiability.
Now this man, Callicles, quite to the contrary of your view, shows that
of the people in Hades—meaning the unseen [*aïdes*]—these, the uninitiated
ones, would be the most miserable. They would carry water into the leaking
jar using another leaky thing, a sieve. That's why by the sieve he means
c the soul (as the man who talked with me claimed). And because they leak,
he likened the souls of fools to sieves; for their untrustworthiness and
forgetfulness makes them unable to retain anything. This account is on
the whole a bit strange; but now that I've shown it to you, it does make
clear what I want to persuade you to change your mind about if I can: to
choose the orderly life, the life that is adequate to and satisfied with its
circumstances at any given time instead of the insatiable, undisciplined
d life. Do I persuade you at all, and are you changing your mind to believe
that those who are orderly are happier than those who are undisciplined,
or, even if I tell you many other such stories, will you change it none the
more for that?

CALLICLES: The latter thing you said is the truer, Socrates.

SOCRATES: Come then, and let me give you another image, one from the same school as this one. Consider whether what you're saying about each

life, the life of the self-controlled man and that of the undisciplined one,
is like this: Suppose there are two men, each of whom has many jars. The
jars belonging to one of them are sound and full, one with wine, another e
with honey, a third with milk, and many others with lots of other things.
And suppose that the sources of each of these things are scarce and difficult
to come by, procurable only with much toil and trouble. Now the one
man, having filled up his jars, doesn't pour anything more into them and
gives them no further thought. He can relax over them. As for the other
one, he too has resources that can be procured, though with difficulty, but
his containers are leaky and rotten. He's forced to keep on filling them, 494
day and night, or else he suffers extreme pain. Now since each life is the
way I describe it, are you saying that the life of the undisciplined man is
happier than that of the orderly man? When I say this, do I at all persuade
you to concede that the orderly life is better than the undisciplined one,
or do I not?

CALLICLES: You do not, Socrates. The man who has filled himself up has
no pleasure any more, and when he's been filled up and experiences neither
joy nor pain, that's living like a stone, as I was saying just now. Rather, b
living pleasantly consists in this: having as much as possible flow in.

SOCRATES: Isn't it necessary, then, that if there's a lot flowing in, there should also be a lot going out and that there should be big holes for what's passed out?

CALLICLES: Certainly.

SOCRATES: Now you're talking about the life of a stonecurlew[13] instead of that of a corpse or a stone. Tell me, do you say that there is such a thing as hunger, and eating when one is hungry?

CALLICLES: Yes, there is.

SOCRATES: And thirst, and drinking when one is thirsty? c

CALLICLES: Yes, and also having all other appetites and being able to fill them and enjoy it, and so live happily.

SOCRATES: Very good, my good man! Do carry on the way you've begun, and take care not to be ashamed. And I evidently shouldn't shrink from being ashamed, either. Tell me now first whether a man who has an itch and scratches it and can scratch to his heart's content, scratch his whole life long, can also live happily.

CALLICLES: What nonsense, Socrates. You're a regular crowd pleaser. d

SOCRATES: That's just how I shocked Polus and Gorgias and made them be ashamed. You certainly won't be shocked, however, or be ashamed, for you're a brave man. Just answer me, please.

CALLICLES: I say that even the man who scratches would have a pleasant life.

SOCRATES: And if a pleasant one, a happy one, too?

CALLICLES: Yes indeed.

13. Dodds: "A bird of messy habits and uncertain identity."

e Socrates: What if he scratches only his head—or what am I to ask you further? See what you'll answer if somebody asked you one after the other every question that comes next. And isn't the climax of this sort of thing, the life of a catamite,[14] a frightfully shameful and miserable one? Or will you have the nerve to say that they are happy as long as they have what they need to their hearts' content?

Callicles: Aren't you ashamed, Socrates, to bring our discussion to such matters?

Socrates: Is it I who bring them there, my splendid fellow, or is it the man who claims, just like that, that those who enjoy themselves, however
495 they may be doing it, are happy, and doesn't discriminate between good kinds of pleasures and bad? Tell me now too whether you say that the pleasant and the good are the same or whether there is some pleasure that isn't good.

Callicles: Well, to keep my argument from being inconsistent if I say that they're different, I say they're the same.

Socrates: You're wrecking your earlier statements, Callicles, and you'd no longer be adequately inquiring into the truth of the matter with me if you speak contrary to what you think.

b Callicles: And you're wrecking yours, too, Socrates.

Socrates: In that case, it isn't right for me to do it, if it's what I do, or for you either. But consider, my marvelous friend, surely the good isn't just unrestricted enjoyment. For both those many shameful things hinted at just now obviously follow if this is the case, and many others as well.

Callicles: That's your opinion, Socrates.

Socrates: Do you really assert these things, Callicles?

Callicles: Yes, I do.

c Socrates: So we're to undertake the discussion on the assumption that you're in earnest?

Callicles: Most certainly.

Socrates: All right, since that's what you think, distinguish the following things for me: There is something you call knowledge, I take it?

Callicles: Yes.

Socrates: Weren't you also saying just now that there is such a thing as bravery with knowledge?

Callicles: Yes, I was.

Socrates: Was it just on the assumption that bravery is distinct from knowledge that you were speaking of them as two?

Callicles: Yes, very much so.

Socrates: Well now, do you say that pleasure and knowledge are the same or different?

d Callicles: Different of course, you wisest of men.

Socrates: And surely that bravery is different from pleasure, too?

14. Catamite: passive partner (esp. boy) in homosexual practices (*Oxford Dictionary of Current English*).

Callicles: Of course.

Socrates: All right, let's put this on the record: Callicles from Acharnae says that *pleasant* and *good* are the same, and that *knowledge* and *bravery* are different both from each other and from what's good.

Callicles: And Socrates from Alopece doesn't agree with us about this. Or does he?

Socrates: He does not. And I believe that Callicles doesn't either when e
he comes to see himself rightly. Tell me: don't you think that those who do well have the opposite experience of those who do badly?

Callicles: Yes, I do.

Socrates: Now since these experiences are the opposites of each other, isn't it necessary that it's just the same with them as it is with health and disease? For a man isn't both healthy and sick at the same time, I take it, nor does he get rid of both health and disease at the same time.

Callicles: What do you mean?

Socrates: Take any part of the body you like, for example, and think 496
about it. A man can have a disease of the eyes, can't he, to which we give the name "eye disease"?

Callicles: Of course.

Socrates: But then surely his eyes aren't also healthy at the same time?

Callicles: No, not in any way.

Socrates: What if he gets rid of his eye disease? Does he then also get rid of his eyes' health and so in the end he's rid of both at the same time?

Callicles: No, not in the least.

Socrates: For that, I suppose, is an amazing and unintelligible thing to b
happen, isn't it?

Callicles: Yes, it very much is.

Socrates: But he acquires and loses each of them successively, I suppose.

Callicles: Yes, I agree.

Socrates: Isn't it like this with strength and weakness, too?

Callicles: Yes.

Socrates: And with speed and slowness?

Callicles: Yes, that's right.

Socrates: Now, does he acquire and get rid of good things and happiness, and their opposites, bad things and misery, successively too?

Callicles: No doubt he does.

Socrates: So if we find things that a man both gets rid of and keeps at c
the same time, it's clear that these things wouldn't be what's good and what's bad. Are we agreed on that? Think very carefully about it and tell me.

Callicles: Yes, I agree most emphatically.

Socrates: Go back, now, to what we've agreed on previously. You mentioned hunger—as a pleasant or a painful thing? I mean the hunger itself.

Callicles: As a painful thing. But for a hungry man to eat is pleasant.

d SOCRATES: I agree. I understand. But the hunger itself is painful, isn't it?

CALLICLES: So I say.

SOCRATES: And thirst is, too?

CALLICLES: Very much so.

SOCRATES: Am I to ask any further, or do you agree that every deficiency and appetite is painful?

CALLICLES: I do. No need to ask.

SOCRATES: Fair enough. Wouldn't you say that, for a thirsty person, to drink is something pleasant?

CALLICLES: Yes, I would.

SOCRATES: And in the case you speak of, "a thirsty person" means "a person who's in pain," I take it?

e CALLICLES: Yes.

SOCRATES: And drinking is a filling of the deficiency, and is a pleasure?

CALLICLES: Yes.

SOCRATES: Now, don't you mean that insofar as a person is drinking, he's feeling enjoyment?

CALLICLES: Very much so.

SOCRATES: Even though he's thirsty?

CALLICLES: Yes, I agree.

SOCRATES: Even though he's in pain?

CALLICLES: Yes.

SOCRATES: Do you observe the result, that when you say that a thirsty person drinks, you're saying that a person who's in pain simultaneously feels enjoyment? Or doesn't this happen simultaneously in the same place, in the soul or in the body as you like? I don't suppose it makes any difference which. Is this so or not?

CALLICLES: It is.

SOCRATES: But you do say that it's impossible for a person who's doing
497 well to be doing badly at the same time.

CALLICLES: Yes, I do.

SOCRATES: Yet you did agree that it's possible for a person in pain to feel enjoyment.

CALLICLES: Apparently.

SOCRATES: So, feeling enjoyment isn't the same as doing well, and being in pain isn't the same as doing badly, and the result is that what's pleasant turns out to be different from what's good.

CALLICLES: I don't know what your clever remarks amount to, Socrates.

SOCRATES: You do know. You're just pretending you don't, Callicles. Go just a bit further ahead.

CALLICLES: Why do you keep up this nonsense?

b SOCRATES: So you'll know how wise you are in scolding me. Doesn't each of us stop being thirsty and stop feeling pleasure at the same time as a result of drinking?

CALLICLES: I don't know what you mean.

GORGIAS: Don't do that, Callicles! Answer him for our benefit too, so that the discussion may be carried through.

CALLICLES: But Socrates is always like this, Gorgias. He keeps questioning people on matters that are trivial, hardly worthwhile, and refutes them!

GORGIAS: What difference does that make to you? It's none of your business to appraise them, Callicles. You promised Socrates that he could try to refute you in any way he liked.

CALLICLES: Go ahead, then, and ask these trivial, petty questions, since c
that's what pleases Gorgias.

SOCRATES: You're a happy man, Callicles, in that you've been initiated into the greater mysteries before the lesser. I didn't think it was permitted. So answer where you left off, and tell me whether each of us stops feeling pleasure at the same time as he stops being thirsty.

CALLICLES: That's my view.

SOCRATES: And doesn't he also stop having pleasures at the same time as he stops being hungry or stops having the other appetites?

CALLICLES: That's so.

SOCRATES: Doesn't he then also stop having pains and pleasures at the d
same time?

CALLICLES: Yes.

SOCRATES: But, he certainly doesn't stop having good things and bad things at the same time, as you agree. Don't you still agree?

CALLICLES: Yes I do. Why?

SOCRATES: Because it turns out that good things are not the same as pleasant ones, and bad things not the same as painful ones. For pleasant and painful things come to a stop simultaneously, whereas good things and bad ones do not, because they are in fact different things. How then could pleasant things be the same as good ones and painful things the same as bad ones?

Look at it this way, too, if you like, for I don't suppose that you agree
with that argument, either. Consider this. Don't you call men good because e
of the presence of good things in them, just as you call them good-looking because of the presence of good looks?

CALLICLES: Yes, I do.

SOCRATES: Well then, do you call foolish and cowardly men good? You didn't a while ago; you were then calling brave and intelligent ones good. Or don't you call these men good?

CALLICLES: Oh yes, I do.

SOCRATES: Well then, have you ever seen a foolish child feel enjoyment?

CALLICLES: Yes, I have.

SOCRATES: But you've never yet seen a foolish man feel enjoyment?

CALLICLES: Yes, I suppose I have. What's the point?

SOCRATES: Nothing. Just answer me. 498

CALLICLES: Yes, I've seen it.

SOCRATES: Well now, have you ever seen an intelligent man feel pain or enjoyment?

CALLICLES: Yes, I daresay I have.

SOCRATES: Now who feels pain or enjoyment more, intelligent men or foolish ones?

Calligles: I don't suppose there's a lot of difference.

Socrates: Good enough. Have you ever seen a cowardly man in combat?

Callicles: Of course I have.

Socrates: Well then, when the enemy retreated, who do you think felt enjoyment more, the cowards or the brave men?

b Callicles: Both felt it, I think; maybe the cowards felt it more. But if not, they felt it to pretty much the same degree.

Socrates: It makes no difference. So cowards feel enjoyment too?

Callicles: Oh yes, very much so.

Socrates: Fools do too, evidently.

Callicles: Yes.

Socrates: Now when the enemy advances, are the cowards the only ones to feel pain, or do the brave men do so too?

Callicles: They both do.

Socrates: To the same degree?

Callicles: Maybe the cowards feel it more.

Socrates: And when the enemy retreats, don't they feel enjoyment more?

Callicles: Maybe.

Socrates: So don't foolish men and intelligent ones, and cowardly men
c and brave ones feel enjoyment and pain to pretty much the same degree, as you say, or cowardly men feel them more than brave ones?

Callicles: That's my view.

Socrates: But surely the intelligent and brave men are good and the cowardly and foolish are bad?

Callicles: Yes.

Socrates: Hence the degree of enjoyment and pain that good and bad men feel is pretty much the same.

Callicles: I agree.

Socrates: Now are good and bad men pretty much equally both good and bad, or are the bad ones even better?

d Callicles: By Zeus! I don't know what you mean.

Socrates: Don't you know that you say that the good men are good and the bad men bad because of the presence of good or bad things in them, and that the good things are pleasures and the bad ones pains?

Callicles: Yes, I do.

Socrates: Aren't good things, pleasures, present in men who feel enjoyment, if in fact they do feel it?

Callicles: Of course.

Socrates: Now aren't men who feel enjoyment good men, because good things are present in them?

Callicles: Yes.

Socrates: Well then, aren't bad things, pains, present in men who feel pain?

Callicles: They are.

e Socrates: And you do say that it's because of the presence of bad things that bad men are bad. Or don't you say this any more?

Callicles: Yes, I do.

Socrates: So all those who feel enjoyment are good, and all those who feel pain are bad.

Callicles: Yes, that's right.

Socrates: And those feeling them more are more so, those feeling them less are less so, and those feeling them to pretty much the same degree are good or bad to pretty much the same degree.

Callicles: Yes.

Socrates: Now aren't you saying that intelligent men and foolish ones, and cowardly and courageous ones, experience pretty much the same degree of enjoyment and pain, or even that cowardly ones experience more of it?

Callicles: Yes, I am.

Socrates: Join me, then, in adding up what follows for us from our
agreements. They say it's an admirable thing to speak of and examine 499
what's admirable "twice and even thrice." We say that the intelligent and brave man is good, don't we?

Callicles: Yes.

Socrates: And that the foolish and cowardly man is bad?

Callicles: Yes, that's right.

Socrates: And again, that the man who feels enjoyment is good?

Callicles: Yes.

Socrates: And the one experiencing pain is bad?

Callicles: Necessarily.

Socrates: And that the good and the bad man feel pain and enjoyment to the same degree, and that perhaps the bad man feels them even more?

Callicles: Yes.

Socrates: Doesn't it then turn out that the bad man is both good and bad to the same degree as the good man, or even that he's better? Isn't
this what follows, along with those earlier statements, if one holds that b
pleasant things are the same as good things? Isn't this necessarily the case, Callicles?

Callicles: I've been listening to you for quite some time now, Socrates, and agreeing with you, while thinking that even if a person grants some point to you in jest, you gladly fasten on it, the way boys do. As though you really think that I or anybody else at all don't believe that some pleasures are better and others worse.

Socrates: Oh, Callicles! What a rascal you are. You treat me like a child. c
At one time you say that things are one way and at another that the same things are another way, and so you deceive me. And yet I didn't suppose at the beginning that I'd be deceived intentionally by you, because I assumed you were a friend. Now, however, I've been misled, and evidently have no choice but to "make the best with what I have," as the ancient proverb has it, and to accept what I'm given by you. The thing you're saying now, evidently, is that some pleasures are good while others are bad. Is that right?

d Callicles: Yes.

Socrates: Are the good ones the beneficial ones, and the bad ones the harmful ones?

Callicles: Yes, that's right.

Socrates: And the beneficial ones are the ones that produce something good while the bad ones are those that produce something bad?

Callicles: That's my view.

Socrates: Now, do you mean pleasures like the ones we were just now mentioning in connection with the body, those of eating and drinking? Do some of these produce health in the body, or strength, or some other bodily excellence, and are these pleasures good, while those that produce
e the opposites of these things are bad?

Callicles: That's right.

Socrates: And similarly, aren't some pains good and others bad, too?

Callicles: Of course.

Socrates: Now, shouldn't we both choose and act to have the good pleasures and pains?

Callicles: Yes, we should.

Socrates: But not the bad ones?

Callicles: Obviously.

Socrates: No, for Polus and I both thought, if you recall, that we should, surely, do all things for the sake of what's good.[15] Do you also think as we do that the end of all action is what's good, and that we should do all
500 other things for its sake, but not it for their sake? Are you voting on our side to make it three?

Callicles: Yes, I am.

Socrates: So we should do the other things, including pleasant things, for the sake of good things, and not good things for the sake of pleasant things.

Callicles: That's right.

Socrates: Now, is it for every man to pick out which kinds of pleasures are good ones and which are bad ones, or does this require a craftsman in each case?

Callicles: It requires a craftsman.

Socrates: Let's recall what I was actually saying to Polus and Gorgias.[16]
b I was saying, if you remember, that there are some practices that concern themselves with nothing further than pleasure and procure only pleasure, practices that are ignorant about what's better and worse, while there are other practices that do know what's good and what's bad. And I placed the "knack" (not the craft) of pastry baking among those that are concerned with pleasure, and the medical craft among those concerned with what's good. And by Zeus, the god of friendship, Callicles, please don't think that you should jest with me either, or answer anything that comes to

15. At 468b.

16. At 464b–465a.

mind, contrary to what you really think, and please don't accept what you get from me as though I'm jesting! For you see, don't you, that our c
discussion's about this (and what would even a man of little intelligence take more seriously than this?), about the way we're supposed to live. Is it the way you urge me toward, to engage in these manly activities, to make speeches among the people, to practice oratory, and to be active in the sort of politics you people engage in these days? Or is it the life spent in philosophy? And in what way does this latter way of life differ from the former? Perhaps it's best to distinguish them, as I just tried to do; d
having done that and having agreed that these are two distinct lives, it's best to examine how they differ from each other, and which of them is the one we should live. Now perhaps you don't yet know what I'm talking about.

CALLICLES: No, I certainly don't.

SOCRATES: Well, I'll tell you more clearly. Given that we're agreed, you and I, that there is such a thing as *good* and such a thing as *pleasant* and that the pleasant is different from the good, and that there's a practice of each of them and a procedure for obtaining it, the quest for the pleasant on the one hand and that for the good on the other—give me first your assent to this point or withhold it. Do you assent to it? e

CALLICLES: Yes, I do.

SOCRATES: Come then, and agree further with me about what I was saying to them too, if you think that what I said then was true. I was saying, wasn't I, that I didn't think that pastry baking is a craft, but a knack, whereas medicine is a craft. I said that the one, medicine, has 501
investigated both the nature of the object it serves and the cause of the things it does, and is able to give an account of each of these. The other, the one concerned with pleasure, to which the whole of its service is entirely devoted, proceeds toward its object in a quite uncraftlike way, without having at all considered either the nature of pleasure or its cause. It does so completely irrationally, with virtually no discrimination. Through routine and knack it merely preserves the memory of what customarily b
happens, and that's how it also supplies its pleasures. So, consider first of all whether you think that this account is an adequate one and whether you think that there are also other, similar preoccupations in the case of the soul. Do you think that some of the latter are of the order of crafts and possess forethought about what's best for the soul, while others slight this and have investigated only, as in the other case, the soul's way of getting its pleasure, without considering which of the pleasures is better or worse, and without having any concerns about anything but mere gratification, whether for the better or for the worse? For my part, Callicles, c
I think there are such preoccupations, and I say that this sort of thing is flattery, both in the case of the body and that of the soul and in any other case in which a person may wait upon a pleasure without any consideration of what's better or worse. As for you, do you join us in subscribing to the same opinion on these matters or do you dissent from it?

Callicles: No, I won't dissent. I'm going along with you, both to expedite your argument and to gratify Gorgias here.

d Socrates: Now is this the case with one soul only, and not with two or many?

Callicles: No, it's also the case with two or many.

Socrates: Isn't it also possible to gratify a group of souls collectively at one and the same time, without any consideration for what's best?

Callicles: Yes, I suppose so.

Socrates: Can you tell me which ones are the practices that do this? Better yet, if you like I'll ask you and you say yes for any which you think
e falls in this group, and no for any which you think doesn't. Let's look at fluteplaying first. Don't you think that it's one of this kind, Callicles? That it merely aims at giving us pleasure without giving thought to anything else?

Callicles: Yes, I think so.

Socrates: Don't all such practices do that, too? Lyreplaying at competitions, for example?

Callicles: Yes.

Socrates: What about training choruses and composing dithyrambs? Doesn't that strike you as being something of the same sort? Do you think that Cinesias the son of Meles gives any thought to saying anything of a sort that might lead to the improvement of his audience, or to what is
502 likely to gratify the crowd of spectators?

Callicles: Clearly the latter, Socrates, at least in Cinesias' case.

Socrates: What about his father Meles? Do you think he sang to the lyre with a regard for what's best? Or did he fail to regard even what's most pleasant? For he inflicted pain upon his spectators with his singing. But consider whether you don't think that all singing to the lyre and composing of dithyrambs has been invented for the sake of pleasure.

Callicles: Yes, I do think so.

b Socrates: And what about that majestic, awe-inspiring practice, the composition of tragedy? What is it after? Is the project, the intent of tragic composition merely the gratification of spectators, as you think, or does it also strive valiantly not to say anything that is corrupt, though it may be pleasant and gratifying to them, and to utter in both speech and song anything that might be unpleasant but beneficial, whether the spectators enjoy it or not? In which of these ways do you think tragedy is being composed?

c Callicles: This much is obvious, Socrates, that it's more bent upon giving pleasure and upon gratifying the spectators.

Socrates: And weren't we saying just now that this sort of thing is flattery?

Callicles: Yes, we were.

Socrates: Well then, if one stripped away from the whole composition both melody, rhythm, and meter, does it turn out that what's left is only speeches?

Callicles: Necessarily.

Socrates: Aren't these speeches given to a large gathering of people?

Callicles: I agree.

Socrates: So poetry is a kind of popular harangue.[17]

Callicles: Apparently. d

Socrates: And such popular harangue would be oratory, then. Or don't you think that poets practice oratory in the theatres?

Callicles: Yes, I do.

Socrates: So now we've discovered a popular oratory of a kind that's addressed to men, women, and children, slave and free alike. We don't much like it; we say that it's a flattering sort.

Callicles: Yes, that's right.

Socrates: Very well. What about the oratory addressed to the Athenian
people and to those in other cities composed of free men? What is our e
view of this kind? Do you think that orators always speak with regard to what's best? Do they always set their sights on making the citizens as good as possible through their speeches? Or are they, too, bent upon the gratification of the citizens, and, slighting the common good for the sake of their own private good, do they treat the people like children, their sole
attempt being to gratify them? 503

Callicles: This issue you're asking about isn't just a simple one, for there are those who say what they do because they do care for the citizens, and there are also those like the ones you're talking about.

Socrates: That's good enough. For if this matter really has two parts to it, then one part of it would be flattery, I suppose, and shameful public harangue, while the other—that of getting the souls of the citizens to be as good as possible and of striving valiantly to say what is best, whether the audience will find it more pleasant or more unpleasant—is something
admirable. But you've never seen this type of oratory—or, if you can b
mention any orator of this sort, why haven't you let me also know who he is?

Callicles: No, by Zeus! I certainly can't mention any of our contemporary orators to you.

Socrates: Well then, can you mention anyone from former times through whom the Athenians are reputed to have become better after he began his public addresses, when previously they had been worse? I certainly don't know who this could be.

Callicles: What? Don't they tell you that Themistocles proved to be a c
good man, and so did Cimon, Miltiades and Pericles who died just recently, and whom you've heard speak, too?

Socrates: Yes, Callicles, if the excellence you were speaking of earlier, the filling up of appetites, both one's own and those of others, is the true kind. But if this is not, and if what we were compelled to agree on in our subsequent discussion is the true kind instead—that a man should satisfy

17. Gk. *dēmēgoria.* A cognate noun, *dēmēgoros*, was translated "crowd pleaser" at 482c, where the cognate verb *dēmēgorein* was translated "playing to the crowd."

those of his appetites that, when they are filled up, make him better, and
d not those that make him worse, and that this is a matter of craft—I don't
see how I can say that any of these men has proved to be such a man.

Callicles: But if you'll look carefully, you'll find that they were.[18]

Socrates: Let's examine the matter calmly and see whether any of these
men has proved to be like that. Well then, won't the good man, the man
e who speaks with regard to what's best, say whatever he says not randomly
but with a view to something, just like the other craftsmen, each of whom
keeps his own product in view and so does not select and apply randomly
what he applies, but so that he may give his product some shape? Take
a look at painters for instance, if you would, or housebuilders or ship-
wrights or any of the other craftsmen you like, and see how each one
504 places what he does into a certain organization, and compels one thing to
be suited for another and to fit to it until the entire object is put together
in an organized and orderly way. The other craftsmen, too, including the
ones we were mentioning just lately, the ones concerned with the body,
physical trainers and doctors, no doubt give order and organization to the
body. Do we agree that this is so or not?

Callicles: Let's take it that way.

Socrates: So if a house gets to be organized and orderly it would be a
good one, and if it gets to be disorganized it would be a terrible one?

Callicles: I agree.

Socrates: This holds true for a boat, too?

b Callicles: Yes.

Socrates: And we surely take it to hold true for our bodies, too?

Callicles: Yes, we do.

Socrates: What about the soul? Will it be a good one if it gets to be
disorganized, or if it gets to have a certain organization and order?

Callicles: Given what we said before, we must agree that this is so, too.

Socrates: What name do we give to what comes into being in the body
as a result of organization and order?

Callicles: You mean health and strength, presumably.

c Socrates: Yes, I do. And which one do we give to what comes into
being in the soul as a result of organization and order? Try to find and
tell me its name, as in the case of the body.

Callicles: Why don't you say it yourself, Socrates?

Socrates: All right, if that pleases you more, I'll do so. And if you think
I'm right, give your assent. If not, refute me and don't give way. I think

18. There are variances in the mss in the text of the last two lines of Socrates' previous speech and this response. The translation follows one ms, while the other mss, with a conjectural addition of Dodds', would yield this: "SOCRATES: . . . and not those that make him worse—and this seemed to us to be a matter of craft—can you say that any of these men has proved to be such a man? CALLICLES: For my part, I don't know what I would say. SOCRATES: But if you look carefully you'll find out. Let's examine the matter calmly, then, and . . ."

that the name for the states of organization of the body is "healthy," as a result of which health and the rest of bodily excellence comes into being in it. Is this so or isn't it?

Callicles: It is.

Socrates: And the name for the states of organization and order of the d soul is "lawful" and "law," which lead people to become law-abiding and orderly, and these are justice and self-control. Do you assent to this or not?

Callicles: Let it be so.

Socrates: So this is what that skilled and good orator will look to when he applies to people's souls whatever speeches he makes as well as all of his actions, and any gift he makes or any confiscation he carries out. He will always give his attention to how justice may come to exist in the souls e of his fellow citizens and injustice be gotten rid of, how self-control may come to exist there and lack of discipline be gotten rid of, and how the rest of excellence may come into being there and badness may depart. Do you agree or not?

Callicles: I do.

Socrates: Yes, for what benefit is there, Callicles, in giving a body that's sick and in wretched shape lots of very pleasant food or drink or anything else when it won't do the man a bit more good, or, quite to the contrary, when by a fair reckoning it'll do him less good? Is that so?

Callicles: Let it be so. 505

Socrates: Yes, for I don't suppose that it profits a man to be alive with his body in a terrible condition, for this way his life, too, would be necessarily a wretched one. Or wouldn't it be?

Callicles: Yes.

Socrates: Now, isn't it also true that doctors generally allow a person to fill up his appetites, to eat when he's hungry, for example, or drink when he's thirsty as much as he wants to when he's in good health, but when he's sick they practically never allow him to fill himself with what he has an appetite for? Do you also go along with this point, at least?

Callicles: Yes, I do.

Socrates: And isn't it just the same way with the soul, my excellent b friend? As long as it's corrupt, in that it's foolish, undisciplined, unjust and impious, it should be kept away from its appetites and not be permitted to do anything other than what will make it better. Do you agree or not?

Callicles: I agree.

Socrates: For this is no doubt better for the soul itself?

Callicles: Yes, it is.

Socrates: Now isn't keeping it away from what it has an appetite for, disciplining it?

Callicles: Yes.

Socrates: So to be disciplined is better for the soul than lack of discipline, which is what you yourself were thinking just now.

Callicles: I don't know what in the world you mean, Socrates. Ask c somebody else.

Socrates: This fellow won't put up with being benefited and with his undergoing the very thing the discussion's about, with being disciplined.

Callicles: And I couldn't care less about anything you say, either. I gave you these answers just for Gorgias' sake.

Socrates: Very well. What'll we do now? Are we breaking off in the midst of the discussion?

Callicles: That's for you to decide.

Socrates: They say that it isn't permitted to give up in the middle of
d telling stories, either. A head must be put on it, so that it won't go about headless. Please answer the remaining questions, too, so that our discussion may get its head.

Callicles: How unrelenting you are, Socrates! If you'll listen to me, you'll drop this discussion or carry it through with someone else.

Socrates: Who else is willing? Surely we mustn't leave the discussion incomplete.

Callicles: Couldn't you go through the discussion by yourself, either by speaking in your own person or by answering your own questions?

e Socrates: In that case Epicharmus' saying applies to me: I prove to be sufficient, being "one man, for what two men were saying before."[19] But it looks as though I have no choice at all. Let's by all means do it that way then. I suppose that all of us ought to be contentiously eager to know what's true and what's false about the things we're talking about. That it should become clear is a good common to all. I'll go through the discussion,
506 then, and say how I think it is, and if any of you thinks that what I agree to with myself isn't so, you must object and refute me. For the things I say I certainly don't say with any knowledge at all; no, I'm searching together with you so that if my opponent clearly has a point, I'll be the first to concede it. I'm saying this, however, in case you think the discussion ought to be carried through to the end. If you don't want it to be, then let's drop it now and leave.

b Gorgias: No, Socrates, I don't think we should leave yet. You must finish the discussion. It seems to me that the others think so, too. I myself certainly want to hear you go through the rest of it by yourself.

Socrates: All right, Gorgias. I myself would have been glad to continue my discussion with Callicles here, until I returned him Amphion's speech for that of Zethus. Well, Callicles, since you're not willing to join me in carrying the discussion through to the end, please do listen to me and
c interrupt if you think I'm saying anything wrong. And if you refute me, I shan't be upset with you as you were with me; instead you'll go on record as my greatest benefactor.

Callicles: Speak on, my good friend, and finish it up by yourself.

Socrates: Listen, then, as I pick up the discussion from the beginning. Is the pleasant the same as the good?—It isn't, as Callicles and I have agreed.—Is the pleasant to be done for the sake of the good, or the good

19. Epicharmus was a comic poet; the source of the line is not known.

for the sake of the pleasant?—The pleasant for the sake of the good.—
And *pleasant* is that by which, when it's come to be present in us, we feel d
pleasure, and *good* that by which, when it's present in us, we are good?—
That's right.—But surely we are good, both we and everything else that's
good, when some excellence has come to be present in us?—Yes, I do
think that that's necessarily so, Callicles.—But the best way in which the
excellence of each thing comes to be present in it, whether it's that of an
artifact or of a body or a soul as well, or of any animal, is not just any old
way, but is due to whatever organization, correctness, and craftsmanship
is bestowed on each of them. Is that right?—Yes, I agree.—So it's due to e
organization that the excellence of each thing is something which is orga-
nized and has order?—Yes, I'd say so.—So it's when a certain order, the
proper one for each thing, comes to be present in it that it makes each of
the things there are, good?—Yes, I think so.—So also a soul which has its
own order is better than a disordered one?—Necessarily so.—But surely
one that has order is an orderly one?—Of course it is.—And an orderly
soul is a self-controlled one?—Absolutely.—So a self-controlled soul is a 507
good one. I for one can't say anything else beyond that, Callicles my friend;
if you can, please teach me.

CALLICLES: Say on, my good man.

SOCRATES: I say that if the self-controlled soul is a good one, then a soul
that's been affected the opposite way of the self-controlled one is a bad
one. And this, it's turned out, is the foolish and undisciplined one.—That's
right.—And surely a self-controlled person would do what's appropriate
with respect to both gods and human beings. For if he does what's inappro-
priate, he wouldn't be self-controlled.—That's necessarily how it is.—And b
of course if he did what's appropriate with respect to human beings, he
would be doing what's just, and with respect to gods he would be doing
what's pious, and one who does what's just and pious must necessarily
be just and pious.—That's so.—Yes, and he would also necessarily be
brave, for it's not like a self-controlled man to either pursue or avoid what
isn't appropriate, but to avoid and pursue what he should, whether these
are things to do, or people, or pleasures and pains, and to stand fast and
endure them where he should. So, it's necessarily very much the case, c
Callicles, that the self-controlled man, because he's just and brave and
pious, as we've recounted, is a completely good man, that the good man
does well and admirably whatever he does, and that the man who does
well is blessed and happy, while the corrupt man, the one who does badly,
is miserable. And this would be the one who's in the condition opposite
to that of the self-controlled one, the undisciplined one whom you were
praising.

So this is how I set down the matter, and I say that this is true. And if
it is true, then a person who wants to be happy must evidently pursue
and practice self-control. Each of us must flee away from lack of discipline d
as quickly as his feet will carry him, and must above all make sure that
he has no need of being disciplined, but if he does have that need, either

he himself or anyone in his house, either a private citizen or a whole city,
he must pay his due and must be disciplined, if he's to be happy. This is
the target which I think one should look to in living, and in his actions
he should direct all of his own affairs and those of his city to the end that
e justice and self-control will be present in one who is to be blessed. He
should not allow his appetites to be undisciplined or undertake to fill them
up—that's interminably bad—and live the life of a marauder. Such a man
could not be dear to another man or to a god, for he cannot be a partner,
and where there's no partnership there's no friendship. Yes, Callicles, wise
508 men claim that partnership and friendship, orderliness, self-control, and
justice hold together heaven and earth, and gods and men, and that is
why they call this universe a *world order*, my friend, and not an undisci-
plined world-disorder. I believe that you don't pay attention to these facts,
even though you're a wise man in these matters. You've failed to notice
that proportionate equality has great power among both gods and men,
and you suppose that you ought to practice getting the greater share.
That's because you neglect geometry.

b Very well. We must either refute this argument and show that it's not
the possession of justice and self-control that makes happy people happy
and the possession of badness that makes miserable people miserable, or
else, if this is true, we must consider what the consequences are. These
consequences are all those previous things, Callicles, the ones about which
you asked me whether I was speaking in earnest when I said that a man
should be his own accuser, or his son's or his friend's, if he's done anything
unjust, and should use oratory for that purpose. Also what you thought
Polus was ashamed to concede is true after all, that doing what's unjust
c is as much worse than suffering it as it is more shameful, and that a person
who is to be an orator the right way should be just and be knowledgeable
in what is just, the point Polus in his turn claimed Gorgias to have agreed
to out of shame.

That being so, let's examine what it is you're taking me to task for, and
whether it's right or not. You say that I'm unable to protect either myself
or any of my friends or relatives or rescue them from the gravest dangers,
and that I'm at the mercy of the first comer, just as people without rights are,
d whether he wants to knock me on the jaw, to use that forceful expression of
yours, or confiscate my property, or exile me from the city, or ultimately
put me to death. To be in that position is, by your reasoning, the most
shameful thing of all. As for what my own reasoning is, that's been told
many times by now, but there's nothing to stop its being told once again. I
deny, Callicles, that being knocked on the jaw unjustly is the most shameful
e thing, or that having my body or my purse cut is, and I affirm that to
knock or cut me or my possessions unjustly is both more shameful and
worse, and at the same time that to rob or enslave me or to break into my
house or, to sum up, to commit any unjust act at all against me and my
possessions is both worse and more shameful for the one who does these
unjust acts than it is for me, the one who suffers them. These conclusions,

at which we arrived earlier in our previous discussions are, I'd say, held
down and bound by arguments of iron and adamant, even if it's rather
rude to say so. So it would seem, anyhow. And if you or someone more 509
forceful than you won't undo them, then anyone who says anything other
than what I'm now saying cannot be speaking well. And yet for my part,
my account is ever the same: I don't know how these things are, but no
one I've ever met, as in this case, can say anything else without being
ridiculous. So once more I set it down that these things are so. And if they b
are—if injustice is the worst thing there is for the person committing it
and if that person's failure to pay what's due is something even worse, if
possible, than this one that's the greatest—what is the protection which
would make a man who's unable to provide it for himself truly ridiculous?
Isn't it the one that will turn away what harms us most? Yes, it's necessarily
very much the case that this is the most shameful kind of protection not
to be able to provide, either for oneself or for one's friends or relatives.
And the second kind's the one that turns away the second worst thing, c
the third kind the one against the third worst, and so on. The greater by
its nature each bad thing is, the more admirable it is to be able to provide
protection against it, too, and the more shameful not to be able to. Is this
the way it is, Callicles, or is it some other way?

Callicles: No, it's not any other way.

Socrates: Of these two things, then, of doing what's unjust and suffering
it, we say that doing it is worse and suffering it is less bad. With what,
then, might a man provide himself to protect himself so that he has both d
these benefits, the one that comes from not doing what's unjust and the
one that comes from not suffering it? Is it power or wish? What I mean
is this: Is it when a person doesn't wish to suffer what's unjust that he
will avoid suffering it, or when he procures a power to avoid suffering it?

Callicles: When he procures a power. That is obvious, at least.

Socrates: And what about doing what's unjust? Is it when he doesn't
wish to do it, is that sufficient—for he won't do it—or should he procure e
a power and a craft for this, too, so that unless he learns and practices it,
he will commit injustice? Why don't you answer at least this question,
Callicles? Do you think Polus and I were or were not correct in being
compelled to agree in our previous discussion when we agreed that no
one does what's unjust because he wants to, but that all who do so do
it unwillingly?[20]

Callicles: Let it be so, Socrates, so you can finish up your argument. 510

Socrates: So we should procure a certain power and craft against this
too, evidently, so that we won't do what's unjust.

Callicles: That's right.

Socrates: What, then, is the craft by which we make sure that we don't
suffer anything unjust, or as little as possible? Consider whether you think
it's the one I do. This is what I think it is: that one ought either to be a

20. Cf. 467c–468e.

ruler himself in his city or even be a tyrant, or else to be a partisan of the regime in power.

Callicles: Do you see, Socrates, how ready I am to applaud you when-
b ever you say anything right? I think that this statement of yours is right
on the mark.

Socrates: Well, consider whether you think that the following statement of mine is a good one, too. I think that the one man who's a friend of another most of all is the one whom the men of old and the wise call a friend, the one who's like the other. Don't you think so, too?

Callicles: Yes, I do.

Socrates: Now, if in the case of a tyrant who's a savage, uneducated
ruler, there were in his city someone much better than he, wouldn't the
tyrant no doubt be afraid of him and never be able to be a friend to him
c with all his heart?

Callicles: That's so.

Socrates: Nor would he, the tyrant, be a friend to a man much his inferior, if there were such a man, for the tyrant would despise him and would never take a serious interest in him as a friend.

Callicles: That's true, too.

Socrates: This leaves only a man of like character, one who approves
and disapproves of the same thing and who is willing to be ruled by and
be subject to the ruler, to be to such a man a friend worth mentioning.
d This man will have great power in that city, and no one will do him any
wrong and get away with it. Isn't that so?

Callicles: Yes.

Socrates: So, if some young person in that city were to reflect, "In what way would I be able to have great power and no one treat me unjustly?" this, evidently, would be his way to go: to get himself accustomed from childhood on to like and dislike the same things as the master, and to make sure that he'll be as like him as possible. Isn't that so?

Callicles: Yes.

Socrates: Now won't this man have achieved immunity to unjust treat-
e ment and great power in his city, as you people say?

Callicles: Oh, yes.

Socrates: And also immunity to unjust action? Or is that far from the case, since he'll be like the ruler who's unjust, and he'll have his great power at the ruler's side? For my part, I think that, quite to the contrary, in this way he'll be making sure he'll have the ability to engage in as much unjust action as possible and to avoid paying what's due for acting so. Right?

Callicles: Apparently.

511 Socrates: So he'll have incurred the worst thing there is, when his soul
is corrupt and mutilated on account of his imitation of the master and on
account of his "power."

Callicles: I don't know how you keep twisting our discussion in every direction, Socrates. Or don't you know that this "imitator" will put to death, if he likes, your "non-imitator," and confiscate his property?

SOCRATES: I do know that, Callicles. I'm not deaf. I hear you say it, and b
heard Polus just now say it many times, and just about everyone else in the city. But now you listen to me, too. I say that, yes, he'll kill him, if he likes, but it'll be a wicked man killing one who's admirable and good.

CALLICLES: And isn't that just the most irritating thing about it?

SOCRATES: No, not for an intelligent person, anyway, as our discussion points out. Or do you think that a man ought to make sure that his life be as long as possible and that he practice those crafts that ever rescue us from dangers, like the oratory that you tell me to practice, the kind that c
preserves us in the law courts?

CALLICLES: Yes, and by Zeus, that's sound advice for you!

SOCRATES: Well, my excellent fellow, do you think that expertise in swimming is a grand thing?

CALLICLES: No, by Zeus, I don't.

SOCRATES: But it certainly does save people from death whenever they fall into the kind of situation that requires this expertise. But if you think this expertise is a trivial one, I'll give you one more important than it, that d
of helmsmanship, which saves not only souls but also bodies and valuables from the utmost dangers, just as oratory does. This expertise is unassuming and orderly, and does not make itself grand, posturing as though its accomplishment is so magnificent. But while its accomplishment is the same as that of the expertise practiced in the courts, it has earned two obols, I suppose, if it has brought people safely here from Aegina; and if it has brought them here from Egypt or the Pontus,[21] then, for that great e
service, having given safe passage to those I was mentioning just now, the man himself, his children, valuables, and womenfolk, and setting them ashore in the harbor, it has earned two drachmas, if that much.[22] And the man who possesses the craft and who has accomplished these feats, disembarks and goes for a stroll along the seaside and beside his ship, with a modest air. For he's enough of an expert, I suppose, to conclude that it isn't clear which ones of his fellow voyagers he has benefited by not letting them drown in the deep, and which ones he has harmed, knowing that they were no better in either body or soul when he set them 512
ashore than they were when they embarked. So he concludes that if a man afflicted with serious incurable physical diseases did not drown, this man is miserable for not dying and has gotten no benefit from him. But if a man has many incurable diseases in what is more valuable than his body, his soul, life for that man is not worth living, and he won't do him any favor if he rescues him from the sea or from prison or from anywhere else. He knows that for a corrupt person it's better not to be alive, for he b
necessarily lives badly.

21. A region along the southern shore of the Black Sea.

22. A drachma is six obols. In 409–406 B.C. the standard daily wage of a laborer was one drachma.

That is why it's not the custom for the helmsman to give himself glory even though he preserves us, and not the engineer either, who sometimes can preserve us no less well than a general or anyone else, not to mention a helmsman. For there are times when he preserves entire cities. You don't think that he's on a level with the advocate, do you? And yet if he wanted
c to say what you people do, Callicles, glorifying his occupation, he would smother you with speeches, telling you urgently that people should become engineers, because nothing else amounts to anything. And the speech would make his point. But you nonetheless despise him and his craft, and you'd call him "engineer" as a term of abuse. You'd be unwilling either to give your daughter to his son, or take his daughter yourself. And yet, given your grounds for applauding your own activities, what just reason
d do you have for despising the engineer and the others whom I was mentioning just now? I know that you'd say that you're a better man, one from better stock. But if "better" does not mean what I take it to mean, and if instead to preserve yourself and what belongs to you, no matter what sort of person you happen to be, is what excellence is, then your reproach against engineer, doctor, and all the other crafts which have been devised to preserve us will prove to be ridiculous. But, my blessed man, please see whether what's noble and what's good isn't something other than
e preserving and being preserved. Perhaps one who is truly a man should stop thinking about how long he will live. He should not be attached to life but should commit these concerns to the god and believe the women who say that not one single person can escape fate. He should thereupon give consideration to how he might live the part of his life still before him
513 as well as possible. Should it be by becoming like the regime under which he lives? In that case you should now be making yourself as much like the Athenian people as possible if you expect to endear yourself to them and have great power in the city. Please see whether this profits you and me, my friend, so that what they say happens to the Thessalian witches when they pull down the moon[23] won't happen to us. Our choice of this kind of civic power will cost us what we hold most dear. If you think that some person or other will hand you a craft of the sort that will give you
b great power in this city while you are unlike the regime, whether for better or for worse, then in my opinion, Callicles, you're not well advised. You mustn't be their imitator but be naturally like them in your own person if you expect to produce any genuine result toward winning the friendship of the Athenian people [*demos*] and, yes, by Zeus, of Demos the son of Pyrilampes to boot. Whoever then turns you out to be most like these men, he'll make you a politician in the way you desire to be one, and an
c orator, too. For each group of people takes delight in speeches that are given in its own character, and resents those given in an alien manner—unless you say something else, my dear friend. Can we say anything in reply to this, Callicles?

23. That is, causing an eclipse.

CALLICLES: I don't know, Socrates—in a way you seem to me to be right, but the thing that happens to most people has happened to me: I'm not really persuaded by you.

SOCRATES: It's your love for the people, Callicles, existing in your soul, that stands against me. But if we closely examine these same matters often and in a better way, you'll be persuaded. Please recall that we said that d
there are two practices for caring for a particular thing, whether it's the body or the soul.[24] One of them deals with pleasure and the other with what's best and doesn't gratify it but struggles against it. Isn't this how we distinguished them then?

CALLICLES: Yes, that's right.

SOCRATES: Now one of them, the one dealing with pleasure, is ignoble and is actually nothing but flattery, right?

CALLICLES: Let it be so, if you like. e

SOCRATES: Whereas the other one, the one that aims to make the thing we're caring for, whether it's a body or a soul, as good as possible, is the more noble one?

CALLICLES: Yes, that's so.

SOCRATES: Shouldn't we then attempt to care for the city and its citizens with the aim of making the citizens themselves as good as possible? For without this, as we discovered earlier, it does no good to provide any other service if the intentions of those who are likely to make a great deal 514
of money or take a position of rule over people or some other position of power aren't admirable and good. Are we to put this down as true?

CALLICLES: Certainly, if that pleases you more.

SOCRATES: Suppose, then, Callicles, that you and I were about to take up the public business of the city, and we called on each other to carry out building projects—the major works of construction: walls, or ships, or temples—would we have to examine and check ourselves closely, first, to b
see if we are or are not experts in the building craft, and whom we've learned it from? Would we have to, or wouldn't we?

CALLICLES: Yes, we would.

SOCRATES: And, second, we'd have to check, wouldn't we, whether we've ever built a work of construction in private business, for a friend of ours, say, or for ourselves, and whether this structure is admirable or disgraceful. And if we discovered on examination that our teachers have proved to be good and reputable ones, and that the works of construction built by us c
under their guidance were numerous and admirable, and those built by us on our own after we left our teachers were numerous, too, then, if that were our situation, we'd be wise to proceed to public projects. But if we could point out neither teacher nor construction works, either none at all or else many worthless ones, it would surely be stupid to undertake public projects and to call each other on to them. Shall we say that this point is d
right, or not?

24. At 500b.

CALLICLES: Yes, we shall.

SOCRATES: Isn't it so in all cases, especially if we attempted to take up
public practice and called on each other, thinking we were capable doctors?
I'd have examined you, and you me, no doubt: "Well now, by the gods!
What is Socrates' own physical state of health? Has there ever been anyone
else, slave or free man, whose deliverance from illness has been due to
Socrates?" And I'd be considering other similar questions about you, I
e suppose. And if we found no one whose physical improvement has been
due to us, among either visitors or townspeople, either a man or a woman,
then by Zeus, Callicles, wouldn't it be truly ridiculous that people should
advance to such a height of folly that, before producing many mediocre
as well as many successful results in private practice and before having
had sufficient exercise at the craft, they should attempt to "learn pottery
on the big jar," as that saying goes, and attempt both to take up public
practice themselves and to call on others like them to do so as well? Don't
you think it would be stupid to proceed like that?

CALLICLES: Yes, I do.

515 SOCRATES: But now, my most excellent fellow, seeing that you yourself
are just now beginning to be engaged in the business of the city and you
call on me and take me to task for not doing so, shall we not examine
each other? "Well now, has Callicles ever improved any of the citizens?
Is there anyone who was wicked before, unjust, undisciplined, and foolish,
a visitor or townsman, a slave or free man, who because of Callicles has
turned out admirable and good?" Tell me, Callicles, what will you say if
b somebody asks you these scrutinizing questions? Whom will you say
you've made a better person through your association with him? Do you
shrink back from answering—if there even *is* anything you produced while
still in private practice before attempting a public career?

CALLICLES: You love to win, Socrates.

SOCRATES: But it's not for love of winning that I'm asking you. It's rather
because I really do want to know the way, whatever it is, in which you
c suppose the city's business ought to be conducted among us. Now that
you've advanced to the business of the city, are we to conclude that you're
devoted to some objective other than that we, the citizens, should be as
good as possible? Haven't we agreed many times already that this is what
a man active in politics should be doing? Have we or haven't we? Please
answer me. Yes we have. (I'll answer for you.) So, if this is what a good
man should make sure about for his own city, think back now to those
men whom you were mentioning a little earlier and tell me whether you
d still think that Pericles, Cimon, Miltiades, and Themistocles have proved
to be good citizens.

CALLICLES: Yes, I do.

SOCRATES: So if they were good ones, each of them was obviously making the citizens better than they were before. Was he or wasn't he?

CALLICLES: Yes.

Socrates: So when Pericles first began giving speeches among the people, the Athenians were worse than when he gave his last ones?

Callicles: Presumably.

Socrates: Not "presumably," my good man. It necessarily follows from what we've agreed, if he really was a good citizen.

Callicles: So what? e

Socrates: Nothing. But tell me this as well. Are the Athenians said to have become better because of Pericles, or, quite to the contrary, are they said to have been corrupted by him? That's what *I* hear, anyhow, that Pericles made the Athenians idle and cowardly, chatterers and money-grubbers, since he was the first to institute wages for them.

Callicles: The people you hear say this have cauliflower ears, Socrates.

Socrates: Here, though, is something I'm not just hearing. I do know clearly and you do, too, that at first Pericles had a good reputation, and when they were worse, the Athenians never voted to convict him in any shameful deposition. But after he had turned them into "admirable and
good" people, near the end of his life, they voted to convict Pericles of 516
embezzlement and came close to condemning him to death, because they thought he was a wicked man, obviously.

Callicles: Well? Did that make Pericles a bad man?

Socrates: A man like that who cared for donkeys or horses or cattle would at least look bad if he showed these animals kicking, butting, and biting him because of their wildness, when they had been doing none of
these things when he took them over. Or don't you think that any caretaker b
of any animal is a bad one who will show his animals to be wilder than when he took them over, when they were gentler? Do you think so or not?

Callicles: Oh yes, so I may gratify you.

Socrates: In that case gratify me now with your answer, too. Is man one of the animals, too?

Callicles: Of course he is.

Socrates: Wasn't Pericles a caretaker of men?

Callicles: Yes.

Socrates: Well? Shouldn't he, according to what we agreed just now, have turned them out more just instead of more unjust, if while he cared
for them he really was good at politics? c

Callicles: Yes, he should have.

Socrates: Now as Homer says, the just are gentle.[25] What do you say? Don't you say the same?

Callicles: Yes.

Socrates: But Pericles certainly showed them to be wilder than they were when he took them over, and that toward himself, the person he'd least want this to happen to.

25. Apparently a reference to the formulaic expression, "wild and not just," which occurs three times in the *Odyssey* (vi.120; ix.175; xiii.201).

Callicles: Do you want me to agree with you?

Socrates: Yes, if you think that what I say is true.

Callicles: So be it, then.

Socrates: And if wilder, then both more unjust and worse?

d Callicles: So be it.

Socrates: So on this reasoning Pericles wasn't good at politics.

Callicles: You at least deny that he was.

Socrates: By Zeus, you do, too, given what you were agreeing to. Let's go back to Cimon. Tell me: didn't the people he was serving ostracize him so that they wouldn't hear his voice for ten years? And didn't they do the very same thing to Themistocles, punishing him with exile besides? And didn't they vote to throw Miltiades, of Marathon fame, into the pit, and
e if it hadn't been for the prytanis he would have been thrown in?[26] And yet these things would not have happened to these men if they were good men, as you say they were. At least it's not the case that good drivers are the ones who at the start don't fall out of their chariots but who do fall out after they've cared for their horses and become better drivers themselves. This doesn't happen either in driving or in any other work. Or do you think it does?

Callicles: No, I don't.

517 Socrates: So it looks as though our earlier statements were true, that we don't know any man who has proved to be good at politics in this city. You were agreeing that none of our present-day ones has, though you said that some of those of times past had, and you gave preference to these men. But these have been shown to be on equal footing with the men of today. The result is that if these men were orators, they practiced neither the true oratory—for in that case they wouldn't have been thrown out—nor the flattering kind.

Callicles: But surely, Socrates, any accomplishment that any of our present-day men produces is a far cry from the sorts of accomplishments
b produced by any one of the others you choose.

Socrates: No, my strange friend, I'm not criticizing these men either, insofar as they were servants of the city. I think rather that they proved to be better servants than the men of today, and more capable than they of satisfying the city's appetites. But the truth is that in redirecting its appetites and not giving in to them, using persuasion or constraint to get
c the citizens to become better, they were really not much different from our contemporaries. That alone is the task of a good citizen. Yes, I too agree with you that they were more clever than our present leaders at supplying ships and walls and dockyards and many other things of the sort.

Now you and I are doing an odd thing in our conversation. The whole time we've been discussing, we constantly keep drifting back to the same point, neither of us recognizing what the other is saying. For my part, I

26. The *prytanis* was that member of the officiating tribe in the Council chosen daily by lot to preside over the Council and the Assembly.

believe you've agreed many times and recognized that after all this subject
of ours has two parts, both in the case of the body and the soul. The one d
part of it is the servient one, enabling us to provide our bodies with food
whenever they're hungry or with drink whenever they're thirsty, and
whenever they're cold, with clothes, wraps, shoes, and other things our
bodies come to have an appetite for. I'm purposely using the same examples
in speaking to you, so that you'll understand more easily. For these, I
think you agree, are the very things a shopkeeper, importer, or producer
can provide, a breadbaker or pastrychef, a weaver or cobbler or tanner, e
so it isn't at all surprising that such a person should think himself and be
thought by others to be a caretaker of the body—by everyone who doesn't
know that over and above all these practices there's a craft, that of gymnas-
tics and medicine, that really does care for the body and is entitled to rule
all these crafts and use their products because of its knowledge of what
food or drink is good or bad for bodily excellence, a knowledge which all 518
of the others lack. That's why the other crafts are slavish and servient and
ill-bred, and why gymnastics and medicine are by rights mistresses over
them. Now, when I say that these same things hold true of the soul, too,
I think you sometimes understand me, and you agree as one who knows
what I'm saying. But then a little later you come along saying that there
have been persons who've proved to be admirable and good citizens in b
the city, and when I ask who they are, you seem to me to produce people
who in the area of politics are very much the same sort you would produce
if I asked you, "Who have proved to be or are good caretakers of bodies?"
and you replied in all seriousness, "Thearion the breadbaker, and Mithae-
cus the author of the book on Sicilian pastry baking, and Sarambus the
shopkeeper, because these men have proved to be wonderful caretakers
of bodies, the first by providing wonderful loaves of bread, the second
pastry, and the third wine." c

Perhaps you'd be upset if I said to you, "My man, you don't have the
slightest understanding of gymnastics. The men you're mentioning to me
are servants, satisfiers of appetites! They have no understanding whatever
of anything that's admirable and good in these cases. They'll fill and fatten
people's bodies, if they get the chance, and besides that, destroy their
original flesh as well, all the while receiving their praise! The latter, in
their turn, thanks to their inexperience, will lay the blame for their illnesses d
and the destruction of their original flesh not on those who threw the
parties, but on any people who happen to be with them at the time giving
them advice. Yes, when that earlier stuffing has come bringing sickness
in its train much later, then, because it's proved to be unhealthy, they'll
blame these people and scold them and do something bad to them if they
can, and they'll sing the praises of those earlier people, the ones responsible e
for their ills. Right now you're operating very much like that, too, Callicles.
You sing the praises of those who threw parties for these people, and who
feasted them lavishly with what they had an appetite for. And they say
that *they* have made the city great! But that the city is swollen and festering, 519

thanks to those early leaders, that they don't notice. For they filled the city with harbors and dockyards, walls, and tribute payments and such trash as that, but did so without justice and self-control. So, when that fit of sickness comes on, they'll blame their advisers of the moment and sing the praises of Themistocles and Cimon and Pericles, the ones who are to blame for their ills. Perhaps, if you're not careful, they'll lay their hands
b on you, and on my friend Alcibiades, when they lose not only what they gained but what they had originally as well, even though you aren't responsible for their ills but perhaps accessories to them.

And yet there's a foolish business that I, for one, both see happening now and hear about in connection with our early leaders. For I notice that whenever the city lays its hands on one of its politicians because he does what's unjust, they resent it and complain indignantly that they're suffering terrible things. They've done many good things for the city, and so they're
c being unjustly brought to ruin by it, so their argument goes. But that's completely false. Not a single city leader could ever be brought to ruin by the very city he's the leader of. It looks as though those who profess to be politicians are just like those who profess to be sophists. For sophists, too, even though they're wise in other matters, do this absurd thing: while they claim to be teachers of excellence, they frequently accuse their students of doing them wrong, depriving them of their fees and withholding other forms of thanks from them, even though the students have been well served by them. Yet what could be a more illogical business than this
d statement, that people who've become good and just, whose injustice has been removed by their teacher and who have come to possess justice, should wrong him—something they can't do? Don't you think that's absurd, my friend? You've made me deliver a real popular harangue, Callicles, because you aren't willing to answer.

CALLICES: And you couldn't speak unless somebody answered you?

e SOCRATES: Evidently I could. Anyhow I *am* stretching my speeches out at length now, since you're unwilling to answer me. But, my good man, tell me, by the god of friendship: don't you think it's illogical that someone who says he's made someone else good should find fault with that person, charging that he, whom he himself made to become and to be good, is after all wicked?

CALLICLES: Yes, I do think so.

SOCRATES: Don't you hear people who say they're educating people for excellence saying things like that?

520 CALLICLES: Yes, I do. But why would you mention completely worthless people?

SOCRATES: Why would you talk about those people who, although they say they're the city's leaders and devoted to making it as good as possible, turn around and accuse it, when the time comes, of being the most wicked? Do you think they're any different from those others? Yes, my blessed man, they are one and the same, the sophist and the orator, or nearly so and pretty similar, as I was telling Polus. But because you don't see this,

you suppose that one of them, oratory, is something wonderful, while you b
sneer at the other. In actuality, however, sophistry is more to be admired than oratory, insofar as legislation is more admirable than the administration of justice, and gymnastics more than medicine. And I, for one, should have supposed that public speakers and sophists are the only people not in a position to charge the creature they themselves educate with being wicked to them, or else they simultaneously accuse themselves as well, by this same argument, of having entirely failed to benefit those whom they say they benefit. Isn't this so?

Callicles: Yes, it is. c

Socrates: And if what I was saying is true, then they alone, no doubt, are in a position to offer on terms of honor the benefit they provide—without charge, as is reasonable. For somebody who had another benefit conferred on him, one who, for example, had been turned into a fast runner by a physical trainer, could perhaps deprive the man of his compensation if the trainer offered him that benefit on his honor, instead of agreeing on
a fixed fee and taking his money as closely as possible to the time he d
imparts the speed. For I don't suppose that it's by slowness that people act unjustly, but by injustice. Right?

Callicles: Yes.

Socrates: So if somebody removes that very thing, injustice, he shouldn't have any fear of being treated unjustly. For him alone is it safe to offer this benefit on terms of honor, if it's really true that one can make people good. Isn't that so?

Callicles: I agree.

Socrates: This, then, is evidently why there's nothing shameful in taking money for giving advice concerning other matters such as housebuilding or the other crafts.

Callicles: Yes, evidently. e

Socrates: But as for this activity, which is concerned with how a person might be as good as possible and manage his own house or his city in the best possible way, it's considered shameful to refuse to give advice concerning it unless somebody pays you money. Right?

Callicles: Yes.

Socrates: For it's clear that what accounts for this is the fact that of all the benefits this one alone makes the one who has had good done to him have the desire to do good in return, so that we think it's a good sign of someone's having done good by conferring this benefit that he'll have good done to him in return, and not a good sign if he won't. Is this how it is?

Callicles: It is. 521

Socrates: Now, please describe for me precisely the type of care for the city to which you are calling me. Is it that of striving valiantly with the Athenians to make them as good as possible, like a doctor, or is it like one ready to serve them and to associate with them for their gratification? Tell me the truth, Callicles. For just as you began by speaking candidly

to me, it's only fair that you should continue speaking your mind. Tell me now, too, well and nobly.

CALLICLES: In that case I say it's like one ready to serve.

b SOCRATES: So, noblest of men, you're calling on me to be ready to flatter.

CALLICLES: Yes, if you find it more pleasant not to mince words, Socrates. Because if you don't do this—

SOCRATES: I hope you won't say what you've said many times, that
anyone who wants to will put me to death. That way I, too, won't repeat
my claim that it would be a wicked man doing this to a good man. And
don't say that he'll confiscate any of my possessions, either, so I won't
reply that when he's done so he won't know how to use them. Rather,
just as he unjustly confiscated them from me, so, having gotten them, he'll
c use them unjustly too, and if unjustly, shamefully, and if shamefully, badly.

CALLICLES: How sure you seem to me to be, Socrates, that not even one of these things will happen to you! You think that you live out of their way and that you wouldn't be brought to court perhaps by some very corrupt and mean man.

SOCRATES: In that case I really am a fool, Callicles, if I don't suppose that
anything might happen to anybody in this city. But I know this well: that
d if I do come into court involved in one of those perils which you mention,
the man who brings me in will be a wicked man—for no good man would
bring in a man who is not a wrongdoer—and it wouldn't be at all strange
if I were to be put to death. Would you like me to tell you my reason for
expecting this?

CALLICLES: Yes, I would.

SOCRATES: I believe that I'm one of a few Athenians—so as not to say
I'm the only one, but the only one among our contemporaries—to take
up the true political craft and practice the true politics. This is because the
speeches I make on each occasion do not aim at gratification but at what's
e best. They don't aim at what's most pleasant. And because I'm not willing
to do those clever things you recommend, I won't know what to say in
court. And the same account I applied to Polus comes back to me. For I'll
be judged the way a doctor would be judged by a jury of children if a
pastry chef were to bring accusations against him. Think about what a
man like that, taken captive among these people, could say in his defense,
if somebody were to accuse him and say, "Children, this man has worked
many great evils on you, yes, on you. He destroys the youngest among
522 you by cutting and burning them, and by slimming them down and choking
them he confuses them. He gives them the most bitter potions to drink
and forces hunger and thirst on them. He doesn't feast you on a great
variety of sweets the way I do!" What do you think a doctor, caught in
such an evil predicament, could say? Or if he should tell them the truth
and say, "Yes, children, I was doing all those things in the interest of
health," how big an uproar do you think such "judges" would make?
Wouldn't it be a loud one?

CALLICLES: Perhaps so.

SOCRATES: I should think so! Don't you think he'd be at a total loss as
to what he should say? b

CALLICLES: Yes, he would be.

SOCRATES: That's the sort of thing I know would happen to me, too, if
I came into court. For I won't be able to point out any pleasures that I've
provided for them, ones they believe to be services and benefits, while I
envy neither those who provide them nor the ones for whom they're
provided. Nor will I be able to say what's true if someone charges that I
ruin younger people by confusing them or abuse older ones by speaking
bitter words against them in public or private. I won't be able to say, that
is, "Yes, I say and do all these things in the interest of justice, my 'honored b
judges' "—to use that expression you people use—nor anything else. So
presumably I'll get whatever comes my way.

CALLICLES: Do you think, Socrates, that a man in such a position in his
city, a man who's unable to protect himself, is to be admired?

SOCRATES: Yes, Callicles, as long as he has that one thing that you've
often agreed he should have: as long as he has protected himself against
having spoken or done anything unjust relating to either men or gods.
For this is the self-protection that you and I often have agreed avails the d
most. Now if someone were to refute me and prove that I am unable to
provide *this* protection for myself or for anyone else, I would feel shame
at being refuted, whether this happened in the presence of many or of a
few, or just between the two of us; and if I were to be put to death for
lack of this ability, I really would be upset. But if I came to my end because
of a deficiency in flattering oratory, I know that you'd see me bear my
death with ease. For no one who isn't totally bereft of reason and courage e
is afraid to die; doing what's unjust is what he's afraid of. For to arrive
in Hades with one's soul stuffed full of unjust actions is the ultimate of
all bad things. If you like, I'm willing to give you an account showing that
this is so.

CALLICLES: All right, since you've gone through the other things, go
through this, too.

SOCRATES: Give ear then—as they put it—to a very fine account. You'll 523
think that it's a mere tale, I believe, although I think it's an account, for
what I'm about to say I will tell you as true. As Homer tells it, after Zeus,
Posidon, and Pluto took over the sovereignty from their father, they divided
it among themselves. Now there was a law concerning human beings
during Cronus' time, one that gods even now continue to observe, that
when a man who has lived a just and pious life comes to his end, he goes
to the Isles of the Blessed, to make his abode in complete happiness, beyond b
the reach of evils, but when one who has lived in an unjust and godless
way dies, he goes to the prison of payment and retribution, the one
they call Tartarus. In Cronus' time, and even more recently during Zeus'
tenure of sovereignty, these men faced living judges while they were still
alive, who judged them on the day they were going to die. Now the cases
were badly decided, so Pluto and the keepers from the Isles of the Blessed

came to Zeus and told him that people were undeservingly making their
c way in both directions. So Zeus said, "All right, I'll put a stop to that. The
cases are being badly decided at this time because those being judged are
judged fully dressed. They're being judged while they're still alive. Many,"
he said, "whose souls are wicked are dressed in handsome bodies, good
stock and wealth, and when the judgment takes place they have many
witnesses appear to testify that they have lived just lives. Now the judges
d are awestruck by these things and pass judgment at a time when they
themselves are fully dressed, too, having put their eyes and ears and their
whole bodies up as screens in front of their souls. All these things, their
own clothing and that of those being judged, have proved to be obstructive
to them. What we must do first," he said, "is to stop them from knowing
their death ahead of time. Now they do have that knowledge. This is
e something that Prometheus has already been told to put a stop to. Next,
they must be judged when they're stripped naked of all these things, for
they should be judged when they're dead. The judge, too, should be naked,
and dead, and with only his soul he should study only the soul of each
person immediately upon his death, when he's isolated from all his kins-
men and has left behind on earth all that adornment, so that the judgment
may be a just one. Now I, realizing this before you did, have already
appointed my sons as judges, two from Asia, Minos and Rhadamanthus,
524 and one from Europe, Aeacus. After they've died, they'll serve as judges
in the meadow, at the three-way crossing from which the two roads go
on, the one to the Isles of the Blessed and the other to Tartarus. Rhada-
manthus will judge the people from Asia and Aeacus those from Europe.
I'll give seniority to Minos to render final judgment if the other two are
at all perplexed, so that the judgment concerning the passage of humankind
may be as just as possible."

b This, Callicles, is what I've heard, and I believe that it's true. And on
the basis of these accounts I conclude that something like this takes place:
Death, I think, is actually nothing but the separation of two things from
each other, the soul and the body. So, after they're separated, each of them
stays in a condition not much worse than what it was in when the person
was alive. The body retains its nature, and the care it had received as well
c as the things that have happened to it are all evident. If a man had a body,
for instance, which was large (either by nature or through nurture, or both)
while he was alive, his corpse after he has died is large, too. And if it was
fat, so is the corpse of the dead man, and so on. And if a man took care
to grow his hair long, his corpse will have long hair, too. And again, if a
man had been a criminal whipped for his crime and showed scars, traces
of beatings on his body inflicted by whips or other blows while he was
alive, his body can be seen to have these marks, too, when he is dead.
And if a man's limbs were broken or twisted while he was alive, these
d very things will be evident, too, when he is dead. In a word, however a
man treated his body while he was alive, all the marks of that treatment,
or most of them, are evident for some time even after he is dead. And I

think that the same thing, therefore, holds true also for the soul, Callicles.
All that's in the soul is evident after it has been stripped naked of the
body, both things that are natural to it and things that have happened to
it, things that the person came to have in his soul as a result of his pursuit
of each objective. So when they arrive before their judge—the people from
Asia before Rhadamanthus—Rhadamanthus brings them to a halt and e
studies each person's soul without knowing whose it is. He's often gotten
hold of the Great King, or some other king or potentate, and noticed that
there's nothing sound in his soul but that it's been thoroughly whipped 525
and covered with scars, the results of acts of perjury and of injustice, things
that each of his actions has stamped upon his soul. Everything was warped
as a result of deception and pretense, and nothing was straight, all because
the soul had been nurtured without truth. And he saw that the soul was
full of distortion and ugliness due to license and luxury, arrogance and
incontinence in its actions. And when he had seen it, he dismissed this soul
in dishonor straight to the guardhouse, where it went to await suffering its
appropriate fate.

It is appropriate for everyone who is subject to punishment rightly b
inflicted by another either to become better and profit from it, or else to
be made an example for others, so that when they see him suffering
whatever it is he suffers, they may be afraid and become better. Those
who are benefited, who are made to pay their due by gods and men, are
the ones whose errors are curable; even so, their benefit comes to them,
both here and in Hades, by way of pain and suffering, for there is no other
possible way to get rid of injustice. From among those who have committed c
the ultimate wrongs and who because of such crimes have become incur-
able come the ones who are made examples of. These persons themselves no
longer derive any profit from their punishment, because they're incurable.
Others, however, do profit from it when they see them undergoing for all
time the most grievous, intensely painful and frightening sufferings for
their errors, simply strung up there in the prison in Hades as examples,
visible warnings to unjust men who are ever arriving. I claim that Arche- d
laus, too, will be one of their number, if what Polus says is true, and
anyone else who's a tyrant like him. I suppose that in fact the majority of
these examples have come from the ranks of tyrants, kings, potentates,
and those active in the affairs of cities, for these people commit the most
grievous and impious errors because they're in a position to do so. Homer,
too, is a witness on these matters, for he has depicted those undergoing
eternal punishment in Hades as kings and potentates: Tantalus, Sisyphus e
and Tityus. As for Thersites and any other private citizen who was wicked,
no one has depicted him as surrounded by the most grievous punishments,
as though he were incurable; he wasn't in that position, I suppose, and
for that reason he's also happier than those who were. The fact is, Callicles,
that those persons who become extremely wicked do come from the ranks 526
of the powerful, although there's certainly nothing to stop good men from
turning up even among the powerful, and those who do turn up there

deserve to be enthusiastically admired. For it's a difficult thing, Callicles,
and one that merits much praise, to live your whole life justly when you've
found yourself having ample freedom to do what's unjust. Few are those
who prove to be like that. But since there *have* proved to be such people,
both here and elsewhere, I suppose that there'll be others, too, men admira-
ble and good in that excellence of justly carrying out whatever is entrusted
b to them. One of these, Aristides the son of Lysimachus, has proved to be
very illustrious indeed, even among the rest of the Greeks. But the majority
of our potentates, my good man, prove to be bad.

So as I was saying, when Rhadamanthus the judge gets hold of someone
like that, he doesn't know a thing about him, neither who he is nor who
his people are, except that he's somebody wicked. And once he's noticed
that, he brands the man as either curable or incurable, as he sees fit, and
dismisses the man to Tartarus, and once the man has arrived there, he
c undergoes the appropriate sufferings. Once in a while he inspects another
soul, one who has lived a pious life, one devoted to truth, the soul of a
private citizen or someone else, especially—and I at any rate say this,
Callicles—that of a philosopher who has minded his own affairs and hasn't
been meddlesome in the course of his life. He admires the man and sends
him off to the Isles of the Blessed. And Aeacus, too, does the very same
things. Each of them with staff in hand renders judgments. And Minos is
seated to oversee them. He alone holds the golden scepter the way Homer's
d Odysseus claims to have seen him,

*holding his golden scepter, decreeing right among the dead.*[27]

For my part, Callicles, I'm convinced by these accounts, and I think
about how I'll reveal to the judge a soul that's as healthy as it can be. So
I disregard the things held in honor by the majority of people, and by
practicing truth I really try, to the best of my ability, to be and to live as
e a very good man, and when I die, to die like that. And I call on all other
people as well, as far as I can—and you especially I call on in response
to your call—to this way of life, this contest, that I hold to be worth all
the other contests in this life. And I take you to task, because you won't
be able to come to protect yourself when you appear at the trial and
judgment I was talking about just now. When you come before that judge,
527 the son of Aegina, and he takes hold of you and brings you to trial, your
mouth will hang open and you'll get dizzy there just as much as I will
here, and maybe somebody'll give you a demeaning knock on the jaw and
throw all sorts of dirt at you.

Maybe you think this account is told as an old wives' tale, and you feel
contempt for it. And it certainly wouldn't be a surprising thing to feel
contempt for it if we could look for and somehow find one better and

27. *Odyssey* xi.569.

truer than it. As it is, you see that there are three of you, the wisest of the
Greeks of today—you, Polus, and Gorgias—and you're not able to prove b
that there's any other life one should live than the one which will clearly
turn out to be advantageous in that world, too. But among so many
arguments this one alone survives refutation and remains steady: that
doing what's unjust is more to be guarded against than suffering it, and
that it's not *seeming* to be good but *being* good that a man should take care
of more than anything, both in his public and his private life; and that if
a person proves to be bad in some respect, he's to be disciplined, and that
the second best thing after being just is to become just by paying one's c
due, by being disciplined; and that every form of flattery, both the form
concerned with oneself and that concerned with others, whether they're
few or many, is to be avoided, and that oratory and every other activity
is always to be used in support of what's just.

So, listen to me and follow me to where I am, and when you've come
here you'll be happy both during life and at its end, as the account indicates.
Let someone despise you as a fool and throw dirt on you, if he likes. And,
yes, by Zeus, confidently let him deal you that demeaning blow. Nothing d
terrible will happen to you if you really are an admirable and good man,
one who practices excellence. And then, after we've practiced it together,
then at last, if we think we should, we'll turn to politics, or then we'll
deliberate about whatever subject we please, when we're better at deliberat-
ing than we are now. For it's a shameful thing for us, being in the condition
we appear to be in at present—when we never think the same about the
same subjects, the most important ones at that—to sound off as though
we're somebodies. That's how far behind in education we've fallen. So e
let's use the account that has now been disclosed to us as our guide, one
that indicates to us that this way of life is the best, to practice justice and
the rest of excellence both in life and in death. Let us follow it, then, and
call on others to do so, too, and let's not follow the one that you believe
in and call on me to follow. For that one is worthless, Callicles.

# MENO

*Meno's is one of the leading aristocratic families of Thessaly, traditionally friendly to Athens and Athenian interests. Here he is a young man, about to embark on an unscrupulous military and political career, leading to an early death at the hands of the Persian king. To his aristocratic 'virtue' (Plato's ancient readers would know what that ultimately came to) he adds an admiration for ideas on the subject he has learned from the rhetorician Gorgias (about whom we learn more in the dialogue named after him). What brings him to Athens we are not told. His family's local sponsor is the democratic politician Anytus, one of Socrates' accusers at his trial, and apparently Anytus is his host. The dialogue begins abruptly, without stage-setting preliminaries of the sort we find in the 'Socratic' dialogues, and with no context of any kind being provided for the conversation. Meno wants to know Socrates' position on the then much-debated question whether virtue can be taught, or whether it comes rather by practice, or else is acquired by one's birth and nature, or in some other way? Socrates and Meno pursue that question, and the preliminary one of what virtue indeed* is, *straight through to the inconclusive conclusion characteristic of 'Socratic' dialogues. (Anytus joins the conversation briefly. He bristles when, to support his doubts that virtue can be taught, Socrates points to the failure of famous Athenian leaders to pass their own virtue on to their sons, and he issues a veiled threat of the likely consequences to Socrates of such 'slanderous' attacks.)*

*The dialogue is best remembered, however, for the interlude in which Socrates questions Meno's slave about a problem in geometry—how to find a square double in area to any given square. Having determined that Meno does not know what virtue is, and recognizing that he himself does not know either, Socrates has proposed to Meno that they inquire into this together. Meno protests that that is impossible, challenging Socrates with the 'paradox' that one logically cannot inquire productively into what one does not already know—nor of course into what one already does! Guided by Socrates' questions, the slave (who has never studied geometry before) comes to see for himself, to recognize, what the right answer to the geometrical problem must be. Socrates argues that this confirms something he has heard from certain wise priests and priestesses—that the soul is immortal and that at our birth we already possess all theoretical knowledge (he includes here not just mathematical theory but moral knowledge as well). Prodded by Socrates' questions, the slave was 'recollecting' this prior knowledge, not drawing new conclusions from data being presented to him for the first time. So in moral inquiry, as well, there is hope that, if we*

*question ourselves rightly, 'recollection' can progressively improve our understanding of moral truth and eventually lead us to full knowledge of it.*

*The examination of the slave assuages Meno's doubt about the possibility of such inquiry. He and Socrates proceed to inquire together what virtue is—but now they follow a new method of 'hypothesis', introduced by Socrates again by analogy with procedures in geometry. Socrates no longer asks Meno for his views and criticizes those. Among other 'hypotheses' that he now works with, he advances and argues for an hypothesis of his own, that virtue is knowledge (in which case it must be teachable). But he also considers weaknesses in his own argument, leading to the alternative possible hypothesis, that virtue is god-granted right opinion (and so, not teachable). In the second half of the dialogue we thus see a new Socrates, with new methods of argument and inquiry, not envisioned in such 'Socratic' dialogues as* Euthyphro, Laches, *and* Charmides. Meno *points forward to* Phaedo, *where the thesis that theoretical knowledge comes by recollection is discussed again, with a clear reference back to the* Meno, *but now expanded by the addition of Platonic Forms as objects of recollection and knowledge.*

*J.M.C.*

MENO: Can you tell me, Socrates, can virtue be taught? Or is it not 70
teachable but the result of practice, or is it neither of these, but men possess
it by nature or in some other way?

SOCRATES: Before now, Meno, Thessalians had a high reputation among
the Greeks and were admired for their horsemanship and their wealth,
but now, it seems to me, they are also admired for their wisdom, not least b
the fellow citizens of your friend Aristippus of Larissa. The responsibility
for this reputation of yours lies with Gorgias, for when he came to your
city he found that the leading Aleuadae, your lover Aristippus among
them, loved him for his wisdom, and so did the other leading Thessalians.
In particular, he accustomed you to give a bold and grand answer to any
question you may be asked, as experts are likely to do. Indeed, he himself c
was ready to answer any Greek who wished to question him, and every
question was answered. But here in Athens, my dear Meno, the opposite
is the case, as if there were a dearth of wisdom, and wisdom seems to
have departed hence to go to you. If then you want to ask one of us that 71
sort of question, everyone will laugh and say: "Good stranger, you must
think me happy indeed if you think I know whether virtue can be taught
or how it comes to be; I am so far from knowing whether virtue can be
taught or not that I do not even have any knowledge of what virtue itself is."

I myself, Meno, am as poor as my fellow citizens in this matter, and I b
blame myself for my complete ignorance about virtue. If I do not know

Translated by G.M.A. Grube.

what something is, how could I know what qualities it possesses? Or do you think that someone who does not know at all who Meno is could know whether he is good-looking or rich or well-born, or the opposite of these? Do you think that is possible?

Meno: I do not; but, Socrates, do you really not know what virtue is?
c Are we to report this to the folk back home about you?

Socrates: Not only that, my friend, but also that, as I believe, I have never yet met anyone else who did know.

Meno: How so? Did you not meet Gorgias when he was here?

Socrates: I did.

Meno: Did you then not think that he knew?

Socrates: I do not altogether remember, Meno, so that I cannot tell you
now what I thought then. Perhaps he does know; you know what he used
d to say, so you remind me of what he said. You tell me yourself, if you are
willing, for surely you share his views.—I do.

Socrates: Let us leave Gorgias out of it, since he is not here. But Meno, by the gods, what do you yourself say that virtue is? Speak and do not begrudge us, so that I may have spoken a most unfortunate untruth when I said that I had never met anyone who knew, if you and Gorgias are shown to know.

e Meno: It is not hard to tell you, Socrates. First, if you want the virtue
of a man, it is easy to say that a man's virtue consists of being able to
manage public affairs and in so doing to benefit his friends and harm his
enemies and to be careful that no harm comes to himself; if you want the
virtue of a woman, it is not difficult to describe: she must manage the
home well, preserve its possessions, and be submissive to her husband;
the virtue of a child, whether male or female, is different again, and so is
that of an elderly man, if you want that, or if you want that of a free man
72 or a slave. And there are very many other virtues, so that one is not at a
loss to say what virtue is. There is virtue for every action and every age,
for every task of ours and every one of us—and, Socrates, the same is true
for wickedness.

Socrates: I seem to be in great luck, Meno; while I am looking for one
virtue, I have found you to have a whole swarm of them. But, Meno, to
b follow up the image of swarms, if I were asking you what is the nature
of bees, and you said that they are many and of all kinds, what would
you answer if I asked you: "Do you mean that they are many and varied
and different from one another in so far as they are bees? Or are they no
different in that regard, but in some other respect, in their beauty, for
example, or their size or in some other such way?" Tell me, what would
you answer if thus questioned?

Meno: I would say that they do not differ from one another in being bees.

Socrates: If I went on to say: "Tell me, what is this very thing, Meno,
c in which they are all the same and do not differ from one another?" Would
you be able to tell me?

Meno: I would.

Socrates: The same is true in the case of the virtues. Even if they are many and various, all of them have one and the same form which makes them virtues, and it is right to look to this when one is asked to make clear what virtue is. Or do you not understand what I mean? d

Meno: I think I understand, but I certainly do not grasp the meaning of the question as fully as I want to.

Socrates: I am asking whether you think it is only in the case of virtue that there is one for man, another for woman, and so on, or is the same true in the case of health and size and strength? Do you think that there is one health for man and another for woman? Or, if it is health, does it have the same form everywhere, whether in man or in anything else whatever? e

Meno: The health of a man seems to me the same as that of a woman.

Socrates: And so with size and strength? If a woman is strong, that strength will be the same and have the same form, for by "the same" I mean that strength is no different as far as being strength, whether in a man or a woman. Or do you think there is a difference?

Meno: I do not think so.

Socrates: And will there be any difference in the case of virtue, as far as being virtue is concerned, whether it be in a child or an old man, in a 73
woman or in a man?

Meno: I think, Socrates, that somehow this is no longer like those other cases.

Socrates: How so? Did you not say that the virtue of a man consists of managing the city well, and that of a woman of managing the household?—I did.

Socrates: Is it possible to manage a city well, or a household, or anything else, while not managing it moderately and justly?—Certainly not.

Socrates: Then if they manage justly and moderately, they must do so b
with justice and moderation?—Necessarily.

Socrates: So both the man and the woman, if they are to be good, need the same things, justice and moderation.—So it seems.

Socrates: What about a child and an old man? Can they possibly be good if they are intemperate and unjust?—Certainly not.

Socrates: But if they are moderate and just?—Yes.

Socrates: So all human beings are good in the same way, for they become c
good by acquiring the same qualities.—It seems so.

Socrates: And they would not be good in the same way if they did not have the same virtue.—They certainly would not be.

Socrates: Since then the virtue of all is the same, try to tell me and to remember what Gorgias, and you with him, said that that same thing is.

Meno: What else but to be able to rule over people, if you are seeking d
one description to fit them all.

Socrates: That is indeed what I am seeking, but, Meno, is virtue the same in the case of a child or a slave, namely, for them to be able to rule over a master, and do you think that he who rules is still a slave?—I do not think so at all, Socrates.

Socrates: It is not likely, my good man. Consider this further point: you say that virtue is to be able to rule. Shall we not add to this *justly and not unjustly?*

Meno: I think so, Socrates, for justice is virtue.

e Socrates: Is it virtue, Meno, or a virtue?—What do you mean?

Socrates: As with anything else. For example, if you wish, take roundness, about which I would say that it is a shape, but not simply that it is shape. I would not so speak of it because there are other shapes.

Meno: You are quite right. So I too say that not only justice is a virtue but there are many other virtues.

74 Socrates: What are they? Tell me, as I could mention other shapes to you if you bade me do so, so do you mention other virtues.

Meno: I think courage is a virtue, and moderation, wisdom, and munificence, and very many others.

Socrates: We are having the same trouble again, Meno, though in another way; we have found many virtues while looking for one, but we cannot find the one which covers all the others.

b Meno: I cannot yet find, Socrates, what you are looking for, one virtue for them all, as in the other cases.

Socrates: That is likely, but I am eager, if I can, that we should make progress, for you understand that the same applies to everything. If someone asked you what I mentioned just now: "What is shape, Meno?" and you told him that it was roundness, and if then he said to you what I did: "Is roundness shape or a shape?" you would surely tell him that it is a shape?—I certainly would.

c Socrates: That would be because there are other shapes?—Yes.

Socrates: And if he asked you further what they were, you would tell him?—I would.

Socrates: So too, if he asked you what color is, and you said it is white, and your questioner interrupted you, "Is white color or a color?" you would say that it is a color, because there are also other colors?—I would.

Socrates: And if he bade you mention other colors, you would mention
d others that are no less colors than white is?—Yes.

Socrates: Then if he pursued the argument as I did and said: "We always arrive at the many; do not talk to me in that way, but since you call all these many by one name, and say that no one of them is not a shape even though they are opposites, tell me what this is which applies
e as much to the round as to the straight and which you call shape, as you say the round is as much a shape as the straight." Do you not say that?—I do.

Socrates: When you speak like that, do you assert that the round is no more round than it is straight, and that the straight is no more straight than it is round?

Meno: Certainly not, Socrates.

Socrates: Yet you say that the round is no more a shape than the straight is, nor the one more than the other.—That is true.

Socrates: What then is this to which the name shape applies? Try to tell me. If then you answered the man who was questioning about shape
or color: "I do not understand what you want, my man, nor what you 75
mean," he would probably wonder and say: "You do not understand that I am seeking that which is the same in all these cases?" Would you still have nothing to say, Meno, if one asked you: "What is this which applies to the round and the straight and the other things which you call shapes and which is the same in them all?" Try to say, that you may practice for your answer about virtue.

Meno: No, Socrates, but you tell me. b

Socrates: Do you want me to do you this favor?

Meno: I certainly do.

Socrates: And you will then be willing to tell me about virtue?

Meno: I will.

Socrates: We must certainly press on. The subject is worth it.

Meno: It surely is.

Socrates: Come then, let us try to tell you what shape is. See whether you will accept that it is this: Let us say that shape is that which alone of existing things always follows color. Is that satisfactory to you, or do you
look for it in some other way? I should be satisfied if you defined virtue c
in this way.

Meno: But that is foolish, Socrates.

Socrates: How do you mean?

Meno: That shape, you say, always follows color. Well then, if someone were to say that he did not know what color is, but that he had the same difficulty as he had about shape, what do you think your answer would be?

Socrates: A true one, surely, and if my questioner was one of those clever and disputatious debaters, I would say to him: "I have given my answer; if it is wrong, it is your job to refute it." Then, if they are friends
as you and I are, and want to discuss with each other, they must answer d
in a manner more gentle and more proper to discussion. By this I mean that the answers must not only be true, but in terms admittedly known to the questioner. I too will try to speak in these terms. Do you call
something "the end?" I mean such a thing as a limit or boundary, for all e
those are, I say, the same thing. Prodicus[1] might disagree with us, but you surely call something "finished" or "completed"—that is what I want to express, nothing elaborate.

Meno: I do, and I think I understand what you mean.

Socrates: Further, you call something a plane, and something else a 76
solid, as in geometry?

Meno: I do.

Socrates: From this you may understand what I mean by shape, for I say this of every shape, that a shape is that which limits a solid; in a word, a shape is the limit of a solid.

1. Prodicus was a well-known sophist who was especially keen on the exact meaning of words.

MENO: And what do you say color is, Socrates?

SOCRATES: You are outrageous, Meno. You bother an old man to answer
b questions, but you yourself are not willing to recall and to tell me what Gorgias says that virtue is.

MENO: After you have answered this, Socrates, I will tell you.

SOCRATES: Even someone who was blindfolded would know from your conversation that you are handsome and still have lovers.

MENO: Why so?

SOCRATES: Because you are forever giving orders in a discussion, as spoiled people do, who behave like tyrants as long as they are young. And
c perhaps you have recognized that I am at a disadvantage with handsome people, so I will do you the favor of an answer.

MENO: By all means do me that favor.

SOCRATES: Do you want me to answer after the manner of Gorgias, which you would most easily follow?

MENO: Of course I want that.

SOCRATES: Do you both say there are effluvia of things, as Empedocles[2] does?— Certainly.

SOCRATES: And that there are channels through which the effluvia make their way?—Definitely.

d SOCRATES: And some effluvia fit some of the channels, while others are too small or too big?—That is so.

SOCRATES: And there is something which you call sight?—There is.

SOCRATES: From this, "comprehend what I state," as Pindar said;[3] for color is an effluvium from shapes which fits the sight and is perceived.

MENO: That seems to me to be an excellent answer, Socrates.

SOCRATES: Perhaps it was given in the manner to which you are accustomed. At the same time I think that you can deduce from this answer
e what sound is, and smell, and many such things.—Quite so.

SOCRATES: It is a theatrical answer so it pleases you, Meno, more than that about shape.—It does.

SOCRATES: It is not better, son of Alexidemus, but I am convinced that the other is, and I think you would agree, if you did not have to go away before the mysteries as you told me yesterday, but could remain and be initiated.

MENO: I would stay, Socrates, if you could tell me many things like
77 these.

SOCRATES: I shall certainly not be lacking in eagerness to tell you such things, both for your sake and my own, but I may not be able to tell you many. Come now, you too try to fulfill your promise to me and tell me the nature of virtue as a whole and stop making many out of one, as jokers say whenever someone breaks something; but allow virtue to remain whole
b and sound, and tell me what it is, for I have given you examples.

2. Empedocles (c. 493–433 B.C.) of Acragas in Sicily was a philosopher famous for his theories about the world of nature and natural phenomena (including sense-perception).

3. Frg. 105 (Snell).

Meno: I think, Socrates, that virtue is, as the poet says, "to find joy in beautiful things and have power." So I say that virtue is to desire beautiful things and have the power to acquire them.

Socrates: Do you mean that the man who desires beautiful things desires good things?—Most certainly.

Socrates: Do you assume that there are people who desire bad things, and others who desire good things? Do you not think, my good man, that c all men desire good things?

Meno: I do not.

Socrates: But some desire bad things?—Yes.

Socrates: Do you mean that they believe the bad things to be good, or that they know they are bad and nevertheless desire them?—I think there are both kinds.

Socrates: Do you think, Meno, that anyone, knowing that bad things are bad, nevertheless desires them?—I certainly do.

Socrates: What do you mean by desiring? Is it to secure for oneself?—What else?

Socrates: Does he think that the bad things benefit him who possesses d them, or does he know they harm him?

Meno: There are some who believe that the bad things benefit them, others who know that the bad things harm them.

Socrates: And do you think that those who believe that bad things benefit them know that they are bad?

Meno: No, that I cannot altogether believe.

Socrates: It is clear then that those who do not know things to be bad do not desire what is bad, but they desire those things that they believe e to be good but that are in fact bad. It follows that those who have no knowledge of these things and believe them to be good clearly desire good things. Is that not so?—It is likely.

Socrates: Well then, those who you say desire bad things, believing that bad things harm their possessor, know that they will be harmed by them?—Necessarily.

Socrates: And do they not think that those who are harmed are miserable 78 to the extent that they are harmed?—That too is inevitable.

Socrates: And that those who are miserable are unhappy?—I think so.

Socrates: Does anyone wish to be miserable and unhappy?—I do not think so, Socrates.

Socrates: No one then wants what is bad, Meno, unless he wants to be such. For what else is being miserable but to desire bad things and secure them?

Meno: You are probably right, Socrates, and no one wants what is bad. b

Socrates: Were you not saying just now that virtue is to desire good things and have the power to secure them?—Yes, I was.

Socrates: The desiring part of this statement is common to everybody, and one man is no better than another in this?—So it appears.

Socrates: Clearly then, if one man is better than another, he must be better at securing them.—Quite so.

SOCRATES: This then is virtue according to your argument, the power of
c securing good things.

MENO: I think, Socrates, that the case is altogether as you now understand it.

SOCRATES: Let us see then whether what you say is true, for you may well be right. You say that the capacity to acquire good things is virtue?—I do.

SOCRATES: And by good things you mean, for example, health and wealth?

MENO: Yes, and also to acquire gold and silver, also honors and offices in the city.

SOCRATES: By good things you do not mean other goods than these?

MENO: No, but I mean all things of this kind.

d SOCRATES: Very well. According to Meno, the hereditary guest friend of the Great King, virtue is the acquisition of gold and silver. Do you add to this acquiring, Meno, the words justly and piously, or does it make no difference to you but even if one secures these things unjustly, you call it virtue none the less?

MENO: Certainly not, Socrates.

SOCRATES: You would then call it wickedness?—Indeed I would.

SOCRATES: It seems then that the acquisition must be accompanied by
e justice or moderation or piety or some other part of virtue; if it is not, it
will not be virtue, even though it provides good things.

MENO: How could there be virtue without these?

SOCRATES: Then failing to secure gold and silver, whenever it would not be just to do so, either for oneself or another, is not this failure to secure them also virtue?

MENO: So it seems.

SOCRATES: Then to provide these goods would not be virtue any more
79 than not to provide them, but apparently whatever is done with justice
will be virtue, and what is done without anything of the kind is wickedness.

MENO: I think it must necessarily be as you say.

SOCRATES: We said a little while ago that each of these things was a part of virtue, namely, justice and moderation and all such things?—Yes.

SOCRATES: Then you are playing with me, Meno.—How so, Socrates?

SOCRATES: Because I begged you just now not to break up or fragment
virtue, and I gave examples of how you should answer. You paid no
b attention, but you tell me that virtue is to be able to secure good things
with justice, and justice, you say, is a part of virtue.

MENO: I do.

SOCRATES: It follows then from what you agree to, that to act in whatever
you do with a part of virtue is virtue, for you say that justice is a part of
virtue, as are all such qualities. Why do I say this? Because when I begged
you to tell me about virtue as a whole, you are far from telling me what
it is. Rather, you say that every action is virtue if it is performed with a
c part of virtue, as if you had said what virtue is as a whole, so I would
already know that, even if you fragment it into parts. I think you must

face the same question from the beginning, my dear Meno, namely, what
is virtue, if every action performed with a part of virtue is virtue? For that
is what one is saying when he says that every action performed with justice
is virtue. Do you not think you should face the same question again, or
do you think one knows what a part of virtue is if one does not know
virtue itself?—I do not think so.

Socrates: If you remember, when I was answering you about shape, d
we rejected the kind of answer that tried to answer in terms still being
the subject of inquiry and not yet agreed upon.—And we were right to
reject them.

Socrates: Then surely, my good sir, you must not think, while the nature
of virtue as a whole is still under inquiry, that by answering in terms of
the parts of virtue you can make its nature clear to anyone or make anything
else clear by speaking in this way, but only that the same question must
be put to you again—what do you take the nature of virtue to be when e
you say what you say? Or do you think there is no point in what I am
saying?—I think what you say is right.

Socrates: Answer me again then from the beginning: What do you and
your friend say that virtue is?

Meno: Socrates, before I even met you I used to hear that you are always 80
in a state of perplexity and that you bring others to the same state, and
now I think you are bewitching and beguiling me, simply putting me
under a spell, so that I am quite perplexed. Indeed, if a joke is in order,
you seem, in appearance and in every other way, to be like the broad
torpedo fish, for it too makes anyone who comes close and touches it feel
numb, and you now seem to have had that kind of effect on me, for both b
my mind and my tongue are numb, and I have no answer to give you.
Yet I have made many speeches about virtue before large audiences on a
thousand occasions, very good speeches as I thought, but now I cannot
even say what it is. I think you are wise not to sail away from Athens to
go and stay elsewhere, for if you were to behave like this as a stranger in
another city, you would be driven away for practising sorcery.

Socrates: You are a rascal, Meno, and you nearly deceived me.

Meno: Why so particularly, Socrates?

Socrates: I know why you drew this image of me. c

Meno: Why do you think I did?

Socrates: So that I should draw an image of you in return. I know that
all handsome men rejoice in images of themselves; it is to their advantage,
for I think that the images of beautiful people are also beautiful, but I will
draw no image of you in turn. Now if the torpedo fish is itself numb and
so makes others numb, then I resemble it, but not otherwise, for I myself
do not have the answer when I perplex others, but I am more perplexed
than anyone when I cause perplexity in others. So now I do not know
what virtue is; perhaps you knew before you contacted me, but now you d
are certainly like one who does not know. Nevertheless, I want to examine
and seek together with you what it may be.

Meno: How will you look for it, Socrates, when you do not know at all what it is? How will you aim to search for something you do not know at all? If you should meet with it, how will you know that this is the thing that you did not know?

e Socrates: I know what you want to say, Meno. Do you realize what a debater's argument you are bringing up, that a man cannot search either for what he knows or for what he does not know? He cannot search for what he knows—since he knows it, there is no need to search—nor for what he does not know, for he does not know what to look for.

81 Meno: Does that argument not seem sound to you, Socrates?

Socrates: Not to me.

Meno: Can you tell me why?

Socrates: I can. I have heard wise men and women talk about divine matters . . .

Meno: What did they say?

Socrates: What was, I thought, both true and beautiful.

Meno: What was it, and who were they?

Socrates: The speakers were among the priests and priestesses whose
b care it is to be able to give an account of their practices. Pindar too says it, and many others of the divine among our poets. What they say is this; see whether you think they speak the truth: They say that the human soul is immortal; at times it comes to an end, which they call dying; at times it is reborn, but it is never destroyed, and one must therefore live one's life as piously as possible:

> *Persephone will return to the sun above in the ninth year*
> *the souls of those from whom*
> *she will exact punishment for old miseries,*
> c *and from these come noble kings,*
> *mighty in strength and greatest in wisdom,*
> *and for the rest of time men will call them sacred heroes.*[4]

As the soul is immortal, has been born often, and has seen all things here and in the underworld, there is nothing which it has not learned; so it is in no way surprising that it can recollect the things it knew before, both
d about virtue and other things. As the whole of nature is akin, and the soul has learned everything, nothing prevents a man, after recalling one thing only—a process men call learning—discovering everything else for himself, if he is brave and does not tire of the search, for searching and learning are, as a whole, recollection. We must, therefore, not believe that debater's argument, for it would make us idle, and fainthearted men like to hear it,
e whereas my argument makes them energetic and keen on the search. I

4. Frg. 133 (Snell).

trust that this is true, and I want to inquire along with you into the nature of virtue.

Meno: Yes, Socrates, but how do you mean that we do not learn, but that what we call learning is recollection? Can you teach me that this is so?

Socrates: As I said just now, Meno, you are a rascal. You now ask me
if I can teach you, when I say there is no teaching but recollection, in order 82
to show me up at once as contradicting myself.

Meno: No, by Zeus, Socrates, that was not my intention when I spoke, but just a habit. If you can somehow show me that things are as you say, please do so.

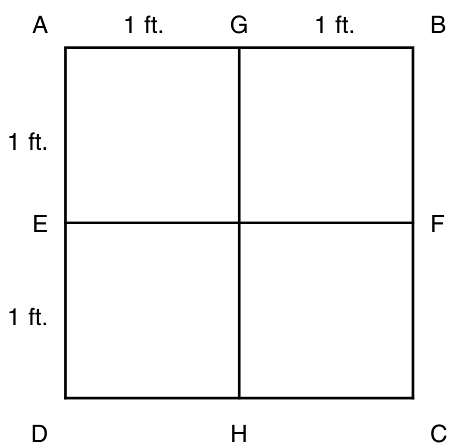
Socrates: It is not easy, but I am nevertheless willing to do my best for
your sake. Call one of these many attendants of yours, whichever you like, b
that I may prove it to you in his case.

Meno: Certainly. You there come forward.

Socrates: Is he a Greek? Does he speak Greek?

Meno: Very much so. He was born in my household.

Socrates: Pay attention then whether you think he is recollecting or learning from me.



Meno: I will pay attention.

Socrates: Tell me now, boy, you know that a square figure is like this?—I do.

Socrates: A square then is a figure in which all these four sides are c
equal?—Yes indeed.

Socrates: And it also has these lines through the middle equal?[5]—Yes.

5. Socrates draws a square ABCD. The "lines through the middle" are the lines joining the middle of these sides, which also go through the center of the square, namely EF and GH.

Socrates: And such a figure could be larger or smaller?—Certainly.

Socrates: If then this side were two feet, and this other side two feet, how many feet would the whole be? Consider it this way: if it were two feet this way, and only one foot that way, the figure would be once two feet?—Yes.

d Socrates: But if it is two feet also that way, it would surely be twice two feet?—Yes.

Socrates: How many feet is twice two feet? Work it out and tell me.—Four, Socrates.

Socrates: Now we could have another figure twice the size of this one, with the four sides equal like this one.—Yes.

Socrates: How many feet will that be?—Eight.

Socrates: Come now, try to tell me how long each side of this will be.
e The side of this is two feet. What about each side of the one which is its double?—Obviously, Socrates, it will be twice the length.

Socrates: You see, Meno, that I am not teaching the boy anything, but all I do is question him. And now he thinks he knows the length of the line on which an eight-foot figure is based. Do you agree?

Meno: I do.

Socrates: And does he know?

Meno: Certainly not.

Socrates: He thinks it is a line twice the length?

Meno: Yes.

Socrates: Watch him now recollecting things in order, as one must recollect. Tell me, boy, do you say that a figure double the size is based
83 on a line double the length? Now I mean such a figure as this, not long on one side and short on the other, but equal in every direction like this one, and double the size, that is, eight feet. See whether you still believe that it will be based on a line double the length.—I do.

Socrates: Now the line becomes double its length if we add another of the same length here?—Yes indeed.

Socrates: And the eight-foot square will be based on it, if there are four lines of that length?—Yes.

b Socrates: Well, let us draw from it four equal lines, and surely that is what you say is the eight-foot square?—Certainly.

Socrates: And within this figure are four squares, each of which is equal to the four-foot square?—Yes.

Socrates: How big is it then? Is it not four times as big?—Of course.

Socrates: Is this square then, which is four times as big, its double?—No, by Zeus.

Socrates: How many times bigger is it?—Four times.

c Socrates: Then, my boy, the figure based on a line twice the length is not double but four times as big?—You are right.

Socrates: And four times four is sixteen, is it not?—Yes.

Socrates: On how long a line should the eight-foot square be based? On *this* line we have a square that is four times bigger, do we not?—Yes.

Socrates: Now this four-foot square is based on this line here, half the length?—Yes.

Socrates: Very well. Is the eight-foot square not double this one and half that one?[6]—Yes.

Socrates: Will it not be based on a line longer than this one and shorter than that one? Is that not so?—I think so. d

Socrates: Good, you answer what you think. And tell me, was this one not two-feet long, and that one four feet?—Yes.

Socrates: The line on which the eight-foot square is based must then be longer than this one of two feet, and shorter than that one of four feet?—It must be.

Socrates: Try to tell me then how long a line you say it is.—Three e feet.

Socrates: Then if it is three feet, let us add the half of this one, and it will be three feet? For these are two feet, and the other is one. And here, similarly, these are two feet and that one is one foot, and so the figure you mention comes to be?—Yes.

Socrates: Now if it is three feet this way and three feet that way, will the whole figure be three times three feet?—So it seems.

Socrates: How much is three times three feet?—Nine feet.

Socrates: And the double square was to be how many feet?—Eight.

Socrates: So the eight-foot figure cannot be based on the three-foot line?—Clearly not.

Socrates: But on how long a line? Try to tell us exactly, and if you do 84 not want to work it out, show me from what line.—By Zeus, Socrates, I do not know.

Socrates: You realize, Meno, what point he has reached in his recollection. At first he did not know what the basic line of the eight-foot square was; even now he does not yet know, but then he thought he knew, and answered confidently as if he did know, and he did not think himself at a loss, but now he does think himself at a loss, and as he does not know, b neither does he think he knows.

Meno: That is true.

Socrates: So he is now in a better position with regard to the matter he does not know?

Meno: I agree with that too.

Socrates: Have we done him any harm by making him perplexed and numb as the torpedo fish does?

Meno: I do not think so.

Socrates: Indeed, we have probably achieved something relevant to finding out how matters stand, for now, as he does not know, he would be glad to find out, whereas before he thought he could easily make many

6. I.e., the eight-foot square is double the four-foot square and half the sixteen-foot square—double the square based on a line two feet long, and half the square based on a four-foot side.

c fine speeches to large audiences about the square of double size and said that it must have a base twice as long.

MENO: So it seems.

SOCRATES: Do you think that before he would have tried to find out that which he thought he knew though he did not, before he fell into perplexity and realized he did not know and longed to know?

MENO: I do not think so, Socrates.

SOCRATES: Has he then benefitted from being numbed?

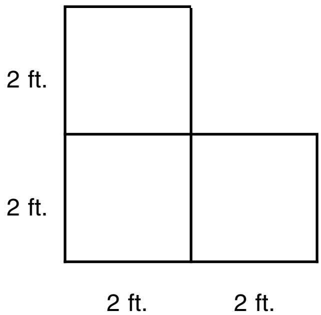
MENO: I think so.

SOCRATES: Look then how he will come out of his perplexity while searching along with me. I shall do nothing more than ask questions and not
d teach him. Watch whether you find me teaching and explaining things to him instead of asking for his opinion.

SOCRATES: You tell me, is this not a four-foot figure? You understand?—I do.

SOCRATES: We add to it this figure which is equal to it?—Yes.

SOCRATES: And we add this third figure equal to each of them?—Yes.



SOCRATES: Could we then fill in the space in the corner?—Certainly.[7]

SOCRATES: So we have these four equal figures?—Yes.

e SOCRATES: Well then, how many times is the whole figure larger than this one?[8]—Four times.

SOCRATES: But we should have had one that was twice as large, or do you not remember?—I certainly do.

7. Socrates now builds up his sixteen-foot square by joining two four-foot squares, then a third, like this:

Filling "the space in the corner" will give another four-foot square, which completes the sixteen-foot square containing four four-foot squares.

8. "This one" is any one of the inside squares of four feet.

SOCRATES: Does not this line from one corner to the other cut each of 85
these figures in two?[9]—Yes.

SOCRATES: So these are four equal lines which enclose this figure?[10]—They are.

SOCRATES: Consider now: how large is the figure?—I do not understand.

SOCRATES: Within these four figures, each line cuts off half of each, does it not?—Yes.

SOCRATES: How many of this size are there in this figure?[11]—Four.

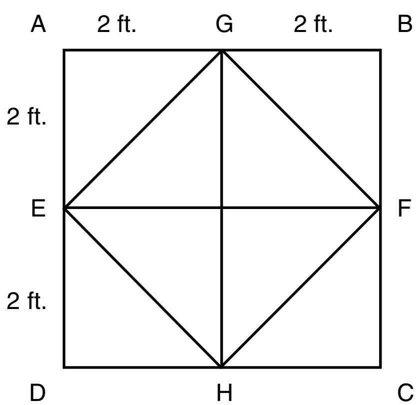
SOCRATES: How many in this?[12]—Two.

SOCRATES: What is the relation of four to two?—Double. b

SOCRATES: How many feet in this?[13]—Eight.

SOCRATES: Based on what line?—This one.

SOCRATES: That is, on the line that stretches from corner to corner of the four-foot figure?—Yes.—Clever men call this the diagonal, so that if diagonal is its name, you say that the double figure would be that based on the diagonal?—Most certainly, Socrates.



SOCRATES: What do you think, Meno? Has he, in his answers, expressed
any opinion that was not his own? c

MENO: No, they were all his own.

SOCRATES: And yet, as we said a short time ago, he did not know?—That is true.

SOCRATES: So these opinions were in him, were they not?—Yes.

9. Socrates now draws the diagonals of the four inside squares, namely, FH, HE, EG, and GF, which together form the square GFHE.

10. I.e., GFHE.

11. Again, GFHE: Socrates is asking how many of the triangles "cut off from inside" there are inside GFHE.

12. I.e., any of the interior squares.

13. GFHE again.

Socrates: So the man who does not know has within himself true opinions about the things that he does not know?—So it appears.

Socrates: These opinions have now just been stirred up like a dream,
but if he were repeatedly asked these same questions in various ways,
d you know that in the end his knowledge about these things would be as
accurate as anyone's.—It is likely.

Socrates: And he will know it without having been taught but only questioned, and find the knowledge within himself?—Yes.

Socrates: And is not finding knowledge within oneself recollection?—Certainly.

Socrates: Must he not either have at some time acquired the knowledge he now possesses, or else have always possessed it?—Yes.

Socrates: If he always had it, he would always have known. If he
e acquired it, he cannot have done so in his present life. Or has someone
taught him geometry? For he will perform in the same way about all
geometry, and all other knowledge. Has someone taught him everything?
You should know, especially as he has been born and brought up in
your house.

Meno: But I know that no one has taught him.

Socrates: Yet he has these opinions, or doesn't he?

Meno: That seems indisputable, Socrates.

86 Socrates: If he has not acquired them in his present life, is it not clear
that he had them and had learned them at some other time?—It seems so.

Socrates: Then that was the time when he was not a human being?—Yes.

Socrates: If then, during the time he exists and is not a human being he will have true opinions which, when stirred by questioning, become knowledge, will not his soul have learned during all time? For it is clear that during all time he exists, either as a man or not.—So it seems.

b Socrates: Then if the truth about reality is always in our soul, the soul
would be immortal so that you should always confidently try to seek out
and recollect what you do not know at present—that is, what you do
not recollect?

Meno: Somehow, Socrates, I think that what you say is right.

Socrates: I think so too, Meno. I do not insist that my argument is right
in all other respects, but I would contend at all costs both in word and
deed as far as I could that we will be better men, braver and less idle, if
we believe that one must search for the things one does not know, rather
c than if we believe that it is not possible to find out what we do not know
and that we must not look for it.

Meno: In this too I think you are right, Socrates.

Socrates: Since we are of one mind that one should seek to find out what one does not know, shall we try to find out together what virtue is?

Meno: Certainly. But Socrates, I should be most pleased to investigate
and hear your answer to my original question, whether we should try on
d the assumption that virtue is something teachable, or is a natural gift, or
in whatever way it comes to men.

Socrates: If I were directing you, Meno, and not only myself, we would
not have investigated whether virtue is teachable or not before we had inves-
tigated what virtue itself is. But because you do not even attempt to rule
yourself, in order that you may be free, but you try to rule me and do so, I
will agree with you—for what can I do? So we must, it appears, inquire into
the qualities of something the nature of which we do not yet know. However, e
please relax your rule a little bit for me and agree to investigate whether it
is teachable or not by means of a hypothesis. I mean the way geometers often
carry on their investigations. For example, if they are asked whether a specific 87
area can be inscribed in the form of a triangle within a given circle, one of
them might say: "I do not yet know whether that area has that property, but
I think I have, as it were, a hypothesis that is of use for the problem, namely
this: If that area is such that when one has applied it as a rectangle to the
given straight line in the circle it is deficient by a figure similar to the very b
figure which is applied, then I think one alternative results, whereas another
results if it is impossible for this to happen. So, by using this hypothesis, I
am willing to tell you what results with regard to inscribing it in the circle—
that is, whether it is impossible or not."[14] So let us speak about virtue also,
since we do not know either what it is or what qualities it possesses, and let
us investigate whether it is teachable or not by means of a hypothesis, and
say this: Among the things existing in the soul, of what sort is virtue, that it
should be teachable or not? First, if it is another sort than knowledge, is it
teachable or not, or, as we were just saying, recollectable? Let it make no c
difference to us which term we use: is it teachable? Or is it plain to anyone
that men cannot be taught anything but knowledge?—I think so.

Socrates: But, if virtue is a kind of knowledge, it is clear that it could be taught.—Of course.

Socrates: We have dealt with that question quickly, that if it is of one kind it can be taught; if it is of a different kind, it cannot.—We have indeed.

Socrates: The next point to consider seems to be whether virtue is knowl-
edge or something else.—That does seem to be the next point to consider. d

Socrates: Well now, do we say that virtue is itself something good, and will this hypothesis stand firm for us, that it is something good?—Of course.

Socrates: If then there is anything else good that is different and separate from knowledge, virtue might well not be a kind of knowledge; but if there is nothing good that knowledge does not encompass, we would be right to suspect that it is a kind of knowledge.—That is so.

Socrates: Surely virtue makes us good?—Yes. e

Socrates: And if we are good, we are beneficent, for all that is good is beneficial. Is that not so?—Yes.

Socrates: So virtue is something beneficial?

Meno: That necessarily follows from what has been agreed.

14. The translation here follows the interpretation of T. L. Heath, *A History of Greek Mathematics* (Oxford: Clarendon Press, 1921), vol. I, pp. 298 ff.

Socrates: Let us then examine what kinds of things benefit us, taking them up one by one: health, we say, and strength, and beauty, and also wealth. We say that these things, and others of the same kind, benefit us, do we not?— We do.

Socrates: Yet we say that these same things also sometimes harm one.
88 Do you agree or not?—I do.

Socrates: Look then, what directing factor determines in each case whether these things benefit or harm us? Is it not the right use of them that benefits us, and the wrong use that harms us?—Certainly.

Socrates: Let us now look at the qualities of the soul. There is something you call moderation, and justice, courage, intelligence, memory, munificence, and all such things?—There is.

b Socrates: Consider whichever of these you believe not to be knowledge
but different from it; do they not at times harm us, at other times benefit us? Courage, for example, when it is not wisdom but like a kind of recklessness: when a man is reckless without understanding, he is harmed; when with understanding, he is benefitted.—Yes.

Socrates: The same is true of moderation and mental quickness; when they are learned and disciplined with understanding they are beneficial, but without understanding they are harmful?—Very much so.

c Socrates: Therefore, in a word, all that the soul undertakes and endures,
if directed by wisdom, ends in happiness, but if directed by ignorance, it ends in the opposite?—That is likely.

Socrates: If then virtue is something in the soul and it must be beneficial,
it must be knowledge, since all the qualities of the soul are in themselves
d neither beneficial nor harmful, but accompanied by wisdom or folly they
become harmful or beneficial. This argument shows that virtue, being beneficial, must be a kind of wisdom.—I agree.

Socrates: Furthermore, those other things we were mentioning just now,
wealth and the like, are at times good and at times harmful. Just as for the
rest of the soul the direction of wisdom makes things beneficial, but harmful
e if directed by folly, so in these cases, if the soul uses and directs them right
it makes them beneficial, but bad use makes them harmful?—Quite so.

Socrates: The wise soul directs them right, the foolish soul wrongly?—That is so.

Socrates: So one may say this about everything; all other human activi-
ties depend on the soul, and those of the soul itself depend on wisdom if
89 they are to be good. According to this argument the beneficial would be
wisdom, and we say that virtue is beneficial?—Certainly.

Socrates: Then we say that virtue is wisdom, either the whole or a part of it?

Meno: What you say, Socrates, seems to me quite right.

Socrates: Then, if that is so, the good are not so by nature?—I do not think they are.

b Socrates: For if they were, this would follow: if the good were so by
nature, we would have people who knew which among the young were

by nature good; we would take those whom they had pointed out and guard them in the Acropolis, sealing them up there much more carefully than gold so that no one could corrupt them, and when they reached maturity they would be useful to their cities.—Reasonable enough, Socrates.

Socrates: Since the good are not good by nature, does learning make c
them so?

Meno: Necessarily, as I now think, Socrates, and clearly, on our hypothesis, if virtue is knowledge, it can be taught.

Socrates: Perhaps, by Zeus, but may it be that we were not right to agree to this?

Meno: Yet it seemed to be right at the time.

Socrates: We should not only think it right at the time, but also now and in the future if it is to be at all sound.

Meno: What is the difficulty? What do you have in mind that you do d
not like about it and doubt that virtue is knowledge?

Socrates: I will tell you, Meno. I am not saying that it is wrong to say that virtue is teachable if it is knowledge, but look whether it is reasonable of me to doubt whether it is knowledge. Tell me this: if not only virtue but anything whatever can be taught, should there not be of necessity people who teach it and people who learn it?—I think so.

Socrates: Then again, if on the contrary there are no teachers or learners e
of something, we should be right to assume that the subject cannot be taught?

Meno: Quite so, but do you think that there are no teachers of virtue?

Socrates: I have often tried to find out whether there were any teachers of it, but in spite of all my efforts I cannot find any. And yet I have searched for them with the help of many people, especially those whom I believed to be most experienced in this matter. And now, Meno, Anytus[15] here has opportunely come to sit down by us. Let us share our search with him. It
would be reasonable for us to do so, for Anytus, in the first place, is the 90
son of Anthemion, a man of wealth and wisdom, who did not become rich automatically or as the result of a gift like Ismenias the Theban, who recently acquired the possessions of Polycrates, but through his own wisdom and efforts. Further, he did not seem to be an arrogant or puffed up or offensive citizen in other ways, but he was a well-mannered and
well-behaved man. Also he gave our friend here a good upbringing and b
education, as the majority of Athenians believe, for they are electing him to the highest offices. It is right then to look for the teachers of virtue with the help of men such as he, whether there are any and if so who they are. Therefore, Anytus, please join me and your guest friend Meno here, in our inquiry as to who are the teachers of virtue. Look at it in this way: if
we wanted Meno to become a good physician, to what teachers would c
we send him? Would we not send him to the physicians?

15. Anytus was one of Socrates' accusers at his trial. See *Apology* 23e.

ANYTUS: Certainly.

SOCRATES: And if we wanted him to be a good shoemaker, to shoemakers?—Yes.

SOCRATES: And so with other pursuits?—Certainly.

SOCRATES: Tell me again on this same topic, like this: we say that we would be right to send him to the physicians if we want him to become
d a physician; whenever we say that, we mean that it would be reasonable to send him to those who practice the craft rather than to those who do not, and to those who exact fees for this very practice and have shown themselves to be teachers of anyone who wishes to come to them and learn. Is it not with this in mind that we would be right to send him? —Yes.

SOCRATES: And the same is true about flute-playing and the other crafts?
e It would be very foolish for those who want to make someone a flute-player to refuse to send him to those who profess to teach the craft and make money at it, but to send him to make trouble for others by seeking to learn from those who do not claim to be teachers or have a single pupil in that subject which we want the one we send to learn from them? Do you not think it very unreasonable to do so?—By Zeus I do, and also very ignorant.

SOCRATES: Quite right. However, you can now deliberate with me about our guest friend Meno here. He has been telling me for some time, Anytus,
91 that he longs to acquire that wisdom and virtue which enables men to manage their households and their cities well, to take care of their parents, to know how to welcome and to send away both citizens and strangers
b as a good man should. Consider to whom we should be right to send him to learn this virtue. Or is it obvious in view of what was said just now that we should send him to those who profess to be teachers of virtue and have shown themselves to be available to any Greek who wishes to learn, and for this fix a fee and exact it?

ANYTUS: And who do you say these are, Socrates?

SOCRATES: You surely know yourself that they are those whom men call sophists.

c ANYTUS: By Heracles, hush, Socrates. May no one of my household or friends, whether citizen or stranger, be mad enough to go to these people and be harmed by them, for they clearly cause the ruin and corruption of their followers.

SOCRATES: How do you mean, Anytus? Are these people, alone of those who claim the knowledge to benefit one, so different from the others that they not only do not benefit what one entrusts to them but on the contrary
d corrupt it, even though they obviously expect to make money from the process? I find I cannot believe you, for I know that one man, Protagoras, made more money from this knowledge of his than Phidias who made such notably fine works, and ten other sculptors. Surely what you say is extraordinary, if those who mend old sandals and restore clothes would

be found out within the month if they returned the clothes and sandals e
in a worse state than they received them; if they did this they would soon die of starvation, but the whole of Greece has not noticed for forty years that Protagoras corrupts those who frequent him and sends them away in a worse moral condition than he received them. I believe that he was nearly seventy when he died and had practiced his craft for forty years. During all that time to this very day his reputation has stood high; and not only Protagoras but a great many others, some born before him and some still alive today. Are we to say that you maintain that they deceive 92
and harm the young knowingly, or that they themselves are not aware of it? Are we to deem those whom some people consider the wisest of men to be so mad as that?

ANYTUS: They are far from being mad, Socrates. It is much rather those among the young who pay their fees who are mad, and even more the relatives who entrust their young to them and most of all the cities who b
allow them to come in and do not drive out any citizen or stranger who attempts to behave in this manner.

SOCRATES: Has some sophist wronged you, Anytus, or why are you so hard on them?

ANYTUS: No, by Zeus, I have never met one of them, nor would I allow any one of my people to do so.

SOCRATES: Are you then altogether without any experience of these men?

ANYTUS: And may I remain so.

SOCRATES: How then, my good sir, can you know whether there is any c
good in their instruction or not, if you are altogether without experience of it?

ANYTUS: Easily, for I know who they are, whether I have experience of them or not.

SOCRATES: Perhaps you are a wizard, Anytus, for I wonder, from what you yourself say, how else you know about these things. However, let us not try to find out who the men are whose company would make Meno d
wicked—let them be the sophists if you like—but tell us, and benefit your family friend here by telling him, to whom he should go in so large a city to acquire, to any worthwhile degree, the virtue I was just now describing.

ANYTUS: Why did you not tell him yourself?

SOCRATES: I did mention those whom I thought to be teachers of it, but you say I am wrong, and perhaps you are right. You tell him in your turn e
to whom among the Athenians he should go. Tell him the name of anyone you want.

ANYTUS: Why give him the name of one individual? Any Athenian gentleman he may meet, if he is willing to be persuaded, will make him a better man than the sophists would.

SOCRATES: And have these gentlemen become virtuous automatically, without learning from anyone, and are they able to teach others what they 93
themselves never learned?

ANYTUS: I believe that these men have learned from those who were gentlemen before them; or do you not think that there are many good men in this city?

SOCRATES: I believe, Anytus, that there are many men here who are good at public affairs, and that there have been as many in the past, but have they been good teachers of their own virtue? That is the point we are discussing, not whether there are good men here or not, or whether there
b have been in the past, but we have been investigating for some time whether virtue can be taught. And in the course of that investigation we are inquiring whether the good men of today and of the past knew how to pass on to another the virtue they themselves possessed, or whether a man cannot pass it on or receive it from another. This is what Meno and I have been investigating for some time. Look at it this way, from what
c you yourself have said. Would you not say that Themistocles[16] was a good man?—Yes. Even the best of men.

SOCRATES: And therefore a good teacher of his own virtue if anyone was?

ANYTUS: I think so, if he wanted to be.

SOCRATES: But do you think he did not want some other people to be worthy men, and especially his own son? Or do you think he begrudged
d him this, and deliberately did not pass on to him his own virtue? Have you not heard that Themistocles taught his son Cleophantus to be a good horseman? He could remain standing upright on horseback and shoot javelins from that position and do many other remarkable things which his father had him taught and made skillful at, all of which required good teachers. Have you not heard this from your elders?—I have.

SOCRATES: So one could not blame the poor natural talents of the son
e for his failure in virtue?—Perhaps not.

SOCRATES: But have you ever heard anyone, young or old, say that Cleophantus, the son of Themistocles, was a good and wise man at the same pursuits as his father?—Never.

SOCRATES: Are we to believe that he wanted to educate his son in those other things but not to do better than his neighbors in that skill which he himself possessed, if indeed virtue can be taught?—Perhaps not, by Zeus.

SOCRATES: And yet he was, as you yourself agree, among the best teachers
94 of virtue in the past. Let us consider another man, Aristides, the son of Lysimachus. Do you not agree that he was good?—I very definitely do.

SOCRATES: He too gave his own son Lysimachus the best Athenian education in matters which are the business of teachers, and do you think he made him a better man than anyone else? For you have been in his company
b and seen the kind of man he is. Or take Pericles, a man of such magnificent wisdom. You know that he brought up two sons, Paralus and Xanthippus?—I know.

16. Famous Athenian statesman and general of the early fifth century, a leader in the victorious war against the Persians.

SOCRATES: You also know that he taught them to be as good horsemen as any Athenian, that he educated them in the arts, in gymnastics, and in all else that was a matter of skill not to be inferior to anyone, but did he not want to make them good men? I think he did, but this could not be taught. And lest you think that only a few most inferior Athenians are incapable in this respect, reflect that Thucydides[17] too brought up two sons,
Melesias and Stephanus, that he educated them well in all other things. c
They were the best wrestlers in Athens—he entrusted the one to Xanthias and the other to Eudorus, who were thought to be the best wrestlers of the day, or do you not remember?

ANYTUS: I remember I have heard that said.

SOCRATES: It is surely clear that he would not have taught his boys what d
it costs money to teach, but have failed to teach them what costs nothing—making them good men—if that could be taught? Or was Thucydides perhaps an inferior person who had not many friends among the Athenians and the allies? He belonged to a great house; he had great influence in the city and among the other Greeks, so that if virtue could be taught he would have found the man who could make his sons good men, be it a
citizen or a stranger, if he himself did not have the time because of his e
public concerns. But, friend Anytus, virtue can certainly not be taught.

ANYTUS: I think, Socrates, that you easily speak ill of people. I would advise you, if you will listen to me, to be careful. Perhaps also in another city, and certainly here, it is easier to injure people than to benefit them.
I think you know that yourself. 95

SOCRATES: I think, Meno, that Anytus is angry, and I am not at all surprised. He thinks, to begin with, that I am slandering those men, and then he believes himself to be one of them. If he ever realizes what slander is, he will cease from anger, but he does not know it now. You tell me, are there not worthy men among your people?—Certainly.

SOCRATES: Well now, are they willing to offer themselves to the young b
as teachers? Do they agree they are teachers, and that virtue can be taught?

MENO: No, by Zeus, Socrates, but sometimes you would hear them say that it can be taught, at other times, that it cannot.

SOCRATES: Should we say that they are teachers of this subject, when they do not even agree on this point?—I do not think so, Socrates.

SOCRATES: Further, do you think that these sophists, who alone profess to be so, are teachers of virtue?

MENO: I admire this most in Gorgias, Socrates, that you would never c
hear him promising this. Indeed, he ridicules the others when he hears them making this claim. He thinks one should make people clever speakers.

SOCRATES: You do not think then that the sophists are teachers?

MENO: I cannot tell, Socrates; like most people, at times I think they are, at other times I think that they are not.

17. Not the historian but Thucydides the son of Melesias, an Athenian statesman who was an opponent of Pericles and who was ostracized in 440 B.C.

Socrates: Do you know that not only you and the other public men at
d times think that it can be taught, at other times that it cannot, but that the poet Theognis[18] says the same thing?—Where?

Socrates: In his elegiacs: "Eat and drink with these men, and keep their company. Please those whose power is great, for you will learn goodness
e from the good. If you mingle with bad men you will lose even what wit you possess." You see that here he speaks as if virtue can be taught?—So it appears.

Socrates: Elsewhere, he changes somewhat: "If this could be done," he says, "and intelligence could be instilled," somehow those who could do this "would collect large and numerous fees," and further: "Never would a bad son be born of a good father, for he would be persuaded by wise
96 words, but you will never make a bad man good by teaching." You realize that the poet is contradicting himself on the same subject?—He seems to be.

Socrates: Can you mention any other subject of which those who claim to be teachers not only are not recognized to be teachers of others but are not recognized to have knowledge of it themselves, and are thought to be
b poor in the very matter which they profess to teach? Or any other subject of which those who are recognized as worthy teachers at one time say it can be taught and at other times that it cannot? Would you say that people who are so confused about a subject can be effective teachers of it?—No, by Zeus, I would not.

Socrates: If then neither the sophists nor the worthy people themselves are teachers of this subject, clearly there would be no others?—I do not think there are.

c Socrates: If there are no teachers, neither are there pupils?—As you say.

Socrates: And we agreed that a subject that has neither teachers nor pupils is not teachable?—We have so agreed.

Socrates: Now there seem to be no teachers of virtue anywhere?—That is so.

Socrates: If there are no teachers, there are no learners?—That seems so.

Socrates: Then virtue cannot be taught?

d Meno: Apparently not, if we have investigated this correctly. I certainly wonder, Socrates, whether there are no good men either, or in what way good men come to be.

Socrates: We are probably poor specimens, you and I, Meno. Gorgias has not adequately educated you, nor Prodicus me. We must then at all costs turn our attention to ourselves and find someone who will in some
e way make us better. I say this in view of our recent investigation, for it is ridiculous that we failed to see that it is not only under the guidance of knowledge that men succeed in their affairs, and that is perhaps why the knowledge of how good men come to be escapes us.

Meno: How do you mean, Socrates?

18. Theognis was a poet of the mid-sixth century B.C. The quotations below are of lines 33–36 and 434–38 (Diehl) of his elegies.

Socrates: I mean this: we were right to agree that good men must be beneficent, and that this could not be otherwise. Is that not so?—Yes.

Socrates: And that they will be beneficent if they give us correct guidance
in our affairs. To this too we were right to agree?—Yes. 97

Socrates: But that one cannot guide correctly if one does not have knowledge; to this our agreement is likely to be incorrect.—How do you mean?

Socrates: I will tell you. A man who knew the way to Larissa, or anywhere else you like, and went there and guided others would surely lead them well and correctly?—Certainly.

Socrates: What if someone had had a correct opinion as to which was b
the way but had not gone there nor indeed had knowledge of it, would
he not also lead correctly?—Certainly.

Socrates: And as long as he has the right opinion about that of which the other has knowledge, he will not be a worse guide than the one who knows, as he has a true opinion, though not knowledge.—In no way worse.

Socrates: So true opinion is in no way a worse guide to correct action
than knowledge. It is this that we omitted in our investigation of the nature
of virtue, when we said that only knowledge can lead to correct action, c
for true opinion can do so also.—So it seems.

Socrates: So correct opinion is no less useful than knowledge?

Meno: Yes, to this extent, Socrates. But the man who has knowledge will always succeed, whereas he who has true opinion will only succeed at times.

Socrates: How do you mean? Will he who has the right opinion not always succeed, as long as his opinion is right?

Meno: That appears to be so of necessity, and it makes me wonder,
Socrates, this being the case, why knowledge is prized far more highly d
than right opinion, and why they are different.

Socrates: Do you know why you wonder, or shall I tell you?—By all means tell me.

Socrates: It is because you have paid no attention to the statues of Daedalus, but perhaps there are none in Thessaly.

Meno: What do you have in mind when you say this?

Socrates: That they too run away and escape if one does not tie them
down but remain in place if tied down.—So what? e

Socrates: To acquire an untied work of Daedalus is not worth much,
like acquiring a runaway slave, for it does not remain, but it is worth
much if tied down, for his works are very beautiful. What am I thinking
of when I say this? True opinions. For true opinions, as long as they remain,
are a fine thing and all they do is good, but they are not willing to remain 98
long, and they escape from a man's mind, so that they are not worth much
until one ties them down by (giving) an account of the reason why. And
that, Meno, my friend, is recollection, as we previously agreed. After they
are tied down, in the first place they become knowledge, and then they
remain in place. That is why knowledge is prized higher than correct

opinion, and knowledge differs from correct opinion in being tied down.

Meno: Yes, by Zeus, Socrates, it seems to be something like that.

b Socrates: Indeed, I too speak as one who does not have knowledge but is guessing. However, I certainly do not think I am guessing that right opinion is a different thing from knowledge. If I claim to know anything else—and I would make that claim about few things—I would put this down as one of the things I know.—Rightly so, Socrates.

Socrates: Well then, is it not correct that when true opinion guides the course of every action, it does no worse than knowledge?—I think you are right in this too.

c Socrates: Correct opinion is then neither inferior to knowledge nor less useful in directing actions, nor is the man who has it less so than he who has knowledge.—That is so.

Socrates: And we agreed that the good man is beneficent.—Yes.

Socrates: Since then it is not only through knowledge but also through right opinion that men are good, and beneficial to their cities when they
d are, and neither knowledge nor true opinion come to men by nature but are acquired—or do you think either of these comes by nature?—I do not think so.

Socrates: Then if they do not come by nature, men are not so by nature either.—Surely not.

Socrates: As goodness does not come by nature, we inquired next whether it could be taught.—Yes.

Socrates: We thought it could be taught, if it was knowledge?—Yes.

Socrates: And that it was knowledge if it could be taught?—Quite so.

e Socrates: And that if there were teachers of it, it could be taught, but if there were not, it was not teachable?—That is so.

Socrates: And then we agreed that there were no teachers of it?—We did.

Socrates: So we agreed that it was neither teachable nor knowledge?—Quite so.

Socrates: But we certainly agree that virtue is a good thing?—Yes.

Socrates: And that which guides correctly is both useful and good?—Certainly.

99 Socrates: And that only these two things, true belief and knowledge, guide correctly, and that if a man possesses these he gives correct guidance. The things that turn out right by some chance are not due to human guidance, but where there is correct human guidance it is due to two things, true belief or knowledge.—I think that is so.

Socrates: Now because it cannot be taught, virtue no longer seems to be knowledge?—It seems not.

b Socrates: So one of the two good and useful things has been excluded, and knowledge is not the guide in public affairs.—I do not think so.

Socrates: So it is not by some kind of wisdom, or by being wise, that such men lead their cities, those such as Themistocles and those mentioned by Anytus just now? That is the reason why they cannot make others be

like themselves, because it is not knowledge which makes them what they are.

MENO: It is likely to be as you say, Socrates.

SOCRATES: Therefore, if it is not through knowledge, the only alternative is that it is through right opinion that statesmen follow the right course c
for their cities. As regards knowledge, they are no different from soothsayers and prophets. They too say many true things when inspired, but they have no knowledge of what they are saying.—That is probably so.

SOCRATES: And so, Meno, is it right to call divine these men who, without any understanding, are right in much that is of importance in what they say and do?—Certainly.

SOCRATES: We should be right to call divine also those soothsayers and prophets whom we just mentioned, and all the poets, and we should call d
no less divine and inspired those public men who are no less under the gods' influence and possession, as their speeches lead to success in many important matters, though they have no knowledge of what they are saying.—Quite so.

SOCRATES: Women too, Meno, call good men divine, and the Spartans, when they eulogize someone, say "This man is divine."

MENO: And they appear to be right, Socrates, though perhaps Anytus e
here will be annoyed with you for saying so.

SOCRATES: I do not mind that; we shall talk to him again, but if we were right in the way in which we spoke and investigated in this whole discussion, virtue would be neither an inborn quality nor taught, but comes to those who possess it as a gift from the gods which is not accompanied by understanding, unless there is someone among our statesmen who can 100
make another into a statesman. If there were one, he could be said to be among the living as Homer said Tiresias was among the dead, namely, that "he alone retained his wits while the others flitted about like shadows."[19] In the same manner such a man would, as far as virtue is concerned, here also be the only true reality compared, as it were, with shadows.

MENO: I think that is an excellent way to put it, Socrates. b

SOCRATES: It follows from this reasoning, Meno, that virtue appears to be present in those of us who may possess it as a gift from the gods. We shall have clear knowledge of this when, before we investigate how it comes to be present in men, we first try to find out what virtue in itself is. But now the time has come for me to go. You convince your guest friend Anytus here of these very things of which you have yourself been convinced, in order that he may be more amenable. If you succeed, you will also confer a benefit upon the Athenians.

19. *Odyssey* x.494–95.

# GREATER HIPPIAS

*This dialogue presents a conversation apparently held in private between Socrates and the sophist Hippias—no company of bystanders is indicated, as they are in* Protagoras *and all Socrates' other confrontations with those itinerant educators, the sophists. There is another, shorter dialogue also called* Hippias*—whence this one gets the addition* Greater. *Near the beginning of our dialogue, Hippias invites Socrates to come the next day but one to hear and admire him giving an exhibition speech—the very one which gives the occasion for his and Socrates' discussion in the* Lesser Hippias. *On that later occasion Socrates is plainly not impressed with what he has heard—he stands pointedly silent while the others give it their praises. But here in* Greater Hippias *the invitation reminds him that he has often before praised some parts of other speeches as fine, criticized others as poor, but could never, when challenged, say satisfactorily what it* is *that makes something fine in the first place—as he ought to have done, if he was entitled to issue those judgments. He wishes to make up this deficiency now, by hearing from the wise Hippias (a self-professed know-everything) 'what the fine is itself'. The Greek word here translated 'fine' is* kalon, *a widely applicable term of highly favorable evaluation, covering our 'beautiful' (in physical, aesthetic, and moral senses), 'noble,' 'admirable', 'excellent', and the like—it is the same term translated 'beautiful' in Diotima's speech about love and its object in* Symposium. *What Socrates is asking for, then, is a general explanation of what feature any object, or action, or person, or accomplishment of any kind, has to have in order correctly to be characterized as highly valued or worth valuing in this broad way. Hippias, of course, fails to deliver himself of an answer that stands up to scrutiny in discussion with Socrates: Socrates now sees clearly that he does not know what the 'fine' is—accordingly, he ought to refrain from issuing judgments about which speeches, or parts of speeches, are fine or the reverse. As a result we have an explanation for Socrates' unexplained silence at the beginning of* Lesser Hippias*: not knowing what the 'fine' itself is, he cannot legitimately evaluate some parts of Hippias' exhibition as 'fine' and others as 'foul' and must simply hold his peace—thinking, perhaps, but not saying, that it is no good at all.*

*Hippias himself offers in succession three definitions of the 'fine'. Then, following up on things Hippias has said, Socrates initiates a line of questioning that leads to three or four other suggestions. His procedures here, and the objections he finds against the various answers canvassed, should be compared closely with his similar search for definitions in* Euthyphro, Charmides, Laches, *and others of Plato's 'Socratic' dialogues.*

*The Platonic authenticity of this dialogue has been both attacked and defended by scholars since the beginning of modern scholarship in the early nineteenth century. It is not cited by Aristotle, though in a few passages he may perhaps be referring to things that Socrates says in it. The neat—perhaps too neat—way it connects itself with* Lesser Hippias *might be thought to have its best explanation in an imitator's exploitation of an opening left by Plato in* Lesser Hippias *for a further* Hippias *dialogue. But its philosophical content seems genuinely Platonic, and scholars have studied it respectfully in exploring the development of Plato's own theory of Forms out of reflection on Socrates' search for definitions of moral and other evaluative terms.*

*J.M.C.*

SOCRATES: Here comes Hippias, fine and wise! How long it's been since 281
you put in to Athens!

HIPPIAS: No spare time, Socrates. Whenever Elis[1] has business to work out with another city, they always come first to me when they choose an ambassador. They think I'm the citizen best able to judge and report b
messages from the various cities. I've often been on missions to other cities, but most often and on the most and greatest affairs to Sparta. That, to answer your question, is why I don't exactly haunt these parts.

SOCRATES: That is what it is like to be truly wise, Hippias, a man of complete accomplishments: in private you are able to make a lot of money from young people (and to give still greater benefits to those from whom you take it); while in public you are able to provide your own city with c
good service (as is proper for one who expects not to be despised, but admired by ordinary people).

But Hippias, how in the world do you explain this: in the old days people who are still famous for wisdom—Pittacus and Bias and the school of Thales of Miletus, and later ones down to Anaxagoras—that all or most of those people, we see, kept away from affairs of state?[2]

HIPPIAS: What do you think, Socrates? Isn't it that they were weak and d
unable to carry their good sense successfully into both areas, the public and the private?

SOCRATES: Then it's really like the improvements in other skills, isn't it, where early craftsmen are worthless compared to modern ones? Should

Translated by Paul Woodruff.

1. Elis was an independent city-state in the northwest Peloponnesus, not far from Olympia. Although geographically close to Sparta, Elis was tilting toward Athens in the contest for leadership between the two.

2. Pittacus ruled in Mytilene for ten years, about 600 B.C., and was famous as a lawgiver; Bias was a statesman of Priene, active in the mid–sixth century B.C.; and Thales is said to have predicted the eclipse of 585 B.C. All three were included in the "Seven Sages." Anaxagoras (c. 500–c. 428) was a philosopher active in Athens in Socrates' youth.

we say that your skill—the skill of the sophists—has been improved in the same way, and that the ancients are worthless compared to you in wisdom?

Hippias: Yes, certainly, you're right.

Socrates: So if Bias came to life again in our time, Hippias, he would 282 make himself a laughingstock compared with you people, just as Daedalus[3] also, according to the sculptors, would be laughable if he turned up now doing things like the ones that made him famous.

Hippias: That's right, Socrates, just as you say. However *I* usually praise the ancients who came before us before and more highly than I praise people of our own day, for while I take care to avoid the envy of the living, I fear the wrath of the dead.

b Socrates: You're putting fine thoughts in fine words, Hippias; that's what I think. I can support the truth of your claim; the skill you people have has really been improved in its ability to handle public business as well as private.

Why, Gorgias of Leontini, the well-known sophist, came here on public business as ambassador from his hometown—because he was best qualified in Leontini to handle community affairs. In the assembly, he won his case, c and in private, by giving displays and tutorials to young people, he made a lot of money and took it out of the city. Or, another case, our colleague Prodicus came often enough on public business; but just this last time, when he came on public business from Ceos, he made a great impression with his speech in the council, and in private he earned a wonderful sum of money giving displays and tutoring the young. But none of these early d thinkers thought fit to charge a monetary fee or give displays of his wisdom for all comers. They were so simple they didn't realize the great value of money. But Gorgias and Prodicus each made more money from wisdom than any craftsman of any kind ever made from his skill. And Protagoras did the same even earlier.

Hippias: Socrates, you haven't the slightest idea how fine this can be. If e you knew how much money *I've* made, you'd be amazed. Take one case: I went to Sicily once, when Protagoras was visiting there (he was famous then, and an older man); though I was younger I made much more than a hundred and fifty minas in a short time—and from one very small place, Inycon, more than twenty minas. When I went home with this I gave it to my father, so that he and the other citizens were amazed and thunderstruck. And I almost think I've made more money than any other two sophists you like put together.

283 Socrates: That's a fine thing you say, Hippias, strong evidence of your own and modern wisdom, and of the superiority of men nowadays over the ancients. There was a lot of ignorance among our predecessors down to Anaxagoras, according to you. People say the opposite of what happened to you happened to Anaxagoras: he inherited a large sum, but lost every-

3. Daedalus was praised in legend as an inventor of lifelike statues for King Minos of Crete.

thing through neglect—there was so little *intelligence*[4] in his wisdom. And they tell stories like that about other early wise men. You make me see there's fine evidence, here, I think, for the superiority of our contemporaries b
over those who came before; and many will have the same opinion, that a wise man needs to be wise primarily for his own sake. The mark of being wise, I see, is when someone makes the most money. Enough said about that.

Tell me this: from which of the cities you visit did you make the most money? From Sparta, obviously, where you visited most often.

Hippias: Lord no, Socrates.

Socrates: Really? Did you make the least?

Hippias: Nothing at all, ever. c

Socrates: That's weird, Hippias, and amazing! Tell me, isn't the wisdom you have the sort that makes those who study and learn it stronger in virtue?

Hippias: Very much so, Socrates.

Socrates: But while you were able to make the sons of Inycans better, you were powerless for the sons of Spartans?

Hippias: Far from it.

Socrates: But then do Sicilians want to become better, but not Spartans?

Hippias: Certainly the Spartans want to, as well, Socrates. d

Socrates: Well, did they stay away from you for lack of money?

Hippias: No. They have enough.

Socrates: How could it be that they have money and the desire, and you have the ability to give them the greatest benefits, but they didn't send you away loaded with money? Could it be this, that the Spartans educate their own children better than you would? Should we say this is so, do you agree?

Hippias: Not at all. e

Socrates: Then weren't you able to persuade the young men in Sparta that if they studied with you they would make more progress in virtue than if they stayed with their own teachers? Or couldn't you persuade their fathers they should entrust the matter to you, rather than look after it themselves, if they cared at all for their sons? Surely they didn't enviously begrudge their own sons the chance to become as good as possible.

Hippias: I don't think they begrudged it.

Socrates: But Sparta really is law-abiding.

Hippias: Of course.

Socrates: And what's most highly prized in law-abiding cities is virtue. 284

Hippias: Of course.

Socrates: And you, you know most finely of men how to pass virtue on to other people.

Hippias: Very much so, Socrates.

4. "Intelligence" (*nous*) was said to be prominent in Anaxagoras' philosophy as the source of order for the entire universe.

SOCRATES: Well, a man who knew most finely how to teach skill with horses would be most honored, and get the most money, in Thessaly, or wherever else in Greece that skill is seriously studied.

HIPPIAS: That's likely.

b SOCRATES: Then won't a man who can teach lessons of the greatest value for virtue be given the highest honor, and make the most money, if he wishes, in Sparta, or in any other law-abiding Greek city? But you think it will be more in Sicily, more in Inycon? Should we believe all this, Hippias? If *you* give the order, it has to be believed.

HIPPIAS: An ancestral tradition of the Spartans, Socrates, forbids them to change their laws, or to give their sons any education contrary to established customs.

c SOCRATES: What do you mean? The Spartans have an ancestral tradition of not doing right, but doing wrong?

HIPPIAS: I wouldn't say so, Socrates.

SOCRATES: But they would do right to educate their young men better, not worse?

HIPPIAS: Right, indeed. But foreign education is not lawful for them: because, mind you, if anybody else had ever taken money from there for education, I would have taken by far the most—they love my lectures and applaud—but, as I say, it's against the law.

d SOCRATES: Do you call law harmful or beneficial to the city, Hippias?

HIPPIAS: I think it is made to be beneficial, but sometimes it does harm, too, if the law is made badly.

SOCRATES: But look here. Don't lawmakers make law to be the greatest good to the city? Without that, law-abiding civilized life is impossible.

HIPPIAS: True.

SOCRATES: So when people who are trying to make laws fail to make them good, they have failed to make them lawful—indeed, to make them law. What do you say?

e HIPPIAS: In precise speech, Socrates, that is so. But men are not accustomed to use words in that manner.

SOCRATES: Do you mean those who know, Hippias, or those who don't?

HIPPIAS: Ordinary people.

SOCRATES: Are *they* the ones who know the truth—ordinary people?

HIPPIAS: Of course not.

SOCRATES: But I suppose people who know, at least, believe that what is more beneficial is more lawful in truth for all men. Do you agree?

HIPPIAS: Yes, I grant it's that way in truth.

SOCRATES: Then it is and stays just the way those who know believe it to be?

HIPPIAS: Quite.

285 SOCRATES: But, as you say, it would be more beneficial for the Spartans to be educated by your teaching, though it's foreign—more beneficial than the local education?

HIPPIAS: And what I say is true.

SOCRATES: And that what is more beneficial is more lawful—do you say that too, Hippias?

HIPPIAS: I did say it.

SOCRATES: By your account it is more lawful for the sons of the Spartans to be educated by Hippias and less lawful by their fathers, if they will really be more benefited by you.

HIPPIAS: They certainly will be benefited, Socrates. b

SOCRATES: Then the Spartans are breaking the law by not giving you money and entrusting their sons to you.

HIPPIAS: I grant that. I think you said your say on my behalf, and there's no need for me to oppose it.

SOCRATES: So we find the Spartans to be lawbreakers, and that on the most important issue, though they appear to be most lawful. So when they applaud you, really, Hippias, and enjoy your speech, what sort of things have they heard? Surely they're those things you know most finely, things c
about stars and movements in the sky?

HIPPIAS: Not at all. They can't stand the subject.

SOCRATES: Then do they enjoy hearing about geometry?

HIPPIAS: No. Many of them can't even, well, *count.*

SOCRATES: Then they're a long way from putting up with your displays of arithmetic.

HIPPIAS: Good god, yes. A long way.

SOCRATES: Well, do they like those things on which you know how to d
make the sharpest distinctions of anybody—the functions of letters, syllables, rhythms, and harmonies?

HIPPIAS: Harmonies and letters, indeed!

SOCRATES: Well just what is it they love to hear about from you, and applaud? Tell me yourself; I can't figure it out.

HIPPIAS: The genealogies of heroes and men, Socrates, and the settlements (how cities were founded in ancient times), and in a word all ancient e
history—that's what they most love to hear about. So because of them I have been forced to learn up on all such things and to study them thoroughly.

SOCRATES: Good lord, Hippias, you're lucky the Spartans don't enjoy it when someone lists our archons from the time of Solon.[5] Otherwise, you'd have had a job learning them.

HIPPIAS: How come, Socrates? Let me hear them once and I'll memorize fifty names.

SOCRATES: That's right. I forgot you had the art of memory. So I under- 286
stand: the Spartans enjoy you, predictably, because you know a lot of things, and they use you the way children use old ladies, to tell stories for pleasure.

HIPPIAS: Yes—and, good lord, actually about fine activities, Socrates. Just now I made a great impression there speaking about the activities a young

5. The chief elected magistrates of Athens were called archons. Solon was a lawgiver, political reformer, and poet (c. 640/635 to soon after 561/560 B.C.).

man should take up. I have a speech about that I put together really finely, and I put the words particularly well. My setting and the starting point
b of the speech are something like this: After Troy was taken, the tale is told that Neoptolemus asked Nestor[6] what sort of activities are fine—the sort of activities that would make someone most famous if he adopted them while young. After that the speaker is Nestor, who teaches him a very great many very fine customs. I displayed that there and I expect to display it here the day after tomorrow, in Phidostratus' schoolroom—with many
c other fine things worth hearing. Eudicus,[7] Apemantus' son, invited me. But why don't you come too, and bring some more people, if they are capable of hearing and judging what is said?

SOCRATES: Certainly, Hippias, if all goes well. But now answer me a short question about that; it's a fine thing you reminded me. Just now someone got me badly stuck when I was finding fault with parts of some speeches for being foul, and praising other parts as fine. He questioned me this
d way, really insultingly: "Socrates, how do *you* know what sorts of things are fine and foul? Look, would you be able to say what the fine is?" And I, I'm so worthless, I was stuck and I wasn't able to answer him properly. As I left the gathering I was angry and blamed myself, and I made a threatening resolve, that whomever of you wise men I met *first,* I would listen and learn and study, then return to the questioner and fight the argument back. So, as I say, it's a fine thing you came now. Teach me
e enough about what the fine is itself, and try to answer me with the greatest precision possible, so I won't be a laughingstock again for having been refuted a second time. Of course you know it clearly; it would be a pretty small bit of learning out of the many things *you* know.

HIPPIAS: Small indeed, Socrates, and not worth a thing, as they say.

SOCRATES: Then I'll learn it easily, and no one will ever refute me again.

287 HIPPIAS: No one will. Or what I do would be crude and amateurish.

SOCRATES: Very well said, Hippias—*if* we defeat the man! Will it hurt if I act like him and take the other side of the argument when you answer, so that you'll give me the most practice? I have some experience of the other side. So if it's the same to you I'd like to take the other side, to learn more strongly.

b HIPPIAS: Take the other side. And, as I just said, the question is not large. I could teach you to answer much harder things than that so no human being could refute you.

SOCRATES: That's amazingly well said! Now, since it's your command, let me become the man as best I can and try to question you. If you displayed that speech to him, the one you mentioned about the fine activities, he'd listen, and when you stopped speaking he'd ask not about anything else

6. Neoptolemus, son of Achilles, is the type of the young hero; Nestor, the oldest of the Greeks in the expedition against Troy, is a proverbial wise old man.

7. Eudicus was probably Hippias' host in Athens (*Lesser Hippias* 363b). Nothing is known about Phidostratus.

but about the fine—that's a sort of habit with him—and he'd say: "O c
visitor from Elis, is it not by justice that just people are just?" Answer,
Hippias, as if *he* were the questioner.

Hippias: I shall answer that it is by justice.

Socrates: "And is this justice *something?*"

Hippias: Very much so.

Socrates: "And by wisdom wise people are wise, and by the good all good things are good?"

Hippias: How could they be otherwise?

Socrates: ". . . by these each *being* something? Of course, it can't be that they're not."

Hippias: They are.

Socrates: "Then all fine things, too, are fine by the fine, isn't that so?"

Hippias: Yes, by the fine. d

Socrates: ". . . by that being *something?*"

Hippias: It is. Why not?

Socrates: "Tell me then, visitor," he'll say, "what is that, the fine?"

Hippias: Doesn't the person who asks this want to find out what is a fine thing?

Socrates: I don't think so, Hippias. What is *the* fine.

Hippias: And what's the difference between the one and the other?

Socrates: You don't think there is any?

Hippias: There's no difference.

Socrates: Well, clearly your knowledge is finer. But look here, he's e
asking you not what is a fine thing, but what is the fine.

Hippias: My friend, I understand. I will indeed tell him what the fine is, and never will I be refuted. Listen, Socrates, to tell the truth, a fine girl is a fine thing.

Socrates: That's fine, Hippias; by Dog you have a glorious answer. So
you really think, if *I* gave that answer, I'd be answering what was asked, 288
and correctly, and never will I be refuted?

Hippias: Socrates, how could you be refuted when you say what everyone thinks, when everyone who hears you will testify that you're right?

Socrates: Very well. Certainly. Now, look, Hippias, let me go over what you said for myself. *He* will question me somewhat like this: "Come now, Socrates, give me an answer. All those things you say are fine, will they be fine if the fine itself is *what?*" Shall I say that if a fine girl is a fine thing, those things will be fine because of that?

Hippias: Then do you think that man will still try to refute you—that what b
you say is not a fine thing—or if he does try, he won't be a laughingstock?

Socrates: You're wonderful! But I'm sure he'll try. Whether trying will make him a laughingstock—we'll see about that. But I want to tell you what he'll say.

Hippias: Tell me.

Socrates: "How sweet you are, Socrates," he'll say. "Isn't a fine Elean c
mare a fine thing? The god praised mares in his oracle." What shall we

say, Hippias? Mustn't we say that the mare is a fine thing? At least if it's a fine one. How could we dare deny that the fine thing is a fine thing?

HIPPIAS: That's true, Socrates. And the god was right to say that too. We breed very fine mares in our country.

SOCRATES: "Very well," he'll say. "What about a fine lyre? Isn't it a fine thing?" Shouldn't we say so, Hippias?

HIPPIAS: Yes.

SOCRATES: Then after that he'll ask—I know fairly well, judging from the way he is—"Then what about a fine pot, my good fellow? Isn't it a fine thing?"

d HIPPIAS: Who is the man, Socrates? What a boor he is to dare in an august proceeding to speak such vulgar speech that way!

SOCRATES: He's like that, Hippias, not refined. He's garbage, he cares about nothing but the truth. Still the man must have an answer; so here's my first opinion: *If* the pot should have been turned by a good potter, smooth and round and finely fired, like some of those fine two-handled
e pots that hold six choes, very fine ones—*if* he's asking about a pot like that, we have to agree it's fine. How could we say that what is fine is not a fine thing?

HIPPIAS: We couldn't, Socrates.

SOCRATES: "Then is a fine pot a fine thing too? Answer me!" he'll say.

HIPPIAS: But I think that's so, Socrates. Even that utensil is fine if finely
289 made. But on the whole that's not worth judging fine, compared to a horse and a girl and all the other fine things.

SOCRATES: Very well. Then I understand how we'll have to answer him when he asks this question, here: "Don't you know that what Heraclitus said holds good—'the finest of monkeys is foul put together with another class',[8] and the finest of pots is foul put together with the class of girls, so says Hippias the wise." Isn't that so, Hippias?

HIPPIAS: Of course, Socrates. Your answer's right.

b SOCRATES: Then listen. I'm sure of what he'll say next. "What? If you put the class of girls together with the class of gods, won't the same thing happen as happened when the class of pots was put together with that of girls? Won't the finest girl be seen to be foul? And didn't Heraclitus (whom you bring in) say the same thing too, that 'the wisest of men is seen to be a monkey compared to god in wisdom and fineness and everything else?' " Should we agree, Hippias, that the finest girl is foul compared to the class of gods?

HIPPIAS: Who would object to that, Socrates?

c SOCRATES: Then if we agreed to that, he'd laugh and say, "Socrates, do you remember what you were asked?" "Yes," I'll say: "Whatever is the fine itself?" "Then," he'll say, "when you were asked for the fine, do you answer with something that turns out to be no more fine than foul, as you

8. Reading *allōi* at a4; Heraclitus B82 Diels-Kranz.

say yourself?" "Apparently," I'll say. Or what do you advise me to say, my friend?

Hippias: That's what I'd say. Because compared to gods, anyway, the human race is not fine—that's true.

Socrates: He'll say: "If I had asked you from the beginning what is both d
fine and foul, and you had given me the answer you just gave, then wouldn't you have given the right answer? Do you *still* think that the fine itself by which everything else is beautified and seen to be fine when that form is added to it—that *that* is a girl or a horse or a lyre?"

Hippias: But if *that's* what he's looking for, it's the easiest thing in the world to answer him and tell him what the fine (thing) is by which everything else is beautified and is seen to be fine when it is added. The man's e
quite simple; he has no feeling at all for fine possessions. If you answer him that this thing he's asking for, the fine, is just *gold,* he'll be stuck and won't try to refute you. Because we all know, don't we, that wherever that is added, even if it was seen to be foul before, it will be seen to be fine when it has been beautified with gold.

Socrates: You have no experience of this man, Hippias. He stops at nothing, and he never accepts anything easily.

Hippias: So what? He *must* accept what's said correctly, or, if not, be a 290
laughingstock.

Socrates: Well, *that* answer he certainly will not accept, my friend. And what's more, he'll jeer at me, and say, "Are you crazy? Do you think Phidias[9] is a bad workman?" And I think I'll say, "No, not at all."

Hippias: And you'll be right about that.

Socrates: Right enough. Then when I agree that Phidias is a good b
workman, this person will say, "Next, do you think Phidias didn't know about this fine thing you mention?" "What's the point?" I'll say. "The point is," he'll say, "that Phidias didn't make Athena's eyes out of gold, nor the rest of her face, nor her feet, nor her hands—as he would have done if gold would really have made them be seen to be finest—but he made them out of ivory. Apparently he went wrong through ignorance; he didn't know gold was what made everything fine, wherever it is added." What shall we answer when he says that, Hippias?

Hippias: It's not hard. We'll say he made the statue right. Ivory's fine c
too, I think.

Socrates: "Then why didn't he work the middles of the eyes out of ivory? He used stone, and he found stone that resembled ivory as closely as possible. Isn't a stone a fine thing too, if it's a fine one?" Shall we agree?

Hippias: Yes, at least when it's appropriate.

Socrates: "But when it's not appropriate it's foul?" Do I agree or not?

Hippias: Yes, when it's not appropriate anyway.

9. Phidias (b. ca. 490 B.C.), an Athenian sculptor, was best known as designer of the Parthenon sculptures. The statue of Athena mentioned in Socrates' next speech was fashioned of ivory and gold for the Parthenon.

d Socrates: "Well," he'll say. "You're a wise man! Don't ivory and gold make things be seen to be fine when they're appropriate, but foul when they're not?" Shall we be negative? Or shall we agree with him that he's right?

Hippias: We'll agree to *this:* whatever is appropriate to each thing makes that particular thing fine.

Socrates: "Then," he'll say, "when someone boils the pot we just mentioned, the fine one, full of fine bean soup, is a gold stirring spoon or a figwood one more appropriate?"

e Hippias: Heracles! What kind of man is this! Won't you tell me who he is?

Socrates: You wouldn't know him if I told you the name.

Hippias: But I know right now he's an ignoramus.

Socrates: Oh, he's a real plague, Hippias. Still, what shall we say? Which of the two spoons is appropriate to the soup and the pot? Isn't it clearly the wooden one? It makes the soup smell better, and at the same time, my friend, it won't break our pot, spill out the soup, put out the fire, and make us do without a truly noble meal, when we were going to have a
291 banquet. That gold spoon would do all these things; so *I* think we should say the figwood spoon is more appropriate than the gold one, unless you say otherwise.

Hippias: Yes, it's more appropriate. But *I* wouldn't talk with a man who asked things like that.

Socrates: Right you are. It wouldn't be appropriate for you to be filled up with words like that, when you're so finely dressed, finely shod, and
b famous for wisdom all over Greece. But it's nothing much for me to mix with him. So help me get prepared. Answer for my sake. "If the figwood is really more appropriate than the gold," the man will say, "wouldn't it be finer? Since you agreed, Socrates, that the appropriate is finer than the not appropriate?"

Hippias, don't we agree that the figwood spoon is finer than the gold one?

Hippias: Would you like me to tell you what you can say the fine is—and save yourself a lot of argument?

c Socrates: Certainly. But not before you tell me how to answer. Which of those two spoons I just mentioned is appropriate and finer?

Hippias: Answer, if you'd like, that it's the one made of fig.

Socrates: Now tell me what you were going to say. Because by *that* answer, if I say the fine is gold, apparently I'll be made to see that gold is no finer than wood from a figtree. So what do you say the fine is this time?

d Hippias: I'll tell you. I think you're looking for an answer that says the fine is the sort of thing that will never be seen to be foul for anyone, anywhere, at any time.

Socrates: Quite right, Hippias. Now you've got a fine grasp of it.

Hippias: Listen now, if anyone has anything to say against *this,* you can certainly say I'm not an expert on anything.

Socrates: Tell me quickly, for god's sake.

HIPPIAS: I say, then, that it is always finest, both for every man and in every place, to be rich, healthy, and honored by the Greeks, to arrive at e
old age, to make a fine memorial to his parents when they die, and to have a fine, grand burial from his own children.

SOCRATES: Hurray, Hippias! What a wonderful long speech, worthy of yourself! I'm really delighted at the kind way in which—to the best of your ability—you've helped me out. But we didn't hit the enemy, and now he'll certainly laugh at us harder than ever.

HIPPIAS: That laughter won't do him any good, Socrates. When he has nothing to say in reply, but laughs anyway, he'll be laughing at himself, 292
and he'll be a laughingstock to those around.

SOCRATES: That may be so. But maybe, as I suspect, he'll do more than laugh at me for that answer.

HIPPIAS: What do you mean?

SOCRATES: If he happens to have a stick, and I don't run and run away from him, he'll try to give me a thrashing.

HIPPIAS: What? Is the man your owner or something? Do you mean he could do that and not be arrested and convicted? Or don't you have any b
laws in this city, but people are allowed to hit each other without any right?

SOCRATES: No, that's not allowed at all.

HIPPIAS: Then he'll be punished for hitting you without any right.

SOCRATES: I don't think so, Hippias. No, if I gave *that* answer he'd have a right—in *my* opinion anyway.

HIPPIAS: Then I think so too, seeing that you yourself believe it.

SOCRATES: Should I tell you why *I* believe he'd have a right to hit me if I gave that answer? Or will you hit me without trial too? Will you hear my case?

HIPPIAS: It would be awful if I wouldn't. What do you have to say? c

SOCRATES: I'll tell you the same way as before. I'll be acting out his part—so the words I use are not directed against you; they're like what he says to me, harsh and grotesque. "Tell me, Socrates," you can be sure he'll say, "do you think it's wrong for a man to be whipped when he sings such a dithyramb[10] as that, so raucously, way out of tune with the question?" "How?" I'll say. "How!" he'll say. "Aren't you capable of remembering that I asked for the fine itself? For what when added to anything—whether d
to a stone or a plank or a man or a god or any action or any lesson—*anything* gets to be fine? I'm asking you to tell me what fineness is itself, my man, and I am no more able to make you hear me than if you were sitting here in stone—and a millstone at that, with no ears and no brain!"

Hippias, wouldn't you be upset if I got scared and came back with this: e
"But that's what Hippias said the fine was. And I asked him the way you asked me, for that which is fine always and for everyone." So what do you say? Wouldn't you be upset if I said that?

10. A dithyramb is a sort of choral ode heavily embellished with music.

Hippias: Socrates, I know perfectly well that what I said is fine for everyone—everyone will think so.

Socrates: "And *will* be fine?" he'll ask. "I suppose the fine is always fine."

Hippias: Certainly.

Socrates: "Then it *was* fine, too," he'll say.

Hippias: It was.

Socrates: "For Achilles as well?" he'll ask. "Does the visitor from Elis
293 say it is fine for *him* to be buried after his parents? And for his grandfather Aeacus? And for the other children of the gods? And for the gods themselves?"[11]

Hippias: What's that? Go to blessedness. These questions the man asks, Socrates, they're sacrilegious!

Socrates: What? Is it a sacrilege to say that's so when someone else asks the question?

Hippias: Maybe.

Socrates: "Then maybe you're the one who says that it is fine for everyone, always, to be buried by his children, and to bury his parents? And isn't Heracles included in 'everyone' as well as everybody we mentioned a moment ago?"

Hippias: But I didn't mean it for the *gods.*

b Socrates: "Apparently you didn't mean it for the heroes either."

Hippias: Not if they're children of gods.

Socrates: "But if they're not?"

Hippias: Certainly.

Socrates: "Then according to your latest theory, I see, what's awful and unholy and foul for some heroes—Tantalus and Dardanus and Zethus—is fine for Pelops and those with similar parentage."

Hippias: That's my opinion.

Socrates: "Then what you think is what you did not say a moment
c ago—that being buried by your children and burying your parents is foul sometimes, and for some people. Apparently it's still more impossible for that to become and be fine for everyone; so that has met the same fate as the earlier ones, the girl and the pot, and a more laughable fate besides; it is fine for some, not fine for others. And to this very day, Socrates, you aren't able to answer the question about the fine, what it is."

That's how he'll scold me—and he's right if I give him such an answer.
d Most of what he says to me is somewhat like that. But sometimes, as if he took pity on my inexperience and lack of education, he himself makes me a suggestion. He asks if I don't think such and such is the fine, or whatever else he happens to be investigating and the discussion is about.

Hippias: How do you mean?

11. Achilles' mother, Thetis, was a goddess. His grandfather, Aeacus, was a son of Zeus. Heracles, Tantalus, Dardanus, and Zethus (below) were all said to be sons of Zeus. Pelops, son of Tantalus, was of human parentage.

SOCRATES: I'll show you. "You're a strange man, Socrates," he'll say, "giving answers like that, in that way. You should stop that. They're very e
simple and easy to refute. But see if you think this sort of answer is fine. We had a grip on it just now when we replied that gold is fine for things it's appropriate to, but not for those it's not. And anything else is fine if *this* has been added to it: this, the appropriate itself—the nature of the appropriate itself. See if it turns out to be the fine."

I'm used to agreeing with such things every time, because I don't know what to say. What do you think? Is the appropriate fine?

HIPPIAS: In every way, Socrates.

SOCRATES: Let's look it over. We'd better not be deceived.

HIPPIAS: We have to look it over.

SOCRATES: See here, then. What do we say about the appropriate: Is it 294
what makes—by coming to be present—each thing to which it is present *be seen to be fine,* or *be fine,* or neither?

HIPPIAS: I think it's what makes things be seen to be fine. For example, when someone puts on clothes and shoes that suit him, even if he's ridiculous, he is seen to be finer.

SOCRATES: Then if the appropriate makes things be seen to be finer than they are, it would be a kind of deceit about the fine, and it wouldn't be what we are looking for, would it, Hippias? I thought we were looking b
for that by which all fine things are fine. For example, what all large things are large by is *the projecting.* For by that all large things—even if they are not seen to be so—if they project they are necessarily large. Similarly, we say the fine is what all things are fine by, whether or not they are seen to be fine. What would it be? It wouldn't be the appropriate. Because that makes things be seen to be finer than they are—so you said—and it won't let things be seen to be as they are. We must try to say what it is that c
makes things fine, whether they are seen to be fine or not, just as I said a moment ago. That's what we're looking for, if we're really looking for the fine.

HIPPIAS: But Socrates, the appropriate makes things both be fine and be seen to be fine, when it's present.

SOCRATES: Is it impossible for things that are really fine not to be seen to be fine, since what makes them be seen is present?

HIPPIAS: It's impossible.

SOCRATES: Then shall we agree to this, Hippias: that everything really d
fine—customs and activities both—are both thought to be, and seen to be, fine always, by everybody? Or just the opposite, that they're unknown, and individuals in private and cities in public both have more strife and contention about them than anything?

HIPPIAS: Much more the latter, Socrates. They are unknown.

SOCRATES: They wouldn't be, if "being seen to be" had been added to them. And that would have been added if the appropriate were fine and made things not only be but be seen to be fine. Therefore, if the appropriate

is what makes things fine, it would be the fine we're looking for, but it
e would not be what makes things be seen to be fine. Or, if the appropriate is what makes things be seen to be fine, it wouldn't be the fine we're looking for. Because *that* makes things be; but by itself it could not make things be seen to be and be, nor could anything else. Let's choose whether we think the appropriate is what makes things be seen to be, or be, fine.

HIPPIAS: It's what makes things be seen to be, in my opinion, Socrates.

SOCRATES: Oh dear! It's gone and escaped from us, our chance to know what the fine is, since the appropriate has been seen to be something other than fine.

HIPPIAS: God yes, Socrates. And I think that's very strange.

295 SOCRATES: But we shouldn't let it go yet, my friend. I still have some hope that the fine will make itself be seen for what it is.

HIPPIAS: Of course it will. It's not hard to find. I'm sure if I went off and looked for it by myself—in quiet—I would tell it to you more precisely than any preciseness.

SOCRATES: Ah, Hippias! Don't talk big. You see how much trouble it has
b given us already; and if it gets mad at us I'm afraid it will run away still harder. But that's nonsense. You'll easily find it, I think, when you're alone. But for god's sake, find it in front of me, or look for it with me if you want, as we've been doing. If we find it, that would be the finest thing; but if not, I will content myself with my fate, while you go away and find it easily. And if we find it now, of course I won't be a nuisance to you
c later, trying to figure out what it was you found on your own. Now see what you think the fine is: I'm saying that it's—pay attention now, be careful I'm not raving—let this be fine for us: whatever is useful. What I had in mind when I said that was this. We say eyes are fine not when we think they are in such a state they're unable to see, but whenever they *are able*, and are useful for seeing. Yes?

HIPPIAS: Yes.

SOCRATES: And that's how we call the whole body fine, sometimes for
d running, sometimes for wrestling. And the same goes for all animals—a fine horse, rooster, or quail—and all utensils and means of transport on land and sea, boats and warships, and the tools of every skill, music and all the others; and, if you want, activities and laws—virtually all these are called fine in the same way. In each case we look at the nature it's got, its
e manufacture, its condition; then we call what is useful "fine" in respect of *the way* it is useful, *what* it is useful *for*, and *when* it is useful; but anything useless in all those respects we call "foul." Don't you think that way too, Hippias?

HIPPIAS: Yes, I do.

SOCRATES: So then are we right to say now that the useful more than anything turns out to be fine?

HIPPIAS: Right, Socrates.

SOCRATES: So what's *able* to accomplish a particular thing is useful for that for which it is able; and what's unable is useless.

Hippias: Certainly.

Socrates: Then is ability[12] fine, but inability foul?

Hippias: Very much so. Many things give us evidence for the truth of 296
that, especially politics. The finest thing of all is to be able politically in your own city, and to be unable is the foulest of all.

Socrates: Good! Then doesn't it follow from these points that, by god, wisdom is really the finest thing of all, and ignorance the foulest?

Hippias: What are you thinking?

Socrates: Keep quiet, my friend. I'm frightened. What on earth are we saying now?

Hippias: Why should you be frightened now? The discussion has gone b
really well for you this time.

Socrates: I wish it had! Look this over with me: could anyone do something he doesn't know how to do, and isn't at all able to do?

Hippias: Not at all. How could he do what he isn't able to do?

Socrates: Then when people make mistakes, do bad work, even when they do it unintentionally—if they aren't able to do things, they wouldn't ever do them, would they?

Hippias: That's clear.

Socrates: But people who are able are able by ability? I don't suppose c
it's by inability.

Hippias: Of course not.

Socrates: And everyone who does things is able to do the things he does.

Hippias: Yes.

Socrates: And all men do much more bad work than good, starting from childhood—and make mistakes unintentionally.

Hippias: That's right.

Socrates: So? We don't call that ability and that sort of useful thing d
fine, do we? The sort that's useful for doing some bad piece of work? Far from it.

Hippias: Far indeed, Socrates. That's what I think.

Socrates: Then this able and useful of ours is apparently not the fine, Hippias.

Hippias: It is, Socrates, if it's able to do good, if it's useful for that sort of thing.

Socrates: Then here's what got away from us: the able-and-useful without qualification is fine. And this is what our mind wanted to say, Hippias:
the useful-and-able for making some good—*that* is the fine. e

Hippias: I think so.

Socrates: But that is beneficial. Isn't it?

Hippias: Certainly.

Socrates: Then that's the way fine bodies and fine customs and wisdom and everything we mentioned a moment ago are fine—because they're beneficial.

12. Alternatively, "power."

HIPPIAS: That's clear.

SOCRATES: So the beneficial appears to be the fine we wanted.

HIPPIAS: Certainly, Socrates.

SOCRATES: But the beneficial is the maker of good.

HIPPIAS: It is.

SOCRATES: And the maker is nothing else but the cause, isn't it?

HIPPIAS: That's so.

SOCRATES: Then the fine is a cause of the good.

297 HIPPIAS: It is.

SOCRATES: But the cause is different from what it's a cause of. I don't suppose the cause would be a cause of a cause. Look at it this way: isn't the cause seen to be a maker?

HIPPIAS: Certainly.

SOCRATES: Then what is made by the maker is the thing that comes to be; it's not the maker.

HIPPIAS: That's right.

SOCRATES: Then the thing that comes to be and the maker are different things.

HIPPIAS: Yes.

b SOCRATES: So the cause isn't a cause of a cause, but of the thing that comes to be because of it.

HIPPIAS: Certainly.

SOCRATES: So if the fine is a cause of the good, the good should come to be from the fine. And apparently this is why we're eager to have intelligence and all the other fine things: because their product, their child—the good—is worth being eager about. It would follow that the fine is a kind of father of the good.

HIPPIAS: Certainly. You're talking fine, Socrates.

c SOCRATES: Then see if this is fine as well: the father is not a son and the son is not a father.

HIPPIAS: Fine.

SOCRATES: The cause is not a thing that comes to be, and the thing that comes to be is not a cause.

HIPPIAS: That's true.

SOCRATES: Good god! Then the fine is not good, nor the good fine. Or do you think they could be, from what we've said?

HIPPIAS: Good god, no. I don't think so.

SOCRATES: So are we happy with that? Would you like to say that the fine is not good, nor the good fine?

HIPPIAS: Good god, no. I'm not at all happy with it.

d SOCRATES: Good god, yes, Hippias. Nothing we've said so far makes me less happy.

HIPPIAS: So it seems.

SOCRATES: Then it doesn't turn out to be the finest account, as we thought a moment ago, that the beneficial—the useful and the able for making some good—is fine. It's not that way at all, but if possible it's more laughable than

the first accounts, when we thought the girl, or each one of those things mentioned earlier, was the fine.

Hippias: Apparently.

Socrates: And *I* don't know where to turn, Hippias. I'm stuck. Do you have anything to say?

Hippias: Not at present; but as I said a little while ago, I'm sure I'll find e
it when I've looked.

Socrates: But I don't think I can wait for you to do that, I have such a desire to know. And besides I think I just got clear. Look. If whatever makes us be glad, not with all the pleasures, but just through hearing and sight—if we call *that* fine, how do you suppose we'd do in the contest?

Men, when they're fine anyway—and everything decorative, pictures 298
and sculptures—these all delight us when we see them, if they're fine. Fine sounds and music altogether, and speeches and storytelling have the same effect. So if we answered that tough man, "Your honor, the fine is what is pleasant through hearing and sight," don't you think we'd curb his toughness?

Hippias: This time, Socrates, I think what the fine is has been well said.

Socrates: What? shall we say that fine activities and laws are fine by b
being pleasant through hearing and sight? Or that they have some other form?

Hippias: Those things might slip right past the man.

Socrates: By Dog, Hippias, not past the person I'd be most ashamed to babble at, or pretend to say something when I'm not saying anything.

Hippias: Who's that?

Socrates: Sophroniscus' son.[13] He wouldn't easily let me say those things c
without testing them, any more than he'd let me talk as if I knew what I didn't know.

Hippias: Well for my part, since you say so, I think that's something else in the case of the laws.

Socrates: Keep quiet, Hippias. We could well be thinking we're in the clear again, when we've gotten stuck on the same point about the fine as we did a moment ago.

Hippias: What do you mean, Socrates?

Socrates: I'll show you what's become obvious to me, if I'm saying
anything. In the case of laws and activities, those could easily be seen not d
to be outside the perception we have through hearing and sight. But let's stay with this account, that what is pleasing through them is fine, and not bring that about the laws into the center. But if someone should ask—whether he's the one I mentioned or anyone else—"What, Hippias and Socrates? Are you marking off the sort of pleasant you call fine from the
pleasant, and not calling what is pleasant to the other senses fine—food e
and drink, what goes with making love, and all the rest of that sort of

13. Sophroniscus' son is Socrates himself.

thing? Aren't they pleasant? Do you say there's altogether no pleasure in such things? Not in anything but seeing and hearing?"

What shall we say, Hippias?

Hippias: Of course we'll say there are very great pleasures in those others, Socrates.

Socrates: "What?" he'll say. "Though they're no less pleasures than
299 these, would you strip them of this word, and deprive them of being fine?"

"Yes," we'll say, "because anyone in the world would laugh at us if we called it not *pleasant to eat* but *fine*, or if we called a pleasant smell not *pleasant* but *fine.* And as for making love, everybody would fight us; they'd say it is most pleasant, but that one should do it, if he does it at all, where no one will see, because it is the foulest thing to be seen." When we've said that, Hippias, he'd probably reply, "I understand that too. You're
b ashamed, you've been ashamed a long time, to call those pleasures fine, because men don't think they are. But I didn't ask for that—what ordinary people think is fine—but for what *is* fine."

I think we'll repeat our hypothesis: "This is what we say is fine, the part of the pleasant that comes by sight and hearing." What else would you do with the argument? What should we say, Hippias?

Hippias: We must say that and nothing else, in view of what's been said.

c Socrates: "That's fine," he'll say. "Then if the pleasant through sight and hearing is fine, whatever is not pleasant in that way clearly would not be fine."

Shall we agree?

Hippias: Yes.

Socrates: "Then is the pleasant through sight pleasant through sight and hearing? Or is the pleasant through hearing pleasant through hearing and through sight?"

"By no means," we'll say. "In that case what comes through one would be what comes through both—I think that's what you mean—but *we* said that each of these pleasant things taken itself by itself is fine, and both are fine as well."

Isn't that our answer?

d Hippias: Certainly.

Socrates: "Then," he'll say, "does one pleasant thing differ from another in *this:* in being pleasant? I'm not asking whether one pleasure can be greater or lesser than another, or more or less, but whether one can differ in this very way—in being a pleasure—and one of the pleasures not be a pleasure."

We don't think so, do we?

Hippias: We don't think so.

Socrates: "So," he'll say. "You selected those pleasures from the other
e pleasures because of something different from their being pleasures. You saw some quality in the pair of them, something that differentiates them from the others, and you say they are fine by looking at that. I don't suppose pleasure through sight is fine because of *that*—that it is through

sight. Because if that were the cause of its being fine, the other—the one through hearing—wouldn't ever be fine. It's not a pleasure through sight."

That's true. Shall we say that's true?

Hippias: We'll say it.

Socrates: "And again, pleasure through hearing turns out not to be fine 300
because of *that*—that it is through hearing. Otherwise, pleasure through sight would never be fine, because it is not a pleasure through hearing."

Shall we say that the man who says this is saying the truth, Hippias?

Hippias: It's true.

Socrates: "But both are fine, as you say." We do say that.

Hippias: We do.

Socrates: "Then they have some thing that itself makes them be fine,
that common thing that belongs to both of them in common and to each b
privately. Because I don't suppose there's any other way they would both and each be fine."

Answer me as you would him.

Hippias: I think it's as he says, and that's my answer.

Socrates: Then if something is attributed to both pleasures but not to each one, they would not be fine by that attribute.

Hippias: And how could that be, Socrates? That when neither has an attribute, whatever it may be, this attribute—which belongs to neither—could belong to both?

Socrates: Don't you think it could happen? c

Hippias: If it did I'd be in the grip of a lot of inexperience about the nature of these things and the terms of the present terminology.

Socrates: Pleasantly put, Hippias. But maybe I'm turning out to think I can see something that's the way you say it can't be, or I'm not seeing anything.

Hippias: It turns out that you're not, Socrates. You're quite readily mis-seeing.

Socrates: And yet a lot of things like that are seen plainly in my mind;
but I don't believe them if they're not imagined in yours, since you're a d
man who's made the most money by wisdom of anyone alive, and I'm one who never made anything. And I wonder, my friend, if you're not playing with me and deliberately fooling me, so many and so clear are the examples I see.

Hippias: Socrates, no one will know finer than you whether I'm playing or not, if you try to say what these things are that are seen by you plainly. You'll be seen to be saying nothing. Because never shall you find what is attributed to neither me nor you, but is attributed to both of us.

Socrates: What do you mean, Hippias? Maybe you're saying something e
I don't understand. But listen more clearly to what I want to say. Because I see what is not attributed to me to be, and what neither I am nor you are, and this can be attributed to both of us. And there are others besides, which are attributed to both of us to be, things neither of us is.

Hippias: Your answers seem weird again, Socrates, more so than the ones you gave a little earlier. Look. If both of us were just, wouldn't each
301 of us be too? Or if each of us were unjust, wouldn't both of us? Or if we were healthy, wouldn't each be? Or if each of us had some sickness or were wounded or stricken or had any other tribulation, again, wouldn't both of us have that attribute? Similarly, if we happened to be gold or silver or ivory, or, if you like, noble or wise or honored or even old or young or anything you like that goes with human beings, isn't it really necessary that each of us be that as well?

b Socrates: Of course.

Hippias: But Socrates, *you* don't look at the entireties of things, nor do the people you're used to talking with. You people knock away at the fine and the other beings by taking each separately and cutting it up with words. Because of that you don't realize how great they are—naturally continuous bodies of being. And now you're so far from realizing it that
c you think there's some attribute or being that is true of these both but not of each, or of each but not of both. That's how unreasonably and unobservantly and foolishly and uncomprehendingly you operate.

Socrates: That's the way things are for us, Hippias. "They're not the way a person wants"—so runs the proverb people often quote—"but the way he can get them." But your frequent admonitions are a help to us. This time, for example, before these admonitions from you about the stupid way we operate. . . . Shall I make a still greater display, and tell you what
d we had in mind about them? Or not tell?

Hippias: You're telling someone who already knows, Socrates. I know how everybody who's involved in speeches operates. All the same, if it's more pleasant for you, speak on.

Socrates: It really is more pleasant. We were so foolish, my friend, before you said what you did, that we had an opinion about me and you that *each* of us is *one,* but that we wouldn't *both* be *one* (which is what *each*
e of us would be) because we're not *one* but *two*—we were so stupid-like. But now, we have been instructed by you that if two is what we both are, two is what each of us must be as well; and if each is one, then both must be one as well. The continuous theory of *being,* according to Hippias, does not allow it to be otherwise; but whatever both are, that each is as well; and whatever each is, both are. Right now I sit here persuaded by you. First, however, remind me, Hippias. Are you and I one? Or are you two and I two?

Hippias: What do you mean, Socrates?

302 Socrates: Just what I say. I'm afraid of you, afraid to speak clearly, because you get angry at me whenever you think you've said anything. All the same, tell me more. Isn't each of us one, and *that*—being one—is attributed to him?

Hippias: Certainly.

Socrates: Then if each of us is one, wouldn't he also be odd-numbered? Or don't you consider *one* to be odd?

Hippias: I do.

Socrates: Then will both of us be odd-numbered, being two?

Hippias: It couldn't be, Socrates.

Socrates: But both are even-numbered. Yes?

Hippias: Certainly.

Socrates: Then because both are even-numbered, on account of *that,* each of us is even-numbered as well. Right?

Hippias: Of course not. b

Socrates: Then it's not entirely necessary, as you said it was a moment ago, that whatever is true of both is also true of each, and that whatever is true of each is also true of both.

Hippias: Not that sort of thing, but the sort I said earlier.

Socrates: They're enough, Hippias. We have to accept them too, because we see that some are this way, and others are not this way. I said (if you remember how this discussion got started) that pleasure through sight
and hearing was not fine by *this*—that each of them turned out to have c
an attribute but not both, or that both had it but not each—but by that by which both and each are fine, because you agreed that they are both and each fine. That's why I thought it was by the being that adheres to both, if both are fine—it was by *that* they had to be fine, and not by what falls off one or the other. And I still think so now. But let's make a fresh start.
Tell me, if the pleasure through sight and the one through hearing are d
both and each fine, doesn't what makes them fine adhere in both and in each of them?

Hippias: Certainly.

Socrates: Then is it because each and both are *pleasure*—would they be fine because of that? Or would that make all other pleasures no less fine than these? Remember, we saw that they were no less pleasures.

Hippias: I remember.

Socrates: But is it because they are through sight and hearing—are they e
called *fine* because of that?

Hippias: That's the way it was put.

Socrates: See if this is true. It was said, I'm remembering, that the pleasant was fine this way: not all the pleasant, but whatever is through sight and hearing.

Hippias: True.

Socrates: Doesn't that attribute adhere in both, but not in each? I don't suppose each of them is through both (as we said earlier), but both through both, not each. Is that right?

Hippias: Yes.

Socrates: Then *that's* not what makes each of them fine; it doesn't adhere in each (because "both" doesn't adhere in each). So the hypothesis lets us call both of them fine, but it doesn't let us call each of them fine.

What else should we say? Isn't it necessarily so? 303

Hippias: So we see.

Socrates: Then should we call both fine, but not call each fine?

HIPPIAS: What's to stop us?

SOCRATES: *This* stops us, friend, in my opinion. We had things that come to belong to particular things in this way: if they come to belong to both, they do to each also; and if to each, to both—all the examples you gave. Right?

HIPPIAS: Yes.

SOCRATES: But the examples *I* gave were not that way. Among them were "each" itself and "both." Is that right?

HIPPIAS: It is.

b SOCRATES: With which of these do you put the fine, Hippias? With those you mentioned? If I am strong and so are you, we're both strong too; and if I am just and so are you, we both are too. And if both, then each. In the same way, if I am fine and so are you, we both are too; and if both, then each. Or does nothing stop them from being like the things I said I saw clearly: when both of anything are even-numbered, each may be either odd- or possibly even-numbered. And again, when each of them is
c inexpressible, both together may be expressible, or possibly inexpressible.[14] And millions of things like that. With which do you place the fine? Do you see the matter the way I do? I think it's a great absurdity for both of us to be fine, but each not; or each fine, but both not, or anything else like that.

Do you choose the way I do, or the other way?

HIPPIAS: The first way is for me, Socrates.

d SOCRATES: Well done, Hippias! We've saved ourselves a longer search. Because if the fine is with *those,* then the pleasant through sight and hearing is not fine anymore. "Through sight and hearing" makes both fine, but not each. But that's impossible, as you and I agree, Hippias.

HIPPIAS: We do agree.

SOCRATES: Then it's impossible for the pleasant through sight and hearing to be fine, since if it becomes fine it presents one of the impossibilities.

HIPPIAS: That's right.

e SOCRATES: "Tell me again from the beginning," he'll say; "since you were quite wrong with that. What do you say that is—the fine in both pleasures, which made you value them above the others and call them fine?" Hippias, I think we have to say that they are the most harmless pleasures and the best, both and each as well. Or can you mention something else that distinguishes them from all the others?

HIPPIAS: Not at all. They really are best.

SOCRATES: He'll say, "Then this is what you say is the fine—beneficial pleasure?"

"Apparently so," I'll say. And you?

HIPPIAS: Me too.

14. By "inexpressible number" is probably meant an irrational surd (square root of a non-square number). If so, the claim is false. The sum of two such numbers is irrational.

SOCRATES: He'll say: "The maker of good is beneficial, but we just saw that the maker and what is made are different. Your account comes down 304
to the earlier account. The good would not be fine, or the fine good, if each of these were different."

"Absolutely," we'll say, if we have any sense. It's not proper to disagree with a man when he's right.

HIPPIAS: But Socrates, really, what do you think of all that? It's flakings and clippings of speeches, as I told you before, divided up small. But here's what is fine and worth a lot: to be able to present a speech well b
and finely, in court or council or any other authority to whom you give the speech, to convince them and go home carrying not the smallest but the greatest of prizes, the successful defense of yourself, your property, and friends. One should stick to that.

He should give up and abandon all that small-talking, so he won't be thought a complete fool for applying himself, as he is now, to babbling nonsense.

SOCRATES: Hippias, my friend, you're a lucky man, because you know which activities a man should practice, and you've practiced them too— c
successfully, as you say. But I'm apparently held back by my crazy luck. I wander around and I'm always getting stuck. If I make a display of how stuck I am to you wise men, I get mud-spattered by your speeches when I display it. You all say what you just said, that I am spending my time on things that are silly and small and worthless. But when I'm convinced by you and say what you say, that it's much the most excellent thing to be able to present a speech well and finely, and get things done in court d
or any other gathering, I hear every insult from that man (among others around here) who has always been refuting me. He happens to be a close relative of mine, and he lives in the same house. So when I go home to my own place and he hears me saying those things, he asks if I'm not ashamed that I dare discuss fine activities when I've been so plainly refuted about the fine, and it's clear I don't even know at all what *that* is itself! "Look," he'll say. "How will you know whose speech—or any other ac- e
tion—is finely presented or not, when you are ignorant of the fine? And when you're in a state like that, do you think it's any better for you to live than die?" That's what I get, as I said. Insults and blame from you, insults from him. But I suppose it is necessary to bear all that. It wouldn't be strange if it were good for me. I actually think, Hippas, that associating with both of you has done me good. The proverb says, "What's fine is hard"—I think I know *that*.

# LESSER HIPPIAS

*The great sophist Hippias, who has come to Athens on his rounds of the Greek cities, has just exhibited his talents in a discourse on Homer. Socrates asks Hippias to explain further his view on Achilles and Odysseus, the heroes of the two Homeric poems. In the poems, says Hippias, Achilles is 'best and bravest' of the Greek heroes at Troy, and truthful, while Odysseus is 'wily and a liar'—he speaks untruths. Homer implies, and Hippias agrees, that being truthful and being a liar (speaking untruths) are two distinct, contrasting things—one and the same person cannot be both truthful and a 'liar'. But is that so, Socrates wants to know? Isn't the one who* has *the truth about some matter the best able to tell an untruth? After all, only he is in a position even to know what* would *be an untruth to say! So the good and truthful man—Achilles, according to Hippias—would also be a liar, one accomplished at telling untruths. On this account, it could not be right to contrast Achilles, as a truthful person, with Odysseus as a liar—they would both have to be both. Hippias proves unable to sort these questions out satisfactorily, and so to explain adequately his own view about the differences between the two Homeric heroes: his self-proclaimed wisdom about the interpretation of Homer and indeed about everything else is thus shown up as no wisdom at all.*

*Toward the end of this short dialogue Socrates presses Hippias to admit that those who make moral errors 'voluntarily'—e.g., the just person, who knows what the just thing to do is, but precisely through knowing that does the unjust thing instead—are better people than those who act unjustly 'involuntarily', from ignorance and by being unjust. Given his earlier inability to show how the good, knowledgeable, truthful person is not also the liar—the person most adept at telling untruths—Hippias is in no position to reject this suggestion, however unpalatable the thought may be that just people are exquisitely good at doing injustice! Nonetheless, he resists—no doubt correctly, however illogically, given his own earlier statements. As usual, in pressing him to accept this conclusion, Socrates is arguing only on the basis of assertions Hippias has made, not his own personal views. Indeed, Socrates indicates his own disavowal of this conclusion when he introduces at the end of the dialogue his own 'if':* if *there is anyone who voluntarily does what is unjust, then perhaps that person would be a 'good' doer of injustice. So we have no good reason to doubt, as some scholars have done, fearing for Socrates' moral reputation, that this dialogue is Plato's work. It is cited by Aristotle under the simple title* Hippias *(we call it* Lesser *to distinguish it from the longer or* Greater Hippias *dialogue). As often in citing Plato, Aristotle names no author, but—provided,*

*as seems reasonable, that he means the reader to know it as Plato's—his citation seems to assure its genuineness.*

*Elsewhere in Plato we hear nothing about Eudicus, the third speaker of the dialogue, except in* Greater Hippias, *where Hippias says Eudicus has invited him to give the exhibition on Homer that provides the occasion for our dialogue. From this evidence he would appear to be Hippias' host in Athens, and so one of his more prominent Athenian admirers—though he is not mentioned in* Protagoras *among those attending him.*

*J.M.C.*

EUDICUS: Why are you silent, Socrates, after Hippias has given such an 363
exhibition? Why don't you either join us in praising some point or other in what he said, or else put something to the test, if it seems to you anything was not well said—especially since we who most claim to have a share in the practice of philosophy are now left to ourselves?

SOCRATES: Indeed, Eudicus, there *are* some things in what Hippias said
just now about Homer that I'd like to hear more about. For your father b
Apemantus used to say that the *Iliad* of Homer is a finer poem than the *Odyssey*, to just the extent that Achilles is a better man than Odysseus; for, he said, one of these poems is about Odysseus and the other about Achilles. I'd like to ask about that, then, if Hippias is willing. What does he think
about these two men? Which of them does he say is the better? For in his c
exhibition he's told us all sorts of other things both about other poets and about Homer.

EUDICUS: It's plain that Hippias won't object to answering any question you ask him. Right, Hippias? If Socrates asks you something, will you answer, or what will you do?

HIPPIAS: Well, it would be strange behavior if I didn't, Eudicus. I always
go from my home at Elis to the festival of the Greeks at Olympia when it d
is held and offer myself at the temple to speak on demand about any subject I have prepared for exhibition, and to answer any questions anyone wants to ask. I can hardly flee now from answering the questions of Socrates.

SOCRATES: What a godlike state of mind you're in, Hippias, if you go to 364
the temple at every Olympiad so confident about your soul's wisdom! I'd be amazed if any of the athletes of the body goes there to take part in the contests as fearless and trusting about his body as you say you are about your intellect!

HIPPIAS: It is reasonable for me to be in that state of mind, Socrates. Ever since I began taking part in the contests at the Olympic games, I have never met anyone superior to me in anything.

Translated by Nicholas D. Smith.

b Socrates: A fine reply, Hippias. Your fame is a monument for wisdom
to the city of Elis and to your parents. But what do you say to us about
Achilles and about Odysseus? Which do you say is the better man, and
in what respect? When there were many of us inside, and you were giving
your exhibition, I couldn't keep up with what you were saying, but I
hesitated to keep asking questions. There were so many people inside,
and I didn't want to hinder your display by raising questions. But now,
since there are fewer of us and Eudicus here urges me to question you,
c speak, and instruct us clearly. What were you saying about these two
men? How were you distinguishing them?

Hippias: Well, I am glad to explain to you even more clearly than before what I say about these men and others, too. I say that Homer made Achilles the "best and bravest" man of those who went to Troy, and Nestor the wisest, and Odysseus the wiliest.

Socrates: What? Hippias, will you do me the favor of not laughing at
d me if I have difficulty understanding what you are saying and often repeat
my questions? But try to answer me gently and in a good–natured way.

Hippias: It would be shameful, Socrates, if I, who teach others to do that very thing and demand a fee for it, should not myself be lenient when questioned by you and answer gently.

Socrates: Finely put. But really, when you said that the poet made
Achilles the "best and bravest," and when you said that he made Nestor
e the wisest, I thought I understood you. But when you said that he made
Odysseus the wiliest—well, to tell you the truth, I don't know in the least
what you mean by that. But tell me this; maybe it'll make me understand
better. Doesn't Homer make Achilles wily?

Hippias: Not in the least, Socrates, but most simple and truthful; for in the "Prayers," when he has them conversing, he has Achilles say to Odysseus:

365 *Son of Laertes, sprung from Zeus, resourceful Odysseus,*
*I must speak the word bluntly,*
*How I will act and how I think it shall be accomplished,*
*For as hateful to me as the gates of Hades*
b *Is he who hides one thing in his mind, and says another.*
*As for me, I will speak as it shall also be accomplished.*[1]

In these lines he clearly shows the way of each man, that Achilles is truthful and simple, and Odysseus is wily and a liar;[2] for he presents Achilles as saying these words to Odysseus.

Socrates: Now, Hippias, it may be that I understand what you mean. You mean that the wily person is a liar, or so it appears.

1. *Iliad* ix.308–10, 12–14. The "Prayers" is the embassy scene in which Odysseus, Phoenix, and Ajax plead with Achilles to give up his anger and return to the fighting.

2. Or rather, "one who says what is false," whether or not their intent is to deceive. In what follows "liar" should be understood in that broad sense.

Hippias: Certainly, Socrates. Homer presents Odysseus as that kind of c
person in many places, both in the *Iliad* and in the *Odyssey*.

Socrates: So Homer, it seems, thought the truthful man was one kind of person, and the liar another, and not the same.

Hippias: How could he not, Socrates?

Socrates: And do you yourself think so, Hippias?

Hippias: Certainly, Socrates. It would be very strange if it were otherwise.

Socrates: Let's dismiss Homer, then, since it's impossible to ask him d
what he had in mind when he wrote these lines. But since you're evidently taking up the cause, and agree with what you say he meant, answer for both Homer and yourself.

Hippias: So be it. Ask briefly what you wish.

Socrates: Do you say that liars, like sick people, don't have the power to do anything, or that they do have the power to do something?

Hippias: I say they very much have the power to do many things, and especially to deceive people.

Socrates: So according to your argument they are powerful, it would e
seem, and wily. Right?

Hippias: Yes.

Socrates: Are they wily and deceivers from dimwittedness and foolishness, or by cunning and some kind of intelligence?

Hippias: From cunning, absolutely, and intelligence.

Socrates: So they are intelligent, it seems.

Hippias: Yes, by Zeus. Too much so.

Socrates: And being intelligent, do they not know what they are doing, or do they know?

Hippias: They know very well. That's how they do their mischief.

Socrates: And knowing the things that they know, are they ignorant, or wise?

Hippias: Wise, surely, in just these things: in deception. 366

Socrates: Stop. Let us recall what it is that you are saying. You claim that liars are powerful and intelligent and knowledgeable and wise in those matters in which they are liars?

Hippias: That's what I claim.

Socrates: And that the truthful and the liars are different, complete opposites of one another?

Hippias: That's what I say.

Socrates: Well, then. The liars are among the powerful and wise, according to your argument.

Hippias: Certainly.

Socrates: And when you say that the liars are powerful and wise in b
these very matters, do you mean that they have the power to lie if they want, or that they are without power in the matters in which they are liars?

Hippias: I mean they are powerful.

Socrates: To put it in a nutshell, then, liars are wise and have the power to lie.

Hippias: Yes.

Socrates: So a person who did not have the power to lie and was ignorant would not be a liar.

Hippias: That's right.

c Socrates: But each person who can do what he wishes when he wishes is powerful. I mean someone who is not prevented by disease or other such things, someone like you with regard to writing my name. You have the power to do this whenever you wish to. That's what I mean. Or don't you say that one in such a condition is powerful?

Hippias: I do.

Socrates: Now tell me, Hippias: aren't you experienced in calculating and arithmetic?

Hippias: Most experienced of all, Socrates.

Socrates: So if someone were to ask you what three times seven hundred is, couldn't you tell him the truth about this most quickly and best of all, if you wished?

d Hippias: Of course.

Socrates: Because you are most powerful and wisest in these matters?

Hippias: Yes.

Socrates: Are you, then, merely wisest and most powerful, or are you also best in those things in which you are most powerful and wisest, that is, in arithmetic?

Hippias: Best also, for sure, Socrates.

Socrates: Then would you tell the truth most powerfully about these things?

e Hippias: *I* think so.

Socrates: But what about falsehoods about these same things? Please answer with the same nobility and grandeur you showed before, Hippias. If someone were to ask you what three times seven hundred is, could you lie the best, always consistently say falsehoods about these things, if you
367 wished to lie and never to tell the truth? Or would one who is ignorant of calculations have more power than you to lie if he wished to? Don't you think the ignorant person would often involuntarily tell the truth when he wished to say falsehoods, if it so happened, because he didn't know; whereas you, the wise person, if you should wish to lie, would always consistently lie?

Hippias: Yes, it is just as you say.

Socrates: Is the liar, then, a liar about other things but not about number—he wouldn't lie about numbers?

Hippias: But yes, by Zeus, about numbers, too.

b Socrates: So we should also maintain this, Hippias, that there is such a person as a liar about calculation and number.

Hippias: Yes.

Socrates: Who would this person be? Mustn't he have the power to lie, as you just now agreed, if he is going to be a liar? If you remember, you said that one who did not have the power to lie could never become a liar.

HIPPIAS: I remember. I said that.

SOCRATES: And were you not just now shown to have the most power to lie about calculations?

HIPPIAS: Yes. I said that, too.

SOCRATES: Do you, therefore, have the most power to tell the truth c
about calculations?

HIPPIAS: Of course.

SOCRATES: Then the same person has the most power both to say falsehoods and to tell the truth about calculations. And this person is the one who is good with regard to these things, the arithmetician?

HIPPIAS: Yes.

SOCRATES: Then who becomes a liar about calculations, Hippias, other than the good person? For the same person is also powerful, and truthful, as well.

HIPPIAS: Apparently.

SOCRATES: Do you see, then, that the same person is both a liar and
truthful about these things, and the truthful person is no better than the d
liar? For, indeed, he is the same person and the two are not complete opposites, as you supposed just now.

HIPPIAS: He does not appear to be, at least in this field.

SOCRATES: Do you wish to investigate some other field, then?

HIPPIAS: If you wish.

SOCRATES: All right. Are you not also experienced in geometry?

HIPPIAS: I am.

SOCRATES: Well, then. Isn't it the same way in geometry? Doesn't the same person have the most power to lie and to tell the truth about geometrical diagrams, namely, the geometer?

HIPPIAS: Yes.

SOCRATES: Is anyone else good at these things, or the geometer?

HIPPIAS: No one else. e

SOCRATES: The good and wise geometer, then, is the most powerful in both respects, isn't he? And if anyone could be a liar about diagrams, it would be this person, the good geometer? For he has the power to lie, but the bad one is powerless; and one who does not have the power to lie cannot become a liar, as you agreed.

HIPPIAS: That's right.

SOCRATES: Let us investigate a third person, the astronomer, whose craft
you think you know even better than the preceding ones. Right, Hippias? 368

HIPPIAS: Yes.

SOCRATES: Aren't the same things true in astronomy, also?

HIPPIAS: Probably, Socrates.

SOCRATES: In astronomy, too, if anyone is a liar, it will be the good astronomer, he who has the power to lie. Certainly it won't be the one who does not have the power; for he is ignorant.

HIPPIAS: That's the way it appears.

SOCRATES: So the same person will be truthful and a liar in astronomy.

Hippias: So it seems.

b Socrates: Come then, Hippias. Examine all the sciences similarly. Is
there any that's different from these, or are they all like this? You are the
wisest of people in the greatest number of crafts, as I once heard you
boasting. In the marketplace, next to the tables of the bankers, you told
of your great and enviable wisdom. You said that you had once gone to
Olympia with everything you had on your body the product of your own
work. First, the ring you were wearing— you began with that—was your
c own work, showing that you knew how to engrave rings. And another
signet, too, was your work, and a strigil[3] and an oil bottle, which you had
made. Then you said that you yourself had cut from leather the sandals
you were wearing, and had woven your cloak and tunic. And what seemed
to everyone most unusual and an exhibition of the greatest wisdom was
when you said that the belt you wore around your tunic was like the very
expensive Persian ones, and that you had plaited it yourself. In addition
to these things, you said that you brought poems with you—epic, tragic,
d and dithyrambs, and many writings of all sorts in prose. You said you
came with knowledge that distinguished you from all others on the subjects
I was just now speaking of, and also about rhythms, and harmony, and
the correctness of letters, and many other things besides, as I seem to
remember. But I've forgotten to mention your artful technique (as it seems)
of memory, in which you think you are most brilliant. I suppose I have
e forgotten a great many other things, as well. But, as I say, look both at
your own crafts—for they are sufficient—and also those of others, and tell
me, in accordance with what you and I have agreed upon, if you find any
case in which one person is truthful and another (distinct, not the same)
369 person is a liar. Look for one in whatever sort of wisdom or villainy you
like, or whatever you want to call it; but you will not find it, my friend,
for none exists. So tell me!

Hippias: But I can't, Socrates; at least not offhand.

Socrates: And you never will, I think. But if what I say is true, you will remember what follows from our argument.

Hippias: I don't entirely understand what you mean, Socrates.

Socrates: Presumably that's because you are not using your memory
technique; plainly, you don't think you need it. But I will remind you.
b You realize that you said that Achilles was truthful, whereas Odysseus
was a liar and wily?

Hippias: Yes.

Socrates: You are now aware, then, that the same person has been discovered to be a liar and truthful, so that if Odysseus was a liar, he also becomes truthful, and if Achilles was truthful, he also becomes a liar, and these two men are not different from one another, nor opposites, but similar?

3. The strigil was a tool used to scrape from the skin the residue of olive oil used to wash off perspiration and soil after athletic exercise.

Hippias: Oh, Socrates! You're always weaving arguments of this kind.
You pick out whatever is the most difficult part of the argument, and c
fasten on to it in minute detail, and don't dispute about the whole subject
under discussion. So now, if you wish, I'll prove to you by sufficient
argument, based upon much evidence, that Homer made Achilles better
than Odysseus and not a liar, whereas he made the latter deceitful, a teller
of many lies, and worse than Achilles. If you wish, you may then offer
counterarguments to mine, to the effect that the other is better. That way,
these people here will know more which of us speaks better.

Socrates: Hippias, I don't dispute that you are wiser than I, but it is d
always my custom to pay attention when someone is saying something,
especially when the speaker seems to me to be wise. And because I desire
to learn what he means, I question him thoroughly and examine and place
side-by-side the things he says, so I can learn. If the speaker seems to me
to be some worthless person, I neither ask questions nor do I care what
he says. This is how you'll recognize whom I consider wise. You'll find
me being persistent about what's said by this sort of person, questioning e
him so that I can benefit by learning something. And so now I noticed as
you were speaking, that in the lines you just now recited—to show that
Achilles speaks to Odysseus as if Odysseus were a fraud—it seems ridicu-
lous to me, if you speak truly, that Odysseus (the wily one), is nowhere
portrayed as lying, whereas Achilles is portrayed as a wily person accord- 370
ing to your argument. In any case, he lies. For he begins by saying the
lines which you just now recited:

*For as hateful to me as the gates of Hades*
*Is he who hides one thing in his mind, and says another.*

A little later he says he wouldn't be persuaded by Odysseus and Aga- b
memnon, and wouldn't stay in Troy at all. But, he says,

*Tomorrow, when I have sacrificed to Zeus and all the gods,*
*And loaded my ships, having dragged them to the sea,*
*You will see, if you want to, and if you care about such things,*
*My ships sailing very early on the fish-filled Hellespont,*
*And in them, the men eagerly rowing.* c
*And if the glorious Earth-shaker should grant a fair voyage,*
*On the third day I should come to fertile Phthia.*[4]

And before that, when he was insulting Agamemnon, he said,

4. *Iliad* ix.357–63; the Earth-shaker is the god Posidon.

*Now I am going to Phthia, because it is much better*
*To go home with my curved ships. I do not think*
d *I will stay here dishonored, and pile up riches and wealth for you.*[5]

Although he said these things—once before the entire army and once
before his colleagues—nowhere is he shown to have prepared or tried to
drag down the ships to sail home. Rather, he shows quite a noble contempt
for telling the truth. So, Hippias, I've been questioning you from the
e beginning because I'm confused as to which of these two men was repre-
sented as better by the poet, thinking that both were "best and bravest"
and that it's hard to discern which is better, with regard both to lying and
to truth, and to virtue, as well; for in this, also, the two are quite similar.

HIPPIAS: That's because you don't look at it right, Socrates. When Achilles lies, he's portrayed as lying not on purpose but involuntarily, forced to stay and help by the misfortune of the army. But the lies of Odysseus are voluntary and on purpose.

SOCRATES: You're deceiving me, my dear Hippias, and are yourself imitating Odysseus!

371 HIPPIAS: Not at all, Socrates! What do you mean? What are you refer-
ring to?

SOCRATES: To your saying that Achilles didn't lie on purpose—he, who
was also such a cheat and a schemer in addition to his fraudulence, as
Homer has represented him. He's shown to be so much more intelligent
than Odysseus in easily defrauding him without being noticed, that right
in front of the other, he dared to contradict himself and Odysseus didn't
notice. In any case, Odysseus isn't portrayed as saying anything to him
b which shows that he perceived his lying.

HIPPIAS: What are you talking about, Socrates?

SOCRATES: Don't you know that after he said to Odysseus that he would sail away at dawn, he doesn't say again that he's going to sail away when he speaks to Ajax, but says something different?

HIPPIAS: Where?

SOCRATES: In the lines in which he says,

*I will not think of bloody war*
c *Until the son of thoughtful Priam, noble Hector*
*Comes to the tents and the ships of the Myrmidons,*
*Killing Argives, and burns the ships with blazing fire.*
*But at my tent and my black ship*
*I think Hector himself, though eager for battle, will stop.*[6]

d So, Hippias; do you think the son of Thetis, who was taught by the most
wise Chiron, was so forgetful that—though a little earlier he had insulted

5. *Iliad* i.169–71.

6. *Iliad* ix.650–55.

fraudulent people with the most extreme insults—he himself said to Odysseus that he was going to sail away, and to Ajax that he was going to stay? And he wasn't doing this on purpose, supposing that Odysseus was an old fool, and that he himself could get the better of him by precisely such conniving and lying?

HIPPIAS: It doesn't seem that way to me, Socrates. Rather, in these things, e
too, it was because of his guilelessness[7] that he was led to say something different to Ajax and to Odysseus. But when Odysseus tells the truth, he always has a purpose, and when he lies, it's the same.

SOCRATES: Then it seems that Odysseus is better than Achilles after all.

HIPPIAS: Not at all, surely, Socrates.

SOCRATES: Why not? Didn't it emerge just now that the voluntary liars are better than the involuntary ones?

HIPPIAS: But Socrates, how could those who are voluntarily unjust, and 372
are voluntary and purposeful evil-doers, be better than those who act that way involuntarily? For these people, there seems to be much lenience, when they act unjustly without knowing, or lie, or do some other evil. The laws, too, are surely much harsher towards those who do evil and lie voluntarily than towards those who do so involuntarily.

SOCRATES: You see, Hippias, that I am telling the truth when I say that b
I'm persistent in questioning wise people? It may be that this is the only good trait I have and that all the others I have are quite worthless. I make mistakes as to the way things are, and don't know how they are—I find it sufficient evidence of this that when I am with one of you who are highly regarded for wisdom, and to whose wisdom all the Greeks bear witness, I show myself to know nothing. For I think pretty well none of
the same things as you do; yet what greater evidence of ignorance is there c
than when someone disagrees with wise men? But I have one wonderfully good trait, which saves me: I'm not ashamed to learn. I inquire and ask questions and I'm very grateful to the one who answers, and I've never failed in gratitude to anyone. I've never denied it when I've learned anything, pretending that what I learned was my own discovery. Instead, I sing the praises of the one who taught me as a wise person, and proclaim
what I learned from him. So indeed now, I don't agree with what you are d
saying but disagree very strongly. But I know very well that this is my fault—it's because I'm the sort of person I am, not to say anything better of myself than I deserve. To me, Hippias, it appears entirely the opposite to what you say: those who harm people and commit injustice and lie and cheat and go wrong voluntarily, rather than involuntarily, are better than those who do so involuntarily. However, sometimes I believe the opposite,
and I go back and forth about all this—plainly because I don't know. But e
now at this moment a fit of lightheadedness has come over me, and I think those who voluntarily go wrong regarding something are better than those who do so involuntarily. I blame the preceding arguments for my present

7. Reading *euētheias* in e1.

condition, making it appear to me now that those who do any of these things involuntarily are more worthless than those who do them volunta-
373 rily. So please be nice and don't refuse to cure my soul. You'll do me a much greater good if you give my soul relief from ignorance, than if you gave my body relief from disease. But if you wish to give a long speech, I tell you in advance that you wouldn't cure me, for I couldn't follow you. If you are willing to answer me as you did just now, you'll benefit me a great deal, and I think you yourself won't be harmed. I might justly call for *your* help, too, son of Apemantus, for you goaded me into a discussion with Hippias. So now, if Hippias isn't willing to answer me, ask him for me.

b EUDICUS: Well, Socrates, I don't think Hippias will need us to plead with him. For that's not what he said earlier; he said that he wouldn't flee from any man's questioning. Right, Hippias? Isn't that what you said?

HIPPIAS: I did. But Socrates always creates confusion in arguments, and seems to argue unfairly.

SOCRATES: Oh excellent Hippias, I don't do that voluntarily, for then I'd be wise and awesome, according to your argument, but involuntarily. So please be lenient with me, for you say that one who acts unfairly involuntarily should be treated leniently.

c EUDICUS: By all means don't do otherwise, Hippias. For our sakes and for the sake of what you said earlier, answer what Socrates asks you.

HIPPIAS: I will answer, then, since you beg me to. Ask whatever you wish.

SOCRATES: I want very much, Hippias, to investigate what we were just now saying: whether those who go wrong voluntarily, or those who go wrong involuntarily are better. I think the most correct way to pursue our investigation is as follows. You answer. Do you call one sort of runner a good one?

d HIPPIAS: I do.

SOCRATES: And one sort bad?

HIPPIAS: Yes.

SOCRATES: You think one who runs well is a good runner; one who runs badly, a bad one?

HIPPIAS: Yes.

SOCRATES: And one who runs slowly runs badly, and one who runs quickly runs well?

HIPPIAS: Yes.

SOCRATES: In a race, then, and in running, quickness is a good thing, and slowness, bad?

HIPPIAS: What else would it be?

SOCRATES: Which one is the better runner, then: the one who runs slowly voluntarily, or the one who does so involuntarily?

HIPPIAS: The one who does so voluntarily.

SOCRATES: And isn't running doing something?

HIPPIAS: Doing something, of course.

SOCRATES: If doing, doesn't it also accomplish something?

e HIPPIAS: Yes.

Socrates: So one who runs badly accomplishes something bad and shameful in a race?

Hippias: Bad; how else?

Socrates: One who runs slowly runs badly?

Hippias: Yes.

Socrates: So the good runner voluntarily accomplishes this bad and shameful thing, and the bad runner, involuntarily?

Hippias: So it seems, at least.

Socrates: In a race, then, one who accomplishes bad things involuntarily is more worthless than one who does them voluntarily?

Hippias: In a race, at least. 374

Socrates: What about in wrestling? Which is the better wrestler, one who falls down voluntarily, or involuntarily?

Hippias: One who does so voluntarily, it seems.

Socrates: Is it more worthless and shameful in wrestling to fall down or to knock down the opponent?

Hippias: To fall down.

Socrates: So also in wrestling, one who voluntarily has worthless and shameful accomplishments is a better wrestler than one who has them involuntarily.

Hippias: So it seems.

Socrates: What about in other physical activities? Isn't the physically better person able to accomplish both sorts of things: the strong *and* the b
weak, the shameful *and* the fine? So whenever he accomplishes worthless physical results, the one who is physically better does them voluntarily, whereas the one who is worse does them involuntarily?

Hippias: That how it seems to be in matters of strength, also.

Socrates: What about gracefulness, Hippias? Doesn't the better body strike shameful and worthless poses voluntarily, and the worse body involuntarily? What do you think?

Hippias: That's right.

Socrates: So awkwardness, when voluntary, counts toward virtue, but c
when involuntary, toward worthlessness.

Hippias: Apparently.

Socrates: What do you say about the voice? Which do you say is better, one that sings out of tune voluntarily, or involuntarily?

Hippias: One that does so voluntarily.

Socrates: And the one that does so involuntarily is in a worse condition?

Hippias: Yes.

Socrates: Would you prefer to possess good or bad things?

Hippias: Good.

Socrates: Then would you prefer to possess feet that limp voluntarily, or involuntarily?

Hippias: Voluntarily. d

Socrates: But doesn't having a limp mean having worthless and awkward feet?

HIPPIAS: Yes.

SOCRATES: Well, again; doesn't dullness of sight mean having worthless eyes?

HIPPIAS: Yes.

SOCRATES: Which sort of eyes, then, would you wish to possess and live with: those with which you would see dully and incorrectly voluntarily, or involuntarily?

HIPPIAS: Those with which one would do so voluntarily.

SOCRATES: So you regard organs that voluntarily accomplish worthless results as better than those that do so involuntarily?

HIPPIAS: Yes, in these sorts of cases.

SOCRATES: So then one statement embraces them all, ears, nose, mouth
e and all the senses: those that involuntarily accomplish bad results aren't worth having because they're worthless, whereas those that do so voluntarily are worth having because they're good.

HIPPIAS: I think so.

SOCRATES: Well, then. Which tools are better to work with? Those with which one accomplishes bad results voluntarily, or involuntarily? For example, is a rudder with which one will involuntarily steer badly better, or one with which one will do so voluntarily?

HIPPIAS: One with which one will do so voluntarily.

SOCRATES: Isn't it the same with a bow, a lyre, flutes, and all the rest?

375 HIPPIAS: What you say is true.

SOCRATES: Well, then. Is it better to possess a horse with such a soul that one could ride it badly voluntarily, or involuntarily?

HIPPIAS: Voluntarily.

SOCRATES: So that's a better one.

HIPPIAS: Yes.

SOCRATES: With the better horse's soul, then, one would voluntarily do the worthless acts of this soul, but with the soul of the worthless mare one would do them involuntarily.

HIPPIAS: Certainly.

SOCRATES: And so also with a dog and all other animals?

HIPPIAS: Yes.

SOCRATES: Well now, then. For an archer, is it better to possess a soul
b which voluntarily misses the target, or one which does so involuntarily?

HIPPIAS: One which does so voluntarily.

SOCRATES: So this sort of soul is better also for archery?

HIPPIAS: Yes.

SOCRATES: A soul which involuntarily misses the mark is more worthless than one which does so voluntarily.

HIPPIAS: In archery, anyway.

SOCRATES: How about in medicine? Isn't one that voluntarily accomplishes bad things for the body better at medicine?

HIPPIAS: Yes.

SOCRATES: Then this sort of soul is better at this craft than the other.

HIPPIAS: Yes.

SOCRATES: Well, then. As to the soul that plays the lyre and the flute better and does everything else better in the crafts and the sciences— c
doesn't it accomplish bad and shameful things and miss the mark voluntarily, whereas the more worthless does this involuntarily?

HIPPIAS: Apparently.

SOCRATES: And perhaps we would prefer to have slaves with souls that voluntarily miss the mark and act badly, rather than those which do so involuntarily, as being better at these things.

HIPPIAS: Yes.

SOCRATES: Well, then. Would we not wish to possess our own soul in the best condition?

HIPPIAS: Yes.

SOCRATES: So, will it be better if it acts badly and misses the mark d
voluntarily or involuntarily?

HIPPIAS: But it would be terrible, Socrates, if those who commit injustice voluntarily are to be better than those who do it involuntarily!

SOCRATES: But nonetheless they appear to be, at least given what's been said.

HIPPIAS: Not to me.

SOCRATES: But I thought, Hippias, that they appeared to be so to you, too. But answer again: isn't justice either some sort of power or knowledge, or both? Or isn't justice necessarily one of these things?

HIPPIAS: Yes. e

SOCRATES: So if justice is a power of the soul, isn't the more powerful soul the more just? For, my excellent friend, it appeared to us, didn't it, that one of this sort was better?

HIPPIAS: Yes, it did.

SOCRATES: And if it's knowledge? Then isn't the wiser soul more just and the more ignorant more unjust?

HIPPIAS: Yes.

SOCRATES: And if it's both? Then isn't the soul which has both—knowledge and power—more just, and the more ignorant more unjust? Isn't that necessarily so?

HIPPIAS: It appears so.

SOCRATES: This more powerful and wiser soul was seen to be better and to have more power to do both fine and shameful in everything it 376
accomplishes?

HIPPIAS: Yes.

SOCRATES: Whenever it accomplishes shameful results, then, it does so voluntarily, by power and craft, and these things appear to be attributes of justice, either both or one of them.

HIPPIAS: So it seems.

SOCRATES: And to do injustice is to do bad, whereas to refrain from injustice is to do something fine.

HIPPIAS: Yes.

SOCRATES: So the more powerful and better soul, when it does injustice, will do injustice voluntarily, and the worthless soul involuntarily?

HIPPIAS: Apparently.

376b SOCRATES: And isn't the good man the one who has a good soul, and the bad man the one who has a bad soul?

HIPPIAS: Yes.

SOCRATES: Therefore, it's up to the good man to do injustice voluntarily, and the bad man to do it involuntarily; that is, if the good man has a good soul.

HIPPIAS: But surely he has.

SOCRATES: So the one who voluntarily misses the mark and does what is shameful and unjust, Hippias—that is, if there is such a person—would be no other than the good man.

HIPPIAS: I can't agree with you in that, Socrates.

c SOCRATES: Nor I with myself, Hippias. But given the argument, we can't help having it look that way to us, now, at any rate. However, as I said before, on these matters I waver back and forth and never believe the same thing. And it's not surprising at all that I or any other ordinary person *should* waver. But if you wise men are going to do it, too—that means something terrible for us, if we can't stop our wavering even after we've put ourselves in your company.

# ION

*A 'rhapsode' is a professional reciter of the poetry of Homer and certain other prestigious early poets of Greece. In Athens the prize-winning rhapsode Ion from Ephesus (we do not know whether he is a historical personage or Plato's invention) runs into Socrates, who expresses admiration for his profession and questions him about it. Theirs is a private conversation, apparently with no others present (as in* Euthyphro*). Ion professes not just to recite superbly Homer's poetry (his specialty) but also to speak beautifully in his own right* about *Homer—in interpreting and explaining his poetry and its excellences. Socrates is more interested in this second aspect of Ion's professional expertise than in the first. He wants to know whether Ion speaks about Homer 'on the basis of knowledge or mastery': is he the master of some body of knowledge, which he employs and expresses in speaking about Homer?*

*The chief interest of this short dialogue, apart from its comical portrayal of Ion's enthusiasm for his own skills, lies in the way Socrates develops his own view—which Ion in the end blithely accepts!—that Ion speaks not from knowledge but from inspiration, his thoughts being 'breathed into' him without the use of his own understanding at all. Using the analogy of a magnet, with the power to draw one iron ring to itself, and through that another, and another, Socrates suggests that Homer himself—the greatest of the Greek poets—had no knowledge of his own in writing his poetry, but was divinely possessed. Ion and other expert rhapsodes are also divinely possessed—as it were, 'magnetized'—through him, both when they recite his poetry and when they speak about it—and they pass on the inspiration to their hearers, who are in a state of divine possession in opening themselves to the poetry. Neither poets nor rhapsodes have any knowledge or mastery of anything: their work, with all its beauty, is the product of the gods working through them, not of any human intelligence and skill. Thus these minor characters, the rhapsodes, provide Socrates entrée to much bigger game, the poet Homer himself, the great 'teacher' of the Greeks. Readers should compare (and contrast) Socrates' criticisms of Homer here with those in* Republic *II and III, and his critique of poetry in X, along with the views about poetic 'madness' that he advances in* Phaedrus *and elsewhere.*

*J.M.C.*

530 SOCRATES: Ion! Hello. Where have you come from to visit us this time? From your home in Ephesus?

ION: No, no, Socrates. From Epidaurus, from the festival of Asclepius.

SOCRATES: Don't tell me the Epidaurians hold a contest for *rhapsodes* in honor of the god?

ION: They certainly do! They do it for every sort of poetry and music.

SOCRATES: Really! Did you enter the contest? And how did it go for you?

b ION: First prize, Socrates! We carried it off.

SOCRATES: That's good to hear. Well, let's see that we win the big games at Athens, next.

ION: We'll do it, Socrates, god willing.

SOCRATES: You know, Ion, many times I've envied you rhapsodes your profession. Physically, it is always fitting for you in your profession to be dressed up to look as beautiful as you can; and at the same time it is necessary for you to be at work with poets—many fine ones, and with
c Homer above all, who's the best poet and the most divine—and you have to learn his thought, not just his verses! Now that is something to envy! I mean, no one would ever get to be a good rhapsode if he didn't understand what is meant by the poet. A rhapsode must come to present the poet's thought to his audience; and he can't do that beautifully unless he knows what the poet means. So this all deserves to be envied.

ION: That's true, Socrates. And that's the part of my profession that took the most work. I think I speak more beautifully than anyone else about
d Homer; neither Metrodorus of Lampsacus nor Stesimbrotus of Thasos nor Glaucon nor anyone else past or present could offer as many beautiful thoughts about Homer as I can.

SOCRATES: That's good to hear, Ion. Surely you won't begrudge me a demonstration?

ION: Really, Socrates, it's worth hearing how well I've got Homer dressed up. I think I'm worthy to be crowned by the Sons of Homer[1] with a golden crown.

531 SOCRATES: Really, I shall make time to hear that later. Now I'd just like an answer to this: Are you so wonderfully clever about Homer alone—or also about Hesiod and Archilochus?

ION: No, no. Only about Homer. That's good enough, I think.

SOCRATES: Is there any subject on which Homer and Hesiod both say the same things?

ION: Yes, I think so. A good many.

SOCRATES: Then, on those subjects, would you explain Homer's verse better and more beautifully than Hesiod's?

b ION: Just the same Socrates, on those subjects, anyway, where they say the same things.

Translated by Paul Woodruff.

1. The sons of Homer were a guild of rhapsodes who originally claimed to be descendants of Homer.

Socrates: And how about the subjects on which they do not say the same things? Divination, for example. Homer says something about it and so does Hesiod.

Ion: Certainly.

Socrates: Well. Take all the places where those two poets speak of divination, both where they agree and where they don't: who would explain those better and more beautifully, you, or one of the diviners if he's good?

Ion: One of the diviners.

Socrates: Suppose *you* were a diviner: if you were really able to explain the places where the two poets agree, wouldn't you also know how to explain the places where they disagree?

Ion: That's clear.

Socrates: Then what in the world is it that you're clever about in Homer c
but not in Hesiod and the other poets? Does Homer speak of any subjects that differ from those of *all* the other poets? Doesn't he mainly go through tales of war, and of how people deal with each other in society—good people and bad, ordinary folks and craftsmen? And of the gods, how *they* deal with each other and with men? And doesn't he recount what happens in heaven and in hell, and tell of the births of gods and heroes? Those are d
the subjects of Homer's poetry-making, aren't they?

Ion: That's true, Socrates.

Socrates: And how about the other poets? Did they write on the same subjects?

Ion: Yes, but Socrates, they didn't do it the way Homer did.

Socrates: How, then? Worse?

Ion: Much worse.

Socrates: And Homer does it better?

Ion: *Really* better.

Socrates: Well now, Ion, dear heart, when a number of people are discussing arithmetic, and one of them speaks best, I suppose *someone* will know how to pick out the good speaker. e

Ion: Yes.

Socrates: Will it be the same person who can pick out the bad speakers, or someone else?

Ion: The same, of course.

Socrates: And that will be someone who has mastered arithmetic, right?

Ion: Yes.

Socrates: Well. Suppose a number of people are discussing healthy nutrition, and one of them speaks best. Will one person know that the best speaker speaks best, and another that an inferior speaker speaks worse? Or will the same man know both?

Ion: Obviously, the same man.

Socrates: Who is he? What do we call him?

Ion: A doctor.

Socrates: So, to sum it up, this is what we're saying: when a number
532 of people speak on the same subject, it's always the same person who will know how to pick out good speakers and bad speakers. If he doesn't know how to pick out a bad speaker, he certainly won't know a good speaker—on the same subject, anyway.

Ion: That's so.

Socrates: Then it turns out that the same person is "wonderfully clever" about both speakers.

Ion: Yes.

Socrates: Now *you* claim that Homer and the other poets (including Hesiod and Archilochus) speak on the same subjects, but not equally well. *He's* good, and they're inferior.

Ion: Yes, and it's true.

b Socrates: Now if you really do know who's speaking well, you'll know that the inferior speakers are speaking worse.

Ion: Apparently so.

Socrates: You're superb! So if we say that Ion is equally clever about Homer and the other poets, we'll make no mistake. Because you agree yourself that the same person will be an adequate judge of all who speak on the same subjects, and that almost all the poets *do* treat the same subjects.

Ion: Then how in the world do you explain what *I* do, Socrates? When
c someone discusses another poet I pay no attention, and I have no power to contribute anything worthwhile: I simply doze off. But let someone mention Homer and right away I'm wide awake and I'm paying attention and I have plenty to say.

Socrates: *That's* not hard to figure out, my friend. Anyone can tell that you are powerless to speak about Homer on the basis of knowledge or mastery. Because if your ability came by mastery, you would be able to speak about all the other poets as well. Look, there is an art of poetry as a whole, isn't there?

Ion: Yes.

d Socrates: And now take the whole of *any* other subject: won't it have the same discipline throughout? And this goes for every subject that can be mastered. Do you need me to tell you what I mean by this, Ion?

Ion: Lord, yes, I do, Socrates. I love to hear you wise men talk.

Socrates: I wish that were true, Ion. But wise? Surely you are the wise men, you rhapsodes and actors, you and the poets whose work you sing. As for me, I say nothing but the truth, as you'd expect from an ordinary
e man. I mean, even this question I asked you—look how commonplace and ordinary a matter it is. Anybody could understand what I meant: don't you use the same discipline throughout whenever you master the whole of a subject? Take this for discussion—painting is a subject to be mastered as a whole, isn't it?

Ion: Yes.

Socrates: And there are many painters, good and bad, and there have been many in the past.

ION: Certainly.

SOCRATES: Have you ever known anyone who is clever at showing what's
well painted and what's not in the work of Polygnotus, but who's powerless
to do that for other painters? Someone who dozes off when the work of 533
other painters is displayed, and is lost, and has nothing to contribute—
but when he has to give judgment on Polygnotus or any other painter (so
long as it's just *one*), he's wide awake and he's paying attention and he
has plenty to say—have you ever known anyone like that?

ION: Good lord no, of course not!

SOCRATES: Well. Take sculpture. Have you ever known anyone who is
clever at explaining which statues are well made in the case of Daedalus, b
son of Metion, or Epeius, son of Panopeus, or Theodorus of Samos, or any
other *single* sculptor, but who's lost when he's among the products of other
sculptors, and he dozes off and has nothing to say?

ION: Good lord no. I haven't.

SOCRATES: And further, it is my opinion, you've never known anyone
ever—not in flute-playing, not in cithara-playing, not in singing to the
cithara, and not in rhapsodizing—you've never known a man who is clever
at explaining Olympus or Thamyrus or Orpheus or Phemius, the rhapsode c
from Ithaca, but who has nothing to contribute about Ion, the rhapsode
from Ephesus, and cannot tell when he does his work well and when he
doesn't—you've never known a man like that.

ION: I have nothing to say against you on that point, Socrates. But *this*
I know about myself: I speak about Homer more beautifully than anybody
else and I have lots to say; and everybody says I do it well. But about the
other poets I do not. Now see what that means.

SOCRATES: I do see, Ion, and I'm going to announce to you what I think d
that is. As I said earlier, that's not a subject you've mastered—speaking
well about Homer; it's a divine power that moves you, as a "Magnetic"
stone moves iron rings. (That's what Euripides called it; most people call
it "Heraclean.")[2] This stone not only pulls those rings, if they're iron, it
also puts power *in* the rings, so that they in turn can do just what the e
stone does—pull other rings—so that there's sometimes a very long chain
of iron pieces and rings hanging from one another. And the power in all
of them depends on this stone. In the same way, the Muse makes some
people inspired herself, and then through those who are inspired a chain
of other enthusiasts is suspended. You know, none of the epic poets, if
they're good, are masters of their subject; they are inspired, possessed,
and that is how they utter all those beautiful poems. The same goes for
lyric poets if they're good: just as the Corybantes are not in their right 534
minds when they dance, lyric poets, too, are not in their right minds when
they make those beautiful lyrics, but as soon as they sail into harmony and

2. Natural magnets apparently came from Magnesia and Heraclea in Caria in Asia Minor, and were called after those places.

rhythm they are possessed by Bacchic frenzy. Just as Bacchus worshippers[3] when they are possessed draw honey and milk from rivers, but not when they are in their right minds—the soul of a lyric poet does this too, as
b they say themselves. For of course poets tell us that they gather songs at honey-flowing springs, from glades and gardens of the Muses, and that they bear songs to us as bees carry honey, flying like bees. And what they say is true. For a poet is an airy thing, winged and holy, and he is not able to make poetry until he becomes inspired and goes out of his mind and his intellect is no longer in him. As long as a human being has his intellect in his possession he will always lack the power to make poetry
c or sing prophecy. Therefore because it's not by mastery that they make poems or say many lovely things about their subjects (as you do about Homer)—but because it's by a divine gift—each poet is able to compose beautifully only that for which the Muse has aroused him: one can do dithyrambs, another encomia, one can do dance songs, another, epics, and yet another, iambics; and each of them is worthless for the other types of poetry. You see, it's not mastery that enables them to speak those verses, but a divine power, since if they knew how to speak beautifully on one type of poetry by mastering the subject, they could do so for all the others
d also. That's why the god takes their intellect away from them when he uses them as his servants, as he does prophets and godly diviners, so that we who hear should know that *they* are not the ones who speak those verses that are of such high value, for their intellect is not in them: the god himself is the one who speaks, and he gives voice through them to us. The best evidence for this account is Tynnichus from Chalcis, who never made a poem anyone would think worth mentioning, *except* for the praise-song everyone sings, almost the most beautiful lyric-poem there is,
e and simply, as he says himself, "an invention of the Muses." In this more than anything, then, I think, the god is showing us, so that we should be in no doubt about it, that these beautiful poems are not human, not even *from* human beings, but are divine and from gods; that poets are nothing but representatives of the gods, possessed by whoever possesses them. To
535 show *that*, the god deliberately sang the most beautiful lyric poem through the most worthless poet. Don't you think I'm right, Ion?

ION: Lord yes, *I* certainly do. Somehow you touch my soul with your words, Socrates, and I do think it's by a divine gift that good poets are able to present these poems to us from the gods.

SOCRATES: And you rhapsodes in turn present what the poets say.

ION: That's true too.

SOCRATES: So you turn out to be representatives of representatives.

ION: Quite right.

b SOCRATES: Hold on, Ion; tell me this. Don't keep any secrets from *me*. When you recite epic poetry well and you have the most stunning effect

3. Bacchus worshippers apparently danced themselves into a frenzy in which they found streams flowing with honey and milk (Euripides, *Bacchae* 708–11).

on your spectators, either when you sing of Odysseus—how he leapt into
the doorway, his identity now obvious to the suitors, and he poured out
arrows at his feet—or when you sing of Achilles charging at Hector, or
when you sing a pitiful episode about Andromache or Hecuba or Priam,
are you at that time in your right mind, or do you get beside yourself? c
And doesn't your soul, in its enthusiasm, believe that it is present at the
actions you describe, whether they're in Ithaca or in Troy or wherever the
epic actually takes place?

Ion: What a vivid example you've given me, Socrates! I won't keep secrets from *you*. Listen, when *I* tell a sad story, my eyes are full of tears; and when I tell a story that's frightening or awful, my hair stands on end with fear and my heart jumps.

Socrates: Well, Ion, should we say this man is in his right mind at times d
like these: when he's at festivals or celebrations, all dressed up in fancy
clothes, with golden crowns, and he weeps, though he's lost none of his
finery—or when he's standing among millions of friendly people and he's
frightened, though no one is undressing him or doing him any harm? Is
he in his right mind then?

Ion: Lord no, Socrates. Not at all, to tell the truth.

Socrates: And you know that you have the same effects on most of your spectators too, don't you?

Ion: I know very well that we do. I look down at them every time from e
up on the rostrum, and they're crying and looking terrified, and as the
stories are told they are filled with amazement. You see I must keep my
wits and pay close attention to them: if I start them crying, *I* will laugh
as I take their money, but if *they* laugh, I shall cry at having lost money.

Socrates: And you know that this spectator is the last of the rings, don't
you—the ones that I said take their power from each other by virtue of
the Heraclean stone [the magnet]? The middle ring is you, the rhapsode 536
or actor, and the first one is the poet himself. The god pulls people's souls
through all these wherever he wants, looping the power down from one
to another. And just as if it hung from that stone, there's an enormous
chain of choral dancers and dance teachers and assistant teachers hanging
off to the sides of the rings that are suspended from the Muse. One poet
is attached to one Muse, another to another (we say he is "possessed," b
and that's near enough, for he is *held*). From these first rings, from the
poets, *they* are attached in their turn and inspired, some from one poet,
some from another: some from Orpheus, some from Musaeus, and many
are possessed and held from Homer. You are one of *them*, Ion, and you
are possessed from Homer. And when anyone sings the work of another
poet, you're asleep and you're lost about what to say; but when any song
of that poet is sounded, you are immediately awake, your soul is dancing, c
and you have plenty to say. You see it's not because you're a master of
knowledge about Homer that you can say what you say, but because of
a divine gift, because you are possessed. That's how it is with the Coryban-
tes, who have sharp ears only for the specific song that belongs to whatever

god possesses them; they have plenty of words and movements to go with *that* song; but they are quite lost if the music is different. That's how it is with you, Ion: when anyone mentions Homer, you have plenty to say, but
d if he mentions the others you are lost; and the explanation of this, for which you ask me—why it is that you have plenty to say about Homer but not about the others—is that it's not mastering the subject, but a divine gift, that makes you a wonderful singer of Homer's praises.

Ion: You're a good speaker, Socrates. Still, I would be amazed if you could speak well enough to convince me that I am possessed or crazed when I praise Homer. I don't believe you'd think so if you heard me speaking on Homer.

e Socrates: And I really do want to hear you, but not before you answer me this: on which of Homer's subjects do you speak well? I don't suppose you speak well on *all* of them.

Ion: I do, Socrates, believe me, on every single one!

Socrates: Surely not on those subjects you happen to know nothing about, even if Homer does speak of them.

Ion: And these subjects Homer speaks of, but I don't know about—what are they?

537 Socrates: But doesn't Homer speak about professional subjects in many places, and say a great deal? Chariot driving, for example, I'll show you, if I can remember the lines.

Ion: No, I'll recite them. I *do* remember.

Socrates: Then tell me what Nestor says to his son Antilochus, when he advises him to take care at the turning post in the horse race they held for Patroclus' funeral.

Ion: "Lean," he says,

*Lean yourself over on the smooth-planed chariot*
b *Just to the left of the pair. Then the horse on the right—*
*Goad him, shout him on, easing the reins with your hands.*
*At the post let your horse on the left stick tight to the turn*
*So you seem to come right to the edge, with the hub*
*Of your welded wheel. But escape cropping the stone . . .*[4]

c Socrates: That's enough. Who would know better, Ion, whether Homer speaks correctly or not in these particular verses—a doctor or a charioteer?

Ion: A charioteer, of course.

Socrates: Is that because he is a master of that profession, or for some other reason?

4. *Iliad* xxiii.335–40.

Ion: No. It's because he's a master of it.

Socrates: Then to each profession a god has granted the ability to know a certain function. I mean, the things navigation teaches us—we won't learn them from medicine as well, will we?

Ion: Of course not.

Socrates: And the things medicine teaches us we won't learn from architecture.

Ion: Of course not. d

Socrates: And so it is for every other profession: what we learn by mastering one profession we won't learn by mastering another, right? But first, answer me this. Do you agree that there are different professions—that one is different from another?

Ion: Yes.

Socrates: And is this how you determine which ones are different? When *I* find that the knowledge [involved in one case] deals with different subjects from the knowledge [in another case], then I claim that one is a e different profession from the other. Is that what you do?

Ion: Yes.

Socrates: I mean if there is some knowledge of the same subjects, then why should we say there are two different professions?—Especially when each of them would allow us to know the same subjects! Take these fingers: I know there are five of them, and you know the same thing about them that I do. Now suppose I asked you whether it's the same profession—arithmetic—that teaches you and me the same things, or whether it's two different ones. Of course you'd say it's the same one.

Ion: Yes.

Socrates: Then tell me now what I was going to ask you earlier. Do 538 you think it's the same way for every profession—the same profession must teach the same subjects, and a different profession, if it *is* different, must teach not the same subjects, but different ones?

Ion: That's how I think it is, Socrates.

Socrates: Then a person who has not mastered a given profession will not be able to be a good judge of the things which belong to that profession, whether they are things said or things done.

Ion: That's true. b

Socrates: Then who will know better whether or not Homer speaks beautifully and well in the lines you quoted? You, or a charioteer?

Ion: A charioteer.

Socrates: That's because you're a rhapsode, of course, and not a charioteer.

Ion: Yes.

Socrates: And the rhapsode's profession is different from the charioteer's.

Ion: Yes.

Socrates: If it's different, then its knowledge is of different subjects also.

ION: Yes.

c SOCRATES: Then what about the time Homer tells how Hecamede, Nestor's woman, gave barley-medicine to Machaon to drink? He says something like this—

> *Over wine of Pramnos she grated goat's milk cheese*
> *With a brazen grater. . . . And onion relish for the drink . . .*[5]

Is Homer right or not: would a fine diagnosis here come from a doctor's profession or a rhapsode's?

ION: A doctor's.

SOCRATES: And what about the time Homer says:

> d *Leaden she plunged to the floor of the sea like a weight*
> *That is fixed to a field cow's horn. Given to the hunt*
> *It goes among ravenous fish, carrying death.*[6]

Should we say it's for a fisherman's profession or a rhapsode's to tell whether or not he describes this beautifully and well?

ION: That's obvious, Socrates. It's for a fisherman's.

e SOCRATES: All right, look. Suppose you were the one asking questions, and you asked me, "Socrates, since you're finding out which passages belong to each of the professions Homer treats—which are the passages that each profession should judge—come tell me this: which are the passages that belong to a diviner and to divination, passages he should be able to judge as to whether they're well or badly composed?" Look how easily I can give you a true answer. Often, in the *Odyssey*, he says things like what Theoclymenus says—the prophet of the sons of Melampus:

> 539 *Are you mad? What evil is this that's upon you? Night*
> *Has enshrouded your hands, your faces, and down to your knees.*
> *Wailing spreads like fire, tears wash your cheeks.*
> *Ghosts fill the dooryard, ghosts fill the hall, they rush*
> *To the black gate of hell, they drop below darkness. Sunlight*
> b *Has died from a sky run over with evil mist.*[7]

And often in the *Iliad*, as in the battle at the wall. There he says:

5. *Iliad* xi.639–40 with 630.

6. *Iliad* xxiv.80–82.

7. *Odyssey* xx.351–57; line 354 is omitted by Plato.

*There came to them a bird as they hungered to cross over.*
*An eagle, a high-flier, circled the army's left*
*With a blood-red serpent carried in its talons, a monster,* c
*Alive, still breathing, it has not yet forgotten its warlust,*
*For it struck its captor on the breast, by the neck;*
*It was writhing back, but the eagle shot it groundwards*
*In agony of pain, and dropped it in the midst of the throng,*
*Then itself, with a scream, soared on a breath of the wind.*[8] d

I shall say that these passages and those like them belong to a diviner. They are for him to examine and judge.

Ion: That's a true answer, Socrates.

Socrates: Well, *your* answers are true, too, Ion. Now *you* tell me—just as I picked out for you, from the *Odyssey* and the *Iliad*, passages that belong to a diviner and ones that belong to a doctor and ones that belong to a e
fisherman—in the same way, Ion, since you have more experience with Homer's work than I do, you pick out for me the passages that belong to the rhapsode and to his profession, the passages a rhapsode should be able to examine and to judge better than anyone else.

Ion: My answer, Socrates, is "all of them."

Socrates: That's not *your* answer, Ion. Not "all of them." Or are you really so forgetful? But no, it would not befit a *rhapsode* to be forgetful.

Ion: What do you think I'm forgetting? 540

Socrates: Don't you remember you said that a rhapsode's profession is different from a charioteer's?

Ion: I remember.

Socrates: And didn't you agree that because they are different they will know different subjects?

Ion: Yes.

Socrates: So a rhapsode's profession, on *your* view, will not know everything, and neither will a rhapsode.

Ion: But things like that are exceptions, Socrates.

Socrates: By "things like that" you mean that almost all the subjects of b
the other professions are exceptions, don't you? But then what sort of thing *will* a rhapsode know, if not everything?

Ion: My opinion, anyhow, is that he'll know what it's fitting for a man or a woman to say—or for a slave or a freeman, or for a follower or a leader.

Socrates: So—what should a leader say when he's at sea and his ship is hit by a storm—do you mean a rhapsode will know better than a navigator?

Ion: No, no. A navigator will know *that*.

Socrates: And when he is in charge of a sick man, what should a leader c
say—will a rhapsode know better than a doctor?

Ion: Not that, either.

8. *Iliad* xii.200–207.

Socrates: But he *will* know what a slave should say. Is that what you mean?

Ion: Yes.

Socrates: For example, what should a slave who's a cowherd say to calm down his cattle when they're going wild—will a rhapsode know what a cowherd does not?

Ion: Certainly not.

Socrates: And what a woman who spins yarn should say about working
d with wool?

Ion: No.

Socrates: And what a man should say, if he's a general, to encourage his troops?

Ion: Yes! That's the sort of thing a rhapsode will know.

Socrates: What? Is a rhapsode's profession the same as a general's?

Ion: Well, *I* certainly would know what a general should say.

Socrates: Perhaps that's because you're also a general by profession,
Ion. I mean, if you were somehow both a horseman and a cithara-player
e at the same time, you would know good riders from bad. But suppose I
asked you: "Which profession teaches you good horsemanship—the one
that makes you a horseman, or the one that makes you a cithara-player?"

Ion: The horseman, I'd say.

Socrates: Then if you also knew good cithara-players from bad, the profession that taught you *that* would be the one which made you a cithara-player, not the one that made you a horseman. Wouldn't you agree?

Ion: Yes.

Socrates: Now, since you know the business of a general, do you know this by being a general or by being a good rhapsode?

Ion: I don't think there's any difference.

541 Socrates: What? Are you saying there's no difference? On your view
is there one profession for rhapsodes and generals, or two?

Ion: One, I think.

Socrates: So anyone who is a good rhapsode turns out to be a good general too.

Ion: Certainly, Socrates.

Socrates: It also follows that anyone who turns out to be a good general is a good rhapsode too.

Ion: No. This time I don't agree.

b Socrates: But you do agree to this: anyone who is a good rhapsode is
a good general too.

Ion: I quite agree.

Socrates: And aren't you the best rhapsode in Greece?

Ion: By far, Socrates.

Socrates: Are you also a general, Ion? Are you the best in Greece?

Ion: Certainly, Socrates. That, too, I learned from Homer's poetry.

Socrates: Then why in heaven's name, Ion, when you're both the best general *and* the best rhapsode in Greece, do you go around the country

giving rhapsodies but not commanding troops? Do you think Greece really c
needs a rhapsode who is crowned with a golden crown? And does not need a general?

ION: Socrates, *my* city is governed and commanded by you [by Athens]; we don't need a general. Besides, neither your city nor Sparta would choose me for a general. You think you're good enough for that yourselves.

SOCRATES: Ion, you're superb. Don't you know Apollodorus of Cyzicus?

ION: What does *he* do?

SOCRATES: He's a foreigner who has often been chosen by Athens to be d
their general. And Phanosthenes of Andros and Heraclides of Clazomenae—they're also foreigners; they've demonstrated that they are worth noticing, and Athens appoints them to be generals or other sorts of officials. And do you think that *this* city, that makes such appointments, would not select Ion of Ephesus and honor him, if they thought he was worth noticing?
Why? Aren't you people from Ephesus Athenians of long standing? And e
isn't Ephesus a city that is second to none?

But *you*, Ion, you're doing me wrong, if what you say is true that what enables you to praise Homer is knowledge or mastery of a profession. You assured me that you knew many lovely things about Homer, you promised to give a demonstration; but you're cheating me, you're a long way from giving a demonstration. You aren't even willing to tell me what it is that you're so wonderfully clever *about*, though I've been begging you for ages. Really, you're just like Proteus,[9] you twist up and down and take many
different shapes, till finally you've escaped me altogether by turning your- 542
self into a general, so as to avoid proving how wonderfully wise you are about Homer.

If you're really a master of your subject, and if, as I said earlier, you're cheating me of the demonstration you promised about Homer, then you're doing me wrong. But if you're not a master of your subject, if you're possessed by a divine gift from Homer, so that you make many lovely speeches about the poet without knowing anything—as *I* said about you—then you're not doing me wrong. So choose, how do you want us to think of you—as a *man* who does wrong, or as someone *divine*?

ION: There's a great difference, Socrates. It's much lovelier to be b
thought divine.

SOCRATES: Then *that* is how we think of you, Ion, the lovelier way: it's as someone divine, and not as master of a profession, that you are a singer of Homer's praises.

9. Proteus was a servant of Posidon. He had the power to take whatever shape he wanted in order to avoid answering questions (*Odyssey* iv.385 ff.).

# MENEXENUS

Menexenus *was also known in antiquity as* Funeral Oration*; Aristotle cites it once in his* Rhetoric *under that title. Here Socrates recites to Menexenus an oration for the annual ceremony when Athens praised itself and its citizens fallen in battle for the city. Several such speeches survive, including the celebrated oration of Pericles in Thucydides, Book II. Socrates himself alludes to this famous speech, claiming that its true author was none other than Aspasia, Pericles' intellectually accomplished mistress. He also claims her as his own rhetoric teacher—not that rhetoric ever was her profession!—and in fact as the author of the speech he is about to recite. Knowing that the time was at hand for the selection of this year's speaker, Aspasia, in the usual manner of rhetoric teachers in ancient Greece, had her pupil commit to memory her own composition, as a model of what a funeral orator ought to say. The rest of the dialogue is then occupied with Socrates' recitation.*

*It is usual in Plato for Socrates to disclaim personal responsibility, as here with Aspasia, for his excursions outside philosophy. One could compare especially* Cratylus*, where he playfully attributes his brilliant etymologizing to instruction and inspiration from Euthyphro (whose expert knowledge about the gods reported in* Euthyphro *thus included expert knowledge of the meanings of their names), and* Phaedrus*, with its appeal to the magical effects of the locale and to Socrates' retentive recall of others' speeches to explain his unaccustomed oratorical prowess. The reader is plainly to understand that this is being represented as Socrates' own speech.*

*Is Plato the dialogue's author? Aristotle, who cites it twice—not indeed naming Plato as author, but in the same way that he often cites Plato's works, as well known to the reader—gives powerful testimony that he is. Modern scholars' doubts have rested in large part on their inability to conceive what purpose Plato could have had in writing it. One purpose could be satirical, to show by exaggeration how trivial an accomplishment these rhetorical tours-de-force were; better, since Socrates' speech is in fact a highly skilled oration of the genre intended (with all the overblown praise of Athens and the selective attention to history that that entails), is to think it may show (as indeed the* Phaedrus *claims) how very much better a skilled philosopher is at the composition of speeches than the usual rhetorical 'expert'. Another ground for doubt has been found in the fact that Socrates carries his story of the Athenians' prowess down to the so-called Corinthian war of 395–387, whose dead he is officially memorializing—long after Socrates' death in 399. But that may only remind us that Plato's, and the ancients', literary conventions are not our own.*

*Menexenus was a prominent member of the Socratic circle: he is reported as present for the conversation on Socrates' last day (*Phaedo*), and he is one of the two young men Socrates questions about friendship in* Lysis.

*J.M.C.*

SOCRATES: Where is Menexenus coming from? The market place? 234

MENEXENUS: Yes, Socrates—the Council Chamber, to be exact.

SOCRATES: You at the Council Chamber? Why? I know—you fancy that you're finished with your schooling and with philosophy, and intend to turn to higher pursuits. You think you're ready for them now. At your age, my prodigy, you're undertaking to govern us older men, so that your b
family may carry on with its tradition of providing someone to look after us.

MENEXENUS: Socrates, with your permission and approval I'll gladly hold public office; otherwise I won't. Today, however, I went to the Chamber because I heard that the Council was going to select someone to speak over our war-dead. They are about to see to the public funeral, you know.

SOCRATES: Certainly I do. Whom did they choose?

MENEXENUS: Nobody. They put if off until tomorrow. But I think Archinus or Dion will be chosen.

SOCRATES: Indeed, dying in war looks like a splendid fate in many ways, Menexenus. Even if he dies a pauper, a man gets a really magnificent c
funeral, and even if he was of little account, he gets a eulogy too from the lips of experts, who speak not extempore but in speeches worked up long beforehand. They do their praising so splendidly that they cast a spell over our souls, attributing to each individual man, with the most varied and beautiful verbal embellishments, both praise he merits and praise he 235
does not, extolling the city in every way, and praising the war-dead, all our ancestors before us, and us ourselves, the living. The result is, Menexenus, that I am put into an exalted frame of mind when I am praised by them. Each time, as I listen and fall under their spell, I become a different b
man—I'm convinced that I have become taller and nobler and better looking all of a sudden. It often happens, too, that all of a sudden I inspire greater awe in the friends from other cities who tag along and listen with me every year. For they are affected in their view of me and the rest of the city just as I am: won over by the speaker, they think the city more wonderful than they thought it before. And this high-and-mighty feeling remains with me more than three days. The speaker's words and the sound of his voice sink into my ears with so much resonance that it is only with c
difficulty that on the third or fourth day I recover myself and realize where I am. Until then I could imagine that I dwell in the Islands of the Blessed. That's how clever our orators are.

Translated by Paul Ryan.

MENEXENUS: You're forever making fun of the orators, Socrates. This time, though, I don't think that the one who's chosen is going to have an easy time of it; the selection is being made at the last minute, so perhaps the speaker will be forced practically to make his speech up as he goes.

d SOCRATES: Nonsense, my good man. Every one of those fellows has speeches ready-made, and, besides, even making up this kind of speech as you go isn't hard. Now if he were obliged to speak well of the Athenians among the Peloponnesians or the Peloponnesians among the Athenians, only a good orator could be persuasive and do himself credit; but when you're performing before the very people you're praising, being thought to speak well is no great feat.

MENEXENUS: You think not, Socrates?

SOCRATES: No, by Zeus, it isn't.

e MENEXENUS: Do you think that *you* could deliver the speech, if that were called for, and the Council were to choose you?

SOCRATES: In fact, Menexenus, there would be nothing surprising in my being able to deliver it. I happen to have no mean teacher of oratory. She is the very woman who has produced—along with a multitude of other good ones—the one outstanding orator among the Greeks, Pericles, son of Xanthippus.

MENEXENUS: What woman is that? But obviously you mean Aspasia?

236 SOCRATES: Yes, I do—her and Connus, son of Metrobius. These are my two teachers, he of music, she of oratory. Surely it's no surprise if a man with an upbringing like that is skilled in speaking! But even someone less well educated than I—a man who learned music from Lamprus and oratory from Antiphon the Rhamnusian[1]—even he, despite these disadvantages, could do himself credit praising Athenians among Athenians.

MENEXENUS: And what would you have to say if the speech were yours to make?

SOCRATES: On my own, very likely nothing; but just yesterday in my
b lesson I heard Aspasia declaim a whole funeral oration on these same dead. For she heard that the Athenians, just as you say, were about to choose someone to speak. Thereupon she went through for me what the speaker ought to say, in part out of her head, in part by pasting together some bits and pieces thought up before, at the time when she was composing the funeral oration which Pericles delivered, as, in my opinion, she did.

MENEXENUS: And can you remember what Aspasia said?

SOCRATES: I *think* I can. Certainly I was taught it by the lady herself—
c and I narrowly escaped a beating every time my memory failed me.

MENEXENUS: So why don't you go ahead and repeat it?

SOCRATES: I'm afraid my teacher will be angry with me if I divulge her speech.

1. Lamprus was a respected musician, and Thucydides called Antiphon the foremost orator in Athens. Socrates' broad ironical point is that no one could have more accomplished teachers than these two.

MENEXENUS: Have no fear, Socrates. Speak. I shall be very grateful, whether you're pleased to recite Aspasia's speech or whosever it is. Only speak.

SOCRATES: But perhaps you will laugh at me if I seem to you, old as I am, to go on playing like a child.

MENEXENUS: Not at all, Socrates. In any case, just speak the speech.

SOCRATES: Well, certainly you're a man I'm so bound to gratify that I
would even be inclined to do so if you asked me to take off my clothes d
and dance—especially since we are alone. All right, listen. To begin with she spoke, I think, on the dead themselves—as follows:

"As for deeds, these men have just received at our hands what they deserve,[2] and with it they are making the inevitable journey, escorted at the outset communally by the city and privately by their families. Now
we must render them in words the remaining recognition that the law e
appoints for them and duty demands. For when deeds have been bravely done, it is through an eloquent speech that remembrance and honor accrue to their doers from the hearers. Clearly, what is required is a speech that will praise the dead as they deserve but also gently admonish the living, urging their sons and brothers to imitate the valor of these men, and consoling their fathers, their mothers and any of their grandparents who may remain alive.

"Well then, what speech on our part would display that effect? Where 237
would it be right for us to begin our praise of brave men, who in their lives gladdened their families and friends through their valor and by their death purchased safety for their survivors? I think it appropriate to present their praises in an order the same as that in which they became brave—the order of nature: they became brave by being sons of brave fathers. Let us, therefore, extoll first their noble birth, second their rearing and educa-
tion. After that, let us put on view the deeds they performed, showing b
that they were noble and worthy of their birth and upbringing.

"The nobility of these men's origin is rooted in that of their ancestors. The latter were not immigrants and did not, by arriving from elsewhere, make these descendants of theirs live as aliens in the land, but made them children of the soil, really dwelling and having their being in their ancestral home, nourished not, as other peoples are, by a stepmother, but by a
mother, the land in which they lived. Now they lie in death among the c
familiar places of her who gave them birth, suckled them, and received them as her own. Surely it is most just to celebrate the mother herself first; in this way the noble birth of these men is celebrated at the same time.

"Our land is indeed worthy of being praised not merely by us but by all of humanity. There are many reasons for that, but the first and greatest is that she has the good fortune to be dear to the gods. The quarrel of the

2. The remains of the dead have been exposed to view, mourned, and carried in procession to the tomb, where the speech is being delivered.

gods who disputed over her and the verdict that settled it bear witness
d to what we say.[3] How could it not be just for all humankind to praise a
land praised by the gods? The second commendation that is due her is
that in the age when the whole earth was causing creatures of all kinds—
wild animals and domestic livestock—to spring up and thrive, our land
showed herself to be barren of savage beasts and pure. Out of all the
animals she selected and brought forth the human, the one creature that
towers over the others in understanding and alone acknowledges justice
and the gods.

"The fact that everything that gives birth is supplied with the food
e its offspring needs is weighty testimony for this assertion that the earth
hereabouts gave birth to these men's ancestors and ours. For by this sign
it can be seen clearly whether or not a woman has really given birth: she
is foisting off an infant not her own, if she does not have within her the
wellsprings of its nourishment. The earth here, our mother, offers precisely
this as sufficient testimony that she has brought forth humans. She first
238 and she alone in that olden time bore food fit for humans, wheat and
barley, which are the finest and best nourishment for the human race,
because she really was the mother of this creature. And such testimonies
are to be taken more seriously on earth's behalf than a woman's, inasmuch
as earth does not mimic woman in conceiving and generating, but
woman earth.

"She was not miserly with this grain; she dispensed it to others too.
Later she brought olive oil to birth for her children, succor against toil.
And when she had nourished them and brought them to their youthful
b prime, she introduced the gods to rule and teach them. They (it is fitting
to omit their names on an occasion like this: we know them) equipped us
for living, by instructing us, earlier than other peoples, in arts for meeting
our daily needs, and by teaching us how to obtain and use arms for the
defense of the land.

"With the birth and education I have described, the ancestors of these
men lived under a polity that they had made for themselves, of which it
c is right to make brief mention. For a polity molds its people; a goodly one
molds good men, the opposite bad. Therefore I must show that our ances-
tors were molded in a goodly polity, thanks to which both they and the
present generation—among them these men who have died—are good
men. For the polity was the same then and now, an aristocracy; we are
now governed by the best men and, in the main, always have been since
that remote age. One man calls our polity democracy, another some other
d name that pleases him; in reality, it is government by the best men along
with popular consent. We have always had kings; at one time they were

3. In myth Athena and Posidon vied for sovereignty of Athens. On the grounds that Athena's gift of the olive tree was more valuable than the salt-water spring Posidon had made gush forth on the Acropolis, the twelve gods appointed by Zeus to arbitrate the dispute awarded the sovereignty to her.

hereditary, later elected.[4] Yet in most respects the people have sovereign power in the city; they grant public offices and power to those who are thought best by them at a given time, and no one is excluded because of weakness or poverty or obscurity of birth, nor is anyone granted honors because of the corresponding advantages, as happens in other cities. There is, rather, one standard: he who is thought wise or good exercises power and holds office.

"The reason we have this polity is our equality in birth. The other e
cities have been put together from people of diverse origin and unequal
condition, so that their polities also are unequal—tyrannies and oligarchies.
Some of their inhabitants look on the others as slaves, while the latter look
on the former as masters. We and our fellows-citizens, all brothers sprung 239
from one mother, do not think it right to be each other's slaves or masters.
Equality of birth in the natural order makes us seek equality of rights in
the legal and defer to each other only in the name of reputation for goodness
and wisdom.

"Because of this splendid polity of ours, the fathers of these men—our
fathers—and the men themselves, brought up in complete freedom and
well-born as they were, were able to display before all humanity, in both
the private and the public spheres, many splendid deeds. They thought
that they were obliged to fight on the side of freedom both for Greeks b
against Greeks and against barbarians for Greece as a whole. My time is
too brief to narrate as the matter deserves how they defended their country
against Eumolpus and the Amazons and even earlier invaders, or how
they defended the Argives against the Cadmeans and the sons of Heracles
against the Argives.[5] Besides, poets have already hymned the valorous
exploits of the ancients in splendid song and made them known to all; so
if we should try to elaborate the same subjects in prose, we would perhaps c
finish a clear second.

"I think it best to pass those deeds by for that reason as well as because they already have a reward worthy of them. But in regard to deeds for which no poet has yet received glory worthy of worthy themes, and which remain in virgin state[6]—those I think I ought to mention with praise and

4. After the monarchy was abolished at Athens, one of the nine principal administrative officials, called archons, was the "king archon." He was concerned for the most part with religious functions.

5. Eumolpus was defeated at Eleusis by the legendary Athenian king Erechtheus. According to legend, the Amazons, when they invaded Athens, were defeated by Theseus, who also led the Athenians in forcing Thebes, founded by Cadmus, to return the Argive dead after the war of the Seven Against Thebes. The Sons of Heracles were supposed to have been pursued by their father's enemy Eurystheus, who ruled cities in the part of the Peloponnese that is often referred to, somewhat loosely, as Argos. When they took refuge in Athens, he marched against them and was defeated and killed by the Athenians.

6. Reading *en mnēsteia(i)* in c4.

woo out of seclusion for others to put into choral odes and poems of other
kinds in a manner that befits the men who performed them.

Here are the first among the deeds I mean. When the Persians held
d dominion over Asia and were trying to enslave Europe, the sons of this
land checked them—our fathers, whose valor it is both right and necessary
to mention first in praise. Clearly one who is to praise it well must contem-
plate it after he has, in thought, been transported into that time when the
whole of Asia was already subject to a third Persian king. Cyrus, the first of
them, when by his keen spirit he liberated his fellow citizens, the Persians,
e enslaved the Medes, their masters, at the same time and became lord over
the rest of Asia as far as Egypt; his son over as much of Egypt and Libya
as it was possible to penetrate. Darius, third of the line, with his land
forces set the bounds of his sway as far as Scythia, and with his ships
240 gained so much control over the sea and its islands that no one presumed
to oppose him. The minds of all humankind were in bondage: so many,
such great and warlike, peoples had the realm of Persia enslaved.

"Now Darius denounced us and the Eretrians. On the pretext that we
had plotted against Sardis he dispatched five hundred thousand men in
transport and combat ships, with three hundred ships of war, and ordered
Datis, their commander, to come back with the Athenians and Eretrians
in tow if he wanted to keep his head on his shoulders.

b "Datis sailed to Eretria, against men who were the most highly esteemed
in warfare of the Greeks of that time and were quite numerous besides.
He overpowered them in three days. He also scoured their whole country
to keep anyone from escaping. This he accomplished in the following
way: his soldiers proceeded to the border of Eretria's territory and posted
themselves at intervals from sea to sea; they then joined hands and passed
c through the entire country, so that they would be able to tell the king that
no one had escaped them.

"Datis and his force left Eretria and came ashore at Marathon with the
same intention, confident that it would be easy for them to force the
Athenians under the same yoke as they had the Eretrians and lead them
captive too. Even though the first of these operations had been accom-
plished and the second was underway, none of the Greeks came to aid
either the Eretrians or the Athenians except the Lacedaemonians—and
d they arrived on the day after the battle. All the others were panic-stricken
and lay low, cherishing their momentary safety.

"By being transported into that situation, I say, one might realize just
how great the valor really was of those men who withstood the might of
the barbarians[7] at Marathon, chastened the arrogance of all Asia, and were
first to erect a trophy[8] over the barbarians. They showed the way and

7. I.e., as usual in classical Greek, the Persians. Similarly, "king" below refers to the king of Persia.

8. I.e., win a battle; trophies, usually consisting of a suit of enemy armor on a stake, were erected at battle sites by the army still in possession of the field after the action.

taught the rest that Persian power is not invincible and that there is no multitude of men and mass of money that does not give way to valor. I declare that those men were fathers not only of our bodies but of our e freedom, ours and that of everyone on this continent. For it was with eyes on that deed that the Greeks dared to risk the battles for their deliverance that followed—pupils of the men who fought at Marathon.

"So the highest rank in honor must be assigned to them by my speech, 241 but the second to the men who fought and won at sea off Salamis and at Artemisium.[9] For one could give a lengthy account of those men, too—the kind of assaults they withstood on land and sea, and how they fought them off. But I shall mention what I think is their finest achievement: they accomplished the successor to the task accomplished at Marathon. The men there showed the Greeks only that a few of them could fight off many barbarians by land; by sea there was still doubt, and the Persians had a b reputation for invinciblity because of their numbers, wealth, skill, and strength. This in particular is what merits praise in the men who fought the sea battles of those times: they freed the Greeks from this second terror and made them stop fearing preponderance in ships and men. So it turns out that the other Greeks were educated by both—by those who fought at Marathon and those who took part in the naval battle at Salamis: as c pupils of the former by land and the latter by sea, they lost their habit of fearing the barbarians.

"And of the exploits for the deliverance of Greece that at Plataea was, I maintain, the third, both in number and in valor—at last an effort shared by both the Lacedaemonians and the Athenians.

"So all the men in those battles fought off a very great and formidable danger. They are being eulogized for their valor now by us, and will be eulogized in the future by posterity. Afterwards, though, many Greek cities were still subject to the barbarian, and it was reported that the king d himself had a new attempt on the Greeks in mind. Therefore, it is right for us to mention those, too, who, by cleansing the sea and driving from it the entire barbarian force, brought to completion what their predecessors had done for our deliverance. These were the men who fought in the naval battle at Eurymedon, those who made the expedition to Cyprus, and those who sailed to Egypt and many other places. They must be mentioned with e gratitude, because they instilled fear in the king and forced him to ponder his own safety rather than plot the destruction of the Greeks.

"Well, this war against the barbarians was endured to the end by the 242 whole city in defense of ourselves and our fellow speakers of Greek. But when peace prevailed and the city was held in honor, there came upon her what people generally inflict on the successful: jealousy and—through jealousy—ill-will. And that involved her, reluctantly, in fighting against Greeks. When war had broken out, the Athenians did battle with the

9. During the second Persian invasion of the Greek mainland, by Darius' son Xerxes in 480–479.

Lacedaemonians at Tanagra for the freedom of the Boeotians, and although
b the issue of the battle was unclear, the action that followed was decisive.
For the Lacedaemonians withdrew and abandoned those whom they had
come to aid, but our men were victorious at Oenophyta two days later
and justly restored those who were unjustly in exile. They were the first
after the Persian War to fight for the freedom of Greeks in the new way—
c against Greeks; and since they proved to be brave men and liberated those
to whose aid they came, they were the first to be buried in this tomb with
civic honors.

"Later, when a great war[10] had broken out, and all the Greeks attacked
our city, ravaged her land, and made sorry recompense for the services
she had done them, our countrymen, who had been victorious over them
at sea and had captured their Lacedaemonian leaders on Sphacteria, spared
d the latter, sent them home, and made peace, even though they could have
killed them. They thought that against men of their own race it is right to
make war as far as victory rather than bring the common interests of Greece
to ruin through resentment against one city, but against the barbarians it
is right to make total war. The men who fought in that war and now lie
here deserve praise, because they showed that if anyone maintained that
in the former war, the one against the barbarians, any other people were
braver than the Athenians, that was not true. By prevailing when Greece
e was in discord, by getting the better of the foremost among the other
Greeks, they showed on this occasion that they could conquer by them-
selves those with whom they had once conquered the barbarians in a
common effort.

"After this peace a third war[11] broke out—a war that defied all expecta-
243 tions and was terrible. Many brave men who died in it lie here. Many fell
on Sicilian shores after they had set up a great many trophies in battles
for the freedom of the people of Leontini. Bound by oaths, they had sailed
to those parts to defend them, but when their city found herself thwarted
on account of the length of the voyage and could not reinforce them, they
gave out and came to grief. Their enemies, even though they fought on
the other side, have more praise for their self-control and valor than have
the friends of other men. Many fell, too, in naval battles on the Hellespont,
b after capturing all the enemy ships in one engagement,[12] and coming off
victorious in many others.

"As for my saying that the war was terrible and defied all expectations, what I mean is that the other Greeks arrived at such a pitch of jealous rivalry against our city that they brought themselves to send an embassy

10. The reference is to the first part (432–421) of the Peloponnesian War, called the Archidamian War after a Spartan, i.e., Lacedaemonian, king.

11. This "third war" (counting the Persian War as the first) is the second and final part of the Peloponnesian War, which broke out when the Athenians sent an expedition to Sicily in 415 and which lasted until 404.

12. The battle of Cyzicus, in 410.

to their worst enemy, the king, whom they had as our allies expelled in
a common effort, to bring him back on their own, a barbarian against
Greeks, and to muster everyone, Greeks and barbarians, against our city.

"And at just that point her strength and valor shone bright. For when c
her enemies supposed that she was already beaten, and when her ships
were blockaded at Mytilene, the citizens themselves embarked and went
to the rescue with sixty ships. After they had, as everyone agrees, behaved
most heroically in overcoming their enemies and rescuing their friends,
they met with undeserved calamity: their dead were not picked up from
the sea and do not lie here.[13] We ought to remember and praise those men
forever, because by their valor we won not only that naval engagement, d
but also the rest of the war. For it was through them that the opinion
gained currency that our city could never be defeated in war, not even by
all mankind. And that belief was true. We were overcome by our own
quarrels, not by other men; by them we remain undefeated to this day,
but we conquered ourselves and suffered defeat at our own hands.

"Afterwards, when tranquillity reigned and we were at peace with our e
neighbors, there was civil war[14] among us, fought in such a way that, if
people *had* to engage in internal strife, no one would pray for his city to
be stricken in any other. So readily and naturally—so much contrary to
the expectations of the other Greeks—did the citizens from the Piraeus
and those from the city deal with each other! So moderately did they bring
the war against the men at Eleusis to a conclusion!

"And the sole cause for all that was their genuine kinship, which pro- 244
vided them, not in word but in fact, with a firm friendship based on ties
of blood. We must also remember those who died at each other's hands
in that war and try to reconcile them in ceremonies such as today's by
what means we have—prayers and sacrifices—praying to the gods below
who have power over them, since we ourselves are reconciled as well. For
they did not lay hands on each other through wickedness or enmity, but
through misfortune. And we, the living, are witnesses of this ourselves, b
since we, who are of the same stock, have forgiven each other for what
we did and for what we suffered.

"After that we got general peace, and the city enjoyed tranquillity. She
forgave the barbarians; she had done them harm, and they gave as good
as they got. But the Greeks aroused her indignation, because she recalled
the thanks they had returned for the good she had done them—by making
common cause with the barbarians, stripping her of the ships that had c
once been their salvation, and dismantling walls once sacrificed by us to

13. Failure to pick up the dead and rescue the wounded from the sea after the battle of Arginusae, in 406, caused widespread resentment against the generals in charge.

14. This "civil war" was fought in 403 to restore the Athenian democracy by ousting the oligarchy of the "Thirty Tyrants," who had seized power with Spartan help at the end of the Peloponnesian War. The conclusion of the civil war, referred to just below, came about through the defeat of the Thirty at Eleusis, where they had retreated.

keep theirs from falling.[15] The city formed a policy of no longer protecting
Greeks from being enslaved, either by each other or by barbarians, and
conducted herself accordingly. So, since this was our policy, the Lacedae-
d monians, thinking that we, the champions of freedom, had fallen and all
they had to do now was enslave the other Greeks, set about that very task.

"And why should I prolong the tale? From here on I wouldn't be speaking
of things that happened in the past to former generations. We ourselves
know how the foremost among the Greeks—the Argives and the Boeotians
and Corinthians—came, in a state of panic, to feel a need for our city, and—
wonder of wonders!—even the king reached such a point of perplexity that
his deliverance came full circle to arising from nowhere other than this
city, which he had kept zealously trying to destroy.

e "In fact, if one should wish to lay a just charge against our city, one would
rightly blame her only by saying that she is always too compassionate and
solicitous of the underdog. And during this time in particular, she was
not able to persevere and stick to the policy she had decided on—namely,
245 to aid against enslavement none of the cities that had treated her people
unfairly. On the contrary, she relented, came to the rescue, and released
the Greeks from slavery by coming to their aid herself, with the result that
they remained free until they once more enslaved themselves. On the
other hand—out of respect for the trophies at Marathon and Salamis and
Plataea—she could not stomach aiding the king in person; but merely by
allowing exiles and mercenaries to assist him, she was, by common consent,
his salvation. And after she had rebuilt her walls and fleet, she took the
b war upon herself, when she was forced to do so, and fought with the
Lacedaemonians in the Parians' behalf.

"The king came to fear our city, when he saw that the Lacedaemonians
were giving up the war at sea. Out of a wish to disengage himself, he
demanded, as his price for continuing to fight on our side and that of the
other allies, the Greeks on the Asian mainland whom the Lacedaemonians
had previously made over to him.[16] He did so because he believed that
c we would refuse and give him an excuse for disengaging. He was mistaken
about the other allies; the Corinthians, the Argives, the Boeotians, and the
rest were willing to hand them over to him and made a sworn treaty on
terms that if he would give them money, they would hand over the Greeks
on the mainland. We alone could not bring ourselves to betray them or
swear the oath. That is how firm and sound the high-mindedness and
liberality of our city are, how much we are naturally inclined to hate the
d barbarians, through being purely Greek with no barbarian taint. For people

15. In response to Xerxes' invasion, the Athenians abandoned their city walls to destruction and took to the "wooden walls" of their ships, which were instrumental in defeating the Persians at Salamis. Now Sparta had exacted the destruction of both walls and ships in the peace terms that ended the Peloponnesian War.

16. This probably refers to the terms under which the Spartans brought Persia into the Peloponnesian War against Athens in 412.

who are barbarians by birth but Greeks by law—offspring of Pelops, Cadmus, Aegyptus, Danaus and many others—do not dwell among us.[17] We dwell apart—Greeks, not semibarbarians. Consequently, our city is imbued with undiluted hatred of foreignness.

"For all that, we found ourselves once again isolated, because we refused
to commit a shameful and sacrilegious deed by betraying Greeks to barbar- e
ians. So we arrived in the same circumstances that had led to our defeat before, but this time, with divine help, we managed the war better: we disengaged ourselves while still in possession of our ships, walls, and colonies. That is how glad the enemy, too, were to make peace! But we
lost brave men in this war also, victims of rough terrain at Corinth and 246
treason at Lechaeum. Brave, too, were those who extricated the king from his difficulties and banished the Lacedaemonians from the sea. I remind you of those men, and it is fitting for you to praise them with me and do them honor.

"And these, in truth, were the deeds of the men who lie here and of others who have died for Athens. Many fine words have been spoken about them, but those that remain unsaid are a great deal more numerous
and finer still; many days and nights would not suffice for one who sets b
out to complete the enumeration. Therefore we must remember the fallen, and every man, just as in war, must encourage their descendants not to desert the ranks of their ancestors and not to yield to cowardice and fall back. So then, I myself both so encourage you today, sons of brave men,
and in the future, whenever I meet any of you, I will remind you and c
exhort you to do your utmost to be as brave as can be.

"On this occasion, though, it is my duty to repeat the words that our fathers commanded us to report to those left at home every time they were about to put their lives at risk, in case they lost them. I will tell you what I heard from them and what—judging by what they said then—they would gladly say to you now, if only they could. Whatever I report you must imagine you are hearing from them in person. And this is what they said:

"'Sons, the present circumstance itself reveals that you are sprung from d
brave fathers. Free to live on ignobly, we prefer to die nobly rather than subject you and your descendants to reproach and bring disgrace on our fathers and all our ancestors. We consider the life of one who has brought disgrace on his own family no life, and we think that no one, human being or god, is his friend, either on the earth or beneath it after his death.

"'Therefore, you must remember what we say and do whatever you do
to the accompaniment of valor, knowing that without it all possessions c
and all ways of life are shameful and base. For neither does wealth confer

17. Many Greek cities had adventurers from abroad mixed up in their foundation legends, such as Pelops from Asia Minor at Mycenae, Cadmus from Phoenicia at Thebes, and Aegyptus and Danaus from Egypt and Libya at Argos.

distinction on one who possesses it with cowardice (the riches of a man
like that belong to another, not himself) nor do bodily beauty and strength,
when they reside in a worthless and cowardly man, seem to suit him. On
the contrary, they seem out of character; they show up the one who has
them for what he is and reveal his cowardice. Moreover, all knowledge
247 cut off from rectitude and the rest of virtue has the look of low cunning,
not wisdom.

"'For these reasons, make it your business from beginning to end to do
your absolute utmost always in every way to surpass us and our ancestors
in glory. If you do not, be sure that if we excel you in valor, our victory,
as we see it, brings us shame, but if we are excelled by you, our defeat
brings happiness. And the surest way to bring about our defeat and your
b victory would be if you would prepare yourselves not to abuse and waste
the good repute of your ancestors, because you are aware that for a man
with self-respect nothing is more disgraceful than to make himself honored
not through himself, but through his ancestors' glory. Honors that come
from ancestors are a noble and magnificent treasure for their descendants,
but it is shameful and unmanly to enjoy the use of a treasure of wealth
and honors and fail to hand it on to the following generation because of
a lack of acquisitions and public recognition on one's own part. And if
c you will live as we advise you to live, you will come to us as friends to
friends, when your destiny conveys you here; but if you have neglected
our advice and behaved as cowards, no one will welcome you. So ends
what is to be reported to our sons.

"'And as for those of our fathers and mothers who still live, one ought
ceaselessly to encourage them to bear the sorrow, should it fall to their
lot, as easily as they can, instead of joining them in lamentations. For they
d will stand in no need of a stimulus for grief; the misfortune that has befallen
them will be enough to provide that. A better course is to try to heal and
soothe them, by reminding them that the gods have answered their most
earnest prayers. For they prayed for their sons to live not forever, but
bravely and gloriously. And that—the greatest of boons—is what they
received. It is not easy for a mortal to have *everything* in his life turn out
as he would have it.

"'If they bear their sorrows courageously, they will seem to be really
fathers of courageous sons—and just as courageous themselves; but if they
e succumb to grief, they will provide grounds for suspicion that either they
are not our fathers or the people who praise us are mistaken. Neither of
these must happen. On the contrary, they above all must be our encomiasts
in action, by showing themselves to be true men, with the look of truly
being the fathers of true men. *Nothing too much* has long been thought an
excellent adage—because it is, in truth, excellent. For that man's life is
best arranged for whom all, or nearly all, the things that promote happiness
248 depend on himself. Such a man does not hang from other men and necessar-
ily rise or fall in fortune as they fare well or badly; he is the temperate,
he is the brave and wise man. He above all, when wealth and children

come and when they go, will pay heed to the adage: because he relies on himself, he will be seen neither to rejoice nor to grieve *too much*.

"'That is the sort of men we expect our fathers to be, the sort we wish b
them to be, and the sort we say they are. It is, moreover, how we now comport ourselves—neither too much vexed nor too fearful if the time of our death is upon us. And we beg our fathers and mothers to pass the rest of their lives with these same sentiments. We want them to know that they will give us no special pleasure by singing dirges and wailing over us. On the contrary, if there is among the dead any perception of the living, that is how they would most displease us—by doing themselves injuries c
and bearing their sorrows heavily. They would please us most by bearing them lightly and with moderation. By that time our lives will have come to the conclusion that is noblest for human beings, so that it is more fitting to celebrate them than to lament them. But by caring for our wives and children and nourishing them, and by turning their minds to the concerns of the living, they would most readily forget their troubles and live more nobly, more uprightly, and more in harmony with our wishes. d

"'That is enough to report from us to our parents. As for the city—we would exhort her to care for our parents and children, educating the latter decently and cherishing the former in their old age as they deserve, if we did not, in fact, know that she will care for them well enough with no exhortation from us.'

"Children and parents, the dead commanded me to report those words, e
and I report them with all my heart. And on my own part, in these men's name I beg their sons to imitate them, and I beg their fathers to be confident about themselves, knowing that we will, as individuals and as a community, cherish you in your old age and care for you, anywhere any one of us comes upon any one of you. No doubt you yourselves are aware of the concern shown by the city: she has made laws relating to the families of men who have died in war, and she takes care of their children and parents. More than in the case of other citizens, it is the official duty of 249
the highest magistracy to see to it that their fathers and mothers are protected from injustice. The city herself assists in bringing up their children, eager to keep their orphaned condition as hidden from them as it can be. She assumes the role of father to them while they are still children. When they attain manhood, she decks each of them out in hoplite's armor and sends him out on his life's business, showing him and reminding him of his father's pursuits, by giving him the tools of his father's valor and, at the same time, allowing him, for the sake of the omen, to go for the b
first time to his ancestral hearth, there to rule in might, arrayed in arms.[18]

18. During the festival called the Great Dionysia, before the competition in tragedy which formed part of it, grown sons of men who had been killed in war were presented to the people in the theater, dressed in hoplite armor, and put in charge of their household and property.

"The dead themselves she never fails to honor: every year she herself celebrates for all publicly the rites that are celebrated for each in private, and in addition she holds contests in athletic prowess and horsemanship and in music and poetry of every kind. Quite simply, for the dead she
249c stands as son and heir, for their sons as a father, for their parents as a guardian; she takes complete and perpetual responsibility for all of them.

"With this in mind, you ought to bear your sorrow more patiently; in that way you would best please both the dead and the living and would most easily heal and be healed. And now that you and all the others have, according to the custom, publicly lamented the dead, take your departure."

d There you have it, Menexenus—the speech of Aspasia of Miletus.

Menexenus: By Zeus, Socrates, your Aspasia is indeed lucky if, woman though she be, she can compose speeches like that one.

Socrates: If you doubt it, come to class with me and hear her speak.

Menexenus: I have often talked with Aspasia, and I know what she is like, Socrates.

Socrates: Well then, don't you admire her and aren't you grateful to her for her speech now?

Menexenus: Yes, Socrates, I'm very grateful for that speech—to her or
e whoever it was who recited it to you. Furthermore, I'm grateful to him who recited it to me, for that and many other favors besides.

Socrates: Very well, but make sure you don't give me away, so that I may report to you many fine, statesmanlike speeches from her in the future.

Menexenus: Don't worry. I won't. Just be sure to report them.

Socrates: Yes, I'll be sure to.

# CLITOPHON

*Socrates is in Clitophon's bad books because he has been unable to satisfy Clitophon's thirst for virtue. It was Socrates himself, with his rousing exhortations to virtue, who stimulated this desire in Clitophon and caused him to enter the Socratic milieu in search of the knowledge that he needed next: a philosophical understanding of virtue itself, especially justice. With Socrates and Socrates' friends, his search always ended in dead ends, and he concluded that the Socratic project had to be pursued at a deeper level, in open discussions with Thrasymachus and anybody else who might help.*

*It comes as quite a surprise to see a Platonic dialogue in which Socrates is the target of attack and fails to have the last word, especially considering that the criticisms he leaves unanswered are delivered by an associate of Thrasymachus, the radical thinker whose views are rejected in Plato's* Republic. *Even considering the rich variety of the Platonic corpus,* Clitophon *is an oddity, indeed an enigma.*

*One of the most interesting features of the dialogue is the Socratic exhortation to virtue (407b–408c), a version of the speeches with which Socrates repeatedly harangued his fellow Athenians. The ideas in this exhortation have parallels in Plato's* Apology *and* Euthydemus, *the* Alcibiades, *Aeschines'* Alcibiades *(fragments), Xenophon's* Memoirs of Socrates *(IV.ii), and other works, including no doubt the lost* Exhortation *dialogues of Aristippus of Cyrene and Antisthenes of Athens. The rhetoric of Socrates' exhortation in* Clitophon *is paralleled in Xenophon's* Memoirs of Socrates *(I.v). Although his enthusiasm for this style of exhortation is rather sarcastically expressed, Clitophon focuses his criticism on what comes next, or rather, on what fails to come next: a properly philosophical understanding of the nature of justice and what it accomplishes. The remarkable thing is that Clitophon argues in the same dialectical way that Socrates does in Plato's Socratic dialogues; Socrates is hoist with his own petard, and Clitophon is the Socratic hero of the piece.*

*But why is Socrates the villain? Does the author align himself with the rhetorical tradition in rejecting the entire Socratic legacy as a dead end? Or is he a spokesman for Plato and his dialectical attempt to establish the Socratic way of thinking on deeper and better foundations than those built upon by competing followers of Socrates? Might the author even be Plato himself? All these questions remain open.*

*Xenophon seems to have read* Clitophon*; if so, his reply in Socrates' defense (*Memoirs of Socrates *I.iv.1) would date it to the second quarter of the fourth*

*century* B.C.*—during Plato's lifetime. The dialogue is a carefully contrived pamphlet, not a fragment or a draft.*

*D.S.H.*

406 SOCRATES: We have recently been informed that Clitophon the son of Aristonymos, in discussion with Lysias, has been criticizing the conversations and speeches of Socrates, while greatly praising the instruction of Thrasymachus.[1]

CLITOPHON: Whoever told you that, Socrates, misrepresented what I said to Lysias about you. Though it's true that I didn't praise you for some things, I did praise you for others. Since you're obviously scolding me right now, though you're pretending you don't care, I'd be very glad to tell you myself what I said—especially since we happen to find ourselves alone—so you won't so readily suppose that I have anything against you. In fact, you probably didn't hear the truth, which is why I think you're being needlessly hard on me. So[2] if you'd let me speak freely, I'd gladly do so—I want to tell you what I said.

407 SOCRATES: By all means; it would be shameful for me not to submit to you when your intention is to help me; for clearly, once I know my good and bad points, I will make it my practice to pursue and develop the former while ridding myself of the latter to the extent that I am able.

CLITOPHON: Listen, then. Socrates, when I was associating with you I was often struck with amazement by what you said. You appeared to me to rise above all other men with your magnificent speeches when you reproached mankind and, like a god suspended above the tragic stage, chanted[3] the following refrain:

> b O mortals, whither are you borne? Do you not realize that you are doing none of the things you should?![4] You men spare no pains in procuring wealth for yourselves, but you neither see to it[5] that your sons, to whom you are leaving this wealth, should know how to use it justly, nor do you find them teachers of justice (if justice can be taught), nor anybody to exercise and train them adequately (if it is acquired by exercise and training)—nor indeed have you started by undergoing such treatment yourselves!

Translated by Francisco J. Gonzalez.

1. Lysias was a famous orator in Athens (*Phaedrus* 227a ff.); Thrasymachus, a teacher of rhetoric (*Phaedrus* 266c), appears in *Republic* (336b ff.) in a hostile light.

2. Reading *dē* instead of *de* in a12.

3. Accepting the conjecture *humnois* in a8.

4. Placing a question mark after *prattontes* in b2.

5. Accepting the supplement *oute phrontizete* after *paradōsete* in b4.

But when you see that you and your children have had a thor- c
ough education in grammar, gymnastics and the arts—which you
consider to be a complete education in virtue—and that you still
have turned out to be no good at using wealth, how can you fail
to despise our present education, and seek those who will rescue
you from this lack of culture?! Yet it is this dissonance, this care-
lessness, not dancing the wrong measures to the lyre, that makes
measure and harmony disappear between brother and brother, d
city and city, as they oppose each other, clash and fight, inflicting
and suffering the utmost horrors of war.

You say that men are unjust because they want to be, not be-
cause they are ignorant or uneducated. But then you have the ef-
frontery to say, on the other hand, that injustice is shameful and
hateful to the gods. Well, then, how could anyone willingly
choose such an evil?! "Perhaps he is defeated by pleasure," you
say. But isn't this defeat involuntary if conquering is voluntary?
Thus every way you look at it, the argument shows that injustice
is involuntary, and that every man privately and every city pub- e
licly must devote to this matter greater care than is presently the
norm.

When, Socrates, I hear you say such things time and time again, I'm
very impressed and I praise you to the skies; and also when you go on
to the next point, that those who discipline the body while neglecting the
soul are doing something else of the same sort, neglecting that which
should rule while busying themselves with that which should be ruled;
and also when you say that it's better to leave unused what you don't
know how to use: if someone doesn't know how to use his eyes or his
ears or his whole body, it would be better for him not to use it all, whether
for seeing or hearing or anything else, rather than use it in some haphazard 408
way. In fact, the same applies to skills; for someone who doesn't know
how to use his own lyre will hardly be able to use his neighbor's lyre, nor
will someone who doesn't know how to use the lyre of others be capable
of using his own lyre, nor any other instrument or possession whatsoever.
Your speech delivers a wonderful coup de grace when it concludes that
someone who doesn't know how to use his soul is better off putting his
soul to rest and not living at all rather than leading a life in which his
actions are based on nothing but personal whim. If for some reason he
must live, it would be better for such a man to live as a slave than to be b
free, handing over the rudder of his mind, like that of a ship, to somebody
else who knows that skill of steering men which you, Socrates, often call
politics, the very same skill, you say, as the judicial skill and justice.

I dare say I never objected nor, I believe, ever will object to these argu- c
ments, nor to many other eloquent ones like them, to the effect that virtue
is teachable and that more care should be devoted to one's self than to
anything else. I consider them to be extremely beneficial and extremely

effective in turning us in the right direction; they can really rouse us as if
we'd been sleeping. I was therefore very interested in what would come
next after such arguments; at first I asked not you, Socrates, but your
companions and fellow enthusiasts, or friends, or whatever we should call
their relationship to you. And I first questioned those who are thought by
d you to be really something; I asked them what argument would come next
and put my case to them in a style somewhat like your own:

> O you most distinguished gentlemen, what are we actually[6] to
> make of Socrates' exhorting of us to pursue virtue? Are we to be-
> lieve that this is all there is, and that it is impossible to pursue the
> matter[7] further and grasp it fully? Will this be our life-long work,
> e simply to convert to the pursuit of virtue those who have not yet
> been converted so that they in turn may convert others? Even if
> we agree that this is what a man should do, should we not also
> ask Socrates, and each other, what the next step is? How should
> we begin to learn what justice is? What do we say?
>
> It's as if we were children with no awareness of the existence of
> such things as gymnastics and medicine, and somebody saw this
> and exhorted us to take care of our bodies and reproached us, say-
> ing that it's shameful that we devote such care to cultivating
> wheat, barley, vines and all the other things which we work hard
> to acquire for the sake of the body, while we fail to discover any
> 409 skill or other means of making the body itself as good as possible,
> even though such skills exist. Now, if we were to ask the man
> who gave us this exhortation, "Which skills are you talking
> about?," he would presumably reply, "Gymnastics and medicine."
> Now what about us? What do we say is the skill which concerns
> the virtue of the soul? Let's have an answer.

The man who appeared the most formidable among your companions
answered these questions by telling me that this skill is "the very skill
b which you hear Socrates talking about, namely, justice itself." Then I said,
"Don't just give me the name; try it this way. Medicine is surely a kind
of skill. It has two results: it produces other doctors in addition to those
who are already doctors, and it produces health. Of these, the second result
is not itself a skill, but rather the product of a skill, the product we call
'health'; the skill itself is what teaches and what's taught. Likewise, carpen-
try has as its results a house and carpentry itself; the first is the product
while the second is what's taught. Let's assume that one result of justice
c is also to produce just men, just as in the case of each of the skills a goal

6. Reading *nun* in d2 as enclitic.

7. Accepting the emendation *estin* for *eni* in d4.

is to produce men with that skill—but what, then, are we to call the other thing, the product which the just man produces for us? Tell me."

He, I think, replied, "the beneficial," somebody else said, "the appropriate," someone else, "the useful" and someone else, "the advantageous." But[8] I returned to the point and said, "All those words, such as 'acting correctly', 'advantageously', 'usefully' and the like, are to be found in each of the skills as well. When asked, however, what these all aim at, each skill will mention some product peculiar to itself. So, for example, when d
carpentry uses the words 'well', 'properly' and 'appropriately', it is speaking of the production of wooden artifacts, which are products distinct from the skill itself. What, then, is the peculiar product of justice? Give me that sort of answer."

Finally, Socrates, one of your friends answered—and he really seemed quite clever in saying this—that the product peculiar to justice and not shared by any of the other skills is to produce friendship within cities. When questioned, he said that friendship is always good and never bad. When questioned further, he wouldn't allow that what we call the "friend- e
ships" of children and animals are really friendships, since he was led to the conclusion that such relationships are more often harmful than good. So in order to avoid saying that this is true of friendship, he claimed that these relationships are not friendships at all and that those who call them that are wrong; instead, real and true friendship is most precisely *agreement*. When asked whether he considered this agreement to be shared belief or knowledge, he rejected the former suggestion since he was forced to admit that many men's shared beliefs are harmful, whereas he had agreed that friendship is entirely good and is the product of justice; so he said that agreement is the same, being knowledge, not belief.

Now by the time we reached this point in the argument, having really 410
made no progress, the bystanders were able to take him to task and say that the argument had gone around in a circle back to where it began.

"Medicine too," they said, "is a sort of agreement, as is every skill, and they all can say what they're *about*. But what you call 'justice' and 'agreement' has no idea what it's aiming at, and so it's not clear what its product could be."

So, Socrates, finally I asked you yourself these questions and you told b
me that the aim of justice is to hurt one's enemies and help one's friends. But later it turned out that the just man never harms anyone, since everything he does is for the benefit of all.

When I had endured this disappointment, not once or twice but a long time, I finally got tired of begging for an answer. I came to the conclusion that while you're better than anyone at turning a man towards the pursuit of virtue, one of two things must be the case: either this is all you can do, nothing more—as might happen with any other skill, for example, when someone who's not a pilot rehearses a speech in praise of the pilot's skill c

8. Reading *de* instead of *dē* in c3.

as being something of great worth to men; the same could also be done for any other skill. And someone might accuse you of being in the same position with justice, that your ability to praise it so well does not make you any more knowledgeable about it. Now that's not my own view, but there are only two possibilities: either you don't know it, or you don't wish to share it with me.

410d And this is why, I suppose, I go[9] to Thrasymachus and to anyone else I can: I'm at a loss. But if you're finally ready to stop exhorting me with speeches—I mean, if it had been about gymnastics that you were exhorting me, saying that I must not neglect my body, you would have proceeded to give me what comes next after such an exhortation, namely, an explanation of the nature of my body and of the particular kind of treatment this
e nature requires—that's the kind of thing you should do now.

Assume that Clitophon agrees with you that it's ridiculous to neglect the soul itself while concerning ourselves solely with what we work hard to acquire for its sake. Suppose now that I have also said all the other things which come next and which I just went through. Then, please, do as I ask and I won't praise you before Lysias and others for some things while criticizing you for others, as I do now. For I will say this, Socrates, that while you're worth the world to someone who hasn't yet been converted to the pursuit of virtue, to someone who's already been converted you rather get in the way of his attaining happiness by reaching the goal of virtue.

9. Reading *poreuomai* in c7.

# REPUBLIC

*The* Republic's *ancient subtitle*—On Justice—*much understates the scope of the work. It begins as a discussion of the nature of justice, much in the manner of 'Socratic' dialogues like* Laches *or* Charmides, *with Socrates examining and refuting successive views of his interlocutors on this subject. But in book II he renews the inquiry, now agreeing to cease examining and refuting the opinions of others, and to present his own account. He will say what justice really is and show that people who are truly and fully just thereby lead a better, happier life than any unjust person could. The horizon lifts to reveal ever-expanding vistas of philosophy. Socrates presents his views on the original purposes for which political communities—cities—were founded, the basic principles of just social and political organization, and the education of young people that those principles demand (books II, III, and V). He decides that a truly just society requires philosophic rulers—both men* and *women—living in a communistic 'guardhouse' within the larger community. The need for such rulers leads him on to wider topics. He discusses the variety and nature (and proper regimentation) of human desires, and the precise nature of justice and the other virtues—and of the corresponding vices—both in the individual person's psychology and in the organization of political society (IV, VIII, IX). He explains the nature of knowledge and its proper objects (V–VII): The world revealed by our senses—the world of everyday, traditional life—is, he argues, cognitively and metaphysically deficient. It depends upon a prior realm of separately existing Forms, organized beneath the Form of the Good and graspable not by our senses but only through rigorous dialectical thought and discussion, after preparation in extended mathematical studies. There is even a discussion of the basic principles of visual and literary art and art criticism (X). All this is necessary, Socrates says, finally to answer the basic question about justice—not what it is, but why it must make the just person live a good, happy life, and the unjust person a bad, miserable one.*

*Speaking throughout to no identified person—that is, directly to the reader—Socrates relates a conversation he took part in one day in the Athenian port city of Piraeus. All the others present, a considerable company, represent historical personages: among them were the noted sophist and teacher of oratory, Thrasymachus, and Glaucon and Adeimantus, Plato's brothers. Glaucon is an ambitious, energetic, 'manly' young man, much interested in public affairs and drawn to the life of politics. An intelligent and argumentative person, he scorns ordinary pleasures and aspires to 'higher' things. Always especially attracted by such people, it was with him that Socrates had gone down to*

*Piraeus in the first place. Adeimantus, equally a decent young man, is less driven, less demanding of himself, more easily satisfied and less gifted in philosophical argument. After book I Socrates carries on his discussion first with one, then with the other of these two men. The conversation as a whole aims at answering to their satisfaction the challenge they jointly raise against Socrates' conviction that justice is a preeminent good for the just person, but Socrates addresses different parts of his reply to a different one of them. (To assist the reader, we have inserted the names of the speakers at the tops of the pages of the translation.)*

*Though in books II–X Socrates no longer searches for the truth by criticizing his interlocutors' ideas, he proceeds nonetheless in a spirit of exploration and discovery, proposing bold hypotheses and seeking their confirmation in the first instance through examining their consequences. He often emphasizes the tentativeness of his results, and the need for a more extensive treatment. Quite different is the main speaker in the late dialogues* Sophist, Statesman, Philebus, *and* Laws*—whether Socrates himself, or a visitor from Elea or Athens: there, we get confident, reasoned delivery of philosophical results assumed by the speaker to be well established.*

*J.M.C.*

# Book I

327 I went down to the Piraeus yesterday with Glaucon, the son of Ariston. I
wanted to say a prayer to the goddess,[1] and I was also curious to see how
they would manage the festival, since they were holding it for the first
time. I thought the procession of the local residents was a fine one and
that the one conducted by the Thracians was no less outstanding. After
we had said our prayer and seen the procession, we started back towards
b Athens. Polemarchus saw us from a distance as we were setting off for
home and told his slave to run and ask us to wait for him. The slave
caught hold of my cloak from behind: Polemarchus wants you to wait, he
said. I turned around and asked where Polemarchus was. He's coming
up behind you, he said, please wait for him. And Glaucon replied: All
right, we will.

c Just then Polemarchus caught up with us. Adeimantus, Glaucon's brother, was with him and so were Niceratus, the son of Nicias, and some others, all of whom were apparently on their way from the procession.

Polemarchus said: It looks to me, Socrates, as if you two are starting off for Athens.

It looks the way it is, then, I said.

Do you see how many we are? he said.

Translated by G.M.A. Grube, revised by C.D.C. Reeve.

1. The Thracian goddess Bendis, whose cult had recently been introduced in the Piraeus, the harbor town of Athens.

I do.

Well, you must either prove stronger than we are, or you will have to stay here.

Isn't there another alternative, namely, that we persuade you to let us go?

But could you persuade us, if we won't listen?

Certainly not, Glaucon said.

Well, we won't listen; you'd better make up your mind to that.

Don't you know, Adeimantus said, that there is to be a torch race on 328
horseback for the goddess tonight?

On horseback? I said. That's something new. Are they going to race on horseback and hand the torches on in relays, or what?

In relays, Polemarchus said, and there will be an all-night festival that will be well worth seeing. After dinner, we'll go out to look at it. We'll be joined there by many of the young men, and we'll talk. So don't go; stay.

It seems, Glaucon said, that we'll have to stay. b

If you think so, I said, then we must.

So we went to Polemarchus' house, and there we found Lysias and Euthydemus, the brothers of Polemarchus, Thrasymachus of Chalcedon, Charmantides of Paeania, and Clitophon the son of Aristonymus. Polemarchus' father, Cephalus, was also there, and I thought he looked quite old, as I hadn't seen him for some time. He was sitting on a sort of c
cushioned chair with a wreath on his head, as he had been offering a sacrifice in the courtyard. There was a circle of chairs, and we sat down by him.

As soon as he saw me, Cephalus welcomed me and said: Socrates, you don't come down to the Piraeus to see us as often as you should. If it were still easy for me to walk to town, you wouldn't have to come here; we'd come to you. But, as it is, you ought to come here more often, for you d
should know that as the physical pleasures wither away, my desire for conversation and its pleasures grows. So do as I say: Stay with these young men now, but come regularly to see us, just as you would to friends or relatives.

Indeed, Cephalus, I replied, I enjoy talking with the very old, for we should ask them, as we might ask those who have travelled a road that we too will probably have to follow, what kind of road it is, whether rough e
and difficult or smooth and easy. And I'd gladly find out from you what you think about this, as you have reached the point in life the poets call "the threshold of old age."[2] Is it a difficult time? What is your report about it?

By god, Socrates, I'll tell you exactly what I think. A number of us, who 329
are more or less the same age, often get together in accordance with the old saying.[3] When we meet, the majority complain about the lost pleasures

2. *Iliad* xxii.60, xxiv.487; *Odyssey* xv.246, 348, xxiii.212.

3. "God ever draws together like to like" (*Odyssey* xvii.218).

they remember from their youth, those of sex, drinking parties, feasts, and
the other things that go along with them, and they get angry as if they
had been deprived of important things and had lived well then but are
now hardly living at all. Some others moan about the abuse heaped on
b old people by their relatives, and because of this they repeat over and
over that old age is the cause of many evils. But I don't think they blame
the real cause, Socrates, for if old age were really the cause, I should have
suffered in the same way and so should everyone else of my age. But as
it is, I've met some who don't feel like that in the least. Indeed, I was once
present when someone asked the poet Sophocles: "How are you as far as
c sex goes, Sophocles? Can you still make love with a woman?" "Quiet,
man," the poet replied, "I am very glad to have escaped from all that, like
a slave who has escaped from a savage and tyrannical master." I thought
at the time that he was right, and I still do, for old age brings peace
and freedom from all such things. When the appetites relax and cease to
importune us, everything Sophocles said comes to pass, and we escape
d from many mad masters. In these matters and in those concerning relatives,
the real cause isn't old age, Socrates, but the way people live. If they are
moderate and contented, old age, too, is only moderately onerous; if they
aren't, both old age and youth are hard to bear.

I admired him for saying that and I wanted him to tell me more, so I
e urged him on: When you say things like that, Cephalus, I suppose that
the majority of people don't agree, they think that you bear old age more
easily not because of the way you live but because you're wealthy, for the
wealthy, they say, have many consolations.

That's true; they don't agree. And there is something in what they say,
though not as much as they think. Themistocles' retort is relevant here.
When someone from Seriphus insulted him by saying that his high reputa-
330 tion was due to his city and not to himself, he replied that, had he been
a Seriphian, he wouldn't be famous, but neither would the other even if
he had been an Athenian. The same applies to those who aren't rich and
find old age hard to bear: A good person wouldn't easily bear old age if
he were poor, but a bad one wouldn't be at peace with himself even if he
were wealthy.

Did you inherit most of your wealth, Cephalus, I asked, or did you
make it for yourself?

What did I make for myself, Socrates, you ask. As a money-maker I'm
b in a sort of mean between my grandfather and my father. My grandfather
and namesake inherited about the same amount of wealth as I possess but
multiplied it many times. My father, Lysanias, however, diminished that
amount to even less than I have now. As for me, I'm satisfied to leave my
sons here not less but a little more than I inherited.

The reason I asked is that you don't seem to love money too much. And
those who haven't made their own money are usually like you. But those
c who have made it for themselves are twice as fond of it as those who
haven't. Just as poets love their poems and fathers love their children, so

those who have made their own money don't just care about it because it's useful, as other people do, but because it's something they've made themselves. This makes them poor company, for they haven't a good word to say about anything except money.

That's true.

It certainly is. But tell me something else. What's the greatest good d
you've received from being very wealthy?

What I have to say probably wouldn't persuade most people. But you know, Socrates, that when someone thinks his end is near, he becomes frightened and concerned about things he didn't fear before. It's then that the stories we're told about Hades, about how people who've been unjust here must pay the penalty there—stories he used to make fun of—twist
his soul this way and that for fear they're true. And whether because of e
the weakness of old age or because he is now closer to what happens in Hades and has a clearer view of it, or whatever it is, he is filled with foreboding and fear, and he examines himself to see whether he has been unjust to anyone. If he finds many injustices in his life, he awakes from sleep in terror, as children do, and lives in anticipation of bad things to
come. But someone who knows that he hasn't been unjust has sweet good 331
hope as his constant companion—a nurse to his old age, as Pindar[4] says, for he puts it charmingly, Socrates, when he says that when someone lives a just and pious life

> *Sweet hope is in his heart,*
> *Nurse and companion to his age.*
> *Hope, captain of the ever-twisting*
> *Minds of mortal men.*

How wonderfully well he puts that. It's in this connection that wealth is most valuable, I'd say, not for every man but for a decent and orderly
one. Wealth can do a lot to save us from having to cheat or deceive someone b
against our will and from having to depart for that other place in fear because we owe sacrifice to a god or money to a person. It has many other uses, but, benefit for benefit, I'd say that this is how it is most useful to a man of any understanding.

A fine sentiment, Cephalus, but, speaking of this very thing itself,
namely, justice, are we to say unconditionally that it is speaking the truth c
and paying whatever debts one has incurred? Or is doing these things sometimes just, sometimes unjust? I mean this sort of thing, for example: Everyone would surely agree that if a sane man lends weapons to a friend and then asks for them back when he is out of his mind, the friend shouldn't return them, and wouldn't be acting justly if he did. Nor should anyone be willing to tell the whole truth to someone who is out of his mind.

4. Frg. 214 (Snell).

d That's true.

Then the definition of justice isn't speaking the truth and repaying what one has borrowed.

It certainly is, Socrates, said Polemarchus, interrupting, if indeed we're to trust Simonides at all.[5]

Well, then, Cephalus said, I'll hand over the argument to you, as I have to look after the sacrifice.

So, Polemarchus said, am I then to be your heir in everything?

You certainly are, Cephalus said, laughing, and off he went to the sacrifice.

Then tell us, heir to the argument, I said, just what Simonides stated
e about justice that you consider correct.

He stated that it is just to give to each what is owed to him. And it's a fine saying, in my view.

Well, now, it isn't easy to doubt Simonides, for he's a wise and godlike man. But what exactly does he mean? Perhaps you know, Polemarchus, but I don't understand him. Clearly, he doesn't mean what we said a moment ago, that it is just to give back whatever a person has lent to you, even if he's out of his mind when he asks for it. And yet what he has lent
332 to you is surely something that's owed to him, isn't it?

Yes.

But it is absolutely not to be given to him when he's out of his mind?

That's true.

Then it seems that Simonides must have meant something different when he says that to return what is owed is just.

Something different indeed, by god. He means that friends owe it to their friends to do good for them, never harm.

I follow you. Someone doesn't give a lender back what he's owed by giving him gold, if doing so would be harmful, and both he and the lender
b are friends. Isn't that what you think Simonides meant?

It is.

But what about this? Should one also give one's enemies whatever is owed to them?

By all means, one should give them what is owed to them. And in my view what enemies owe to each other is appropriately and precisely—something bad.

It seems then that Simonides was speaking in riddles—just like a poet!—when he said what justice is, for he thought it just to give to each what
c is appropriate to him, and this is what he called giving him what is owed to him.

What else did you think he meant?

Then what do you think he'd answer if someone asked him: "Simonides, which of the things that are owed or that are appropriate for someone or

5. Simonides (c. 548–468 B.C.), a lyric and elegiac poet, was born in the Aegean island of Ceos.

something to have does the craft[6] we call medicine give, and to whom or what does it give them?"

It's clear that it gives medicines, food, and drink to bodies.

And what owed or appropriate things does the craft we call cooking give, and to whom or what does it give them?

It gives seasonings to food. d

Good. Now, what does the craft we call justice give, and to whom or what does it give it?

If we are to follow the previous answers, Socrates, it gives benefits to friends and does harm to enemies.

Simonides means, then, that to treat friends well and enemies badly is justice?

I believe so.

And who is most capable of treating friends well and enemies badly in matters of disease and health?

A doctor.

And who can do so best in a storm at sea? e

A ship's captain.

What about the just person? In what actions and what work is he most capable of benefiting friends and harming enemies?

In wars and alliances, I suppose.

All right. Now, when people aren't sick, Polemarchus, a doctor is useless to them?

True.

And so is a ship's captain to those who aren't sailing?

Yes.

And to people who aren't at war, a just man is useless?

No, I don't think that at all.

Justice is also useful in peacetime, then?

It is. 333

And so is farming, isn't it?

Yes.

For getting produce?

Yes.

And shoemaking as well?

Yes.

For getting shoes, I think you'd say?

Certainly.

Well, then, what is justice useful for getting and using in peacetime?

Contracts, Socrates.

And by contracts do you mean partnerships, or what?

I mean partnerships.

6. Here and in what follows "craft" translates *technē*. As Socrates conceives it a *technē* is a disciplined body of knowledge founded on a grasp of the truth about what is good and bad, right and wrong, in the matters of concern to it.

Is someone a good and useful partner in a game of checkers because
b he's just or because he's a checkers player?

Because he's a checkers player.

And in laying bricks and stones, is a just person a better and more useful partner than a builder?

Not at all.

In what kind of partnership, then, is a just person a better partner than a builder or a lyre-player, in the way that a lyre-player is better than a just person at hitting the right notes?

In money matters, I think.

Except perhaps, Polemarchus, in using money, for whenever one needs to buy a horse jointly, I think a horse breeder is a more useful partner,
c isn't he?

Apparently.

And when one needs to buy a boat, it's a boatbuilder or a ship's captain?

Probably.

In what joint use of silver or gold, then, is a just person a more useful partner than the others?

When it must be deposited for safekeeping, Socrates.

You mean whenever there is no need to use them but only to keep them?

That's right.

Then it is when money isn't being used that justice is useful for it?

d I'm afraid so.

And whenever one needs to keep a pruning knife safe, but not to use it, justice is useful both in partnerships and for the individual. When you need to use it, however, it is skill at vine pruning that's useful?

Apparently.

You'll agree, then, that when one needs to keep a shield or a lyre safe and not to use them, justice is a useful thing, but when you need to use them, it is soldiery or musicianship that's useful?

Necessarily.

And so, too, with everything else, justice is useless when they are in use but useful when they aren't?

It looks that way.

e In that case, justice isn't worth much, since it is only useful for useless things. But let's look into the following point. Isn't the person most able to land a blow, whether in boxing or any other kind of fight, also most able to guard against it?

Certainly.

And the one who is most able to guard against disease is also most able to produce it unnoticed?

So it seems to me, anyway.

And the one who is the best guardian of an army is the very one who
334 can steal the enemy's plans and dispositions?

Certainly.

Whenever someone is a clever guardian, then, he is also a clever thief.

Probably so.

If a just person is clever at guarding money, therefore, he must also be clever at stealing it.

According to our argument, at any rate.

A just person has turned out then, it seems, to be a kind of thief. Maybe
you learned this from Homer, for he's fond of Autolycus, the maternal
grandfather of Odysseus, whom he describes as better than everyone at b
lying and stealing.[7] According to you, Homer, and Simonides, then, justice
seems to be some sort of craft of stealing, one that benefits friends and
harms enemies. Isn't that what you meant?

No, by god, it isn't. I don't know any more what I did mean, but I still believe that to benefit one's friends and harm one's enemies is justice.

Speaking of friends, do you mean those a person believes to be good
and useful to him or those who actually are good and useful, even if he c
doesn't think they are, and similarly with enemies?

Probably, one loves those one considers good and useful and hates those one considers bad and harmful.

But surely people often make mistakes about this, believing many people to be good and useful when they aren't, and making the opposite mistake about enemies?

They do indeed.

And then good people are their enemies and bad ones their friends?

That's right.

And so it's just to benefit bad people and harm good ones? d

Apparently.

But good people are just and able to do no wrong?

True.

Then, according to your account, it's just to do bad things to those who do no injustice.

No, that's not just at all, Socrates; my account must be a bad one.

It's just, then, is it, to harm unjust people and benefit just ones?

That's obviously a more attractive view than the other one, anyway.

Then, it follows, Polemarchus, that it is just for the many, who are
mistaken in their judgment, to harm their friends, who are bad, and benefit
their enemies, who are good. And so we arrive at a conclusion opposite e
to what we said Simonides meant.

That certainly follows. But let's change our definition, for it seems that we didn't define friends and enemies correctly.

How did we define them, Polemarchus?

We said that a friend is someone who is believed to be useful.

And how are we to change that now?

Someone who is both believed to be useful and is useful is a friend;
someone who is believed to be useful but isn't, is believed to be a friend
but isn't. And the same for the enemy. 335

7. *Odyssey* xix.392–98.

According to this account, then, a good person will be a friend and a bad one an enemy.

Yes.

So you want us to add something to what we said before about justice, when we said that it is just to treat friends well and enemies badly. You want us to add to this that it is just to treat well a friend who is good and to harm an enemy who is bad?

b Right. That seems fine to me.

Is it, then, the role of a just man to harm anyone?

Certainly, he must harm those who are both bad and enemies.

Do horses become better or worse when they are harmed?

Worse.

With respect to the virtue[8] that makes dogs good or the one that makes horses good?

The one that makes horses good.

And when dogs are harmed, they become worse in the virtue that makes dogs good, not horses?

Necessarily.

Then won't we say the same about human beings, too, that when they
c are harmed they become worse in human virtue?

Indeed.

But isn't justice human virtue?

Yes, certainly.

Then people who are harmed must become more unjust?

So it seems.

Can musicians make people unmusical through music?

They cannot.

Or horsemen make people unhorsemanlike through horsemanship?

No.

Well, then, can those who are just make people unjust through justice?
d In a word, can those who are good make people bad through virtue?

They cannot.

It isn't the function of heat to cool things but of its opposite?

Yes.

Nor the function of dryness to make things wet but of its opposite?

Indeed.

Nor the function of goodness to harm but of its opposite?

Apparently.

8. I.e., *aretē*. *Aretē* is broader than our notion of virtue, which tends to be applied only to human beings, and restricted to good sexual behavior or helpfulness on their part to others. *Aretē* could equally be translated "excellence" or "goodness." Thus if something is a knife (say) its *aretē* or "virtue" as a knife is that state or property of it that makes it a good knife—having a sharp blade, and so on. So with the virtue of a man: this might include being intelligent, well-born, or courageous, as well as being just and sexually well-behaved.

And a just person is good?

Indeed.

Then, Polemarchus, it isn't the function of a just person to harm a friend or anyone else, rather it is the function of his opposite, an unjust person?

In my view that's completely true, Socrates.

If anyone tells us, then, that it is just to give to each what he's owed e
and understands by this that a just man should harm his enemies and benefit his friends, he isn't wise to say it, since what he says isn't true, for it has become clear to us that it is never just to harm anyone?

I agree.

You and I shall fight as partners, then, against anyone who tells us that Simonides, Bias, Pittacus, or any of our other wise and blessedly happy men said this.

I, at any rate, am willing to be your partner in the battle.

Do you know to whom I think the saying belongs that it is just to benefit 336
friends and harm enemies?

Who?

I think it belongs to Periander, or Perdiccas, or Xerxes, or Ismenias of Corinth, or some other wealthy man who believed himself to have great power.[9]

That's absolutely true.

All right, since it has become apparent that justice and the just aren't what such people say they are, what else could they be?

While we were speaking, Thrasymachus had tried many times to take over the discussion but was restrained by those sitting near him, who b
wanted to hear our argument to the end. When we paused after what I'd just said, however, he couldn't keep quiet any longer. He coiled himself up like a wild beast about to spring, and he hurled himself at us as if to tear us to pieces.

Polemarchus and I were frightened and flustered as he roared into our midst: What nonsense have you two been talking, Socrates? Why do you act like idiots by giving way to one another? If you truly want to know c
what justice is, don't just ask questions and then refute the answers simply to satisfy your competitiveness or love of honor. You know very well that it is easier to ask questions than answer them. Give an answer yourself, and tell us what you say the just is. And don't tell me that it's the right, the beneficial, the profitable, the gainful, or the advantageous, but tell me d
clearly and exactly what you mean; for I won't accept such nonsense from you.

His words startled me, and, looking at him, I was afraid. And I think that if I hadn't seen him before he stared at me, I'd have been dumbstruck. But as it was, I happened to look at him just as our discussion began to exasperate him, so I was able to answer, and, trembling a little, I said: e

9. The first three named are notorious tyrants or kings, the fourth a man famous for his extraordinary wealth.

Don't be too hard on us, Thrasymachus, for if Polemarchus and I made an error in our investigation, you should know that we did so unwillingly. If we were searching for gold, we'd never willingly give way to each other, if by doing so we'd destroy our chance of finding it. So don't think that in searching for justice, a thing more valuable than even a large quantity of gold, we'd mindlessly give way to one another or be less than completely serious about finding it. You surely mustn't think that, but rather—as I do—that we're incapable of finding it. Hence it's surely far more appropriate for
337 us to be pitied by you clever people than to be given rough treatment.

When he heard that, he gave a loud, sarcastic laugh. By Heracles, he said, that's just Socrates' usual irony. I knew, and I said so to these people earlier, that you'd be unwilling to answer and that, if someone questioned *you*, you'd be ironical and do anything rather than give an answer.

That's because you're a clever fellow, Thrasymachus. You knew very well that if you ask someone how much twelve is, and, as you ask, you
b warn him by saying "Don't tell me, man, that twelve is twice six, or three times four, or six times two, or four times three, for I won't accept such nonsense," then you'll see clearly, I think, that no one could answer a question framed like that. And if he said to you: "What are you saying, Thrasymachus, am I not to give any of the answers you mention, not even if twelve happens to be one of those things? I'm amazed. Do you want me to say something other than the truth? Or do you mean something
c else?" What answer would you give him?

Well, so you think the two cases are alike?

Why shouldn't they be alike? But even if they aren't alike, yet seem so to the person you asked, do you think him any less likely to give the answer that seems right to him, whether we forbid him to or not?

Is that what you're going to do, give one of the forbidden answers?

I wouldn't be surprised—provided that it's the one that seems right to me after I've investigated the matter.

What if I show you a different answer about justice than all these—and
d a better one? What would you deserve then?

What else than the appropriate penalty for one who doesn't know, namely, to learn from the one who does know? Therefore, that's what I deserve.

You amuse me, but in addition to learning, you must pay a fine.

I will as soon as I have some money.

He has some already, said Glaucon. If it's a matter of money, speak, Thrasymachus, for we'll all contribute for Socrates.

I know, he said, so that Socrates can carry on as usual. He gives no
e answer himself, and then, when someone else does give one, he takes up the argument and refutes it.

How can someone give an answer, I said, when he doesn't know it and doesn't claim to know it, and when an eminent man forbids him to express the opinion he has? It's much more appropriate for you to answer, since

you say you know and can tell us. So do it as a favor to me, and don't 338
begrudge your teaching to Glaucon and the others.

While I was saying this, Glaucon and the others begged him to speak.
It was obvious that Thrasymachus thought he had a fine answer and that
he wanted to earn their admiration by giving it, but he pretended that he
wanted to indulge his love of victory by forcing me to answer. However,
he agreed in the end, and then said: There you have Socrates' wisdom; he b
himself isn't willing to teach, but he goes around learning from others and
isn't even grateful to them.

When you say that I learn from others you are right, Thrasymachus, but when you say that I'm not grateful, that isn't true. I show what gratitude I can, but since I have no money, I can give only praise. But just how enthusiastically I give it when someone seems to me to speak well, you'll know as soon as you've answered, for I think that you will speak well.

Listen, then. I say that justice is nothing other than the advantage of the c
stronger. Well, why don't you praise me? But then you'd do anything to
avoid having to do that.

I must first understand you, for I don't yet know what you mean. The
advantage of the stronger, you say, is just. What do you mean, Thrasyma-
chus? Surely you don't mean something like this: Polydamus, the pancra-
tist,[10] is stronger than we are; it is to his advantage to eat beef to build up
his physical strength; therefore, this food is also advantageous and just
for us who are weaker than he is? d

You disgust me, Socrates. Your trick is to take hold of the argument at the point where you can do it the most harm.

Not at all, but tell us more clearly what you mean.

Don't you know that some cities are ruled by a tyranny, some by a democracy, and some by an aristocracy?

Of course.

And in each city this element is stronger, namely, the ruler?

Certainly.

And each makes laws to its own advantage. Democracy makes demo-
cratic laws, tyranny makes tyrannical laws, and so on with the others. And e
they declare what they have made—what is to their own advantage—to
be just for their subjects, and they punish anyone who goes against this
as lawless and unjust. This, then, is what I say justice is, the same in all
cities, the advantage of the established rule. Since the established rule is 339
surely stronger, anyone who reasons correctly will conclude that the just
is the same everywhere, namely, the advantage of the stronger.

Now I see what you mean. Whether it's true or not, I'll try to find out. But you yourself have answered that the just is the advantageous, Thrasymachus, whereas you forbade that answer to me. True, you've added "of the stronger" to it.

10. The *pancration* was a mixture of boxing and wrestling.

b And I suppose you think that's an insignificant addition.

It isn't clear yet whether it's significant. But it is clear that we must investigate to see whether or not it's true. I agree that the just is some kind of advantage. But you add that it's *of the stronger*. I don't know about that. We'll have to look into it.

Go ahead and look.

We will. Tell me, don't you also say that it is just to obey the rulers?

I do.

c And are the rulers in all cities infallible, or are they liable to error?

No doubt they are liable to error.

When they undertake to make laws, therefore, they make some correctly, others incorrectly?

I suppose so.

And a law is correct if it prescribes what is to the rulers' own advantage and incorrect if it prescribes what is to their disadvantage? Is that what you mean?

It is.

And whatever laws they make must be obeyed by their subjects, and this is justice?

Of course.

d Then, according to your account, it is just to do not only what is to the advantage of the stronger, but also the opposite, what is not to their advantage.

What are you saying?

The same as you. But let's examine it more fully. Haven't we agreed that, in giving orders to their subjects, the rulers are sometimes in error as to what is best for themselves, and yet that it is just for their subjects to do whatever their rulers order? Haven't we agreed to that much?

I think so.

e Then you must also think that you have agreed that it is just to do what is disadvantageous to the rulers and those who are stronger, whenever they unintentionally order what is bad for themselves. But you also say that it is just for the others to obey the orders they give. You're terribly clever, Thrasymachus, but doesn't it necessarily follow that it is just to do the opposite of what you said, since the weaker are then ordered to do what is disadvantageous to the stronger?

340 By god, Socrates, said Polemarchus, that's quite clear.

If you are to be his witness anyway, said Clitophon, interrupting.

Who needs a witness? Polemarchus replied. Thrasymachus himself agrees that the rulers sometimes order what is bad for themselves and that it is just for the others to do it.

That, Polemarchus, is because Thrasymachus maintained that it is just to obey the orders of the rulers.

He also maintained, Clitophon, that the advantage of the stronger is
b just. And having maintained both principles he went on to agree that the

stronger sometimes gives orders to those who are weaker than he is—in other words, to his subjects—that are disadvantageous to the stronger himself. From these agreements it follows that what is to the advantage of the stronger is no more just than what is not to his advantage.

But, Clitophon responded, he said that the advantage of the stronger is what the stronger believes to be his advantage. This is what the weaker must do, and this is what he maintained the just to be.

That isn't what he said, Polemarchus replied.

It makes no difference, Polemarchus, I said. If Thrasymachus wants to
put it that way now, let's accept it. Tell me, Thrasymachus, is this what c
you wanted to say the just is, namely, what the stronger believes to be to his advantage, whether it is in fact to his advantage or not? Is that what we are to say you mean?

Not at all. Do you think I'd call someone who is in error stronger at the very moment he errs?

I did think that was what you meant when you agreed that the rulers aren't infallible but are liable to error.

That's because you are a false witness in arguments, Socrates. When d
someone makes an error in the treatment of patients, do you call him a doctor in regard to that very error? Or when someone makes an error in accounting, do you call him an accountant in regard to that very error in calculation? I think that we express ourselves in words that, taken literally, do say that a doctor is in error, or an accountant, or a grammarian. But
each of these, insofar as he is what we call him, never errs, so that, according e
to the precise account (and you are a stickler for precise accounts), no craftsman ever errs. It's when his knowledge fails him that he makes an error, and in regard to that error he is no craftsman. No craftsman, expert, or ruler makes an error at the moment when he is ruling, even though everyone will say that a physician or a ruler makes errors. It's in this loose way that you must also take the answer I gave earlier. But the most precise
answer is this. A ruler, insofar as he is a ruler, never makes errors and 341
unerringly decrees what is best for himself, and this his subject must do. Thus, as I said from the first, it is just to do what is to the advantage of the stronger.

All right, Thrasymachus, so you think I'm a false witness?

You certainly are.

And you think that I asked the questions I did in order to harm you in the argument?

I know it very well, but it won't do you any good. You'll never be able b
to trick me, so you can't harm me that way, and without trickery you'll never be able to overpower me in argument.

I wouldn't so much as try, Thrasymachus. But in order to prevent this sort of thing from happening again, define clearly whether it is the ruler and stronger in the ordinary sense or in the precise sense whose advantage you said it is just for the weaker to promote as the advantage of the stronger.

I mean the ruler in the most precise sense. Now practice your harm-doing and false witnessing on that if you can—I ask no concessions from you—but you certainly won't be able to.

c Do you think that I'm crazy enough to try to shave a lion or to bear false witness against Thrasymachus?

You certainly tried just now, though you were a loser at that too.

Enough of this. Tell me: Is a doctor in the precise sense, whom you mentioned before, a money-maker or someone who treats the sick? Tell me about the one who is really a doctor.

He's the one who treats the sick.

What about a ship's captain? Is a captain in the precise sense a ruler of sailors or a sailor?

A ruler of sailors.

We shouldn't, I think, take into account the fact that he sails in a ship,
d and he shouldn't be called a sailor for that reason, for it isn't because of
his sailing that he is called a ship's captain, but because of his craft and
his rule over sailors?

That's true.

And is there something advantageous to each of these, that is, to bodies and to sailors?

Certainly.

And aren't the respective crafts by nature set over them to seek and provide what is to their advantage?

They are.

And is there any advantage for each of the crafts themselves except to be as complete or perfect as possible?

e What are you asking?

This: If you asked me whether our bodies are sufficient in themselves, or whether they need something else, I'd answer: "They certainly have needs. And because of this, because our bodies are deficient rather than self-sufficient, the craft of medicine has now been discovered. The craft of medicine was developed to provide what is advantageous for a body." Do you think that I'm right in saying this or not?

You are right.

342 Now, is medicine deficient? Does a craft need some further virtue, as
the eyes are in need of sight, and the ears of hearing, so that another craft
is needed to seek and provide what is advantageous to them? Does a craft
itself have some similar deficiency, so that each craft needs another, to
seek out what is to its advantage? And does the craft that does the seeking
need still another, and so on without end? Or does each seek out what is
b to its own advantage by itself? Or does it need neither itself nor another
craft to seek out what is advantageous to it, because of its own deficiencies?
Is it that there is no deficiency or error in any craft? That it isn't appropriate
for any craft to seek what is to the advantage of anything except that of
which it is the craft? And that, since it is itself correct, it is without either
fault or impurity, as long as it is wholly and precisely the craft that it is?

Consider this with the preciseness of language you mentioned. Is it so or not?

It appears to be so.

Medicine doesn't seek its own advantage, then, but that of the body? c

Yes.

And horse-breeding doesn't seek its own advantage, but that of horses? Indeed, no other craft seeks its own advantage—for it has no further needs—but the advantage of that of which it is the craft?

Apparently so.

Now, surely, Thrasymachus, the crafts rule over and are stronger than the things of which they are the crafts?

Very reluctantly, he conceded this as well.

No kind of knowledge seeks or orders what is advantageous to itself, then, but what is advantageous to the weaker, which is subject to it. d

He tried to fight this conclusion, but he conceded it in the end. And after he had, I said: Surely, then, no doctor, insofar as he is a doctor, seeks or orders what is advantageous to himself, but what is advantageous to his patient? We agreed that a doctor in the precise sense is a ruler of bodies, not a money-maker. Wasn't that agreed?

Yes.

So a ship's captain in the precise sense is a ruler of sailors, not a sailor?

That's what we agreed. e

Doesn't it follow that a ship's captain or ruler won't seek and order what is advantageous to himself, but what is advantageous to a sailor, his subject?

He reluctantly agreed.

So, then, Thrasymachus, no one in any position of rule, insofar as he is a ruler, seeks or orders what is advantageous to himself, but what is advantageous to his subject, that on which he practices his craft. It is to his subject and what is advantageous and proper to it that he looks, and everything he says and does he says and does for it.

When we reached this point in the argument, and it was clear to all that his account of justice had turned into its opposite, instead of answering, 343
Thrasymachus said: Tell me, Socrates, do you still have a wet nurse?

What's this? Hadn't you better answer *my* questions rather than asking *me* such things?

Because she's letting you run around with a snotty nose, and doesn't wipe it when she needs to! Why, for all she cares, you don't even know about sheep and shepherds.

Just what is it I don't know?

You think that shepherds and cowherds seek the good of their sheep b
and cattle, and fatten them and take care of them, looking to something other than their master's good and their own. Moreover, you believe that rulers in cities—true rulers, that is—think about their subjects differently than one does about sheep, and that night and day they think of something besides their own advantage. You are so far from understanding about c
justice and what's just, about injustice and what's unjust, that you don't

realize that justice is really the good of another, the advantage of the
stronger and the ruler, and harmful to the one who obeys and serves.
Injustice is the opposite, it rules the truly simple and just, and those it
rules do what is to the advantage of the other and stronger, and they make
the one they serve happy, but themselves not at all. You must look at it
d as follows, my most simple Socrates: A just man always gets less than an
unjust one. First, in their contracts with one another, you'll never find,
when the partnership ends, that a just partner has got more than an unjust
one, but less. Second, in matters relating to the city, when taxes are to be
paid, a just man pays more on the same property, an unjust one less, but
when the city is giving out refunds, a just man gets nothing, while an
e unjust one makes a large profit. Finally, when each of them holds a ruling
position in some public office, a just person, even if he isn't penalized in
other ways, finds that his private affairs deteriorate because he has to
neglect them, that he gains no advantage from the public purse because
of his justice, and that he's hated by his relatives and acquaintances when
he's unwilling to do them an unjust favor. The opposite is true of an unjust
man in every respect. Therefore, I repeat what I said before: A person of
344 great power outdoes everyone else. Consider him if you want to figure
out how much more advantageous it is for the individual to be just rather
than unjust. You'll understand this most easily if you turn your thoughts
to the most complete injustice, the one that makes the doer of injustice
happiest and the sufferers of it, who are unwilling to do injustice, most
wretched. This is tyranny, which through stealth or force appropriates the
property of others, whether sacred or profane, public or private, not little
by little, but all at once. If someone commits only one part of injustice and
b is caught, he's punished and greatly reproached—such partly unjust people
are called temple-robbers,[11] kidnappers, housebreakers, robbers, and
thieves when they commit these crimes. But when someone, in addition
to appropriating their possessions, kidnaps and enslaves the citizens as
well, instead of these shameful names he is called happy and blessed, not
c only by the citizens themselves, but by all who learn that he has done the
whole of injustice. Those who reproach injustice do so because they are
afraid not of doing it but of suffering it. So, Socrates, injustice, if it is on
a large enough scale, is stronger, freer, and more masterly than justice.
And, as I said from the first, justice is what is advantageous to the stronger,
while injustice is to one's own profit and advantage.

d Having emptied this great flood of words into our ears all at once like
a bath attendant, Thrasymachus intended to leave. But those present didn't
let him and made him stay to give an account of what he had said. I too
begged him to stay, and I said to him: After hurling such a speech at us,
Thrasymachus, do you intend to leave before adequately instructing us
e or finding out whether you are right or not? Or do you think it a small

11. The temples acted as public treasuries, so that a temple robber is much like a present-day bank robber.

matter to determine which whole way of life would make living most worthwhile for each of us?

Is *that* what I seem to you to think? Thrasymachus said.

Either that, or else you care nothing for us and aren't worried about
whether we'll live better or worse lives because of our ignorance of what
you say you know. So show some willingness to teach it to us. It wouldn't
be a bad investment for you to be the benefactor of a group as large as
ours. For my own part, I'll tell you that I am not persuaded. I don't believe 345
that injustice is more profitable than justice, not even if you give it full
scope and put no obstacles in its way. Suppose that there *is* an unjust
person, and suppose he *does* have the power to do injustice, whether by
trickery or open warfare; nonetheless, he doesn't persuade me that injustice
is more profitable than justice. Perhaps someone here, besides myself, feels b
the same as I do. So come now, and persuade us that we are wrong to
esteem justice more highly than injustice in planning our lives.

And how am I to persuade you, if you aren't persuaded by what I said just now? What more can I do? Am I to take my argument and pour it into your very soul?

God forbid! Don't do that! But, first, stick to what you've said, and then,
if you change your position, do it openly and don't deceive us. You see,
Thrasymachus, that having defined the true doctor—to continue examining
the things you said before—you didn't consider it necessary later to keep c
a precise guard on the true shepherd. You think that, insofar as he's a
shepherd, he fattens sheep, not looking to what is best for the sheep but
to a banquet, like a guest about to be entertained at a feast, or to a future
sale, like a money-maker rather than a shepherd. Shepherding is concerned
only to provide what is best for that which it is set over, and it is itself d
adequately provided with all it needs to be at its best when it doesn't fall
short in any way of being the craft of shepherding. That's why I thought
it necessary for us to agree before[12] that every kind of rule, insofar as it
rules, doesn't seek anything other than what is best for the thing it rules
and cares for, and this is true both of public and private kinds of rule. But
do you think that those who rule cities, the true rulers, rule willingly? e

I don't think it, by god, I know it.

But, Thrasymachus, don't you realize that in other kinds of rule no one
wants to rule for its own sake, but they ask for pay, thinking that their
ruling will benefit not themselves but their subjects? Tell me, doesn't every
craft differ from every other in having a different function? Please don't 346
answer contrary to what you believe, so that we can come to some definite conclusion.

Yes, that's what differentiates them.

And each craft benefits us in its own peculiar way, different from the others. For example, medicine gives us health, navigation gives us safety while sailing, and so on with the others?

12. See 341e–342e.

Certainly.

And wage-earning gives us wages, for this is its function? Or would
b you call medicine the same as navigation? Indeed, if you want to define matters precisely, as you proposed, even if someone who is a ship's captain becomes healthy because sailing is advantageous to his health, you wouldn't for that reason call his craft medicine?

Certainly not.

Nor would you call wage-earning medicine, even if someone becomes healthy while earning wages?

Certainly not.

Nor would you call medicine wage-earning, even if someone earns pay while healing?

c No.

We are agreed, then, that each craft brings its own peculiar benefit?

It does.

Then whatever benefit all craftsmen receive in common must clearly result from their joint practice of some additional craft that benefits each of them?

So it seems.

And we say that the additional craft in question, which benefits the craftsmen by earning them wages, is the craft of wage-earning?

He reluctantly agreed.

Then this benefit, receiving wages, doesn't result from their own craft,
d but rather, if we're to examine this precisely, medicine provides health, and wage-earning provides wages; house-building provides a house, and wage-earning, which accompanies it, provides a wage; and so on with the other crafts. Each of them does its own work and benefits the thing it is set over. So, if wages aren't added, is there any benefit that the craftsman gets from his craft?

Apparently none.

e But he still provides a benefit when he works for nothing?

Yes, I think he does.

Then, it is clear now, Thrasymachus, that no craft or rule provides for its own advantage, but, as we've been saying for some time, it provides and orders for its subject and aims at its advantage, that of the weaker, not of the stronger. That's why I said just now, Thrasymachus, that no one willingly chooses to rule and to take other people's troubles in hand
347 and straighten them out, but each asks for wages; for anyone who intends to practice his craft well never does or orders what is best for himself—at least not when he orders as his craft prescribes—but what is best for his subject. It is because of this, it seems, that wages must be provided to a person if he's to be willing to rule, whether in the form of money or honor or a penalty if he refuses.

What do you mean, Socrates? said Glaucon. I know the first two kinds of wages, but I don't understand what penalty you mean or how you can call it a wage.

Then you don't understand the best people's kind of wages, the kind
that moves the most decent to rule, when they are willing to rule at all.
Don't you know that the love of honor and the love of money are despised, b
and rightly so?

I do.

Therefore good people won't be willing to rule for the sake of either
money or honor. They don't want to be paid wages openly for ruling and
get called hired hands, nor to take them in secret from their rule and be
called thieves. And they won't rule for the sake of honor, because they
aren't ambitious honor-lovers. So, if they're to be willing to rule, some c
compulsion or punishment must be brought to bear on them—perhaps
that's why it is thought shameful to seek to rule before one is compelled
to. Now, the greatest punishment, if one isn't willing to rule, is to be ruled
by someone worse than oneself. And I think that it's fear of this that makes
decent people rule when they do. They approach ruling not as something
good or something to be enjoyed, but as something necessary, since it can't
be entrusted to anyone better than—or even as good as—themselves. In d
a city of good men, if it came into being, the citizens would fight in order
*not to rule*, just as they do now in order to rule. There it would be quite
clear that anyone who is really a true ruler doesn't by nature seek his own
advantage but that of his subject. And everyone, knowing this, would
rather be benefited by others than take the trouble to benefit them. So I
can't at all agree with Thrasymachus that justice is the advantage of the
stronger—but we'll look further into that another time. What Thrasyma- e
chus is now saying—that the life of an unjust person is better than that
of a just one—seems to be of far greater importance. Which life would
you choose, Glaucon? And which of our views do you consider truer?

I certainly think that the life of a just person is more profitable.

Did you hear all of the good things Thrasymachus listed a moment ago 348
for the unjust life?

I heard, but I wasn't persuaded.

Then, do you want us to persuade him, if we're able to find a way, that what he says isn't true?

Of course I do.

If we oppose him with a parallel speech about the blessings of the just
life, and then he replies, and then we do, we'd have to count and measure
the good things mentioned on each side, and we'd need a jury to decide
the case. But if, on the other hand, we investigate the question, as we've b
been doing, by seeking agreement with each other, we ourselves can be
both jury and advocates at once.

Certainly.

Which approach do you prefer? I asked.

The second.

Come, then, Thrasymachus, I said, answer us from the beginning. You say that complete injustice is more profitable than complete justice?

I certainly do say that, and I've told you why. c

Well, then, what do you say about this? Do you call one of the two a virtue and the other a vice?

Of course.

That is to say, you call justice a virtue and injustice a vice?

That's hardly likely, since I say that injustice is profitable and justice isn't.

Then, what exactly do you say?

The opposite.

That justice is a vice?

No, just very high-minded simplicity.

d Then do you call being unjust being low-minded?

No, I call it good judgment.

You consider unjust people, then, Thrasymachus, to be clever and good?

Yes, those who are completely unjust, who can bring cities and whole communities under their power. Perhaps, you think I meant pickpockets? Not that such crimes aren't also profitable, if they're not found out, but they aren't worth mentioning by comparison to what I'm talking about.

e I'm not unaware of what you want to say. But I wonder about this: Do you really include injustice with virtue and wisdom, and justice with their opposites?

I certainly do.

That's harder, and it isn't easy now to know what to say. If you had declared that injustice is more profitable, but agreed that it is a vice or shameful, as some others do, we could have discussed the matter on the basis of conventional beliefs. But now, obviously, you'll say that injustice is fine and strong and apply to it all the attributes we used to apply to
349 justice, since you dare to include it with virtue and wisdom.

You've divined my views exactly.

Nonetheless, we mustn't shrink from pursuing the argument and looking into this, just as long as I take you to be saying what you really think. And I believe that you aren't joking now, Thrasymachus, but are saying what you believe to be the truth.

What difference does it make to you, whether *I* believe it or not? It's *my account* you're supposed to be refuting.

It makes no difference. But try to answer this further question: Do you
b think that a just person wants to outdo someone else who's just?

Not at all, for he wouldn't then be as polite and innocent as he is.

Or to outdo someone who does a just action?

No, he doesn't even want to do that.

And does he claim that he deserves to outdo an unjust person and believe that it is just for him to do so, or doesn't he believe that?

He'd want to outdo him, and he'd claim to deserve to do so, but he wouldn't be able.

That's not what I asked, but whether a just person wants to outdo an
c unjust person but not a just one, thinking that this is what he deserves?

He does.

What about an unjust person? Does he claim that he deserves to outdo a just person or someone who does a just action?

Of course he does; he thinks he deserves to outdo everyone.

Then will an unjust person also outdo an *unjust* person or someone who does an *unjust* action, and will he strive to get the most he can for himself from everyone?

He will.

Then, let's put it this way: A just person doesn't outdo someone like himself but someone unlike himself, whereas an unjust person outdoes both like and unlike. d

Very well put.

An unjust person is clever and good, and a just one is neither?

That's well put, too.

It follows, then, that an unjust person is like clever and good people, while the other isn't?

Of course that's so. How could he fail to be like them when he has their qualities, while the other isn't like them?

Fine. Then each of them has the qualities of the people he's like?

Of course.

All right, Thrasymachus. Do you call one person musical and another e nonmusical?

I do.

Which of them is clever in music, and which isn't?

The musical one is clever, of course, and the other isn't.

And the things he's clever in, he's good in, and the things he isn't clever in, he's bad in?

Yes.

Isn't the same true of a doctor?

It is.

Do you think that a musician, in tuning his lyre and in tightening and loosening the strings, wants to outdo another musician, claiming that this is what he deserves?

I do not.

But he does want to outdo a nonmusician?

Necessarily.

What about a doctor? Does he, when prescribing food and drink, want to outdo another doctor or someone who does the action that medicine pre- 350 scribes?

Certainly not.

But he does want to outdo a nondoctor?

Yes.

In any branch of knowledge or ignorance, do you think that a knowledgeable person would intentionally try to outdo other knowledgeable people or say something better or different than they do, rather than doing or saying the very same thing as those like him?

Well, perhaps it must be as you say.

And what about an ignorant person? Doesn't he want to outdo both a
b knowledgeable person and an ignorant one?

Probably.

A knowledgeable person is clever?

I agree.

And a clever one is good?

I agree.

Therefore, a good and clever person doesn't want to outdo those like himself but those who are unlike him and his opposite.

So it seems.

But a bad and ignorant person wants to outdo both his like and his opposite.

Apparently.

Now, Thrasymachus, we found that an unjust person tries to outdo those like him and those unlike him? Didn't you say that?

I did.

c And that a just person won't outdo his like but his unlike?

Yes.

Then, a just person is like a clever and good one, and an unjust is like an ignorant and bad one.

It looks that way.

Moreover, we agreed that each has the qualities of the one he resembles.

Yes, we did.

Then, a just person has turned out to be good and clever, and an unjust one ignorant and bad.

Thrasymachus agreed to all this, not easily as I'm telling it, but reluc-
d tantly, with toil, trouble, and—since it was summer—a quantity of sweat that was a wonder to behold. And then I saw something I'd never seen before—Thrasymachus blushing. But, in any case, after we'd agreed that justice is virtue and wisdom and that injustice is vice and ignorance, I said: All right, let's take that as established. But we also said that injustice is powerful, or don't you remember that, Thrasymachus?

I remember, but I'm not satisfied with what you're now saying. I could make a speech about it, but, if I did, I know that you'd accuse me of
e engaging in oratory. So either allow me to speak, or, if you want to ask questions, go ahead, and I'll say, "All right," and nod yes and no, as one does to old wives' tales.

Don't do that, contrary to your own opinion.

I'll answer so as to please you, since you won't let me make a speech. What else do you want?

Nothing, by god. But if that's what you're going to do, go ahead and do it. I'll ask my questions.

Ask ahead.

351 I'll ask what I asked before, so that we may proceed with our argument about justice and injustice in an orderly fashion, for surely it was claimed

that injustice is stronger and more powerful than justice. But, now, if justice is indeed wisdom and virtue, it will easily be shown to be stronger than injustice, since injustice is ignorance (no one could now be ignorant of that). However, I don't want to state the matter so unconditionally, Thrasy-
machus, but to look into it in some such way as this. Would you say that b
it is unjust for a city to try to enslave other cities unjustly and to hold them in subjection when it has enslaved many of them?

Of course, that's what the best city will especially do, the one that is most completely unjust.

I understand that's your position, but the point I want to examine is this: Will the city that becomes stronger than another achieve this power without justice, or will it need the help of justice?

If what you said a moment ago stands, and justice is cleverness or
wisdom, it will need the help of justice, but if things are as I stated, it will c
need the help of injustice.

I'm impressed, Thrasymachus, that you don't merely nod yes or no but give very fine answers.

That's because I'm trying to please you.

You're doing well at it, too. So please me some more by answering this question: Do you think that a city, an army, a band of robbers or thieves, or any other tribe with a common unjust purpose would be able to achieve it if they were unjust to each other?

No, indeed. d

What if they weren't unjust to one another? Would they achieve more?

Certainly.

Injustice, Thrasymachus, causes civil war, hatred, and fighting among themselves, while justice brings friendship and a sense of common purpose. Isn't that so?

Let it be so, in order not to disagree with you.

You're still doing well on that front. So tell me this: If the effect of injustice is to produce hatred wherever it occurs, then, whenever it arises, whether among free men or slaves, won't it cause them to hate one another, engage in civil war, and prevent them from achieving any common
purpose? e

Certainly.

What if it arises between two people? Won't they be at odds, hate each other, and be enemies to one another and to just people?

They will.

Does injustice lose its power to cause dissension when it arises within a single individual, or will it preserve it intact?

Let it preserve it intact.

Apparently, then, injustice has the power, first, to make whatever it arises in—whether it is a city, a family, an army, or anything else—incapable of
achieving anything as a unit, because of the civil wars and differences it 352
creates, and, second, it makes that unit an enemy to itself and to what is in every way its opposite, namely, justice. Isn't that so?

Certainly.

And even in a single individual, it has by its nature the very same effect. First, it makes him incapable of achieving anything, because he is in a state of civil war and not of one mind; second, it makes him his own enemy, as well as the enemy of just people. Hasn't it that effect?

Yes.

And the gods too are just?

Let it be so.

b So an unjust person is also an enemy of the gods, Thrasymachus, while a just person is their friend?

Enjoy your banquet of words! Have no fear, I won't oppose you. That would make these people hate me.

Come, then, complete the banquet for me by continuing to answer as you've been doing. We have shown that just people are cleverer and more capable of doing things, while unjust ones aren't even able to act together,
c for when we speak of a powerful achievement by unjust men acting together, what we say isn't altogether true. They would never have been able to keep their hands off each other if they were completely unjust. But clearly there must have been some sort of justice in them that at least prevented them from doing injustice among themselves at the same time as they were doing it to others. And it was this that enabled them to achieve what they did. When they started doing unjust things, they were only halfway corrupted by their injustice (for those who are all bad and completely unjust are completely incapable of accomplishing anything). These are the things I understand to hold, not the ones you first maintained.
d We must now examine, as we proposed before,[13] whether just people also live better and are happier than unjust ones. I think it's clear already that this is so, but we must look into it further, since the argument concerns no ordinary topic but the way we ought to live.

Go ahead and look.

I will. Tell me, do you think there is such a thing as the function of a horse?

e I do.

And would you define the function of a horse or of anything else as that which one can do only with it or best with it?

I don't understand.

Let me put it this way: Is it possible to see with anything other than eyes?

Certainly not.

Or to hear with anything other than ears?

No.

Then, we are right to say that seeing and hearing are the functions of eyes and ears?

Of course.

What about this? Could you use a dagger or a carving knife or lots of
353 other things in pruning a vine?

13. See 347e.

Of course.

But wouldn't you do a finer job with a pruning knife designed for the purpose than with anything else?

You would.

Then shall we take pruning to be its function?

Yes.

Now, I think you'll understand what I was asking earlier when I asked whether the function of each thing is what it alone can do or what it does better than anything else.

I understand, and I think that this is the function of each. b

All right. Does each thing to which a particular function is assigned also have a virtue? Let's go over the same ground again. We say that eyes have some function?

They do.

So there is also a virtue of eyes?

There is.

And ears have a function?

Yes.

So there is also a virtue of ears?

There is.

And all other things are the same, aren't they?

They are.

And could eyes perform their function well if they lacked their peculiar c
virtue and had the vice instead?

How could they, for don't you mean if they had blindness instead of sight?

Whatever their virtue is, for I'm not now asking about that but about whether anything that has a function performs it well by means of its own peculiar virtue and badly by means of its vice?

That's true, it does.

So ears, too, deprived of their own virtue, perform their function badly?

That's right.

And the same could be said about everything else? d

So it seems.

Come, then, and let's consider this: Is there some function of a soul that you couldn't perform with anything else, for example, taking care of things, ruling, deliberating, and the like? Is there anything other than a soul to which you could rightly assign these, and say that they are its peculiar function?

No, none of them.

What of living? Isn't that a function of a soul?

It certainly is.

And don't we also say that there is a virtue of a soul?

We do.

Then, will a soul ever perform its function well, Thrasymachus, if it is e
deprived of its own peculiar virtue, or is that impossible?

It's impossible.

Doesn't it follow, then, that a bad soul rules and takes care of things badly and that a good soul does all these things well?

It does.

Now, we agreed that justice is a soul's virtue, and injustice its vice?

We did.

Then, it follows that a just soul and a just man will live well, and an unjust one badly.

Apparently so, according to your argument.

And surely anyone who lives well is blessed and happy, and anyone
354 who doesn't is the opposite.

Of course.

Therefore, a just person is happy, and an unjust one wretched.

So be it.

It profits no one to be wretched but to be happy.

Of course.

And so, Thrasymachus, injustice is never more profitable than justice.

Let that be your banquet, Socrates, at the feast of Bendis.

Given by you, Thrasymachus, after you became gentle and ceased to
give me rough treatment. Yet I haven't had a fine banquet. But that's my
b fault not yours. I seem to have behaved like a glutton, snatching at every
dish that passes and tasting it before properly savoring its predecessor.
Before finding the answer to our first inquiry about what justice is, I let
that go and turned to investigate whether it is a kind of vice and ignorance
or a kind of wisdom and virtue. Then an argument came up about injustice
being more profitable than justice, and I couldn't refrain from abandoning
the previous one and following up on that. Hence the result of the discus-
c sion, as far as I'm concerned, is that I know nothing, for when I don't
know what justice is, I'll hardly know whether it is a kind of virtue or
not, or whether a person who has it is happy or unhappy.

## Book II

357 When I said this, I thought I had done with the discussion, but it turned
out to have been only a prelude. Glaucon showed his characteristic courage
on this occasion too and refused to accept Thrasymachus' abandonment
of the argument. Socrates, he said, do you want to seem to have persuaded
us that it is better in every way to be just than unjust, or do you want
b truly to convince us of this?

I want truly to convince you, I said, if I can.

Well, then, you certainly aren't doing what you want. Tell me, do you think there is a kind of good we welcome, not because we desire what comes from it, but because we welcome it for its own sake—joy, for example, and all the harmless pleasures that have no results beyond the joy of having them?

Certainly, I think there are such things.

And is there a kind of good we like for its own sake and also for the sake of what comes from it—knowing, for example, and seeing and being c
healthy? We welcome such things, I suppose, on both counts.

Yes.

And do you also see a third kind of good, such as physical training, medical treatment when sick, medicine itself, and the other ways of making money? We'd say that these are onerous but beneficial to us, and we wouldn't choose them for their own sakes, but for the sake of the rewards and other things that come from them. d

There is also this third kind. But what of it?

Where do you put justice?

I myself put it among the finest goods, as something to be valued by 358
anyone who is going to be blessed with happiness, both because of itself and because of what comes from it.

That isn't most people's opinion. They'd say that justice belongs to the onerous kind, and is to be practiced for the sake of the rewards and popularity that come from a reputation for justice, but is to be avoided because of itself as something burdensome.

I know that's the general opinion. Thrasymachus faulted justice on these grounds a moment ago and praised injustice, but it seems that I'm a slow learner.

Come, then, and listen to me as well, and see whether you still have b
that problem, for I think that Thrasymachus gave up before he had to, charmed by you as if he were a snake. But I'm not yet satisfied by the argument on either side. I want to know what justice and injustice are and what power each itself has when it's by itself in the soul. I want to leave out of account their rewards and what comes from each of them. So, if you agree, I'll renew the argument of Thrasymachus. First, I'll state what kind of thing people consider justice to be and what its origins are. Second, c
I'll argue that all who practice it do so unwillingly, as something necessary, not as something good. Third, I'll argue that they have good reason to act as they do, for the life of an unjust person is, they say, much better than that of a just one.

It isn't, Socrates, that I believe any of that myself. I'm perplexed, indeed, and my ears are deafened listening to Thrasymachus and countless others. But I've yet to hear anyone defend justice in the way I want, proving that it is better than injustice. I want to hear it praised *by itself*, and I think that d
I'm most likely to hear this from you. Therefore, I'm going to speak at length in praise of the unjust life, and in doing so I'll show you the way I want to hear you praising justice and denouncing injustice. But see whether you want me to do that or not.

I want that most of all. Indeed, what subject could someone with any understanding enjoy discussing more often?

Excellent. Then let's discuss the first subject I mentioned—what justice e
is and what its origins are.

They say that to do injustice is naturally good and to suffer injustice
bad, but that the badness of suffering it so far exceeds the goodness of
doing it that those who have done and suffered injustice and tasted both,
but who lack the power to do it and avoid suffering it, decide that it is
359 profitable to come to an agreement with each other neither to do injustice
nor to suffer it. As a result, they begin to make laws and covenants, and
what the law commands they call lawful and just. This, they say, is the
origin and essence of justice. It is intermediate between the best and the
worst. The best is to do injustice without paying the penalty; the worst is
to suffer it without being able to take revenge. Justice is a mean between
these two extremes. People value it not as a good but because they are
b too weak to do injustice with impunity. Someone who has the power to
do this, however, and is a true man wouldn't make an agreement with
anyone not to do injustice in order not to suffer it. For him that would be
madness. This is the nature of justice, according to the argument, Socrates,
and these are its natural origins.

We can see most clearly that those who practice justice do it unwillingly
c and because they lack the power to do injustice, if in our thoughts we
grant to a just and an unjust person the freedom to do whatever they
like. We can then follow both of them and see where their desires would
lead. And we'll catch the just person red-handed travelling the same road
as the unjust. The reason for this is the desire to outdo others and get
more and more. This is what anyone's nature naturally pursues as good,
but nature is forced by law into the perversion of treating fairness with
respect.

The freedom I mentioned would be most easily realized if both people
had the power they say the ancestor of Gyges of Lydia possessed. The
d story goes that he was a shepherd in the service of the ruler of Lydia.
There was a violent thunderstorm, and an earthquake broke open the
ground and created a chasm at the place where he was tending his sheep.
Seeing this, he was filled with amazement and went down into it. And
there, in addition to many other wonders of which we're told, he saw a
hollow bronze horse. There were windowlike openings in it, and, peeping
in, he saw a corpse, which seemed to be of more than human size, wearing
e nothing but a gold ring on its finger. He took the ring and came out of
the chasm. He wore the ring at the usual monthly meeting that reported
to the king on the state of the flocks. And as he was sitting among the
others, he happened to turn the setting of the ring towards himself to the
inside of his hand. When he did this, he became invisible to those sitting
360 near him, and they went on talking as if he had gone. He wondered at
this, and, fingering the ring, he turned the setting outwards again and
became visible. So he experimented with the ring to test whether it indeed
had this power—and it did. If he turned the setting inward, he became
invisible; if he turned it outward, he became visible again. When he realized
this, he at once arranged to become one of the messengers sent to report
to the king. And when he arrived there, he seduced the king's wife, attacked
b the king with her help, killed him, and took over the kingdom.

Let's suppose, then, that there were two such rings, one worn by a just
and the other by an unjust person. Now, no one, it seems, would be so
incorruptible that he would stay on the path of justice or stay away from
other people's property, when he could take whatever he wanted from
the marketplace with impunity, go into people's houses and have sex with
anyone he wished, kill or release from prison anyone he wished, and do c
all the other things that would make him like a god among humans. Rather
his actions would be in no way different from those of an unjust person,
and both would follow the same path. This, some would say, is a great
proof that one is never just willingly but only when compelled to be. No
one believes justice to be a good when it is kept private, since, wherever
either person thinks he can do injustice with impunity, he does it. Indeed,
every man believes that injustice is far more profitable to himself than
justice. And any exponent of this argument will say he's right, for someone d
who didn't want to do injustice, given this sort of opportunity, and who
didn't touch other people's property would be thought wretched and
stupid by everyone aware of the situation, though, of course, they'd praise
him in public, deceiving each other for fear of suffering injustice. So much
for my second topic.

As for the choice between the lives we're discussing, we'll be able to
make a correct judgment about that only if we separate the most just and e
the most unjust. Otherwise we won't be able to do it. Here's the separation
I have in mind. We'll subtract nothing from the injustice of an unjust
person and nothing from the justice of a just one, but we'll take each to
be complete in his own way of life. First, therefore, we must suppose that
an unjust person will act as clever craftsmen do: A first-rate captain or
doctor, for example, knows the difference between what his craft can and 361
can't do. He attempts the first but lets the second go by, and if he happens
to slip, he can put things right. In the same way, an unjust person's
successful attempts at injustice must remain undetected, if he is to be fully
unjust. Anyone who is caught should be thought inept, for the extreme
of injustice is to be believed to be just without being just. And our com-
pletely unjust person must be given complete injustice; nothing may be
subtracted from it. We must allow that, while doing the greatest injustice,
he has nonetheless provided himself with the greatest reputation for justice.
If he happens to make a slip, he must be able to put it right. If any of his b
unjust activities should be discovered, he must be able to speak persua-
sively or to use force. And if force is needed, he must have the help of
courage and strength and of the substantial wealth and friends with which
he has provided himself.

Having hypothesized such a person, let's now in our argument put
beside him a just man, who is simple and noble and who, as Aeschylus
says, doesn't want to be believed to be good but to be so.[1] We must take

1. In *Seven Against Thebes*, 592–94, it is said of Amphiaraus that "he did not wish to be believed to be the best but to be it." The passage continues with the words Glaucon quotes below at 362a–b.

c away his reputation, for a reputation for justice would bring him honor
and rewards, so that it wouldn't be clear whether he is just for the sake
of justice itself or for the sake of those honors and rewards. We must strip
him of everything except justice and make his situation the opposite of
an unjust person's. Though he does no injustice, he must have the greatest
reputation for it, so that he can be tested as regards justice unsoftened by
his bad reputation and its effects. Let him stay like that unchanged until
d he dies—just, but all his life believed to be unjust. In this way, both will
reach the extremes, the one of justice and the other of injustice, and we'll
be able to judge which of them is happier.

Whew! Glaucon, I said, how vigorously you've scoured each of the men for our competition, just as you would a pair of statues for an art competition.

I do the best I can, he replied. Since the two are as I've described, in
any case, it shouldn't be difficult to complete the account of the kind of
life that awaits each of them, but it must be done. And if what I say sounds
e crude, Socrates, remember that it isn't I who speak but those who praise
injustice at the expense of justice. They'll say that a just person in such
circumstances will be whipped, stretched on a rack, chained, blinded with
fire, and, at the end, when he has suffered every kind of evil, he'll be
impaled, and will realize then that one shouldn't want to be just but to
362 be believed to be just. Indeed, Aeschylus' words are far more correctly
applied to unjust people than to just ones, for the supporters of injustice
will say that a really unjust person, having a way of life based on the truth
about things and not living in accordance with opinion, doesn't want
simply to be believed to be unjust but actually to be so—

*Harvesting a deep furrow in his mind,*
b *Where wise counsels propagate.*

He rules his city because of his reputation for justice; he marries into any
family he wishes; he gives his children in marriage to anyone he wishes;
he has contracts and partnerships with anyone he wants; and besides
benefiting himself in all these ways, he profits because he has no scruples
about doing injustice. In any contest, public or private, he's the winner
and outdoes his enemies. And by outdoing them, he becomes wealthy,
benefiting his friends and harming his enemies. He makes adequate sacri-
c fices to the gods and sets up magnificent offerings to them. He takes better
care of the gods, therefore, (and, indeed, of the human beings he's fond
of) than a just person does. Hence it's likely that the gods, in turn, will
take better care of him than of a just person. That's what they say, Socrates,
that gods and humans provide a better life for unjust people than for
just ones.

d When Glaucon had said this, I had it in mind to respond, but his brother
Adeimantus intervened: You surely don't think that the position has been
adequately stated?

Why not? I said.

The most important thing to say hasn't been said yet.

Well, then, I replied, a man's brother must stand by him, as the saying goes.[2] If Glaucon has omitted something, you must help him. Yet what he has said is enough to throw me to the canvas and make me unable to come to the aid of justice.

Nonsense, he said. Hear what more I have to say, for we should also fully explore the arguments that are opposed to the ones Glaucon gave, the ones that praise justice and find fault with injustice, so that what I e
take to be his intention may be clearer.

When fathers speak to their sons, they say that one must be just, as do all the others who have charge of anyone. But they don't praise justice itself, only the high reputations it leads to and the consequences of being 363
thought to be just, such as the public offices, marriages, and other things Glaucon listed. But they elaborate even further on the consequences of reputation. By bringing in the esteem of the gods, they are able to talk about the abundant good things that they themselves and the noble Hesiod and Homer say that the gods give to the pious, for Hesiod says that the gods make the oak trees b

*Bear acorns at the top and bees in the middle*
*And make fleecy sheep heavy laden with wool*

for the just, and tells of many other good things akin to these. And Homer is similar:

*When a good king, in his piety,*
*Upholds justice, the black earth bears*
*Wheat and barley for him, and his trees are heavy with fruit.* c
*His sheep bear lambs unfailingly, and the sea yields up its fish.*[3]

Musaeus and his son make the gods give the just more headstrong goods than these.[4] In their stories, they lead the just to Hades, seat them on couches, provide them with a symposium of pious people, crown them with wreaths, and make them spend all their time drinking—as if they thought drunkenness was the finest wage of virtue. Others stretch even d
further the wages that virtue receives from the gods, for they say that someone who is pious and keeps his promises leaves his children's children and a whole race behind him. In these and other similar ways, they praise

2. See *Odyssey* xvi.97–98.

3. The two last quotations are from *Works and Days* 232 ff. and *Odyssey* xix.109–13, omitting 110, respectively.

4. Musaeus was a legendary poet closely associated with the mystery religion of Orphism.

justice. They bury the impious and unjust in mud in Hades; force them to carry water in a sieve; bring them into bad repute while they're still alive, and all those penalties that Glaucon gave to the just person they
e give to the unjust. But they have nothing else to say. This, then, is the way people praise justice and find fault with injustice.

Besides this, Socrates, consider another form of argument about justice and injustice employed both by private individuals and by poets. All go on repeating with one voice that justice and moderation are fine things,
364 but hard and onerous, while licentiousness and injustice are sweet and easy to acquire and are shameful only in opinion and law. They add that unjust deeds are for the most part more profitable than just ones, and, whether in public or private, they willingly honor vicious people who have wealth and other types of power and declare them to be happy. But they dishonor and disregard the weak and the poor, even though they
b agree that they are better than the others.

But the most wonderful of all these arguments concerns what they have to say about the gods and virtue. They say that the gods, too, assign misfortune and a bad life to many good people, and the opposite fate to their opposites. Begging priests and prophets frequent the doors of the rich and persuade them that they possess a god-given power founded on
c sacrifices and incantations. If the rich person or any of his ancestors has committed an injustice, they can fix it with pleasant rituals. Moreover, if he wishes to injure some enemy, then, at little expense, he'll be able to harm just and unjust alike, for by means of spells and enchantments they can persuade the gods to serve them. And the poets are brought forward as witnesses to all these accounts. Some harp on the ease of vice, as follows:

*Vice in abundance is easy to get;*
d *The road is smooth and begins beside you,*
*But the gods have put sweat between us and virtue,*

and a road that is long, rough, and steep.[5] Others quote Homer to bear witness that the gods can be influenced by humans, since he said:

*The gods themselves can be swayed by prayer,*
*And with sacrifices and soothing promises,*
e *Incense and libations, human beings turn them from their purpose*
*When someone has transgressed and sinned.*[6]

And they present a noisy throng of books by Musaeus and Orpheus, offspring as they say of Selene and the Muses, in accordance with which

5. *Works and Days* 287–89, with minor alterations.

6. *Iliad* ix.497–501, with minor alterations.

they perform their rituals.[7] And they persuade not only individuals but whole cities that the unjust deeds of the living or the dead can be absolved or purified through ritual sacrifices and pleasant games. These initiations, 365
as they call them, free people from punishment hereafter, while a terrible fate awaits those who have not performed the rituals.

When all such sayings about the attitudes of gods and humans to virtue and vice are so often repeated, Socrates, what effect do you suppose they have on the souls of young people? I mean those who are clever and are able to flit from one of these sayings to another, so to speak, and gather from them an impression of what sort of person he should be and of how best to travel the road of life. He would surely ask himself Pindar's question, b
"Should I by justice or by crooked deceit scale this high wall and live my life guarded and secure?" And he'll answer: "The various sayings suggest that there is no advantage in my being just if I'm not also thought just, while the troubles and penalties of being just are apparent. But they tell me that an unjust person, who has secured for himself a reputation for justice, lives the life of a god. Since, then, 'opinion forcibly overcomes truth' and 'controls happiness,' as the wise men say, I must surely turn c
entirely to it.[8] I should create a façade of illusory virtue around me to deceive those who come near, but keep behind it the greedy and crafty fox of the wise Archilochus."[9]

"But surely," someone will object, "it isn't easy for vice to remain always hidden." We'll reply that nothing great is easy. And, in any case, if we're to be happy, we must follow the path indicated in these accounts. To d
remain undiscovered we'll form secret societies and political clubs. And there are teachers of persuasion to make us clever in dealing with assemblies and law courts. Therefore, using persuasion in one place and force in another, we'll outdo others without paying a penalty.

"What about the gods? Surely, we can't hide from them or use violent force against them!" Well, if the gods don't exist or don't concern themselves with human affairs, why should we worry at all about hiding from them? If they do exist and do concern themselves with us, we've learned e
all we know about them from the laws and the poets who give their genealogies—nowhere else. But these are the very people who tell us that the gods can be persuaded and influenced by sacrifices, gentle prayers, and offerings. Hence, we should believe them on both matters or neither. If we believe them, we should be unjust and offer sacrifices from the fruits of our injustice. If we are just, our only gain is not to be punished by the 366
gods, since we lose the profits of injustice. But if we are unjust, we get the

7. It is not clear whether Orpheus was a real person or a mythical figure. His fame in Greek myth rests on the poems in which the doctrines of the Orphic religion are set forth.

8. The quotation is attributed to Simonides, whom Polemarchus cites in Book I.

9. Archilochus of Paros (c. 756–716 B.C.) was an iambic and elegiac poet who composed a famous fable about the fox and the hedgehog.

profits of our crimes and transgressions and afterwards persuade the gods
by prayer and escape without punishment.

"But in Hades won't we pay the penalty for crimes committed here,
either ourselves or our children's children?" "My friend," the young man
will say as he does his calculation, "mystery rites and the gods of absolution
have great power. The greatest cities tell us this, as do those children of
b the gods who have become poets and prophets."

Why, then, should we still choose justice over the greatest injustice?
Many eminent authorities agree that, if we practice such injustice with a
false façade, we'll do well at the hands of gods and humans, living and
dying as we've a mind to. So, given all that has been said, Socrates, how
c is it possible for anyone of any power—whether of mind, wealth, body,
or birth—to be willing to honor justice and not laugh aloud when he hears
it praised? Indeed, if anyone can show that what we've said is false and
has adequate knowledge that justice is best, he'll surely be full not of anger
but of forgiveness for the unjust. He knows that, apart from someone of
godlike character who is disgusted by injustice or one who has gained
d knowledge and avoids injustice for that reason, no one is just willingly.
Through cowardice or old age or some other weakness, people do indeed
object to injustice. But it's obvious that they do so only because they lack
the power to do injustice, for the first of them to acquire it is the first to
do as much injustice as he can.

And all of this has no other cause than the one that led Glaucon and
me to say to you: "Socrates, of all of you who claim to praise justice, from
the original heroes of old whose words survive, to the men of the present
e day, not one has ever blamed injustice or praised justice except by mention-
ing the reputations, honors, and rewards that are their consequences. No
one has ever adequately described what each itself does of its own power
by its presence in the soul of the person who possesses it, even if it remains
hidden from gods and humans. No one, whether in poetry or in private
conversations, has adequately argued that injustice is the worst thing a
soul can have in it and that justice is the greatest good. If you had treated
367 the subject in this way and persuaded us from youth, we wouldn't now
be guarding against one another's injustices, but each would be his own
best guardian, afraid that by doing injustice he'd be living with the worst
thing possible."

Thrasymachus or anyone else might say what we've said, Socrates, or
maybe even more, in discussing justice and injustice—crudely inverting
their powers, in my opinion. And, frankly, it's because I want to hear the
b opposite from you that I speak with all the force I can muster. So don't
merely give us a theoretical argument that justice is stronger than injustice,
but tell us what each itself does, because of its own powers, to someone
who possesses it, that makes injustice bad and justice good. Follow Glau-
con's advice, and don't take reputations into account, for if you don't
deprive justice and injustice of their true reputations and attach false ones
to them, we'll say that you are not praising them but their reputations

and that you're encouraging us to be unjust in secret. In that case, we'll c
say that you agree with Thrasymachus that justice is the good of another, the advantage of the stronger, while injustice is one's own advantage and profit, though not the advantage of the weaker.

You agree that justice is one of the greatest goods, the ones that are worth getting for the sake of what comes from them, but much more so
for their own sake, such as seeing, hearing, knowing, being healthy, and d
all other goods that are fruitful by their own nature and not simply because of reputation. Therefore, praise justice as a good of that kind, explaining how—because of its very self—it benefits its possessors and how injustice harms them. Leave wages and reputations for others to praise.

Others would satisfy me if they praised justice and blamed injustice in that way, extolling the wages of one and denigrating those of the other. But you, unless you order me to be satisfied, wouldn't, for you've spent
your whole life investigating this and nothing else. Don't, then, give us e
only a theoretical argument that justice is stronger than injustice, but show what effect each has because of itself on the person who has it—the one for good and the other for bad—whether it remains hidden from gods and human beings or not.

While I'd always admired the natures of Glaucon and Adeimantus, I
was especially pleased on this occasion, and I said: You are the sons of a 368
great man, and Glaucon's lover began his elegy well when he wrote, celebrating your achievements at the battle of Megara,

*Sons of Ariston, godlike offspring of a famous man.*

That's well said in my opinion, for you must indeed be affected by the divine if you're not convinced that injustice is better than justice and yet can speak on its behalf as you have done. And I believe that you really
are unconvinced by your own words. I infer this from the way you live, b
for if I had only your words to go on, I wouldn't trust you. The more I trust you, however, the more I'm at a loss as to what to do. I don't see how I can be of help. Indeed, I believe I'm incapable of it. And here's my evidence. I thought what I said to Thrasymachus showed that justice is better than injustice, but you won't accept it from me. On the other hand, I don't see how I can refuse my help, for I fear that it may even be impious to have breath in one's body and the ability to speak and yet to stand idly by and not defend justice when it is being prosecuted. So the best course
is to give justice any assistance I can. c

Glaucon and the others begged me not to abandon the argument but to help in every way to track down what justice and injustice are and what the truth about their benefits is. So I told them what I had in mind: The investigation we're undertaking is not an easy one but requires keen
eyesight. Therefore, since we aren't clever people, we should adopt the d
method of investigation that we'd use if, lacking keen eyesight, we were told to read small letters from a distance and then noticed that the same

letters existed elsewhere in a larger size and on a larger surface. We'd consider it a godsend, I think, to be allowed to read the larger ones first and then to examine the smaller ones, to see whether they really are the same.

That's certainly true, said Adeimantus, but how is this case similar to
e our investigation of justice?

I'll tell you. We say, don't we, that there is the justice of a single man and also the justice of a whole city?

Certainly.

And a city is larger than a single man?

It is larger.

Perhaps, then, there is more justice in the larger thing, and it will be easier to learn what it is. So, if you're willing, let's first find out what sort
369 of thing justice is in a city and afterwards look for it in the individual, observing the ways in which the smaller is similar to the larger.

That seems fine to me.

If we could watch a city coming to be in theory, wouldn't we also see its justice coming to be, and its injustice as well?

Probably so.

And when that process is completed, we can hope to find what we are looking for more easily?

b Of course.

Do you think we should try to carry it out, then? It's no small task, in my view. So think it over.

We have already, said Adeimantus. Don't even consider doing anything else.

I think a city comes to be because none of us is self-sufficient, but we all need many things. Do you think that a city is founded on any other principle?

No.

And because people need many things, and because one person calls
c on a second out of one need and on a third out of a different need, many people gather in a single place to live together as partners and helpers. And such a settlement is called a city. Isn't that so?

It is.

And if they share things with one another, giving and taking, they do so because each believes that this is better for himself?

That's right.

Come, then, let's create a city in theory from its beginnings. And it's our needs, it seems, that will create it.

It is, indeed.

d Surely our first and greatest need is to provide food to sustain life.

Certainly.

Our second is for shelter, and our third for clothes and such.

That's right.

How, then, will a city be able to provide all this? Won't one person have to be a farmer, another a builder, and another a weaver? And shouldn't we add a cobbler and someone else to provide medical care?

All right.

So the essential minimum for a city is four or five men?

Apparently. e

And what about this? Must each of them contribute his own work for the common use of all? For example, will a farmer provide food for everyone, spending quadruple the time and labor to provide food to be shared by them all? Or will he not bother about that, producing one quarter the food in one quarter the time, and spending the other three quarters, one in 370
building a house, one in the production of clothes, and one in making shoes, not troubling to associate with the others, but minding his own business on his own?

Perhaps, Socrates, Adeimantus replied, the way you suggested first would be easier than the other.

That certainly wouldn't be surprising, for, even as you were speaking it occurred to me that, in the first place, we aren't all born alike, but each of us differs somewhat in nature from the others, one being suited to one task, another to another. Or don't you think so? b

I do.

Second, does one person do a better job if he practices many crafts or—since he's one person himself—if he practices one?

If he practices one.

It's clear, at any rate, I think, that if one misses the right moment in anything, the work is spoiled.

It is.

That's because the thing to be done won't wait on the leisure of the doer, but the doer must of necessity pay close attention to his work rather than treating it as a secondary occupation. c

Yes, he must.

The result, then, is that more plentiful and better-quality goods are more easily produced if each person does one thing for which he is naturally suited, does it at the right time, and is released from having to do any of the others.

Absolutely.

Then, Adeimantus, we're going to need more than four citizens to provide the things we've mentioned, for a farmer won't make his own plough, not if it's to be a good one, nor his hoe, nor any of his other farming tools. Neither will a builder—and he, too, needs lots of things. And the same is d
true of a weaver and a cobbler, isn't it?

It is.

Hence, carpenters, metal workers, and many other craftsmen of that sort will share our little city and make it bigger.

That's right.

Yet it won't be a huge settlement even if we add cowherds, shepherds, and other herdsmen in order that the farmers have cows to do their plough-
e ing, the builders have oxen to share with the farmers in hauling their materials, and the weavers and cobblers have hides and fleeces to use.

It won't be a small one either, if it has to hold all those.

Moreover, it's almost impossible to establish a city in a place where nothing has to be imported.

Indeed it is.

So we'll need yet further people to import from other cities whatever is needed.

Yes.

And if an importer goes empty-handed to another city, without a cargo of the things needed by the city from which he's to bring back what his
371 own city needs, he'll come away empty-handed, won't he?

So it seems.

Therefore our citizens must not only produce enough for themselves at home but also goods of the right quality and quantity to satisfy the requirements of others.

They must.

So we'll need more farmers and other craftsmen in our city.

Yes.

And others to take care of imports and exports. And they're called merchants, aren't they?

Yes.

So we'll need merchants, too.

Certainly.

And if the trade is by sea, we'll need a good many others who know
b how to sail.

A good many, indeed.

And how will those in the city itself share the things that each produces? It was for the sake of this that we made their partnership and founded their city.

Clearly, they must do it by buying and selling.

Then we'll need a marketplace and a currency for such exchange.

Certainly.

c If a farmer or any other craftsman brings some of his products to market, and he doesn't arrive at the same time as those who want to exchange things with him, is he to sit idly in the marketplace, away from his own work?

Not at all. There'll be people who'll notice this and provide the requisite service—in well-organized cities they'll usually be those whose bodies are weakest and who aren't fit to do any other work. They'll stay around the
d market exchanging money for the goods of those who have something to sell and then exchanging those goods for the money of those who want them.

Then, to fill this need there will have to be retailers in our city, for aren't those who establish themselves in the marketplace to provide this service

of buying and selling called retailers, while those who travel between cities are called merchants?

That's right.

There are other servants, I think, whose minds alone wouldn't qualify
them for membership in our society but whose bodies are strong enough e
for labor. These sell the use of their strength for a price called a wage and
hence are themselves called wage-earners. Isn't that so?

Certainly.

So wage-earners complete our city?

I think so.

Well, Adeimantus, has our city grown to completeness, then?

Perhaps it has.

Then where are justice and injustice to be found in it? With which of the things we examined did they come in?

I've no idea, Socrates, unless it was somewhere in some need that these 372
people have of one another.

You may be right, but we must look into it and not grow weary. First,
then, let's see what sort of life our citizens will lead when they've been
provided for in the way we have been describing. They'll produce bread,
wine, clothes, and shoes, won't they? They'll build houses, work naked
and barefoot in the summer, and wear adequate clothing and shoes in the b
winter. For food, they'll knead and cook the flour and meal they've made
from wheat and barley. They'll put their honest cakes and loaves on reeds
or clean leaves, and, reclining on beds strewn with yew and myrtle, they'll
feast with their children, drink their wine, and, crowned with wreaths,
hymn the gods. They'll enjoy sex with one another but bear no more
children than their resources allow, lest they fall into either poverty or war. c

It seems that you make your people feast without any delicacies, Glaucon interrupted.

True enough, I said, I was forgetting that they'll obviously need salt,
olives, cheese, boiled roots, and vegetables of the sort they cook in the
country. We'll give them desserts, too, of course, consisting of figs, chick-
peas, and beans, and they'll roast myrtle and acorns before the fire, drinking
moderately. And so they'll live in peace and good health, and when they d
die at a ripe old age, they'll bequeath a similar life to their children.

If you were founding a city for pigs, Socrates, he replied, wouldn't you fatten *them* on the same diet?

Then how should I feed these people, Glaucon? I asked.

In the conventional way. If they aren't to suffer hardship, they should
recline on proper couches, dine at a table, and have the delicacies and
desserts that people have nowadays. e

All right, I understand. It isn't merely the origin of a city that we're considering, it seems, but the origin of a *luxurious* city. And that may not be a bad idea, for by examining it, we might very well see how justice and injustice grow up in cities. Yet the true city, in my opinion, is the one we've described, the healthy one, as it were. But let's study a city with a

373 fever, if that's what you want. There's nothing to stop us. The things I mentioned earlier and the way of life I described won't satisfy some people, it seems, but couches, tables, and other furniture will have to be added, and, of course, all sorts of delicacies, perfumed oils, incense, prostitutes, and pastries. We mustn't provide them only with the necessities we mentioned at first, such as houses, clothes, and shoes, but painting and embroidery must be begun, and gold, ivory, and the like acquired. Isn't that so?

b Yes.

Then we must enlarge our city, for the healthy one is no longer adequate. We must increase it in size and fill it with a multitude of things that go beyond what is necessary for a city—hunters, for example, and artists or imitators, many of whom work with shapes and colors, many with music. And there'll be poets and their assistants, actors, choral dancers, contractors, and makers of all kinds of devices, including, among other things, those needed for the adornment of women. And so we'll need more ser-
c vants, too. Or don't you think that we'll need tutors, wet nurses, nannies, beauticians, barbers, chefs, cooks, and swineherds? We didn't need any of these in our earlier city, but we'll need them in this one. And we'll also need many more cattle, won't we, if the people are going to eat meat?

Of course.

And if we live like that, we'll have a far greater need for doctors than
d we did before?

Much greater.

And the land, I suppose, that used to be adequate to feed the population we had then, will cease to be adequate and become too small. What do you think?

The same.

Then we'll have to seize some of our neighbors' land if we're to have enough pasture and ploughland. And won't our neighbors want to seize part of ours as well, if they too have surrendered themselves to the endless acquisition of money and have overstepped the limit of their necessities?

e That's completely inevitable, Socrates.

Then our next step will be war, Glaucon, won't it?

It will.

We won't say yet whether the effects of war are good or bad but only that we've now found the origins of war. It comes from those same desires that are most of all responsible for the bad things that happen to cities and the individuals in them.

That's right.

Then the city must be further enlarged, and not just by a small number, either, but by a whole army, which will do battle with the invaders in
374 defense of the city's substantial wealth and all the other things we mentioned.

Why aren't the citizens themselves adequate for that purpose?

They won't be, if the agreement you and the rest of us made when we were founding the city was a good one, for surely we agreed, if you

remember, that it's impossible for a single person to practice many crafts or professions well.

That's true.

Well, then, don't you think that warfare is a profession? b

Of course.

Then should we be more concerned about cobbling than about warfare?

Not at all.

But we prevented a cobbler from trying to be a farmer, weaver, or builder at the same time and said that he must remain a cobbler in order to produce fine work. And each of the others, too, was to work all his life at a single trade for which he had a natural aptitude and keep away from all the others, so as not to miss the right moment to practice his own work well. c
Now, isn't it of the greatest importance that warfare be practiced well? And is fighting a war so easy that a farmer or a cobbler or any other craftsman can be a soldier at the same time? Though no one can become so much as a good player of checkers or dice if he considers it only as a sideline and doesn't practice it from childhood. Or can someone pick up a shield or any other weapon or tool of war and immediately perform adequately in an infantry battle or any other kind? No other tool makes d
anyone who picks it up a craftsman or champion unless he has acquired the requisite knowledge and has had sufficient practice.

If tools could make anyone who picked them up an expert, they'd be valuable indeed.

Then to the degree that the work of the guardians is most important, it e
requires most freedom from other things and the greatest skill and devotion.

I should think so.

And doesn't it also require a person whose nature is suited to that way of life?

Certainly.

Then our job, it seems, is to select, if we can, the kind of nature suited to guard the city.

It is.

By god, it's no trivial task that we've taken on. But insofar as we are able, we mustn't shrink from it.

No, we mustn't. 375

Do you think that, when it comes to guarding, there is any difference between the nature of a pedigree young dog and that of a well-born youth?

What do you mean?

Well, each needs keen senses, speed to catch what it sees, and strength in case it has to fight it out with what it captures.

They both need all these things.

And each must be courageous if indeed he's to fight well.

Of course.

And will a horse, a dog, or any other animal be courageous, if he isn't spirited? Or haven't you noticed just how invincible and unbeatable spirit is, so that its presence makes the whole soul fearless and unconquerable? b

I have noticed that.

The physical qualities of the guardians are clear, then.

Yes.

And as far as their souls are concerned, they must be spirited.

That too.

But if they have natures like that, Glaucon, won't they be savage to each other and to the rest of the citizens?

By god, it will be hard for them to be anything else.

Yet surely they must be gentle to their own people and harsh to the
c enemy. If they aren't, they won't wait around for others to destroy the city but will do it themselves first.

That's true.

What are we to do, then? Where are we to find a character that is both gentle and high-spirited at the same time? After all, a gentle nature is the opposite of a spirited one.

Apparently.

If someone lacks either gentleness or spirit, he can't be a good guardian. Yet it seems impossible to combine them. It follows that a good guardian
d cannot exist.

It looks like it.

I couldn't see a way out, but on reexamining what had gone before, I said: We deserve to be stuck, for we've lost sight of the analogy we put forward.

How do you mean?

We overlooked the fact that there *are* natures of the sort we thought impossible, natures in which these opposites are indeed combined.

Where?

You can see them in other animals, too, but especially in the one to which we compared the guardian, for you know, of course, that a pedigree
e dog naturally has a character of this sort—he is gentle as can be to those he's used to and knows, but the opposite to those he doesn't know.

I do know that.

So the combination we want is possible after all, and our search for the good guardian is not contrary to nature.

Apparently not.

Then do you think that our future guardian, besides being spirited, must also be by nature philosophical?

376 How do you mean? I don't understand.

It's something else you see in dogs, and it makes you wonder at the animal.

What?

When a dog sees someone it doesn't know, it gets angry before anything bad happens to it. But when it knows someone, it welcomes him, even if it has never received anything good from him. Haven't you ever wondered at that?

I've never paid any attention to it, but obviously that is the way a dog behaves.

Surely this is a refined quality in its nature and one that is truly philo- b
sophical.

In what way philosophical?

Because it judges anything it sees to be either a friend or an enemy, on no other basis than that it knows the one and doesn't know the other. And how could it be anything besides a lover of learning, if it defines what is its own and what is alien to it in terms of knowledge and ignorance?

It couldn't.

But surely the love of learning is the same thing as philosophy or the love of wisdom?

It is.

Then, may we confidently assume in the case of a human being, too,
that if he is to be gentle toward his own and those he knows, he must be
a lover of learning and wisdom? c

We may.

Philosophy, spirit, speed, and strength must all, then, be combined in the nature of anyone who is to be a fine and good guardian of our city.

Absolutely.

Then those are the traits a potential guardian would need at the outset.
But how are we to bring him up and educate him? Will inquiry into that
topic bring us any closer to the goal of our inquiry, which is to discover
the origins of justice and injustice in a city? We want our account to be d
adequate, but we don't want it to be any longer than necessary.

I certainly expect, Glaucon's brother said, that such inquiry will further our goal.

Then, by god, Adeimantus, I said, we mustn't leave it out, even if it turns out to be a somewhat lengthy affair.

No, we mustn't.

Come, then, and just as if we had the leisure to make up stories, let's describe in theory how to educate our men.

All right. e

What will their education be? Or is it hard to find anything better than that which has developed over a long period—physical training for bodies and music and poetry for the soul?

Yes, it would be hard.

Now, we start education in music and poetry before physical training, don't we?

Of course.

Do you include stories under music and poetry?

I do.

Aren't there two kinds of story, one true and the other false?

Yes.

And mustn't our men be educated in both, but first in false ones? 377

I don't understand what you mean.

Don't you understand that we first tell stories to children? These are false, on the whole, though they have some truth in them. And we tell them to small children before physical training begins.

That's true.

And that's what I meant by saying that we must deal with music and poetry before physical training.

All right.

You know, don't you, that the beginning of any process is most important, especially for anything young and tender? It's at that time that it is
b most malleable and takes on any pattern one wishes to impress on it.

Exactly.

Then shall we carelessly allow the children to hear any old stories, told by just anyone, and to take beliefs into their souls that are for the most part opposite to the ones we think they should hold when they are grown up?

We certainly won't.

Then we must first of all, it seems, supervise the storytellers. We'll select their stories whenever they are fine or beautiful and reject them when they
c aren't. And we'll persuade nurses and mothers to tell their children the ones we have selected, since they will shape their children's souls with stories much more than they shape their bodies by handling them. Many of the stories they tell now, however, must be thrown out.

Which ones do you mean?

We'll first look at the major stories, and by seeing how to deal with them, we'll see how to deal with the minor ones as well, for they exhibit the same pattern and have the same effects whether they're famous or
d not. Don't you think so?

I do, but I don't know which ones you're calling major.

Those that Homer, Hesiod, and other poets tell us, for surely they composed false stories, told them to people, and are still telling them.

Which stories do you mean, and what fault do you find in them?

The fault one ought to find first and foremost, especially if the falsehood isn't well told.

For example?

When a story gives a bad image of what the gods and heroes are like,
e the way a painter does whose picture is not at all like the things he's trying to paint.

You're right to object to that. But what sort of thing in particular do you have in mind?

First, telling the greatest falsehood about the most important things doesn't make a fine story—I mean Hesiod telling us about how Uranus behaved, how Cronus punished him for it, and how he was in turn pun-
378 ished by his own son.[10] But even if it were true, it should be passed over in silence, not told to foolish young people. And if, for some reason, it has to be told, only a very few people—pledged to secrecy and after sacrificing not just a pig but something great and scarce—should hear it, so that their number is kept as small as possible.

Yes, such stories are hard to deal with.

10. See Hesiod, *Theogony* 154–210, 453–506.

And they shouldn't be told in our city, Adeimantus. Nor should a young b
person hear it said that in committing the worst crimes he's doing nothing
out of the ordinary, or that if he inflicts every kind of punishment on an
unjust father, he's only doing the same as the first and greatest of the gods.

No, by god, I don't think myself that these stories are fit to be told.

Indeed, if we want the guardians of our city to think that it's shameful
to be easily provoked into hating one another, we mustn't allow *any* stories
about gods warring, fighting, or plotting against one another, for they c
aren't true. The battles of gods and giants, and all the various stories of
the gods hating their families or friends, should neither be told nor even
woven in embroideries. If we're to persuade our people that no citizen
has ever hated another and that it's impious to do so, then *that's* what
should be told to children from the beginning by old men and women;
and as these children grow older, poets should be compelled to tell them
the same sort of thing. We won't admit stories into our city—whether d
allegorical or not—about Hera being chained by her son, nor about He-
phaestus being hurled from heaven by his father when he tried to help
his mother, who was being beaten, nor about the battle of the gods in
Homer. The young can't distinguish what is allegorical from what isn't,
and the opinions they absorb at that age are hard to erase and apt to
become unalterable. For these reasons, then, we should probably take the
utmost care to insure that the first stories they hear about virtue are the e
best ones for them to hear.

That's reasonable. But if someone asked us what stories these are, what should we say?

You and I, Adeimantus, aren't poets, but we *are* founding a city. And
it's appropriate for the founders to know the patterns on which poets must 379
base their stories and from which they mustn't deviate. But we aren't
actually going to compose their poems for them.

All right. But what precisely are the patterns for theology or stories about the gods?

Something like this: Whether in epic, lyric, or tragedy, a god must always be represented as he is.

Indeed, he must.

Now, a god is really good, isn't he, and must be described as such? b

What else?

And surely nothing good is harmful, is it?

I suppose not.

And can what isn't harmful do harm?

Never.

Or can what does no harm do anything bad?

No.

And can what does nothing bad be the cause of anything bad?

How could it?

Moreover, the good is beneficial?

Yes.

It is the cause of doing well?

Yes.

The good isn't the cause of all things, then, but only of good ones; it isn't the cause of bad ones.

c I agree entirely.

Therefore, since a god is good, he is not—as most people claim—the cause of everything that happens to human beings but of only a few things, for good things are fewer than bad ones in our lives. He alone is responsible for the good things, but we must find some other cause for the bad ones, not a god.

That's very true, and I believe it.

Then we won't accept from anyone the foolish mistake Homer makes
d about the gods when he says:

> *There are two urns at the threshold of Zeus,*
> *One filled with good fates, the other with bad ones. . . .*

and the person to whom he gives a mixture of these

> *Sometimes meets with a bad fate, sometimes with good,*

but the one who receives his fate entirely from the second urn,

> *Evil famine drives him over the divine earth.*

e We won't grant either that Zeus is for us

> *The distributor of both good and bad.*

And as to the breaking of the promised truce by Pandarus, if anyone tells us that it was brought about by Athena and Zeus or that Themis and Zeus were responsible for strife and contention among the gods, we will not
380 praise him. Nor will we allow the young to hear the words of Aeschylus:

> *A god makes mortals guilty*
> *When he wants utterly to destroy a house.*[11]

And if anyone composes a poem about the sufferings of Niobe, such as the one in which these lines occur, or about the house of Pelops, or the tale of Troy, or anything else of that kind, we must require him to say that these things are not the work of a god. Or, if they are, then poets must look for the kind of account of them that we are now seeking, and

11. The first three quotations are from *Iliad* xxiv.527–32. The sources for the fourth and for the quotation from Aeschylus are unknown. The story of Athena urging Pandarus to break the truce is told in *Iliad* iv.73–126.

say that the actions of the gods are good and just, and that those they
punish are benefited thereby. We won't allow poets to say that the punished b
are made wretched and that it was a god who made them so. But we will
allow them to say that bad people are wretched because they are in need
of punishment and that, in paying the penalty, they are benefited by the
gods. And, as for saying that a god, who is himself good, is the cause of
bad things, we'll fight that in every way, and we won't allow anyone to
say it in his own city, if it's to be well governed, or anyone to hear it
either—whether young or old, whether in verse or prose. These stories c
are not pious, not advantageous to us, and not consistent with one another.

I like your law, and I'll vote for it.

This, then, is one of the laws or patterns concerning the gods to which speakers and poets must conform, namely, that a god isn't the cause of all things but only of good ones.

And it's a fully satisfactory law.

What about this second law? Do you think that a god is a sorcerer, able
to appear in different forms at different times, sometimes changing himself d
from his own form into many shapes, sometimes deceiving us by making
us think that he has done it? Or do you think he's simple and least of all
likely to step out of his own form?

I can't say offhand.

Well, what about this? If he steps out of his own form, mustn't he either
change himself or be changed by something else? e

He must.

But the best things are least liable to alteration or change, aren't they? For example, isn't the healthiest and strongest body least changed by food, drink, and labor, or the healthiest and strongest plant by sun, wind, and the like?

Of course. 381

And the most courageous and most rational soul is least disturbed or altered by any outside affection?

Yes.

And the same account is true of all artifacts, furniture, houses, and clothes. The ones that are good and well made are least altered by time or anything else that happens to them.

That's right.

Whatever is in good condition, then, whether by nature or craft or both, b
admits least of being changed by anything else.

So it seems.

Now, surely a god and what belongs to him are in every way in the best condition.

How could they fail to be?

Then a god would be least likely to have many shapes.

Indeed.

Then does he change or alter himself?

Clearly he does, if indeed he is altered at all.

Would he change himself into something better and more beautiful than himself or something worse and uglier?

c It would have to be into something worse, if he's changed at all, for surely we won't say that a god is deficient in either beauty or virtue.

Absolutely right. And do you think, Adeimantus, that anyone, whether god or human, would deliberately make himself worse in any way?

No, that's impossible.

Is it impossible, then, for gods to want to alter themselves? Since they are the most beautiful and best possible, it seems that each always and unconditionally retains his own shape.

That seems entirely necessary to me.

d Then let no poet tell us about Proteus or Thetis, or say that

> *The gods, in the likeness of strangers from foreign lands,*
> *Adopt every sort of shape and visit our cities.*[12]

Nor must they present Hera, in their tragedies or other poems, as a priestess collecting alms for

> *the life-giving sons of the Argive river Inachus,*[13]

or tell us other stories of that sort. Nor must mothers, believing bad stories
e about the gods wandering at night in the shapes of strangers from foreign lands, terrify their children with them. Such stories blaspheme the gods and, at the same time, make children more cowardly.

They mustn't be told.

But though the gods are unable to change, do they nonetheless make us believe that they appear in all sorts of ways, deceiving us through sorcery?

Perhaps.

382 What? Would a god be willing to be false, either in word or deed, by presenting an illusion?

I don't know.

Don't you know that a *true* falsehood, if one may call it that, is hated by all gods and humans?

What do you mean?

I mean that no one is willing to tell falsehoods to the most important part of himself about the most important things, but of all places he is most afraid to have falsehood there.

I still don't understand.

12. *Odyssey* xvii.485–86.

13. Inachus was the father of Io, who was persecuted by Hera because Zeus was in love with her. The source for the part of the story Plato quotes is unknown.

That's because you think I'm saying something deep. I simply mean b
that to be false to one's soul about the things that are, to be ignorant and to have and hold falsehood there, is what everyone would least of all accept, for everyone hates a falsehood in that place most of all.

That's right.

Surely, as I said just now, this would be most correctly called true falsehood—ignorance in the soul of someone who has been told a falsehood. Falsehood in words is a kind of imitation of this affection in the soul, an image of it that comes into being after it and is not a pure falsehood.
Isn't that so? c

Certainly.

And the thing that is really a falsehood is hated not only by the gods but by human beings as well.

It seems so to me.

What about falsehood in words? When and to whom is it useful and so not deserving of hatred? Isn't it useful against one's enemies? And when any of our so-called friends are attempting, through madness or ignorance, to do something bad, isn't it a useful drug for preventing them? It is also useful in the case of those stories we were just talking about, the
ones we tell because we don't know the truth about those ancient events d
involving the gods. By making a falsehood as much like the truth as we can, don't we also make it useful?

We certainly do.

Then in which of these ways could a falsehood be useful to a god? Would he make false likenesses of ancient events because of his ignorance of them?

It would be ridiculous to think that.

Then there is nothing of the false poet in a god?

Not in my view.

Would he be false, then, through fear of his enemies?

Far from it. e

Because of the ignorance or madness of his family or friends, then?

No one who is ignorant or mad is a friend of the gods.

Then there's no reason for a god to speak falsely?

None.

Therefore the daemonic and the divine are in every way free from falsehood.

Completely.

A god, then, is simple and true in word and deed. He doesn't change himself or deceive others by images, words, or signs, whether in visions or in dreams.

That's what I thought as soon as I heard you say it. 383

You agree, then, that this is our second pattern for speaking or composing poems about the gods: They are not sorcerers who change themselves, nor do they mislead us by falsehoods in words or deeds.

I agree.

So, even though we praise many things in Homer, we won't approve of the dream Zeus sent to Agamemnon, nor of Aeschylus when he makes
b Thetis say that Apollo sang in prophecy at her wedding:

*About the good fortune my children would have,*
*Free of disease throughout their long lives,*
*And of all the blessings that the friendship of the gods would bring me,*
*I hoped that Phoebus' divine mouth would be free of falsehood,*
*Endowed as it is with the craft of prophecy.*
*But the very god who sang, the one at the feast,*
*The one who said all this, he himself it is*
*Who killed my son.*[14]

Whenever anyone says such things about a god, we'll be angry with him,
c refuse him a chorus,[15] and not allow his poetry to be used in the education of the young, so that our guardians will be as god-fearing and godlike as human beings can be.

I completely endorse these patterns, he said, and I would enact them as laws.

## Book III

386 Such, then, I said, are the kinds of stories that I think future guardians should and should not hear about the gods from childhood on, if they are to honor the gods and their parents and not take their friendship with one another lightly.

I'm sure we're right about that, at any rate.

What if they are to be courageous as well? Shouldn't they be told stories that will make them least afraid of death? Or do you think that anyone
b ever becomes courageous if he's possessed by this fear?

No, I certainly don't.

And can someone be unafraid of death, preferring it to defeat in battle or slavery, if he believes in a Hades full of terrors?

Not at all.

Then we must supervise such stories and those who tell them, and ask them not to disparage the life in Hades in this unconditional way, but rather to praise it, since what they now say is neither true nor beneficial
c to future warriors.

We must.

14. In *Iliad* ii.1–34, Zeus sends a dream to Agamemnon to promise success if he attacks Troy immediately. The promise is false. The source for the quotation from Aeschylus is unknown.

15. I.e., deny him the funding necessary to produce his play.

Then we'll expunge all that sort of disparagement, beginning with the following lines:

*I would rather labor on earth in service to another,*
*To a man who is landless, with little to live on,*
*Than be king over all the dead.*[1]

and also these:

*He feared that his home should appear to gods and men* d
*Dreadful, dank, and hated even by the gods.*[2]

and

*Alas, there survives in the Halls of Hades*
*A soul, a mere phantasm, with its wits completely gone.*[3]

and this:

*And he alone could think; the others are flitting shadows.*[4]

and

*The soul, leaving his limbs, made its way to Hades,*
*Lamenting its fate, leaving manhood and youth behind.*[5]

and these: 387

*His soul went below the earth like smoke,*
*Screeching as it went . . .*[6]

and

1. *Odyssey* xi.489–91. Odysseus is being addressed by the dead Achilles in Hades.

2. *Iliad* xx.64–65. The speaker is the god of the underworld—who is afraid that the earth will split open and reveal that his home is dreadful, etc.

3. *Iliad* xxiii.103–4. Achilles speaks these lines as the soul of the dead Patroclus leaves for Hades.

4. *Odyssey* x.495. Circe is speaking to Odysseus about the prophet Tiresias.

5. *Iliad* xvi.856–57. The words refer to Patroclus, who has just been mortally wounded by Hector.

6. *Iliad* xxiii.100–101. The soul referred to is Patroclus'.

*As when bats in an awful cave*
*Fly around screeching if one of them falls*
*From the cluster on the ceiling, all clinging to one another,*
*So their souls went screeching . . .*[7]

We'll ask Homer and the other poets not to be angry if we delete these
b passages and all similar ones. It isn't that they aren't poetic and pleasing to the majority of hearers but that, the more poetic they are, the less they should be heard by children or by men who are supposed to be free and to fear slavery more than death.

Most certainly.

And the frightening and dreadful names for the underworld must be struck out, for example, "Cocytus" and "Styx,"[8] and also the names for
c the dead, for example, "those below" and "the sapless ones," and all those names of things in the underworld that make everyone who hears them shudder. They may be all well and good for other purposes, but we are afraid that our guardians will be made softer and more malleable by such shudders.

And our fear is justified.

Then such passages are to be struck out?

Yes.

And poets must follow the opposite pattern in speaking and writing?

Clearly.

Must we also delete the lamentations and pitiful speeches of famous
d men?

We must, if indeed what we said before is compelling.

Consider though whether we are right to delete them or not. We surely say that a decent man doesn't think that death is a terrible thing for someone decent to suffer—even for someone who happens to be his friend.

We do say that.

Then he won't mourn for him as for someone who has suffered a terrible fate.

Certainly not.

We also say that a decent person is most self-sufficient in living well
e and, above all others, has the least need of anyone else.

That's true.

Then it's less dreadful for him than for anyone else to be deprived of his son, brother, possessions, or any other such things.

Much less.

Then he'll least give way to lamentations and bear misfortune most quietly when it strikes.

7. *Odyssey* xxiv.6–9. The souls are those of the suitors of Penelope, whom Odysseus has killed.

8. "Cocytus" means river of wailing or lamenting; "Styx" means river of hatred or gloom.

Certainly.

We'd be right, then, to delete the lamentations of famous men, leaving them to women (and not even to good women, either) and to cowardly men, so that those we say we are training to guard our city will disdain 388
to act like that.

That's right.

Again, then, we'll ask Homer and the other poets not to represent Achilles, the son of a goddess, as

*Lying now on his side, now on his back, now again*
*On his belly; then standing up to wander distracted*
*This way and that on the shore of the unharvested sea.*

Nor to make him pick up ashes in both hands and pour them over his head, weeping and lamenting in the ways he does in Homer. Nor to b
represent Priam, a close descendant of the gods, as entreating his men and

*Rolling around in dung,*
*Calling upon each man by name.*[9]

And we'll ask them even more earnestly not to make the gods lament and say:

*Alas, unfortunate that I am, wretched mother of a great son.*[10] c

But, if they do make the gods do such things, at least they mustn't dare to represent the greatest of the gods as behaving in so unlikely a fashion as to say:

*Alas, with my own eyes I see a man who is most dear to me*
*Chased around the city, and my heart laments*

or

*Woe is me, that Sarpedon, who is most dear to me, should be*
*Fated to be killed by Patroclus, the son of Menoetius . . .*[11] d

If our young people, Adeimantus, listen to these stories without ridiculing them as not worth hearing, it's hardly likely that they'll consider the things

9. The last three references and quotations are to *Iliad* xxiv.3–12, *Iliad* xviii.23–24, and *Iliad* xxii.414–15, respectively.

10. *Iliad* xviii.54. Thetis, the mother of Achilles, is mourning his fate among the Nereids.

11. *Iliad* xxii.168–69 (Zeus is watching Hector being pursued by Achilles), and *Iliad* xvi.433–34.

described in them to be unworthy of mere human beings like themselves
or that they'll rebuke themselves for doing or saying similar things when
misfortune strikes. Instead, they'll feel neither shame nor restraint but
groan and lament at even insignificant misfortunes.

e What you say is completely true.

Then, as the argument has demonstrated—and we must remain persuaded by it until someone shows us a better one—they mustn't behave
like that.

No, they mustn't.

Moreover, they mustn't be lovers of laughter either, for whenever anyone
indulges in violent laughter, a violent change of mood is likely to follow.

So I believe.

Then, if someone represents worthwhile people as overcome by laughter,
we won't approve, and we'll approve even less if they represent gods
389 that way.

Much less.

Then we won't approve of Homer saying things like this about the gods:

> *And unquenchable laughter arose among the blessed gods*
> *As they saw Hephaestus limping through the hall.*[12]

According to your argument, such things must be rejected.

b If you want to call it mine, but they must be rejected in any case.

Moreover, we have to be concerned about truth as well, for if what we
said just now is correct, and falsehood, though of no use to the gods, is
useful to people as a form of drug, clearly we must allow only doctors to
use it, not private citizens.

Clearly.

Then if it is appropriate for anyone to use falsehoods for the good of
the city, because of the actions of either enemies or citizens, it is the rulers.
But everyone else must keep away from them, because for a private citizen
c to lie to a ruler is just as bad a mistake as for a sick person or athlete not
to tell the truth to his doctor or trainer about his physical condition or for
a sailor not to tell the captain the facts about his own condition or that of
the ship and the rest of its crew—indeed it is a worse mistake than either
of these.

That's completely true.

d And if the ruler catches someone else telling falsehoods in the city—

> *Any one of the craftsmen,*
> *Whether a prophet, a doctor who heals the sick, or a maker of spears*[13]

12. *Iliad* i.599–600.

13. *Odyssey* xvii.383–84.

—he'll punish him for introducing something as subversive and destructive to a city as it would be to a ship.

He will, if practice is to follow theory.

What about moderation? Won't our young people also need that?

Of course.

And aren't these the most important aspects of moderation for the majority of people, namely, to obey the rulers and to rule the pleasures of drink, sex, and food for themselves? e

That's my opinion at any rate.

Then we'll say that the words of Homer's Diomedes are well put:

> *Sit down in silence, my friend, and be persuaded by me.*

and so is what follows:

> *The Achaeans, breathing eagerness for battle,*
> *Marched in silence, fearing their commanders.*

and all other such things.

Those *are* well put.

But what about this?

> *Wine-bibber, with the eyes of a dog and the heart of a deer*[14]

and the rest, is it—or any other headstrong words spoken in prose or poetry by private citizens against their rulers—well put? 390

No, they aren't.

I don't think they are suitable for young people to hear—not, in any case, with a view to making them moderate. Though it isn't surprising that they are pleasing enough in other ways. What do you think?

The same as you.

What about making the cleverest man say that the finest thing of all is when

> *The tables are well laden*
> *With bread and meat, and the winebearer* b
> *Draws wine from the mixing bowl and pours it in the cups.*

or

14. The last three citations are, respectively, *Iliad* iv.412, where Diomedes rebukes his squire and quiets him; *Iliad* iii.8 and iv.431, not in fact (in our Homer text) adjacent to one another or the preceding; and *Iliad* i.225 (Achilles is insulting his commander, Agamemnon).

*Death by starvation is the most pitiful fate.*[15]

Do you think that such things make for self-control in young people? Or what about having Zeus, when all the other gods are asleep and he alone c is awake, easily forget all his plans because of sexual desire and be so overcome by the sight of Hera that he doesn't even want to go inside but wants to possess her there on the ground, saying that his desire for her is even greater than it was when—without their parents' knowledge—they were first lovers? Or what about the chaining together of Ares and Aphrodite by Hephaestus[16]—also the result of sexual passion?

No, by god, none of that seems suitable to me.

But if, on the other hand, there are words or deeds of famous men, who d are exhibiting endurance in the face of everything, surely they must be seen or heard. For example,

*He struck his chest and spoke to his heart:*
*"Endure, my heart, you've suffered more shameful things than this."*[17]

They certainly must.

Now, we mustn't allow our men to be money-lovers or to be bribable with gifts.

e Certainly not.

Then the poets mustn't sing to them:

*Gifts persuade gods, and gifts persuade revered kings.*[18]

Nor must Phoenix, the tutor of Achilles, be praised as speaking with moderation when he advises him to take the gifts and defend the Achaeans, but not to give up his anger without gifts.[19] Nor should we think such things to be worthy of Achilles himself. Nor should we agree that he was such a money-lover that he would accept the gifts of Agamemnon or 391 release the corpse of Hector for a ransom but not otherwise.

It certainly isn't right to praise such things.

It is only out of respect for Homer, indeed, that I hesitate to say that it is positively impious to accuse Achilles of such things or to believe others who say them. Or to make him address Apollo in these words:

15. Odysseus in *Odyssey* ix.8–10; *Odyssey* xii.342 (Eurylochus urges the men to slay the cattle of Helios in Odysseus' absence).

16. *Odyssey* viii.266 ff.

17. *Odyssey* xx.17–18. The speaker is Odysseus.

18. The source of the passage is unknown. Cf. Euripides, *Medea* 964.

19. *Iliad* ix.602–5.

*You've injured me, Farshooter, most deadly of the gods;*
*And I'd punish you, if I had the power.*[20]

Or to say that he disobeyed the river—a god—and was ready to fight it, or that he consecrated hair to the dead Patroclus, which was already b
consecrated to a different river, Spercheius. It isn't to be believed that he did any of these. Nor is it true that he dragged the dead Hector around the tomb of Patroclus or massacred the captives on his pyre.[21] So we'll deny that. Nor will we allow our people to believe that Achilles, who was c
the son of a goddess and of Peleus (the most moderate of men and the grandson of Zeus) and who was brought up by the most wise Chiron, was so full of inner turmoil as to have two diseases in his soul—slavishness accompanied by the love of money, on the one hand, and arrogance towards gods and humans, on the other.

That's right.

We certainly won't believe such things, nor will we allow it to be said that Theseus, the son of Posidon, and Pirithous, the son of Zeus, engaged in terrible kidnappings,[22] or that any other hero and son of a god dared d
to do any of the terrible and impious deeds that they are now falsely said to have done. We'll compel the poets either to deny that the heroes did such things or else to deny that they were children of the gods. They mustn't say both or attempt to persuade our young people that the gods bring about evil or that heroes are no better than humans. As we said earlier, these things are both impious and untrue, for we demonstrated e
that it is impossible for the gods to produce bad things.[23]

Of course.

Moreover, these stories are harmful to people who hear them, for everyone will be ready to excuse himself when he's bad, if he is persuaded that similar things both are being done now and have been done in the past by

*Close descendants of the gods,*
*Those near to Zeus, to whom belongs*
*The ancestral altar high up on Mount Ida,*
*In whom the blood of daemons has not weakened.*[24]

For that reason, we must put a stop to such stories, lest they produce in the youth a strong inclination to do bad things. 392

20. *Iliad* xxii.15, 20.

21. The last four references are to *Iliad* xxi.232 ff., *Iliad* xxiii.141–52, *Iliad* xxiv.14–18, and *Iliad* xxiii.175, respectively.

22. According to some legends, Theseus and Pirithous abducted Helen and tried to abduct Persephone from Hades.

23. See 380d ff.

24. Thought to be from Aeschylus' lost play *Niobe*.

Absolutely.

Now, isn't there a kind of story whose content we haven't yet discussed? So far we've said how one should speak about gods, heroes, daemons, and things in Hades.

We have.

Then what's left is how to deal with stories about human beings, isn't it?

Obviously.

But we can't settle that matter at present.

Why not?

Because I think we'll say that what poets and prose-writers tell us about the most important matters concerning human beings is bad. They say
b that many unjust people are happy and many just ones wretched, that injustice is profitable if it escapes detection, and that justice is another's good but one's own loss. I think we'll prohibit these stories and order the poets to compose the opposite kind of poetry and tell the opposite kind of tales. Don't you think so?

I know so.

But if you agree that what I said is correct, couldn't I reply that you've agreed to the very point that is in question in our whole discussion?

And you'd be right to make that reply.

Then we'll agree about what stories should be told about human
c beings only when we've discovered what sort of thing justice is and how by nature it profits the one who has it, whether he is believed to be just or not.

That's very true.

This concludes our discussion of the content of stories. We should now, I think, investigate their style, for we'll then have fully investigated both what should be said and how it should be said.

I don't understand what you mean, Adeimantus responded.

But you must, I said. Maybe you'll understand it better if I put it this
d way. Isn't everything said by poets and storytellers a narrative about past, present, or future events?

What else could it be?

And aren't these narratives either narrative alone, or narrative through imitation, or both?

I need a clearer understanding of that as well.

I seem to be a ridiculously unclear teacher. So, like those who are incompetent at speaking, I won't try to deal with the matter as a whole, but I'll take up a part and use it as an example to make plain what I want to say.
e Tell me, do you know the beginning of the *Iliad*, where the poet tells us that Chryses begs Agamemnon to release his daughter, that Agamemnon harshly rejects him, and that, having failed, Chryses prays to the god
393 against the Achaeans?

I do.

You know, then, that up to the lines:

*And he begged all the Achaeans*
*But especially the two sons of Atreus, the commanders of the army,*[25]

the poet himself is speaking and doesn't attempt to get us to think that the speaker is someone other than himself. After this, however, he speaks as if he were Chryses and tries as far as possible to make us think that the speaker isn't Homer but the priest himself—an old man. And he b
composes pretty well all the rest of his narrative about events in Troy, Ithaca, and the whole *Odyssey* in this way.

That's right.

Now, the speeches he makes and the parts between them are both narrative?

Of course.

But when he makes a speech as if he were someone else, won't we say that he makes his own style as much like that of the indicated speaker c
as possible?

We certainly will.

Now, to make oneself like someone else in voice or appearance is to imitate the person one makes oneself like.

Certainly.

In these passages, then, it seems that he and the other poets effect their narrative through imitation.

That's right.

If the poet never hid himself, the whole of his poem would be narrative d
without imitation. In order to prevent you from saying again that you don't understand, I'll show you what this would be like. If Homer said that Chryses came with a ransom for his daughter to supplicate the Achaeans, especially the kings, and after that didn't speak as if he had become Chryses, but still as Homer, there would be no imitation but rather simple narrative. It would have gone something like this—I'll speak without meter since I'm no poet: "And the priest came and prayed that the gods would allow them to capture Troy and be safe afterwards, that they'd accept the e
ransom and free his daughter, and thus show reverence for the god. When he'd said this, the others showed their respect for the priest and consented. But Agamemnon was angry and ordered him to leave and never to return, lest his priestly wand and the wreaths of the god should fail to protect him. He said that, before freeing the daughter, he'd grow old in Argos by her side. He told Chryses to go away and not to make him angry, if he wanted to get home safely. When the old man heard this, he was frightened 394
and went off in silence. But when he'd left the camp he prayed at length to Apollo, calling him by his various titles and reminding him of his own services to him. If any of those services had been found pleasing, whether

25. *Iliad* i.15–16.

it was the building of temples or the sacrifice of victims, he asked in return that the arrows of the god should make the Achaeans pay for his tears."
b That is the way we get simple narrative without imitation.

I understand.

Then also understand that the opposite occurs when one omits the words between the speeches and leaves the speeches by themselves.

I understand that too. Tragedies are like that.

c That's absolutely right. And now I think that I can make clear to you what I couldn't before. One kind of poetry and story-telling employs only imitation—tragedy and comedy, as you say. Another kind employs only narration by the poet himself—you find this most of all in dithyrambs. A third kind uses both—as in epic poetry and many other places, if you follow me.

Now I understand what you were trying to say.

Remember, too, that before all that we said that we had dealt with *what* must be said in stories, but that we had yet to investigate *how* it must be said.

Yes, I remember.

d Well, this, more precisely, is what I meant: We need to come to an agreement about whether we'll allow poets to narrate through imitation, and, if so, whether they are to imitate some things but not others—and what things these are, or whether they are not to imitate at all.

I divine that you're looking into the question of whether or not we'll allow tragedy and comedy into our city.

Perhaps, and perhaps even more than that, for I myself really don't know yet, but whatever direction the argument blows us, that's where we must go.

Fine.

Then, consider, Adeimantus, whether our guardians should be imitators
e or not. Or does this also follow from our earlier statement that each individual would do a fine job of one occupation, not of many, and that if he tried the latter and dabbled in many things, he'd surely fail to achieve distinction in any of them?

He would indeed.

Then, doesn't the same argument also hold for imitation—a single individual can't imitate many things as well as he can imitate one?

No, he can't.

Then, he'll hardly be able to pursue any worthwhile way of life while
395 at the same time imitating many things and being an imitator. Even in the case of two kinds of imitation that are thought to be closely akin, such as tragedy and comedy, the same people aren't able to do both of them well. Did you not just say that these were both imitations?

I did, and you're quite right that the same people can't do both.

Nor can they be both rhapsodes and actors.

True.

Indeed, not even the same actors are used for tragedy and comedy. Yet
b all these are imitations, aren't they?

They are.

And human nature, Adeimantus, seems to me to be minted in even smaller coins than these, so that it can neither imitate many things well nor do the actions themselves, of which those imitations are likenesses.

That's absolutely true.

Then, if we're to preserve our first argument, that our guardians must be kept away from all other crafts so as to be the craftsmen of the city's
freedom, and be exclusively that, and do nothing at all except what contri- c
butes to it, they must neither do nor imitate anything else. If they do imitate, they must imitate from childhood what is appropriate for them, namely, people who are courageous, self-controlled, pious, and free, and their actions. They mustn't be clever at doing or imitating slavish or shameful actions, lest from enjoying the imitation, they come to enjoy the reality.
Or haven't you noticed that imitations practiced from youth become part d
of nature and settle into habits of gesture, voice, and thought?

I have indeed.

Then we won't allow those for whom we profess to care, and who must grow into good men, to imitate either a young woman or an older one, or one abusing her husband, quarreling with the gods, or bragging because she thinks herself happy, or one suffering misfortune and possessed by
sorrows and lamentations, and even less one who is ill, in love, or in labor. e

That's absolutely right.

Nor must they imitate either male or female slaves doing slavish things.

No, they mustn't.

Nor bad men, it seems, who are cowards and are doing the opposite of what we described earlier, namely, libelling and ridiculing each other, using shameful language while drunk or sober, or wronging themselves and others, whether in word or deed, in the various other ways that
are typical of such people. They mustn't become accustomed to making 396
themselves like madmen in either word or deed, for, though they must know about mad and vicious men and women, they must neither do nor imitate anything they do.

That's absolutely true.

Should they imitate metal workers or other craftsmen, or those who row
in triremes, or their time-keepers, or anything else connected with ships? b

How could they, since they aren't to concern themselves with any of those occupations?

And what about this? Will they imitate neighing horses, bellowing bulls, roaring rivers, the crashing sea, thunder, or anything of that sort?

They are forbidden to be mad or to imitate mad people.

If I understand what you mean, there is one kind of style and narrative that someone who is really a gentleman would use whenever he wanted to narrate something, and another kind, unlike this one, which his op-
posite by nature and education would favor, and in which he would c
narrate.

Which styles are those?

Well, I think that when a moderate man comes upon the words or actions
of a good man in his narrative, he'll be willing to report them as if he
were that man himself, and he won't be ashamed of that kind of imitation.
He'll imitate this good man most when he's acting in a faultless and
d intelligent manner, but he'll do so less, and with more reluctance, when
the good man is upset by disease, sexual passion, drunkenness, or some
other misfortune. When he comes upon a character unworthy of himself,
however, he'll be unwilling to make himself seriously resemble that inferior
character—except perhaps for a brief period in which he's doing something
good. Rather he'll be ashamed to do something like that, both because
he's unpracticed in the imitation of such people and because he can't stand
to shape and mold himself according to a worse pattern. He despises this
e in his mind, unless it's just done in play.

That seems likely.

He'll therefore use the kind of narrative we described in dealing with the Homeric epics a moment ago. His style will participate both in imitation and in the other kind of narrative, but there'll be only a little bit of imitation in a long story? Or is there nothing in what I say?

That's precisely how the pattern for such a speaker must be.

397 As for someone who is not of this sort, the more inferior he is, the more
willing he'll be to narrate anything and to consider nothing unworthy of
himself. As a result, he'll undertake to imitate seriously and before a large
audience all the things we just mentioned—thunder, the sounds of wind,
hail, axles, pulleys, trumpets, flutes, pipes, and all the other instruments,
even the cries of dogs, sheep, and birds. And this man's style will consist
b entirely of imitation in voice and gesture, or else include only a small bit
of plain narrative.

That too is certain.

These, then, are the two kinds of style I was talking about.

There are these two.

The first of these styles involves little variation, so that if someone
provides a musical mode and rhythm appropriate to it, won't the one who
speaks correctly remain—with a few minor changes—pretty well within
c that mode and rhythm throughout?

That's precisely what he'll do.

What about the other kind of style? Doesn't it require the opposite if it is to speak appropriately, namely, all kinds of musical modes and all kinds of rhythms, because it contains every type of variation?

That's exactly right.

Do all poets and speakers adopt one or other of these patterns of style or a mixture of both?

Necessarily.

d What are we to do, then? Shall we admit all these into our city, only
one of the pure kinds, or the mixed one?

If my opinion is to prevail, we'll admit only the pure imitator of a decent person.

And yet, Adeimantus, the mixed style is pleasant. Indeed, it is by far the most pleasing to children, their tutors, and the vast majority of people.

Yes, it is the most pleasing.

But perhaps you don't think that it harmonizes with our constitution, because no one in our city is two or more people simultaneously, since each does only one job. e

Indeed, it doesn't harmonize.

And isn't it because of this that it's only in our city that we'll find a cobbler who is a cobbler and not also a captain along with his cobbling, and a farmer who is a farmer and not also a juror along with his farming, and a soldier who is a soldier and not a money-maker in addition to his soldiering, and so with them all?

That's true.

It seems, then, that if a man, who through clever training can become
anything and imitate anything, should arrive in our city, wanting to give a 398
performance of his poems, we should bow down before him as someone holy, wonderful, and pleasing, but we should tell him that there is no one like him in our city and that it isn't lawful for there to be. We should pour myrrh on his head, crown him with wreaths, and send him away to another city. But, for our own good, we ourselves should employ a more austere and
less pleasure-giving poet and storyteller, one who would imitate the speech b
of a decent person and who would tell his stories in accordance with the patterns we laid down when we first undertook the education of our soldiers.

That is certainly what we'd do if it were up to us.

It's likely, then, that we have now completed our discussion of the part of music and poetry that concerns speech and stories, for we've spoken both of what is to be said and of how it is to be said.

I agree.

Doesn't it remain, then, to discuss lyric odes and songs? c

Clearly.

And couldn't anyone discover what we would say about them, given that it has to be in tune with what we've already said?

Glaucon laughed and said: I'm afraid, Socrates, that I'm not to be included under "anyone," for I don't have a good enough idea at the moment of what we're to say. Of course, I have my suspicions.

Nonetheless, I said, you know that, in the first place, a song consists of three elements—words, harmonic mode, and rhythm. d

Yes, I do know that.

As far as words are concerned, they are no different in songs than they are when not set to music, so mustn't they conform in the same way to the patterns we established just now?

They must.

Further, the mode and rhythm must fit the words.

Of course.

And we said that we no longer needed dirges and lamentations among our words.

We did, indeed.

e What are the lamenting modes, then? You tell me, since you're musical.

The mixo-Lydian, the syntono-Lydian, and some others of that sort.

Aren't they to be excluded, then? They're useless even to decent women, let alone to men.

Certainly.

Drunkenness, softness, and idleness are also most inappropriate for our guardians.

How could they not be?

What, then, are the soft modes suitable for drinking-parties?

The Ionian and those Lydian modes that are said to be relaxed.

399 Could you ever use these to make people warriors?

Never. And now all you have left is the Dorian and Phrygian modes.

I don't know all the musical modes. Just leave me the mode that
would suitably imitate the tone and rhythm of a courageous person
who is active in battle or doing other violent deeds, or who is failing
b and facing wounds, death, or some other misfortune, and who, in all
these circumstances, is fighting off his fate steadily and with self-control.
Leave me also another mode, that of someone engaged in a peaceful,
unforced, voluntary action, persuading someone or asking a favor of a
god in prayer or of a human being through teaching and exhortation,
or, on the other hand, of someone submitting to the supplications of
another who is teaching him and trying to get him to change his mind,
and who, in all these circumstances, is acting with moderation and self-
control, not with arrogance but with understanding, and is content with
c the outcome. Leave me, then, these two modes, which will best imitate
the violent or voluntary tones of voice of those who are moderate and
courageous, whether in good fortune or in bad.

The modes you're asking for are the very ones I mentioned.

Well, then, we'll have no need for polyharmonic or multistringed instruments to accompany our odes and songs.

It doesn't seem so to me at least.

Then we won't need the craftsmen who make triangular lutes, harps,
d and all other such multistringed and polyharmonic instruments.

Apparently not.

What about flute-makers and flute-players? Will you allow them into the city? Or isn't the flute the most "many-stringed" of all? And aren't the panharmonic instruments all imitations of it?[26]

Clearly.

The lyre and the cithara are left, then, as useful in the city, while in the country, there'd be some sort of pipe for the shepherds to play.

That is what our argument shows, at least.

26. The instrument here is the *aulos*, which was not really a flute but a reed instrument. It was especially good at conveying emotion.

Well, we certainly aren't doing anything new in preferring Apollo and e
his instruments to Marsyas and his.[27]

By god, it doesn't seem as though we are.

And, by the dog, without being aware of it, we've been purifying the city we recently said was luxurious.

That's because we're being moderate.

Then let's purify the rest. The next topic after musical modes is the
regulation of meter. We shouldn't strive to have either subtlety or great
variety in meter. Rather, we should try to discover what are the rhythms
of someone who leads an ordered and courageous life and then adapt the
meter and the tune to his words, not his words to them. What these 400
rhythms actually are is for you to say, just as in the case of the modes.

I really don't know what to say. I can tell you from observation that there are three basic kinds of metrical feet out of which the others are constructed, just as there are four in the case of modes. But I can't tell you which sort imitates which sort of life.

Then we'll consult with Damon as to which metrical feet are suited to b
slavishness, insolence, madness, and the other vices and which are suited
to their opposites. I think I've heard him talking about an enoplion, which
is a composite metrical phrase (although I'm not clear on this), and also
about dactylic or heroic meter, which he arranged, I don't know how, to
be equal up and down in the interchange of long and short. I think he
called one foot an iambus, another a trochee, assigning a long and a short c
to both of them. In the case of some of these, I think he approved or
disapproved of the tempo of the foot as much as of the rhythm itself, or
of some combination of the two—I can't tell you which. But, as I said,
we'll leave these things to Damon, since to mark off the different kinds
would require a long argument. Or do you think we should try it?

No, I certainly don't.

But you can discern, can't you, that grace and gracelessness follow good and bad rhythm respectively?

Of course.

Further, if, as we said just now, rhythm and mode must conform to the d
words and not vice versa, then good rhythm follows fine words and is
similar to them, while bad rhythm follows the opposite kind of words,
and the same for harmony and disharmony.

To be sure, these things must conform to the words.

What about the style and content of the words themselves? Don't they conform to the character of the speaker's soul?

Of course.

And the rest conform to the words?

27. After Athena had invented the *aulos*, she discarded it because it distorted her features to play it. It was picked up by the satyr Marsyas, who was foolish enough to challenge Apollo (inventor of the lyre) to a musical contest. He was defeated, and Apollo flayed him alive. Satyrs were bestial in their behavior and desires—especially their sexual desires.

Yes.

Then fine words, harmony, grace, and rhythm follow simplicity of char-
e acter—and I do not mean this in the sense in which we use "simplicity"
as a euphemism for "simple-mindedness"—but I mean the sort of fine and
good character that has developed in accordance with an intelligent plan.

That's absolutely certain.

And must not our young people everywhere aim at these, if they are to do their own work?

They must, indeed.

Now, surely painting is full of these qualities, as are all the crafts similar
401 to it; weaving is full of them, and so are embroidery, architecture, and the
crafts that produce all the other furnishings. Our bodily nature is full of
them, as are the natures of all growing things, for in all of these there is
grace and gracelessness. And gracelessness, bad rhythm, and disharmony
are akin to bad words and bad character, while their opposites are akin
to and are imitations of the opposite, a moderate and good character.

Absolutely.

b Is it, then, only poets we have to supervise, compelling them to make
an image of a good character in their poems or else not to compose them
among us? Or are we also to give orders to other craftsmen, forbidding
them to represent—whether in pictures, buildings, or any other works—
a character that is vicious, unrestrained, slavish, and graceless? Are we to
allow someone who cannot follow these instructions to work among us,
c so that our guardians will be brought up on images of evil, as if in a
meadow of bad grass, where they crop and graze in many different places
every day until, little by little, they unwittingly accumulate a large evil in
their souls? Or must we rather seek out craftsmen who are by nature able
to pursue what is fine and graceful in their work, so that our young people
will live in a healthy place and be benefited on all sides, and so that
something of those fine works will strike their eyes and ears like a breeze
that brings health from a good place, leading them unwittingly, from
d childhood on, to resemblance, friendship, and harmony with the beauty
of reason?

The latter would be by far the best education for them.

Aren't these the reasons, Glaucon, that education in music and poetry
is most important? First, because rhythm and harmony permeate the inner
part of the soul more than anything else, affecting it most strongly and
bringing it grace, so that if someone is properly educated in music and
e poetry, it makes him graceful, but if not, then the opposite. Second, because
anyone who has been properly educated in music and poetry will sense
it acutely when something has been omitted from a thing and when it
hasn't been finely crafted or finely made by nature. And since he has the
right distastes, he'll praise fine things, be pleased by them, receive them
into his soul, and, being nurtured by them, become fine and good. He'll
402 rightly object to what is shameful, hating it while he's still young and
unable to grasp the reason, but, having been educated in this way, he will

welcome the reason when it comes and recognize it easily because of its kinship with himself.

Yes, I agree that those are the reasons to provide education in music and poetry.

It's just the way it was with learning how to read. Our ability wasn't adequate until we realized that there are only a few letters that occur in all sorts of different combinations, and that—whether written large or b
small[28]—they were worthy of our attention, so that we picked them out eagerly wherever they occurred, knowing that we wouldn't be competent readers until we knew our letters.

True.

And isn't it also true that if there are images of letters reflected in mirrors or water, we won't know them until we know the letters themselves, for both abilities are parts of the same craft and discipline?

Absolutely.

Then, by the gods, am I not right in saying that neither we, nor the c
guardians we are raising, will be educated in music and poetry until we know the different forms of moderation, courage, frankness, high-mindedness, and all their kindred, and their opposites too, which are moving around everywhere, and see them in the things in which they are, both themselves and their images, and do not disregard them, whether they are written on small things or large, but accept that the knowledge of both large and small letters is part of the same craft and discipline?

That's absolutely essential.

Therefore, if someone's soul has a fine and beautiful character and his body matches it in beauty and is thus in harmony with it, so that both d
share in the same pattern, wouldn't that be the most beautiful sight for anyone who has eyes to see?

It certainly would.

And isn't what is most beautiful also most loveable?

Of course.

And a musical person would love such people most of all, but he wouldn't love anyone who lacked harmony?

No, he wouldn't, at least not if the defect was in the soul, but if it was only in the body, he'd put up with it and be willing to embrace the boy who had it. e

I gather that you love or have loved such a boy yourself, and I agree with you. Tell me this, however: Is excessive pleasure compatible with moderation?

How can it be, since it drives one mad just as much as pain does?

What about with the rest of virtue?

No. 403

Well, then, is it compatible with violence and licentiousness?

Very much so.

28. See 368c–d.

Can you think of a greater or keener pleasure than sexual pleasure?

I can't—or a madder one either.

But the right kind of love is by nature the love of order and beauty that has been moderated by education in music and poetry?

That's right.

Therefore, the right kind of love has nothing mad or licentious about it?

No, it hasn't.

Then sexual pleasure mustn't come into it, and the lover and the boy
b he loves must have no share in it, if they are to love and be loved in the
right way?

By god, no, Socrates, it mustn't come into it.

It seems, then, that you'll lay it down as a law in the city we're establish-
ing that if a lover can persuade a boy to let him, then he may kiss him,
be with him, and touch him, as a father would a son, for the sake of what
is fine and beautiful, but—turning to the other things—his association
c with the one he cares about must never seem to go any further than this,
otherwise he will be reproached as untrained in music and poetry and
lacking in appreciation for what is fine and beautiful.

That's right.

Does it seem to you that we've now completed our account of education in music and poetry? Anyway, it has ended where it ought to end, for it ought to end in the love of the fine and beautiful.

I agree.

After music and poetry, our young people must be given physical training.

Of course.

In this, too, they must have careful education from childhood throughout
d life. The matter stands, I believe, something like this—but you, too, should
look into it. It seems to me that a fit body doesn't by its own virtue make
the soul good, but instead that the opposite is true—a good soul by its
own virtue makes the body as good as possible. How does it seem to you?

The same.

Then, if we have devoted sufficient care to the mind, wouldn't we be
right, in order to avoid having to do too much talking, to entrust it with
the detailed supervision of the body, while we indicate only the general
e patterns to be followed?

Certainly.

We said that our prospective guardians must avoid drunkenness, for it is less appropriate for a guardian to be drunk and not to know where on earth he is than it is for anyone else.

It would be absurd for a guardian to need a guardian.

What about food? Aren't these men athletes in the greatest contest?

They are.

404 Then would the regimen currently prescribed for athletes in training be
suitable for them?

Perhaps it would.

Yet it seems to result in sluggishness and to be of doubtful value for health. Or haven't you noticed that these athletes sleep their lives away and that, if they deviate even a little from their orderly regimen, they become seriously and violently ill?

I have noticed that.

Then our warrior athletes need a more sophisticated kind of training. They must be like sleepless hounds, able to see and hear as keenly as possible and to endure frequent changes of water and food, as well as summer and winter weather on their campaigns, without faltering in b
health.

That's how it seems to me, too.

Now, isn't the best physical training akin to the simple music and poetry we were describing a moment ago?

How do you mean?

I mean a simple and decent physical training, particularly the kind involved in training for war.

What would it be like?

You might learn about such things from Homer. You know that, when his heroes are campaigning, he doesn't give them fish to banquet on, even though they are by the sea in the Hellespont, nor boiled meat either. Instead, he gives them only roasted meat, which is the kind most easily c
available to soldiers, for it's easier nearly everywhere to use fire alone than to carry pots and pans.

That's right.

Nor, I believe, does Homer mention sweet desserts anywhere. Indeed, aren't even the other athletes aware that, if one's body is to be sound, one must keep away from all such things?

They're right to be aware of it, at any rate, and to avoid such things.

If you think that, then it seems that you don't approve of Syracusan d
cuisine or of Sicilian-style dishes.

I do not.

Then you also object to Corinthian girlfriends for men who are to be in good physical condition.

Absolutely.

What about the reputed delights of Attic pastries?

I certainly object to them, too.

I believe that we'd be right to compare this diet and this entire life-style to the kinds of lyric odes and songs that are composed in all sorts of modes and rhythms. e

Certainly.

Just as embellishment in the one gives rise to licentiousness, doesn't it give rise to illness in the other? But simplicity in music and poetry makes for moderation in the soul, and in physical training it makes for bodily health?

That's absolutely true.

And as licentiousness and disease breed in the city, aren't many law
405 courts and hospitals opened? And don't medicine and law give themselves
solemn airs when even large numbers of free men take them very seriously?

How could it be otherwise?

Yet could you find a greater sign of bad and shameful education in a
city than that the need for skilled doctors and lawyers is felt not only by
inferior people and craftsmen but by those who claim to have been brought
up in the manner of free men? Don't you think it's shameful and a great
b sign of vulgarity to be forced to make use of a justice imposed by others,
as masters and judges, because you are unable to deal with the situation yourself?

I think that's the most shameful thing of all.

Yet isn't it even more shameful when someone not only spends a good
part of his life in court defending himself or prosecuting someone else
but, through inexperience of what is fine, is persuaded to take pride in
c being clever at doing injustice and then exploiting every loophole and
trick to escape conviction—and all for the sake of little worthless things
and because he's ignorant of how much better and finer it is to arrange
one's own life so as to have no need of finding a sleepy or inattentive judge?

This case is even more shameful than the other.

And doesn't it seem shameful to you to need medical help, not for
wounds or because of some seasonal illness, but because, through idleness
d and the life-style we've described, one is full of gas and phlegm like a
stagnant swamp, so that sophisticated Asclepiad doctors are forced to come
up with names like "flatulence" and "catarrh" to describe one's diseases?

It does. And those certainly are strange new names for diseases.

Indeed, I don't suppose that they even existed in the time of Asclepius
himself. I take it as a proof of this that his sons at Troy didn't criticize
e either the woman who treated Eurypylus when he was wounded, or
Patroclus who prescribed the treatment, which consisted of Pramnian wine
with barley meal and grated cheese sprinkled on it, though such treatment
406 is now thought to cause inflammation.[29]

Yet it's a strange drink to give someone in that condition.

Not if you recall that they say that the kind of modern medicine that
plays nursemaid to the disease wasn't used by the Asclepiads before Herodicus. He was a physical trainer who became ill, so he mixed physical
training with medicine and wore out first himself and then many others
b as well.

How did he do that?

By making his dying a lengthy process. Always tending his mortal
illness, he was nonetheless, it seems, unable to cure it, so he lived out his
life under medical treatment, with no leisure for anything else whatever.
If he departed even a little from his accustomed regimen, he became

29. See *Iliad* xi.580 ff., 828–36, and 624–50.

completely worn out, but because his skill made dying difficult, he lived into old age.

That's a fine prize for his skill.

One that's appropriate for someone who didn't know that it wasn't c
because he was ignorant or inexperienced that Asclepius failed to teach this type of medicine to his sons, but because he knew that everyone in a well-regulated city has his own work to do and that no one has the leisure to be ill and under treatment all his life. It's absurd that we recognize this to be true of craftsmen while failing to recognize that it's equally true of those who are wealthy and supposedly happy.

How is that?

When a carpenter is ill, he expects to receive an emetic or a purge from d
his doctor or to get rid of his disease through surgery or cautery. If anyone prescribed a lengthy regimen to him, telling him that he should rest with his head bandaged and so on, he'd soon reply that he had no leisure to be ill and that life is no use to him if he has to neglect his work and always be concerned with his illness. After that he'd bid good-bye to his doctor, e
resume his usual way of life, and either recover his health or, if his body couldn't withstand the illness, he'd die and escape his troubles.

It is believed to be appropriate for someone like that to use medicine in this way.

Is that because his life is of no profit to him if he doesn't do his work? 407

Obviously.

But the rich person, we say, has no work that would make his life unlivable if he couldn't do it.

That's what people say, at least.

That's because you haven't heard the saying of Phocylides that, once you have the means of life, you must practice virtue.[30]

I think he must also practice virtue before that.

We won't quarrel with Phocylides about this. But let's try to find out whether the rich person must indeed practice virtue and whether his life is not worth living if he doesn't or whether tending an illness, while it is an obstacle to applying oneself to carpentry and the other crafts, is no b
obstacle whatever to taking Phocylides' advice.

But excessive care of the body, over and above physical training, is pretty well the biggest obstacle of all. It's troublesome in managing a household, in military service, and even in a sedentary public office.

Yet the most important of all, surely, is that it makes any kind of learning, c
thought, or private meditation difficult, for it's always imagining some headaches or dizziness and accusing philosophy of causing them. Hence, wherever this kind of virtue is practiced and examined, excessive care of the body hinders it, for it makes a person think he's ill and be all the time concerned about his body.

30. Phocylides of Miletus was a mid-sixth-century elegiac and hexameter poet best known for his epigrams.

It probably does.

Therefore, won't we say that Asclepius knew this, and that he taught
medicine for those whose bodies are healthy in their natures and habits
d but have some specific disease? His medicine is for these people with these
habits. He cured them of their disease with drugs or surgery and then
ordered them to live their usual life so as not to harm their city's affairs.
But for those whose bodies were riddled with disease, he didn't attempt
to prescribe a regimen, drawing off a little here and pouring in a little
there, in order to make their life a prolonged misery and enable them to
produce offspring in all probability like themselves. He didn't think that
e he should treat someone who couldn't live a normal life, since such a
person would be of no profit either to himself or to the city.

The Asclepius you're talking about was quite a statesman.

Clearly. And don't you see that because he was a statesman his sons
turned out to be good men at Troy, practicing medicine as I say they did?
408 Don't you remember that they "sucked out the blood and applied gentle
potions" to the wound Pandarus inflicted on Menelaus, but without pre-
scribing what he should eat or drink after that, any more than they did
for Eurypylus?[31] They considered their drugs to be sufficient to cure men
who were healthy and living an orderly life before being wounded, even
b if they happened to drink wine mixed with barley and cheese right after
receiving their wounds. But they didn't consider the lives of those who
were by nature sick and licentious to be profitable either to themselves or
to anyone else. Medicine isn't intended for such people and they shouldn't
be treated, not even if they're richer than Midas.

The sons of Asclepius you're talking about were indeed very sophisticated.

Appropriately so. But Pindar and the tragedians don't agree with us.[32]
They say that Asclepius was the son of Apollo, that he was bribed with
gold to heal a rich man, who was already dying, and that he was killed
by lightning for doing so. But, in view of what we said before, we won't
c believe this. We'll say that if Asclepius was the son of a god, he was not
a money-grubber, and that if he was a money-grubber, he was not the son
of a god.

That's right. But what do you say about the following, Socrates? Don't
we need to have good doctors in our city? And the best will surely be
those who have handled the greatest number of sick and of healthy people.
d In the same way, the best judges will be those who have associated with
people whose natures are of every kind.

I agree that the doctors and judges must be good. But do you know the kind I consider to be so?

If you'll tell me.

31. *Iliad* iv.218–19.

32. Cf. Aeschylus *Agamemnon* 1022 ff., Euripides *Alcestis* 3, Pindar *Pythians* 3.55–58.

I'll try. But you ask about things that aren't alike in the same question.

In what way?

The cleverest doctors are those who, in addition to learning their craft,
have had contact with the greatest number of very sick bodies from child-
hood on, have themselves experienced every illness, and aren't very healthy
by nature, for they don't treat bodies with their bodies, I suppose—if they e
did, we wouldn't allow their bodies to be or become bad. Rather they treat
the body with their souls, and it isn't possible for the soul to treat anything
well, if it is or has been bad itself.

That's right.

As for the judge, he *does* rule other souls with his own soul. And it isn't 409
possible for a soul to be nurtured among vicious souls from childhood,
to associate with them, to indulge in every kind of injustice, and come
through it able to judge other people's injustices from its own case, as it
can diseases of the body. Rather, if it's to be fine and good, and a sound
judge of just things, it must itself remain pure and have no experience of
bad character while it's young. That's the reason, indeed, that decent people
appear simple and easily deceived by unjust ones when they are young.
It's because they have no models in themselves of the evil experiences of b
the vicious to guide their judgments.

That's certainly so.

Therefore, a good judge must not be a young person but an old one,
who has learned late in life what injustice is like and who has become
aware of it not as something at home in his own soul, but as something
alien and present in others, someone who, after a long time, has recognized
that injustice is bad by nature, not from his own experience of it, but
through knowledge. c

Such a judge would be the most noble one of all.

And he'd be good, too, which was what you asked, for someone who
has a good soul is good. The clever and suspicious person, on the other
hand, who has committed many injustices himself and thinks himself a
wise villain, appears clever in the company of those like himself, because
he's on his guard and is guided by the models within himself. But when
he meets with good older people, he's seen to be stupid, distrustful at the
wrong time, and ignorant of what a sound character is, since he has no
model of this within himself. But since he meets vicious people more often d
than good ones, he seems to be clever rather than unlearned, both to
himself and to others.

That's completely true.

Then we mustn't look for the good judge among people like that but
among the sort we described earlier. A vicious person would never know
either himself or a virtuous one, whereas a naturally virtuous person,
when educated, will in time acquire knowledge of both virtue and vice.
And it is someone like that who becomes wise, in my view, and not the
bad person. e

I agree with you.

Then won't you legislate in our city for the kind of medicine we mentioned and for this kind of judging, so that together they'll look after those
410 who are naturally well endowed in body and soul? But as for the ones whose bodies are naturally unhealthy or whose souls are incurably evil, won't they let the former die of their own accord and put the latter to death?

That seems to be best both for the ones who suffer such treatment and for the city.

However, *our* young people, since they practice that simple sort of music and poetry that we said produces moderation, will plainly be wary of coming to need a judge.

That's right.

And won't a person who's educated in music and poetry pursue physical
b training in the same way, and choose to make no use of medicine except when unavoidable?

I believe so.

He'll work at physical exercises in order to arouse the spirited part of his nature, rather than to acquire the physical strength for which other athletes diet and labor.

That's absolutely right.

Then, Glaucon, did those who established education in music and poetry
c and in physical training do so with the aim that people attribute to them, which is to take care of the body with the latter and the soul with the former, or with some other aim?

What other aim do you mean?

It looks as though they established both chiefly for the sake of the soul.

How so?

Haven't you noticed the effect that lifelong physical training, unaccompanied by any training in music and poetry, has on the mind, or the effect of the opposite, music and poetry without physical training?

What effects are you talking about?

d Savagery and toughness in the one case and softness and overcultivation in the other.

I get the point. You mean that those who devote themselves exclusively to physical training turn out to be more savage than they should, while those who devote themselves to music and poetry turn out to be softer than is good for them?

Moreover, the source of the savageness is the spirited part of one's nature. Rightly nurtured, it becomes courageous, but if it's overstrained, it's likely to become hard and harsh.

So it seems.

And isn't it the philosophic part of one's nature that provides the cultiva-
e tion? If it is relaxed too far, it becomes softer than it should, but if properly nurtured, it is cultivated and orderly.

So it is.

Now, we say that our guardians must have both these natures.

They must indeed.

And mustn't the two be harmonized with each other?

Of course.

And if this harmony is achieved, the soul is both moderate and coura-
geous? 411

Certainly.

But if it is inharmonious, it is cowardly and savage?

Yes, indeed.

Therefore, when someone gives music an opportunity to charm his
soul with the flute and to pour those sweet, soft, and plaintive tunes we
mentioned through his ear, as through a funnel, when he spends his whole
life humming them and delighting in them, then, at first, whatever spirit
he has is softened, just as iron is tempered, and from being hard and
useless, it is made useful. But if he keeps at it unrelentingly and is beguiled
by the music, after a time his spirit is melted and dissolved until it vanishes, b
and the very sinews of his soul are cut out and he becomes "a feeble
warrior."[33]

That's right.

And if he had a spiritless nature from the first, this process is soon
completed. But if he had a spirited nature, his spirit becomes weak and
unstable, flaring up at trifles and extinguished as easily. The result is
that such people become quick-tempered, prone to anger, and filled with
discontent, rather than spirited. c

That's certainly true.

What about someone who works hard at physical training and eats well
but never touches music or philosophy? Isn't he in good physical condition
at first, full of resolution and spirit? And doesn't he become more coura-
geous than he was before?

Certainly.

But what happens if he does nothing else and never associates with the d
Muse? Doesn't whatever love of learning he might have had in his soul soon
become enfeebled, deaf, and blind, because he never tastes any learning or
investigation or partakes of any discussion or any of the rest of music and
poetry, to nurture or arouse it?

It does seem to be that way.

I believe that someone like that becomes a hater of reason and of music.
He no longer makes any use of persuasion but bulls his way through every
situation by force and savagery like a wild animal, living in ignorance and
stupidity without either rhythm or grace. e

That's most certainly how he'll live.

It seems, then, that a god has given music and physical training to
human beings not, except incidentally, for the body and the soul but for
the spirited and wisdom-loving parts of the soul itself, in order that these
might be in harmony with one another, each being stretched and relaxed
to the appropriate degree. 412

33. *Iliad* xvii.588.

It seems so.

Then the person who achieves the finest blend of music and physical training and impresses it on his soul in the most measured way is the one we'd most correctly call completely harmonious and trained in music, much more so than the one who merely harmonizes the strings of his instrument.

That's certainly so, Socrates.

Then, won't we always need this sort of person as an overseer in our city, Glaucon, if indeed its constitution is to be preserved?

b It seems that we'll need someone like that most of all.

These, then, are the patterns for education and upbringing. Should we enumerate the dances of these people, or their hunts, chases with hounds, athletic contests, and horse races? Surely, they're no longer hard to discover, since it's pretty clear that they must follow the patterns we've already established.

Perhaps so.

All right, then what's the next thing we have to determine? Isn't it which of these same people will rule and which be ruled?

c Of course.

Now, isn't it obvious that the rulers must be older and the ruled younger?

Yes, it is.

And mustn't the rulers also be the best of them?

That, too.

And aren't the best farmers the ones who are best at farming?

Yes.

Then, as the rulers must be the best of the guardians, mustn't they be the ones who are best at guarding the city?

Yes.

Then, in the first place, mustn't they be knowledgeable and capable, and mustn't they care for the city?

d That's right.

Now, one cares most for what one loves.

Necessarily.

And someone loves something most of all when he believes that the same things are advantageous to it as to himself and supposes that if it does well, he'll do well, and that if it does badly, then he'll do badly too.

That's right.

Then we must choose from among our guardians those men who, upon examination, seem most of all to believe throughout their lives that they
e must eagerly pursue what is advantageous to the city and be wholly unwilling to do the opposite.

Such people would be suitable for the job at any rate.

I think we must observe them at all ages to see whether they are guardians of this conviction and make sure that neither compulsion nor magic spells will get them to discard or forget their belief that they must do what is best for the city.

What do you mean by discarding?

I'll tell you. I think the discarding of a belief is either voluntary or involuntary—voluntary when one learns that the belief is false, involuntary in the case of all true beliefs. 413

I understand voluntary discarding but not involuntary.

What's that? Don't you know that people are voluntarily deprived of bad things, but involuntarily deprived of good ones? And isn't being deceived about the truth a bad thing, while possessing the truth is good? Or don't you think that to believe the things that are is to possess the truth?

That's right, and I do think that people are involuntarily deprived of true opinions.

But can't they also be so deprived by theft, magic spells, and compulsion? b

Now, I don't understand again.

I'm afraid I must be talking like a tragic poet! By "the victims of theft" I mean those who are persuaded to change their minds or those who forget, because time, in the latter case, and argument, in the former, takes away their opinions without their realizing it. Do you understand now?

Yes.

By "the compelled" I mean those whom pain or suffering causes to change their mind.

I understand that, and you're right.

The "victims of magic," I think you'd agree, are those who change their mind because they are under the spell of pleasure or fear. c

It seems to me that everything that deceives does so by casting a spell.

Then, as I said just now, we must find out who are the best guardians of their conviction that they must always do what they believe to be best for the city. We must keep them under observation from childhood and set them tasks that are most likely to make them forget such a conviction or be deceived out of it, and we must select whoever keeps on remembering d
it and isn't easily deceived, and reject the others. Do you agree?

Yes.

And we must subject them to labors, pains, and contests in which we can watch for these traits.

That's right.

Then we must also set up a competition for the third way in which people are deprived of their convictions, namely, magic. Like those who lead colts into noise and tumult to see if they're afraid, we must expose our young people to fears and pleasures, testing them more thoroughly than gold is tested by fire. If someone is hard to put under a spell, is e
apparently gracious in everything, is a good guardian of himself and the music and poetry he has learned, and if he always shows himself to be rhythmical and harmonious, then he is the best person both for himself and for the city. Anyone who is tested in this way as a child, youth, and adult, and always comes out of it untainted, is to be made a ruler as well 414
as a guardian; he is to be honored in life and to receive after his death the most prized tombs and memorials. But anyone who fails to prove himself

in this way is to be rejected. It seems to me, Glaucon, that rulers and guardians must be selected and appointed in some such way as this, though we've provided only a general pattern and not the exact details.

It also seems to me that they must be selected in this sort of way.

b Then, isn't it truly most correct to call these people complete guardians,
since they will guard against external enemies and internal friends, so that the one will lack the power and the other the desire to harm the city? The young people we've hitherto called guardians we'll now call *auxiliaries* and supporters of the guardians' convictions.

I agree.

How, then, could we devise one of those useful falsehoods we were
talking about a while ago,[34] one noble falsehood that would, in the best
c case, persuade even the rulers, but if that's not possible, then the others
in the city?

What sort of falsehood?

Nothing new, but a Phoenician story which describes something that has happened in many places. At least, that's what the poets say, and they've persuaded many people to believe it too. It hasn't happened among us, and I don't even know if it could. It would certainly take a lot of persuasion to get people to believe it.

You seem hesitant to tell the story.

When you hear it, you'll realize that I have every reason to hesitate.

Speak, and don't be afraid.

d I'll tell it, then, though I don't know where I'll get the audacity or even
what words I'll use. I'll first try to persuade the rulers and the soldiers
and then the rest of the city that the upbringing and the education we
gave them, and the experiences that went with them, were a sort of dream,
that in fact they themselves, their weapons, and the other craftsmen's tools
e were at that time really being fashioned and nurtured inside the earth,
and that when the work was completed, the earth, who is their mother, delivered all of them up into the world. Therefore, if anyone attacks the land in which they live, they must plan on its behalf and defend it as their mother and nurse and think of the other citizens as their earthborn brothers.

It isn't for nothing that you were so shy about telling your falsehood.

415 Appropriately so. Nevertheless, listen to the rest of the story. "All of
you in the city are brothers," we'll say to them in telling our story, "but
the god who made you mixed some gold into those who are adequately
equipped to rule, because they are most valuable. He put silver in those
who are auxiliaries and iron and bronze in the farmers and other craftsmen.
For the most part you will produce children like yourselves, but, because
b you are all related, a silver child will occasionally be born from a golden
parent, and vice versa, and all the others from each other. So the first and most important command from the god to the rulers is that there is nothing that they must guard better or watch more carefully than the mixture of

34. See 382a ff.

metals in the souls of the next generation. If an offspring of theirs should be found to have a mixture of iron or bronze, they must not pity him in any way, but give him the rank appropriate to his nature and drive him c
out to join the craftsmen and farmers. But if an offspring of these people is found to have a mixture of gold or silver, they will honor him and take him up to join the guardians or the auxiliaries, for there is an oracle which says that the city will be ruined if it ever has an iron or a bronze guardian." So, do you have any device that will make our citizens believe this story?

I can't see any way to make them believe it themselves, but perhaps d
there is one in the case of their sons and later generations and all the other people who come after them.

I understand pretty much what you mean, but even that would help to make them care more for the city and each other. However, let's leave this matter wherever tradition takes it. And let's now arm our earthborn and lead them forth with their rulers in charge. And as they march, let them look for the best place in the city to have their camp, a site from which they can most easily control those within, if anyone is unwilling to obey e
the laws, or repel any outside enemy who comes like a wolf upon the flock. And when they have established their camp and made the requisite sacrifices, they must see to their sleeping quarters. What do you say?

I agree.

And won't these quarters protect them adequately both in winter and summer?

Of course, for it seems to me that you mean their housing.

Yes, but housing for soldiers, not for money-makers.

How do you mean to distinguish these from one another? 416

I'll try to tell you. The most terrible and most shameful thing of all is for a shepherd to rear dogs as auxiliaries to help him with his flocks in such a way that, through licentiousness, hunger, or some other bad trait of character, they do evil to the sheep and become like wolves instead of dogs.

That's certainly a terrible thing.

Isn't it necessary, therefore, to guard in every way against our auxiliaries b
doing anything like that to the citizens because they are stronger, thereby becoming savage masters instead of kindly allies?

It is necessary.

And wouldn't a really good education endow them with the greatest caution in this regard?

But surely they have had an education like that.

Perhaps we shouldn't assert this dogmatically, Glaucon. What we can assert is what we were saying just now, that they must have the right education, whatever it is, if they are to have what will most make them gentle to each other and to those they are guarding. c

That's right.

Now, someone with some understanding might say that, besides this education, they must also have the kind of housing and other property

that will neither prevent them from being the best guardians nor encourage
d them to do evil to the other citizens.

That's true.

Consider, then, whether or not they should live in some such way as
this, if they're to be the kind of men we described. First, none of them
should possess any private property beyond what is wholly necessary.
Second, none of them should have a house or storeroom that isn't open for
all to enter at will. Third, whatever sustenance moderate and courageous
e warrior-athletes require in order to have neither shortfall nor surplus in
a given year they'll receive by taxation on the other citizens as a salary
for their guardianship. Fourth, they'll have common messes and live to-
gether like soldiers in a camp. We'll tell them that they always have gold
and silver of a divine sort in their souls as a gift from the gods and so
have no further need of human gold. Indeed, we'll tell them that it's
impious for them to defile this divine possession by any admixture of
such gold, because many impious deeds have been done that involve the
417 currency used by ordinary people, while their own is pure. Hence, for
them alone among the city's population, it is unlawful to touch or handle
gold or silver. They mustn't be under the same roof as it, wear it as jewelry,
or drink from gold or silver goblets. In this way they'd save both themselves
and the city. But if they acquire private land, houses, and currency them-
selves, they'll be household managers and farmers instead of guardians—
b hostile masters of the other citizens instead of their allies. They'll spend
their whole lives hating and being hated, plotting and being plotted against,
more afraid of internal than of external enemies, and they'll hasten both
themselves and the whole city to almost immediate ruin. For all these
reasons, let's say that the guardians must be provided with housing and
the rest in this way, and establish this as a law. Or don't you agree?

I certainly do, Glaucon said.

## Book IV

419 And Adeimantus interrupted: How would you defend yourself, Socrates,
he said, if someone told you that you aren't making these men very happy
and that it's their own fault? The city really belongs to them, yet they
derive no good from it. Others own land, build fine big houses, acquire
furnishings to go along with them, make their own private sacrifices to
the gods, entertain guests, and also, of course, possess what you were
talking about just now, gold and silver and all the things that are thought
to belong to people who are blessedly happy. But one might well say that
your guardians are simply settled in the city like mercenaries and that all
420 they do is watch over it.

Yes, I said, and what's more, they work simply for their keep and get
no extra wages as the others do. Hence, if they want to take a private trip
away from the city, they won't be able to; they'll have nothing to give to

their mistresses, nothing to spend in whatever other ways they wish, as people do who are considered happy. You've omitted these and a host of other, similar facts from your charge.

Well, let them be added to the charge as well.

Then, are you asking how we should defend ourselves? b

Yes.

I think we'll discover what to say if we follow the same path as before. We'll say that it wouldn't be surprising if these people were happiest just as they are, but that, in establishing our city, we aren't aiming to make any one group outstandingly happy but to make the whole city so, as far as possible. We thought that we'd find justice most easily in such a city and injustice, by contrast, in the one that is governed worst and that, by observing both cities, we'd be able to judge the question we've been inquiring into for so long. We take ourselves, then, to be fashioning the happy c
city, not picking out a few happy people and putting them in it, but making the whole city happy. (We'll look at the opposite city soon.[1])

Suppose, then, that someone came up to us while we were painting a statue and objected that, because we had painted the eyes (which are the most beautiful part) black rather than purple, we had not applied the most beautiful colors to the most beautiful parts of the statue. We'd think it reasonable to offer the following defense: "You mustn't expect us to paint the eyes so beautifully that they no longer appear to be eyes at all, and d
the same with the other parts. Rather you must look to see whether by dealing with each part appropriately, we are making the whole statue beautiful." Similarly, you mustn't force us to give our guardians the kind of happiness that would make them something other than guardians. We know how to clothe the farmers in purple robes, festoon them with gold e
jewelry, and tell them to work the land whenever they please. We know how to settle our potters on couches by the fire, feasting and passing the wine around, with their wheel beside them for whenever they want to make pots. And we can make all the others happy in the same way, so that the whole city is happy. Don't urge us to do this, however, for if we do, a farmer wouldn't be a farmer, nor a potter a potter, and none of the 421
others would keep to the patterns of work that give rise to a city. Now, if cobblers become inferior and corrupt and claim to be what they are not, that won't do much harm to the city. Hence, as far as they and the others like them are concerned, our argument carries less weight. But if the guardians of our laws and city are merely believed to be guardians but are not, you surely see that they'll destroy the city utterly, just as they alone have the opportunity to govern it well and make it happy.

If we are making true guardians, then, who are least likely to do evil to the city, and if the one who brought the charge is talking about farmers and banqueters who are happy as they would be at a festival rather than b
in a city, then he isn't talking about a city at all, but about something else.

1. This discussion is announced at 445c, but doesn't begin until Book VIII.

With this in mind, we should consider whether in setting up our guardians
we are aiming to give them the greatest happiness, or whether—since our
aim is to see that the city as a whole has the greatest happiness—we must
compel and persuade the auxiliaries and guardians to follow our other
c policy and be the best possible craftsmen at their own work, and the same
with all the others. In this way, with the whole city developing and being
governed well, we must leave it to nature to provide each group with its
share of happiness.

I think you put that very well, he said.

Will you also think that I'm putting things well when I make the next point, which is closely akin to this one?

Which one exactly?

Consider whether or not the following things corrupt the other workers,
d so that they become bad.

What things?

Wealth and poverty.

How do they corrupt the other workers?

Like this. Do you think that a potter who has become wealthy will still be willing to pay attention to his craft?

Not at all.

Won't he become more idle and careless than he was?

Much more.

Then won't he become a worse potter?

Far worse.

And surely if poverty prevents him from having tools or any of the
other things he needs for his craft, he'll produce poorer work and will
e teach his sons, or anyone else he teaches, to be worse craftsmen.

Of course.

So poverty and wealth make a craftsman and his products worse.

Apparently.

It seems, then, that we've found other things that our guardians must guard against in every way, to prevent them from slipping into the city unnoticed.

What are they?

422 Both wealth and poverty. The former makes for luxury, idleness, and
revolution; the latter for slavishness, bad work, and revolution as well.

That's certainly true. But consider this, Socrates: If our city hasn't got any money, how will it be able to fight a war, especially if it has to fight against a great and wealthy city?

b Obviously, it will be harder to fight one such city and easier to fight two.

How do you mean?

First of all, if our city has to fight a city of the sort you mention, won't it be a case of warrior-athletes fighting against rich men?

Yes, as far as that goes.

Well, then, Adeimantus, don't you think that one boxer who has had the best possible training could easily fight two rich and fat non-boxers?

Maybe not at the same time.

Not even by escaping from them and then turning and hitting the one who caught up with him first, and doing this repeatedly in stifling heat and sun? Wouldn't he, in his condition, be able to handle even more than c
two such people?

That certainly wouldn't be surprising.

And don't you think that the rich have more knowledge and experience of boxing than of how to fight a war?

I do.

Then in all likelihood our athletes will easily be able to fight twice or three times their own numbers in a war.

I agree, for I think what you say is right.

What if they sent envoys to another city and told them the following truth: "We have no use for gold or silver, and it isn't lawful for us to d
possess them, so join us in this war, and you can take the property of those who oppose us for yourselves." Do you think that anyone hearing this would choose to fight hard, lean dogs, rather than to join them in fighting fat and tender sheep?

No, I don't. But if the wealth of all the cities came to be gathered in a single one, watch out that it doesn't endanger your nonwealthy city. e

You're happily innocent if you think that anything other than the kind of city we are founding deserves to be called *a city*.

What do you mean?

We'll have to find a greater title for the others because each of them is a great many cities, not *a* city, as they say in the game. At any rate, each of them consists of two cities at war with one another, that of the poor and that of the rich, and each of these contains a great many. If you 423
approach them as one city, you'll be making a big mistake. But if you approach them as many and offer to give to the one city the money, power, and indeed the very inhabitants of the other, you'll always find many allies and few enemies. And as long as your own city is moderately governed in the way that we've just arranged, it will, even if it has only a thousand men to fight for it, be the greatest. Not in reputation; I don't mean that, but the greatest in fact. Indeed, you won't find a city as great as this one among either Greeks or barbarians, although many that are many times its size may seem to be as great. Do you disagree? b

No, I certainly don't.

Then this would also be the best limit for our guardians to put on the size of the city. And they should mark off enough land for a city that size and let the rest go.

What limit is that?

I suppose the following one. As long as it is willing to remain *one* city, it may continue to grow, but it cannot grow beyond that point.

That is a good limit. c

Then, we'll give our guardians this further order, namely, to guard in every way against the city's being either small or great in reputation instead of being sufficient in size and one in number.

At any rate, that order will be fairly easy for them to follow.

And the one we mentioned earlier is even easier, when we said that, if an offspring of the guardians is inferior, he must be sent off to join the other citizens and that, if the others have an able offspring, he must join
d the guardians. This was meant to make clear that each of the other citizens is to be directed to what he is naturally suited for, so that, doing the one work that is his own, he will become not many but one, and the whole city will itself be naturally one not many.

That *is* easier than the other.

These orders we give them, Adeimantus, are neither as numerous nor as important as one might think. Indeed, they are all insignificant, provided, as the saying goes, that they guard the one great thing, though I'd rather
e call it sufficient than great.

What's that?

Their education and upbringing, for if by being well educated they become reasonable men, they will easily see these things for themselves, as well as all the other things we are omitting, for example, that marriage, the having of wives, and the procreation of children must be governed as
424 far as possible by the old proverb: Friends possess everything in common.

That would be best.

And surely, once our city gets a good start, it will go on growing in a cycle. Good education and upbringing, when they are preserved, produce good natures, and useful natures, who are in turn well educated, grow up even better than their predecessors, both in their offspring and in other
b respects, just like other animals.

That's likely.

To put it briefly, those in charge must cling to education and see that it isn't corrupted without their noticing it, guarding it against everything. Above all, they must guard as carefully as they can against any innovation in music and poetry or in physical training that is counter to the established order. And they should dread to hear anyone say:

*People care most for the song*
*That is newest from the singer's lips.*[2]

Someone might praise such a saying, thinking that the poet meant not
c new songs but new ways of singing. Such a thing shouldn't be praised, and the poet shouldn't be taken to have meant it, for the guardians must beware of changing to a new form of music, since it threatens the whole system. As Damon says, and I am convinced, the musical modes are never changed without change in the most important of a city's laws.

You can count me among the convinced as well, Adeimantus said.

2. *Odyssey* i.351–52, slightly altered.

Then it seems, I said, that it is in music and poetry that our guardians must build their bulwark. d

At any rate, lawlessness easily creeps in there unnoticed.

Yes, as if music and poetry were only play and did no harm at all.

It is harmless—except, of course, that when lawlessness has established itself there, it flows over little by little into characters and ways of life. Then, greatly increased, it steps out into private contracts, and from private contracts, Socrates, it makes its insolent way into the laws and government, until in the end it overthrows everything, public and private. e

Well, is that the way it goes?

I think so.

Then, as we said at first, our children's games must from the very beginning be more law-abiding, for if their games become lawless, and the children follow suit, isn't it impossible for them to grow up into good and law-abiding men? 425

It certainly is.

But when children play the right games from the beginning and absorb lawfulness from music and poetry, it follows them in everything and fosters their growth, correcting anything in the city that may have gone wrong before—in other words, the very opposite of what happens where the games are lawless.

That's true.

These people will also discover the seemingly insignificant conventions their predecessors have destroyed.

Which ones?

Things like this: When it is proper for the young to be silent in front of their elders, when they should make way for them or stand up in their b presence, the care of parents, hair styles, the clothes and shoes to wear, deportment, and everything else of that sort. Don't you agree?

I do.

I think it's foolish to legislate about such things. Verbal or written decrees will never make them come about or last.

How could they?

At any rate, Adeimantus, it looks as though the start of someone's education determines what follows. Doesn't like always encourage like? c

It does.

And the final outcome of education, I suppose we'd say, is a single newly finished person, who is either good or the opposite.

Of course.

That's why I wouldn't go on to try to legislate about such things.

And with good reason.

Then, by the gods, what about market business, such as the private contracts people make with one another in the marketplace, for example, or contracts with manual laborers, cases of insult or injury, the bringing d of lawsuits, the establishing of juries, the payment and assessment of whatever dues are necessary in markets and harbors, the regulation of

market, city, harbor, and the rest—should we bring ourselves to legislate about any of these?

It isn't appropriate to dictate to men who are fine and good. They'll easily
e find out for themselves whatever needs to be legislated about such things.

Yes, provided that a god grants that the laws we have already described are preserved.

If not, they'll spend their lives enacting a lot of other laws and then amending them, believing that in this way they'll attain the best.

You mean they'll live like those sick people who, through licentiousness, aren't willing to abandon their harmful way of life?

That's right.

426 And such people carry on in an altogether amusing fashion, don't they? Their medical treatment achieves nothing, except that their illness becomes worse and more complicated, and they're always hoping that someone will recommend some new medicine to cure them.

That's exactly what happens to people like that.

And isn't it also amusing that they consider their worst enemy to be the person who tells them the truth, namely, that until they give up drunkenness, overeating, lechery, and idleness, no medicine, cautery, or surgery,
b no charms, amulets, or anything else of that kind will do them any good?

It isn't amusing at all, for it isn't amusing to treat someone harshly when he's telling the truth.

You don't seem to approve of such men.

I certainly don't, by god.

Then, you won't approve either if a whole city behaves in that way, as we said. Don't you think that cities that are badly governed behave exactly like this when they warn their citizens not to disturb the city's whole
c political establishment on pain of death? The person who is honored and considered clever and wise in important matters by such badly governed cities is the one who serves them most pleasantly, indulges them, flatters them, anticipates their wishes, and is clever at fulfillling them.

Cities certainly do seem to behave in that way, and I don't approve of it at all.

What about those who are willing and eager to serve such cities? Don't
d you admire their courage and readiness?

I do, except for those who are deceived by majority approval into believing that they are true statesmen.

What do you mean? Have you no sympathy for such men? Or do you think it's possible for someone who is ignorant of measurement not to believe it himself when many others who are similarly ignorant tell him
e that he is six feet tall?

No, I don't think that.

Then don't be too hard on them, for such people are surely the most amusing of all. They pass laws on the subjects we've just been enumerating and then amend them, and they always think they'll find a way to put a

stop to cheating on contracts and the other things I mentioned, not realizing that they're really just cutting off a Hydra's head.[3]

Yet that's all they're doing. 427

I'd have thought, then, that the true lawgiver oughtn't to bother with that form of law or constitution, either in a badly governed city or in a well-governed one—in the former, because it's useless and accomplishes nothing; in the latter, because anyone could discover some of these things, while the others follow automatically from the ways of life we established.

What is now left for us to deal with under the heading of legislation? b

For us nothing, but for the Delphic Apollo it remains to enact the greatest, finest, and first of laws.

What laws are those?

Those having to do with the establishing of temples, sacrifices, and other forms of service to gods, daemons, and heroes, the burial of the dead, and the services that ensure their favor. We have no knowledge of these things, and in establishing our city, if we have any understanding, we won't be
persuaded to trust them to anyone other than the ancestral guide. And c
this god, sitting upon the rock at the center of the earth,[4] is without a doubt the ancestral guide on these matters for all people.

Nicely put. And that's what we must do.

Well, son of Ariston, your city might now be said to be established. The d
next step is to get an adequate light somewhere and to call upon your brother as well as Polemarchus and the others, so as to look inside it and see where the justice and the injustice might be in it, what the difference between them is, and which of the two the person who is to be happy should possess, whether its possession is unnoticed by all the gods and human beings or not.

You're talking nonsense, Glaucon said. You promised to look for them yourself because you said it was impious for you not to come to the rescue
of justice in every way you could. e

That's true, and I must do what I promised, but you'll have to help.

We will.

I hope to find it in this way. I think our city, if indeed it has been correctly founded, is completely good.

Necessarily so.

Clearly, then, it is wise, courageous, moderate, and just.

Clearly.

Then, if we find any of these in it, what's left over will be the ones we haven't found?

Of course. 428

3. The Hydra was a mythical monster. When one of its heads was cut off, two or three new heads grew in its place. Heracles had to slay the Hydra as one of his labors.

4. I.e., on the rock in the sanctuary at Delphi, which was believed to be the navel or center of the earth.

Therefore, as with any other four things, if we were looking for any one of them in something and recognized it first, that would be enough for us, but if we recognized the other three first, this itself would be sufficient to enable us to recognize what we are looking for. Clearly it couldn't be anything other than what's left over.

That's right.

Therefore, since there are four virtues, mustn't we look for them in the same way?

Clearly.

Now, the first thing I think I can see clearly in the city is wisdom, and
b there seems to be something odd about it.

What's that?

I think that the city we described is really wise. And that's because it has good judgment, isn't it?

Yes.

Now, this very thing, good judgment, is clearly some kind of knowledge, for it's through knowledge, not ignorance, that people judge well.

Clearly.

But there are many kinds of knowledge in the city.

Of course.

Is it because of the knowledge possessed by its carpenters, then, that the city is to be called wise and sound in judgment?

c Not at all. It's called skilled in carpentry because of that.

Then it isn't to be called wise because of the knowledge by which it arranges to have the best wooden implements.

No, indeed.

What about the knowledge of bronze items or the like?

It isn't because of any knowledge of that sort.

Nor because of the knowledge of how to raise a harvest from the earth, for it's called skilled in farming because of that.

I should think so.

Then, is there some knowledge possessed by some of the citizens in the city we just founded that doesn't judge about any particular matter but about the city as a whole and the maintenance of good relations, both
d internally and with other cities?

There is indeed.

What is this knowledge, and who has it?

It is guardianship, and it is possessed by those rulers we just now called complete guardians.

Then, what does this knowledge entitle you to say about the city?

That it has good judgment and is really wise.

Who do you think that there will be more of in our city, metal-workers
e or these true guardians?

There will be far more metal-workers.

Indeed, of all those who are called by a certain name because they have some kind of knowledge, aren't the guardians the least numerous?

By far.

Then, a whole city established according to nature would be wise because of the smallest class and part in it, namely, the governing or ruling one. And to this class, which seems to be by nature the smallest, belongs a share of the knowledge that alone among all the other kinds of knowledge 429
is to be called wisdom.

That's completely true.

Then we've found one of the four virtues, as well as its place in the city, though I don't know how we found it.

Our way of finding it seems good enough to me.

And surely courage and the part of the city it's in, the part on account of which the city is called courageous, aren't difficult to see.

How is that?

Who, in calling the city cowardly or courageous, would look anywhere b
other than to the part of it that fights and does battle on its behalf?

No one would look anywhere else.

At any rate, I don't think that the courage or cowardice of its other citizens would cause the city itself to be called either courageous or cowardly.

No, it wouldn't.

The city is courageous, then, because of a part of itself that has the power to preserve through everything its belief about what things are to be feared, namely, that they are the things and kinds of things that the lawgiver c
declared to be such in the course of educating it. Or don't you call that courage?

I don't completely understand what you mean. Please, say it again.

I mean that courage is a kind of preservation.

What sort of preservation?

That preservation of the belief that has been inculcated by the law through education about what things and sorts of things are to be feared. And by preserving this belief "through everything," I mean preserving it and not abandoning it because of pains, pleasures, desires, or fears. If you d
like, I'll compare it to something I think it resembles.

I'd like that.

You know that dyers, who want to dye wool purple, first pick out from the many colors of wool the one that is naturally white, then they carefully prepare this in various ways, so that it will absorb the color as well as possible, and only at that point do they apply the purple dye. When something is dyed in this way, the color is fast—no amount of washing, e
whether with soap or without it, can remove it. But you also know what happens to material if it hasn't been dyed in this way, but instead is dyed purple or some other color without careful preparation.

I know that it looks washed out and ridiculous.

Then, you should understand that, as far as we could, we were doing something similar when we selected our soldiers and educated them in music and physical training. What we were contriving was nothing other 430
than this: That because they had the proper nature and upbringing, they

would absorb the laws in the finest possible way, just like a dye, so that
their belief about what they should fear and all the rest would become so
fast that even such extremely effective detergents as pleasure, pain, fear,
and desire wouldn't wash it out—and pleasure is much more potent than
b any powder, washing soda, or soap. This power to preserve through every-
thing the correct and law-inculcated belief about what is to be feared and
what isn't is what I call courage, unless, of course, you say otherwise.

I have nothing different to say, for I assume that you don't consider the correct belief about these same things, which you find in animals and slaves, and which is not the result of education, to be inculcated by law, and that you don't call it courage but something else.

c That's absolutely true.

Then I accept your account of courage.

Accept it instead as my account of *civic* courage, and you will be right. We'll discuss courage more fully some other time, if you like. At present, our inquiry concerns not it but justice. And what we've said is sufficient for that purpose.

You're quite right.

There are now two things left for us to find in the city, namely, modera-
d tion[5] and—the goal of our entire inquiry—justice.

That's right.

Is there a way we could find justice so as not to have to bother with moderation any further?

I don't know any, and I wouldn't want justice to appear first if that means that we won't investigate moderation. So if you want to please me, look for the latter first.

e I'm certainly willing. It would be wrong not to be.

Look, then.

We will. Seen from here, it is more like a kind of consonance and harmony than the previous ones.

In what way?

Moderation is surely a kind of order, the mastery of certain kinds of pleasures and desires. People indicate as much when they use the phrase "self-control" and other similar phrases. I don't know just what they mean by them, but they are, so to speak, like tracks or clues that moderation has left behind in language. Isn't that so?

Absolutely.

Yet isn't the expression "self-control" ridiculous? The stronger self that
does the controlling is the same as the weaker self that gets controlled, so
431 that only one person is referred to in all such expressions.

Of course.

5. The Greek term is *sōphrosunē*. It has a very wide meaning: self-control, good sense, reasonableness, temperance, and (in some contexts) chastity. Someone who keeps his head under pressure or temptation possesses *sōphrosunē*.

Nonetheless, the expression is apparently trying to indicate that, in the soul of that very person, there is a better part and a worse one and that, whenever the naturally better part is in control of the worse, this is expressed by saying that the person is self-controlled or master of himself. At any rate, one praises someone by calling him self-controlled. But when, on the other hand, the smaller and better part is overpowered by the larger,
because of bad upbringing or bad company, this is called being self-
defeated or licentious and is a reproach. b

Appropriately so.

Take a look at our new city, and you'll find one of these in it. You'll say that it is rightly called self-controlled, if indeed something in which the better rules the worse is properly called moderate and self-controlled.

I am looking, and what you say is true.

Now, one finds all kinds of diverse desires, pleasures, and pains, mostly
in children, women, household slaves, and in those of the inferior majority c
who are called free.

That's right.

But you meet with the desires that are simple, measured, and directed by calculation in accordance with understanding and correct belief only in the few people who are born with the best natures and receive the best education.

That's true.

Then, don't you see that in your city, too, the desires of the inferior
many are controlled by the wisdom and desires of the superior few? d

I do.

Therefore, if any city is said to be in control of itself and of its pleasures and desires, it is this one.

Absolutely.

And isn't it, therefore, also moderate because of all this?

It is.

And, further, if indeed the ruler and the ruled in any city share the same e
belief about who should rule, it is in this one. Or don't you agree?

I agree entirely.

And when the citizens agree in this way, in which of them do you say moderation is located? In the ruler or the ruled?

I suppose in both.

Then, you see how right we were to divine that moderation resembles a kind of harmony?

How so?

Because, unlike courage and wisdom, each of which resides in one
part, making the city brave and wise respectively, moderation spreads
throughout the whole. It makes the weakest, the strongest, and those in 432
between—whether in regard to reason, physical strength, numbers, wealth,
or anything else—all sing the same song together. And this unanimity,
this agreement between the naturally worse and the naturally better as to

which of the two is to rule both in the city and in each one, is rightly called moderation.

b I agree completely.

All right. We've now found, at least from the point of view of our present beliefs, three out of the four virtues in our city. So what kind of virtue is left, then, that makes the city share even further in virtue? Surely, it's clear that it is justice.

That is clear.

Then, Glaucon, we must station ourselves like hunters surrounding a wood and focus our understanding, so that justice doesn't escape us and vanish into obscurity, for obviously it's around here somewhere. So look
c and try eagerly to catch sight of it, and if you happen to see it before I do, you can tell me about it.

I wish I could, but you'll make better use of me if you take me to be a follower who can see things when you point them out to him.

Follow, then, and join me in a prayer.

I'll do that, just so long as you lead.

I certainly will, though the place seems to be impenetrable and full of shadows. It is certainly dark and hard to search through. But all the same, we must go on.

d Indeed we must.

And then I caught sight of something. Ah ha! Glaucon, it looks as though there's a track here, so it seems that our quarry won't altogether escape us.

That's good news.

Either that, or we've just been stupid.

In what way?

Because what we are looking for seems to have been rolling around at our feet from the very beginning, and we didn't see it, which was ridiculous of us. Just as people sometimes search for the very thing they are holding
e in their hands, so we didn't look in the right direction but gazed off into the distance, and that's probably why we didn't notice it.

What do you mean?

I mean that, though we've been talking and hearing about it for a long time, I think we didn't understand what we were saying or that, in a way, we were talking about justice.

That's a long prelude for someone who wants to hear the answer.

433 Then listen and see whether there's anything in what I say. Justice, I think, is exactly what we said must be established throughout the city when we were founding it—either that or some form of it. We stated, and often repeated, if you remember, that everyone must practice one of the occupations in the city for which he is naturally best suited.

Yes, we did keep saying that.

Moreover, we've heard many people say and have often said ourselves that justice is doing one's own work and not meddling with what isn't
b one's own.

Yes, we have.

Then, it turns out that this doing one's own work—provided that it comes to be in a certain way—is justice. And do you know what I take as evidence of this?

No, tell me.

I think that this is what was left over in the city when moderation, courage, and wisdom have been found. It is the power that makes it possible for them to grow in the city and that preserves them when they've grown for as long as it remains there itself. And of course we said that c
justice would be what was left over when we had found the other three.

Yes, that must be so.

And surely, if we had to decide which of the four will make the city good by its presence, it would be a hard decision. Is it the agreement in belief between the rulers and the ruled? Or the preservation among the soldiers of the law-inspired belief about what is to be feared and what isn't? Or the wisdom and guardianship of the rulers? Or is it, above all, d
the fact that every child, woman, slave, freeman, craftsman, ruler, and ruled each does his own work and doesn't meddle with what is other people's?

How could this fail to be a hard decision?

It seems, then, that the power that consists in everyone's doing his own work rivals wisdom, moderation, and courage in its contribution to the virtue of the city. e

It certainly does.

And wouldn't you call this rival to the others in its contribution to the city's virtue justice?

Absolutely.

Look at it this way if you want to be convinced. Won't you order your rulers to act as judges in the city's courts?

Of course.

And won't their sole aim in delivering judgments be that no citizen should have what belongs to another or be deprived of what is his own?

They'll have no aim but that.

Because that is just?

Yes.

Therefore, from this point of view also, the having and doing of one's own would be accepted as justice. 434

That's right.

Consider, then, and see whether you agree with me about this. If a carpenter attempts to do the work of a cobbler, or a cobbler that of a carpenter, or they exchange their tools or honors with one another, or if the same person tries to do both jobs, and all other such exchanges are made, do you think that does any great harm to the city?

Not much.

But I suppose that when someone, who is by nature a craftsman or some other kind of money-maker, is puffed up by wealth, or by having a majority of votes, or by his own strength, or by some other such thing, and attempts b
to enter the class of soldiers, or one of the unworthy soldiers tries to enter

that of the judges and guardians, and these exchange their tools and honors, or when the same person tries to do all these things at once, then I think you'll agree that these exchanges and this sort of meddling bring the city to ruin.

Absolutely.

Meddling and exchange between these three classes, then, is the greatest harm that can happen to the city and would rightly be called the worst
c thing someone could do to it.

Exactly.

And wouldn't you say that the worst thing that someone could do to his city is injustice?

Of course.

Then, that exchange and meddling is injustice. Or to put it the other way around: For the money-making, auxiliary, and guardian classes each to do its own work in the city, is the opposite. That's justice, isn't it, and makes the city just?

d I agree. Justice is that and nothing else.

Let's not take that as secure just yet, but if we find that the same form, when it comes to be in each individual person, is accepted as justice there as well, we can assent to it. What else can we say? But if that isn't what we find, we must look for something else to be justice. For the moment, however, let's complete the present inquiry. We thought that, if we first tried to observe justice in some larger thing that possessed it, this would make it easier to observe in a single individual.[6] We agreed that this larger thing is a city, and so we established the best city we could, knowing well
e that justice would be in one that was good. So, let's apply what has come to light in the city to an individual, and if it is accepted there, all will be well. But if something different is found in the individual, then we must go back and test that on the city. And if we do this, and compare them
435 side by side, we might well make justice light up as if we were rubbing fire-sticks together. And, when it has come to light, we can get a secure grip on it for ourselves.

You're following the road we set, and we must do as you say.

Well, then, are things called by the same name, whether they are bigger or smaller than one another, like or unlike with respect to that to which that name applies?

Alike.

Then a just man won't differ at all from a just city in respect to the form
b of justice; rather he'll be like the city.

He will.

But a city was thought to be just when each of the three natural classes within it did its own work, and it was thought to be moderate, courageous, and wise because of certain other conditions and states of theirs.

6. See 368c ff.

That's true.

Then, if an individual has these same three parts in his soul, we will expect him to be correctly called by the same names as the city if he has
the same conditions in them. c

Necessarily so.

Then once again we've come upon an easy question, namely, does the soul have these three parts in it or not?

It doesn't look easy to me. Perhaps, Socrates, there's some truth in the old saying that everything fine is difficult.

Apparently so. But you should know, Glaucon, that, in my opinion, we will never get a precise answer using our present methods of argument—
although there is another longer and fuller road that does lead to such an d
answer. But perhaps we can get an answer that's up to the standard of our previous statements and inquiries.

Isn't that satisfactory? It would be enough for me at present.

In that case, it will be fully enough for me too.

Then don't weary, but go on with the inquiry.

Well, then, we are surely compelled to agree that each of us has within
himself the same parts and characteristics as the city? Where else would e
they come from? It would be ridiculous for anyone to think that spiritedness didn't come to be in cities from such individuals as the Thracians, Scythians, and others who live to the north of us who are held to possess spirit, or that the same isn't true of the love of learning, which is mostly associated
with our part of the world, or of the love of money, which one might say 436
is conspicuously displayed by the Phoenicians and Egyptians.

It would.

That's the way it is, anyway, and it isn't hard to understand.

Certainly not.

But this *is* hard. Do we do these things with the same part of ourselves, or do we do them with three different parts? Do we learn with one part, get angry with another, and with some third part desire the pleasures of food, drink, sex, and the others that are closely akin to them? Or, when we set out after something, do we act with the whole of our soul, in each
case? This is what's hard to determine in a way that's up to the standards b
of our argument.

I think so too.

Well, then, let's try to determine in that way whether these parts are the same or different.

How?

It is obvious that the same thing will not be willing to do or undergo opposites in the same part of itself, in relation to the same thing, at the same time. So, if we ever find this happening in the soul, we'll know that
we aren't dealing with one thing but many. c

All right.

Then consider what I'm about to say.

Say on.

Is it possible for the same thing to stand still and move at the same time in the same part of itself?

Not at all.

Let's make our agreement more precise in order to avoid disputes later on. If someone said that a person who is standing still but moving his hands and head is moving and standing still at the same time, we wouldn't consider, I think, that he ought to put it like that. What he ought to say is that one part of the person is standing still and another part is moving.
d Isn't that so?

It is.

And if our interlocutor became even more amusing and was sophisticated enough to say that whole spinning tops stand still and move at the same time when the peg is fixed in the same place and they revolve, and that the same is true of anything else moving in a circular motion on the same spot, we wouldn't agree, because it isn't with respect to the same parts of themselves that such things both stand still and move. We'd say
e that they have an axis and a circumference and that with respect to the axis they stand still, since they don't wobble to either side, while with respect to the circumference they move in a circle. But if they do wobble to the left or right, front or back, while they are spinning, we'd say that they aren't standing still in any way.

And we'd be right.

No such statement will disturb us, then, or make us believe that the same thing can be, do, or undergo opposites, at the same time, in the same
437 respect, and in relation to the same thing.

They won't make me believe it, at least.

Nevertheless, in order to avoid going through all these objections one by one and taking a long time to prove them all untrue, let's hypothesize that this is corrrect and carry on. But we agree that if it should ever be shown to be incorrect, all the consequences we've drawn from it will also be lost.

We should agree to that.

b Then wouldn't you consider all the following, whether they are doings or undergoings, as pairs of opposites: Assent and dissent, wanting to have something and rejecting it, taking something and pushing it away?

Yes, they are opposites.

What about these? Wouldn't you include thirst, hunger, the appetites
c as a whole, and wishing and willing somewhere in the class we mentioned? Wouldn't you say that the soul of someone who has an appetite for a thing wants what he has an appetite for and takes to himself what it is his will to have, and that insofar as he wishes something to be given to him, his soul, since it desires this to come about, nods assent to it as if in answer to a question?

I would.

What about not willing, not wishing, and not having an appetite? Aren't these among the very opposites—cases in which the soul pushes and drives things away?

Of course. d

Then won't we say that there is a class of things called appetites and that the clearest examples are hunger and thirst?

We will.

One of these is for food and the other for drink?

Yes.

Now, insofar as it is thirst, is it an appetite in the soul for more than that for which we say that it is the appetite? For example, is thirst thirst for hot drink or cold, or much drink or little, or, in a word, for drink of a certain sort? Or isn't it rather that, where heat is present as well as thirst,
it causes the appetite to be for something cold as well, and where cold for e
something hot, and where there is much thirst because of the presence of muchness, it will cause the desire to be for much, and where little for little? But thirst itself will never be for anything other than what it is in its nature to be for, namely, drink itself, and hunger for food.

That's the way it is, each appetite itself is only for its natural object, while the appetite for something of a certain sort depends on additions.

Therefore, let no one catch us unprepared or disturb us by claiming that 438
no one has an appetite for drink but rather good drink, nor food but good food, on the grounds that everyone after all has appetite for good things, so that if thirst is an appetite, it will be an appetite for good drink or whatever, and similarly with the others.

All the same, the person who says that has a point.

But it seems to me that, in the case of all things that are related to something, those that are of a particular sort are related to a particular
sort of thing, while those that are merely themselves are related to a thing b
that is merely itself.

I don't understand.

Don't you understand that the greater is such as to be greater than something?

Of course.

Than the less?

Yes.

And the much greater than the much less, isn't that so?

Yes.

And the once greater to the once less? And the going-to-be greater than the going-to-be less?

Certainly.

And isn't the same true of the more and the fewer, the double and the
half, heavier and lighter, faster and slower, the hot and the cold, and all c
other such things?

Of course.

And what about the various kinds of knowledge? Doesn't the same apply? Knowledge itself is knowledge of what can be learned itself (or whatever it is that knowledge is of), while a particular sort of knowledge is of a particular sort of thing. For example, when knowledge of building
d houses came to be, didn't it differ from the other kinds of knowledge, and so was called knowledge of building?

Of course.

And wasn't that because it was a different sort of knowledge from all the others?

Yes.

And wasn't it because it was of a particular sort of thing that it itself became a particular sort of knowledge? And isn't this true of all crafts and kinds of knowledge?

It is.

Well, then, this is what I was trying to say—if you understand it now—when I said that of all things that are related to something, those that are merely themselves are related to things that are merely themselves, while those that are of a particular sort are related to things of a particular sort.
e However, I don't mean that the sorts in question have to be the same for them both. For example, knowledge of health or disease isn't healthy or diseased, and knowledge of good and bad doesn't itself become good or bad. I mean that, when knowledge became, not knowledge of the thing itself that knowledge is of, but knowledge of something of a particular sort, the result was that it itself became a particular sort of knowledge, and this caused it to be no longer called knowledge without qualification, but—with the addition of the relevant sort—medical knowledge or whatever.

I understand, and I think that that's the way it is.

Then as for thirst, wouldn't you include it among things that are related
439 to something? Surely thirst is related to . . .

I know it's related to drink.

Therefore a particular sort of thirst is for a particular sort of drink. But thirst itself isn't for much or little, good or bad, or, in a word, for drink of a particular sort. Rather, thirst itself is in its nature only for drink itself.

Absolutely.

Hence the soul of the thirsty person, insofar as he's thirsty, doesn't wish
b anything else but to drink, and it wants this and is impelled towards it.

Clearly.

Therefore, if something draws it back when it is thirsting, wouldn't that be something different in it from whatever thirsts and drives it like a beast to drink? It can't be, we say, that the same thing, with the same part of itself, in relation to the same, at the same time, does opposite things.

No, it can't.

In the same way, I suppose, it's not well put to say of the archer that his hands at the same time push the bow away and draw it towards him.

We ought to say that one hand pushes it away and the other draws it towards him.

Absolutely. c

Now, would we assert that sometimes there are thirsty people who don't wish to drink?

Certainly, it happens often to many different people.

What, then, should one say about them? Isn't it that there is something in their soul, bidding them to drink, and something different, forbidding them to do so, that overrules the thing that bids?

I think so.

Doesn't that which forbids in such cases come into play—if it comes into play at all—as a result of rational calculation, while what drives and
drags them to drink is a result of feelings and diseases? d

Apparently.

Hence it isn't unreasonable for us to claim that they are two, and different from one another. We'll call the part of the soul with which it calculates the rational part and the part with which it lusts, hungers, thirsts, and gets excited by other appetites the irrational appetitive part, companion of certain indulgences and pleasures.

Yes. Indeed, that's a reasonable thing to think. e

Then, let these two parts be distinguished in the soul. Now, is the spirited part by which we get angry a third part or is it of the same nature as either of the other two?

Perhaps it's like the appetitive part.

But I've heard something relevant to this, and I believe it. Leontius, the son of Aglaion, was going up from the Piraeus along the outside of the North Wall when he saw some corpses lying at the executioner's feet. He had an appetite to look at them but at the same time he was disgusted and turned away. For a time he struggled with himself and covered his
face, but, finally, overpowered by the appetite, he pushed his eyes wide 440
open and rushed towards the corpses, saying, "Look for yourselves, you evil wretches, take your fill of the beautiful sight!"

I've heard that story myself.

It certainly proves that anger sometimes makes war against the appetites, as one thing against another.

Besides, don't we often notice in other cases that when appetite forces someone contrary to rational calculation, he reproaches himself and gets
angry with that in him that's doing the forcing, so that of the two factions b
that are fighting a civil war, so to speak, spirit allies itself with reason? But I don't think you can say that you've ever seen spirit, either in yourself or anyone else, ally itself with an appetite to do what reason has decided must not be done.

No, by god, I haven't.

What happens when a person thinks that he has done something unjust?
Isn't it true that the nobler he is, the less he resents it if he suffers hunger, c

cold, or the like at the hands of someone whom he believes to be inflicting this on him justly, and won't his spirit, as I say, refuse to be aroused?

That's true.

But what happens if, instead, he believes that someone has been unjust to him? Isn't the spirit within him boiling and angry, fighting for what he believes to be just? Won't it endure hunger, cold, and the like and keep
d on till it is victorious, not ceasing from noble actions until it either wins, dies, or calms down, called to heel by the reason within him, like a dog by a shepherd?

Spirit is certainly like that. And, of course, we made the auxiliaries in our city like dogs obedient to the rulers, who are themselves like shepherds of a city.

You well understand what I'm trying to say. But also reflect on this further point.

e What?

The position of the spirited part seems to be the opposite of what we thought before. Then we thought of it as something appetitive, but now we say that it is far from being that, for in the civil war in the soul it aligns itself far more with the rational part.

Absolutely.

Then is it also different from the rational part, or is it some form of it, so that there are two parts in the soul—the rational and the appetitive—instead of three? Or rather, just as there were three classes in the city that
441 held it together, the money-making, the auxiliary, and the deliberative, is the spirited part a third thing in the soul that is by nature the helper of the rational part, provided that it hasn't been corrupted by a bad upbringing?

It must be a third.

Yes, provided that we can show it is different from the rational part, as we saw earlier it was from the appetitive one.

It isn't difficult to show that it is different. Even in small children, one can see that they are full of spirit right from birth, while as far as rational calculation is concerned, some never seem to get a share of it, while the
b majority do so quite late.

That's really well put. And in animals too one can see that what you say is true. Besides, our earlier quotation from Homer bears it out, where he says,

*He struck his chest and spoke to his heart.*[7]

For here Homer clearly represents the part that has calculated about better
c and worse as different from the part that is angry without calculation.

That's exactly right.

7. See 390d, and note.

Well, then, we've now made our difficult way through a sea of argument. We are pretty much agreed that the same number and the same kinds of classes as are in the city are also in the soul of each individual.

That's true.

Therefore, it necessarily follows that the individual is wise in the same way and in the same part of himself as the city.

That's right.

And isn't the individual courageous in the same way and in the same part of himself as the city? And isn't everything else that has to do with d
virtue the same in both?

Necessarily.

Moreover, Glaucon, I suppose we'll say that a man is just in the same way as a city.

That too is entirely necessary.

And we surely haven't forgotten that the city was just because each of the three classes in it was doing its own work.

I don't think we could forget that.

Then we must also remember that each one of us in whom each part is doing its own work will himself be just and do his own. e

Of course, we must.

Therefore, isn't it appropriate for the rational part to rule, since it is really wise and exercises foresight on behalf of the whole soul, and for the spirited part to obey it and be its ally?

It certainly is.

And isn't it, as we were saying, a mixture of music and poetry, on the one hand, and physical training, on the other, that makes the two parts harmonious, stretching and nurturing the rational part with fine words and learning, relaxing the other part through soothing stories, and making it gentle by means of harmony and rhythm? 442

That's precisely it.

And these two, having been nurtured in this way, and having truly learned their own roles and been educated in them, will govern the appetitive part, which is the largest part in each person's soul and is by nature most insatiable for money. They'll watch over it to see that it isn't filled with the so-called pleasures of the body and that it doesn't become so big and strong that it no longer does its own work but attempts to enslave and rule over the classes it isn't fitted to rule, thereby overturning everyone's whole life. b

That's right.

Then, wouldn't these two parts also do the finest job of guarding the whole soul and body against external enemies—reason by planning, spirit by fighting, following its leader, and carrying out the leader's decisions through its courage?

Yes, that's true.

And it is because of the spirited part, I suppose, that we call a single individual courageous, namely, when it preserves through pains and plea- c
sures the declarations of reason about what is to be feared and what isn't.

That's right.

And we'll call him wise because of that small part of himself that rules in him and makes those declarations and has within it the knowledge of what is advantageous for each part and for the whole soul, which is the community of all three parts.

Absolutely.

And isn't he moderate because of the friendly and harmonious relations between these same parts, namely, when the ruler and the ruled believe in common that the rational part should rule and don't engage in civil
d war against it?

Moderation is surely nothing other than that, both in the city and in the individual.

And, of course, a person will be just because of what we've so often mentioned, and in that way.

Necessarily.

Well, then, is the justice in us at all indistinct? Does it seem to be something different from what we found in the city?

It doesn't seem so to me.

If there are still any doubts in our soul about this, we could dispel them
e altogether by appealing to ordinary cases.

Which ones?

For example, if we had to come to an agreement about whether someone similar in nature and training to our city had embezzled a deposit of gold or silver that he had accepted, who do you think would consider him to
443 have done it rather than someone who isn't like him?

No one.

And would he have anything to do with temple robberies, thefts, betrayals of friends in private life or of cities in public life?

No, nothing.

And he'd be in no way untrustworthy in keeping an oath or other agreement.

How could he be?

And adultery, disrespect for parents, and neglect of the gods would be more in keeping with every other kind of character than his.

With every one.

And isn't the cause of all this that every part within him does its own
b work, whether it's ruling or being ruled?

Yes, that and nothing else.

Then, are you still looking for justice to be something other than this power, the one that produces men and cities of the sort we've described?

No, I certainly am not.

Then the dream we had has been completely fulfillled—our suspicion that, with the help of some god, we had hit upon the origin and pattern
c of justice right at the beginning in founding our city.[8]

8. See 432c–433b.

Absolutely.

Indeed, Glaucon, the principle that it is right for someone who is by nature a cobbler to practice cobblery and nothing else, for the carpenter to practice carpentry, and the same for the others is a sort of image of justice—that's why it's beneficial.

Apparently.

And in truth justice is, it seems, something of this sort. However, it isn't concerned with someone's doing his own externally, but with what is inside him, with what is truly himself and his own. One who is just does d
not allow any part of himself to do the work of another part or allow the various classes within him to meddle with each other. He regulates well what is really his own and rules himself. He puts himself in order, is his own friend, and harmonizes the three parts of himself like three limiting notes in a musical scale—high, low, and middle. He binds together those parts and any others there may be in between, and from having been many things he becomes entirely one, moderate and harmonious. Only e
then does he act. And when he does anything, whether acquiring wealth, taking care of his body, engaging in politics, or in private contracts—in all of these, he believes that the action is just and fine that preserves this inner harmony and helps achieve it, and calls it so, and regards as wisdom the knowledge that oversees such actions. And he believes that the action that destroys this harmony is unjust, and calls it so, and regards the belief that oversees it as ignorance. 444

That's absolutely true, Socrates.

Well, then, if we claim to have found the just man, the just city, and what the justice is that is in them, I don't suppose that we'll seem to be telling a complete falsehood.

No, we certainly won't.

Shall we claim it, then?

We shall.

So be it. Now, I suppose we must look for injustice.

Clearly.

Surely, it must be a kind of civil war between the three parts, a meddling b
and doing of another's work, a rebellion by some part against the whole soul in order to rule it inappropriately. The rebellious part is by nature suited to be a slave, while the other part is not a slave but belongs to the ruling class. We'll say something like that, I suppose, and that the turmoil and straying of these parts are injustice, licentiousness, cowardice, ignorance, and, in a word, the whole of vice.

That's what they are.

So, if justice and injustice are really clear enough to us, then acting justly, acting unjustly, and doing injustice are also clear. c

How so?

Because just and unjust actions are no different for the soul than healthy and unhealthy things are for the body.

In what way?

Healthy things produce health, unhealthy ones disease.

Yes.

And don't just actions produce justice in the soul and unjust ones in-
d justice?

Necessarily.

To produce health is to establish the components of the body in a natural relation of control and being controlled, one by another, while to produce disease is to establish a relation of ruling and being ruled contrary to nature.

That's right.

Then, isn't to produce justice to establish the parts of the soul in a natural relation of control, one by another, while to produce injustice is to establish a relation of ruling and being ruled contrary to nature?

Precisely.

Virtue seems, then, to be a kind of health, fine condition, and well-being
e of the soul, while vice is disease, shameful condition, and weakness.

That's true.

And don't fine ways of living lead one to the possession of virtue, shameful ones to vice?

Necessarily.

So it now remains, it seems, to inquire whether it is more profitable to
445 act justly, live in a fine way, and be just, whether one is known to be so or not, or to act unjustly and be unjust, provided that one doesn't pay the penalty and become better as a result of punishment.

But, Socrates, this inquiry looks ridiculous to me now that justice and injustice have been shown to be as we have described. Even if one has every kind of food and drink, lots of money, and every sort of power to rule, life is thought to be not worth living when the body's nature is ruined.
b So even if someone can do whatever he wishes, except what will free him from vice and injustice and make him acquire justice and virtue, how can it be worth living when his soul—the very thing by which he lives—is ruined and in turmoil?

Yes, it is ridiculous. Nevertheless, now that we've come far enough to be able to see most clearly that this is so, we mustn't give up.

That's absolutely the last thing we must do.

c Then come here, so that you can see how many forms of vice there are, anyhow that I consider worthy of examination.

I'm following you, just tell me.

Well, from the vantage point we've reached in our argument, it seems to me that there is one form of virtue and an unlimited number of forms of vice, four of which are worth mentioning.

How do you mean?

It seems likely that there are as many types of soul as there are specific types of political constitution.

How many is that?

d Five forms of constitution and five of souls.

What are they?

One is the constitution we've been describing. And it has two names. If one outstanding man emerges among the rulers, it's called a kingship; if more than one, it's called an aristocracy.

That's true.

Therefore, I say that this is one form of constitution. Whether one man emerges or many, none of the significant laws of the city would be changed, if they followed the upbringing and education we described. e

Probably not.

## Book V

This is the kind of city and constitution, then, that I call good and correct, 449
and so too is this kind of man. And if indeed this is the correct kind, all the others—whether as city governments or as organizations of the individual soul—are bad and mistaken. Their badness is of four kinds.

What are they? he said.

I was going to enumerate them and explain how I thought they developed out of one another,[1] but Polemarchus, who was sitting a little further away than Adeimantus, extended his hand and took hold of the latter's b
cloak by the shoulder from above. He drew Adeimantus towards him, while he himself leaned forward and said something to him. We overheard nothing of what he said except the words "Shall we let it go, or what?"

We certainly won't let it go, Adeimantus said, now speaking aloud.

And I asked: What is it that you won't let go?

You, he said.

For what reason in particular? c

We think that you're slacking off and that you've cheated us out of a whole important section of the discussion in order to avoid having to deal with it. You thought we wouldn't notice when you said—as though it were something trivial—that, as regards wives and children, anyone could see that the possessions of friends should be held in common.[2]

But isn't that right, Adeimantus?

Yes it is. But this "right," like the other things we've discussed, requires an explanation—in this case, an explanation of the manner in which they are to be held in common, for there may be many ways of doing this. So don't omit telling us about the particular one you mean. We've been d
waiting for some time, indeed, for you to tell us about the production of children—how they'll be produced and, once born, how they'll be brought up—and about the whole subject of having wives and children in common. We think that this makes a considerable difference—indeed all the difference—to whether a constitution is correct or not. So now, since you are beginning to describe another constitution before having adequately

1. This task is taken up in Book VIII.

2. See 423e–424a.

discussed these things, we are resolved, as you overheard, not to let you
450 off until you explain all this as fully as the rest.

Include me, Glaucon said, as a partner in this resolution.

In fact, Socrates, Thrasymachus added, you can take this as the resolution of all of us.

What a thing you've done, I said, in stopping me! What an argument
you've started up again from the very beginning, as it were, about the
constitution! I was delighted to think that it had already been described
and was content to have these things accepted as they were stated before.
You don't realize what a swarm of arguments you've stirred up by calling
b me to account now. I saw the swarm and passed the topic by in order to
save us a lot of trouble.

Well, said Thrasymachus, are we here to search for gold[3] or to listen to an argument?

The latter, I said, but within reason.

It's within reason, Socrates, Glaucon said, for people with any under-
standing to listen to an argument of this kind their whole life long. So
don't mind about us, and don't get tired yourself. Rather, tell us at length
what your thoughts are on the topic we inquired about, namely, what the
c common possession of wives and children will amount to for the guardians
and how the children will be brought up while they're still small, for the
time between birth and the beginning of education seems to be the most
difficult period of all. So try to tell us what the manner of this upbringing
must be.

It isn't an easy subject to explain, for it raises even more incredulity
than the topics we've discussed so far. People may not believe that what
we say is possible or that, even if it could be brought about, it would be
for the best. It's for this reason that I hesitated to bring it up, namely, that
d our argument might seem to be no more than wishful thinking.

Then don't hesitate, for your audience isn't inconsiderate, incredulous, or hostile.

Are you trying to encourage me by saying that?

I am.

Well, you're doing the opposite. Your encouragement would be fine, if
I could be sure I was speaking with knowledge, for one can feel both
secure and confident when one knows the truth about the dearest and
most important things and speaks about them among those who are them-
e selves wise and dear friends. But to speak, as I'm doing, at a time when
one is unsure of oneself and searching for the truth, is a frightening and
451 insecure thing to do. I'm not afraid of being laughed at—that would be
childish indeed. But I am afraid that, if I slip from the truth, just where
it's most important not to, I'll not only fall myself but drag my friends

3. A proverbial expression applied to those who neglect the task at hand for some more fascinating but less profitable pursuit.

down as well. So I bow to Adrastea[4] for what I'm going to say, for I suspect that it's a lesser crime to kill someone involuntarily than to mislead people about fine, good, and just institutions. Since it's better to run this risk among enemies than among friends, you've well and truly encouraged me! b

Glaucon laughed and said: Well, Socrates, if we suffer from any false note you strike in the argument, we'll release you and absolve you of any guilt as in a homicide case: your hands are clean, and you have not deceived us. So take courage and speak.

I will, for the law says that someone who kills involuntarily is free of guilt when he's absolved by the injured party. So it's surely reasonable to think the same is true in my case as well.

With that as your defense, speak.

Then I'll have to go back to what should perhaps have been said in c sequence, although it may be that this way of doing things is in fact right and that after the completion of the male drama, so to speak, we should then go through the female one—especially as you insist on it so urgently.

For men born and educated as we've described there is, in my opinion, no right way to acquire and use women and children other than by following the road on which we started them. We attempted, in the argument, to set up the men as guardians of the herd.

Yes.

Then let's give them a birth and rearing consistent with that and see d whether it suits us or not.

How?

As follows: Do we think that the wives of our guardian watchdogs should guard what the males guard, hunt with them, and do everything else in common with them? Or should we keep the women at home, as incapable of doing this, since they must bear and rear the puppies, while the males work and have the entire care of the flock?

Everything should be in common, except that the females are weaker e and the males stronger.

And is it possible to use any animals for the same things if you don't give them the same upbringing and education?

No, it isn't.

Therefore, if we use the women for the same things as the men, they must also be taught the same things.

Yes. 452

Now, we gave the men music and poetry and physical training.

Yes.

Then we must give these two crafts, as well as those having to do with warfare, to the women also to use in the same way as the men use them.

That seems to follow from what you say.

4. Adrastea was a kind of Nemesis, a punisher of pride. The "bow to Adrastea" is a kind of apology for the sort of behavior that might otherwise spur her to take action.

But perhaps much of what we are saying, since it is contrary to custom,
would incite ridicule if it were carried out in practice as we've described.

It certainly would.

What is the most ridiculous thing that you see in it? Isn't it obviously
the women exercising naked in the palestras with the men? And not just
the young women, but the older ones too—like old men in gymnasiums
b who, even though their bodies are wrinkled and not pleasant to look at,
still love to do physical training.

Yes, that would look really ridiculous as things stand at present.

But surely, now that we've started to speak about this, we mustn't fear
the various jokes that wits will make about this kind of change in music
and poetry, physical training, and—last but not least—in bearing arms
c and riding horses.

You're right.

And now that we've begun to speak about this, we must move on to
the tougher part of the law, begging these people not to be silly (though
that is their own work!) but to take the matter seriously. They should
remember that it wasn't very long ago that the Greeks themselves thought
it shameful and ridiculous (as the majority of the barbarians still do) for
even men to be seen naked and that when the Cretans and then the
Lacedaemonians began the gymnasiums, the wits of those times could
d also have ridiculed it all. Or don't you think so?

I do.

But I think that, after it was found in practice to be better to strip than
to cover up all those parts, then what was ridiculous to the eyes faded
away in the face of what argument showed to be the best. This makes it
clear that it's foolish to think that anything besides the bad is ridiculous
or to try to raise a laugh at the sight of anything besides what's stupid or
e bad or (putting it the other way around) it's foolish to take seriously any
standard of what is fine and beautiful other than the good.

That's absolutely certain.

However, mustn't we first agree about whether our proposals are possi-
ble or not? And mustn't we give to anyone who wishes the opportunity
to question us—whether in jest or in earnest—about whether female human
453 nature *can* share all the tasks of that of the male, or none of them, or some
but not others, and to ask in which class the waging of war belongs?
Wouldn't this, as the best beginning, also be likely to result in the best con-
clusion?

Of course.

Shall we give the argument against ourselves, then, on behalf of those
who share these reservations, so that their side of the question doesn't fall
by default?

b There's no reason not to.

Then let's say this on their behalf: "Socrates and Glaucon, there's no
need for others to argue with you, for you yourselves, when you began

to found your city, agreed that each must do his own work in accordance with his nature."

And I think we certainly did agree to that.

"Can you deny that a woman is by nature very different from a man?"

Of course not.

"And isn't it appropriate to assign different work to each in accordance with its nature?"

Certainly. c

"How is it, then, that you aren't mistaken and contradicting yourselves when you say that men and women must do the same things, when their natures are so completely separate and distinct?"

Do you have any defense against that attack?

It isn't easy to think of one on the spur of the moment, so I'll ask you to explain the argument on our side as well, whatever it is.

This and many other such things, Glaucon, which I foresaw earlier, were what I was afraid of, so that I hesitated to tackle the law concerning the possession and upbringing of women and children. d

By god, it doesn't seem to be an easy topic.

It isn't. But the fact is that whether someone falls into a small diving pool or into the middle of the biggest ocean, he must swim all the same.

He certainly must.

Then we must swim too, and try to save ourselves from the sea of argument, hoping that a dolphin will pick us up or that we'll be rescued by some other desperate means.[5]

It seems so. e

Come, then. Let's see if we can find a way out. We've agreed that different natures must follow different ways of life and that the natures of men and women are different. But now we say that those different natures must follow the same way of life. Isn't that the accusation brought against us?

That's it exactly.

Ah! Glaucon, great is the power of the craft of disputation. 454

Why is that?

Because many fall into it against their wills. They think they are having not a quarrel but a conversation, because they are unable to examine what has been said by dividing it up according to forms. Hence, they pursue mere verbal contradictions of what has been said and have a quarrel rather than a conversation.

That does happen to lots of people, but it isn't happening to us at the moment, is it?

It most certainly is, for it looks to me, at any rate, as though we are falling into disputation against our will. b

How?

5. See Herodotus, *Histories* 1.23–24 for the story of Arion's rescue by the dolphin.

We're bravely, but in a quarrelsome and merely verbal fashion, pursuing the principle that natures that aren't the same must follow different ways of life. But when we assigned different ways of life to different natures and the same ones to the same, we didn't at all examine the form of natural difference and sameness we had in mind or in what regard we were distinguishing them.

No, we didn't look into that.

c Therefore, we might just as well, it seems, ask ourselves whether the natures of bald and long-haired men are the same or opposite. And, when we agree that they are opposite, then, if the bald ones are cobblers, we ought to forbid the long-haired ones to be cobblers, and if the long-haired ones are cobblers, we ought to forbid this to the bald ones.

That would indeed be ridiculous.

And aren't we in this ridiculous position because at that time we did not introduce every form of difference and sameness in nature, but focused on the one form of sameness and difference that was relevant to the particular ways of life themselves? We meant, for example, that a male
d and female doctor have souls of the same nature. Or don't you think so?

I do.

But a doctor and a carpenter have different ones?

Completely different, surely.

Therefore, if the male sex is seen to be different from the female with regard to a particular craft or way of life, we'll say that the relevant one must be assigned to it. But if it's apparent that they differ only in this respect, that the females bear children while the males beget them, we'll say that there has been no kind of proof that women are different from
e men with respect to what we're talking about, and we'll continue to believe that our guardians and their wives must have the same way of life.

And rightly so.

Next, we'll tell anyone who holds the opposite view to instruct us in this: With regard to what craft or way of life involved in the constitution
455 of the city are the natures of men and women not the same but different?

That's a fair question, at any rate.

And perhaps he'd say, just as you did a moment ago, that it isn't easy to give an immediate answer, but with enough consideration it should not be difficult.

Yes, he might say that.

Shall we ask the one who raises this objection to follow us and see whether we can show him that no way of life concerned with the manage-
b ment of the city is peculiar to women?

Of course.

"Come, now," we'll say to him, "give us an answer: Is this what you meant by one person being naturally well suited for something and another being naturally unsuited? That the one learned it easily, the other with difficulty; that the one, after only a brief period of instruction, was able

to find out things for himself, while the other, after much instruction,
couldn't even remember what he'd learned; that the body of the one
adequately served his thought, while the body of the other opposed his.
Are there any other things besides these by which you distinguished those c
who are naturally well suited for anything from those who are not?"

No one will claim that there are any others.

Do you know of anything practiced by human beings in which the male
sex isn't superior to the female in all these ways? Or must we make a long
story of it by mentioning weaving, baking cakes, and cooking vegetables,
in which the female sex is believed to excel and in which it is most ridiculous
of all for it to be inferior? d

It's true that one sex is much superior to the other in pretty well everything, although many women are better than many men in many things. But on the whole it is as you say.

Then there is no way of life concerned with the management of the city
that belongs to a woman because she's a woman or to a man because he's
a man, but the various natures are distributed in the same way in both
creatures. Women share by nature in every way of life just as men do, but
in all of them women are weaker than men. e

Certainly.

Then shall we assign all of them to men and none to women?

How can we?

We'll say, I suppose, that one woman is a doctor, another not, and that one is musical by nature, another not.

Of course.

And, therefore, won't one be athletic or warlike, while another is unwar-
like and no lover of physical training? 456

I suppose so.

Further, isn't one woman philosophical or a lover of wisdom, while another hates wisdom? And isn't one spirited and another spiritless?

That too.

So one woman may have a guardian nature and another not, for wasn't it qualities of this sort that we looked for in the natures of the men we selected as guardians?

Certainly.

Therefore, men and women are by nature the same with respect to guarding the city, except to the extent that one is weaker and the other stronger.

Apparently.

Then women of this sort must be chosen along with men of the same
sort to live with them and share their guardianship, seeing that they are b
adequate for the task and akin to the men in nature.

Certainly.

And mustn't we assign the same way of life to the same natures?

We must.

We've come round, then, to what we said before and have agreed that it isn't against nature to assign an education in music, poetry, and physical training to the wives of the guardians.

Absolutely.

c Then we're not legislating impossibilities or indulging in mere wishful thinking, since the law we established is in accord with nature. It's rather the way things are at present that seems to be against nature.

So it seems.

Now, weren't we trying to determine whether our proposals were both possible and optimal?

Yes, we were.

And haven't we now agreed that they're possible?

Yes.

Then mustn't we next reach agreement about whether or not they're optimal?

Clearly.

Should we have one kind of education to produce women guardians, then, and another to produce men, especially as they have the same natures
d to begin with?

No.

Then, what do you think about this?

What?

About one man being better and another worse. Or do you think they're all alike?

Certainly not.

In the city we're establishing, who do you think will prove to be better men, the guardians, who receive the education we've described, or the cobblers, who are educated in cobblery?

Your question is ridiculous.

e I understand. Indeed, aren't the guardians the best of the citizens?

By far.

And what about the female guardians? Aren't they the best of the women?

They're by far the best.

Is there anything better for a city than having the best possible men and women as its citizens?

There isn't.

And isn't it music and poetry and physical training, lending their support
457 in the way we described, that bring this about?

Of course.

Then the law we've established isn't only possible; it is also optimal for a city?

Yes.

Then the guardian women must strip for physical training, since they'll wear virtue or excellence instead of clothes. They must share in war and the other guardians' duties in the city and do nothing else. But the lighter

parts must be assigned to them because of the weakness of their sex. And
the man who laughs at naked women doing physical training for the sake
of what is best is "plucking the unripe fruit"[6] of laughter and doesn't b
know, it seems, what he's laughing at or what he's doing, for it is and
always will be the finest saying that the beneficial is beautiful, while the
harmful is ugly.

Absolutely.

Can we say, then, that we've escaped one wave of criticism in our
discussion of the law about women, that we haven't been altogether swept
away by laying it down that male and female guardians must share their
entire way of life, and that our argument is consistent when it states that c
this is both possible and beneficial?

And it's certainly no small wave that you've escaped.

You won't think that it's so big when you get a look at the next one.

Tell me about it, and I'll decide.

I suppose that the following law goes along with the last one and the
others that preceded it.

Which one?

That all these women are to belong in common to all the men, that none
are to live privately with any man, and that the children, too, are to be
possessed in common, so that no parent will know his own offspring or d
any child his parent.

This wave is far bigger than the other, for there's doubt both about its
possibility and about whether or not it's beneficial.

I don't think that its being beneficial would be disputed or that it would
be denied that the common possession of women and children would be
the greatest good, if indeed it is possible. But I think that there would be
a lot of disagreement about whether or not it is possible.

There could very well be dispute about both. e

You mean that I'll have to face a coalition of arguments. I thought I'd
escape one of them, if you believed that the proposal was beneficial, and
that I'd have only the one about whether or not it's possible left to deal with.

But you didn't escape unobserved, so you have to give an argument
for both.

Well, then, I'll have to accept my punishment. But do me this favor. Let
me, as if on a holiday, do what lazy people do who feast on their own
thoughts when out for a solitary walk. Instead of finding out how some- 458
thing they desire might actually come about, these people pass that over,
so as to avoid tiring deliberations about what's possible and what isn't.
They assume that what they desire is available and proceed to arrange
the rest, taking pleasure in thinking through everything they'll do when
they have what they want, thereby making their lazy souls even lazier.
I'm getting soft myself at the moment, so I want to delay consideration b

6. Plato is here adapting a phrase of Pindar, "plucking the unripe fruit of wisdom," frg. 209 (Snell).

of the feasibility of our proposal until later. With your permission, I'll assume that it's feasible and examine how the rulers will arrange these matters when they come to pass. And I'll try to show that nothing could be more beneficial to the city and its guardians than those arrangements. These are the things I'll examine with you first, and I'll deal with the other question later, but only if you'll permit me to do it this way.

You have my permission, so carry on with your examination.

I suppose that our rulers and auxiliaries—if indeed they're worthy of
c the names—will be willing to command and to obey respectively. In some
cases, the rulers will themselves be obeying our laws, and in others, namely,
the ones we leave to their discretion, they'll give directions that are in the
spirit of our laws.

Probably so.

Then you, as their lawgiver, will select women just as you did men,
with natures as similar to theirs as possible, and hand them over to the
men. And since they have common dwellings and meals, rather than
d private ones, and live together and mix together both in physical training
and in the rest of their upbringing, they will, I suppose, be driven by
innate necessity to have sex with one another. Or don't you think we're
talking about necessities here?

The necessities aren't geometrical but erotic, and they're probably better than the others at persuading and compelling the majority of people.

That's right. But the next point, Glaucon, is that promiscuity is impious
e in a city of happy people, and the rulers won't allow it.

No, for it isn't right.

Then it's clear that our next task must be to make marriage as sacred as possible. And the sacred marriages will be those that are most beneficial.

Absolutely.

How, then, will they be most beneficial? Tell me this, Glaucon: I see
459 that you have hunting dogs and quite a flock of noble fighting birds at
home. Have you noticed anything about their mating and breeding?

Like what?

In the first place, although they're all noble, aren't there some that are the best and prove themselves to be so?

There are.

Do you breed them all alike, or do you try to breed from the best as much as possible?

I try to breed from the best.

And do you breed from the youngest or the oldest or from those in
b their prime?

From those in their prime.

And do you think that if they weren't bred in this way, your stock of birds and dogs would get much worse?

I do.

What about horses and other animals? Are things any different with them?

It would be strange if they were.

Dear me! If this also holds true of human beings, our need for excellent rulers is indeed extreme.

It does hold of them. But what of it? c

Because our rulers will then have to use a lot of drugs. And while an inferior doctor is adequate for people who are willing to follow a regimen and don't need drugs, when drugs are needed, we know that a bolder doctor is required.

That's true. But what exactly do you have in mind?

I mean that it looks as though our rulers will have to make considerable use of falsehood and deception for the benefit of those they rule. And we said that all such falsehoods are useful as a form of drug.[7] d

And we were right.

Well, it seems we were right, especially where marriages and the producing of children are concerned.

How so?

It follows from our previous agreements, first, that the best men must have sex with the best women as frequently as possible, while the opposite is true of the most inferior men and women, and, second, that if our herd is to be of the highest possible quality, the former's offspring must be reared but not the latter's. And this must all be brought about without e being noticed by anyone except the rulers, so that our herd of guardians remains as free from dissension as possible.

That's absolutely right.

Therefore certain festivals and sacrifices will be established by law at which we'll bring the brides and grooms together, and we'll direct our poets to compose appropriate hymns for the marriages that take place. We'll leave the number of marriages for the rulers to decide, but their aim 460 will be to keep the number of males as stable as they can, taking into account war, disease, and similar factors, so that the city will, as far as possible, become neither too big nor too small.

That's right.

Then there'll have to be some sophisticated lotteries introduced, so that at each marriage the inferior people we mentioned will blame luck rather than the rulers when they aren't chosen.

There will.

And among other prizes and rewards the young men who are good in war or other things must be given permission to have sex with the women b more often, since this will also be a good pretext for having them father as many of the children as possible.

That's right.

And then, as the children are born, they'll be taken over by the officials appointed for the purpose, who may be either men or women or both, since our offices are open to both sexes.

7. See 382c ff. and 414b ff.

Yes.

I think they'll take the children of good parents to the nurses in charge
c of the rearing pen situated in a separate part of the city, but the children of inferior parents, or any child of the others that is born defective, they'll hide in a secret and unknown place, as is appropriate.

It is, if indeed the guardian breed is to remain pure.

And won't the nurses also see to it that the mothers are brought to the rearing pen when their breasts have milk, taking every precaution to insure that no mother knows her own child and providing wet nurses if the
d mother's milk is insufficient? And won't they take care that the mothers suckle the children for only a reasonable amount of time and that the care of sleepless children and all other such troublesome duties are taken over by the wet nurses and other attendants?

You're making it very easy for the wives of the guardians to have children.

And that's only proper. So let's take up the next thing we proposed. We said that the children's parents should be in their prime.

True.

Do you share the view that a woman's prime lasts about twenty years
e and a man's about thirty?

Which years are those?

A woman is to bear children for the city from the age of twenty to the age of forty, a man from the time that he passes his peak as a runner until he reaches fifty-five.

461 At any rate, that's the physical and mental prime for both.

Then, if a man who is younger or older than that engages in reproduction for the community, we'll say that his offense is neither pious nor just, for the child he begets for the city, if it remains hidden, will be born in darkness, through a dangerous weakness of will, and without the benefit of the sacrifices and prayers offered at every marriage festival, in which the priests and priestesses, together with the entire city, ask that the children of good and beneficial parents may always prove themselves still better
b and more beneficial.

That's right.

The same law will apply if a man still of begetting years has a child with a woman of child-bearing age without the sanction of the rulers. We'll say that he brings to the city an illegitimate, unauthorized, and unhallowed child.

That's absolutely right.

However, I think that when women and men have passed the age of having children, we'll leave them free to have sex with whomever they wish, with these exceptions: For a man—his daughter, his mother, his
c daughter's children, and his mother's ancestors; for a woman—her son and his descendants, her father and his ancestors. Having received these instructions, they should be very careful not to let a single fetus see the light of day, but if one is conceived and forces its way to the light, they must deal with it in the knowledge that no nurture is available for it.

That's certainly sensible. But how will they recognize their fathers and daughters and the others you mentioned? d

They have no way of knowing. But a man will call all the children born in the tenth or seventh month after he became a bridegroom his sons, if they're male, and his daughters, if they're female, and they'll call him father. He'll call their children his grandchildren, and they'll call the group to which he belongs grandfathers and grandmothers. And those who were born at the same time as their mothers and fathers were having children they'll call their brothers and sisters. Thus, as we were saying, the relevant e groups will avoid sexual relations with each other. But the law will allow brothers and sisters to have sex with one another if the lottery works out that way and the Pythia[8] approves.

That's absolutely right.

This, then, Glaucon, is how the guardians of your city have their wives and children in common. We must now confirm that this arrangement is both consistent with the rest of the constitution and by far the best. Or how else are we to proceed?

In just that way. 462

Then isn't the first step towards agreement to ask ourselves what we say is the greatest good in designing the city—the good at which the legislator aims in making the laws—and what is the greatest evil? And isn't the next step to examine whether the system we've just described fits into the tracks of the good and not into those of the bad?

Absolutely.

Is there any greater evil we can mention for a city than that which tears it apart and makes it many instead of one? Or any greater good than that which binds it together and makes it one? b

There isn't.

And when, as far as possible, all the citizens rejoice and are pained by the same successes and failures, doesn't this sharing of pleasures and pains bind the city together?

It most certainly does.

But when some suffer greatly, while others rejoice greatly, at the same things happening to the city or its people, doesn't this privatization of pleasures and pains dissolve the city? c

Of course.

And isn't that what happens whenever such words as "mine" and "not mine" aren't used in unison? And similarly with "someone else's"?

Precisely.

Then, is the best-governed city the one in which most people say "mine" and "not mine" about the same things in the same way?

It is indeed.

What about the city that is most like a single person? For example, when one of us hurts his finger, the entire organism that binds body and soul together into a single system under the ruling part within it is aware of

8. The priestess of Apollo at Delphi.

this, and the whole feels the pain together with the part that suffers. That's
d why we say that the man has a pain in his finger. And the same can be
said about any part of a man, with regard either to the pain it suffers or
to the pleasure it experiences when it finds relief.

Certainly. And, as for your question, the city with the best government
*is* most like such a person.

Then, whenever anything good or bad happens to a single one of its
citizens, such a city above all others will say that the affected part is its
e own and will share in the pleasure or pain as a whole.

If it has good laws, that must be so.

It's time now to return to our own city, to look there for the features
we've agreed on, and to determine whether it or some other city possesses
them to the greatest degree.

Then that's what we must do.

What about those other cities? Aren't there rulers and people in them,
463 as well as in ours?

There are.

Besides fellow citizens, what do the people call the rulers in those other cities?

In many they call them despots, but in democracies they are called just this—rulers.

What about the people in our city? Besides fellow citizens, what do they call their rulers?

b Preservers and auxiliaries.

And what do they in turn call the people?

Providers of upkeep and wages.

What do the rulers call the people in other cities?

Slaves.

And what do the rulers call each other?

Co-rulers.

And ours?

Co-guardians.

Can you tell me whether a ruler in those other cities could address some of his co-rulers as his kinsmen and others as outsiders?

Yes, many could.

And doesn't he consider his kinsman to be his own, and doesn't he
c address him as such, while he considers the outsider not to be his own?

He does.

What about your guardians? Could any of them consider a co-guardian as an outsider or address him as such?

There's no way he could, for when he meets any one of them, he'll hold that he's meeting a brother or sister, a father or mother, a son or daughter, or some ancestor or descendant of theirs.

You put that very well. But tell me this: Will your laws require them
simply to use these kinship names or also to do all the things that go along
d with the names? Must they show to their "fathers" the respect, solicitude,

and obedience we show to our parents by law? Won't they fare worse at the hands of gods and humans, as people whose actions are neither pious nor just, if they do otherwise? Will these be the oracular sayings they hear from all the citizens from their childhood on, or will they hear something else about their fathers—or the ones they're told are their fathers—and other relatives?

The former. It would be absurd if they only mouthed kinship names without doing the things that go along with them. e

Therefore, in our city more than in any other, they'll speak in unison the words we mentioned a moment ago. When any one of them is doing well or badly, they'll say that "mine" is doing well or that "mine" is doing badly.

That's absolutely true.

Now, didn't we say that the having and expressing of this conviction is closely followed by the having of pleasures and pains in common? 464

Yes, and we were right.

Then won't our citizens, more than any others, have the same thing in common, the one they call "mine"? And, having that in common, won't they, more than any others, have common pleasures and pains?

Of course.

And, in addition to the other institutions, the cause of this is the having of wives and children in common by the guardians?

That more than anything else is the cause.

But we agreed that the having of pains and pleasures in common is the greatest good for a city, and we characterized a well-governed city in terms of the body's reaction to pain or pleasure in any one of its parts. b

And we were right to agree.

Then, the cause of the greatest good for our city has been shown to be the having of wives and children in common by the auxiliaries.

It has.

And, of course, this is consistent with what we said before, for we said somewhere that, if they're going to be guardians, they mustn't have private houses, property, or possessions, but must receive their upkeep from the other citizens as a wage for their guardianship and enjoy it in common.[9] c

That's right.

Then isn't it true, just as I claimed, that what we are saying now, taken together with what we said before, makes even better guardians out of them and prevents them from tearing the city apart by not calling the same thing "mine"? If different people apply the term to different things, one would drag into his own house whatever he could separate from the others, and another would drag things into a different house to a different wife and children, and this would make for private pleasures and pains d
at private things. But our people, on the other hand, will think of the same

9. See 416d ff.

things as their own, aim at the same goal, and, as far as possible, feel pleasure and pain in unison.

Precisely.

And what about lawsuits and mutual accusations? Won't they pretty well disappear from among them, because they have everything in common except their own bodies? Hence they'll be spared all the dissension that arises between people because of the possession of money, children,
e and families.

They'll necessarily be spared it.

Nor could any lawsuits for insult or injury justly occur among them, for we'll declare that it's a fine and just thing for people to defend themselves against others of the same age, since this will compel them to stay in good physical shape.

That's right.

465 This law is also correct for another reason: If a spirited person vents his anger in this way, it will be less likely to lead him into more serious disputes.

Certainly.

But an older person will be authorized to rule and punish all the younger ones.

Clearly.

And surely it's also obvious that a younger person won't strike or do any sort of violence to an older one or fail to show him respect in other ways, unless the rulers command it, for there are two guardians sufficient to prevent him from doing such things—shame and fear. Shame will prevent him from laying a hand on his parents, and so will the fear that
b the others would come to the aid of the victim, some as his sons, some as his brothers, and some as his fathers.

That's the effect they'll have.

Then, in all cases, won't the laws induce men to live at peace with one another?

Very much so.

And if there's no discord among the guardians, there's no danger that the rest of the city will break into civil war, either with them or among themselves.

Certainly not.

I hesitate to mention, since they're so unseemly, the pettiest of the evils the guardians would therefore escape: The poor man's flattery of the rich,
c the perplexities and sufferings involved in bringing up children and in making the money necessary to feed the household, getting into debt, paying it off, and in some way or other providing enough money to hand over to their wives and household slaves to manage. All of the various troubles men endure in these matters are obvious, ignoble, and not worth discussing.

d They're obvious even to the blind.

They'll be free of all these, and they'll live a life more blessedly happy than that of the victors in the Olympian games.

How?

The Olympian victors are considered happy on account of only a small part of what is available to our guardians, for the guardians' victory is even greater, and their upkeep from public funds more complete. The victory they gain is the preservation of the whole city, and the crown of victory that they and their children receive is their upkeep and all the necessities of life. They receive rewards from their own city while they live, and at their death they're given a worthy burial. e

Those are very good things.

Do you remember that, earlier in our discussion, someone—I forget who—shocked us by saying that we hadn't made our guardians happy, that it was possible for them to have everything that belongs to the citizens, yet they had nothing? We said, I think, that if this happened to come up 466
at some point, we'd look into it then, but that our concern at the time was to make our guardians true guardians and the city the happiest we could, rather than looking to any one group within it and molding it for happiness.[10]

I remember.

Well, then, if the life of our auxiliaries is apparently much finer and better than that of Olympian victors, is there any need to compare it to the lives of cobblers, farmers, or other craftsmen? b

Not in my opinion.

Then it's surely right to repeat here what I said then: If a guardian seeks happiness in such a way that he's no longer a guardian and isn't satisfied with a life that's moderate, stable, and—as we say—best, but a silly, adolescent idea of happiness seizes him and incites him to use his power to take everything in the city for himself, he'll come to know the true wisdom of c
Hesiod's saying that somehow "the half is worth more than the whole."[11]

If he takes my advice, he'll keep to his own life-style.

You agree, then, that the women and men should associate with one another in education, in things having to do with children, and in guarding the other citizens in the way we've described; that both when they remain in the city and when they go to war, they must guard together and hunt together like dogs and share in everything as far as possible; and that by d
doing so they'll be doing what's best and not something contrary either to woman's nature as compared with man's or to the natural association of men and women with one another.

I agree.

Then doesn't it remain for us to determine whether it's possible to bring about this association among human beings, as it is among animals, and to say just how it might be done?

You took the words right out of my mouth.

10. See 419a ff.

11. *Works and Days* 40.

e As far as war is concerned, I think it's clear how they will wage it.

How so?

Men and women will campaign together. They'll take the sturdy children
with them, so that, like the children of other craftsmen, they can see what
they'll have to do when they grow up. But in addition to observing, they
can serve and assist in everything to do with the war and help their mothers
467 and fathers. Haven't you noticed in the other crafts how the children of
potters, for example, assist and observe for a long time before actually
making any pots?

I have indeed.

And should these craftsmen take more care in training their children by appropriate experience and observation than the guardians?

Of course not; that would be completely ridiculous.

b Besides, every animal fights better in the presence of its young.

That's so. But, Socrates, there's a considerable danger that in a defeat—and such things are likely to happen in a war—they'll lose their children's lives as well as their own, making it impossible for the rest of the city to recover.

What you say is true. But do you think that the first thing we should provide for is the avoidance of all danger?

Not at all.

Well, then, if people will probably have to face some danger, shouldn't it be the sort that will make them better if they come through it successfully?

Obviously.

And do you think that whether or not men who are going to be warriors
observe warfare when they're still boys makes such a small difference that
c it isn't worth the danger of having them do it?

No, it does make a difference to what you're talking about.

On the assumption, then, that the children are to be observers of war, if we can contrive some way to keep them secure, everything will be fine, won't it?

Yes.

Well, then, in the first place, their fathers won't be ignorant, will they,
about which campaigns are dangerous and which are not, but rather as
d knowledgeable about this as any human beings can be?

Probably so.

Then they'll take the children to some campaigns and not to others?

Correct.

And they'll put officers in charge of them whose age and experience qualifies them to be leaders and tutors?

Appropriately so.

But, as we say, the unexpected often occurs.

Indeed.

With this in mind, we must provide the children with wings when they're small, so that they can fly away and escape.

What do you mean? e

We must mount them on horses as early as possible—not on spirited or aggressive horses, but on very fast and manageable ones—and when they've learned to ride, they must be taken to observe a war. In this way, they'll get the best look at their own work and, if the need arises, make the securest possible escape to safety, following their older guides.

I think you're right.

What about warfare itself? What attitude should your soldiers have to 468
each other and to the enemy? Are my views about this right or not?

First, tell me what they are.

If one of them leaves his post or throws away his shield or does anything else of that sort through cowardice, shouldn't he be reduced to being a craftsman or farmer?

Certainly.

And shouldn't anyone who is captured alive be left to his captors as a gift to do with as they wish?

Absolutely. b

But don't you think that anyone who distinguishes himself and earns high esteem should, while still on the campaign, first be crowned with wreaths by each of the adolescents and children who accompany the expedition?

I do.

And what about shaken by the right hand?

That too.

But I suppose that you wouldn't go this far?

Namely?

That he should kiss and be kissed by each of them.

That most of all. And I'd add this to the law: As long as the campaign lasts, no one he wants to kiss shall be allowed to refuse, for then, if one
of them happens to be in love with another, whether male or female, he'll c
be all the more eager to win the rewards of valor.

Excellent. And we've already stated that, since he's a good person, more marriages will be available to him, and he'll be selected for such things more frequently than the others, so that he'll beget as many children as possible.

Yes, we did say that.

Indeed, according to Homer too, it is just to honor in such ways those young people who are good, for he says that Ajax, when he distinguished
himself in battle, "was rewarded with the long cut off the backbone." And d
that's an appropriate honor for a courageous young man, since it will both honor him and increase his strength.

That's absolutely right.

Then we'll follow Homer in these matters at least. And insofar as good people have shown themselves to be good, we'll honor them at sacrifices and all such occasions with hymns, "seats of honor, meats, and well-filled

cups of wine,"[12] and in all the other ways we mentioned, so that, in addition
e to honoring good men and women, we'll continue to train them.

That's excellent.

All right. And as for those who died on the campaign, won't we say, first of all, that, if their deaths were distinguished, they belong to the golden race?

That above all.

And won't we believe with Hesiod that, whenever any of that race die, they become

469 *Sacred daemons living upon the earth,*
*Noble spirits, protectors against evil, guardians of articulate mortals?*[13]

We'll certainly believe that.

Then we'll inquire from the god[14] what kind of distinguished funeral we should give to daemonic and godlike people, and we'll follow his instructions.

Of course.

And for the remainder of time, we'll care for their graves and worship at them as we would at those of daemons. And we'll follow the same rites
b for anyone whom we judge to have lived an outstandingly good life, whether he died of old age or in some other way.

That is only just.

Now, what about enemies? How will our soldiers deal with them?

In what respect?

First, enslavement. Do you think it is just for Greeks to enslave Greek cities, or, as far as they can, should they not even allow other cities to do so, and make a habit of sparing the Greek race, as a precaution against
c being enslaved by the barbarians?

It's altogether and in every way best to spare the Greek race.

Then isn't it also best for the guardians not to acquire a Greek slave and to advise the other Greeks not to do so either?

Absolutely. In that way they'd be more likely to turn against the barbarians and keep their hands off one another.

What about despoiling the dead? Is it a good thing to strip the dead of anything besides their armor after a victory? Or don't cowards make this
d an excuse for not facing the enemy—as if they were doing something of vital importance in bending over a corpse? And haven't many armies been lost because of such plundering?

12. The last two quotations are from *Iliad* vii.321 and viii.162, respectively.

13. *Works and Days* 122.

14. Apollo. See 427b.

Indeed, they have.

Don't you think it's slavish and money-loving to strip a corpse? Isn't it small-minded and womanish to regard the body as your enemy, when the enemy himself has flitted away, leaving behind only the instrument with which he fought? Or do you think such behavior any different from that of dogs who get angry with the stone that hits them and leave the e
thrower alone?

It's no different at all.

Then may our soldiers strip corpses or refuse the enemy permission to pick up their dead?

No, by god, they certainly may not.

Moreover, we won't take enemy arms to the temples as offerings, and if we care about the goodwill of other Greeks, we especially won't do this with *their* arms. Rather we'd be afraid of polluting the temples if we 470
brought them such things from our own people, unless, of course, the god tells us otherwise.

That's absolutely right.

What about ravaging the land of the Greeks and burning their houses? Will your soldiers do things of this sort to their enemies?

I'd like to hear *your* opinion about that.

Well, I think they should do neither of these things but destroy the year's harvest only. Do you want me to tell you why? b

Of course.

It seems to me that as we have two names, "war" and "civil war," so there are two things and the names apply to two kinds of disagreements arising in them. The two things I'm referring to are what is one's own and akin, on the one hand, and what's foreign and strange, on the other. The name "civil war" applies to hostilities with one's own, while "war" applies to hostilities with strangers.

That's certainly to the point.

Then see whether this is also to the point: I say that the Greek race is its own and akin, but is strange and foreign to barbarians. c

That's right.

Then when Greeks do battle with barbarians or barbarians with Greeks, we'll say that they're natural enemies and that such hostilities are to be called war. But when Greeks fight with Greeks, we'll say that they are natural friends and that in such circumstances Greece is sick and divided into factions and that such hostilities are to be called civil war. d

I, at any rate, agree to think of it that way.

Now, notice that, wherever something of the sort that's currently called civil war occurs and a city is divided, if either party ravages the land of the others and burns their houses, it's thought that this is abominable and that neither party loves their city, since otherwise they'd never have ravaged their very nurse and mother. However, it *is* thought appropriate for the victors to carry off the harvest of the vanquished. Nonetheless, their

attitude of mind should be that of people who'll one day be reconciled
e and who won't always be at war.

This way of thinking is far more civilized than the other.

What about the city you're founding? It is Greek, isn't it?

It has to be.

Then, won't your citizens be good and civilized?

Indeed they will.

Then, won't they love Greece? Won't they consider Greece as their own and share the religion of the other Greeks?

Yes, indeed.

Then won't they consider their differences with Greeks—people who
471 are their own—not as war but as civil war?

Of course.

And won't they quarrel like people who know that one day they'll be reconciled?

Certainly.

Then they'll moderate their foes in a friendly spirit, not punish them with enslavement and destruction, for they're moderators, not enemies.

That's right.

And being Greeks, they won't ravage Greece or burn her houses, nor will they agree that in any of her cities all the inhabitants—men, women, and children—are their enemies, but that whatever differences arise are caused by the few enemies that any city inevitably contains. Because of this, because the majority are friendly, they won't ravage the country or
b destroy the houses, and they'll continue their quarrel only to the point at which those who caused it are forced to pay the penalty by those who were its innocent victims.

I agree that this is the way our citizens must treat their enemies, and they must treat barbarians the way Greeks currently treat each other.

Then shall we also impose this law on the guardians: Neither ravage
c the country nor burn the houses?

Consider it imposed. And let's also assume that this law and its predecessors are all fine. But I think, Socrates, that if we let you go on speaking about this subject, you'll never remember the one you set aside in order to say all this, namely, whether it's possible for this constitution to come into being and in what way it could be brought about. I agree that, if it existed, all the things we've mentioned would be good for the city in which they occurred. And I'll add some that you've left out. The guardians would be excellent fighters against an enemy because they'd be least likely to desert each other, since they know each other as brothers, fathers, and
d sons, and call each other by those names. Moreover, if their women joined their campaigns, either in the same ranks or positioned in the rear to frighten the enemy and in case their help should ever be needed, I know that this would make them quite unbeatable. And I also see all the good things that they'd have at home that you've omitted. Take it that I agree
e that all these things would happen, as well as innumerable others, if this

kind of constitution came into being, and say no more on that subject. But rather let's now try to convince ourselves that it is possible and how it is possible, and let the rest go.

This is a sudden attack that you've made on my argument, and you 472 show no sympathy for my delay. Perhaps you don't realize that, just as I've barely escaped from the first two waves of objections, you're bringing the third—the biggest and most difficult one—down upon me. When you see and hear it, you'll surely be completely sympathetic, and recognize that it was, after all, appropriate for me to hesitate and be afraid to state and look into so paradoxical a view.

The more you speak like that, the less we'll let you off from telling us how it's possible for this constitution to come into being. So speak instead of wasting time. b

Well, then, we must first remember that we got to this point while trying to discover what justice and injustice are like.

We must. But what of it?

Nothing. But if we discover what justice is like, will we also maintain that the just man is in no way different from the just itself, so that he is like justice in every respect? Or will we be satisfied if he comes as close to it as possible and participates in it far more than anyone else? c

We'll be satisfied with that.

Then it was in order to have a model that we were trying to discover what justice itself is like and what the completely just man would be like, if he came into being, and what kind of man he'd be if he did, and likewise with regard to injustice and the most unjust man. We thought that, by looking at how their relationship to happiness and its opposite seemed to us, we'd also be compelled to agree about ourselves as well, that the one who was most like them would have a portion of happiness most like theirs. But we weren't trying to discover these things in order to prove d that it's possible for them to come into being.

That's true.

Do you think that someone is a worse painter if, having painted a model of what the finest and most beautiful human being would be like and having rendered every detail of his picture adequately, he could not prove that such a man could come into being?

No, by god, I don't.

Then what about our own case? Didn't we say that we were making a theoretical model of a good city?[15] e

Certainly.

So do you think that our discussion will be any less reasonable if we can't prove that it's possible to found a city that's the same as the one in our theory?

Not at all.

15. See 369a–c.

Then that's the truth of the matter. But if, in order to please you, I must also be willing to show how and under what conditions it would most be possible to found such a city, then you should agree to make the same concessions to me, in turn, for the purposes of this demonstration.

Which ones?

Is it possible to do anything in practice the same as in theory? Or is it in the nature of practice to grasp truth less well than theory does, even if
473 some people don't think so? Will you first agree to this or not?

I agree.

Then don't compel me to show that what we've described in theory can come into being exactly as we've described it. Rather, if we're able to discover how a city could come to be governed in a way that most closely approximates our description, let's say that we've shown what you ordered us to show, namely, that it's possible for our city to come to be. Or wouldn't
b you be satisfied with that? *I* would be satisfied with it.

So would I.

Then next, it seems, we should try to discover and point out what's now badly done in cities that keeps them from being governed in that way and what's the smallest change that would enable our city to reach our sort of constitution—one change, if possible, or if not one, two, and if not two, then the fewest in number and the least extensive.

c That's absolutely right.

There is one change we could point to that, in my opinion, would accomplish this. It's certainly neither small nor easy, but it is possible.

What is it?

Well, I've now come to what we likened to the greatest wave. But I shall say what I have to say, even if the wave is a wave of laughter that will simply drown me in ridicule and contempt. So listen to what I'm going to say.

Say on.

Until philosophers rule as kings or those who are now called kings and leading men genuinely and adequately philosophize, that is, until political
d power and philosophy entirely coincide, while the many natures who at present pursue either one exclusively are forcibly prevented from doing so, cities will have no rest from evils, Glaucon, nor, I think, will the human race. And, until this happens, the constitution we've been describing in
e theory will never be born to the fullest extent possible or see the light of the sun. It's because I saw how very paradoxical this statement would be that I hesitated to make it for so long, for it's hard to face up to the fact that there can be no happiness, either public or private, in any other city.

Socrates, after hurling a speech and statement like that at us, you must expect that a great many people (and not undistinguished ones either) will cast off their cloaks and, stripped for action, snatch any available
474 weapon, and make a determined rush at you, ready to do terrible things. So, unless you can hold them off by argument and escape, you really will pay the penalty of general derision.

Well, you are the one that brought this on me.

And I was right to do it. However, I won't betray you, but rather defend you in any way I can—by goodwill, by urging you on, and perhaps by being able to give you more appropriate answers than someone else. So, with the promise of this assistance, try to show the unbelievers that things are as you say they are. b

I must try it, then, especially since you agree to be so great an ally. If we're to escape from the people you mention, I think we need to define for them who the philosophers are that we dare to say must rule. And once that's clear, we should be able to defend ourselves by showing that the people we mean are fitted by nature both to engage in philosophy and to rule in a city, while the rest are naturally fitted to leave philosophy c
alone and follow their leader.

This would be a good time to give that definition.

Come, then, follow me, and we'll see whether or not there's some way to set it out adequately.

Lead on.

Do you need to be reminded or do you remember that, if it's rightly said that someone loves something, then he mustn't love one part of it and not another, but he must love all of it?[16]

I think you'll have to remind me, for I don't understand it at all. d

That would be an appropriate response, Glaucon, for somebody else to make. But it isn't appropriate for an erotically inclined man to forget that all boys in the bloom of youth pique the interest of a lover of boys and arouse him and that all seem worthy of his care and pleasure. Or isn't that the way you people behave to fine and beautiful boys? You praise a snub-nosed one as cute, a hook-nosed one you say is regal, one in between is well proportioned, dark ones look manly, and pale ones are children of the gods. And as for a honey-colored boy, do you think that this very term e
is anything but the euphemistic coinage of a lover who found it easy to tolerate sallowness, provided it was accompanied by the bloom of youth? In a word, you find all kinds of terms and excuses so as not to reject 475
anyone whose flower is in bloom.

If you insist on taking me as your example of what erotically inclined men do, then, for the sake of the argument, I agree.

Further, don't you see wine-lovers behave in the same way? Don't they love every kind of wine and find any excuse to enjoy it?

Certainly.

And I think you see honor-lovers, if they can't be generals, be captains, and, if they can't be honored by people of importance and dignity, they put up with being honored by insignificant and inferior ones, for they desire the whole of honor. b

Exactly.

Then do you agree to this or not? When we say that someone desires something, do we mean that he desires everything of that kind or that he desires one part of it but not another?

16. See 438a–b.

We mean he desires everything.

Then won't we also say that the philosopher doesn't desire one part of wisdom rather than another, but desires the whole thing?

Yes, that's true.

And as for the one who's choosy about what he learns, especially if
he's young and can't yet give an account of what is useful and what
c isn't, we won't say that he is a lover of learning or a philosopher, for
we wouldn't say that someone who's choosy about his food is hungry
or has an appetite for food or is a lover of food—instead, we'd say
that he is a bad eater.

And we'd be right to say it.

But the one who readily and willingly tries all kinds of learning, who turns gladly to learning and is insatiable for it, is rightly called a philosopher, isn't he?

d Then many strange people will be philosophers, for the lovers of sights
seem to be included, since they take pleasure in learning things. And the
lovers of sounds are very strange people to include as philosophers, for
they would never willingly attend a serious discussion or spend their time
that way, yet they run around to all the Dionysiac festivals, omitting none,
whether in cities or villages, as if their ears were under contract to listen
to every chorus. Are we to say that these people—and those who learn
e similar things or petty crafts—are philosophers?

No, but they are *like* philosophers.

And who are the true philosophers?

Those who love the sight of truth.

That's right, but what exactly do you mean by it?

It would not be easy to explain to someone else, but I think that you will agree to this.

To what?

Since the beautiful is the opposite of the ugly, they are two.

476 Of course.

And since they are two, each is one?

I grant that also.

And the same account is true of the just and the unjust, the good and the bad, and all the forms. Each of them is itself one, but because they manifest themselves everywhere in association with actions, bodies, and one another, each of them appears to be many.

That's right.

So, I draw this distinction: On one side are those you just now called
lovers of sights, lovers of crafts, and practical people; on the other side are
b those we are arguing about and whom one would alone call philosophers.

How do you mean?

The lovers of sights and sounds like beautiful sounds, colors, shapes, and everything fashioned out of them, but their thought is unable to see and embrace the nature of the beautiful itself.

That's for sure.

In fact, there are very few people who would be able to reach the beautiful itself and see it by itself. Isn't that so?

Certainly. c

What about someone who believes in beautiful things, but doesn't believe in the beautiful itself and isn't able to follow anyone who could lead him to the knowledge of it? Don't you think he is living in a dream rather than a wakened state? Isn't this dreaming: whether asleep or awake, to think that a likeness is not a likeness but rather the thing itself that it is like?

I certainly think that someone who does that is dreaming.

But someone who, to take the opposite case, believes in the beautiful itself, can see both it and the things that participate in it and doesn't believe that the participants are it or that it itself is the participants—is he living d in a dream or is he awake?

He's very much awake.

So we'd be right to call his thought knowledge, since he knows, but we should call the other person's thought opinion, since he opines?

Right.

What if the person who has opinion but not knowledge is angry with us and disputes the truth of what we are saying? Is there some way to console him and persuade him gently, while hiding from him that he isn't e in his right mind?

There must be.

Consider, then, what we'll say to him. Won't we question him like this? First, we'll tell him that nobody begrudges him any knowledge he may have and that we'd be delighted to discover that he knows something. Then we'll say: "Tell us, does the person who knows know something or nothing?" You answer for him.

He knows something.

Something that is or something that is not?[17]

Something that is, for how could something that is not be known? 477

Then we have an adequate grasp of this: No matter how many ways we examine it, what is completely is completely knowable and what is in no way is in every way unknowable?

A most adequate one.

Good. Now, if anything is such as to be and also not to be, won't it be intermediate between what purely is and what in no way is?

Yes, it's intermediate.

Then, as knowledge is set over what is, while ignorance is of necessity set over what is not, mustn't we find an intermediate between knowledge

17. Because of the ambiguity of the verb *einai* ("to be"), Socrates could be asking any or all of the following questions: (1) "Something that exists or something that does not exist?" (existential "is"); (2) "Something that is beautiful (say) or something that is not beautiful?" (predicative "is"); (3) "Something that is true or something that is not true?" (veridical "is").

and ignorance to be set over what is intermediate between what is and
b what is not, if there is such a thing?

Certainly.

Do we say that opinion is something?

Of course.

A different power from knowledge or the same?

A different one.

Opinion, then, is set over one thing, and knowledge over another, according to the power of each.

Right.

Now, isn't knowledge by its nature set over what is, to know it as it is? But first maybe we'd better be a bit more explicit.

How so?

c Powers are a class of the things that are that enable us—or anything else for that matter—to do whatever we are capable of doing. Sight, for example, and hearing are among the powers, if you understand the kind of thing I'm referring to.

I do.

Here's what I think about them. A power has neither color nor shape
nor any feature of the sort that many other things have and that I use to
distinguish those things from one another. In the case of a power, I use
d only what it is set over and what it does, and by reference to these I call
each the power it is: What is set over the same things and does the same
I call the same power; what is set over something different and does
something different I call a different one. Do you agree?

I do.

Then let's back up. Is knowledge a power, or what class would you put it in?

It's a power, the strongest of them all.

e And what about opinion, is it a power or some other kind of thing?

It's a power as well, for it is what enables us to opine.

A moment ago you agreed that knowledge and opinion aren't the same.

How could a person with any understanding think that a fallible power is the same as an infallible one?

478 Right. Then we agree that opinion is clearly different from knowledge.

It is different.

Hence each of them is by nature set over something different and does something different?

Necessarily.

Knowledge is set over what is, to know it as it is?

Yes.

And opinion opines?

Yes.

Does it opine the very thing that knowledge knows, so that the knowable and the opinable are the same, or is this impossible?

It's impossible, given what we agreed, for if a different power is set over something different, and opinion and knowledge are different powers, then the knowable and the opinable cannot be the same. b

Then, if what is is knowable, the opinable must be something other than what is?

It must.

Do we, then, opine what is not? Or is it impossible to opine what is not? Think about this. Doesn't someone who opines set his opinion over something? Or is it possible to opine, yet to opine nothing?

It's impossible.

But someone who opines opines some one thing?

Yes.

Surely the most accurate word for that which is not isn't "one thing" but "nothing"? c

Certainly.

But we had to set ignorance over what is not and knowledge over what is?

That's right.

So someone opines neither what is nor what is not?

How could it be otherwise?

Then opinion is neither ignorance nor knowledge?

So it seems.

Then does it go beyond either of these? Is it clearer than knowledge or darker than ignorance?

No, neither.

Is opinion, then, darker than knowledge but clearer than ignorance?

It is.

Then it lies between them? d

Yes.

So opinion is intermediate between those two?

Absolutely.

Now, we said that, if something could be shown, as it were, to be and not to be at the same time, it would be intermediate between what purely is and what in every way is not, and that neither knowledge nor ignorance would be set over it, but something intermediate between ignorance and knowledge?

Correct.

And now the thing we call opinion has emerged as being intermediate between them?

It has.

Apparently, then, it only remains for us to find what participates in both being and not being and cannot correctly be called purely one or the other, e in order that, if there is such a thing, we can rightly call it the opinable, thereby setting the extremes over the extremes and the intermediate over the intermediate. Isn't that so?

It is.

Now that these points have been established, I want to address a question 479 to our friend who doesn't believe in the beautiful itself or any form of the beautiful itself that remains always the same in all respects but who does believe in the many beautiful things—the lover of sights who wouldn't allow anyone to say that the beautiful itself is one or that the just is one or any of the rest: "My dear fellow," we'll say, "of all the many beautiful things, is there one that will not also appear ugly? Or is there one of those just things that will not also appear unjust? Or one of those pious things that will not also appear impious?"

There isn't one, for it is necessary that they appear to be beautiful in a b way and also to be ugly in a way, and the same with the other things you asked about.

What about the many doubles? Do they appear any the less halves than doubles?

Not one.

So, with the many bigs and smalls and lights and heavies, is any one of them any more what we say it is than its opposite?

No, each of them always participates in both opposites.

Is any one of the manys what we say it is, then, any more than it is not what he says it is?

No, they are like the ambiguities one is entertained with at dinner parties or like the children's riddle about the eunuch who threw something at a c bat—the one about what he threw at it and what it was in,[18] for they are ambiguous, and one cannot understand them as fixedly being or fixedly not being or as both or as neither.

Then do you know how to deal with them? Or can you find a more appropriate place to put them than intermediate between being and not being? Surely, they can't *be* more than what is or *not be* more than what is not, for apparently nothing is darker than what is not or clearer than d what is.

Very true.

We've now discovered, it seems, that the many conventions of the majority of people about beauty and the others are rolling around as intermediates between what is not and what purely is.

We have.

And we agreed earlier that anything of that kind would have to be called the opinable, not the knowable—the wandering intermediate grasped by the intermediate power.

We did.

As for those who study the many beautiful things but do not see the e beautiful itself and are incapable of following another who leads them to

18. The riddle seems to have been: A man who is not a man saw and did not see a bird that was not a bird in a tree (lit., a piece of wood) that was not a tree; he hit (lit., threw at) and did not hit it with a stone that was not a stone. The answer is that a eunuch with bad eyesight saw a bat on a rafter, threw a pumice stone at it, and missed.

it, who see many just things but not the just itself, and so with everything—these people, we shall say, opine everything but have no knowledge of anything they opine.

Necessarily.

What about the ones who in each case study the things themselves that are always the same in every respect? Won't we say that they know and don't opine?

That's necessary too.

Shall we say, then, that these people love and embrace the things that
knowledge is set over, as the others do the things that opinion is set over? 480
Remember we said that the latter saw and loved beautiful sounds and colors and the like but wouldn't allow the beautiful itself to be anything?

We remember, all right.

We won't be in error, then, if we call such people lovers of opinion rather than philosophers or lovers of wisdom and knowledge? Will they be angry with us if we call them that?

Not if they take my advice, for it isn't right to be angry with those who speak the truth.

As for those who in each case embrace the thing itself, we must call them philosophers, not lovers of opinion?

Most definitely.

## Book VI

And so, Glaucon, I said, after a somewhat lengthy and difficult discussion, 484
both the philosophers and the nonphilosophers came to light as who they are.

It probably wouldn't have been easy, he said, to have them do it in a shorter one.

Apparently not. But for my part, I think that the matter would have been better illuminated if we had only it to discuss and not all the other things that remain to be treated in order to discover the difference between
the just life and the unjust one. b

What's our next topic?

What else but the one that's next in order? Since those who are able to grasp what is always the same in all respects are philosophers, while those who are not able to do so and who wander among the many things that vary in every sort of way are not philosophers, which of the two should be the leaders in a city?

What would be a sensible answer to that?

We should establish as guardians those who are clearly capable of guard-
ing the laws and the ways of life of the city. c

That's right.

And isn't it clear that a guardian who is to keep watch over anything should be keen-sighted rather than blind?

Of course it's clear.

Do you think, then, that there's any difference between the blind and
those who are really deprived of the knowledge of each thing that is? The
latter have no clear model in their souls, and so they cannot—in the manner
of painters—look to what is most true, make constant reference to it, and
d study it as exactly as possible. Hence they cannot establish here on earth
conventions about what is fine or just or good, when they need to be
established, or guard and preserve them, once they have been established.

No, by god, there isn't much difference between them.

Should we, then, make these blind people our guardians or rather those who know each thing that is and who are not inferior to the others, either in experience or in any other part of virtue?

It would be absurd to choose anyone but the ones who have knowledge, if indeed they're not inferior in these ways, for the respect in which they are superior is pretty well the most important one.

485 Then shouldn't we explain how it is possible for people to come to have both these sorts of qualities?

Certainly.

Then, as we said at the beginning of this discussion, it is necessary to understand first the nature of the ones who are going to come to have both sorts,[1] for I think that, if we can reach adequate agreement about that, we'll also agree that the same people *can* have both qualities and that no one but they should be leaders in cities.

How so?

Let's agree that philosophic natures always love the sort of learning that
makes clear to them some feature of the being that always is and does not
b wander around between coming to be and decaying.

And further, let's agree that, like the honor-lovers and erotically inclined men we described before,[2] they love all such learning and are not willing to give up any part of it, whether large or small, more valuable or less so.

That's right.

Consider next whether the people we're describing must also have this
c in their nature.

What?

They must be without falsehood—they must refuse to accept what is false, hate it, and have a love for the truth.

That's a reasonable addition, at any rate.

It's not only reasonable, it's entirely necessary, for it's necessary for a man who is erotically inclined by nature to love everything akin to or belonging to the boy he loves.

That's right.

And could you find anything that belongs more to wisdom than truth does?

Of course not.

1. See 474b–c.

2. See 474c–475c.

Then is it possible for the same nature to be a philosopher—a lover of wisdom—and a lover of falsehood? d

Not at all.

Then someone who loves learning must above all strive for every kind of truth from childhood on.

Absolutely.

Now, we surely know that, when someone's desires incline strongly for one thing, they are thereby weakened for others, just like a stream that has been partly diverted into another channel.

Of course.

Then, when someone's desires flow towards learning and everything of that sort, they'd be concerned, I suppose, with the pleasures of the soul itself by itself, and they'd abandon those pleasures that come through the body—if indeed he is a true philosopher and not merely a counterfeit one.

That's completely necessary. e

Then surely such a person is moderate and not at all a money-lover. It's appropriate for others to take seriously the things for which money and large expenditures are needed, but not for him.

That's right.

And of course there's also this to consider when you are judging whether 486
a nature is philosophic or not.

What's that?

If it is at all slavish, you should not overlook that fact, for pettiness is altogether incompatible with a soul that is always reaching out to grasp everything both divine and human as a whole.

That's completely true.

And will a thinker high-minded enough to study all time and all being consider human life to be something important?

He couldn't possibly.

Then will he consider death to be a terrible thing? b

He least of all.

Then it seems a cowardly and slavish nature will take no part in true philosophy.

Not in my opinion.

And is there any way that an orderly person, who isn't money-loving, slavish, a boaster, or a coward, could become unreliable or unjust?

There isn't.

Moreover, when you are looking to see whether a soul is philosophic or not, you'll look to see whether it is just and gentle, from youth on, or savage and hard to associate with.

Certainly.

And here's something I think you won't leave out. c

What?

Whether he's a slow learner or a fast one. Or do you ever expect anyone to love something when it pains him to do it and when much effort brings only small return?

No, it couldn't happen.

And what if he could retain nothing of what he learned, because he was full of forgetfulness? Could he fail to be empty of knowledge?

How could he?

Then don't you think that, if he's laboring in vain, he'd inevitably come to hate both himself and that activity in the end?

Of course.

Then let's never include a forgetful soul among those who are sufficiently
d philosophical for our purposes, but look for one with a good memory.

Absolutely.

Now, we'd certainly say that the unmusical and graceless element in a person's nature draws him to lack of due measure.

Of course.

And do you think that truth is akin to what lacks due measure or to what is measured?

To what is measured.

Then, in addition to those other things, let's look for someone whose thought is by nature measured and graceful and is easily led to the form of each thing that is.

Of course.

Well, then, don't you think the properties we've enumerated are compatible with one another and that each is necessary to a soul that is to have
e an adequate and complete grasp of that which is?

487 They're all completely necessary.

Is there any objection you can find, then, to a pursuit that no one can adequately follow unless he's by nature good at remembering, quick to learn, high-minded, graceful, and a friend and relative of truth, justice, courage, and moderation?

Not even Momus[3] could find one.

When such people have reached maturity in age and education, wouldn't you entrust the city to them and to them alone?

And Adeimantus replied: No one would be able to contradict the things you've said, Socrates, but on each occasion that you say them, your hearers
b are affected in some such way as this. They think that, because they're inexperienced in asking and answering questions, they're led astray a little bit by the argument at every question and that, when these little bits are added together at the end of the discussion, great is their fall, as the opposite of what they said at the outset comes to light. Just as inexperienced checkers players are trapped by the experts in the end and can't make a
c move, so they too are trapped in the end and have nothing to say in this different kind of checkers, which is played not with disks but with words. Yet the truth isn't affected by this outcome. I say this with a view to the present case, for someone might well say now that he's unable to oppose you as you ask each of your questions, yet he sees that of all those who take up philosophy—not those who merely dabble in it while still young

3. Momus is a personification of blame or censure.

in order to complete their upbringing and then drop it, but those who
continue in it for a longer time—the greatest number become cranks, not d
to say completely vicious, while those who seem completely decent are
rendered useless to the city because of the studies you recommend.

When I'd heard him out, I said: Do you think that what these people
say is false?

I don't know, but I'd be glad to hear what you think.

You'd hear that they seem to me to speak the truth.

How, then, can it be true to say that there will be no end to evils in our e
cities until philosophers—people we agree to be useless—rule in them?

The question you ask needs to be answered by means of an image
or simile.

And you, of course, aren't used to speaking in similes!

So! Are you making fun of me now that you've landed me with a claim
that's so hard to establish? In any case, listen to my simile, and you'll
appreciate all the more how greedy for images I am. What the most decent 488
people experience in relation to their city is so hard to bear that there's
no other single experience like it. Hence to find an image of it and a defense
for them, I must construct it from many sources, just as painters paint
goat-stags by combining the features of different things. Imagine, then,
that something like the following happens on a ship or on many ships.
The shipowner is bigger and stronger than everyone else on board, but
he's hard of hearing, a bit short-sighted, and his knowledge of seafaring b
is equally deficient. The sailors are quarreling with one another about
steering the ship, each of them thinking that he should be the captain,
even though he's never learned the art of navigation, cannot point to
anyone who taught it to him, or to a time when he learned it. Indeed, they
claim that it isn't teachable and are ready to cut to pieces anyone who
says that it is. They're always crowding around the shipowner, begging
him and doing everything possible to get him to turn the rudder over to c
them. And sometimes, if they don't succeed in persuading him, they execute
the ones who do succeed or throw them overboard, and then, having
stupefied their noble shipowner with drugs, wine, or in some other way,
they rule the ship, using up what's in it and sailing while drinking and
feasting, in the way that people like that are prone to do. Moreover, they
call the person who is clever at persuading or forcing the shipowner to
let them rule a "navigator," a "captain," and "one who knows ships," and d
dismiss anyone else as useless. They don't understand that a true captain
must pay attention to the seasons of the year, the sky, the stars, the winds,
and all that pertains to his craft, if he's really to be the ruler of a ship.
And they don't believe there is any craft that would enable him to determine
how he should steer the ship, whether the others want him to or not, or e
any possibility of mastering this alleged craft or of practicing it at the same
time as the craft of navigation. Don't you think that the true captain will
be called a real stargazer, a babbler, and a good-for-nothing by those who
sail in ships governed in that way, in which such things happen? 489

I certainly do.

I don't think that you need to examine the simile in detail to see that the ships resemble cities and their attitude to the true philosophers, but you already understand what I mean.

Indeed, I do.

Then first tell this simile to anyone who wonders why philosophers
aren't honored in the cities, and try to persuade him that there would be
b far more cause for wonder if they were honored.

I will tell him.

Next tell him that what he says is true, that the most decent among
the philosophers are useless to the majority. Tell him not to blame those
decent people for this but the ones who don't make use of them. It isn't
natural for the captain to beg the sailors to be ruled by him nor for the
wise to knock at the doors of the rich—the man who came up with that
wisecrack made a mistake. The natural thing is for the sick person, rich
c or poor, to knock at the doctor's door, and for anyone who needs to be
ruled to knock at the door of the one who can rule him. It isn't for the
ruler, if he's truly any use, to beg the others to accept his rule. Tell him
that he'll make no mistake in likening those who rule in our cities at
present to the sailors we mentioned just now, and those who are called
useless stargazers to the true captains.

That's absolutely right.

Therefore, it isn't easy for the best ways of life to be highly esteemed
by people who, as in these circumstances, follow the opposite ways. By
far the greatest and most serious slander on philosophy, however, results
d from those who profess to follow the philosophic way of life. I mean those
of whom the prosecutor of philosophy declared that the greatest number
are completely vicious and the most decent useless. And I admitted that
what he said was true, didn't I?

Yes.

And haven't we explained why the decent ones are useless?

Yes, indeed.

Then, do you next want us to discuss why it's inevitable that the greater
number are vicious and to try to show, if we can, that philosophy isn't
e responsible for this either?

Certainly.

Then, let's begin our dialogue by reminding ourselves of the point at
which we began to discuss the nature that someone must have if he is to
become a fine and good person. First of all, if you remember, he had to
490 be guided by the truth and always pursue it in every way, or else he'd
really be a boaster, with no share at all in true philosophy.

That's what was said.

And isn't this view completely contrary to the opinions currently held about him?

It certainly is.

Then, won't it be reasonable for us to plead in his defense that it is the nature of the real lover of learning to struggle toward what is, not to

remain with any of the many things that are believed to be, that, as he
moves on, he neither loses nor lessens his erotic love until he grasps the b
being of each nature itself with the part of his soul that is fitted to grasp
it, because of its kinship with it, and that, once getting near what really
is and having intercourse with it and having begotten understanding and
truth, he knows, truly lives, is nourished, and—at that point, but not
before—is relieved from the pains of giving birth?

That is the most reasonable defense possible.

Well, then, will such a person have any part in the love of falsehood, or will he entirely hate it?

He'll hate it. c

And if truth led the way, we'd never say, I suppose, that a chorus of evils could ever follow in its train.

How could it?

But rather a healthy and just character, with moderation following it.

That's right.

What need is there, then, to marshal all over again from the beginning
the members of the philosophic nature's chorus in their inevitable array?
Remember that courage, high-mindedness, ease in learning, and a good
memory all belong to it. Then you objected, saying that anyone would be
compelled to agree with what we said, but that, if he abandoned the d
argument and looked at the very people the argument is about, he'd say
that some of them were useless, while the majority had every kind of vice.
So we examined the reason for this slander and have now arrived at the
point of explaining why the majority of them are bad. And it's for this
reason that we've again taken up the nature of the true philosophers and
defined what it necessarily has to be.

That's true. e

We must now look at the ways in which this nature is corrupted, how
it's destroyed in many people, while a small number (the ones that are
called useless rather than bad) escape. After that, we must look in turn at
the natures of the souls that imitate the philosophic nature and establish
themselves in its pursuits, so as to see what the people are like who thereby 491
arrive at pursuits they are unworthy of and that is beyond them and who,
because they often strike false notes, bring upon philosophy the reputation
that you said it has with everyone everywhere.

In what ways is this nature corrupted?

I'll try to enumerate them for you if I can. I suppose that everyone would
agree that only a few natures possess all the qualities that we just now
said were essential to becoming a complete philosopher and that seldom
occur naturally among human beings. Or don't you think so? b

I certainly do.

Consider, then, the many important ways in which these few can be corrupted.

What are they?

What will surprise you most, when you hear it, is that each of the things we praised in that nature tends to corrupt the soul that has it and to drag

it away from philosophy. I mean courage, moderation, and the other things we mentioned.

That does sound strange.

c Furthermore, all the things that are said to be good also corrupt it
and drag it away—beauty, wealth, physical strength, relatives who are
powerful in the city, and all that goes with these. You understand what I
have in mind?

I do, and I'd be glad to learn about it more precisely.

Correctly grasp the general point I'm after, and it will be clear to you, and what I've said before won't seem so strange.

What do you want me to do?

d We know that the more vigorous any seed, developing plant, or animal
is, the more it is deficient in the things that are appropriate for it to have
when it is deprived of suitable food, season, or location. For the bad is
more opposed to the good than it is to the merely not good.

Of course.

Then it's reasonable to say that the best nature fares worse, when unsuitably nurtured, than an ordinary one.

It is.

Then won't we say the same thing about souls too, Adeimantus, that
e those with the best natures become outstandingly bad when they receive a
bad upbringing? Or do you think that great injustices and pure wickedness
originate in an ordinary nature rather than in a vigorous one that has been
corrupted by its upbringing? Or that a weak nature is ever the cause of
either great good or great evil?

No, you're right.

Now, I think that the philosophic nature as we defined it will inevitably
492 grow to possess every virtue if it happens to receive appropriate instruction,
but if it is sown, planted, and grown in an inappropriate environment, it
will develop in quite the opposite way, unless some god happens to come
to its rescue. Or do you agree with the general opinion that certain young
people are actually corrupted by sophists—that there are certain sophists
with significant influence on the young who corrupt them through private
teaching? Isn't it rather the very people who say this who are the greatest
sophists of all, since they educate most completely, turning young and
b old, men and women, into precisely the kind of people they want them
to be?

When do they do that?

When many of them are sitting together in assemblies, courts, theaters,
army camps, or in some other public gathering of the crowd, they object
very loudly and excessively to some of the things that are said or done
and approve others in the same way, shouting and clapping, so that the
c very rocks and surroundings echo the din of their praise or blame and
double it. In circumstances like that, what is the effect, as they say, on a
young person's heart? What private training can hold out and not be swept
away by that kind of praise or blame and be carried by the flood wherever

it goes, so that he'll say that the same things are beautiful or ugly as the crowd does, follow the same pursuits as they do, and be the same sort of person as they are?

He will be under great compulsion to do so, Socrates. d

And yet we haven't mentioned the greatest compulsion of all.

What's that?

It's what these educators and sophists impose by their actions if their words fail to persuade. Or don't you know that they punish anyone who isn't persuaded, with disenfranchisement, fines, or death?

They most certainly do.

What other sophist, then, or what private conversations do you think will prevail in opposition to these?

I don't suppose that any will. e

No, indeed, it would be very foolish even to try to oppose them, for there isn't now, hasn't been in the past, nor ever will be in the future anyone with a character so unusual that he has been educated to virtue in spite of the contrary education he received from the mob—I mean, a human character; the divine, as the saying goes, is an exception to the rule. You should realize that if anyone is saved and becomes what he ought to be under our present constitutions, he has been saved—you might
rightly say—by a divine dispensation. 493

I agree.

Well, then, you should also agree to this.

What?

Not one of those paid private teachers, whom the people call sophists and consider to be their rivals in craft, teaches anything other than the convictions that the majority express when they are gathered together. Indeed, these are precisely what the sophists call wisdom. It's as if someone were learning the moods and appetites of a huge, strong beast that he's
rearing—how to approach and handle it, when it is most difficult to deal b
with or most gentle and what makes it so, what sounds it utters in either condition, and what sounds soothe or anger it. Having learned all this through tending the beast over a period of time, he calls this knack wisdom, gathers his information together as if it were a craft, and starts to teach it. In truth, he knows nothing about which of these convictions is fine or shameful, good or bad, just or unjust, but he applies all these names in
accordance with how the beast reacts—calling what it enjoys good and c
what angers it bad. He has no other account to give of these terms. And he calls what he is compelled to do just and fine, for he hasn't seen and cannot show anyone else how much compulsion and goodness really differ. Don't you think, by god, that someone like that is a strange educator?

I do indeed.

Then does this person seem any different from the one who believes that it is wisdom to understand the moods and pleasures of a majority
gathered from all quarters, whether they concern painting, music, or, for d
that matter, politics? If anyone approaches the majority to exhibit his poetry

or some other piece of craftsmanship or his service to the city and gives them mastery over him to any degree beyond what's unavoidable, he'll be under Diomedean compulsion, as it's called, to do the sort of thing of which they approve. But have you ever heard anyone presenting an argument that such things are truly good and beautiful that wasn't absolutely ridiculous?

e No, and I don't expect ever to hear one.

Keeping all this in mind, recall the following question: Can the majority
in any way tolerate or accept the reality of the beautiful itself, as opposed
to the many beautiful things, or the reality of each thing itself, as opposed
494 to the corresponding many?

Not in any way.

Then the majority cannot be philosophic.

They cannot.

Hence they inevitably disapprove of those who practice philosophy?

Inevitably.

And so do all those private individuals who associate with the majority and try to please them.

Clearly.

Then, because of all that, do you see any salvation for someone who is
by nature a philosopher, to insure that he'll practice philosophy correctly
to the end? Think about what we've said before. We agreed that ease in
b learning, a good memory, courage, and high-mindedness belong to the
philosophic nature.

Yes.

And won't someone with a nature like that be first among the children in everything, especially if his body has a nature that matches that of his soul?

How could he not be?

Then I suppose that, as he gets older, his family and fellow citizens will want to make use of him in connection with their own affairs.

Of course.

Therefore they'll pay court to him with their requests and honors, trying
c by their flattery to secure for themselves ahead of time the power that is
going to be his.

That's what usually happens, at any rate.

What do you think someone like that will do in such circumstances,
especially if he happens to be from a great city, in which he's rich, well-born,
good-looking, and tall? Won't he be filled with impractical expectations and
think himself capable of managing the affairs, not only of the Greeks, but
of the barbarians as well? And as a result, won't he exalt himself to great
d heights and be brimming with pretension and pride that is empty and
lacks understanding?

He certainly will.

And if someone approaches a young man in that condition and gently tells him the truth, namely, that that there's no understanding in him, that

he needs it, and that it can't be acquired unless he works like a slave to attain it, do you think that it will be easy for him to listen when he's in the midst of so many evils?

Far from it.

And even if a young man of that sort somehow sees the point and is guided and drawn to philosophy because of his noble nature and his
kinship with reason, what do you think those people will do, if they e
believe that they're losing their use of him and his companionship? Is there anything they won't do or say to him to prevent him from being persuaded? Or anything they won't do or say about his persuader—whether plotting against him in private or publicly bringing him into court—to prevent him from such persuasion?

There certainly isn't. 495

Then, is there any chance that such a person will practice philosophy?

None at all.

Do you see, then, that we weren't wrong to say that, when someone with a philosophic nature is badly brought up, the very components of his nature—together with the other so-called goods, such as wealth and other similar advantages—are themselves in a way the cause of his falling away from philosophic pursuits?

I do, and what we said was right.

These, then, are the many ways in which the best nature—which is already rare enough, as we said—is destroyed and corrupted, so that it
cannot follow the best pursuits. And it is among these men that we find b
the ones who do the greatest evils to cities and individuals and also—if they happen to be swept that way by the current—the greatest good, for a petty nature will never do anything great, either to an individual or a city.

That's very true.

When these men, for whom philosophy is most appropriate, fall away
from her, they leave her desolate and unwed, and they themselves lead c
lives that are inappropriate and untrue. Then others, who are unworthy of her, come to her as to an orphan deprived of the protection of kinsmen and disgrace her. These are the ones who are responsible for the reproaches that you say are cast upon philosophy by those who revile her, namely, that some of those who consort with her are useless, while the majority deserve to suffer many bad things.

Yes, that is indeed what is said.

And it's a reasonable thing to say, for other little men—the ones who are most sophisticated at their own little crafts—seeing that this position, which is full of fine names and adornments, is vacated, leap gladly from
those little crafts to philosophy, like prisoners escaping from jail who take d
refuge in a temple. Despite her present poor state, philosophy is still more high-minded than these other crafts, so that many people with defective natures desire to possess her, even though their souls are cramped and spoiled by the mechanical nature of their work, in just the way that their
bodies are mutilated by their crafts and labors. Isn't that inevitable? e

It certainly is.

Don't you think that a man of this sort looks exactly like a little bald-headed tinker who has come into some money and, having been just released from jail, has taken a bath, put on a new cloak, got himself up as a bridegroom, and is about to marry the boss's daughter because she is poor and abandoned?

496 They're exactly the same.

And what kind of children will that marriage produce? Won't they be illegitimate and inferior?

They have to be.

What about when men who are unworthy of education approach philosophy and consort with her unworthily? What kinds of thoughts and opinions are we to say they beget? Won't they truly be what are properly called sophisms, things that have nothing genuine about them or worthy of being called true wisdom?

That's absolutely right.

Then there remains, Adeimantus, only a very small group who consort with philosophy in a way that's worthy of her: A noble and well brought-up character, for example, kept down by exile, who remains with philosophy
b according to his nature because there is no one to corrupt him, or a great soul living in a small city, who disdains the city's affairs and looks beyond them. A very few might be drawn to philosophy from other crafts that they rightly despise because they have good natures. And some might be held back by the bridle that restrains our friend Theages[4]—for he's in every way qualified to be tempted away from philosophy, but his physical illness
c restrains him by keeping him out of politics. Finally, my own case is hardly worth mentioning—my daemonic sign[5]—because it has happened to no one before me, or to only a very few. Now, the members of this small group have tasted how sweet and blessed a possession philosophy is, and at the same time they've also seen the madness of the majority and realized, in a word, that hardly anyone acts sanely in public affairs and that there is no ally with whom they might go to the aid of justice and survive, that
d instead they'd perish before they could profit either their city or their friends and be useless both to themselves and to others, just like a man who has fallen among wild animals and is neither willing to join them in doing injustice nor sufficiently strong to oppose the general savagery alone. Taking all this into account, they lead a quiet life and do their own work. Thus, like someone who takes refuge under a little wall from a storm of dust or hail driven by the wind, the philosopher—seeing others filled with lawlessness—is satisfied if he can somehow lead his present life free from injustice and impious acts and depart from it with good hope, blameless
e and content.

4. See the *Theages*.

5. See Plato, *Apology* 31c–32a, where Socrates explains that his *daimonion* has kept him out of politics.

Well, that's no small thing for him to have accomplished before de- 497
parting.

But it isn't the greatest either, since he didn't chance upon a constitution that suits him. Under a suitable one, his own growth will be fuller, and he'll save the community as well as himself. It seems to me that we've now sensibly discussed the reasons why philosophy is slandered and why the slanderer is unjust—unless, of course, you have something to add.

I have nothing to add on that point. But which of our present constitutions do you think is suitable for philosophers?

None of them. That's exactly my complaint: None of our present constitu- b
tions is worthy of the philosophic nature, and, as a result, this nature is
perverted and altered, for, just as a foreign seed, sown in alien ground, is
likely to be overcome by the native species and to fade away among them,
so the philosophic nature fails to develop its full power and declines into
a different character. But if it were to find the best constitution, as it is c
itself the best, it would be clear that it is really divine and that other natures
and ways of life are merely human. Obviously you're going to ask next
what the best constitution is.

You're wrong there; I wasn't going to ask that, but whether it was the constitution we described when we were founding our city or some other one.

In the other respects, it is that one. But we said even then[6] that there must
always be some people in the city who have a theory of the constitution, the
same one that guided you, the lawgiver, when you made the laws. d

We did say that.

Yes, but we didn't emphasize it sufficiently, for fear of what your objections have made plain, namely, that its proof would be long and difficult. And indeed what remains is by no means easy to go through.

What's that?

How a city can engage in philosophy without being destroyed, for all great things are prone to fall, and, as the saying goes, fine things are really hard to achieve.

Nevertheless, to complete our discussion, we'll have to get clear e
about this.

If anything prevents us from doing it, it won't be lack of willingness but lack of ability. At least you'll see how willing *I* am, for notice again how enthusiastically and recklessly I say that the manner in which a city ought to take up the philosophic way of life is the opposite of what it does at present.

How?

At present, those who study philosophy do so as young men who have
just left childhood behind and have yet to take up household management
and money-making. But just when they reach the hardest part—I mean 498
the part that has to do with giving a rational account—they abandon it

6. See 412a–b.

and are regarded as fully trained in philosophy. In later life, they think they're doing well if they are willing to be in an invited audience when others are doing philosophy, for they think they should do this only as a sideline. And, with a few exceptions, by the time they reach old age, their eagerness for philosophy is quenched more thoroughly than the sun of
b Heraclitus, which is never rekindled.[7]

What should they do?

Entirely the opposite. As youths and children, they should put their minds to youthful education and philosophy and take care of their bodies at a time when they are growing into manhood, so as to acquire a helper for philosophy. As they grow older and their souls begin to reach maturity, they should increase their mental exercises. Then, when their strength begins to fail and they have retired from politics and military service, they should graze freely in the pastures of philosophy and do nothing else—I
c mean the ones who are to live happily and, in death, add a fitting destiny in that other place to the life they have lived.

You seem to be speaking with true enthusiasm, Socrates. But I'm sure that most of your hearers, beginning with Thrasymachus, will oppose you with even greater enthusiasm and not be at all convinced.

Don't slander Thrasymachus and me just as we've become friends—not
d that we were enemies before. We won't relax our efforts until we either convince him and the others or, at any rate, do something that may benefit them in a later incarnation, when, reborn, they happen upon these arguments again.

That's a short time you're talking about!

It's nothing compared to the whole of time. All the same, it's no wonder that the majority of people aren't convinced by our arguments, for they've never seen a *man* that fits our *plan* (and the rhymes of this sort they have heard are usually intended and not, like this one, the product of mere
e chance). That is to say, they've never seen a man or a number of men who themselves rhymed with virtue, were assimilated to it as far as possible,
499 and ruled in a city of the same type. Or do you think they have?

I don't think so at all.

Nor have they listened sufficiently to fine and free arguments that search out the truth in every way for the sake of knowledge but that keep away from the sophistications and eristic quibbles that, both in public trials and in private gatherings, aim at nothing except reputation and disputation.

No, they haven't.

It was because of this, because we foresaw these difficulties, that we were afraid. Nonetheless, we were compelled by the truth to say that no
b city, constitution, or individual man will ever become perfect until either some chance event compels those few philosophers who aren't vicious

7. Aristotle (*Meteorologica* 355a14) reports Heraclitus as believing that "the sun is new every day": the sun not only sets at night, it ceases to exist, being replaced by a totally new sun the next morning.

(the ones who are now called useless) to take charge of a city, whether
they want to or not, and compels the city to obey them, or until a god
inspires the present rulers and kings or their offspring with a true erotic
love for true philosophy. Now, it cannot be reasonably maintained, in my
view, that either of these things is impossible, but if it could, we'd be justly c
ridiculed for indulging in wishful thinking. Isn't that so?

It is.

Then, if in the limitless past, those who were foremost in philosophy
were forced to take charge of a city or if this is happening now in some
foreign place far beyond our ken or if it will happen in the future, we are
prepared to maintain our argument that, at whatever time the muse of d
philosophy controls a city, the constitution we've described will also exist
at that time, whether it is past, present, or future. Since it is not impossible
for this to happen, we are not speaking of impossibilities. That it is *difficult*
for it to happen, however, we agree ourselves.

That's my opinion, anyway.

But the majority don't share your opinion—is that what you are going to say?

They probably don't.

You should not make such wholesale charges against the majority, for
they'll no doubt come to a different opinion, if instead of indulging your
love of victory at their expense, you soothe them and try to remove their e
slanderous prejudice against the love of learning, by pointing out what
you mean by a philosopher and by defining the philosophic nature and
way of life, as we did just now, so that they'll realize that you don't mean 500
the same people as they do. And if they once see it your way, even you
will say that they'll have a different opinion from the one you just attributed
to them and will answer differently. Or do you think that anyone who is
gentle and without malice is harsh with someone who is neither irritable
nor malicious? I'll anticipate your answer and say that a few people may
have such a harsh character, but not the majority.

And, of course, I agree.

Then don't you also agree that the harshness the majority exhibit towards b
philosophy is caused by those outsiders who don't belong and who've
burst in like a band of revellers, always abusing one another, indulging
their love of quarrels, and arguing about human beings in a way that is
wholly inappropriate to philosophy?

I do indeed.

No one whose thoughts are truly directed towards the things that are,
Adeimantus, has the leisure to look down at human affairs or to be filled
with envy and hatred by competing with people. Instead, as he looks at
and studies things that are organized and always the same, that neither c
do injustice to one another nor suffer it, being all in a rational order, he
imitates them and tries to become as like them as he can. Or do you think
that someone can consort with things he admires without imitating them?

I do not. It's impossible.

Then the philosopher, by consorting with what is ordered and divine
and despite all the slanders around that say otherwise, himself becomes
d as divine and ordered as a human being can.

That's absolutely true.

And if he should come to be compelled to put what he sees there into people's characters, whether into a single person or into a populace, instead of shaping only his own, do you think that he will be a poor craftsman of moderation, justice, and the whole of popular virtue?

He least of all.

And when the majority realize that what we are saying about the philosopher is true, will they be harsh with him or mistrust us when we say that
e the city will never find happiness until its outline is sketched by painters
who use the divine model?

They won't be harsh, if indeed they realize this. But what sort of sketch
501 do you mean?

They'd take the city and the characters of human beings as their sketching slate, but first they'd wipe it clean—which isn't at all an easy thing to do. And you should know that this is the plain difference between them and others, namely, that they refuse to take either an individual or a city in hand or to write laws, unless they receive a clean slate or are allowed to clean it themselves.

And they'd be right to refuse.

Then don't you think they'd next sketch the outline of the constitution?

Of course.

b And I suppose that, as they work, they'd look often in each direction,
towards the natures of justice, beauty, moderation, and the like, on the
one hand, and towards those they're trying to put into human beings, on
the other. And in this way they'd mix and blend the various ways of life
in the city until they produced a human image based on what Homer too
called "the divine form and image" when it occurred among human
beings.[8]

That's right.

They'd erase one thing, I suppose, and draw in another until they'd
made characters for human beings that the gods would love as much
c as possible.

At any rate, that would certainly result in the finest sketch.

Then is this at all persuasive to those you said were straining to attack us—that the person we were praising is really a painter of constitutions? They were angry because we entrusted the city to him: Are they any calmer, now that they've heard what we had to say?

They'll be much calmer, if they have any moderation.

Indeed, how could they possibly dispute it? Will they deny that philoso-
d phers are lovers of what is or of the truth?

That would be absurd.

8. See, for example, *Iliad* i.131.

Or that their nature as we've described it is close to the best?

They can't deny that either.

Or that such a nature, if it follows its own way of life, isn't as completely good and philosophic as any other? Or that the people we excluded are more so?

Certainly not. e

Then will they still be angry when we say that, until philosophers take control of a city, there'll be no respite from evil for either city or citizens, and the constitution we've been describing in theory will never be completed in practice?

They'll probably be less angry.

Then if it's all right with you, let's not say that they'll simply be less angry but that they'll become altogether gentle and persuaded, so that they'll be shamed into agreeing with us, if nothing else. 502

It's all right with me.

Let's assume, therefore, that they've been convinced on this point. Will anyone dispute our view that the offspring of kings or rulers could be born with philosophic natures?

No one would do that.

Could anyone claim that, if such offspring are born, they'll inevitably be corrupted? We agree ourselves that it's hard for them to be saved from corruption, but could anyone claim that in the whole of time not one of them could be saved? b

How could he?

But surely one such individual would be sufficient to bring to completion all the things that now seem so incredible, provided that his city obeys him.

One would be sufficient.

If a ruler established the laws and ways of life we've described, it is surely not impossible that the citizens would be willing to carry them out.

Not at all.

And would it be either astonishing or impossible that others should think as we do?

I don't suppose it would. c

But I think our earlier discussion was sufficient to show that these arrangements are best, if only they are possible.

Indeed it was.

Then we can now conclude that this legislation is best, if only it is possible, and that, while it is hard for it to come about, it is not impossible.

We can.

Now that this difficulty has been disposed of, we must deal with what remains, namely, how the saviors of our constitution will come to be in the city, what subjects and ways of life will cause them to come into being, and at what ages they'll take each of them up. d

Indeed we must.

It wasn't very clever of me to omit from our earlier discussion the troublesome topics of acquiring wives, begetting children, and appointing

rulers, just because I knew that the whole truth would provoke resentment
and would be hard to bring about in practice, for as it turned out, I had
to go through these matters anyway. The subject of women and children
e has been adequately dealt with, but that of the rulers has to be taken up
again from the beginning. We said, if you remember, that they must show
themselves to be lovers of their city when tested by pleasure and pain and
503 that they must hold on to their resolve through labors, fears, and all other
adversities. Anyone who was incapable of doing so was to be rejected,
while anyone who came through unchanged—like gold tested in a fire—
was to be made ruler and receive prizes both while he lived and after his
death. These were the sort of things we were saying while our argument,
afraid of stirring up the very problems that now confront us, veiled its
b face and slipped by.

That's very true; I do remember it.

We hesitated to say the things we've now dared to say anyway. So let's now also dare to say that those who are to be made our guardians in the most exact sense of the term must be philosophers.

Let's do it.

Then you should understand that there will probably be only a few of them, for they have to have the nature we described, and its parts mostly grow in separation and are rarely found in the same person.

c What do you mean?

You know that ease of learning, good memory, quick wits, smartness, youthful passion, high-mindedness, and all the other things that go along with these are rarely willing to grow together in a mind that will choose an orderly life that is quiet and completely stable, for the people who possess the former traits are carried by their quick wits wherever chance leads them and have no stability at all.

That's true.

On the other hand, people with stable characters, who don't change
easily, who aren't easily frightened in battle, and whom one would employ
d because of their greater reliability, exhibit similar traits when it comes to
learning: They are as hard to move and teach as people whose brains have
become numb, and they are filled with sleep and yawning whenever they
have to learn anything.

That's so.

Yet we say that someone must have a fine and goodly share of both characters, or he won't receive the truest education, honors, or rule.

That's right.

Then, don't you think that such people will be rare?

Of course.

e Therefore they must be tested in the labors, fears, and pleasures we
mentioned previously. But they must also be exercised in many other
subjects—which we didn't mention but are adding now—to see whether
they can tolerate the most important subjects or will shrink from them
504 like the cowards who shrink from other tests.

It's appropriate to examine them like that. But what do you mean by the most important subjects?

Do you remember when we distinguished three parts in the soul, in order to help bring out what justice, moderation, courage, and wisdom each is?

If I didn't remember that, it wouldn't be just for me to hear the rest.

What about what preceded it?

What was that?

We said, I believe, that, in order to get the finest possible view of these b
matters, we would need to take a longer road that would make them plain to anyone who took it but that it was possible to give demonstrations of what they are that would be up to the standard of the previous argument.[9] And you said that that would be satisfactory. So it seems to me that our discussion at that time fell short of exactness, but whether or not it satisfied you is for you to say.

I thought you gave us good measure and so, apparently, did the others.

Any measure of such things that falls short in any way of that which c
is is not good measure, for nothing incomplete is the measure of anything, although people are sometimes of the opinion that an incomplete treatment is nonetheless adequate and makes further investigation unnecessary.

Indeed, laziness causes many people to think that.

It is a thought that a guardian of a city and its laws can well do without.

Probably so.

Well, then, he must take the longer road and put as much effort into learning as into physical training, for otherwise, as we were just saying,
he will never reach the goal of the most important subject and the most d
appropriate one for him to learn.

Aren't these virtues, then, the most important things? he asked. Is there anything even more important than justice and the other virtues we discussed?

There is something more important. However, even for the virtues themselves, it isn't enough to look at a mere sketch, as we did before, while neglecting the most complete account. It's ridiculous, isn't it, to strain every nerve to attain the utmost exactness and clarity about other things of little value and not to consider the most important things worthy of
the greatest exactness? e

It certainly is. But do you think that anyone is going to let you off without asking you what this most important subject is and what it concerns?

No, indeed, and you can ask me too. You've certainly heard the answer often enough, but now either you aren't thinking or you intend to make trouble for me again by interrupting. And I suspect the latter, for you've
often heard it said that the form of the good is the most important thing 505
to learn about and that it's by their relation to it that just things and the others become useful and beneficial. You know very well now that I am

9. See 435d.

going to say this, and, besides, that we have no adequate knowledge of it. And you also know that, if we don't know it, even the fullest possible knowledge of other things is of no benefit to us, any more than if we acquire any possession without the good of it. Or do you think that it is any advantage to have every kind of possession without the good of it?
b Or to know everything except the good, thereby knowing nothing fine or good?

No, by god, I don't.

Furthermore, you certainly know that the majority believe that pleasure is the good, while the more sophisticated believe that it is knowledge.

Indeed I do.

And you know that those who believe this can't tell us what sort of knowledge it is, however, but in the end are forced to say that it is knowledge of the good.

And that's ridiculous.

c Of course it is. They blame us for not knowing the good and then turn around and talk to us as if we did know it. They say that it is knowledge of the good—as if we understood what they're speaking about when they utter the word "good."

That's completely true.

What about those who define the good as pleasure? Are they any less full of confusion than the others? Aren't even they forced to admit that there are bad pleasures?

Most definitely.

So, I think, they have to agree that the same things are both good and bad. Isn't that true?

d Of course.

It's clear, then, isn't it, why there are many large controversies about this?

How could it be otherwise?

And isn't this also clear? In the case of just and beautiful things, many people are content with what are believed to be so, even if they aren't really so, and they act, acquire, and form their own beliefs on that basis. Nobody is satisfied to acquire things that are merely believed to be good, however, but everyone wants the things that really *are* good and disdains mere belief here.

That's right.

e Every soul pursues the good and does its utmost for its sake. It divines that the good is something but it is perplexed and cannot adequately grasp what it is or acquire the sort of stable beliefs it has about other things, and so it misses the benefit, if any, that even those other things may give. Will we allow the best people in the city, to whom we entrust everything,
506 to be so in the dark about something of this kind and of this importance?

That's the last thing we'd do.

I don't suppose, at least, that just and fine things will have acquired much of a guardian in someone who doesn't even know in what way they

are good. And I divine that no one will have adequate knowledge of them until he knows this.

You've divined well.

But won't our constitution be perfectly ordered, if a guardian who knows these things is in charge of it? b

Necessarily. But, Socrates, you must also tell us whether you consider the good to be knowledge or pleasure or something else altogether.

What a man! It's been clear for some time that other people's opinions about these matters wouldn't satisfy you.

Well, Socrates, it doesn't seem right to me for you to be willing to state other people's convictions but not your own, especially when you've spent so much time occupied with these matters. c

What? Do you think it's right to talk about things one doesn't know as if one does know them?

Not as if one knows them, he said, but one ought to be willing to state one's opinions as such.

What? Haven't you noticed that opinions without knowledge are shameful and ugly things? The best of them are blind—or do you think that those who express a true opinion without understanding are any different from blind people who happen to travel the right road?

They're no different.

Do you want to look at shameful, blind, and crooked things, then, when you might hear illuminating and fine ones from other people? d

By god, Socrates, Glaucon said, don't desert us with the end almost in sight. We'll be satisfied if you discuss the good as you discussed justice, moderation, and the rest.

That, my friend, I said, would satisfy me too, but I'm afraid that I won't be up to it and that I'll disgrace myself and look ridiculous by trying. So let's abandon the quest for what the good itself is for the time being, for even to arrive at my own view about it is too big a topic for the discussion e
we are now started on. But I am willing to tell you about what is apparently an offspring of the good and most like it. Is that agreeable to you, or would you rather we let the whole matter drop?

It is. The story about the father remains a debt you'll pay another time.

I wish that I could pay the debt in full, and you receive it instead of 507
just the interest. So here, then, is this child and offspring of the good. But be careful that I don't somehow deceive you unintentionally by giving you an illegitimate account of the child.[10]

We'll be as careful as possible, so speak on.

I will when we've come to an agreement and recalled some things that we've already said both here and many other times.

Which ones? b

10. Throughout, Socrates is punning on the word *tokos*, which means either a child or the interest on capital.

We say that there are many beautiful things and many good things, and so on for each kind, and in this way we distinguish them in words.

We do.

And beauty itself and good itself and all the things that we thereby set down as many, reversing ourselves, we set down according to a single form of each, believing that there is but one, and call it "the being" of each.

That's true.

And we say that the many beautiful things and the rest are visible but not intelligible, while the forms are intelligible but not visible.

That's completely true.

c With what part of ourselves do we see visible things?

With our sight.

And so audible things are heard by hearing, and with our other senses we perceive all the other perceptible things.

That's right.

Have you considered how lavish the maker of our senses was in making the power to see and be seen?

I can't say I have.

Well, consider it this way. Do hearing and sound need another kind of thing in order for the former to hear and the latter to be heard, a third
d thing in whose absence the one won't hear or the other be heard?

No, they need nothing else.

And if there are any others that need such a thing, there can't be many of them. Can you think of one?

I can't.

You don't realize that sight and the visible have such a need?

How so?

Sight may be present in the eyes, and the one who has it may try to use it, and colors may be present in things, but unless a third kind of thing is present, which is naturally adapted for this very purpose, you know that
e sight will see nothing, and the colors will remain unseen.

What kind of thing do you mean?

I mean what you call light.

You're right.

Then it isn't an insignificant kind of link that connects the sense of sight
508 and the power to be seen—it is a more valuable link than any other linked things have got, if indeed light is something valuable.

And, of course, it's very valuable.

Which of the gods in heaven would you name as the cause and controller of this, the one whose light causes our sight to see in the best way and the visible things to be seen?

The same one you and others would name. Obviously, the answer to your question is the sun.

And isn't sight by nature related to that god in this way?

Which way?

Sight isn't the sun, neither sight itself nor that in which it comes to be, namely, the eye. b

No, it certainly isn't.

But I think that it is the most sunlike of the senses.

Very much so.

And it receives from the sun the power it has, just like an influx from an overflowing treasury.

Certainly.

The sun is not sight, but isn't it the cause of sight itself and seen by it?

That's right.

Let's say, then, that this is what I called the offspring of the good, which the good begot as its analogue. What the good itself is in the intelligible realm, in relation to understanding and intelligible things, the sun is in the visible realm, in relation to sight and visible things. c

How? Explain a bit more.

You know that, when we turn our eyes to things whose colors are no longer illuminated by the light of day but by night lights, the eyes are dimmed and seem nearly blind, as if clear vision were no longer in them.

Of course.

Yet whenever one turns them on things illuminated by the sun, they see clearly, and vision appears in those very same eyes? d

Indeed.

Well, understand the soul in the same way: When it focuses on something illuminated by truth and what is, it understands, knows, and apparently possesses understanding, but when it focuses on what is mixed with obscurity, on what comes to be and passes away, it opines and is dimmed, changes its opinions this way and that, and seems bereft of understanding.

It does seem that way.

So that what gives truth to the things known and the power to know to the knower is the form of the good. And though it is the cause of e
knowledge and truth, it is also an object of knowledge.[11] Both knowledge and truth are beautiful things, but the good is other and more beautiful than they. In the visible realm, light and sight are rightly considered sunlike, but it is wrong to think that they are the sun, so here it is right to think of knowledge and truth as goodlike but wrong to think that either 509
of them is the good—for the good is yet more prized.

This is an inconceivably beautiful thing you're talking about, if it provides both knowledge and truth and is superior to them in beauty. You surely don't think that a thing like that could be pleasure.

Hush! Let's examine its image in more detail as follows.

How? b

You'll be willing to say, I think, that the sun not only provides visible things with the power to be seen but also with coming to be, growth, and nourishment, although it is not itself coming to be.

How could it be?

11. Accepting the emendation of *gignōskomenēs* to *gignōskomenēn*.

Therefore, you should also say that not only do the objects of knowledge owe their being known to the good, but their being is also due to it, although the good is not being, but superior to it in rank and power.

c And Glaucon comically said: By Apollo, what a daemonic superiority!

It's your own fault; you forced me to tell you my opinion about it.

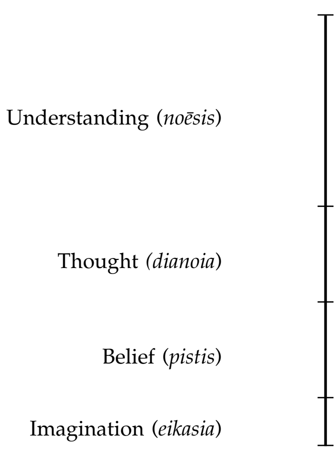
And I don't want you to stop either. So continue to explain its similarity to the sun, if you've omitted anything.

I'm certainly omitting a lot.

Well, don't, not even the smallest thing.

I think I'll have to omit a fair bit, but, as far as is possible at the moment, I won't omit anything voluntarily.

Don't.



d Understand, then, that, as we said, there are these two things, one sovereign of the intelligible kind and place, the other of the visible (I don't say "of heaven" so as not to seem to you to be playing the sophist with the name).[12] In any case, you have two kinds of thing, visible and intelligible.

Right.

It is like a line divided into two unequal sections.[13] Then divide each section—namely, that of the visible and that of the intelligible—in the same ratio as the line. In terms now of relative clarity and opacity, one subsection of the visible consists of images. And by images I mean, first,

12. The play may be on the similarity of sound between *ouranou* ("of heaven") and *horatou* ("of the visible"). More likely, Socrates is referring to the fact that *ouranou* seems to contain the word *nou*, the genitive case of *nous* ("understanding"), and relative of *noētou* ("of the intelligible"). If he said that the sun was sovereign of heaven, he might be taken to suggest in sophistical fashion that it was sovereign of the intelligible and that there was no real difference between the good and the sun.

13. The line is illustrated below:

shadows, then reflections in water and in all close-packed, smooth, and e
shiny materials, and everything of that sort, if you understand. 510

I do.

In the other subsection of the visible, put the originals of these images, namely, the animals around us, all the plants, and the whole class of manufactured things.

Consider them put.

Would you be willing to say that, as regards truth and untruth, the division is in this proportion: As the opinable is to the knowable, so the likeness is to the thing that it is like?

Certainly. b

Consider now how the section of the intelligible is to be divided.

How?

As follows: In one subsection, the soul, using as images the things that were imitated before, is forced to investigate from hypotheses, proceeding not to a first principle but to a conclusion. In the other subsection, however, it makes its way to a first principle that is *not* a hypothesis, proceeding from a hypothesis but without the images used in the previous subsection, using forms themselves and making its investigation through them.

I don't yet fully understand what you mean.

Let's try again. You'll understand it more easily after the following c
preamble. I think you know that students of geometry, calculation, and the like hypothesize the odd and the even, the various figures, the three kinds of angles, and other things akin to these in each of their investigations, as if they knew them. They make these their hypotheses and don't think it necessary to give any account of them, either to themselves or to others, as if they were clear to everyone. And going from these first principles
through the remaining steps, they arrive in full agreement. d

I certainly know that much.

Then you also know that, although they use visible figures and make claims about them, their thought isn't directed to them but to those other things that they are like. They make their claims for the sake of the square itself and the diagonal itself, not the diagonal they draw, and similarly
with the others. These figures that they make and draw, of which shadows e
and reflections in water are images, they now in turn use as images, in seeking to see those others themselves that one cannot see except by means
of thought. 511

That's true.

This, then, is the kind of thing that, on the one hand, I said is intelligible, and, on the other, is such that the soul is forced to use hypotheses in the investigation of it, not travelling up to a first principle, since it cannot reach beyond its hypotheses, but using as images those very things of which images were made in the section below, and which, by comparison to their images, were thought to be clear and to be valued as such.

I understand that you mean what happens in geometry and related b
sciences.

Then also understand that, by the other subsection of the intelligible, I mean that which reason itself grasps by the power of dialectic. It does not consider these hypotheses as first principles but truly as hypotheses—but as stepping stones to take off from, enabling it to reach the unhypothetical first principle of everything. Having grasped this principle, it reverses itself and, keeping hold of what follows from it, comes down to a conclusion without making use of anything visible at all, but only of forms themselves,
c moving on from forms to forms, and ending in forms.

I understand, if not yet adequately (for in my opinion you're speaking of an enormous task), that you want to distinguish the intelligible part of that which is, the part studied by the science of dialectic, as clearer than the part studied by the so-called sciences, for which their hypotheses are first principles. And although those who study the objects of these sciences are forced to do so by means of thought rather than sense perception, still,
d because they do not go back to a genuine first principle, but proceed from hypotheses, you don't think that they understand them, even though, given such a principle, they are intelligible. And you seem to me to call the state of the geometers thought but not understanding, thought being intermediate between opinion and understanding.

Your exposition is most adequate. Thus there are four such conditions in the soul, corresponding to the four subsections of our line: Understanding for the highest, thought for the second, belief for the third, and imaging
e for the last. Arrange them in a ratio, and consider that each shares in clarity to the degree that the subsection it is set over shares in truth.

I understand, agree, and arrange them as you say.

## Book VII

514 Next, I said, compare the effect of education and of the lack of it on our nature to an experience like this: Imagine human beings living in an underground, cavelike dwelling, with an entrance a long way up, which is both open to the light and as wide as the cave itself. They've been there since childhood, fixed in the same place, with their necks and legs fettered, able to see only in front of them, because their bonds prevent them from turning their heads around. Light is provided by a fire burning far above
b and behind them. Also behind them, but on higher ground, there is a path stretching between them and the fire. Imagine that along this path a low wall has been built, like the screen in front of puppeteers above which they show their puppets.

I'm imagining it.

Then also imagine that there are people along the wall, carrying all kinds of artifacts that project above it—statues of people and other animals,
c made out of stone, wood, and every material. And, as you'd expect, some
515 of the carriers are talking, and some are silent.

It's a strange image you're describing, and strange prisoners.

They're like us. Do you suppose, first of all, that these prisoners see anything of themselves and one another besides the shadows that the fire casts on the wall in front of them?

How could they, if they have to keep their heads motionless throughout life? b

What about the things being carried along the wall? Isn't the same true of them?

Of course.

And if they could talk to one another, don't you think they'd suppose that the names they used applied to the things they see passing before them?[1]

They'd have to.

And what if their prison also had an echo from the wall facing them? Don't you think they'd believe that the shadows passing in front of them were talking whenever one of the carriers passing along the wall was doing so?

I certainly do.

Then the prisoners would in every way believe that the truth is nothing c
other than the shadows of those artifacts.

They must surely believe that.

Consider, then, what being released from their bonds and cured of their ignorance would naturally be like, if something like this came to pass.[2] When one of them was freed and suddenly compelled to stand up, turn his head, walk, and look up toward the light, he'd be pained and dazzled and unable to see the things whose shadows he'd seen before. What do you think he'd say, if we told him that what he'd seen before was inconse- d
quential, but that now—because he is a bit closer to the things that are and is turned towards things that are more—he sees more correctly? Or, to put it another way, if we pointed to each of the things passing by, asked him what each of them is, and compelled him to answer, don't you think he'd be at a loss and that he'd believe that the things he saw earlier were truer than the ones he was now being shown?

Much truer.

And if someone compelled him to look at the light itself, wouldn't his
eyes hurt, and wouldn't he turn around and flee towards the things he's e
able to see, believing that they're really clearer than the ones he's being shown?

He would.

And if someone dragged him away from there by force, up the rough, steep path, and didn't let him go until he had dragged him into the sunlight, wouldn't he be pained and irritated at being treated that way? And when
he came into the light, with the sun filling his eyes, wouldn't he be unable 516
to see a single one of the things now said to be true?

1. Reading *parionta autous nomizein onomazein* in b5.

2. Reading *hoia tis an eiē phusei, ei* in c5.

He would be unable to see them, at least at first.

I suppose, then, that he'd need time to get adjusted before he could see things in the world above. At first, he'd see shadows most easily, then images of men and other things in water, then the things themselves. Of these, he'd be able to study the things in the sky and the sky itself more easily at night, looking at the light of the stars and the moon, than during
b the day, looking at the sun and the light of the sun.

Of course.

Finally, I suppose, he'd be able to see the sun, not images of it in water or some alien place, but the sun itself, in its own place, and be able to study it.

Necessarily so.

And at this point he would infer and conclude that the sun provides the seasons and the years, governs everything in the visible world, and is
c in some way the cause of all the things that he used to see.

It's clear that would be his next step.

What about when he reminds himself of his first dwelling place, his fellow prisoners, and what passed for wisdom there? Don't you think that he'd count himself happy for the change and pity the others?

Certainly.

And if there had been any honors, praises, or prizes among them for the one who was sharpest at identifying the shadows as they passed by and who best remembered which usually came earlier, which later, and
d which simultaneously, and who could thus best divine the future, do you think that our man would desire these rewards or envy those among the prisoners who were honored and held power? Instead, wouldn't he feel, with Homer, that he'd much prefer to "work the earth as a serf to another, one without possessions,"[3] and go through any sufferings, rather than share their opinions and live as they do?

e I suppose he would rather suffer anything than live like that.

Consider this too. If this man went down into the cave again and sat down in his same seat, wouldn't his eyes—coming suddenly out of the sun like that—be filled with darkness?

They certainly would.

And before his eyes had recovered—and the adjustment would not be quick—while his vision was still dim, if he had to compete again with
517 the perpetual prisoners in recognizing the shadows, wouldn't he invite ridicule? Wouldn't it be said of him that he'd returned from his upward journey with his eyesight ruined and that it isn't worthwhile even to try to travel upward? And, as for anyone who tried to free them and lead them upward, if they could somehow get their hands on him, wouldn't they kill him?

They certainly would.

3. *Odyssey* xi.489–90.

This whole image, Glaucon, must be fitted together with what we said b
before. The visible realm should be likened to the prison dwelling, and
the light of the fire inside it to the power of the sun. And if you interpret
the upward journey and the study of things above as the upward journey
of the soul to the intelligible realm, you'll grasp what I hope to convey,
since that is what you wanted to hear about. Whether it's true or not, only
the god knows. But this is how I see it: In the knowable realm, the form
of the good is the last thing to be seen, and it is reached only with difficulty.
Once one has seen it, however, one must conclude that it is the cause of
all that is correct and beautiful in anything, that it produces both light c
and its source in the visible realm, and that in the intelligible realm it
controls and provides truth and understanding, so that anyone who is to
act sensibly in private or public must see it.

I have the same thought, at least as far as I'm able.

Come, then, share with me this thought also: It isn't surprising that the
ones who get to this point are unwilling to occupy themselves with human
affairs and that their souls are always pressing upwards, eager to spend
their time above, for, after all, this is surely what we'd expect, if indeed
things fit the image I described before. d

It is.

What about what happens when someone turns from divine study to
the evils of human life? Do you think it's surprising, since his sight is still
dim, and he hasn't yet become accustomed to the darkness around him,
that he behaves awkwardly and appears completely ridiculous if he's
compelled, either in the courts or elsewhere, to contend about the shadows
of justice or the statues of which they are the shadows and to dispute
about the way these things are understood by people who have never
seen justice itself? e

That's not surprising at all.

No, it isn't. But anyone with any understanding would remember that 518
the eyes may be confused in two ways and from two causes, namely, when
they've come from the light into the darkness *and* when they've come from
the darkness into the light. Realizing that the same applies to the soul,
when someone sees a soul disturbed and unable to see something, he
won't laugh mindlessly, but he'll take into consideration whether it has
come from a brighter life and is dimmed through not having yet become
accustomed to the dark or whether it has come from greater ignorance
into greater light and is dazzled by the increased brilliance. Then he'll
declare the first soul happy in its experience and life, and he'll pity the
latter—but even if he chose to make fun of it, at least he'd be less ridiculous b
than if he laughed at a soul that has come from the light above.

What you say is very reasonable.

If that's true, then here's what we must think about these matters:
Education isn't what some people declare it to be, namely, putting knowl-
edge into souls that lack it, like putting sight into blind eyes. c

They do say that.

But our present discussion, on the other hand, shows that the power to
learn is present in everyone's soul and that the instrument with which
each learns is like an eye that cannot be turned around from darkness to
light without turning the whole body. This instrument cannot be turned
around from that which is coming into being without turning the whole
soul until it is able to study that which is and the brightest thing that is,
d namely, the one we call the good. Isn't that right?

Yes.

Then education is the craft concerned with doing this very thing, this turning around, and with how the soul can most easily and effectively be made to do it. It isn't the craft of putting sight into the soul. Education takes for granted that sight is there but that it isn't turned the right way or looking where it ought to look, and it tries to redirect it appropriately.

So it seems.

Now, it looks as though the other so-called virtues of the soul are akin
to those of the body, for they really aren't there beforehand but are added
e later by habit and practice. However, the virtue of reason seems to belong
above all to something more divine, which never loses its power but is
either useful and beneficial or useless and harmful, depending on the way
519 it is turned. Or have you never noticed this about people who are said to
be vicious but clever, how keen the vision of their little souls is and how
sharply it distinguishes the things it is turned towards? This shows that
its sight isn't inferior but rather is forced to serve evil ends, so that the
sharper it sees, the more evil it accomplishes.

Absolutely.

However, if a nature of this sort had been hammered at from childhood
and freed from the bonds of kinship with becoming, which have been
fastened to it by feasting, greed, and other such pleasures and which, like
b leaden weights, pull its vision downwards—if, being rid of these, it turned
to look at true things, then I say that the same soul of the same person
would see these most sharply, just as it now does the things it is presently
turned towards.

Probably so.

And what about the uneducated who have no experience of truth? Isn't
it likely—indeed, doesn't it follow necessarily from what was said before—
that they will never adequately govern a city? But neither would those
who've been allowed to spend their whole lives being educated. The former
c would fail because they don't have a single goal at which all their actions,
public and private, inevitably aim; the latter would fail because they'd
refuse to act, thinking that they had settled while still alive in the faraway
Isles of the Blessed.

That's true.

It is our task as founders, then, to compel the best natures to reach the
study we said before is the most important, namely, to make the ascent
and see the good. But when they've made it and looked sufficiently, we
d mustn't allow them to do what they're allowed to do today.

What's that?

To stay there and refuse to go down again to the prisoners in the cave and share their labors and honors, whether they are of less worth or of greater.

Then are we to do them an injustice by making them live a worse life when they could live a better one?

You are forgetting again that it isn't the law's concern to make any one e
class in the city outstandingly happy but to contrive to spread happiness throughout the city by bringing the citizens into harmony with each other through persuasion or compulsion and by making them share with each other the benefits that each class can confer on the community.[4] The law
produces such people in the city, not in order to allow them to turn 520
in whatever direction they want, but to make use of them to bind the city together.

That's true, I had forgotten.

Observe, then, Glaucon, that we won't be doing an injustice to those who've become philosophers in our city and that what we'll say to them, when we compel them to guard and care for the others, will be just. We'll say: "When people like you come to be in other cities, they're justified in
not sharing in their city's labors, for they've grown there spontaneously, b
against the will of the constitution. And what grows of its own accord and owes no debt for its upbringing has justice on its side when it isn't keen to pay anyone for that upbringing. But we've made you kings in our city and leaders of the swarm, as it were, both for yourselves and for the rest of the city. You're better and more completely educated than the others
and are better able to share in both types of life. Therefore each of you in c
turn must go down to live in the common dwelling place of the others and grow accustomed to seeing in the dark. When you are used to it, you'll see vastly better than the people there. And because you've seen the truth about fine, just, and good things, you'll know each image for what it is and also that of which it is the image. Thus, for you and for us, the city will be governed, not like the majority of cities nowadays, by people who fight over shadows and struggle against one another in order to rule—as if that were a great good—but by people who are awake rather
than dreaming, for the truth is surely this: A city whose prospective rulers d
are least eager to rule must of necessity be most free from civil war, whereas a city with the opposite kind of rulers is governed in the opposite way."

Absolutely.

Then do you think that those we've nurtured will disobey us and refuse to share the labors of the city, each in turn, while living the greater part of their time with one another in the pure realm?

It isn't possible, for we'll be giving just orders to just people. Each of e
them will certainly go to rule as to something compulsory, however, which is exactly the opposite of what's done by those who now rule in each city.

4. See 420b–421c, 462a–466c.

This is how it is. If you can find a way of life that's better than ruling
for the prospective rulers, your well-governed city will become a possibil-
521 ity, for only in it will the truly rich rule—not those who are rich in gold
but those who are rich in the wealth that the happy must have, namely,
a good and rational life. But if beggars hungry for private goods go into
public life, thinking that the good is there for the seizing, then the well-
governed city is impossible, for then ruling is something fought over, and
this civil and domestic war destroys these people and the rest of the city
as well.

That's very true.

b Can you name any life that despises political rule besides that of the true philosopher?

No, by god, I can't.

But surely it is those who are not lovers of ruling who must rule, for if they don't, the lovers of it, who are rivals, will fight over it.

Of course.

Then who will you compel to become guardians of the city, if not those who have the best understanding of what matters for good government and who have other honors than political ones, and a better life as well?

No one.

Do you want us to consider now how such people will come to be in
c our city and how—just as some are said to have gone up from Hades to
the gods—we'll lead them up to the light?

Of course I do.

This isn't, it seems, a matter of tossing a coin, but of turning a soul from a day that is a kind of night to the true day—the ascent to what is, which we say is true philosophy.

Indeed.

Then mustn't we try to discover the subjects that have the power to
d bring this about?

Of course.

So what subject is it, Glaucon, that draws the soul from the realm of becoming to the realm of what is? And it occurs to me as I'm speaking that we said, didn't we, that it is necessary for the prospective rulers to be athletes in war when they're young?

Yes, we did.

Then the subject we're looking for must also have this characteristic in addition to the former one.

Which one?

It mustn't be useless to warlike men.

If it's at all possible, it mustn't.

Now, prior to this, we educated them in music and poetry and physi-
e cal training.

We did.

And physical training is concerned with what comes into being and dies, for it oversees the growth and decay of the body.

Apparently.

So it couldn't be the subject we're looking for.

No, it couldn't. 522

Then, could it be the music and poetry we described before?

But that, if you remember, is just the counterpart of physical training. It educated the guardians through habits. Its harmonies gave them a certain harmoniousness, not knowledge; its rhythms gave them a certain rhythmical quality; and its stories, whether fictional or nearer the truth, cultivated other habits akin to these. But as for the subject you're looking for now, there's nothing like that in music and poetry. b

Your reminder is exactly to the point; there's really nothing like that in music and poetry. But, Glaucon, what is there that does have this? The crafts all seem to be base or mechanical.

How could they be otherwise? But apart from music and poetry, physical training, and the crafts, what subject is left?

Well, if we can't find anything apart from these, let's consider one of the subjects that touches all of them.

What sort of thing?

For example, that common thing that every craft, every type of thought, and every science uses and that is among the first compulsory subjects c
for everyone.

What's that?

That inconsequential matter of distinguishing the one, the two, and the three. In short, I mean number and calculation, for isn't it true that every craft and science must have a share in that?

They certainly must.

Then so must warfare.

Absolutely.

In the tragedies, at any rate, Palamedes is always showing up Agamemnon as a totally ridiculous general. Haven't you noticed? He says that, by inventing numbers, he established how many troops there were d
in the Trojan army and counted their ships and everything else—implying that they were uncounted before and that Agamemnon (if indeed he didn't know how to count) didn't even know how many feet he had? What kind of general do you think that made him?

A very strange one, if that's true.

Then won't we set down this subject as compulsory for a warrior, so e
that he is able to count and calculate?

More compulsory than anything. If, that is, he's to understand anything about setting his troops in order or if he's even to be properly human.

Then do you notice the same thing about this subject that I do?

What's that?

That this turns out to be one of the subjects we were looking for that naturally lead to understanding. But no one uses it correctly, namely, as something that is really fitted in every way to draw one towards being. 523

What do you mean?

I'll try to make my view clear as follows: I'll distinguish for myself the things that do or don't lead in the direction we mentioned, and you must study them along with me and either agree or disagree, and that way we may come to know more clearly whether things are indeed as I divine.

Point them out.

I'll point out, then, if you can grasp it, that some sense perceptions *don't*
summon the understanding to look into them, because the judgment of
b sense perception is itself adequate, while others encourage it in every
way to look into them, because sense perception seems to produce no
sound result.

You're obviously referring to things appearing in the distance and to *trompe l'oeil* paintings.

You're not quite getting my meaning.

Then what do you mean?

The ones that don't summon the understanding are all those that don't
go off into opposite perceptions at the same time. But the ones that do go
c off in that way I call *summoners*—whenever sense perception doesn't de-
clare one thing any more than its opposite, no matter whether the object
striking the senses is near at hand or far away. You'll understand my
meaning better if I put it this way: These, we say, are three fingers—the
smallest, the second, and the middle finger.

That's right.

Assume that I'm talking about them as being seen from close by. Now, this is my question about them.

What?

It's apparent that each of them is equally a finger, and it makes no
difference in this regard whether the finger is seen to be in the middle or
d at either end, whether it is dark or pale, thick or thin, or anything else of
that sort, for in all these cases, an ordinary soul isn't compelled to ask the
understanding what a finger is, since sight doesn't suggest to it that a
finger is at the same time the opposite of a finger.

No, it doesn't.

Therefore, it isn't likely that anything of that sort would summon or
e awaken the understanding.

No, it isn't.

But what about the bigness and smallness of fingers? Does sight perceive
them adequately? Does it make no difference to it whether the finger is
in the middle or at the end? And is it the same with the sense of touch,
as regards the thick and the thin, the hard and the soft? And do the other
senses reveal such things clearly and adequately? Doesn't each of them
524 rather do the following: The sense set over the hard is, in the first place,
of necessity also set over the soft, and it reports to the soul that the same
thing is perceived by it to be both hard and soft?

That's right.

And isn't it necessary that in such cases the soul is puzzled as to what this sense means by the hard, if it indicates that the same thing is also

soft, or what it means by the light and the heavy, if it indicates that the heavy is light, or the light, heavy?

Yes, indeed, these are strange reports for the soul to receive, and they b
do demand to be looked into.

Then it's likely that in such cases the soul, summoning calculation and understanding, first tries to determine whether each of the things announced to it is one or two.

Of course.

If it's evidently two, won't each be evidently distinct and one?

Yes.

Then, if each is one, and both two, the soul will understand that the
two are separate, for it wouldn't understand the inseparable to be two,
but rather one. c

That's right.

Sight, however, saw the big and small, not as separate, but as mixed up together. Isn't that so?

Yes.

And in order to get clear about all this, understanding was compelled to see the big and the small, not as mixed up together, but as separate—the opposite way from sight.

True.

And isn't it from these cases that it first occurs to us to ask what the big is and what the small is?

Absolutely.

And, because of this, we called the one the intelligible and the other the visible.

That's right. d

This, then, is what I was trying to express before, when I said that some things summon thought, while others don't. Those that strike the relevant sense at the same time as their opposites I call summoners, those that don't do this do not awaken understanding.

Now I understand, and I think you're right.

Well, then, to which of them do number and the one belong?

I don't know.

Reason it out from what was said before. If the one is adequately seen
itself by itself or is so perceived by any of the other senses, then, as we
were saying in the case of fingers, it wouldn't draw the soul towards being.
But if something opposite to it is always seen at the same time, so that e
nothing is apparently any more one than the opposite of one, then something would be needed to judge the matter. The soul would then be
puzzled, would look for an answer, would stir up its understanding, and
would ask what the one itself is. And so this would be among the subjects
that lead the soul and turn it around towards the study of that which is. 525

But surely the sight of the one does possess this characteristic to a remarkable degree, for we see the same thing to be both one and an unlimited number at the same time.

Then, if this is true of the one, won't it also be true of all numbers?

Of course.

Now, calculation and arithmetic are wholly concerned with numbers.

That's right.

b Then evidently they lead us towards truth.

Supernaturally so.

Then they belong, it seems, to the subjects we're seeking. They are compulsory for warriors because of their orderly ranks and for philosophers because they have to learn to rise up out of becoming and grasp being, if they are ever to become rational.

That's right.

And our guardian must be both a warrior and a philosopher.

Certainly.

Then it would be appropriate, Glaucon, to legislate this subject for those who are going to share in the highest offices in the city and to persuade them to turn to calculation and take it up, not as laymen do, but staying
c with it until they reach the study of the natures of the numbers by means of understanding itself, nor like tradesmen and retailers, for the sake of buying and selling, but for the sake of war and for ease in turning the soul around, away from becoming and towards truth and being.

Well put.

Moreover, it strikes me, now that it has been mentioned, how sophisticated the subject of calculation is and in how many ways it is useful for
d our purposes, provided that one practices it for the sake of knowing rather than trading.

How is it useful?

In the very way we were talking about. It leads the soul forcibly upward and compels it to discuss the numbers themselves, never permitting anyone to propose for discussion numbers attached to visible or tangible bodies. You know what those who are clever in these matters are like: If, in the course of the argument, someone tries to divide the one itself, they laugh
e and won't permit it. If you divide it, they multiply it, taking care that one thing never be found to be many parts rather than one.

That's very true.

Then what do you think would happen, Glaucon, if someone were to
526 ask them: "What kind of numbers are you talking about, in which the one is as you assume it to be, each one equal to every other, without the least difference and containing no internal parts?"

I think they'd answer that they are talking about those numbers that can be grasped only in thought and can't be dealt with in any other way.

b Then do you see that it's likely that this subject really is compulsory for us, since it apparently compels the soul to use understanding itself on the truth itself?

Indeed, it most certainly does do that.

And what about those who are naturally good at calculation or reasoning? Have you already noticed that they're naturally sharp, so to speak,

in all subjects, and that those who are slow at it, if they're educated and exercised in it, even if they're benefited in no other way, nonetheless improve and become generally sharper than they were?

That's true.

Moreover, I don't think you'll easily find subjects that are harder to learn or practice than this. c

No, indeed.

Then, for all these reasons, this subject isn't to be neglected, and the best natures must be educated in it.

I agree.

Let that, then, be one of our subjects. Second, let's consider whether the subject that comes next is also appropriate for our purposes.

What subject is that? Do you mean geometry?

That's the very one I had in mind.

Insofar as it pertains to war, it's obviously appropriate, for when it d comes to setting up camp, occupying a region, concentrating troops, deploying them, or with regard to any of the other formations an army adopts in battle or on the march, it makes all the difference whether someone is a geometer or not.

But, for things like that, even a little geometry—or calculation for that matter—would suffice. What we need to consider is whether the greater and more advanced part of it tends to make it easier to see the form of the good. And we say that anything has that tendency if it compels the e soul to turn itself around towards the region in which lies the happiest of the things that are, the one the soul must see at any cost.

You're right.

Therefore, if geometry compels the soul to study being, it's appropriate, but if it compels it to study becoming, it's inappropriate.

So we've said, at any rate.

Now, no one with even a little experience of geometry will dispute that 527 this science is entirely the opposite of what is said about it in the accounts of its practitioners.

How do you mean?

They give ridiculous accounts of it, though they can't help it, for they speak like practical men, and all their accounts refer to doing things. They talk of "squaring," "applying," "adding," and the like, whereas the entire subject is pursued for the sake of knowledge. b

Absolutely.

And mustn't we also agree on a further point?

What is that?

That their accounts are for the sake of knowing what always is, not what comes into being and passes away.

That's easy to agree to, for geometry *is* knowledge of what always is.

Then it draws the soul towards truth and produces philosophic thought by directing upwards what we now wrongly direct downwards.

As far as anything possibly can.

c Then as far as *we* possibly can, we must require those in your fine
city not to neglect geometry in any way, for even its by-products are
not insignificant.

What are they?

The ones concerned with war that you mentioned. But we also surely know that, when it comes to better understanding any subject, there is a world of difference between someone who has grasped geometry and someone who hasn't.

Yes, by god, a world of difference.

Then shall we set this down as a second subject for the young?

Let's do so, he said.

And what about astronomy? Shall we make it the third? Or do you dis-
d agree?

That's fine with me, for a better awareness of the seasons, months, and years is no less appropriate for a general than for a farmer or navigator.

You amuse me: You're like someone who's afraid that the majority will
think he is prescribing useless subjects. It's no easy task—indeed it's very
difficult—to realize that in every soul there is an instrument that is purified
and rekindled by such subjects when it has been blinded and destroyed
e by other ways of life, an instrument that it is more important to preserve
than ten thousand eyes, since only with it can the truth be seen. Those
who share your belief that this is so will think you're speaking incredibly
well, while those who've never been aware of it will probably think you're
talking nonsense, since they see no benefit worth mentioning in these
subjects. So decide right now which group you're addressing. Or are your
528 arguments for neither of them but mostly for your own sake—though you
won't begrudge anyone else whatever benefit he's able to get from them?

The latter: I want to speak, question, and answer mostly for my own sake.

Then let's fall back to our earlier position, for we were wrong just now about the subject that comes after geometry.

What was our error?

After plane surfaces, we went on to revolving solids before dealing with
solids by themselves. But the right thing to do is to take up the third
b dimension right after the second. And this, I suppose, consists of cubes
and of whatever shares in depth.

You're right, Socrates, but this subject hasn't been developed yet.

There are two reasons for that: First, because no city values it, this
difficult subject is little researched. Second, the researchers need a director,
for, without one, they won't discover anything. To begin with, such a
director is hard to find, and, then, even if he could be found, those who
c currently do research in this field would be too arrogant to follow him. If
an entire city helped him to supervise it, however, and took the lead in
valuing it, then he would be followed. And, if the subject was consistently
and vigorously pursued, it would soon be developed. Even now, when it
isn't valued and is held in contempt by the majority and is pursued by

researchers who are unable to give an account of its usefulness, nevertheless, in spite of all these handicaps, the force of its charm has caused it to develop somewhat, so that it wouldn't be surprising if it were further developed even as things stand.

The subject *has* outstanding charm. But explain more clearly what you d
were saying just now. The subject that deals with plane surfaces you took to be geometry.

Yes.

And at first you put astronomy after it, but later you went back on that.

In my haste to go through them all, I've only progressed more slowly. The subject dealing with the dimension of depth was next. But because it is in a ridiculous state, I passed it by and spoke of astronomy (which deals with the motion of things having depth) after geometry. e

That's right.

Let's then put astronomy as the fourth subject, on the assumption that solid geometry will be available if a city takes it up.

That seems reasonable. And since you reproached me before for praising astronomy in a vulgar manner, I'll now praise it your way, for I think it's clear to everyone that astronomy compels the soul to look upward and 529
leads it from things here to things there.

It may be obvious to everyone except me, but that's not my view about it.

Then what *is* your view?

As it's practiced today by those who teach philosophy, it makes the soul look very much downward.

How do you mean?

In my opinion, your conception of "higher studies" is a good deal too generous, for if someone were to study something by leaning his head back and studying ornaments on a ceiling, it looks as though you'd say he's studying not with his eyes but with his understanding. Perhaps you're b
right, and I'm foolish, but I can't conceive of any subject making the soul look upward except one concerned with that which is, and that which is is invisible. If anyone attempts to learn something about sensible things, whether by gaping upward or squinting downward, I'd claim—since there's no knowledge of such things—that he never learns anything and that, even if he studies lying on his back on the ground or floating on it c
in the sea, his soul is looking not up but down.

You're right to reproach me, and I've been justly punished, but what did you mean when you said that astronomy must be learned in a different way from the way in which it is learned at present if it is to be a useful subject for our purposes?

It's like this: We should consider the decorations in the sky to be the most beautiful and most exact of visible things, seeing that they're embroidered on a visible surface. But we should consider their motions to fall far short of the true ones—motions that are really fast or slow as measured d
in true numbers, that trace out true geometrical figures, that are all in

relation to one another, and that are the true motions of the things carried along in them. And these, of course, must be grasped by reason and thought, not by sight. Or do you think otherwise?

Not at all.

Therefore, we should use the embroidery in the sky as a model in the study of these other things. If someone experienced in geometry were to come upon plans very carefully drawn and worked out by Daedalus or
e some other craftsman or artist, he'd consider them to be very finely executed, but he'd think it ridiculous to examine them seriously in order to
530 find the truth in them about the equal, the double, or any other ratio.

How could it be anything other than ridiculous?

Then don't you think that a real astronomer will feel the same when he looks at the motions of the stars? He'll believe that the craftsman of the heavens arranged them and all that's in them in the finest way possible for such things. But as for the ratio of night to day, of days to a month, of a month to a year, or of the motions of the stars to any of them or to each other, don't you think he'll consider it strange to believe that they're
b always the same and never deviate anywhere at all or to try in any sort of way to grasp the truth about them, since they're connected to body and visible?

That's my opinion anyway, now that I hear it from you.

Then if, by really taking part in astronomy, we're to make the naturally intelligent part of the soul useful instead of useless, let's study astronomy by means of problems, as we do geometry, and leave the things in the
c sky alone.

The task you're prescribing is a lot harder than anything now attempted in astronomy.

And I suppose that, if we are to be of any benefit as lawgivers, our prescriptions for the other subjects will be of the same kind. But have you any other appropriate subject to suggest?

Not offhand.

Well, there isn't just one form of motion but several. Perhaps a wise
d person could list them all, but there are two that are evident even to us.

What are they?

Besides the one we've discussed, there is also its counterpart.

What's that?

It's likely that, as the eyes fasten on astronomical motions, so the ears fasten on harmonic ones, and that the sciences of astronomy and harmonics are closely akin. This is what the Pythagoreans say, Glaucon, and we agree, don't we?

We do.

e Therefore, since the subject is so huge, shouldn't we ask them what they have to say about harmonic motions and whether there is anything else besides them, all the while keeping our own goal squarely in view?

What's that?

That those whom we are rearing should never try to learn anything incomplete, anything that doesn't reach the end that everything should reach—the end we mentioned just now in the case of astronomy. Or don't you know that people do something similar in harmonics? Measuring 531
audible consonances and sounds against one another, they labor in vain, just like present-day astronomers.

Yes, by the gods, and pretty ridiculous they are too. They talk about something they call a "dense interval" or quartertone—putting their ears to their instruments like someone trying to overhear what the neighbors are saying. And some say that they hear a tone in between and that *it* is the shortest interval by which they must measure, while others argue that this tone sounds the same as a quarter tone. Both put ears before b
understanding.

You mean those excellent fellows who torment their strings, torturing them, and stretching them on pegs. I won't draw out the analogy by speaking of blows with the plectrum or the accusations or denials and boastings on the part of the strings; instead I'll cut it short by saying that these aren't the people I'm talking about. The ones I mean are the ones we just said we were going to question about harmonics, for they do the same as the astronomers. They seek out the numbers that are to be found c
in these audible consonances, but they do not make the ascent to problems. They don't investigate, for example, which numbers are consonant and which aren't or what the explanation is of each.

But that would be a superhuman task.

Yet it's useful in the search for the beautiful and the good. But pursued for any other purpose, it's useless.

Probably so.

Moreover, I take it that, if inquiry into all the subjects we've mentioned brings out their association and relationship with one another and draws conclusions about their kinship, it does contribute something to our goal d
and isn't labor in vain, but that otherwise it is in vain.

I, too, divine that this is true. But you're still talking about a very big task, Socrates.

Do you mean the prelude, or what? Or don't you know that all these subjects are merely preludes to the song itself that must also be learned? Surely you don't think that people who are clever in these matters are dialecticians. e

No, by god, I don't. Although I have met a few exceptions.

But did it ever seem to you that those who can neither give nor follow an account know anything at all of the things we say they must know?

My answer to that is also no.

Then isn't this at last, Glaucon, the song that dialectic sings? It is intel- 532
ligible, but it is imitated by the power of sight. We said that sight tries at last to look at the animals themselves, the stars themselves, and, in the end, at the sun itself. In the same way, whenever someone tries through

argument and apart from all sense perceptions to find the being itself
of each thing and doesn't give up until he grasps the good itself with
b understanding itself, he reaches the end of the intelligible, just as the other
reached the end of the visible.

Absolutely.

And what about this journey? Don't you call it dialectic?

I do.

Then the release from bonds and the turning around from shadows to
statues and the light of the fire and, then, the way up out of the cave to
the sunlight and, there, the continuing inability to look at the animals, the
plants, and the light of the sun, but the newly acquired ability to look at
c divine images in water and shadows of the things that are, rather than,
as before, merely at shadows of statues thrown by another source of light
that is itself a shadow in relation to the sun—all this business of the crafts
we've mentioned has the power to awaken the best part of the soul and
lead it upward to the study of the best among the things that are, just as,
before, the clearest thing in the body was led to the brightest thing in the
d bodily and visible realm.

I accept that this is so, even though it seems very hard to accept in one
way and hard not to accept in another. All the same, since we'll have to
return to these things often in the future, rather than having to hear them
just once now, let's assume that what you've said is so and turn to the
song itself, discussing it in the same way as we did the prelude. So tell
us: what is the sort of power dialectic has, what forms is it divided into,
and what paths does it follow? For these lead at last, it seems, towards
e that place which is a rest from the road, so to speak, and an end of
journeying for the one who reaches it.

533 You won't be able to follow me any longer, Glaucon, even though there
is no lack of eagerness on my part to lead you, for you would no longer
be seeing an image of what we're describing, but the truth itself. At any
rate, that's how it seems to me. That it is really so is not worth insisting
on any further. But that there is some such thing to be seen, *that* is something
we must insist on. Isn't that so?

Of course.

And mustn't we also insist that the power of dialectic could reveal it
only to someone experienced in the subjects we've described and that it
cannot reveal it in any other way?

That too is worth insisting on.

b At any rate, no one will dispute it when we say that there is no other
inquiry that systematically attempts to grasp with respect to each thing
itself what the being of it is, for all the other crafts are concerned with
human opinions and desires, with growing or construction, or with the
care of growing or constructed things. And as for the rest, I mean geometry
and the subjects that follow it, we described them as to some extent grasping
what is, for we saw that, while they do dream about what is, they are
unable to command a waking view of it as long as they make use of

hypotheses that they leave untouched and that they cannot give any account of. What mechanism could possibly turn any agreement into knowledge when it begins with something unknown and puts together the conclusion and the steps in between from what is unknown? c

None.

Therefore, dialectic is the only inquiry that travels this road, doing away with hypotheses and proceeding to the first principle itself, so as to be d
secure. And when the eye of the soul is really buried in a sort of barbaric bog, dialectic gently pulls it out and leads it upwards, using the crafts we described to help it and cooperate with it in turning the soul around. From force of habit, we've often called these crafts sciences or kinds of knowledge, but they need another name, clearer than opinion, darker than knowledge. We called them thought somewhere before.[5] But I presume that we won't dispute about a name when we have so many more important matters to investigate. e

Of course not.

It will therefore be enough to call the first section knowledge, the second thought, the third belief, and the fourth imaging, just as we did before. The last two together we call opinion, the other two, intellect. Opinion is 534
concerned with becoming, intellect with being. And as being is to becoming, so intellect is to opinion, and as intellect is to opinion, so knowledge is to belief and thought to imaging. But as for the ratios between the things these are set over and the division of either the opinable or the intelligible section into two, let's pass them by, Glaucon, lest they involve us in arguments many times longer than the ones we've already gone through.

I agree with you about the others in any case, insofar as I'm able to follow. b

Then, do you call someone who is able to give an account of the being of each thing dialectical? But insofar as he's unable to give an account of something, either to himself or to another, do you deny that he has any understanding of it?

How could I do anything else?

Then the same applies to the good. Unless someone can distinguish in an account the form of the good from everything else, can survive all refutation, as if in a battle, striving to judge things not in accordance with c
opinion but in accordance with being, and can come through all this with his account still intact, you'll say that he doesn't know the good itself or any other good. And if he gets hold of some image of it, you'll say that it's through opinion, not knowledge, for he is dreaming and asleep throughout his present life, and, before he wakes up here, he will arrive in Hades and go to sleep forever. d

Yes, by god, I'll certainly say all of that.

Then, as for those children of yours whom you're rearing and educating in theory, if you ever reared them in fact, I don't think that you'd allow

5. See 511d–e.

them to rule in your city or be responsible for the most important things while they are as irrational as incommensurable lines.

Certainly not.

Then you'll legislate that they are to give most attention to the education that will enable them to ask and answer questions most knowledgeably?

e I'll legislate it along with you.

Then do you think that we've placed dialectic at the top of the other subjects like a coping stone and that no other subject can rightly be placed above it, but that our account of the subjects that a future ruler must learn
535 has come to an end?

Probably so.

Then it remains for you to deal with the distribution of these subjects, with the question of to whom we'll assign them and in what way.

That's clearly next.

Do you remember what sort of people we chose in our earlier selection of rulers?[6]

Of course I do.

In the other respects, the same natures have to be chosen: we have to select the most stable, the most courageous, and as far as possible the most graceful. In addition, we must look not only for people who have a noble
b and tough character but for those who have the natural qualities conducive to this education of ours.

Which ones exactly?

They must be keen on the subjects and learn them easily, for people's souls give up much more easily in hard study than in physical training, since the pain—being peculiar to them and not shared with their body—is more their own.

That's true.

c We must also look for someone who has got a good memory, is persistent, and is in every way a lover of hard work. How else do you think he'd be willing to carry out both the requisite bodily labors and also complete so much study and practice?

Nobody would, unless his nature was in every way a good one.

In any case, the present error, which as we said before explains why philosophy isn't valued, is that she's taken up by people who are unworthy of her, for illegitimate students shouldn't be allowed to take her up, but only legitimate ones.

How so?

d In the first place, no student should be lame in his love of hard work, really loving one half of it, and hating the other half. This happens when someone is a lover of physical training, hunting, or any kind of bodily labor and isn't a lover of learning, listening, or inquiry, but hates the work involved in them. And someone whose love of hard work tends in the opposite direction is also lame.

6. See 412b ff.

That's very true.

Similarly with regard to truth, won't we say that a soul is maimed if it hates a voluntary falsehood, cannot endure to have one in itself, and is greatly angered when it exists in others, but is nonetheless content to accept e
an involuntary falsehood, isn't angry when it is caught being ignorant, and bears its lack of learning easily, wallowing in it like a pig?

Absolutely. 536

And with regard to moderation, courage, high-mindedness, and all the other parts of virtue, it is also important to distinguish the illegitimate from the legitimate, for when either a city or an individual doesn't know how to do this, it unwittingly employs the lame and illegitimate as friends or rulers for whatever services it wants done.

That's just how it is.

So we must be careful in all these matters, for if we bring people who are sound of limb and mind to so great a subject and training, and educate them in it, even justice itself won't blame us, and we'll save the city and b
its constitution. But if we bring people of a different sort, we'll do the opposite, and let loose an even greater flood of ridicule upon philosophy.

And it would be shameful to do that.

It certainly would. But I seem to have done something a bit ridiculous myself just now.

What's that?

I forgot that we were only playing, and so I spoke too vehemently. But I looked upon philosophy as I spoke, and seeing her undeservedly c
besmirched, I seem to have lost my temper and said what I had to say too earnestly, as if I were angry with those responsible for it.

That certainly wasn't my impression as I listened to you.

But it was mine as I was speaking. In any case, let's not forget that in our earlier selection we chose older people but that that isn't permitted in this one, for we mustn't believe Solon[7] when he says that as someone grows older he's able to learn a lot. He can do that even less well than he d
can run races, for all great and numerous labors belong to the young.

Necessarily.

Therefore, calculation, geometry, and all the preliminary education required for dialectic must be offered to the future rulers in childhood, and not in the shape of compulsory learning either.

Why's that?

Because no free person should learn anything like a slave. Forced bodily e
labor does no harm to the body, but nothing taught by force stays in the soul.

That's true.

Then don't use force to train the children in these subjects; use play instead. That way you'll also see better what each of them is naturally fitted for. 537

7. Athenian statesman, lawgiver, and poet (c. 640–560).

That seems reasonable.

Do you remember that we stated that the children were to be led into war on horseback as observers and that, wherever it is safe to do so, they should be brought close and taste blood, like puppies?

I remember.

In all these things—in labors, studies, and fears—the ones who always show the greatest aptitude are to be inscribed on a list.

b At what age?

When they're released from compulsory physical training, for during that period, whether it's two or three years, young people are incapable of doing anything else, since weariness and sleep are enemies of learning. At the same time, how they fare in this physical training is itself an important test.

Of course it is.

And after that, that is to say, from the age of twenty, those who are chosen will also receive more honors than the others. Moreover, the subjects they learned in no particular order as children they must now bring to-
c gether to form a unified vision of their kinship both with one another and
with the nature of that which is.

At any rate, only learning of that sort holds firm in those who receive it.

It is also the greatest test of who is naturally dialectical and who isn't, for anyone who can achieve a unified vision is dialectical, and anyone who can't isn't.

I agree.

Well, then, you'll have to look out for the ones who most of all have
this ability in them and who also remain steadfast in their studies, in war,
d and in the other activities laid down by law. And after they have reached
their thirtieth year, you'll select them in turn from among those chosen earlier and assign them yet greater honors. Then you'll have to test them by means of the power of dialectic, to discover which of them can relinquish his eyes and other senses, going on with the help of truth to that which by itself is. And this is a task that requires great care.

What's the main reason for that?

Don't you realize what a great evil comes from dialectic as it is cur-
e rently practiced?

What evil is that?

Those who practice it are filled with lawlessness.

They certainly are.

Do you think it's surprising that this happens to them? Aren't you sympathetic?

Why isn't it surprising? And why should I be sympathetic?

Because it's like the case of a child brought up surrounded by much
wealth and many flatterers in a great and numerous family, who finds
538 out, when he has become a man, that he isn't the child of his professed
parents and that he can't discover his real ones. Can you divine what the

attitude of someone like that would be to the flatterers, on the one hand, and to his supposed parents, on the other, before he knew about his parentage, and what it would be when he found out? Or would you rather hear what I divine about it?

I'd rather hear your views.

Well, then, I divine that during the time that he didn't know the truth,
he'd honor his father, mother, and the rest of his supposed family more
than he would the flatterers, that he'd pay greater attention to their needs, b
be less likely to treat them lawlessly in word or deed, and be more likely
to obey them than the flatterers in any matters of importance.

Probably so.

When he became aware of the truth, however, his honor and enthusiasm
would lessen for his family and increase for the flatterers, he'd obey the
latter far more than before, begin to live in the way that they did, and
keep company with them openly, and, unless he was very decent by nature, c
he'd eventually care nothing for that father of his or any of the rest of his
supposed family.

All this would probably happen as you say, but in what way is it an image of those who take up arguments?

As follows. We hold from childhood certain convictions about just and fine things; we're brought up with them as with our parents, we obey and honor them.

Indeed, we do.

There are other ways of living, however, opposite to these and full of d
pleasures, that flatter the soul and attract it to themselves but which don't
persuade sensible people, who continue to honor and obey the convictions
of their fathers.

That's right.

And then a questioner comes along and asks someone of this sort, "What
is the fine?" And, when he answers what he has heard from the traditional
lawgiver, the argument refutes him, and by refuting him often and in
many places shakes him from his convictions, and makes him believe that
the fine is no more fine than shameful, and the same with the just, the
good, and the things he honored most. What do you think his attitude e
will be then to honoring and obeying his earlier convictions?

Of necessity he won't honor or obey them in the same way.

Then, when he no longer honors and obeys those convictions and can't
discover the true ones, will he be likely to adopt any other way of life
than that which flatters him? 539

No, he won't.

And so, I suppose, from being law-abiding he becomes lawless.

Inevitably.

Then, as I asked before, isn't it only to be expected that this is what happens to those who take up arguments in this way, and don't they therefore deserve a lot of sympathy?

Yes, and they deserve pity too.

Then, if you don't want your thirty-year-olds to be objects of such pity, you'll have to be extremely careful about how you introduce them to arguments.

That's right.

And isn't it one lasting precaution not to let them taste arguments while
they're young? I don't suppose that it has escaped your notice that, when
b young people get their first taste of arguments, they misuse it by treating
it as a kind of game of contradiction. They imitate those who've refuted
them by refuting others themselves, and, like puppies, they enjoy dragging
and tearing those around them with their arguments.

They're excessively fond of it.

Then, when they've refuted many and been refuted by them in turn,
they forcefully and quickly fall into disbelieving what they believed before.
c And, as a result, they themselves and the whole of philosophy are discred-
ited in the eyes of others.

That's very true.

But an older person won't want to take part in such madness. He'll
imitate someone who is willing to engage in discussion in order to look
for the truth, rather than someone who plays at contradiction for sport.
He'll be more sensible himself and will bring honor rather than discredit
d to the philosophical way of life.

That's right.

And when we said before that those allowed to take part in arguments should be orderly and steady by nature, not as nowadays, when even the unfit are allowed to engage in them—wasn't all that also said as a precaution?

Of course.

Then if someone continuously, strenuously, and exclusively devotes himself to participation in arguments, exercising himself in them just as he did in the bodily physical training, which is their counterpart, would that be enough?

e Do you mean six years or four?

It doesn't matter. Make it five. And after that, you must make them go
down into the cave again, and compel them to take command in matters
of war and occupy the other offices suitable for young people, so that they
won't be inferior to the others in experience. But in these, too, they must
be tested to see whether they'll remain steadfast when they're pulled this
540 way and that or shift their ground.

How much time do you allow for that?

Fifteen years. Then, at the age of fifty, those who've survived the tests
and been successful both in practical matters and in the sciences must be
led to the goal and compelled to lift up the radiant light of their souls to
what itself provides light for everything. And once they've seen the good
itself, they must each in turn put the city, its citizens, and themselves in
b order, using it as their model. Each of them will spend most of his time

with philosophy, but, when his turn comes, he must labor in politics and rule for the city's sake, not as if he were doing something fine, but rather something that has to be done. Then, having educated others like himself to take his place as guardians of the city, he will depart for the Isles of the Blessed and dwell there. And, if the Pythia agrees, the city will publicly establish memorials and sacrifices to him as a daemon, but if not, then as c
a happy and divine human being.

Like a sculptor, Socrates, you've produced ruling men that are completely fine.

And ruling women, too, Glaucon, for you mustn't think that what I've said applies any more to men than it does to women who are born with the appropriate natures.

That's right, if indeed they are to share everything equally with the men, as we said they should.

Then, do you agree that the things we've said about the city and its d
constitution aren't altogether wishful thinking, that it's hard for them to come about, but not impossible? And do you also agree that they can come about only in the way we indicated, namely, when one or more true philosophers come to power in a city, who despise present honors, thinking them slavish and worthless, and who prize what is right and the honors that come from it above everything, and regard justice as the most impor- e
tant and most essential thing, serving it and increasing it as they set their city in order?

How will they do that?

They'll send everyone in the city who is over ten years old into the country. Then they'll take possession of the children, who are now free 541
from the ethos of their parents, and bring them up in their own customs and laws, which are the ones we've described. This is the quickest and easiest way for the city and constitution we've discussed to be established, become happy, and bring most benefit to the people among whom it's established.

That's by far the quickest and easiest way. And in my opinion, Socrates, you've described well how it would come into being, if it ever did. b

Then, isn't that enough about this city and the man who is like it? Surely it is clear what sort of man we'll say he has to be.

It is clear, he said. And as for your question, I think that we have reached the end of this topic.

## Book VIII

Well, then, Glaucon, we've agreed to the following: If a city is to achieve 543
the height of good government, wives must be in common, children and all their education must be in common, their way of life, whether in peace or war, must be in common, and their kings must be those among them who have proved to be best, both in philosophy and in warfare.

We have agreed to that, he said.

Moreover, we also agreed that, as soon as the rulers are established,
b they will lead the soldiers and settle them in the kind of dwellings we
described, which are in no way private but common to all. And we also
agreed, if you remember, what kind of possessions they will have.

I remember that we thought that none of them should acquire any of
the things that the other rulers now do but that, as athletes of war and
guardians, they should receive their yearly upkeep from the other citizens
c as a wage for their guardianship and look after themselves and the rest
of the city.[1]

That's right. But since we have completed this discussion, let's recall
the point at which we began the digression that brought us here, so that
we can continue on the same path from where we left off.

That isn't difficult, for, much the same as now, you were talking as if
you had completed the description of the city.[2] You said that you would
class both the city you described and the man who is like it as good, even
d though, as it seems, you had a still finer city and man to tell us about.
544 But, in any case, you said that, if this city was the right one, the others were
faulty. You said, if I remember, that there were four types of constitution
remaining that are worth discussing, each with faults that we should
observe, and we should do the same for the people who are like them.
Our aim was to observe them all, agree which man is best and which
worst, and then determine whether the best is happiest and the worst
most wretched or whether it's otherwise. I was asking you which four
constitutions you had in mind when Polemarchus and Adeimantus inter-
b rupted.[3] And that's when you took up the discussion that led here.

That's absolutely right.

Well, then, like a wrestler, give me the same hold again, and when I
ask the same question, try to give the answer you were about to give before.

If I can.

I'd at least like to hear what four constitutions you meant.

c That won't be difficult since they're the ones for which we have names.
First, there's the constitution praised by most people, namely, the Cretan
or Laconian.[4] The second, which is also second in the praise it receives, is
called oligarchy and is filled with a host of evils. The next in order, and
antagonistic to it, is democracy. And finally there is genuine tyranny,
surpassing all of them, the fourth and last of the diseased cities. Or can
you think of another type of constitution—I mean another whose form is
distinct from these? Dynasties and purchased kingships and other constitu-

1. See 414d–20b.
2. See 445c–e.
3. See 449b ff.
4. I.e., the Spartan constitution.

tions of that sort, which one finds no less among the barbarians than d among the Greeks, are somewhere intermediate between these four.

At any event, many strange ones are indeed talked about.

And do you realize that of necessity there are as many forms of human character as there are of constitutions? Or do you think that constitutions are born “from oak or rock”[5] and not from the characters of the people who live in the cities governed by them, which tip the scales, so to speak, and drag the rest along with them? e

No, I don’t believe they come from anywhere else.

Then, if there are five forms of city, there must also be five forms of the individual soul.

Of course.

Now, we’ve already described the one that’s like aristocracy, which is rightly said to be good and just.

We have. 545

Then mustn’t we next go through the inferior ones, namely, the victory-loving and honor-loving (which corresponds to the Laconian form of constitution), followed by the oligarchic, the democratic, and the tyrannical, so that, having discovered the most unjust of all, we can oppose him to the most just? In this way, we can complete our investigation into how pure justice and pure injustice stand, with regard to the happiness or wretchedness of those who possess them, and either be persuaded by Thrasymachus to practice injustice or by the argument that is now coming to light to practice justice. b

That’s absolutely what we have to do.

Then, just as we began by looking for the virtues of character in a constitution, before looking for them in the individual, thinking that they’d be clearer in the former, shouldn’t we first examine the honor-loving constitution? I don’t know what other name there is for it, but it should be called either timocracy or timarchy. Then shouldn’t we examine an individual who is related to that constitution, and, after that, oligarchy and an oligarchic person, and democracy and a democratic person? And finally, having come to a city under a tyrant and having examined it, c shouldn’t we look into a tyrannical soul, trying in this way to become adequate judges of the topic we proposed to ourselves?

That would be a reasonable way for us to go about observing and judging, at any rate.

Well, then, let’s try to explain how timocracy emerges from aristocracy. Or is it a simple principle that the cause of change in any constitution is civil war breaking out within the ruling group itself, but that if this group—however small it is—remains of one mind, the constitution cannot be d changed?

Yes, that’s right.

5. See e.g. *Odyssey* xix.163.

How, then, Glaucon, will our city be changed? How will civil war arise,
either between the auxiliaries and the rulers or within either group? Or
do you want us to be like Homer and pray to the Muses to tell us "how
e civil war first broke out?"[6] And shall we say that they speak to us in tragic
tones, as if they were in earnest, playing and jesting with us as if we
were children?

What will they say?

546 Something like this. "It is hard for a city composed in this way to change,
but everything that comes into being must decay. Not even a constitution
such as this will last forever. It, too, must face dissolution. And this is
how it will be dissolved. All plants that grow in the earth, and also all
animals that grow upon it, have periods of fruitfulness and barrenness of
both soul and body as often as the revolutions complete the circumferences
of their circles. These circumferences are short for the short-lived, and the
opposite for their opposites.[7] Now, the people you have educated to be
leaders in your city, even though they are wise, still won't, through calcula-
b tion together with sense perception, hit upon the fertility and barrenness
of the human species, but it will escape them, and so they will at some
time beget children when they ought not to do so. For the birth of a divine
creature, there is a cycle comprehended by a perfect number. For a human
being, it is the first number in which are found root and square increases,
comprehending three lengths and four terms, of elements that make things
like and unlike, that cause them to increase and decrease, and that render
c all things mutually agreeable and rational in their relations to one another.
Of these elements, four and three, married with five, give two harmonies
when thrice increased. One of them is a square, so many times a hundred.
The other is of equal length one way but oblong. One of its sides is one
hundred squares of the rational diameter of five diminished by one each
or one hundred squares of the irrational diameter diminished by two each.
The other side is a hundred cubes of three. This whole geometrical number
controls better and worse births.[8] And when your rulers, through ignorance
of these births, join brides and grooms at the wrong time, the children

6. An adaptation of *Iliad* xvi.112–13.

7. The reference is to the fertility and gestation periods of different species of plants and animals and their (supposedly related) life spans.

8. The human geometrical number is the product of 3, 4, and 5 "thrice increased," multiplied by itself three times, i.e., $(3 \cdot 4 \cdot 5)^4$ or 12,960,000. This can be represented geometrically as a square whose sides are 3600 or as an oblong or rectangle whose sides are 4800 and 2700. The first is "so many times a hundred," viz. 36 times. The latter is obtained as follows. The "rational diameter" of 5 is the nearest rational number to the real diagonal of a square whose sides are 5, i.e., to $\sqrt{50}$. This number is 7. Since the square of 7 is 49, we get the longer side of the rectangle by diminishing 49 by 1 and multiplying the result by 100. This gives 4800. The "irrational diameter" of 5 is $\sqrt{50}$. When squared, diminished by 2, and multiplied by 100 this, too, is 4800. The short side, "a hundred cubes of three," is 2700.

will be neither good natured nor fortunate. The older generation will d
choose the best of these children but they are unworthy nevertheless, and
when they acquire their fathers' powers, they will begin, as guardians, to
neglect us Muses. First, they will have less consideration for music and
poetry than they ought, then they will neglect physical training, so that
your young people will become less well educated in music and poetry.
Hence, rulers chosen from among them won't be able to guard well the e
testing of the golden, silver, bronze, and iron races, which are Hesiod's
and your own.[9] The intermixing of iron with silver and bronze with gold
that results will engender lack of likeness and unharmonious inequality, 547
and these always breed war and hostility wherever they arise. Civil war,
we declare, is always and everywhere 'of this lineage'."[10]

And we'll declare that what the Muses say is right.

It must be, since they're Muses.

What do the Muses say after that? b

Once civil war breaks out, both the iron and bronze types pull the
constitution towards money-making and the acquisition of land, houses,
gold, and silver, while both the gold and silver types—not being poor,
but by nature rich or rich in their souls—lead the constitution towards
virtue and the old order. And thus striving and struggling with one another,
they compromise on a middle way: They distribute the land and houses
as private property, enslave and hold as serfs and servants those whom
they previously guarded as free friends and providers of upkeep, and
occupy themselves with war and with guarding against those whom c
they've enslaved.

I think that is the way this transformation begins.

Then, isn't this constitution a sort of midpoint between aristocracy
and oligarchy?

Absolutely.

Then, if that's its place in the transformation, how will it be managed after
the change? Isn't it obvious that it will imitate the aristocratic constitution in
some respects and oligarchy in others, since it's between them, and that d
it will also have some features of its own?

That's right.

The rulers will be respected; the fighting class will be prevented from
taking part in farming, manual labor, or other ways of making money; it
will eat communally and devote itself to physical training and training for
war; and in all such ways, won't the constitution be like the aristocratic one?

Yes.

On the other hand, it will be afraid to appoint wise people as rulers, on
the grounds that they are no longer simple and earnest but mixed, and e
will incline towards spirited and simpler people, who are more naturally

9. See *Works and Days* 109–202.

10. See e.g. *Iliad* vi.211.

suited for war than peace; it will value the tricks and stratagems of war
548 and spend all its time making war. Aren't most of these qualities peculiar
to it?

Yes.

Such people will desire money just as those in oligarchies do, passion-
ately adoring gold and silver in secret. They will possess private treasuries
and storehouses, where they can keep it hidden, and have houses to enclose
them, like private nests, where they can spend lavishly either on women
b or on anyone else they wish.

That's absolutely true.

They'll be mean with their own money, since they value it and are not allowed to acquire it openly, but they'll love to spend other people's because of their appetites. They'll enjoy their pleasures in secret, running away from the law like boys from their father, for since they've neglected the true Muse—that of discussion and philosophy—and have valued physical training more than music and poetry, they haven't been educated by
c persuasion but by force.

The constitution you're discussing is certainly a mixture of good and bad.

Yes, it is mixed, but because of the predominance of the spirited element, one thing alone is most manifest in it, namely, the love of victory and the love of honor.

Very much so.

This, then, is the way this constitution would come into being and
what it would be like, for, after all, we're only sketching the shape of the
constitution in theory, not giving an exact account of it, since even from
d a sketch we'll be able to discern the most just and the most unjust person.
And, besides, it would be an intolerably long task to describe every constitution and every character without omitting any detail.

That's right.

Then who is the man that corresponds to this constitution? How does he come to be, and what sort of man is he?

I think, said Adeimantus, that he'd be very like Glaucon here, as far as the love of victory is concerned.

In that respect, I said, he might be, but, in the following ones, I don't think his nature would be similar.

e Which ones?

He'd be more obstinate and less well trained in music and poetry, though
he's a lover of it, and he'd love to listen to speeches and arguments, though
he's by no means a rhetorician. He'd be harsh to his slaves rather than
merely looking down on them as an adequately educated person does.
549 He'd be gentle to free people and very obedient to rulers, being himself
a lover of ruling and a lover of honor. However, he doesn't base his claim
to rule on his ability as a speaker or anything like that, but, as he's a lover
of physical training and a lover of hunting, on his abilities and exploits
in warfare and warlike activities.

Yes, that's the character that corresponds to this constitution.

Wouldn't such a person despise money when he's young but love it
more and more as he grows older, because he shares in the money-loving
nature and isn't pure in his attitude to virtue? And isn't that because he b
lacks the best of guardians?

What guardian is that? Adeimantus said.

Reason, I said, mixed with music and poetry, for it alone dwells within the person who possesses it as the lifelong preserver of his virtue.

Well put.

That, then, is a timocratic youth; he resembles the corresponding city.

Absolutely. c

And he comes into being in some such way as this. He's the son of a good father who lives in a city that isn't well governed, who avoids honors, office, lawsuits, and all such meddling in other people's affairs, and who is even willing to be put at a disadvantage in order to avoid trouble.

Then how does he come to be timocratic?

When he listens, first, to his mother complaining that her husband isn't
one of the rulers and that she's at a disadvantage among the other women
as a result. Then she sees that he's not very concerned about money and
that he doesn't fight back when he's insulted, whether in private or in d
public in the courts, but is indifferent to everything of that sort. She also
sees him concentrating his mind on his own thoughts, neither honoring
nor dishonoring her overmuch. Angered by all this, she tells her son that
his father is unmanly, too easy-going, and all the other things that women
repeat over and over again in such cases. e

Yes, Adeimantus said, it's like them to have many such complaints.

You know, too, I said, that the servants of men like that—the ones who
are thought to be well disposed to the family—also say similar things to
the son in private. When they see the father failing to prosecute someone
who owes him money or has wronged him in some other way, they urge
the son to take revenge on all such people when he grows up and to be
more of a man than his father. The boy hears and sees the same kind of 550
things when he goes out: Those in the city who do their own work are
called fools and held to be of little account, while those who meddle in
other people's affairs are honored and praised. The young man hears and
sees all this, but he also listens to what his father says, observes what he
does from close at hand, and compares his ways of living with those of
the others. So he's pulled by both. His father nourishes the rational part b
of his soul and makes it grow; the others nourish the spirited and appetitive
parts. Because he isn't a bad man by nature but keeps bad company, when
he's pulled in these two ways, he settles in the middle and surrenders the
rule over himself to the middle part—the victory-loving and spirited part—
and becomes a proud and honor-loving man.

I certainly think that you've given a full account of how this sort of man comes to be.

Then we now have the second constitution and the second man. c

We have.

Then shall we next talk, as Aeschylus says, of "another man ordered like another city,"[11] or shall we follow our plan and talk about the city first?

We must follow our plan.

And I suppose that the one that comes after the present constitution is oligarchy.

And what kind of constitution would you call oligarchy?

The constitution based on a property assessment, in which the rich rule,
d and the poor man has no share in ruling.

I understand.

So mustn't we first explain how timarchy is transformed into oligarchy?

Yes.

And surely the manner of this transformation is clear even to the blind.

What is it like?

The treasure house filled with gold, which each possesses, destroys the constitution. First, they find ways of spending money for themselves, then they stretch the laws relating to this, then they and their wives disobey the laws altogether.

They would do that.

And as one person sees another doing this and emulates him, they make
e the majority of the others like themselves.

They do.

From there they proceed further into money-making, and the more they value it, the less they value virtue. Or aren't virtue and wealth so opposed that if they were set on a scales, they'd always incline in opposite directions?

That's right.

So, when wealth and the wealthy are valued or honored in a city, virtue
551 and good people are valued less.

Clearly.

And what is valued is always practiced, and what isn't valued is neglected.

That's right.

Then, in the end, victory-loving and honor-loving men become lovers of making money, or money-lovers. And they praise and admire wealthy people and appoint them as rulers, while they dishonor poor ones.

Certainly.

Then, don't they pass a law that is characteristic of an oligarchic constitution, one that establishes a wealth qualification—higher where the constitution is more oligarchic, less where it's less so—and proclaims that those
b whose property doesn't reach the stated amount aren't qualified to rule? And they either put this through by force of arms, or else, before it comes to that, they terrorize the people and establish their constitution that way. Isn't that so?

Of course it is.

11. Perhaps an adaptation of *Seven Against Thebes* 451.

Generally speaking, then, that's the way this kind of constitution is established.

Yes, but what is its character? And what are the faults that we said it contained? c

First of all, the very thing that defines it is one, for what would happen if someone were to choose the captains of ships by their wealth, refusing to entrust the ship to a poor person even if he was a better captain?

They would make a poor voyage of it.

And isn't the same true of the rule of anything else whatsoever?

I suppose so.

Except a city? Or does it also apply to a city?

To it most of all, since it's the most difficult and most important kind of rule.

That, then, is one major fault in oligarchy. d

Apparently.

And what about this second fault? Is it any smaller than the other?

What fault?

That of necessity it isn't one city but two—one of the poor and one of the rich—living in the same place and always plotting against one another.

By god, that's just as big a fault as the first.

And the following is hardly a fine quality either, namely, that oligarchs probably aren't able to fight a war, for they'd be compelled either to arm and use the majority, and so have more to fear from them than the enemy, or not to use them and show up as true oligarchs—few in number—on e
the battlefield. At the same time, they'd be unwilling to pay mercenaries, because of their love of money.

That certainly isn't a fine quality either.

And what about the meddling in other people's affairs that we condemned before? Under this constitution, won't the same people be farmers, money-makers, and soldiers simultaneously? And do you think it's right for things to be that way? 552

Not at all.

Now, let's see whether this constitution is the first to admit the greatest of all evils.

Which one is that?

Allowing someone to sell all his possessions and someone else to buy them and then allowing the one who has sold them to go on living in the city, while belonging to none of its parts, for he's neither a money-maker, a craftsman, a member of the cavalry, or a hoplite, but a poor person without means.

It is the first to allow that. b

At any rate, this sort of thing is not forbidden in oligarchies. If it were, some of their citizens wouldn't be excessively rich, while others are totally impoverished.

That's right.

Now, think about this. When the person who sells all his possessions was rich and spending his money, was he of any greater use to the city in the ways we've just mentioned than when he'd spent it all? Or did he merely seem to be one of the rulers of the city, while in truth he was neither ruler nor subject there, but only a squanderer of his property?

That's right. He seemed to be part of the city, but he was nothing but
c a squanderer.

Should we say, then, that, as a drone exists in a cell and is an affliction to the hive, so this person is a drone in the house and an affliction to the city?

That's certainly right, Socrates.

Hasn't the god made all the winged drones stingless, Adeimantus, as well as some wingless ones, while other wingless ones have dangerous stings? And don't the stingless ones continue as beggars into old age, while
d those with stings become what we call evildoers?

That's absolutely true.

Clearly, then, in any city where you see beggars, there are thieves, pickpockets, temple-robbers, and all such evildoers hidden.

That is clear.

What about oligarchic cities? Don't you see beggars in them?

Almost everyone except the rulers is a beggar there.

e Then mustn't we suppose that they also include many evildoers with stings, whom the rulers carefully keep in check by force?

We certainly must.

And shall we say that the presence of such people is the result of lack of education, bad rearing, and a bad constitutional arrangement?

We shall.

This, then, or something like it, is the oligarchic city. It contains all these evils and probably others in addition.

That's pretty well what it's like.

Then, let's take it that we've disposed of the constitution called oligar-
553 chy—I mean the one that gets its rulers on the basis of a property assessment—and let's examine the man who is like it, both how he comes to be and what sort of man he is.

All right.

Doesn't the transformation from the timocrat we described to an oligarch occur mostly in this way?

Which way?

The timocrat's son at first emulates his father and follows in his footsteps. Then he suddenly sees him crashing against the city like a ship against a
b reef, spilling out all his possessions, even his life. He had held a generalship or some other high office, was brought to court by false witnesses, and was either put to death or exiled or was disenfranchised and had all his property confiscated.

That's quite likely.

The son sees all this, suffers from it, loses his property, and, fearing for his life, immediately drives from the throne in his own soul the honor-

loving and spirited part that ruled there. Humbled by poverty, he turns
greedily to making money, and, little by little, saving and working, he c
amasses property. Don't you think that this person would establish his appetitive and money-making part on the throne, setting it up as a great king within himself, adorning it with golden tiaras and collars and girding it with Persian swords?

I do.

He makes the rational and spirited parts sit on the ground beneath
appetite, one on either side, reducing them to slaves. He won't allow the d
first to reason about or examine anything except how a little money can be made into great wealth. And he won't allow the second to value or admire anything but wealth and wealthy people or to have any ambition other than the acquisition of wealth or whatever might contribute to getting it.

There is no other transformation of a young man who is an honor-lover into one who is a money-lover that's as swift and sure as this.

Then isn't this an oligarchic man? e

Surely, he developed out of a man who resembled the constitution from which oligarchy came.

Then let's consider whether he resembles the oligarchic constitution?

All right. 554

Doesn't he resemble it, in the first place, by attaching the greatest importance to money?

Of course.

And, further, by being a thrifty worker, who satisfies only his necessary appetites, makes no other expenditures, and enslaves his other desires as vain.

That's right.

A somewhat squalid fellow, who makes a profit from everything and
hoards it—the sort the majority admires. Isn't this the man who resembles
such a constitution? b

That's my opinion, anyway. At any rate, money is valued above everything by both the city and the man.

I don't suppose that such a man pays any attention to education.

Not in my view, for, if he did, he wouldn't have chosen a blind leader for his chorus and honored him most.[12]

Good. But consider this: Won't we say that, because of his lack of educa-
tion, the dronish appetites—some beggarly and others evil—exist in him,
but that they're forcibly held in check by his carefulness? c

Certainly.

Do you know where you should look to see the evildoings of such people?

Where?

12. Plutus, the god of wealth, is represented as being blind.

To the guardianship of orphans or something like that, where they have ample opportunity to do injustice with impunity.

True.

And doesn't this make it clear that, in those other contractual obligations, where he has a good reputation and is thought to be just, he's forcibly holding his other evil appetites in check by means of some decent part of
d himself? He holds them in check, not by persuading them that it's better not to act on them or taming them with arguments, but by compulsion and fear, trembling for his other possessions.

That's right.

And, by god, you'll find that most of them have appetites akin to those of the drone, once they have other people's money to spend.

You certainly will.

Then someone like that wouldn't be entirely free from internal civil war and wouldn't be one but in some way two, though generally his better
e desires are in control of his worse.

That's right.

For this reason, he'd be more respectable than many, but the true virtue of a single-minded and harmonious soul far escapes him.

I suppose so.

Further, this thrifty man is a poor individual contestant for victory in a city or for any other fine and much-honored thing, for he's not willing to
555 spend money for the sake of a fine reputation or on contests for such things. He's afraid to arouse his appetites for spending or to call on them as allies to obtain victory, so he fights like an oligarch, with only a few of his resources. Hence he's mostly defeated but remains rich.

That's right.

Then have we any further doubt that a thrifty money-maker is like an
b oligarchic city?

None at all.

It seems, then, that we must next consider democracy, how it comes into being, and what character it has when it does, so that, knowing in turn the character of a man who resembles it, we can present him for judgment.

That would be quite consistent with what we've been doing.

Well, isn't the city changed from an oligarchy to a democracy in some such way as this, because of its insatiable desire to attain what it has set before itself as the good, namely, the need to become as rich as possible?

In what way?

c Since those who rule in the city do so because they own a lot, I suppose they're unwilling to enact laws to prevent young people who've had no discipline from spending and wasting their wealth, so that by making loans to them, secured by the young people's property, and then calling those loans in, they themselves become even richer and more honored.

That's their favorite thing to do.

So isn't it clear by now that it is impossible for a city to honor wealth and at the same time for its citizens to acquire moderation, but one or the other is inevitably neglected? d

That's pretty clear.

Because of this neglect and because they encourage bad discipline, oligarchies not infrequently reduce people of no common stamp to poverty.

That's right.

And these people sit idle in the city, I suppose, with their stings and weapons—some in debt, some disenfranchised, some both—hating those who've acquired their property, plotting against them and others, and longing for a revolution. e

They do.

The money-makers, on the other hand, with their eyes on the ground, pretend not to see these people, and by lending money they disable any of the remainder who resist, exact as interest many times the principal sum, and so create a considerable number of drones and beggars in the city. 556

A considerable number indeed.

In any case, they are unwilling to quench this kind of evil as it flares up in the city, either in the way we mentioned, by preventing people from doing whatever they like with their own property or by another law which would also solve the problem.

What law?

The second-best one, which compels the citizens to care about virtue by prescribing that the majority of voluntary contracts be entered into at the lender's own risk, for lenders would be less shameless then in their pursuit b
of money in the city and fewer of those evils we were mentioning just now would develop.

Far fewer.

But as it is, for all these reasons, the rulers in the city treat their subjects in the way we described. But as for themselves and their children, don't they make their young fond of luxury, incapable of effort either mental or physical, too soft to stand up to pleasures or pains, and idle besides? c

Of course.

And don't they themselves neglect everything except making money, caring no more for virtue than the poor do?

Yes.

But when rulers and subjects in this condition meet on a journey or some other common undertaking—it might be a festival, an embassy, or a campaign, or they might be shipmates or fellow soldiers—and see one another in danger, in these circumstances are the poor in any way despised by the rich? Or rather isn't it often the case that a poor man, lean and d
suntanned, stands in battle next to a rich man, reared in the shade and carrying a lot of excess flesh, and sees him panting and at a loss? And don't you think that he'd consider that it's through the cowardice of the poor that such people are rich and that one poor man would say to another

when they met in private: "These people are at our mercy; they're good
e for nothing"?

I know very well that's what they would do.

Then, as a sick body needs only a slight shock from outside to become ill and is sometimes at civil war with itself even without this, so a city in the same condition needs only a small pretext—such as one side bringing in allies from an oligarchy or the other from a democracy—to fall ill and to fight with itself and is sometimes in a state of civil war even without any external influence.

557 Absolutely.

And I suppose that democracy comes about when the poor are victorious, killing some of their opponents and expelling others, and giving the rest an equal share in ruling under the constitution, and for the most part assigning people to positions of rule by lot.

Yes, that's how democracy is established, whether by force of arms or because those on the opposing side are frightened into exile.

Then how do these people live? What sort of constitution do they have?
b It's clear that a man who is like it will be democratic.

That is clear.

First of all, then, aren't they free? And isn't the city full of freedom and freedom of speech? And doesn't everyone in it have the license to do what he wants?

That's what they say, at any rate.

And where people have this license, it's clear that each of them will arrange his own life in whatever manner pleases him.

It is.

Then I suppose that it's most of all under this constitution that one finds
c people of all varieties.

Of course.

Then it looks as though this is the finest or most beautiful of the constitutions, for, like a coat embroidered with every kind of ornament, this city, embroidered with every kind of character type, would seem to be the most beautiful. And many people would probably judge it to be so, as women and children do when they see something multicolored.

They certainly would.

d It's also a convenient place to look for a constitution.

Why's that?

Because it contains all kinds of constitutions on account of the license it gives its citizens. So it looks as though anyone who wants to put a city in order, as we were doing, should probably go to a democracy, as to a supermarket of constitutions, pick out whatever pleases him, and establish that.

e He probably wouldn't be at a loss for models, at any rate.

In this city, there is no requirement to rule, even if you're capable of it, or again to be ruled if you don't want to be, or to be at war when the others are, or at peace unless you happen to want it. And there is no

requirement in the least that you not serve in public office as a juror, if you happen to want to serve, even if there is a law forbidding you to do so. Isn't that a divine and pleasant life, while it lasts? 558

It probably is—while it lasts.

And what about the calm of some of their condemned criminals? Isn't that a sign of sophistication? Or have you never seen people who've been condemned to death or exile under such a constitution stay on at the center of things, strolling around like the ghosts of dead heroes, without anyone staring at them or giving them a thought?

Yes, I've seen it a lot.

And what about the city's tolerance? Isn't it so completely lacking in b
small-mindedness that it utterly despises the things we took so seriously when we were founding our city, namely, that unless someone had transcendent natural gifts, he'd never become good unless he played the right games and followed a fine way of life from early childhood? Isn't it magnificent the way it tramples all this underfoot, by giving no thought to what someone was doing before he entered public life and by honoring him if only he tells them that he wishes the majority well? c

Yes, it's altogether splendid!

Then these and others like them are the characteristics of democracy. And it would seem to be a pleasant constitution, which lacks rulers but not variety and which distributes a sort of equality to both equals and unequals alike.

We certainly know what you mean.

Consider, then, what private individual resembles it. Or should we first inquire, as we did with the city, how he comes to be?

Yes, we should.

Well, doesn't it happen like this? Wouldn't the son of that thrifty oligarch be brought up in his father's ways? d

Of course.

Then he too rules his spendthrift pleasures by force—the ones that aren't money-making and are called unnecessary.

Clearly.

But, so as not to discuss this in the dark, do you want us first to define which desires are necessary and which aren't?

I do.

Aren't those we can't desist from and those whose satisfaction benefits us rightly called necessary, for we are by nature compelled to satisfy them both? Isn't that so? e

Of course.

So we'd be right to apply the term "necessary" to them? 559

We would.

What about those that someone could get rid of if he practiced from youth on, those whose presence leads to no good or even to the opposite? If we said that all of them were unnecessary, would we be right?

We would.

Let's pick an example of each, so that we can grasp the patterns they exhibit.

We should do that.

Aren't the following desires necessary: the desire to eat to the point of
b health and well-being and the desire for bread and delicacies?

I suppose so.

The desire for bread is necessary on both counts; it's beneficial, and unless it's satisfied, we die.

Yes.

The desire for delicacies is also necessary to the extent that it's beneficial to well-being.

Absolutely.

What about the desire that goes beyond these and seeks other sorts of foods, that most people can get rid of, if it's restrained and educated while they're young, and that's harmful both to the body and to the reason and
c moderation of the soul? Would it be rightly called unnecessary?

It would indeed.

Then wouldn't we also say that such desires are spendthrift, while the earlier ones are money-making, because they profit our various projects?

Certainly.

And won't we say the same about the desire for sex and about other desires?

Yes.

And didn't we say that the person we just now called a drone is full of such pleasures and desires, since he is ruled by the unnecessary ones,
d while a thrifty oligarch is ruled by his necessary desires?

We certainly did.

Let's go back, then, and explain how the democratic man develops out of the oligarchic one. It seems to me as though it mostly happens as follows.

How?

When a young man, who is reared in the miserly and uneducated manner we described, tastes the honey of the drones and associates with wild and dangerous creatures who can provide every variety of multicolored pleasure in every sort of way, this, as you might suppose, is the beginning
e of his transformation from having an oligarchic constitution within him to having a democratic one.

It's inevitable that this is how it starts.

And just as the city changed when one party received help from like-minded people outside, doesn't the young man change when one party of his desires receives help from external desires that are akin to them and of the same form?

Absolutely.

And I suppose that, if any contrary help comes to the oligarchic party within him, whether from his father or from the rest of his household, who exhort and reproach him, then there's civil war and counterrevolution
560 within him, and he battles against himself.

That's right.

Sometimes the democratic party yields to the oligarchic, so that some of the young man's appetites are overcome, others are expelled, a kind of shame rises in his soul, and order is restored.

That does sometimes happen.

But I suppose that, as desires are expelled, others akin to them are being
nurtured unawares, and because of his father's ignorance about how to
bring him up, they grow numerous and strong. b

That's what tends to happen.

These desires draw him back into the same bad company and in secret intercourse breed a multitude of others.

Certainly.

And, seeing the citadel of the young man's soul empty of knowledge, fine ways of living, and words of truth (which are the best watchmen and guardians of the thoughts of those men whom the gods love), they finally occupy that citadel themselves.

They certainly do. c

And in the absence of these guardians, false and boastful words and beliefs rush up and occupy this part of him.

Indeed, they do.

Won't he then return to these lotus-eaters and live with them openly?
And if some help comes to the thrifty part of his soul from his household,
won't these boastful words close the gates of the royal wall within him
to prevent these allies from entering and refuse even to receive the words
of older private individuals as ambassadors? Doing battle and controlling
things themselves, won't they call reverence foolishness and moderation d
cowardice, abusing them and casting them out beyond the frontiers like
disenfranchised exiles? And won't they persuade the young man that
measured and orderly expenditure is boorish and mean, and, joining with
many useless desires, won't they expel it across the border?

They certainly will.

Having thus emptied and purged these from the soul of the one they've
possessed and initiated in splendid rites, they proceed to return insolence,
anarchy, extravagance, and shamelessness from exile in a blaze of torch- e
light, wreathing them in garlands and accompanying them with a vast
chorus of followers. They praise the returning exiles and give them fine
names, calling insolence good breeding, anarchy freedom, extravagance
magnificence, and shamelessness courage. Isn't it in some such way as
this that someone who is young changes, after being brought up with
necessary desires, to the liberation and release of useless and unneces- 561
sary pleasures?

Yes, that's clearly the way it happens.

And I suppose that after that he spends as much money, effort, and time on unnecessary pleasures as on necessary ones. If he's lucky, and his frenzy doesn't go too far, when he grows older, and the great tumult within him has spent itself, he welcomes back some of the exiles, ceases

b to surrender himself completely to the newcomers, and puts his pleasures on an equal footing. And so he lives, always surrendering rule over himself to whichever desire comes along, as if it were chosen by lot. And when that is satisfied, he surrenders the rule to another, not disdaining any but satisfying them all equally.

That's right.

And he doesn't admit any word of truth into the guardhouse, for if someone tells him that some pleasures belong to fine and good desires
c and others to evil ones and that he must pursue and value the former and restrain and enslave the latter, he denies all this and declares that all pleasures are equal and must be valued equally.

That's just what someone in that condition would do.

And so he lives on, yielding day by day to the desire at hand. Sometimes he drinks heavily while listening to the flute; at other times, he drinks only water and is on a diet; sometimes he goes in for physical training;
d at other times, he's idle and neglects everything; and sometimes he even occupies himself with what he takes to be philosophy. He often engages in politics, leaping up from his seat and saying and doing whatever comes into his mind. If he happens to admire soldiers, he's carried in that direction, if money-makers, in that one. There's neither order nor necessity in his life, but he calls it pleasant, free, and blessedly happy, and he follows it for as long as he lives.

e You've perfectly described the life of a man who believes in legal equality.

I also suppose that he's a complex man, full of all sorts of characters, fine and multicolored, just like the democratic city, and that many men and women might envy his life, since it contains the most models of constitutions and ways of living.

That's right.

Then shall we set this man beside democracy as one who is rightly
562 called democratic?

Let's do so.

The finest constitution and the finest man remain for us to discuss, namely, tyranny and a tyrannical man.

They certainly do.

Come, then, how does tyranny come into being? It's fairly clear that it evolves from democracy.

It is.

And doesn't it evolve from democracy in much the same way that
b democracy does from oligarchy?

What way is that?

The good that oligarchy puts before itself and because of which it is established is wealth, isn't it?

Yes.

And its insatiable desire for wealth and its neglect of other things for the sake of money-making is what destroyed it, isn't it?

That's true.

And isn't democracy's insatiable desire for what it defines as the good also what destroys it?

What do you think it defines as the good?

Freedom: Surely you'd hear a democratic city say that this is the finest
thing it has, so that as a result it is the only city worth living in for someone c
who is by nature free.

Yes, you often hear that.

Then, as I was about to say, doesn't the insatiable desire for freedom and the neglect of other things change this constitution and put it in need of a dictatorship?

In what way?

I suppose that, when a democratic city, athirst for freedom, happens to
get bad cupbearers for its leaders, so that it gets drunk by drinking more
than it should of the unmixed wine of freedom, then, unless the rulers are d
very pliable and provide plenty of that freedom, they are punished by the
city and accused of being accursed oligarchs.

Yes, that is what it does.

It insults those who obey the rulers as willing slaves and good-for-
nothings and praises and honors, both in public and in private, rulers who
behave like subjects and subjects who behave like rulers. And isn't it
inevitable that freedom should go to all lengths in such a city? e

Of course.

It makes its way into private households and in the end breeds anarchy even among the animals.

What do you mean?

I mean that a father accustoms himself to behave like a child and fear
his sons, while the son behaves like a father, feeling neither shame nor
fear in front of his parents, in order to be free. A resident alien or a foreign
visitor is made equal to a citizen, and he is their equal. 563

Yes, that is what happens.

It does. And so do other little things of the same sort. A teacher in such
a community is afraid of his students and flatters them, while the students
despise their teachers or tutors. And, in general, the young imitate their
elders and compete with them in word and deed, while the old stoop to
the level of the young and are full of play and pleasantry, imitating the
young for fear of appearing disagreeable and authoritarian. b

Absolutely.

The utmost freedom for the majority is reached in such a city when bought slaves, both male and female, are no less free than those who bought them. And I almost forgot to mention the extent of the legal equality of men and women and of the freedom in the relations between them.

What about the animals? Are we, with Aeschylus, going to "say whatever
it was that came to our lips just now" about them? c

Certainly. I put it this way: No one who hasn't experienced it would believe how much freer domestic animals are in a democratic city than anywhere else. As the proverb says, dogs become like their mistresses;

horses and donkeys are accustomed to roam freely and proudly along the streets, bumping into anyone who doesn't get out of their way; and all
d the rest are equally full of freedom.

You're telling me what I already know. I've often experienced that sort of thing while travelling in the country.

To sum up: Do you notice how all these things together make the citizens' souls so sensitive that, if anyone even puts upon *himself* the least degree of slavery, they become angry and cannot endure it. And in the end, as you know, they take no notice of the laws, whether written or unwritten,
e in order to avoid having any master at all.

I certainly do.

This, then, is the fine and impetuous origin from which tyranny seems to me to evolve.

It is certainly impetuous. But what comes next?

The same disease that developed in oligarchy and destroyed it also develops here, but it is more widespread and virulent because of the general permissiveness, and it eventually enslaves democracy. In fact, excessive action in one direction usually sets up a reaction in the opposite direction. This happens in seasons, in plants, in bodies, and, last but not
564 least, in constitutions.

That's to be expected.

Extreme freedom can't be expected to lead to anything but a change to extreme slavery, whether for a private individual or for a city.

No, it can't.

Then I don't suppose that tyranny evolves from any constitution other than democracy—the most severe and cruel slavery from the utmost freedom.

Yes, that's reasonable.

But I don't think that was your question. You asked what was the disease
b that developed in oligarchy and also in democracy, enslaving it.

That's true.

And what I had in mind as an answer was that class of idle and extravagant men, whose bravest members are leaders and the more cowardly ones followers. We compared them to stinged and stingless drones, respectively.

That's right.

Now, these two groups cause problems in any constitution, just as phlegm and bile do in the body. And it's against them that the good doctor
c and lawgiver of a city must take advance precautions, first, to prevent their presence and, second, to cut them out of the hive as quickly as possible, cells and all, if they should happen to be present.

Yes, by god, he must cut them out altogether.

Then let's take up the question in the following way, so that we can see what we want more clearly.

In what way?

Let's divide a democratic city into three parts in theory, this being the way that it is in fact divided. One part is this class of idlers, that grows
d here no less than in an oligarchy, because of the general permissiveness.

So it does.

But it is far fiercer in democracy than in the other.

How so?

In an oligarchy it is fierce because it's disdained, but since it is prevented from having a share in ruling, it doesn't get any exercise and doesn't become vigorous. In a democracy, however, with a few exceptions, this class is the dominant one. Its fiercest members do all the talking and acting, while the rest settle near the speaker's platform and buzz and refuse to tolerate the opposition of another speaker, so that, under a democratic constitution, with the few exceptions I referred to before, this class manages everything. e

That's right.

Then there's a second class that always distinguishes itself from the majority of people.

Which is that?

When everybody is trying to make money, those who are naturally most organized generally become the wealthiest.

Probably so.

Then they would provide the most honey for the drones and the honey that is most easily extractable by them.

Yes, for how could anyone extract it from those who have very little?

Then I suppose that these rich people are called drone-fodder.

Something like that.

The people—those who work with their own hands—are the third class. They take no part in politics and have few possessions, but, when 565
they are assembled, they are the largest and most powerful class in a democracy.

They are. But they aren't willing to assemble often unless they get a share of the honey.

And they always do get a share, though the leaders, in taking the wealth of the rich and distributing it to the people, keep the greater part for themselves.

Yes, that is the way the people get their share. b

And I suppose that those whose wealth is taken away are compelled to defend themselves by speaking before the people and doing whatever else they can.

Of course.

And they're accused by the drones of plotting against the people and of being oligarchs, even if they have no desire for revolution at all.

That's right.

So in the end, when they see the people trying to harm them, they truly do become oligarchs and embrace oligarchy's evils, whether they want to c
or not. But neither group does these things willingly. Rather the people act as they do because they are ignorant and are deceived by the drones, and the rich act as they do because they are driven to it by the stinging of those same drones.

Absolutely.

And then there are impeachments, judgments, and trials on both sides.

That's right.

Now, aren't the people always in the habit of setting up one man as their special champion, nurturing him and making him great?

They are.

d And it's clear that, when a tyrant arises, this special leadership is the sole root from which he sprouts.

It is.

What is the beginning of the transformation from leader of the people to tyrant? Isn't it clear that it happens when the leader begins to behave like the man in the story told about the temple of the Lycean Zeus[13] in Arcadia?

What story is that?

That anyone who tastes the one piece of human innards that's chopped up with those of other sacrificial victims must inevitably become a wolf.
e Haven't you heard that story?

I have.

Then doesn't the same happen with a leader of the people who dominates a docile mob and doesn't restrain himself from spilling kindred blood? He brings someone to trial on false charges and murders him (as tyrants so often do), and, by thus blotting out a human life, his impious tongue and lips taste kindred citizen blood. He banishes some, kills others, and drops hints to the people about the cancellation of debts and the redistribu-
566 tion of land. And because of these things, isn't a man like that inevitably fated either to be killed by his enemies or to be transformed from a man into a wolf by becoming a tyrant?

It's completely inevitable.

He's the one who stirs up civil wars against the rich.

He is.

And if he's exiled but manages, despite his enemies, to return, doesn't he come back as a full-fledged tyrant?

Clearly.

And if these enemies are unable to expel him or to put him to death by
b accusing him before the city, they plot secretly to kill him.

That's usually what happens at least.

And all who've reached this stage soon discover the famous request of the tyrant, namely, that the people give him a bodyguard to keep their defender safe for them.

That's right.

And the people give it to him, I suppose, because they *are* afraid for his safety but aren't worried at all about their own.

c That's right.

And when a wealthy man sees this and is charged with being an enemy of the people because of his wealth, then, as the oracle to Croesus put it, he

13. Zeus the wolf-god.

*Flees to the banks of the many-pebbled Hermus,*
*Neither staying put nor being ashamed of his cowardice.*

He wouldn't get a second chance of being ashamed.

That's true, for if he was caught, he'd be executed.

He most certainly would.

But, as for the leader, he doesn't lie on the ground "mighty in his might,"[14] but, having brought down many others, he stands in the city's chariot, a complete tyrant rather than a leader. d

What else?

Then let's describe the happiness of this man and of the city in which a mortal like him comes to be.

Certainly, let's do so.

During the first days of his reign and for some time after, won't he smile in welcome at anyone he meets, saying that he's no tyrant, making all sorts of promises both in public and in private, freeing the people from debt, redistributing the land to them and to his followers, and pretending e
to be gracious and gentle to all?

He'd have to.

But I suppose that, when he has dealt with his exiled enemies by making peace with some and destroying others, so that all is quiet on that front, the first thing he does is to stir up a war, so that the people will continue to feel the need of a leader.

Probably so.

But also so that they'll become poor through having to pay war taxes,
for that way they'll have to concern themselves with their daily needs and 567
be less likely to plot against him.

Clearly.

Besides, if he suspects some people of having thoughts of freedom and of not favoring his rule, can't he find a pretext for putting them at the mercy of the enemy in order to destroy them? And for all these reasons, isn't it necessary for a tyrant to be always stirring up war?

It is.

And because of this, isn't he all the more readily hated by the citizens? b

Of course.

Moreover, don't the bravest of those who helped to establish his tyranny and who hold positions of power within it speak freely to each other and to him, criticizing what's happening?

They probably do.

Then the tyrant will have to do away with all of them if he intends to rule, until he's left with neither friend nor enemy of any worth.

Clearly.

He must, therefore, keep a sharp lookout for anyone who is brave, large-minded, knowledgeable, or rich. And so happy is he that he must be the

14. See *Iliad* xvi.776.

c enemy of them all, whether he wants to be or not, and plot against them until he has purged them from the city.

That's a fine sort of purge!

Yes, for it's the opposite of the one that doctors perform on the body. They draw off the worst and leave the best, but he does just the opposite.

Yet I expect he'll have to do this, if he's really going to rule.

d It's a blessedly happy necessity he's bound by, since it requires him either to live with the inferior majority, even though they hate him, or not to live at all.

Yet that's exactly his condition.

And won't he need a larger and more loyal bodyguard, the more his actions make the citizens hate him?

Of course.

And who will these trustworthy people be? And where will he get them from?

They'll come swarming of their own accord, if he pays them.

Drones, by the dog! All manner of foreign drones! That's what I think
e you're talking about.

You're right.

But what about in the city itself? Wouldn't he be willing . . .

Willing to what?

To deprive citizens of their slaves by freeing them and enlisting them in his bodyguard?

He certainly would, since they'd be likely to prove most loyal to him.

What a blessedly happy sort of fellow you make the tyrant out to be, if these are the sort of people he employs as friends and loyal followers
568 after he's done away with the earlier ones.

Nonetheless, they're the sort he employs.

And these companions and new citizens admire and associate with him, while the decent people hate and avoid him.

Of course.

It isn't for nothing, then, that tragedy in general has the reputation of being wise and that Euripides is thought to be outstandingly so.

Why's that?

Because among other shrewd things he said that "tyrants are wise who associate with the wise." And by "the wise" he clearly means the sort of
b people that we've seen to be the tyrant's associates.

Yes. And he and the other poets eulogize tyranny as godlike and say lots of other such things about it.

Then, surely, since the tragic poets are wise, they'll forgive us and those whose constitutions resemble ours, if we don't admit them into our city, since they praise tyranny.

c I suppose that the more sophisticated among them will.

And so I suppose that they go around to other cities, draw crowds, hire people with fine, big, persuasive voices, and lead their constitutions to tyranny and democracy.

They do indeed.

And besides this, they receive wages and honors, especially—as one might expect—from the tyrants and, in second place, from the democracies, but the higher they go on the ascending scale of constitutions, the more their honor falls off, as if unable to keep up with them for lack of d breath.

Absolutely.

But we digress. So let's return to that fine, numerous, diverse, and ever-changing bodyguard of the tyrant and explain how he'll pay for it.

Clearly, if there are sacred treasuries in the city, he'll use them for as long as they last, as well as the property of the people he has destroyed, thus requiring smaller taxes from the people.

What about when these give out? e

Clearly, both he and his fellow revellers—his companions, male or female—will have to feed off his father's estate.

I understand. You mean that the people, who fathered the tyrant, will have to feed him and his companions.

They'll be forced to do so.

And what would you have to say about this? What if the people get angry and say, first, that it isn't just for a grown-up son to be fed by his father but, on the contrary, for the father to be fed by his son; second, that they didn't father him and establish him in power so that, when he'd become strong, they'd be enslaved to their own slave and have to feed 569 both him and his slaves, along with other assorted rabble, but because they hoped that, with him as their leader, they'd be free from the rich and the so-called fine and good people in the city; third, that they therefore order him and his companions to leave the city, just as a father might drive a son and his troublesome fellow revellers from his house?

Then, by god, the people will come to know what kind of creature they have fathered, welcomed, and made strong and that they are the weaker trying to drive out the stronger. b

What do you mean? Will the tyrant dare to use violence against his father or to hit him if he doesn't obey?

Yes—once he's taken away his father's weapons.

You mean that the tyrant is a parricide and a harsh nurse of old age, that his rule has become an acknowledged tyranny at last, and that—as the saying goes—by trying to avoid the frying pan of enslavement to free men, the people have fallen into the fire of having slaves as their masters, and that in the place of the great but inappropriate freedom they enjoyed c under democracy, they have put upon themselves the harshest and most bitter slavery to slaves.

That's exactly what I mean.

Well, then, aren't we justified in saying that we have adequately described how tyranny evolves from democracy and what it's like when it has come into being?

We certainly are, he said.

# Book IX

571 It remains, I said, to consider the tyrannical man himself, how he evolves from a democrat, what he is like when he has come into being, and whether he is wretched or blessedly happy.

Yes, he said, he is the one who is still missing.

And do you know what else I think is still missing?

What?

I don't think we have adequately distinguished the kinds and numbers of our desires, and, if that subject isn't adequately dealt with, our entire
b investigation will be less clear.

Well, isn't now as fine a time as any to discuss the matter?

It certainly is. Consider, then, what I want to know about our desires. It's this: Some of our unnecessary pleasures and desires seem to me to be lawless. They are probably present in everyone, but they are held in check by the laws and by the better desires in alliance with reason. In a few people, they have been eliminated entirely or only a few weak ones remain,
c while in others they are stronger and more numerous.

What desires do you mean?

Those that are awakened in sleep, when the rest of the soul—the rational, gentle, and ruling part—slumbers. Then the beastly and savage part, full of food and drink, casts off sleep and seeks to find a way to gratify itself. You know that there is nothing it won't dare to do at such a time, free of all control by shame or reason. It doesn't shrink from trying to have sex
d with a mother, as it supposes, or with anyone else at all, whether man, god, or beast. It will commit any foul murder, and there is no food it refuses to eat. In a word, it omits no act of folly or shamelessness.

That's completely true.

On the other hand, I suppose that someone who is healthy and moderate with himself goes to sleep only after having done the following: First, he rouses his rational part and feasts it on fine arguments and speculations;
e second, he neither starves nor feasts his appetites, so that they will slumber and not disturb his best part with either their pleasure or their pain, but
572 they'll leave it alone, pure and by itself, to get on with its investigations, to yearn after and perceive something, it knows not what,[1] whether it is past, present, or future; third, he soothes his spirited part in the same way, for example, by not falling asleep with his spirit still aroused after an outburst of anger. And when he has quieted these two parts and aroused the third, in which reason resides, and so takes his rest, you know that it is then that he best grasps the truth and that the visions that appear in
b his dreams are least lawless.

Entirely so.

1. Reading *kai* before *aisthanesthai* in a2.

However, we've been carried away from what we wanted to establish, which is this: Our dreams make it clear that there is a dangerous, wild, and lawless form of desire in everyone, even in those of us who seem to be entirely moderate or measured. See whether you think I'm talking sense and whether or not you agree with me.

I do agree.

Recall, then, what we said a democratic man is like. He was produced by being brought up from youth by a thrifty father who valued only those desires that make money and who despised the unnecessary ones that aim c
at frivolity and display. Isn't that right?

Yes.

And by associating with more sophisticated men, who are full of the latter desires, he starts to indulge in every kind of insolence and to adopt their form of behavior, because of his hatred of his father's thrift. But, because he has a better nature than his corrupters, he is pulled in both directions and settles down in the middle between his father's way of life and theirs. And enjoying each in moderation, as he supposes, he leads a life that is neither slavish nor lawless and from having been oligarchic he d
becomes democratic.

That was and is our opinion about this type of man.

Suppose now that this man has in turn become older and that *he* has a son who is brought up in *his* father's ethos.

All right.

And further suppose that the same things that happened to his father now happen to him. First, he is led to all the kinds of lawlessness that those who are leading him call freedom. Then his father and the rest of e
the household come to the aid of the middle desires, while the others help the other ones. Then, when those clever enchanters and tyrant-makers have no hope of keeping hold of the young man in any other way, they contrive to plant in him a powerful erotic love, like a great winged drone, to be the leader of those idle desires that spend whatever is at hand. Or do you think that erotic love is anything other than an enormous drone 573
in such people?

I don't think that it could be anything else.

And when the other desires—filled with incense, myrrh, wreaths, wine, and the other pleasures found in their company—buzz around the drone, nurturing it and making it grow as large as possible, they plant the sting of longing in it. Then this leader of the soul adopts madness as its bodyguard and becomes frenzied. If it finds any beliefs or desires in the man b
that are thought to be good or that still have some shame, it destroys them and throws them out, until it's purged him of moderation and filled him with imported madness.

You've perfectly described the evolution of a tyrannical man.

Is this the reason that erotic love has long been called a tyrant?

It looks that way.

Then doesn't a drunken man have something of a tyrannical mind? c

Yes, he has.

And a man who is mad and deranged attempts to rule not just human beings, but gods as well, and expects that he will be able to succeed.

He certainly does.

Then a man becomes tyrannical in the precise sense of the term when either his nature or his way of life or both of them together make him drunk, filled with erotic desire, and mad.

Absolutely.

This, then, it seems, is how a tyrannical man comes to be. But what way does he live?

d No doubt *you're* going to tell *me*, just as posers of riddles usually do.

I am. I think that someone in whom the tyrant of erotic love dwells and in whom it directs everything next goes in for feasts, revelries, luxuries, girlfriends, and all that sort of thing.

Necessarily.

And don't many terrible desires grow up day and night beside the tyrannical one, needing many things to satisfy them?

Indeed they do.

Hence any income someone like that has is soon spent.

Of course.

e Then borrowing follows, and expenditure of capital.

What else?

And when everything is gone, won't the violent crowd of desires that has nested within him inevitably shout in protest? And driven by the stings of the other desires and especially by erotic love itself (which leads all of them as its bodyguard), won't he become frenzied and look to see
574 who possesses anything that he could take, by either deceit or force?

He certainly will.

Consequently, he must acquire wealth from every source or live in great pain and suffering.

He must.

And just as the pleasures that are latecomers outdo the older ones and steal away their satisfactions, won't the man himself think that he deserves to outdo his father and mother, even though he is younger than they are—to take and spend his father's wealth when he's spent his own share?

Of course.

And if they won't give it to him, won't he first try to steal it from them
b by deceitful means?

Certainly.

And if that doesn't work, wouldn't he seize it by force?

I suppose so.

And if the old man and woman put up a fight, would he be careful to refrain from acting like a tyrant?

I'm not very optimistic about their fate, if they do.

But, good god, Adeimantus, do you think he'd sacrifice his long-loved and irreplaceable mother for a recently acquired girlfriend whom he can

do without? Or that for the sake of a newfound and replaceable boyfriend
in the bloom of youth, he'd strike his aged and irreplaceable father, his c
oldest friend? Or that he'd make his parents the slaves of these others, if he brought them under the same roof?

Yes, indeed he would.

It seems to be a very great blessing to produce a tyrannical son!

It certainly does!

What about when the possessions of his father and mother give out?
With that great swarm of pleasures inside him, won't he first try to break d
into someone's house or snatch someone's coat late at night? Then won't he try to loot a temple? And in all this, the old traditional opinions that he had held from childhood about what is fine or shameful—opinions that are accounted just—are overcome by the opinions, newly released from slavery, that are now the bodyguard of erotic love and hold sway along
with it. When he himself was subject to the laws and his father and had e
a democratic constitution within him, these opinions used only to be freed in sleep. Now, however, under the tyranny of erotic love, he has permanently become while awake what he used to become occasionally while asleep, and he won't hold back from any terrible murder or from any kind of food or act. But, rather, erotic love lives like a tyrant within him, in
complete anarchy and lawlessness as his sole ruler, and drives him, as if 575
he were a city, to dare anything that will provide sustenance for itself and the unruly mob around it (some of whose members have come in from the outside as a result of his keeping bad company, while others have come from within, freed and let loose by his own bad habits). Isn't this the life that a tyrannical man leads?

It is indeed.

Now, if there are only a few such men in a city, and the rest of the people are moderate, this mob will leave the city in order to act as a
bodyguard to some other tyrant or to serve as mercenaries if there happens b
to be a war going on somewhere. But if they chance to live in a time of peace and quiet, they'll remain in the city and bring about lots of little evils.

What sort of evils do you mean?

They steal, break into houses, snatch purses, steal clothes, rob temples, and sell people into slavery. Sometimes, if they are good speakers, they become sycophants and bear false witness and accept bribes.

These evils *are* small, provided that there happen to be only a few
such people. c

Yes, for small things are small by comparison to big ones. And when it comes to producing wickedness and misery in a city, all these evils together don't, as the saying goes, come within a mile of the rule of a tyrant. But when such people become numerous and conscious of their numbers, it is they—aided by the foolishness of the people—who create a tyrant. And he, more than any of them, has in his soul the greatest and strongest tyrant
of all. d

Naturally, for he'd be the most tyrannical.

That's if the city happens to yield willingly, but if it resists him, then, just as he once chastised his mother and father, he'll now chastise his fatherland, if he can, by bringing in new friends and making his fatherland and his dear old motherland (as the Cretans call it) their slaves and keeping them that way, for this is surely the end at which such a man's desires are directed.

e It most certainly is.

Now, in private life, before a tyrannical man attains power, isn't he this sort of person—one who associates primarily with flatterers who are ready to obey him in everything? Or if he himself happens to need anything from other people, isn't he willing to fawn on them and make every gesture of friendship, as if he were dealing with his own family? But once he gets
576 what he wants, don't they become strangers again?

Yes, they certainly do.

So someone with a tyrannical nature lives his whole life without being friends with anyone, always a master to one man or a slave to another and never getting a taste of either freedom or true friendship.

That's right.

Wouldn't we be right to call someone like that untrustworthy?

Of course.

And isn't he as unjust as anyone can be? If indeed what we earlier
b agreed about justice was right.

And it certainly was right.

Then, let's sum up the worst type of man: His waking life is like the nightmare we described earlier.

That's right.

And he evolves from someone by nature most tyrannical who achieves sole rule. And the longer he remains tyrant, the more like the nightmare he becomes.

That's inevitable, said Glaucon, taking over the argument.

Well, then, I said, isn't the man who is clearly most vicious also clearly most wretched? And isn't the one who for the longest time is most of all
c a tyrant, most wretched for the longest time? If, that is to say, truth rather than majority opinion is to settle these questions.

That much is certain, at any rate.

And isn't a tyrannical man like a city ruled by a tyrant, a democratic man like a city ruled by a democracy, and similarly with the others?

Of course.

And won't the relations between the cities with respect to virtue and happiness be the same as those between the men?

d Certainly.

Then how does the city ruled by a tyrant compare to the city ruled by kings that we described first?

They are total opposites: one is the best, and the other the worst.

I won't ask you which is which, since it's obvious. But is your judgment the same with regard to their happiness and wretchedness? And let's not

be dazzled by looking at one man—a tyrant—or at the few who surround him, but since it is essential to go into the city and study the whole of it, let's
not give our opinion, till we've gone down and looked into every corner. e

That's right, for it's clear to everyone that there is no city more wretched than one ruled by a tyrant and none more happy than one ruled by kings.

Would I be right, then, to make the same challenge about the individuals,
assuming, first, that the person who is fit to judge them is someone who in 577
thought can go down into a person's character and examine it thoroughly, someone who doesn't judge from outside, the way a child does, who is dazzled by the façade that tyrants adopt for the outside world to see, but is able to see right through that sort of thing? And, second, that he's someone—since we'd all listen to him if he were—who is competent to judge, because he has lived in the same house with a tyrant and witnessed his behavior at home and his treatment of each member of his household when he is stripped of his theatrical façade, and has also seen how he
behaves when in danger from the people? Shouldn't we ask the person b
who has seen all that to tell us how the tyrant compares to the others in happiness and wretchedness?

That's also right.

Then do you want us to pretend that we are among those who can give such a judgment and that we have already met tyrannical people, so that we'll have someone to answer our questions?

I certainly do.

Come, then, and look at it this way for me: Bearing in mind the resem- c
blance between the city and the man, look at each in turn and describe its condition.

What kinds of things do you want me to describe?

First, speaking of the city, would you say that a tyrannical city is free or enslaved?

It is as enslaved as it is possible to be.

Yet you see in it people who are masters and free.

I do see a few like that, but the whole city, so to speak, and the most decent part of it are wretched, dishonored slaves.

Then, if man and city are alike, mustn't the same structure be in him d
too? And mustn't his soul be full of slavery and unfreedom, with the most decent parts enslaved and with a small part, the maddest and most vicious, as their master?

It must.

What will you say about such a soul then? Is it free or slave?

Slave, of course.

And isn't the enslaved and tyrannical city least likely to do what it wants?

Certainly.

Then a tyrannical soul—I'm talking about the whole soul—will also be least likely to do what it wants and, forcibly driven by the stings of a
dronish gadfly, will be full of disorder and regret. e

How could it be anything else?

Is a tyrannically ruled city rich or poor?

Poor.

578 Then a tyrannical soul, too, must always be poor and unsatisfiable.

That's right.

What about fear? Aren't a tyrannical city and man full of it?

Absolutely.

And do you think that you'll find more wailing, groaning, lamenting, and grieving in any other city?

Certainly not.

Then, are such things more common in anyone besides a tyrannical man, who is maddened by his desires and erotic loves?

How could they be?

It is in view of all these things, I suppose, and others like them, that
b you judged this to be the most wretched of cities.

And wasn't I right?

Of course you were. But what do you say about a tyrannical man, when you look at these same things?

He's by far the most wretched of all of them.

There you're no longer right.

How is that?

I don't think that this man has yet reached the extreme of wretchedness.

Then who has?

Perhaps you'll agree that this next case is even more wretched.

Which one?

c The one who is tyrannical but doesn't live a private life, because some misfortune provides him with the opportunity to become an actual tyrant.

On the basis of what was said before, I assume that what you say is true.

Yes, but in matters of this sort, it isn't enough just to assume these things; one needs to investigate carefully the two men in question by means of argument, for the investigation concerns the most important thing, namely, the good life and the bad one.

That's absolutely right.

Then consider whether I'm talking sense or not, for I think our investiga-
d tion will be helped by the following examples.

What are they?

We should look at all the wealthy private citizens in our cities who have many slaves, for, like a tyrant, they rule over many, although not over so many as he does.

That's right.

And you know that they're secure and do not fear their slaves.

What have they got to be afraid of?

Nothing. And do you know why?

Yes. It's because the whole city is ready to defend each of its individual citizens.

e You're right. But what if some god were to lift one of these men, his fifty or more slaves, and his wife and children out of the city and deposit

him with his slaves and other property in a deserted place, where no free
person could come to his assistance? How frightened would he be that he
himself and his wife and children would be killed by the slaves?

Very frightened indeed.

And wouldn't he be compelled to fawn on some of his own slaves,
promise them lots of things, and free them, even though he didn't want 579
to? And wouldn't he himself have become a panderer to slaves?

He'd have to or else be killed.

What if the god were to settle many other neighbors around him, who
wouldn't tolerate anyone to claim that he was the master of another and
who would inflict the worst punishments on anyone they caught doing it?

I suppose that he'd have even worse troubles, since he'd be surrounded b
by nothing but vigilant enemies.

And isn't this the kind of prison in which the tyrant is held—the one
whose nature is such as we have described it, filled with fears and erotic
loves of all kinds? Even though his soul is really greedy for it, he's the
only one in the whole city who can't travel abroad or see the sights that
other free people want to see. Instead, he lives like a woman, mostly
confined to his own house, and envying any other citizen who happens
to travel abroad and see something worthwhile. c

That's entirely so.

Then, isn't this harvest of evils a measure of the difference between a
tyrannical man who is badly governed on the inside—whom you judged
to be most wretched just now—and one who doesn't live a private life
but is compelled by some chance to be a tyrant, who tries to rule others
when he can't even control himself. He's just like an exhausted body
without any self-control, which, instead of living privately, is compelled
to compete and fight with other bodies all its life. d

That's exactly what he's like, Socrates, and what you say is absolutely
true.

And so, Glaucon, isn't this a completely wretched condition to be in,
and doesn't the reigning tyrant have an even harder life than the one you
judged to be hardest?

He certainly does.

In truth, then, and whatever some people may think, a real tyrant is
really a slave, compelled to engage in the worst kind of fawning, slavery,
and pandering to the worst kind of people. He's so far from satisfying his
desires in any way that it is clear—if one happens to know that one must e
study his whole soul—that he's in the greatest need of most things and
truly poor. And, if indeed his state is like that of the city he rules, then
he's full of fear, convulsions, and pains throughout his life. And it is like
it, isn't it?

Of course it is.

And we'll also attribute to the man what we mentioned before, namely, 580
that he is inevitably envious, untrustworthy, unjust, friendless, impious,
host and nurse to every kind of vice, and that his ruling makes him even

more so. And because of all these, he is extremely unfortunate and goes on to make those near him like himself.

No one with any understanding could possibly contradict you.

Come, then, and like the judge who makes the final decision, tell me
who among the five—the king, the timocrat, the oligarch, the democrat,
b and the tyrant—is first in happiness, who second, and so on in order.

That's easy. I rank them in virtue and vice, in happiness and its opposite, in the order of their appearance, as I might judge choruses.

Shall we, then, hire a herald, or shall I myself announce that the son of
Ariston has given as his verdict that the best, the most just, and the most
c happy is the most kingly, who rules like a king over himself, and that the
worst, the most unjust, and the most wretched is the most tyrannical, who
most tyrannizes himself and the city he rules?

Let it be so announced.

And shall I add to the announcement that it holds, whether these things remain hidden from every god and human being or not?

Add it.

Good. Then that is one of our proofs. And there'd be a second, if you
d happen to think that there is anything in this.

In what?

In the fact that the soul of each individual is divided into three parts, in just the way that a city is, for that's the reason I think that there is another proof.

What is it?

This: it seems to me that there are three pleasures corresponding to the three parts of the soul, one peculiar to each part, and similarly with desires and kinds of rule.

What do you mean?

The first, we say, is the part with which a person learns, and the second
the part with which he gets angry. As for the third, we had no one special
name for it, since it's multiform, so we named it after the biggest and
e strongest thing in it. Hence we called it the appetitive part, because of the
intensity of its appetites for food, drink, sex, and all the things associated
with them, but we also called it the money-loving part, because such
581 appetites are most easily satisfied by means of money.

And rightly so.

Then, if we said that its pleasure and love are for profit, wouldn't that best determine its central feature for the purposes of our argument and insure that we are clear about what we mean when we speak of this part of the soul, and wouldn't we be right to call it money-loving and profit-loving?

That's how it seems to me, at least.

What about the spirited part? Don't we say that it is wholly dedicated to the pursuit of control, victory, and high repute?

b Certainly.

Then wouldn't it be appropriate for us to call it victory-loving and honor-loving?

It would be most appropriate.

Now, it is clear to everyone that the part with which we learn is always wholly straining to know where the truth lies and that, of the three parts, it cares least for money and reputation.

By far the least.

Then wouldn't it be appropriate for us to call it learning-loving and philosophical?

Of course.

And doesn't this part rule in some people's souls, while one of the other parts—whichever it happens to be—rules in other people's? c

That's right.

And isn't that the reason we say that there are three primary kinds of people: philosophic, victory-loving, and profit-loving?

That's it precisely.

And also three forms of pleasure, one assigned to each of them?

Certainly.

And do you realize that, if you chose to ask three such people in turn to tell you which of their lives is most pleasant, each would give the highest praise to his own? Won't a money-maker say that the pleasure of being honored and that of learning are worthless compared to that of making a d
profit, if he gets no money from them?

He will.

What about an honor-lover? Doesn't he think that the pleasure of making money is vulgar and that the pleasure of learning—except insofar as it brings him honor—is smoke and nonsense?

He does.

And as for a philosopher, what do you suppose he thinks the other pleasures are worth compared to that of knowing where the truth lies and always being in some such pleasant condition while learning? Won't he e
think that they are far behind? And won't he call them really necessary, since he'd have no need for them if they weren't necessary for life?

He will: we can be sure of that.

Then, since there's a dispute between the different forms of pleasure and between the lives themselves, not about which way of living is finer or more shameful or better or worse, but about which is more pleasant and less painful, how are we to know which of them is speaking most truly? 582

Don't ask me.

Look at it this way: How are we to judge things if we want to judge them well? Isn't it by experience, reason, and argument? Or could anyone have better criteria than these?

How could he?

Consider, then: Which of the three men has most experience of the pleasures we mentioned? Does a profit-lover learn what the truth itself is

like or acquire more experience of the pleasure of knowing it than a
b philosopher does of making a profit?

There's a big difference between them. A philosopher has of necessity tasted the other pleasures since childhood, but it isn't necessary for a profit-lover to taste or experience the pleasure of learning the nature of the things that are and how sweet it is. Indeed, even if he were eager to taste it, he couldn't easily do so.

Then a philosopher is far superior to a profit-lover in his experience of both their pleasures.

c He certainly is.

What about an honor-lover? Has he more experience of the pleasure of knowing than a philosopher has of the pleasure of being honored?

No, for honor comes to each of them, provided that he accomplishes his aim. A rich man is honored by many people, so is a courageous one and a wise one, but the pleasure of studying the things that are cannot be tasted by anyone except a philosopher.

d Then, as far as experience goes, he is the finest judge of the three.

By far.

And he alone has gained his experience in the company of reason.

Of course.

Moreover, the instrument one must use to judge isn't the instrument of a profit-lover or an honor-lover but a philosopher.

What instrument is that?

Arguments, for didn't we say that we must judge by means of them?

Yes.

And argument is a philosopher's instrument most of all.

Of course.

Now, if wealth and profit were the best means of judging things, the
e praise and blame of a profit-lover would necessarily be truest.

That's right.

And if honor, victory, and courage were the best means, wouldn't it be the praise and blame of an honor-lover?

Clearly.

But since the best means are experience, reason, and argument . . .

The praise of a wisdom-lover and argument-lover is necessarily truest.

Then, of the three pleasures, the most pleasant is that of the part of the
583 soul with which we learn, and the one in whom that part rules has the
most pleasant life.

How could it be otherwise? A person with knowledge at least speaks with authority when he praises his own life.

To what life and to what pleasure does the judge give second place?

Clearly, he gives it to those of a warrior and honor-lover, since they're closer to his own than those of a money-maker.

Then the life and pleasure of a profit-lover come last, it seems.

Of course they do.

These, then, are two proofs in a row, and the just person has defeated the unjust one in both. The third is dedicated in Olympic fashion to Olympian Zeus the Savior. Observe then that, apart from those of a knowledgeable person, the other pleasures are neither entirely true nor pure but are like a shadow-painting, as I think I've heard some wise person say. And yet, if this were true, it would be the greatest and most decisive of the overthrows. b

It certainly would. But what exactly do you mean?

I'll find out, if I ask the questions, and you answer. c

Ask, then.

Tell me, don't we say that pain is the opposite of pleasure?

Certainly.

And is there such a thing as feeling neither pleasure nor pain?

There is.

Isn't it intermediate between these two, a sort of calm of the soul by comparison to them? Or don't you think of it that way?

I do.

And do you recall what sick people say when they're ill?

Which saying of theirs do you have in mind?

That nothing gives more pleasure than being healthy, but that they hadn't realized that it was most pleasant until they fell ill. d

I do recall that.

And haven't you also heard those who are in great pain say that nothing is more pleasant than the cessation of their suffering?

I have.

And there are many similar circumstances, I suppose, in which you find people in pain praising, not enjoyment, but the absence of pain and relief from it as most pleasant.

That may be because at such times a state of calm becomes pleasant enough to content them.

And when someone ceases to feel pleasure, this calm will be painful to him. e

Probably so.

Then the calm we described as being intermediate between pleasure and pain will sometimes be both.

So it seems.

Now, is it possible for that which is neither to become both?

Not in my view.

Moreover, the coming to be of either the pleasant or the painful in the soul is a sort of motion, isn't it?

Yes.

And didn't what is neither painful nor pleasant come to light just now as a calm state, intermediate between them? 584

Yes, it did.

Then, how can it be right to think that the absence of pain is pleasure or that the absence of pleasure is pain?

There's no way it can be.

Then it isn't right. But when the calm is next to the painful it appears pleasant, and when it is next to the pleasant it appears painful. However, there is nothing sound in these appearances as far as the truth about pleasure is concerned, only some kind of magic.

That's what the argument suggests, at any rate.

b Take a look at the pleasures that don't come out of pains, so that you won't suppose in their case also that it is the nature of pleasure to be the cessation of pain or of pain to be the cessation of pleasure.

Where am I to look? What pleasures do you mean?

The pleasures of smell are especially good examples to take note of, for they suddenly become very intense without being preceded by pain, and when they cease they leave no pain behind. But there are plenty of other examples as well.

That's absolutely true.

Then let no one persuade us that pure pleasure is relief from pain or
c that pure pain is relief from pleasure.

No, let's not.

However, most of the so-called pleasures that reach the soul through the body, as well as the most intense ones, are of this form—they are some kind of relief from pain.

Yes, they are.

And aren't the pleasures and pains of anticipation, which arise from the expectation of future pleasures or pains, also of this form?

They are.

d Do you know what kind of thing they are and what they most resemble?

No, what is it?

Do you believe that there is an up, a down, and a middle in nature?

I do.

And do you think that someone who was brought from down below to the middle would have any other belief than that he was moving upward? And if he stood in the middle and saw where he had come from, would he believe that he was anywhere other than the upper region, since he hasn't seen the one that is truly upper?

By god, I don't see how he could think anything else.

And if he was brought back, wouldn't he suppose that he was being
e brought down? And wouldn't he be right?

Of course.

Then wouldn't all this happen to him because he is inexperienced in what is really and truly up, down, and in the middle?

Clearly.

Is it any surprise, then, if those who are inexperienced in the truth have unsound opinions about lots of other things as well, or that they are so disposed to pleasure, pain, and the intermediate state that, when they descend to the painful, they believe truly and are really in pain, but that,
585 when they ascend from the painful to the intermediate state, they firmly

believe that they have reached fulfillment and pleasure? They are inexperienced in pleasure and so are deceived when they compare pain to painlessness, just as they would be if they compared black to gray without having experienced white.

No, by god, I wouldn't be surprised. In fact, I'd be very surprised if it were any other way.

Think of it this way: Aren't hunger, thirst, and the like some sort of b empty states of the body?

They are.

And aren't ignorance and lack of sense empty states of the soul?

Of course.

And wouldn't someone who partakes of nourishment or strengthens his understanding be filled?

Certainly.

Does the truer filling up fill you with that which is less or that which is more?

Clearly, it's with that which is more.

And which kinds partake more of pure being? Kinds of filling up such as filling up with bread or drink or delicacies or food in general? Or the kind of filling up that is with true belief, knowledge, understanding, and, in sum, with all of virtue? Judge it this way: That which is related to what is always the same, immortal, and true, is itself of that kind, and comes c to be in something of that kind—this is more, don't you think, than that which is related to what is never the same and mortal, is itself of that kind, and comes to be in something of that kind?

That which is related to what is always the same is far more.

And does the being of what is always the same participate more in being than in knowledge?

Not at all.

Or more than in truth?

Not that either.

And if less in truth, then less in being also?

Necessarily.

And isn't it generally true that the kinds of filling up that are concerned with the care of the body share less in truth and being than those concerned d with the care of the soul?

Yes, much less.

And don't you think that the same holds of the body in comparison to the soul?

Certainly.

And isn't that which is more, and is filled with things that are more, really more filled than that which is less, and is filled with things that are less?

Of course.

Therefore, if being filled with what is appropriate to our nature is pleasure, that which is more filled with things that are more enjoys more really

e and truly a more true pleasure, while that which partakes of things that are less is less truly and surely filled and partakes of a less trustworthy and less true pleasure.

That's absolutely inevitable.

Therefore, those who have no experience of reason or virtue, but are
586 always occupied with feasts and the like, are brought down and then back
up to the middle, as it seems, and wander in this way throughout their
lives, never reaching beyond this to what is truly higher up, never looking
up at it or being brought up to it, and so they aren't filled with that which
really is and never taste any stable or pure pleasure. Instead, they always
look down at the ground like cattle, and, with their heads bent over the
dinner table, they feed, fatten, and fornicate. To outdo others in these
b things, they kick and butt them with iron horns and hooves, killing each
other, because their desires are insatiable. For the part that they're trying
to fill is like a vessel full of holes, and neither it nor the things they are
trying to fill it with are among the things that are.

Socrates, you've exactly described the life of the majority of people, just like an oracle.

Then isn't it necessary for these people to live with pleasures that are
mixed with pains, mere images and shadow-paintings of true pleasures?
And doesn't the juxtaposition of these pleasures and pains make them
c appear intense, so that they give rise to mad erotic passions in the foolish,
and are fought over in just the way that Stesichorus tells us the phantom
of Helen was fought over at Troy by men ignorant of the truth?

Something like that must be what happens.

And what about the spirited part? Mustn't similar things happen to
someone who satisfies it? Doesn't his love of honor make him envious
and his love of victory make him violent, so that he pursues the satisfaction
d of his anger and of his desires for honors and victories without calculation
or understanding?

Such things must happen to him as well.

Then can't we confidently assert that those desires of even the money-
loving and honor-loving parts that follow knowledge and argument and
pursue with their help those pleasures that reason approves will attain
the truest pleasures possible for them, because they follow truth, and the
e ones that are most their own, if indeed what is best for each thing is most
its own?

And indeed it is best.

Therefore, when the entire soul follows the philosophic part, and there
is no civil war in it, each part of it does its own work exclusively and is
just, and in particular it enjoys its own pleasures, the best and truest
587 pleasures possible for it.

Absolutely.

But when one of the other parts gains control, it won't be able to secure its own pleasure and will compel the other parts to pursue an alien and untrue pleasure.

That's right.

And aren't the parts that are most distant from philosophy and reason the ones most likely to do this sort of compelling?

They're much more likely.

And isn't whatever is most distant from reason also most distant from law and order?

Clearly.

And didn't the erotic and tyrannical desires emerge as most distant from these things? b

By far.

And weren't the kingly and orderly ones least distant?

Yes.

Then I suppose that a tyrant will be most distant from a pleasure that is both true and his own and that a king will be least distant.

Necessarily.

So a tyrant will live most unpleasantly, and a king most pleasantly.

Necessarily.

Do you know how much more unpleasant a tyrant's life is than a king's?

I will if you tell me.

There are, it seems, three pleasures, one genuine and two illegitimate, and a tyrant is at the extreme end of the illegitimate ones, since he flees both law and reason and lives with a bodyguard of certain slavish pleasures. But c
it isn't easy, all the same, to say just how inferior he is to a king, except perhaps as follows. A tyrant is somehow third from an oligarch, for a democrat was between them.

Yes.

Then, if what we said before is true, doesn't he live with an image of pleasure that is third from an oligarch's with respect to truth?[2]

He does.

Now, an oligarch, in turn, is third from a king, if we identify a king and an aristocrat. d

Yes, he's third.

So a tyrant is three times three times removed from true pleasure.

Apparently so.

It seems then, on the basis of the magnitude of its number, that the image of tyrannical pleasure is a plane figure.

Exactly.

But then it's clear that, by squaring and cubing it, we'll discover how far a tyrant's pleasure is from that of a king.

It is clear to a mathematician, at any rate.

Then, turning it the other way around, if someone wants to say how far a king's pleasure is from a tyrant's, he'll find, if he completes the calculation, that a king lives seven hundred and twenty-nine times more e

2. Third because the Greeks always counted the first as well as the last member of a series, e.g. the day after tomorrow was the third day from today.

pleasantly than a tyrant and that a tyrant is the same number of times more wretched.

That's an amazing calculation of the difference between the pleasure
588 and pain of the two men, the just and the unjust.

Yet it's a true one, and one appropriate to human lives, if indeed days, nights, months, and years are appropriate to them.

And of course they are appropriate.

Then, if a good and just person's life is that much more pleasant than the life of a bad and unjust person, won't its grace, fineness, and virtue be incalculably greater?

By god, it certainly will.

b All right, then. Since we've reached this point in the argument, let's return to the first things we said, since they are what led us here. I think someone said at some point that injustice profits a completely unjust person who is believed to be just. Isn't that so?

It certainly is.

Now, let's discuss this with him, since we've agreed on the respective powers that injustice and justice have.

How?

By fashioning an image of the soul in words, so that the person who says this sort of thing will know what he is saying.

c What sort of image?

One like those creatures that legends tell us used to come into being in ancient times, such as the Chimera, Scylla, Cerberus, or any of the multitude of others in which many different kinds of things are said to have grown together naturally into one.

Yes, the legends do tell us of such things.

Well, then, fashion a single kind of multicolored beast with a ring of many heads that it can grow and change at will—some from gentle, some from savage animals.

d That's work for a clever artist. However, since words are more malleable than wax and the like, consider it done.

Then fashion one other kind, that of a lion, and another of a human being. But make the first much the largest and the other second to it in size.

That's easier—the sculpting is done.

Now join the three of them into one, so that they somehow grow together naturally.

They're joined.

Then, fashion around them the image of one of them, that of a human being so that anyone who sees only the outer covering and not what's
e inside will think it is a single creature, a human being.

It's done.

Then, if someone maintains that injustice profits this human being and that doing just things brings no advantage, let's tell him that he is simply saying that it is beneficial for him, first, to feed the multiform beast well and make it strong, and also the lion and all that pertains to him; second,

to starve and weaken the human being within, so that he is dragged along 589
wherever either of the other two leads; and, third, to leave the parts to bite and kill one another rather than accustoming them to each other and making them friendly.

Yes, that's absolutely what someone who praises injustice is saying.

But, on the other hand, wouldn't someone who maintains that just things are profitable be saying, first, that all our words and deeds should insure that the human being within this human being has the most control; second, that he should take care of the many-headed beast as a farmer does his b
animals, feeding and domesticating the gentle heads and preventing the savage ones from growing; and, third, that he should make the lion's nature his ally, care for the community of all his parts, and bring them up in such a way that they will be friends with each other and with himself?

Yes, that's exactly what someone who praises justice is saying.

From every point of view, then, anyone who praises justice speaks truly, and anyone who praises injustice speaks falsely. Whether we look at the matter from the point of view of pleasure, good reputation, or advantage, a praiser of justice tells the truth, while one who condemns it has nothing c
sound to say and condemns without knowing what he is condemning.

In my opinion, at least, he knows nothing about it.

Then let's persuade him gently—for he isn't wrong of his own will—by asking him these questions. Should we say that this is the original basis for the conventions about what is fine and what is shameful? Fine things are those that subordinate the beastlike parts of our nature to the human—or better, perhaps, to the divine; shameful ones are those that enslave the d
gentle to the savage? Will he agree or what?

He will, if he takes my advice.

In light of this argument, can it profit anyone to acquire gold unjustly if, by doing so, he enslaves the best part of himself to the most vicious? If he got the gold by enslaving his son or daughter to savage and evil men, it wouldn't profit him, no matter how much gold he got. How, then, e
could he fail to be wretched if he pitilessly enslaves the most divine part of himself to the most godless and polluted one and accepts golden gifts in return for a more terrible destruction than Eriphyle's when she took 590
the necklace in return for her husband's soul?[3]

A much more terrible one, Glaucon said. I'll answer for him.

And don't you think that licentiousness has long been condemned for just these reasons, namely, that because of it, that terrible, large, and multiform beast is let loose more than it should be?

Clearly.

And aren't stubbornness and irritability condemned because they inharmoniously increase and stretch the lionlike and snakelike part? b

3. Eriphyle was bribed with a golden necklace by Polynices to persuade her husband, Amphiaraus, to join the "Seven Against Thebes." He was killed. See *Odyssey* xi.326–27; Pindar, *Nemean* 9.16 ff.

Certainly.

And aren't luxury and softness condemned because the slackening and loosening of this same part produce cowardice in it?

Of course.

And aren't flattery and slavishness condemned because they subject the spirited part to the moblike beast, accustoming it from youth on to being insulted for the sake of the money needed to satisfy the beast's insatiable appetites, so that it becomes an ape instead of a lion?

c They certainly are.

Why do you think that the condition of a manual worker is despised? Or is it for any other reason than that, when the best part is naturally weak in someone, it can't rule the beasts within him but can only serve them and learn to flatter them?

Probably so.

Therefore, to insure that someone like that is ruled by something similar to what rules the best person, we say that he ought to be the slave of that best person who has a divine ruler within himself. It isn't to harm the
d slave that we say he must be ruled, which is what Thrasymachus thought to be true of all subjects, but because it is better for everyone to be ruled by divine reason, preferably within himself and his own, otherwise imposed from without, so that as far as possible all will be alike and friends, governed by the same thing.

Yes, that's right.

This is clearly the aim of the law, which is the ally of everyone. But it's also our aim in ruling our children, we don't allow them to be free until we establish a constitution in them, just as in a city, and—by fostering their best part with our own—equip them with a guardian and ruler similar
591 to our own to take our place. Then, and only then, we set them free.

Clearly so.

Then how can we maintain or argue, Glaucon, that injustice, licentiousness, and doing shameful things are profitable to anyone, since, even though he may acquire more money or other sort of power from them, they make him more vicious?

There's no way we can.

Or that to do injustice without being discovered and having to pay the penalty is profitable? Doesn't the one who remains undiscovered become
b even more vicious, while the bestial part of the one who is discovered is calmed and tamed and his gentle part freed, so that his entire soul settles into its best nature, acquires moderation, justice, and reason, and attains a more valuable state than that of having a fine, strong, healthy body, since the soul itself is more valuable than the body?

That's absolutely certain.

Then won't a person of understanding direct all his efforts to attaining
c that state of his soul? First, he'll value the studies that produce it and despise the others.

Clearly so.

Second, he won't entrust the condition and nurture of his body to the irrational pleasure of the beast within or turn his life in that direction, but neither will he make health his aim or assign first place to being strong, healthy, and beautiful, unless he happens to acquire moderation as a result. Rather, it's clear that he will always cultivate the harmony of his body for the sake of the consonance in his soul. d

He certainly will, if indeed he's to be truly trained in music and poetry.

Will he also keep order and consonance in his acquisition of money, with that same end in view? Or, even though he isn't dazzled by the size of the majority into accepting their idea of blessed happiness, will he increase his wealth without limit and so have unlimited evils?

Not in my view.

Rather, he'll look to the constitution within him and guard against e
disturbing anything in it, either by too much money or too little. And, in this way, he'll direct both the increase and expenditure of his wealth, as far as he can.

That's exactly what he'll do.

And he'll look to the same thing where honors are concerned. He'll willingly share in and taste those that he believes will make him better, 592
but he'll avoid any public or private honor that might overthrow the established condition of his soul.

If that's his chief concern, he won't be willing to take part in politics.

Yes, by the dog, he certainly will, at least in his own kind of city. But he may not be willing to do so in his fatherland, unless some divine good luck chances to be his.

I understand. You mean that he'll be willing to take part in the politics of the city we were founding and describing, the one that exists in theory, for I don't think it exists anywhere on earth. b

But perhaps, I said, there is a model of it in heaven, for anyone who wants to look at it and to make himself its citizen on the strength of what he sees. It makes no difference whether it is or ever will be somewhere, for he would take part in the practical affairs of that city and no other.

Probably so, he said.

## Book X

Indeed, I said, our city has many features that assure me that we were 595
entirely right in founding it as we did, and, when I say this, I'm especially thinking of poetry.

What about it in particular? Glaucon said.

That we didn't admit any that is imitative. Now that we have distinguished the separate parts of the soul, it is even clearer, I think, that such poetry should be altogether excluded. b

What do you mean?

Between ourselves—for *you* won't denounce me to the tragic poets or any of the other imitative ones—all such poetry is likely to distort the thought of anyone who hears it, unless he has the knowledge of what it is really like, as a drug to counteract it.

What exactly do you have in mind in saying this?

I'll tell you, even though the love and respect I've had for Homer since I was a child make me hesitate to speak, for he seems to have been the first teacher and leader of all these fine tragedians. All the
c same, no one is to be honored or valued more than the truth. So, as I say, it must be told.

That's right.

Listen then, or, rather, answer.

Ask and I will.

Could you tell me what imitation in general is? I don't entirely understand what sort of thing imitations are trying to be.

Is it likely, then, that *I'll* understand?

That wouldn't be so strange, for people with bad eyesight often see
596 things before those whose eyesight is keener.

That's so, but even if something occurred to me, I wouldn't be eager to talk about it in front of you. So I'd rather that you did the looking.

Do you want us to begin our examination, then, by adopting our usual procedure? As you know, we customarily hypothesize a single form in connection with each of the many things to which we apply the same name. Or don't you understand?

I do.

Then let's now take any of the manys you like. For example, there are
b many beds and tables.

Of course.

But there are only two forms of such furniture, one of the bed and one of the table.

Yes.

And don't we also customarily say that their makers look towards the appropriate form in making the beds or tables we use, and similarly in the other cases? Surely no craftsman makes the form itself. How could he?

There's no way he could.

Well, then, see what you'd call *this* craftsman?

c Which one?

The one who makes all the things that all the other kinds of craftsmen severally make.

That's a clever and wonderful fellow you're talking about.

Wait a minute, and you'll have even more reason to say that, for this same craftsman is able to make, not only all kinds of furniture, but all plants that grow from the earth, all animals (including himself), the earth itself, the heavens, the gods, all the things in the heavens and in Hades beneath the earth.

d *He'd* be amazingly clever!

You don't believe me? Tell me, do you think that there's no way any craftsman could make all these things, or that in one way he could and in another he couldn't? Don't you see that there is a way in which you yourself could make all of them?

What way is that?

It isn't hard: You could do it quickly and in lots of places, especially if you were willing to carry a mirror with you, for that's the quickest way of all. With it you can quickly make the sun, the things in the heavens,
the earth, yourself, the other animals, manufactured items, plants, and e
everything else mentioned just now.

Yes, I could make them appear, but I couldn't make the things themselves as they truly are.

Well put! You've extracted the point that's crucial to the argument. I suppose that the painter too belongs to this class of makers, doesn't he?

Of course.

But I suppose you'll say that he doesn't truly make the things he makes. Yet, in a certain way, the painter does make a bed, doesn't he?

Yes, he makes the appearance of one.

What about the carpenter? Didn't you just say that he doesn't make the
form—which is our term for the being of a bed—but only *a* bed? 597

Yes, I did say that.

Now, if he doesn't make the being of a bed, he isn't making that which is, but something which is like that which is, but is not it. So, if someone were to say that the work of a carpenter or any other craftsman is completely that which is, wouldn't he risk saying what isn't true?

That, at least, would be the opinion of those who busy themselves with arguments of this sort.

Then let's not be surprised if the carpenter's bed, too, turns out to be a somewhat dark affair in comparison to the true one.

All right. b

Then, do you want us to try to discover what an imitator is by reference to these same examples?

I do, if you do.

We get, then, these three kinds of beds. The first is in nature a bed, and I suppose we'd say that a god makes it, or does someone else make it?

No one else, I suppose.

The second is the work of a carpenter.

Yes.

And the third is the one the painter makes. Isn't that so?

It is.

Then the painter, carpenter, and god correspond to three kinds of bed?

Yes, three.

Now, the god, either because he didn't want to or because it was neces-
sary for him not to do so, didn't make more than one bed in nature, but c
only one, the very one that is the being of a bed. Two or more of these have not been made by the god and never will be.

Why is that?

Because, if he made only two, then again one would come to light whose form they in turn would both possess, and *that* would be the one that is the being of a bed and not the other two.

That's right.

The god knew this, I think, and wishing to be the real maker of the
d truly real bed and not just *a* maker of *a* bed, he made it to be one in nature.

Probably so.

Do you want us to call him its natural maker or something like that?

It would be right to do so, at any rate, since he is by nature the maker of this and everything else.

What about a carpenter? Isn't he the maker of a bed?

Yes.

And is a painter also a craftsman and maker of such things?

Not at all.

Then what do you think he does do to a bed?

He imitates it. He is an imitator of what the others make. That, in my
e view, is the most reasonable thing to call him.

All right. Then wouldn't you call someone whose product is third from the natural one an imitator?

I most certainly would.

Then this will also be true of a tragedian, if indeed he is an imitator. He is by nature third from the king and the truth, as are all other imitators.

It looks that way.

We're agreed about imitators, then. Now, tell me this about a painter.
Do you think he tries in each case to imitate the thing itself in nature or
598 the works of craftsmen?

The works of craftsmen.

As they are or as they appear? You must be clear about that.

How do you mean?

Like this. If you look at a bed from the side or the front or from anywhere else is it a different bed each time? Or does it only appear different, without being at all different? And is that also the case with other things?

That's the way it is—it appears different without being so.

Then consider this very point: What does painting do in each case? Does
b it imitate that which is as it is, or does it imitate that which appears as it
appears? Is it an imitation of appearances or of truth?

Of appearances.

Then imitation is far removed from the truth, for it touches only a small
part of each thing and a part that is itself only an image. And that, it
seems, is why it can produce everything. For example, we say that a painter
can paint a cobbler, a carpenter, or any other craftsman, even though he
c knows nothing about these crafts. Nevertheless, if he is a good painter
and displays his painting of a carpenter at a distance, he can deceive
children and foolish people into thinking that it is truly a carpenter.

Of course.

Then this, I suppose, is what we must bear in mind in all these cases. Hence, whenever someone tells us that he has met a person who knows all the crafts as well as all the other things that anyone else knows and that his knowledge of any subject is more exact than any of theirs is,
we must assume that we're talking to a simple-minded fellow who has d
apparently encountered some sort of magician or imitator and been deceived into thinking him omniscient and that the reason he has been deceived is that he himself can't distinguish between knowledge, ignorance, and imitation.

That's absolutely true.

Then, we must consider tragedy and its leader, Homer. The reason is this: We hear some people say that poets know all crafts, all human affairs
concerned with virtue and vice, and all about the gods as well. They say e
that if a good poet produces fine poetry, he must have knowledge of the things he writes about, or else he wouldn't be able to produce it at all. Hence, we have to look to see whether those who tell us this have encountered these imitators and have been so deceived by them that they don't realize that their works are at the third remove from that which is and
are easily produced without knowledge of the truth (since they are only 599
images, not things that are), or whether there is something in what these people say, and good poets really do have knowledge of the things most people think they write so well about.

We certainly must look into it.

Do you think that someone who could make both the thing imitated and its image would allow himself to be serious about making images
and put this at the forefront of his life as the best thing to do? b

No, I don't.

I suppose that, if he truly had knowledge of the things he imitates, he'd be much more serious about actions than about imitations of them, would try to leave behind many fine deeds as memorials to himself, and would be more eager to be the subject of a eulogy than the author of one.

I suppose so, for these things certainly aren't equally valuable or equally beneficial either.

Then let's not demand an account of any of these professions from Homer or the other poets. Let's not ask whether any of them is a doctor
rather than an imitator of what doctors say, or whether any poet of the c
old or new school has made anyone healthy as Asclepius did, or whether he has left any students of medicine behind as Asclepius did his sons. And let's not ask them about the other crafts either. Let's pass over all that. But about the most important and most beautiful things of which Homer undertakes to speak—warfare, generalship, city government, and people's education—about these it *is* fair to question him, asking him this:
"Homer, if you're not third from the truth about virtue, the sort of craftsman d
of images that we defined an imitator to be, but if you're even second and capable of knowing what ways of life make people better in private or in public, then tell us which cities are better governed because of you, as

Sparta is because of Lycurgus, and as many others—big and small—are
because of many other men? What city gives you credit for being a good
e lawgiver who benefited it, as Italy and Sicily do to Charondas, and as we
do to Solon? Who gives such credit to you?" Will he be able to name one?

I suppose not, for not even the Homeridae[1] make that claim for him.

Well, then, is any war in Homer's time remembered that was won
600 because of his generalship and advice?

None.

Or, as befits a wise man, are many inventions and useful devices in the crafts or sciences attributed to Homer, as they are to Thales of Miletus and Anacharsis the Scythian?[2]

There's nothing of that kind at all.

Then, if there's nothing of a public nature, are we told that, when Homer
was alive, he was a leader in the education of certain people who took
pleasure in associating with him in private and that he passed on a Homeric
b way of life to those who came after him, just as Pythagoras did? Pythagoras
is particularly loved for this, and even today his followers are conspicuous
for what they call the Pythagorean way of life.

Again, we're told nothing of this kind about Homer. If the stories about
him are true, Socrates, his companion, Creophylus,[3] seems to have been
an even more ridiculous example of education than his name suggests,
for they tell us that while Homer was alive, Creophylus completely ne-
c glected him.

They do tell us that. But, Glaucon, if Homer had really been able to
educate people and make them better, if he'd known about these things
and not merely about how to imitate them, wouldn't he have had many
companions and been loved and honored by them? Protagoras of Abdera,
Prodicus of Ceos,[4] and a great many others are able to convince anyone
who associates with them in private that he wouldn't be able to manage
his household or city unless they themselves supervise his education, and
d they are so intensely loved because of this wisdom of theirs that their
disciples do everything but carry them around on their shoulders. So do
you suppose that, if Homer had been able to benefit people and make
them more virtuous, his companions would have allowed either him or
Hesiod to wander around as rhapsodes? Instead, wouldn't they have clung

1. The Homeridae were the rhapsodes and poets who recited and expounded Homer throughout the Greek world.

2. Thales of Miletus is the first philosopher we know of in ancient Greece. He is said to have predicted the solar eclipse of 585 B.C. Anacharsis, who lived around 600 B.C., is credited with beginning Greek geometry and with being able to calculate the distance of ships at sea.

3. Creophylus is said to have been an epic poet from Chios. His name comes from two words meaning "meat" and "race" or "kind." A modern equivalent would be "meathead."

4. Protagoras and Prodicus were two of the most famous fifth-century sophists.

tighter to them than to gold and compelled them to live with them in their
homes, or, if they failed to persuade them to do so, wouldn't they have
followed them wherever they went until they had received sufficient edu- e
cation?

It seems to me, Socrates, that what you say is entirely true.

Then shall we conclude that all poetic imitators, beginning with Homer,
imitate images of virtue and all the other things they write about and have
no grasp of the truth? As we were saying just now, a painter, though he
knows nothing about cobblery, can make what seems to be a cobbler to
those who know as little about it as he does and who judge things by their 601
colors and shapes.

That's right.

And in the same way, I suppose we'll say that a poetic imitator uses
words and phrases to paint colored pictures of each of the crafts. He
himself knows nothing about them, but he imitates them in such a way
that others, as ignorant as he, who judge by words, will think he speaks
extremely well about cobblery or generalship or anything else whatever,
provided—so great is the natural charm of these things—that he speaks
with meter, rhythm, and harmony, for if you strip a poet's works of their
musical colorings and take them by themselves, I think you know what b
they look like. You've surely seen them.

I certainly have.

Don't they resemble the faces of young boys who are neither fine nor beautiful after the bloom of youth has left them?

Absolutely.

Now, consider this. We say that a maker of an image—an imitator—
knows nothing about that which is but only about its appearance. Isn't
that so? c

Yes.

Then let's not leave the discussion of this point halfway, but examine it fully.

Go ahead.

Don't we say that a painter paints reins and a mouth-bit?

Yes.

And that a cobbler and a metal-worker makes them?

Of course.

Then, does a painter know how the reins and mouth-bit have to be? Or is it the case that even a cobbler and metal-worker who make them don't know this, but only someone who knows how to use them, namely, a horseman?

That's absolutely true.

And won't we say that the same holds for everything?

What?

That for each thing there are these three crafts, one that uses it, one that d
makes it, and one that imitates it?

Yes.

Then aren't the virtue or excellence, the beauty and correctness of each manufactured item, living creature, and action related to nothing but the use for which each is made or naturally adapted?

They are.

It's wholly necessary, therefore, that a user of each thing has most experience of it and that he tell a maker which of his products performs well or badly in actual use. A flute-player, for example, tells a flute-maker about the flutes that respond well in actual playing and prescribes what
e kind of flutes he is to make, while the maker follows his instructions.

Of course.

Then doesn't the one who knows give instructions about good and bad flutes, and doesn't the other rely on him in making them?

Yes.

Therefore, a maker—through associating with and having to listen to the one who knows—has right opinion about whether something he makes
602 is fine or bad, but the one who knows is the user.

That's right.

Does an imitator have knowledge of whether the things he makes are fine or right through having made use of them, or does he have right opinion about them through having to consort with the one who knows and being told how he is to paint them?

Neither.

Therefore an imitator has neither knowledge nor right opinion about whether the things he makes are fine or bad.

Apparently not.

Then a poetic imitator is an accomplished fellow when it comes to wisdom about the subjects of his poetry!

Hardly.

Nonetheless, he'll go on imitating, even though he doesn't know the good or bad qualities of anything, but what he'll imitate, it seems, is what
b appears fine or beautiful to the majority of people who know nothing.

Of course.

It seems, then, that we're fairly well agreed that an imitator has no worthwhile knowledge of the things he imitates, that imitation is a kind of game and not something to be taken seriously, and that all the tragic poets, whether they write in iambics or hexameters, are as imitative as they could possibly be.

That's right.

c Then is this kind of imitation concerned with something that is third from the truth, or what?

Yes, it is.

And on which of a person's parts does it exert its power?

What do you mean?

This: Something looked at from close at hand doesn't seem to be the same size as it does when it is looked at from a distance.

No, it doesn't.

And something looks crooked when seen in water and straight when seen out of it, while something else looks both concave and convex because our eyes are deceived by its colors, and every other similar sort of confusion is clearly present in our soul. And it is because they exploit this weakness in our nature that *trompe l'oeil* painting, conjuring, and other forms of d
trickery have powers that are little short of magical.

That's true.

And don't measuring, counting, and weighing give us most welcome assistance in these cases, so that we aren't ruled by something's looking bigger, smaller, more numerous, or heavier, but by calculation, measurement, or weighing?

Of course.

And calculating, measuring, and weighing are the work of the rational part of the soul. e

They are.

But when this part has measured and has indicated that some things are larger or smaller or the same size as others, the opposite appears to it at the same time.

Yes.

And didn't we say that it is impossible for the same thing to believe opposites about the same thing at the same time?[5]

We did, and we were right to say it.

Then the part of the soul that forms a belief contrary to the measurements couldn't be the same as the part that believes in accord with them. 603

No, it couldn't.

Now, the part that puts its trust in measurement and calculation is the best part of the soul.

Of course.

Therefore, the part that opposes it is one of the inferior parts in us.

Necessarily.

This, then, is what I wanted to get agreement about when I said that painting and imitation as a whole produce work that is far from the truth, namely, that imitation really consorts with a part of us that is far from reason, and the result of their being friends and companions is neither sound nor true. b

That's absolutely right.

Then imitation is an inferior thing that consorts with another inferior thing to produce an inferior offspring.

So it seems.

Does this apply only to the imitations we see, or does it also apply to the ones we hear—the ones we call poetry?

It probably applies to poetry as well.

However, we mustn't rely solely on a mere probability based on the analogy with painting; instead, we must go directly to the part of our

5. See 436b–c.

thought with which poetic imitations consort and see whether it is inferior
c or something to be taken seriously.

Yes, we must.

Then let's set about it as follows. We say that imitative poetry imitates human beings acting voluntarily or under compulsion, who believe that, as a result of these actions, they are doing either well or badly and who experience either pleasure or pain in all this. Does it imitate anything apart from this?

Nothing.

Then is a person of one mind in all these circumstances? Or, just as he was at war with himself in matters of sight and held opposite beliefs about
d the same thing at the same time, does he also fight with himself and engage in civil war with himself in matters of action? But there is really no need for us to reach agreement on this question now, for I remember that we already came to an adequate conclusion about all these things in our earlier arguments, when we said that our soul is full of a myriad of such oppositions at the same time.[6]

And rightly so.

It *was* right, but I think we omitted some things then that we must
e now discuss.

What are they?

We also mentioned somewhere before[7] that, if a decent man happens to lose his son or some other prized possession, he'll bear it more easily than the other sorts of people.

Certainly.

But now let's consider this. Will he not grieve at all, or, if that's impossible, will he be somehow measured in his response to pain?

The latter is closer to the truth.

Now, tell me this about him: Will he fight his pain and put up more
604 resistance to it when his equals can see him or when he's alone by himself in solitude?

He'll fight it far more when he's being seen.

But when he's alone I suppose he'll venture to say and do lots of things that he'd be ashamed to be heard saying or seen doing.

That's right.

And isn't it reason and law that tells him to resist his pain, while his
b experience of it tells him to give in?

True.

And when there are two opposite inclinations in a person in relation to the same thing at the same time, we say that he must also have two parts.

Of course.

6. See 439c ff.

7. See 387d–e.

Isn't one part ready to obey the law wherever it leads him?

How so?

The law says, doesn't it, that it is best to keep as quiet as possible in misfortunes and not get excited about them? First, it isn't clear whether such things will turn out to be good or bad in the end; second, it doesn't make the future any better to take them hard; third, human affairs aren't worth taking very seriously; and, finally, grief prevents the very thing c
we most need in such circumstances from coming into play as quickly as possible.

What are you referring to?

Deliberation. We must accept what has happened as we would the fall of the dice, and then arrange our affairs in whatever way reason determines to be best. We mustn't hug the hurt part and spend our time weeping and wailing like children when they trip. Instead, we should always accustom our souls to turn as quickly as possible to healing the disease and putting the disaster right, replacing lamentation with cure. d

That would be the best way to deal with misfortune, at any rate.

Accordingly, we say that it is the best part of us that is willing to follow this rational calculation.

Clearly.

Then won't we also say that the part that leads us to dwell on our misfortunes and to lamentation, and that can never get enough of these things, is irrational, idle, and a friend of cowardice?

We certainly will.

Now, this excitable character admits of many multicolored imitations.
But a rational and quiet character, which always remains pretty well the e
same, is neither easy to imitate nor easy to understand when imitated, especially not by a crowd consisting of all sorts of people gathered together at a theater festival, for the experience being imitated is alien to them.

Absolutely. 605

Clearly, then, an imitative poet isn't by nature related to the part of the soul that rules in such a character, and, if he's to attain a good reputation with the majority of people, his cleverness isn't directed to pleasing it. Instead, he's related to the excitable and multicolored character, since it is easy to imitate.

Clearly.

Therefore, we'd be right to take him and put him beside a painter as his counterpart. Like a painter, he produces work that is inferior with respect to truth and that appeals to a part of the soul that is similarly
inferior rather than to the best part. So we were right not to admit him b
into a city that is to be well-governed, for he arouses, nourishes, and strengthens this part of the soul and so destroys the rational one, in just the way that someone destroys the better sort of citizens when he strengthens the vicious ones and surrenders the city to them. Similarly, we'll say that an imitative poet puts a bad constitution in the soul of each individual

by making images that are far removed from the truth and by gratifying
c the irrational part, which cannot distinguish the large and the small but
believes that the same things are large at one time and small at another.

That's right.

However, we haven't yet brought the most serious charge against imitation, namely, that with a few rare exceptions it is able to corrupt even decent people, for that's surely an altogether terrible thing.

It certainly is, if indeed it can do that.

Listen, then, and consider whether it can or not. When even the best of
us hear Homer or some other tragedian imitating one of the heroes sorrow-
ing and making a long lamenting speech or singing and beating his breast,
d you know that we enjoy it, give ourselves up to following it, sympathize
with the hero, take his sufferings seriously, and praise as a good poet the
one who affects us most in this way.

Of course we do.

But when one of us suffers a private loss, you realize that the opposite
happens. We pride ourselves if we are able to keep quiet and master our
grief, for we think that this is the manly thing to do and that the behavior
e we praised before is womanish.

I do realize that.

Then are we right to praise it? Is it right to look at someone behaving in a way that we would consider unworthy and shameful and to enjoy and praise it rather than being disgusted by it?

No, by god, that doesn't seem reasonable.

606 No, at least not if you look at it in the following way.

How?

If you reflect, first, that the part of the soul that is forcibly controlled in
our private misfortunes and that hungers for the satisfaction of weeping
and wailing, because it desires these things by nature, is the very part that
receives satisfaction and enjoyment from poets, and, second, that the part
of ourselves that is best by nature, since it hasn't been adequately educated
either by reason or habit, relaxes its guard over the lamenting part when
it is watching the sufferings of somebody else. The reason it does so is
b this: It thinks that there is no shame involved for it in praising and pitying
another man who, in spite of his claim to goodness, grieves excessively.
Indeed, it thinks that there is a definite gain involved in doing so, namely,
pleasure. And it wouldn't want to be deprived of that by despising the
whole poem. I suppose that only a few are able to figure out that enjoyment
of other people's sufferings is necessarily transferred to our own and that
the pitying part, if it is nourished and strengthened on the sufferings of
others, won't be easily held in check when we ourselves suffer.

c That's very true.

And doesn't the same argument apply to what provokes laughter? If there are any jokes that you yourself would be ashamed to tell but that you very much enjoy hearing and don't detest as something evil in comic plays or in private, aren't you doing the same thing as in the case of what

provokes pity? The part of you that wanted to tell the jokes and that was held back by your reason, for fear of being thought a buffoon, you then release, not realizing that, by making it strong in this way, you will be led into becoming a figure of fun where your own affairs are concerned.

Yes, indeed.

And in the case of sex, anger, and all the desires, pleasures, and pains d
that we say accompany all our actions, poetic imitation has the very same effect on us. It nurtures and waters them and establishes them as rulers in us when they ought to wither and be ruled, for that way we'll become better and happier rather than worse and more wretched.

I can't disagree with you.

And so, Glaucon, when you happen to meet those who praise Homer e
and say that he's the poet who educated Greece, that it's worth taking up his works in order to learn how to manage and educate people, and that one should arrange one's whole life in accordance with his teachings, you should welcome these people and treat them as friends, since they're as good as they're capable of being, and you should agree that Homer is the 607
most poetic of the tragedians and the first among them. But you should also know that hymns to the gods and eulogies to good people are the only poetry we can admit into our city. If you admit the pleasure-giving Muse, whether in lyric or epic poetry, pleasure and pain will be kings in your city instead of law or the thing that everyone has always believed to be best, namely, reason.

That's absolutely true.

Then let this be our defense—now that we've returned to the topic of poetry—that, in view of its nature, we had reason to banish it from the b
city earlier, for our argument compelled us to do so. But in case we are charged with a certain harshness and lack of sophistication, let's also tell poetry that there is an ancient quarrel between it and philosophy, which is evidenced by such expressions as "the dog yelping and shrieking at its master," "great in the empty eloquence of fools," "the mob of wise men that has mastered Zeus,"[8] and "the subtle thinkers, beggars all." Nonetheless, if c
the poetry that aims at pleasure and imitation has any argument to bring forward that proves it ought to have a place in a well-governed city, we at least would be glad to admit it, for we are well aware of the charm it exercises. But, be that as it may, to betray what one believes to be the truth is impious. What about you, Glaucon, don't you feel the charm of the pleasure-giving Muse, especially when you study her through the eyes of Homer? d

Very much so.

Therefore, isn't it just that such poetry should return from exile when it has successfully defended itself, whether in lyric or any other meter?

Certainly.

8. Reading *Dia sophōn* in c1.

Then we'll allow its defenders, who aren't poets themselves but lovers of poetry, to speak in prose on its behalf and to show that it not only gives pleasure but is beneficial both to constitutions and to human life. Indeed, we'll listen to them graciously, for we'd certainly profit if poetry were
e shown to be not only pleasant but also beneficial.

How could we fail to profit?

However, if such a defense isn't made, we'll behave like people who have fallen in love with someone but who force themselves to stay away from him, because they realize that their passion isn't beneficial. In the same way, because the love of this sort of poetry has been implanted in us by the upbringing we have received under our fine constitutions, we are well disposed to any proof that it is the best and truest thing. But if
608 it isn't able to produce such a defense, then, whenever we listen to it, we'll repeat the argument we have just now put forward like an incantation so as to preserve ourselves from slipping back into that childish passion for poetry which the majority of people have. And we'll go on chanting that such poetry is not to be taken seriously or treated as a serious undertaking with some kind of hold on the truth, but that anyone who is anxious about the constitution within him must be careful when he hears it and must
b continue to believe what we have said about it.

I completely agree.

Yes, for the struggle to be good rather than bad is important, Glaucon, much more important than people think. Therefore, we mustn't be tempted by honor, money, rule, or even poetry into neglecting justice and the rest of virtue.

After what we've said, I agree with you, and so, I think, would anyone else.

c And yet we haven't discussed the greatest rewards and prizes that have been proposed for virtue.

They must be inconceivably great, if they're greater than those you've already mentioned.

Could anything really great come to pass in a short time? And isn't the time from childhood to old age short when compared to the whole of time?

It's a mere nothing.

Well, do you think that an immortal thing should be seriously concerned
d with that short period rather than with the whole of time?

I suppose not, but what exactly do you mean by this?

Haven't you realized that our soul is immortal and never destroyed?

He looked at me with wonder and said: No, by god, I haven't. Are you really in a position to assert that?

I'd be wrong not to, I said, and so would you, for it isn't difficult.

It is for me, so I'd be glad to hear from you what's not difficult about it.

Listen, then.

Just speak, and I will.

Do you talk about good and bad?

I do.

And do you think about them the same way I do? e

What way is that?

The bad is what destroys and corrupts, and the good is what preserves and benefits.

I do.

And do you say that there is a good and a bad for everything? For example, ophthalmia for the eyes, sickness for the whole body, blight for
grain, rot for wood, rust for iron or bronze. In other words, is there, as I 609
say, a natural badness and sickness for pretty well everything?

There is.

And when one of these attaches itself to something, doesn't it make the thing in question bad, and in the end, doesn't it disintegrate it and destroy it wholly?

Of course.

Therefore, the evil that is natural to each thing and the bad that is peculiar to it destroy it. However, if they don't destroy it, nothing else will, for the good would never destroy anything, nor would anything
neither good nor bad. b

How could they?

Then, if we discover something that has an evil that makes it bad but isn't able to disintegrate and destroy it, can't we infer that it is naturally incapable of being destroyed?

Probably so.

Well, what about the soul? Isn't there something that makes it bad?

Certainly, all the things we were mentioning: Injustice, licentiousness,
cowardice, and lack of learning. c

Does any of these disintegrate and destroy the soul? Keep your wits about you, and let's not be deceived into thinking that, when an unjust and foolish person is caught, he has been destroyed by injustice, which is evil in a soul. Let's think about it this way instead: Just as the body is worn out, destroyed, and brought to the point where it is a body no longer by disease, which is evil in a body, so all the things we mentioned just now reach the point at which they cease to be what they are through their own peculiar evil, which attaches itself to them and is present in them.
Isn't that so? d

Yes.

Then look at the soul in the same way. Do injustice and the other vices that exist in a soul—by their very presence in it and by attaching themselves to it—corrupt it and make it waste away until, having brought it to the point of death, they separate it from the body?

That's not at all what they do.

But surely it's unreasonable to suppose that a thing is destroyed by the badness proper to something else when it is not destroyed by its own?

That is unreasonable.

Keep in mind, Glaucon, that we don't think that a body is destroyed
by the badness of food, whether it is staleness, rottenness, or anything e

else. But if the badness of the food happens to implant in the body an evil
proper to a body, we'll say that the body was destroyed by its own evil,
namely, disease. But, since the body is one thing and food another, we'll
610 never judge that the body is destroyed by the badness of food, unless it
implants in it the body's own natural and peculiar evil.

That's absolutely right.

By the same argument, if the body's evil doesn't cause an evil in the soul that is proper to the soul, we'll never judge that the soul, in the absence of its own peculiar evil, is destroyed by the evil of something else. We'd never accept that *anything* is destroyed by an evil proper to something else.

That's also reasonable.

Then let's either refute our argument and show that we were wrong,
or, as long as it remains unrefuted, let's never say that the soul is destroyed
by a fever or any other disease or by killing either, for that matter, not
b even if the body is cut up into tiny pieces. We mustn't say that the soul
is even close to being destroyed by these things until someone shows us
that these conditions of the body make the soul more unjust and more
impious. When something has the evil proper to something else in it, but
its own peculiar evil is absent, we won't allow anyone to say that it is
c destroyed, no matter whether it is a soul or anything else whatever.

And you may be sure that no one will ever prove that the souls of the dying are made more unjust by death.

But if anyone dares to come to grips with our argument, in order to
avoid having to agree that our souls are immortal, and says that a dying
man does become more vicious and unjust, we'll reply that, if what he
says is true, then injustice must be as deadly to unjust people as a disease,
d and those who catch it must die of it because of its own deadly nature,
with the worst cases dying quickly and the less serious dying more slowly.
As things now stand, however, it isn't like that at all. Unjust people do
indeed die of injustice, but at the hands of others who inflict the death
penalty on them.

By god, if injustice were actually fatal to those who contracted it, it
wouldn't seem so terrible, for it would be an escape from their troubles.
But I rather think that it's clearly the opposite, something that kills other
e people if it can, while, on top of making the unjust themselves lively, it
even brings them out at night. Hence it's very far from being deadly to
its possessors.

You're right, for if the soul's own evil and badness isn't enough to kill and destroy it, an evil appointed for the destruction of something else will hardly kill it. Indeed, it won't kill anything at all except the very thing it is appointed to destroy.

"Hardly" is right, or so it seems.

Now, if the soul isn't destroyed by a single evil, whether its own or
something else's, then clearly it must always be. And if it always is, it
611 is immortal.

Necessarily so.

So be it. And if it is so, then you realize that there would always be the same souls, for they couldn't be made fewer if none is destroyed, and they couldn't be made more numerous either. If anything immortal is increased, you know that the increase would have to come from the mortal, and then everything would end up being immortal.

That's true.

Then we mustn't think such a thing, for the argument doesn't allow it, nor must we think that the soul in its truest nature is full of multicolored variety and unlikeness or that it differs with itself. b

What do you mean?

It isn't easy for anything composed of many parts to be immortal if it isn't put together in the finest way, yet this is how the soul now appeared to us.

It probably isn't easy.

Yet our recent argument and others as well compel us to believe that the soul *is* immortal. But to see the soul as it is in truth, we must not study it as it is while it is maimed by its association with the body and other evils—which is what we were doing earlier—but as it is in its pure state, c that's how we should study the soul, thoroughly and by means of logical reasoning. We'll then find that it is a much finer thing than we thought and that we can see justice and injustice as well as all the other things we've discussed far more clearly. What we've said about the soul is true of it as it appears at present. But the condition in which we've studied it is like that of the sea god Glaucus, whose primary nature can't easily be made out by those who catch glimpses of him. Some of the original parts d have been broken off, others have been crushed, and his whole body has been maimed by the waves and by the shells, seaweeds, and stones that have attached themselves to him, so that he looks more like a wild animal than his natural self. The soul, too, is in a similar condition when we study it, beset by many evils. That, Glaucon, is why we have to look somewhere else in order to discover its true nature.

To where?

To its philosophy, or love of wisdom. We must realize what it grasps e and longs to have intercourse with, because it is akin to the divine and immortal and what always is, and we must realize what it would become if it followed this longing with its whole being, and if the resulting effort lifted it out of the sea in which it now dwells, and if the many stones and 612 shells (those which have grown all over it in a wild, earthy, and stony profusion because it feasts at those so-called happy feastings on earth) were hammered off it. Then we'd see what its true nature is and be able to determine whether it has many parts or just one and whether or in what manner it is put together. But we've already given a decent account, I think, of what its condition is and what parts it has when it is immersed in human life.

We certainly have.

And haven't we cleared away the various other objections to our argument without having to invoke the rewards and reputations of justice, as
b you said Homer and Hesiod did?[9] And haven't we found that justice itself is the best thing for the soul itself, and that the soul—whether it has the ring of Gyges or even it together with the cap of Hades[10]—should do just things?

We have. That's absolutely true.

Then can there now be any objection, Glaucon, if in addition we return to justice and the rest of virtue both the kind and quantity of wages that
c they obtain for the soul from human beings and gods, whether in this life or the next?

None whatever.

Then will you give me back what you borrowed from me during the discussion?

What are you referring to in particular?

I granted your request that a just person should seem unjust and an unjust one just, for you said that, even if it would be impossible for these things to remain hidden from both gods and humans, still, this had to be granted for the sake of argument, so that justice itself could be judged in
d relation to injustice itself. Don't you remember that?

It would be wrong of me not to.

Well, then, since they've now been judged, I ask that the reputation justice in fact has among gods and humans be returned to it and that we agree that it does indeed have such a reputation and is entitled to carry off the prizes it gains for someone by making him seem just. It is already clear that it gives good things to anyone who is just and that it doesn't deceive those who really possess it.

e That's a fair request.

Then won't you first grant that it doesn't escape the notice of the gods at least as to which of the two is just and which isn't?

We will.

Then if neither of them escapes the gods' notice, one would be loved by the gods and the other hated, as we agreed at the beginning.

That's right.

And won't we also agree that everything that comes to someone who is loved by gods, insofar as it comes from the gods themselves, is the best
613 possible, unless it is the inevitable punishment for some mistake he made in a former life?

Certainly.

Then we must suppose that the same is true of a just person who falls into poverty or disease or some other apparent evil, namely, that this will

9. See 357–367e.

10. The ring of Gyges is discussed at 359d–360a. The cap of Hades also made its wearer invisible.

end well for him, either during his lifetime or afterwards, for the gods
never neglect anyone who eagerly wishes to become just and who makes
himself as much like a god as a human can by adopting a virtuous way
of life. b

It makes sense that such a person not be neglected by anyone who is like him.

And mustn't we suppose that the opposite is true of an unjust person?

Definitely.

Then these are some of the prizes that a just person, but not an unjust one, receives from the gods.

That's certainly my opinion.

What about from human beings? What does a just person get from them?
Or, if we're to tell the truth, isn't this what happens? Aren't clever but
unjust people like runners who run well for the first part of the course
but not for the second? They leap away sharply at first, but they become
ridiculous by the end and go off uncrowned, with their ears drooping on
their shoulders like those of exhausted dogs, while true runners, on the
other hand, get to the end, collect the prizes, and are crowned. And isn't c
it also generally true of just people that, towards the end of each course
of action, association, or life, they enjoy a good reputation and collect the
prizes from other human beings?

Of course.

Then will you allow me to say all the things about them that you yourself
said about unjust people? I'll say that it is just people who, when they're
old enough, rule in their own cities (if they happen to want ruling office) d
and that it is they who marry whomever they want and give their children
in marriage to whomever they want. Indeed, all the things that you said
about unjust people I now say about just ones. As for unjust people, the
majority of them, even if they escape detection when they're young, are
caught by the end of the race and are ridiculed. And by the time they get
old, they've become wretched, for they are insulted by foreigners and
citizens, beaten with whips, and made to suffer those punishments, such
as racking and burning, which you rightly described as crude. Imagine e
that I've said that they suffer all such things, and see whether you'll allow
me to say it.

Of course I will. What you say is right.

Then these are the prizes, wages, and gifts that a just person receives
from gods and humans while he is alive and that are added to the good
things that justice itself provides. 614

Yes, and they're very fine and secure ones too.

Yet they're nothing in either number or size compared to those that await just and unjust people after death. And these things must also be heard, if both are to receive in full what they are owed by the argument.

Then tell us about them, for there aren't many things that would be
more pleasant to hear. b

It isn't, however, a tale of Alcinous that I'll tell you but that of a brave
Pamphylian man called Er, the son of Armenias, who once died in a war.[11]
When the rest of the dead were picked up ten days later, they were already
putrefying, but when he was picked up, his corpse was still quite fresh.
He was taken home, and preparations were made for his funeral. But on
the twelfth day, when he was already laid on the funeral pyre, he revived
and, having done so, told what he had seen in the world beyond. He said
that, after his soul had left him, it travelled together with many others
c until they came to a marvellous place, where there were two adjacent
openings in the earth, and opposite and above them two others in the
heavens, and between them judges sat. These, having rendered their judg-
ment, ordered the just to go upwards into the heavens through the door
on the right, with signs of the judgment attached to their chests, and the
unjust to travel downward through the opening on the left, with signs of
d all their deeds on their backs. When Er himself came forward, they told
him that he was to be a messenger to human beings about the things that
were there, and that he was to listen to and look at everything in the place.
He said that he saw souls departing after judgment through one of the
openings in the heavens and one in the earth, while through the other two
souls were arriving. From the door in the earth souls came up covered
with dust and dirt and from the door in the heavens souls came down
e pure. And the souls who were arriving all the time seemed to have been
on long journeys, so that they went gladly to the meadow, like a crowd
going to a festival, and camped there. Those who knew each other ex-
changed greetings, and those who come up from the earth asked those
who came down from the heavens about the things there and were in turn
questioned by them about the things below. And so they told their stories
615 to one another, the former weeping as they recalled all they had suffered
and seen on their journey below the earth, which lasted a thousand years,
while the latter, who had come from heaven, told about how well they
had fared and about the inconceivably fine and beautiful sights they had
seen. There was much to tell, Glaucon, and it took a long time, but the
main point was this: For each in turn of the unjust things they had done
and for each in turn of the people they had wronged, they paid the penalty
ten times over, once in every century of their journey. Since a century is
b roughly the length of a human life, this means that they paid a tenfold
penalty for each injustice. If, for example, some of them had caused many
deaths by betraying cities or armies and reducing them to slavery or by
participating in other wrongdoing, they had to suffer ten times the pain
they had caused to each individual. But if they had done good deeds and
had become just and pious, they were rewarded according to the same
scale. He said some other things about the stillborn and those who had
c lived for only a short time, but they're not worth recounting. And he also

11. Books ix–xi of the *Odyssey* were traditionally referred to as the tales of Alcinous.

spoke of even greater rewards or penalties for piety or impiety towards
gods or parents and for murder with one's own hands.

For example, he said he was there when someone asked another where
the great Ardiaeus was. (This Ardiaeus was said to have been tyrant in
some city in Pamphylia a thousand years before and to have killed his
aged father and older brother and committed many other impious deeds
as well.) And he said that the one who was asked responded: "He hasn't d
arrived here yet and never will, for this too was one of the terrible sights
we saw. When we came near the opening on our way out, after all our
sufferings were over, we suddenly saw him together with some others,
pretty well all of whom were tyrants (although there were also some
private individuals among them who had committed great crimes). They
thought that they were ready to go up, but the opening wouldn't let them e
through, for it roared whenever one of these incurably wicked people or
anyone else who hadn't paid a sufficient penalty tried to go up. And there
were savage men, all fiery to look at, who were standing by, and when
they heard the roar, they grabbed some of these criminals and led them
away, but they bound the feet, hands, and head of Ardiaeus and the others,
threw them down, and flayed them. Then they dragged them out of the 616
way, lacerating them on thorn bushes, and telling every passer-by that
they were to be thrown into Tartarus, and explaining why they were being
treated in this way." And he said that of their many fears the greatest each
one of them had was that the roar would be heard as he came up and
that everyone was immensely relieved when silence greeted him. Such,
then, were the penalties and punishments and the rewards corresponding
to them. b

Each group spent seven days in the meadow, and on the eighth they
had to get up and go on a journey. On the fourth day of that journey, they
came to a place where they could look down from above on a straight
column of light that stretched over the whole of heaven and earth, more
like a rainbow than anything else, but brighter and more pure. After
another day, they came to the light itself, and there, in the middle of the
light, they saw the extremities of its bonds stretching from the heavens,
for the light binds the heavens like the cables girding a trireme and holds c
its entire revolution together. From the extremities hangs the spindle of
Necessity, by means of which all the revolutions are turned. Its stem and
hook are of adamant, whereas in its whorl[12] adamant is mixed with other
kinds of material. The nature of the whorl was this: Its shape was like that
of an ordinary whorl, but, from what Er said, we must understand its d
structure as follows. It was as if one big whorl had been made hollow by
being thoroughly scooped out, with another smaller whorl closely fitted
into it, like nested boxes, and there was a third whorl inside the second,
and so on, making eight whorls altogether, lying inside one another, with
their rims appearing as circles from above, while from the back they formed

12. A whorl is the weight that twirls a spindle.

e one continuous whorl around the stem, which was driven through the
center of the eighth. The first or outside whorl had the widest circular rim;
that of the sixth was second in width; the fourth was third; the eighth was
fourth; the seventh was fifth; the fifth was sixth; the third was seventh;
and the second was eighth. The rim of the largest was spangled; that of
617 the seventh was brightest; that of the eighth took its color from the seventh's
shining on it; the second and fifth were about equal in brightness, more
yellow than the others; the third was the whitest in color; the fourth was
rather red; and the sixth was second in whiteness. The whole spindle
turned at the same speed, but, as it turned, the inner circles gently revolved
in a direction opposite to that of the whole. Of the whorls themselves, the
eighth was the fastest; second came the seventh, sixth, and fifth, all at the
b same speed; it seemed to them that the fourth was third in its speed of
revolution; the fourth, third; and the second, fifth. The spindle itself turned
on the lap of Necessity. And up above on each of the rims of the circles
stood a Siren, who accompanied its revolution, uttering a single sound,
one single note. And the concord of the eight notes produced a single
harmony. And there were three other beings sitting at equal distances
from one another, each on a throne. These were the Fates, the daughters
c of Necessity: Lachesis, Clotho, and Atropos. They were dressed in white,
with garlands on their heads, and they sang to the music of the Sirens.
Lachesis sang of the past, Clotho of the present, and Atropos of the future.
With her right hand, Clotho touched the outer circumference of the spindle
and helped it turn, but left off doing so from time to time; Atropos did
the same to the inner ones; and Lachesis helped both motions in turn, one
d with one hand and one with the other.

When the souls arrived at the light, they had to go to Lachesis right
away. There a Speaker arranged them in order, took from the lap of
Lachesis a number of lots and a number of models of lives, mounted a
high pulpit, and spoke to them: "Here is the message of Lachesis, the
maiden daughter of Necessity: 'Ephemeral souls, this is the beginning of
another cycle that will end in death. Your daemon or guardian spirit will
not be assigned to you by lot; you will choose him. The one who has the
e first lot will be the first to choose a life to which he will then be bound
by necessity. Virtue knows no master; each will possess it to a greater or
less degree, depending on whether he values or disdains it. The responsibil-
ity lies with the one who makes the choice; the god has none.'" When he
had said this, the Speaker threw the lots among all of them, and each—
with the exception of Er, who wasn't allowed to choose—picked up the
one that fell next to him. And the lot made it clear to the one who picked
it up where in the order he would get to make his choice. After that, the
models of lives were placed on the ground before them. There were far
618 more of them than there were souls present, and they were of all kinds,
for the lives of animals were there, as well as all kinds of human lives.
There were tyrannies among them, some of which lasted throughout life,
while others ended halfway through in poverty, exile, and beggary. There

were lives of famous men, some of whom were famous for the beauty of
their appearance, others for their strength or athletic prowess, others still
for their high birth and the virtue or excellence of their ancestors. And
there were also lives of men who weren't famous for any of these things. b
And the same for lives of women. But the arrangement of the soul was
not included in the model because the soul is inevitably altered by the
different lives it chooses. But all the other things were there, mixed with
each other and with wealth, poverty, sickness, health, and the states inter-
mediate to them.

Now, it seems that it is here, Glaucon, that a human being faces the
greatest danger of all. And because of this, each of us must neglect all
other subjects and be most concerned to seek out and learn those that will c
enable him to distinguish the good life from the bad and always to make
the best choice possible in every situation. He should think over all the
things we have mentioned and how they jointly and severally determine
what the virtuous life is like. That way he will know what the good and
bad effects of beauty are when it is mixed with wealth, poverty, and a
particular state of the soul. He will know the effects of high or low birth, d
private life or ruling office, physical strength or weakness, ease or difficulty
in learning, and all the things that are either naturally part of the soul or
are acquired, and he will know what they achieve when mixed with one
another. And from all this he will be able, by considering the nature of
the soul, to reason out which life is better and which worse and to choose
accordingly, calling a life worse if it leads the soul to become more unjust,
better if it leads the soul to become more just, and ignoring everything e
else: We have seen that this is the best way to choose, whether in life
or death. Hence, we must go down to Hades holding with adamantine
determination to the belief that this is so, lest we be dazzled there by
wealth and other such evils, rush into a tyranny or some other similar 619
course of action, do irreparable evils, and suffer even worse ones. And we
must always know how to choose the mean in such lives and how to avoid
either of the extremes, as far as possible, both in this life and in all those
beyond it. This is the way that a human being becomes happiest. b

Then our messenger from the other world reported that the Speaker
spoke as follows: "There is a satisfactory life rather than a bad one available
even for the one who comes last, provided that he chooses it rationally
and lives it seriously. Therefore, let not the first be careless in his choice
nor the last discouraged."

He said that when the Speaker had told them this, the one who came
up first chose the greatest tyranny. In his folly and greed he chose it
without adequate examination and didn't notice that, among other evils,
he was fated to eat his own children as a part of it. When he examined at c
leisure, the life he had chosen, however, he beat his breast and bemoaned
his choice. And, ignoring the warning of the Speaker, he blamed chance,
daemons, or guardian spirits, and everything else for these evils but him-
self. He was one of those who had come down from heaven, having lived

his previous life under an orderly constitution, where he had participated
in virtue through habit and without philosophy. Broadly speaking, indeed,
d most of those who were caught out in this way were souls who had come
down from heaven and who were untrained in suffering as a result. The
majority of those who had come up from the earth, on the other hand,
having suffered themselves and seen others suffer, were in no rush to
make their choices. Because of this and because of the chance of the lottery,
there was an interchange of goods and evils for most of the souls. However,
if someone pursues philosophy in a sound manner when he comes to live
e here on earth and if the lottery doesn't make him one of the last to choose,
then, given what Er has reported about the next world, it looks as though
not only will he be happy here, but his journey from here to there and
back again won't be along the rough underground path, but along the
smooth heavenly one.

Er said that the way in which the souls chose their lives was a sight
620 worth seeing, since it was pitiful, funny, and surprising to watch. For the
most part, their choice depended upon the character of their former life.
For example, he said that he saw the soul that had once belonged to
Orpheus choosing a swan's life, because he hated the female sex because
of his death at their hands, and so was unwilling to have a woman conceive
and give birth to him. Er saw the soul of Thamyris[13] choosing the life of
a nightingale, a swan choosing to change over to a human life, and other
musical animals doing the same thing. The twentieth soul chose the life
b of a lion. This was the soul of Ajax, son of Telamon.[14] He avoided human
life because he remembered the judgment about the armor. The next soul
was that of Agamemnon, whose sufferings also had made him hate the
human race, so he changed to the life of an eagle. Atalanta[15] had been
assigned a place near the middle, and when she saw great honors being
given to a male athlete, she chose his life, unable to pass them by. After
her, he saw the soul of Epeius, the son of Panopeus, taking on the nature
c of a craftswoman.[16] And very close to last, he saw the soul of the ridiculous
Thersites clothing itself as a monkey.[17] Now, it chanced that the soul of

13. Thamyris was a legendary poet and singer, who boasted that he could defeat the Muses in a song contest. For this they blinded him and took away his voice. He is mentioned at *Iliad* ii.596–600.

14. Ajax is a great Homeric hero. He thought that he deserved to be awarded the armor of the dead Achilles, but instead it went to Odysseus. Ajax was maddened by this injustice and finally killed himself because of the terrible things he had done while mad. See Sophocles, *Ajax*.

15. Atalanta was a mythical huntress, who would marry only a man who could beat her at running. In most versions of the myth, losers were killed.

16. Epeius is mentioned at *Odyssey* viii.493 as the man who helped Athena make the Trojan Horse.

17. Thersites is an ordinary soldier who criticizes Agamemnon at *Iliad* ii.211–77. Odysseus beats him for his presumption and is widely approved for doing so.

Odysseus got to make its choice last of all, and since memory of its former
sufferings had relieved its love of honor, it went around for a long time,
looking for the life of a private individual who did his own work, and
with difficulty it found one lying off somewhere neglected by the others.
He chose it gladly and said that he'd have made the same choice even if
he'd been first. Still other souls changed from animals into human beings, d
or from one kind of animal into another, with unjust people changing into
wild animals, and just people into tame ones, and all sorts of mixtures oc-
curred.

After all the souls had chosen their lives, they went forward to Lachesis
in the same order in which they had made their choices, and she assigned
to each the daemon it had chosen as guardian of its life and fulfiller of its
choice. This daemon first led the soul under the hand of Clotho as it turned e
the revolving spindle to confirm the fate that the lottery and its own choice
had given it. After receiving her touch, he led the soul to the spinning of
Atropos, to make what had been spun irreversible. Then, without turning
around, they went from there under the throne of Necessity and, when
all of them had passed through, they travelled to the Plain of Forgetfulness
in burning, choking, terrible heat, for it was empty of trees and earthly 621
vegetation. And there, beside the River of Unheeding, whose water no
vessel can hold, they camped, for night was coming on. All of them had
to drink a certain measure of this water, but those who weren't saved by
reason drank more than that, and as each of them drank, he forgot every-
thing and went to sleep. But around midnight there was a clap of thunder
and an earthquake, and they were suddenly carried away from there, this b
way and that, up to their births, like shooting stars. Er himself was forbid-
den to drink from the water. All the same, he didn't know how he had
come back to his body, except that waking up suddenly he saw himself
lying on the pyre at dawn.

And so, Glaucon, his story wasn't lost but preserved, and it would save
us, if we were persuaded by it, for we would then make a good crossing
of the River of Forgetfulness, and our souls wouldn't be defiled. But if we c
are persuaded by me, we'll believe that the soul is immortal and able to
endure every evil and every good, and we'll always hold to the upward
path, practicing justice with reason in every way. That way we'll be friends
both to ourselves and to the gods while we remain here on earth and
afterwards—like victors in the games who go around collecting their d
prizes—we'll receive our rewards. Hence, both in this life and on the
thousand-year journey we've described, we'll do well and be happy.

# TIMAEUS

Timaeus *offers the reader a rhetorical display, not a philosophical dialogue. In a stage-setting conversation, Socrates reviews his own previous day's exposition of the institutions of the ideal city (apparently those of the* Republic*), but the remainder of the work is taken up by Timaeus' very long speech describing the creation of the world. Other works in the Platonic corpus similarly consist of a single speech: not to mention the* Apology, *the same is true of* Critias *(*Timaeus' *incomplete companion piece) and* Menexenus. *But* Timaeus' *speech is unique among them in having extensive philosophical content: here we get philosophy, but grandiose and rhetorically elaborate cosmic theorizing, not the down-to-earth dialectical investigation of most of Plato's philosophical works. For a parallel one has to look to* Phaedrus, *where Socrates' two speeches on erotic love, especially the second, similarly deck out philosophical theses in brilliant, image-studded rhetorical dress.*

*Timaeus, who appears to be a dramatic invention of Plato's, comes from Southern Italy, noted for its Greek mathematicians and scientists. He bases his cosmology on the Platonic division, familiar for example from* Phaedo *and* Republic, *between eternal, unchanging 'Forms' and their unstable 'reflections' in the physical, perceptible world of 'becoming'. But he introduces a creator god, the 'demiurge' (Greek for 'craftsman'), who crafts and brings order to the physical world by using the Forms as patterns—Timaeus does not conceive the Forms as themselves shaping the world. And he develops the theory of a 'receptacle' underlying physical things, onto which, as onto a featureless plastic stuff, the Formal patterns are imposed. In these terms, and emphasizing mathematical relationships as the basis for cosmic order, Timaeus sets out the foundations of the sciences of astronomy, physics, chemistry, and physiology, including the physiology and psychology of perception, ending with a classification of the diseases of body and soul and provisions for their treatment.* Timaeus *was a central text of Platonism in later antiquity and the Middle Ages—it was almost the only work of Plato's available in Latin—and the subject of many controversies. Did Timaeus' creation story mean that the world was created in time—or did it merely tell in temporal terms a story of the world's eternal dependence on a higher reality, the Forms? Did the demiurge really stand apart from those realities in designing it, or were they in fact simply the contents of his own divine mind?* Timaeus *was central to debates on these and other questions of traditional Platonism.*

*Most scholars would date* Timaeus *among Plato's last works, though a minority argue for a date in the 'middle period', closer to* Republic, *which it*

*seems certainly to postdate. Plato, as author of the work, is responsible for all Timaeus' theories. How far do they represent his own philosophical convictions at the time he wrote? Timaeus himself emphasizes—in effect, because of the great distance, literal and metaphorical, separating us from the heavens, on which the rest of the world depends—that we cannot have more than a 'likely story', not the full, transparent truth, about the physical details of the world's structure. It may be instructive to work out detailed theories, but he offers them as no more than reasonable ways in which the creator might have proceeded in designing the world. Moreover, according to the* Phaedrus, *rhetorically skilled speakers will base what they say on the full philosophical truth, but will vary and embellish it as needed to attract and hold their hearers' attention and to persuade them to accept what is essential in it. Timaeus may be Plato's spokesman, but if Plato attended to the* Phaedrus*'s strictures on rhetoric in composing his speech, one should exercise more than ordinary caution in inferring from what Timaeus says to details of Plato's own commitments even on matters of philosophical principle. In what Timaeus says about 'being' and 'becoming', the Forms and 'reflections', the 'demiurge' and the 'receptacle', and the arguments he offers on these subjects, what belongs to the rhetorical embellishment—intended to impress Socrates and his other listeners—and what is the sober truth, as Plato now understands it? The dialogue forces these questions on us, but gives no easy answers.*

*J.M.C.*

SOCRATES: One, two, three . . . Where's number four, Timaeus? The four 17
of you were my guests yesterday and today I'm to be yours.

TIMAEUS: He came down with something or other, Socrates. He wouldn't have missed our meeting willingly.

SOCRATES: Well then, isn't it for you and your companions to fill in for your absent friend?

TIMAEUS: You're quite right. Anyhow, we'll do our best not to come up b
short. You did such a fine job yesterday hosting us visitors that now it wouldn't be right if the three of us didn't go all out to give you a feast in return.

SOCRATES: Do you remember all the subjects I assigned to you to speak on?

TIMAEUS: Some we do. And if there are any we don't—well, you're here to remind us. Better still, if it's not too much trouble, why don't you take a few minutes to go back through them from the beginning? That way they'll be the more firmly fixed in our minds.

SOCRATES: Very well. I talked about politics yesterday and my main c
point, I think, had to do with the kind of political structure cities should

Translated by Donald J. Zeyl.

have and the kind of men that should make it up so as to be the best possible.

Timaeus: Yes, Socrates, so you did, and we were all very satisfied with your description of it.

Socrates: Didn't we begin by separating off the class of farmers and all the other craftsmen in the city from the class of those who were to wage war on its behalf?

Timaeus: Yes.

d Socrates: And we followed nature in giving each person only one occupation, one craft for which he was well suited. And so we said that only those whose job it was to wage war on everyone's behalf should be the guardians of the city. And if some foreigner or even a citizen were to go
18 against the city to cause trouble, these guardians should judge their own subjects lightly, since they are their natural friends. But they should be harsh, we said, with the enemies they encountered on the battlefield.

Timaeus: Yes, absolutely.

Socrates: That's because—as I think we said—the guardians' souls should have a nature that is at once both spirited and philosophical to the highest degree, to enable them to be appropriately gentle or harsh as the case may be.

Timaeus: Yes.

Socrates: What about their training? Didn't we say that they were to be given both physical and cultural training, as well as training in any other appropriate fields of learning?

Timaeus: We certainly did.

b Socrates: Yes, and we said, I think, that those who received this training shouldn't consider gold or silver or anything else as their own private property. Like the professionals they are, they should receive from those under their protection a wage for their guardianship that's in keeping with their moderate way of life. And we said that they should share their expenses and spend their time together, live in one another's company, and devote their care above all to excellence, now that they were relieved of all other occupations.

Timaeus: Yes, we said that as well.

c Socrates: And in fact we even made mention of women. We said that their natures should be made to correspond with those of men, and that all occupations, whether having to do with war or with the other aspects of life, should be common to both men and women.

Timaeus: That, too, was discussed.

Socrates: And what did we say about the procreation of children? We couldn't possibly forget that subject, because what we said about it was so unusual. We decided that they should all have spouses and children in common and that schemes should be devised to prevent anyone of them
d from recognizing his or her own particular child. Everyone of them would believe that they all make up a single family, and that all who fall within their own age bracket are their sisters and brothers, that those who are

older, who fall in an earlier bracket, are their parents or grandparents, while those who fall in a later one are their children or grandchildren.

Timaeus: You're right. That really was an unforgettable point.

Socrates: And surely we also remember saying, don't we, that to make
their natures as excellent as possible right from the start, the rulers, male
and female, should secretly arrange marriages by lot, to make sure that e
good men and bad ones would each as a group be separately matched up
with women like themselves? And we said that this arrangement wouldn't
create any animosity among them, because they'd believe that the matching
was due to chance?

Timaeus: Yes, we remember.

Socrates: And do we also remember saying that the children of the 19
good parents were to be brought up, while those of the bad ones were to
be secretly handed on to another city? And that these children should be
constantly watched as they grew up, so that the ones that turned out
deserving might be taken back again and the ones they kept who did not
turn out that way should change places with them?

Timaeus: We did say so.

Socrates: So now, Timaeus, are we done with our review of yesterday's talk—at least with its main points—or are we missing some point we made then? Have we left anything out?

Timaeus: Not a thing, Socrates. This is exactly what we said. b

Socrates: All right, I'd like to go on now and tell you what I've come
to feel about the political structure we've described. My feelings are like
those of a man who gazes upon magnificent looking animals, whether
they're animals in a painting or even actually alive but standing still, and
who then finds himself longing to look at them in motion or engaged in
some struggle or conflict that seems to show off their distinctive physical
qualities. I felt the same thing about the city we've described. I'd love to c
listen to someone give a speech depicting our city in a contest with other
cities, competing for those prizes that cities typically compete for. I'd love
to see our city distinguish itself in the way it goes to war and in the way
it pursues the war: that it deals with the other cities, one after another, in
ways that reflect positively on its own education and training, both in
word and deed—that is, both in how it behaves toward them and how it
negotiates with them. Now on these matters, Critias and Hermocrates, I d
charge myself with being quite unable to sing fitting praise to our city and
its men. That this should be so in my case isn't at all surprising. But I have
come to have the same opinion of the poets, our ancient poets as well as
today's. I have no disrespect for poets in general, but everyone knows that
imitators as a breed are best and most adept at imitating the sort of things
they've been trained to imitate. It's difficult enough for any one of them
to do a decent job of imitating in performance, let alone in narrative e
description, anything that lies outside their training. And again, I've always
thought that sophists as a class are very well versed in making long
speeches and doing many other fine things. But because they wander from

one city to the next and never settle down in homes of their own, I'm
afraid their representations of those philosopher-statesmen would simply
miss their mark. Sophists are bound to misrepresent whatever these leaders
accomplish on the battlefield when they engage any of their enemies,
whether in actual warfare or in negotiations.

So that leaves people of your sort, then. By nature as well as by training
you take part in both philosophy and politics at once. Take Timaeus here.
20 He's from Locri, an Italian city under the rule of excellent laws. None of
his compatriots outrank him in property or birth, and he has come to
occupy positions of supreme authority and honor in his city. Moreover,
he has, in my judgment, mastered the entire field of philosophy. As for
Critias, I'm sure that all of us here in Athens know that he's no mere
layman in any of the areas we're talking about. And many people whose
testimony must surely be believed assure us that Hermocrates, too, is
b well qualified by nature and training to deal with these matters. Already
yesterday I was aware of this when you asked me to discuss matters of
government, and that's why I was eager to do your bidding. I knew that
if you'd agree to make the follow-up speech, no one could do a better job
than you. No one today besides you could present our city pursuing a
war that reflects her true character. Only you could give her all she requires.
So now that I'm done speaking on my assigned subject, I've turned the
tables and assigned you to speak on the subject I've just described. You've
c thought about this together as a group, and you've agreed to reciprocate
at this time. Your speeches are your hospitality gifts, and so here I am, all
dressed up for the occasion. No one could be more prepared to receive
your gifts than I.

Hermocrates: Yes indeed, Socrates, you won't find us short on enthusi-
asm, as Timaeus has already told you. We don't have the slightest excuse
for not doing as you say. Why, already yesterday, right after we had left
here and got to Critias' guest quarters where we're staying—and even
d earlier on our way there—we were thinking about this very thing. And
then Critias brought up a story that goes back a long way. Tell him the
story now, Critias, so he can help us decide whether or not it will serve
the purpose of our assignment.

Critias: Yes, we really should, if our third partner, Timaeus, also agrees.

Timaeus: Of course I do.

Critias: Let me tell you this story then, Socrates. It's a very strange one,
but even so, every word of it is true. It's a story that Solon, the wisest of
e the seven sages once vouched for. He was a kinsman and a very close
friend of my great-grandfather Dropides. Solon himself says as much in
many places in his poetry. Well, Dropides told the story to my grandfather
Critias, and the old man in his turn would tell it to us from memory. The
story is that our city had performed great and marvelous deeds in ancient
times, which, owing to the passage of time and to the destruction of human
life, have vanished. Of all these deeds one in particular was magnificent.
21 It is this one that we should now do well to commemorate and present

to you as our gift of thanks. In so doing we shall also offer the goddess a hymn, as it were, of just and true praise on this her festival.[1]

SOCRATES: Splendid! Tell me, though, what was that ancient deed our city performed, the one that Solon reported and old Critias told you about? I've never heard of it. They say it really happened?

CRITIAS: I'll tell you. It's an ancient story I heard from a man who was
no youngster himself. In fact, at the time Critias was pretty close to ninety b
years old already—so he said—and I was around ten or so. As it happened, it was the day of the presentation of children during the Apaturia.[2] On this occasion, too, we children got the customary treatment at the feast: our fathers started a recitation contest. Many compositions by many different poets were recited, and many of us children got to sing the verses of Solon, because they were new at the time. Now someone, a member of
our clan, said that he thought that Solon was not only the wisest of men c
in general, but that his poetry in particular showed him to be the most civilized of all the poets. (The man may have been speaking his mind, or else he may have just wanted to make Critias feel good.) And the old man—how well I remember it—was tickled. He grinned broadly and said, "Yes, Amynander, it's too bad that Solon wrote poetry only as a diversion and didn't seriously work at it like the other poets. And too bad that he never finished the story he'd brought back home with him from Egypt. He was forced to abandon that story on account of the civil conflicts and
all the other troubles he found here when he returned. Otherwise not even d
Hesiod or Homer, or any other poet at all would ever have become more famous than he. That's what *I* think, anyhow." "Well, Critias? What story was that?" asked the other. "It's the story about the most magnificent thing our city has ever done," replied Critias, "an accomplishment that deserves to be known far better than any of her other achievements. But owing to the march of time and the fact that the men who accomplished it have perished, the story has not survived to the present." "Please tell us from the beginning," said the other, "What was this 'true story' that Solon heard? How did he get to hear it? Who told him?"

"In Egypt," Critias began, "in that part of the Delta where the stream e
of the Nile divides around the vertex there is a district called the Saïtic. The most important city of this district is Saïs. (This is in fact also the city from which King Amasis came.) This city was founded by a goddess whose name was 'Neith' in Egyptian and (according to the people there) 'Athena' in Greek. They are very friendly to Athens and claim to be related to our people somehow or other. Now Solon said that when he arrived there the
people began to revere him. Furthermore, he said that when he asked 22
those priests of theirs who were scholars of antiquity about ancient times,

1. The goddess is Athena, patron deity of Athens; the conversation is presumably taking place at the celebration of the Panathenaic Festival in Athens.

2. The Apaturia was celebrated in Athens in October–November of each year. The presentation of children took place on the third day.

he discovered that just about every Greek, including himself, was all but
completely ignorant about such matters. On one occasion, wanting to lead
them on to talk about antiquity, he broached the subject of our own ancient
history. He started talking about Phoroneus—the first human being, it is
b said—and about Niobe, and then he told the story of how Deucalion and
Pyrrha survived the flood. He went on to trace the lines of descent of their
posterity, and tried to compute their dates by calculating the number of
years which had elapsed since the events of which he spoke. And then
one of the priests, a very old man, said, 'Ah, Solon, Solon, you Greeks are
ever children. There isn't an old man among you.' On hearing this, Solon
said, 'What? What do you mean?' 'You are young,' the old priest replied,
'young in soul, every one of you. Your souls are devoid of beliefs about
antiquity handed down by ancient tradition. Your souls lack any learning
c made hoary by time. The reason for that is this: There have been, and
there will continue to be, numerous disasters that have destroyed human
life in many kinds of ways. The most serious of these involve fire and
water, while the lesser ones have numerous other causes. And so also
among your people the tale is told that Phaethon, child of the Sun, once
harnessed his father's chariot, but was unable to drive it along his father's
course. He ended up burning everything on the earth's surface and was
destroyed himself when a lightning bolt struck him. This tale is told as a
d myth, but the truth behind it is that there is a deviation in the heavenly
bodies that travel around the earth, which causes huge fires that destroy
what is on the earth across vast stretches of time. When this happens all
those people who live in mountains or in places that are high and dry are
much more likely to perish than the ones who live next to rivers or by
the sea. Our Nile, always our savior, is released and at such times, too,
saves us from this disaster. On the other hand, whenever the gods send
floods of water upon the earth to purge it, the herdsmen and shepherds
e in the mountains preserve their lives, while those who live in cities, in
your region, are swept by the rivers into the sea. But here, in this place,
water does not flow from on high onto our fields, either at such a time or
any other. On the contrary, its nature is always to rise up from below.
This, then, explains the fact that the antiquities preserved here are said to
be the most ancient. The truth is that in all places where neither inordinate
23 cold nor heat prevent it, the human race will continue to exist, sometimes
in greater, sometimes in lesser numbers. Now of all the events reported
to us, no matter where they've occurred—in your parts or in ours—if there
are any that are noble or great or distinguished in some other way, they've
all been inscribed here in our temples and preserved from antiquity on.
In your case, on the other hand, as in that of others, no sooner have you
achieved literacy and all the other resources that cities require, than there
again, after the usual number of years, comes the heavenly flood. It sweeps
b upon you like a plague, and leaves only your illiterate and uncultured
people behind. You become infants all over again, as it were, completely
unfamiliar with anything there was in ancient times, whether here or in

your own region. And so, Solon, the account you just gave of your people's
lineage is just like a nursery tale. First of all, you people remember only
one flood, though in fact there had been a great many before. Second, you
are unaware of the fact that the finest and best of all the races of humankind
once lived in your region. This is the race from whom you yourself, your
whole city, all that you and your countrymen have today, are sprung, c
thanks to the survival of a small portion of their stock. But this has escaped
you, because for many generations the survivors passed on without leaving
a written record. Indeed, Solon, there was a time, before the greatest of
these devastating floods, when the city that is Athens today not only
excelled in war but also distinguished itself by the excellence of its laws
in every area. Its accomplishments and its social arrangements are said to
have been the finest of all those under heaven of which we have re- d
ceived report.'

"When Solon heard this he was astounded, he said, and with unreserved
eagerness begged the priests to give him a detailed, consecutive account
of all that concerned those ancient citizens. 'I won't grudge you this,
Solon,' the priest replied. 'I'll tell you the story for your own benefit as
well as your city's, and especially in honor of our patron goddess who
has founded, nurtured and educated our cities, both yours and ours. Yours
she founded first, a thousand years before ours, when she had received e
from Earth and Hephaestus the seed from which your people were to
come. Now our social arrangement, according to the records inscribed in
our sacred documents, is eight thousand years old. Nine thousand years
ago, then, did these fellow citizens of yours live, whose laws and whose
finest achievement I'll briefly describe to you. At another time we'll go 24
through all the details one by one at our leisure and inspect the docu-
ments themselves.

"'Let's compare your ancient laws with ours today. You'll discover many
instances that once existed among you, existing among us today. First,
you'll find that the class of priests is marked off and separated from the
other classes. Next, in the case of the working class, you'll find that each
group—the herdsmen, the hunters and the farmers—works independently,
without mixing with the others. In particular, I'm sure you've noticed that b
our warrior class has been separated from all the others. It's been assigned
by law to occupy itself exclusively with matters of war. Moreover, the
style of armor used is that of shields and spears, which we were the first
among the peoples of Asia to use for arming ourselves. The goddess
instructed us just as she first instructed you in the regions where you live.
Moreover, as for wisdom, I'm sure you can see how much attention our
way of life here has devoted to it, right from the beginning. In our study c
of the world order we have traced all our discoveries, including prophecy
and health-restoring medicine, from those divine realities to human levels,
and we have also acquired all the other related disciplines. This is in fact
nothing less than the very same system of social order that the goddess
first devised for you when she founded your city, which she did once she

had chosen the region in which your people were born, and had discerned
that the temperate climate in it throughout the seasons would bring forth
d men of surpassing wisdom. And, being a lover of both war and wisdom,
the goddess chose the region that was likely to bring forth men most like
herself, and founded it first. And so you came to live there, and to observe
laws such as these. In fact your laws improved even more, so that you
came to surpass all other peoples in every excellence, as could be expected
from those whose begetting and nurture were divine.

"'Now many great accomplishments of your city recorded here are awe-
e inspiring, but there is one that surely surpasses them all in magnitude and
excellence. The records speak of a vast power that your city once brought
to a halt in its insolent march against the whole of Europe and Asia at
once—a power that sprang forth from beyond, from the Atlantic ocean.
For at that time this ocean was passable, since it had an island in it in
front of the strait that you people say you call the 'Pillars of Heracles.'[3]
This island was larger than Libya and Asia combined, and it provided
passage to the other islands for people who traveled in those days. From
those islands one could then travel to the entire continent on the other
side, which surrounds that real sea beyond. Everything here inside the
strait we're talking about seems nothing but a harbor with a narrow en-
trance, whereas that really is an ocean out there and the land that embraces
it all the way around truly deserves to be called a continent. Now on this
Isle of Atlantis a great and marvelous royal power established itself, and
ruled not only the whole island, but many of the other islands and parts
of the continent as well. What's more, their rule extended even inside the
b strait, over Libya as far as Egypt, and over Europe as far as Tyrrhenia.[4]
Now one day this power gathered all of itself together, and set out to
enslave all of the territory inside the strait, including your region and ours,
in one fell swoop. Then it was, Solon, that your city's might shone bright
with excellence and strength, for all humankind to see. Preeminent among
all others in the nobility of her spirit and in her use of all the arts of war,
c she first rose to the leadership of the Greek cause. Later, forced to stand
alone, deserted by her allies, she reached a point of extreme peril. Neverthe-
less she overcame the invaders and erected her monument of victory. She
prevented the enslavement of those not yet enslaved, and generously freed
all the rest of us who lived within the boundaries of Heracles. Some time
d later excessively violent earthquakes and floods occurred, and after the
onset of an unbearable day and a night, your entire warrior force sank
below the earth all at once, and the Isle of Atlantis likewise sank below
the sea and disappeared. That is how the ocean in that region has come

3. The strait of Gibraltar.

4. South of the Mediterranean the empire extended across North Africa to the western frontier of Egypt. To the north it included Europe as far east as central Italy.

to be even now unnavigable and unexplorable, obstructed as it is by a
layer of mud at a shallow depth,[5] the residue of the island as it settled.'"

What I've just related, Socrates, is a concise version of old Critias' story, e
as Solon originally reported it. While you were speaking yesterday about
politics and the men you were describing, I was reminded of what I've
just told you and was quite amazed as I realized how by some supernatural
chance your ideas are on the mark, in substantial agreement with what
Solon said. I didn't want to say so at the time, though. Because it had been 26
so long ago, I didn't remember Solon's story very well. So I realized that
I would first have to recover the whole story for myself well enough, and
then to tell it that way. That's why I was so quick to agree to your assign-
ment yesterday. The most important task in situations like these is to
propose a speech that rewards people's expectations, and so I thought
that we would be well supplied if I gave this one. And that's how—as
Hermocrates has already said—the moment I left here yesterday, I began b
to repeat the story to him and to Timaeus as it came back to me. After I
left them I concentrated on it during the night and recovered just about
the whole thing. They say that the lessons of childhood have a marvelous
way of being retained. How true that is! In my case, I don't know if I'd
be able to recall everything I heard yesterday, but I'd be extremely surprised
if any part of this story has gotten away from me, even though it's been
a very long time since I heard it. What I heard then gave me so much
childlike pleasure—the old man was so eager to teach me because I kept c
on asking one question after another—that the story has stayed with me
like the indelible markings of a picture with the colors burnt in. Besides,
I told the whole story to Timaeus and Hermocrates first thing this morning,
so that not just I, but they, too, would have a supply of material for
our speech.

I've said all this, Socrates, to prepare myself to tell Solon's story now.
I won't just give you the main points, but the details, one by one, just the
way I heard it. We'll translate the citizens and the city you described to
us in mythical fashion yesterday to the realm of fact, and place it before d
us as though it is ancient Athens itself. And we'll say that the citizens you
imagined are the very ones the priest spoke about, our actual ancestors.
The congruence will be complete, and our song will be in tune if we say
that your imaginary citizens are the ones who really existed at that time.
We'll share the task among us, and we'll all try our best to do justice to
your assignment. What do you think, Socrates? Will this do as our speech,
or should we look for another to replace it? e

SOCRATES: Well, Critias, what other speech could we possibly prefer to
this one? We're in the midst of celebrating the festival of the goddess, and
this speech really fits the occasion. So it couldn't be more appropriate.
And of course the fact that it's no made-up story but a true account is no

5. Reading *kata bracheos* in d5.

small matter. How and where shall we find others to celebrate if we let
these men go? We've no choice. Go on with your speech, then, and good
27 luck! It's my turn now to sit back and listen to your speeches that pay
back mine of yesterday.

CRITIAS: All right, Socrates, what do you think of the plan we've arranged
for our guest gift to you? We thought that because Timaeus is our expert
in astronomy and has made it his main business to know the nature of
the universe, he should speak first, beginning with the origin of the uni-
verse, and concluding with the nature of human beings. Then I'll go next,
once I'm in possession of Timaeus' account of the origin of human beings
b and your account of how some of them came to have a superior education.
I'll introduce them, as not only Solon's account but also his law would
have it, into our courtroom and make them citizens of our ancient city—
as really being those Athenians of old whom the report of the sacred
records has rescued from obscurity—and from then on I'll speak of them
as actual Athenian citizens.

SOCRATES: Apparently I'll be getting a complete, brilliant banquet of
speeches in payment for my own. Very well then, Timaeus, the task of
being our next speaker seems to fall to you. Why don't you make an
invocation to the gods, as we customarily do?

c TIMAEUS: That I will, Socrates. Surely anyone with any sense at all will
always call upon a god before setting out on any venture, whatever its
importance. In our case, we are about to make speeches about the uni-
verse—whether it has an origin or even if it does not[6]—and so if we're
not to go completely astray we have no choice but to call upon the gods
and goddesses, and pray that they above all will approve of all we have
d to say, and that in consequence we will, too. Let this, then, be our appeal
to the gods; to ourselves we must appeal to make sure that you learn as
easily as possible, and that I instruct you in the subject matter before us
in the way that best conveys my intent.

As I see it, then, we must begin by making the following distinction:
What is *that which always is* and has no becoming, and what is *that which*
28 *becomes*[7] but never is? The former is grasped by understanding, which
involves a reasoned account. It is unchanging. The latter is grasped by
opinion, which involves unreasoning sense perception. It comes to be and
passes away, but never really is. Now everything that comes to be[8] must
of necessity come to be by the agency of some cause, for it is impossible
for anything to come to be without a cause. So whenever the craftsman[9]

6. Reading *ei gegonen ē kai agenes estin* in c5.

7. Omitting *aei* in a1.

8. "Becoming" and "coming to be" here as elsewhere translate the same Greek word, *genesis*, and its cognates; the Greek word does not say, as English "comes to be" does, that once a thing has come to be, it now *is*, or has *being*.

9. Greek *dēmiourgos*, also sometimes translated below as "maker" (40c2, 41a7) or "fashioner" (69c3)—whence the divine "Demiurge" one reads about in accounts of the *Timaeus*.

looks at what is always changeless and, using a thing of that kind as his
model, reproduces its form and character, then, of necessity, all that he so b
completes is beautiful. But were he to look at a thing that has come to be
and use as his model something that has been begotten, his work will
lack beauty.

Now as to the whole universe[10] or world order [*kosmos*]—let's just call
it by whatever name is most acceptable in a given context—there is a
question we need to consider first. This is the sort of question one should
begin with in inquiring into any subject. Has it always existed? Was there
no origin from which it came to be? Or did it come to be and take its start
from some origin? It has come to be. For it is both visible and tangible
and it has a body—and all things of that kind are perceptible. And, as we c
have shown, perceptible things are grasped by opinion, which involves
sense perception. As such, they are things that come to be, things that are
begotten. Further, we maintain that, necessarily, that which comes to be
must come to be by the agency of some cause. Now to find the maker and
father of this universe [*to pan*] is hard enough, and even if I succeeded, to
declare him to everyone is impossible. And so we must go back and raise
this question about the universe: Which of the two models did the maker
use when he fashioned it? Was it the one that does not change and stays 29
the same, or the one that has come to be? Well, if this world of ours is
beautiful and its craftsman good, then clearly he looked at the eternal
model. But if what it's blasphemous to even say is the case, then he looked
at one that has come to be. Now surely it's clear to all that it was the
eternal model he looked at, for, of all the things that have come to be, our
universe is the most beautiful, and of causes the craftsman is the most
excellent. This, then, is how it has come to be: it is a work of craft, modeled
after that which is changeless and is grasped by a rational account, that
is, by wisdom.

Since these things are so, it follows by unquestionable necessity that this b
world is an image of something. Now in every subject it is of utmost
importance to begin at the natural beginning, and so, on the subject of an
image and its model, we must make the following specification: the accounts
we give of things have the same character as the subjects they set
forth. So accounts of what is stable and fixed and transparent to understanding
are themselves stable and unshifting. We must do our very best to
make these accounts as irrefutable and invincible as any account may be.
On the other hand, accounts we give of that which has been formed to be c
like that reality, since they are accounts of what is a likeness, are themselves
likely, and stand in proportion to the previous accounts, i.e., what being
is to becoming, truth is to convincingness. Don't be surprised then, Socrates,
if it turns out repeatedly that we won't be able to produce accounts on a
great many subjects—on gods or the coming to be of the universe—that
are completely and perfectly consistent and accurate. Instead, if we can

10. *Ouranos*, i.e., "heaven."

come up with accounts no less likely than any, we ought to be content,
keeping in mind that both I, the speaker, and you, the judges, are only
d human. So we should accept the likely tale on these matters. It behooves
us not to look for anything beyond this.

SOCRATES: Bravo, Timaeus! By all means! We must accept it as you say
we should. This overture of yours was marvellous. Go on now and let us
have the work itself.

TIMAEUS: Very well then. Now why did he who framed this whole
e universe of becoming frame it? Let us state the reason why: He was good,
and one who is good can never become jealous of anything. And so, being
free of jealousy, he wanted everything to become as much like himself as
was possible. In fact, men of wisdom will tell you (and you couldn't do
30 better than to accept their claim) that this, more than anything else, was
the most preeminent reason for the origin of the world's coming to be.
The god wanted everything to be good and nothing to be bad so far as
that was possible, and so he took over all that was visible—not at rest but
in discordant and disorderly motion—and brought it from a state of disor-
der to one of order, because he believed that order was in every way better
than disorder. Now it wasn't permitted (nor is it now) that one who is
b supremely good should do anything but what is best. Accordingly, the
god reasoned and concluded that in the realm of things naturally visible
no unintelligent thing could as a whole be better than anything which
does possess intelligence as a whole, and he further concluded that it is
impossible for anything to come to possess intelligence apart from soul.
Guided by this reasoning, he put intelligence in soul, and soul in body,
and so he constructed the universe. He wanted to produce a piece of work
that would be as excellent and supreme as its nature would allow. This,
then, in keeping with our likely account, is how we must say divine
c providence brought our world into being as a truly living thing, endowed
with soul and intelligence.

This being so, we have to go on to speak about what comes next. When
the maker made our world, what living thing did he make it resemble?
Let us not stoop to think that it was any of those that have the natural
character of a part, for nothing that is a likeness of anything incomplete
could ever turn out beautiful. Rather, let us lay it down that the universe
resembles more closely than anything else that Living Thing of which all
other living things are parts, both individually and by kinds. For that
Living Thing comprehends within itself all intelligible living things, just
d as our world is made up of us and all the other visible creatures. Since
the god wanted nothing more than to make the world like the best of the
intelligible things, complete in every way, he made it a single visible living
31 thing, which contains within itself all the living things whose nature it is
to share its kind.

Have we been correct in speaking of *one* universe, or would it have been
more correct to say that there are many, in fact infinitely many universes?
There is but one universe, if it is to have been crafted after its model. For
that which contains all of the intelligible living things couldn't ever be one

of a pair, since that would require there to be yet another Living Thing, the one that contained those two, of which they then would be parts, and then it would be more correct to speak of our universe as made in the likeness, now not of those two, but of that other, the one that contains them. So, in order that this living thing should be like the complete Living b
Thing in respect of uniqueness, the Maker made neither two, nor yet an infinite number of worlds. On the contrary, our universe came to be as the one and only thing of its kind, is so now and will continue to be so in the future.

Now that which comes to be must have bodily form, and be both visible and tangible, but nothing could ever become visible apart from fire, nor tangible without something solid, nor solid without earth. That is why, as he began to put the body of the universe together, the god came to make it out of fire and earth. But it isn't possible to combine two things well all by themselves, without a third; there has to be some bond between the c
two that unites them. Now the best bond is one that really and truly makes a unity of itself together with the things bonded by it, and this in the nature of things is best accomplished by proportion. For whenever of three numbers which are either solids[11] or squares the middle term between any 32
two of them is such that what the first term is to it, it is to the last, and, conversely, what the last term is to the middle, it is to the first, then, since the middle term turns out to be both first and last, and the last and the first likewise both turn out to be middle terms, they will all of necessity turn out to have the same relationship to each other, and, given this, will all be unified.

So if the body of the universe were to have come to be as a two dimensional plane, a single middle term would have sufficed to bind together b
its conjoining terms with itself. As it was, however, the universe was to be a solid, and solids are never joined together by just one middle term but always by two. Hence the god set water and air between fire and earth, and made them as proportionate to one another as was possible, so that what fire is to air, air is to water, and what air is to water, water is to earth. He then bound them together and thus he constructed the visible and tangible universe. This is the reason why these four particular constituents were used to beget the body of the world, making it a symphony c
of proportion.[12] They bestowed friendship[13] upon it, so that, having come

11. "Solids" are cubes (e.g., 2 × 2 × 2, or 8).

12. A simple example of a proportionate progression that satisfies Plato's requirements in 32a might be that of 2, 4, 8. So: 2:4::4:8 (the first term is to the middle what the middle is to the last, the last term is to the middle what the middle is to the first); 4:2::8:4 or 4:8::2:4 (the middle term turns out to be first and last and the first and last terms turn out to be middles). Since, however, the body of the world is three-dimensional, its components must be represented by "solid" numbers (see previous note). This will require two middle terms.

13. Compare *Gorgias* 508a: ". . . Wise men claim that partnership and friendship . . . hold together heaven and earth . . . and that is why they call this universe a *world-order* . . ."

together into a unity with itself, it could not be undone by anyone but the
one who had bound it together.

Now each one of the four constituents was entirely used up in the
process of building the world. The builder built it from all the fire, water,
air and earth there was, and left no part or power of any of them out. His
d intentions in so doing were these: First, that as a living thing it should be
33 as whole and complete as possible and made up of complete parts. Second,
that it should be just one universe, in that nothing would be left over from
which another one just like it could be made. Third, that it should not get
old and diseased. He realized that when heat or cold or anything else that
possesses strong powers surrounds a composite body from outside and
attacks it, it destroys that body prematurely, brings disease and old age
upon it and so causes it to waste away. That is why he concluded that he
should fashion the world as a single whole, composed of all wholes,
complete and free of old age and disease, and why he fashioned it that
b way. And he gave it a shape appropriate to the kind of thing it was. The
appropriate shape for that living thing that is to contain within itself all
the living things would be the one which embraces within itself all the
shapes there are. Hence he gave it a round shape, the form of a sphere,
with its center equidistant from its extremes in all directions. This of all
shapes is the most complete and most like itself, which he gave to it because
he believed that likeness is incalculably more excellent than unlikeness.
c And he gave it a smooth round finish all over on the outside, for many
reasons. It needed no eyes, since there was nothing visible left outside it;
nor did it need ears, since there was nothing audible there, either. There
was no air enveloping it that it might need for breathing, nor did it need
any organ by which to take in food or, again, expel it when it had been
digested. For since there wasn't anything else, there would be nothing to
leave it or come to it from anywhere. It supplied its own waste for its
food. Anything that it did or experienced it was designed to do or experi-
d ence within itself and by itself. For the builder thought that if it were self-
sufficient, it would be a better thing than if it required other things.

And since it had no need to catch hold of or fend off anything, the god
thought that it would be pointless to attach hands to it. Nor would it need
34 feet or any support to stand on. In fact, he awarded it the movement suited
to its body—that one of the seven motions which is especially associated
with understanding and intelligence. And so he set it turning continuously
in the same place, spinning around upon itself. All the other six motions
he took away, and made its movement free of their wanderings. And since
it didn't need feet to follow this circular path, he begat it without legs or feet.

b Applying this entire train of reasoning to the god that was yet to be,
the eternal god made it smooth and even all over, equal from the center,
a whole and complete body itself, but also made up of complete bodies.
In its center he set a soul, which he extended throughout the whole body,
and with which he then covered the body outside. And he set it to turn
in a circle, a single solitary universe, whose very excellence enables it to

keep its own company without requiring anything else. For its knowledge of and friendship with itself is enough. All this, then, explains why this world which he begat for himself is a blessed god.

As for the world's soul, even though we are now embarking on an
account of it *after* we've already given an account of its body, it isn't the
case that the god devised it to be younger than the body. For the god c
would not have united them and then allow the elder to be ruled by the
younger. We have a tendency to be casual and random in our speech,
reflecting, no doubt, the whole realm of the casual and random of which
we are a part. The god, however, gave priority and seniority to the soul,
both in its coming to be and in the degree of its excellence, to be the body's
mistress and to rule over it as her subject.

The components from which he made the soul and the way in which 35
he made it were as follows: In between the *Being* that is indivisible and
always changeless, and the one that is divisible and comes to be in the
corporeal realm, he mixed a third, intermediate form of being, derived
from the other two. Similarly, he made a mixture of the *Same,* and then one
of the *Different,* in between their indivisible and their corporeal, divisible
counterparts. And he took the three mixtures and mixed them together to
make a uniform mixture, forcing the Different, which was hard to mix,
into conformity with the Same. Now when he had mixed these two together b
with Being, and from the three had made a single mixture, he redivided
the whole mixture into as many parts as his task required,[14] each part
remaining a mixture of the Same, the Different, and of Being. This is how
he began the division: first he took one portion away from the whole, and
then he took another, twice as large, followed by a third, one and a half
times as large as the second and three times as large as the first. The fourth
portion he took was twice as large as the second, the fifth three times as
large as the third, the sixth eight times that of the first, and the seventh
twenty-seven times that of the first.

After this he went on to fill the double and triple intervals by cutting 36
off still more portions from the mixture and placing these between them,
in such a way that in each interval there were two middle terms, one
exceeding the first extreme by the same fraction of the extremes by which
it was exceeded by the second, and the other exceeding the first extreme
by a number equal to that by which it was exceeded by the second. These
connections produced intervals of 3/2, 4/3, and 9/8 within the previous
intervals. He then proceeded to fill all the 4/3 intervals with the 9/8 b
interval, leaving a small portion over every time. The terms of this interval
of the portion left over made a numerical ratio of 256/243. And so it was
that the mixture, from which he had cut off these portions, was eventually
completely used up.

14. In order to establish in the soul, through connected geometrical proportions, the source of the harmonious order it needs to impart to the three-dimensional body of the world, and in particular to the heaven and the bodies it contains.

Next, he sliced this entire compound in two along its length, joined the
c two halves together center to center like an X, and bent them back in a
circle, attaching each half to itself end to end and to the ends of the other
half at the point opposite to the one where they had been joined together.
He then included them in that motion which revolves in the same place
without variation, and began to make the one the outer, and the other
the inner circle. And he decreed that the outer movement should be the
movement of *the Same,* while the inner one should be that of *the Different*.[15]
He made the movement of the Same revolve toward the right by way of
the side, and that of the Different toward the left by way of the diagonal,
d and he made the revolution of the Same, i.e., the uniform, the dominant
one in that he left this one alone undivided, while he divided the inner
one six times, to make seven unequal circles.[16] His divisions corresponded
to the several double and triple intervals, of which there were three each.
He set the circles to go in contrary directions: three to go at the same
speed, and the other four to go at speeds different from both each other's
and that of the other three. Their speeds, however, were all proportionate
to each other.

Once the whole soul had acquired a form that pleased him, he who
e formed it went on to fashion inside it all that is corporeal, and, joining
center to center, he fitted the two together. The soul was woven together
with the body from the center on out in every direction to the outermost
limit of the universe, and covered it all around on the outside. And,
revolving within itself, it initiated a divine beginning of unceasing, intelli-
gent life for all time. Now while the body of the universe had come to be
as a visible thing, the soul was invisible. But even so, because it shares in
37 reason and harmony, the soul came to be as the most excellent of all the
things begotten by him who is himself most excellent of all that is intelligible
and eternal.

Because the soul is a mixture of the Same, the Different and Being (the
three components we've described), because it was divided up and bound
together in various proportions, and because it circles round upon itself,
then, whenever it comes into contact with something whose being is scatter-
able or else with something whose being is indivisible, it is stirred through-
out its whole self. It then declares what exactly that thing is the same as,
b or what it is different from, and in what respect and in what manner, as
well as when, it turns out that they are the same or different and are

15. The outer band is the circle responsible for the constant daily rotation of the fixed stars—hence for the "movement of *the Same*." The inner band is the circle responsible for contrary movements in the Zodiac of the seven "wandering" stars (moon and sun, plus the five planets known to the ancients)—hence for the "movements of *the Different*."

16. These circles or bands are the ones responsible for the individual movements in the Zodiac respectively of moon, sun, Mercury, Venus, Mars, Jupiter, and Saturn, the seven "wanderers" (see 38c–d). The sun, Venus, and Mercury are the three mentioned just below as going "at the same speed" (see 38d).

characterized as such. This applies both to the things that come to be, and
to those that are always changeless. And when this contact gives rise to
an account that is equally true whether it is about what is different or
about what is the same, and is borne along without utterance or sound
within the self-moved thing, then, whenever the account concerns anything
that is perceptible, the circle of the Different goes straight and proclaims
it throughout its whole soul. This is how firm and true opinions and
convictions come about. Whenever, on the other hand, the account concerns c
any object of reasoning, and the circle of the Same runs well and reveals
it, the necessary result is understanding and knowledge. And if anyone
should ever call that in which these two arise, not soul but something else,
what he says will be anything but true.

Now when the Father who had begotten the universe observed it set in
motion and alive, a thing that had come to be as a shrine for the everlasting
gods, he was well pleased, and in his delight he thought of making it more
like its model still. So, as the model was itself an everlasting Living Thing, d
he set himself to bringing this universe to completion in such a way that
it, too, would have that character to the extent that was possible. Now it
was the Living Thing's nature to be eternal, but it isn't possible to bestow
eternity fully upon anything that is begotten. And so he began to think
of making a moving image of eternity: at the same time as he brought
order to the universe, he would make an eternal image, moving according
to number, of eternity remaining in unity. This number, of course, is what
we now call "time."

For before the heavens came to be, there were no days or nights, no e
months or years. But now, at the same time as he framed the heavens, he
devised their coming to be. These all are parts of time, and *was* and *will
be* are forms of time that have come to be. Such notions we unthinkingly
but incorrectly apply to everlasting being. For we say that it *was* and *is*
and *will be,* but according to the true account only *is* is appropriately said 38
of it. *Was* and *will be* are properly said about the becoming that passes in
time, for these two are motions. But that which is always changeless and
motionless cannot become either older or younger in the course of time—
it neither ever became so, nor is it now such that it has become so, nor
will it ever be so in the future. And all in all, none of the characteristics
that becoming has bestowed upon the things that are borne about in the
realm of perception are appropriate to it. These, rather, are forms of time
that have come to be—time that imitates eternity and circles according to
number. And what is more, we also say things like these: that what has b
come to be *is* what has come to be, that what is coming to be *is* what is
coming to be, and also that what will come to be *is* what will come to be,
and that what is not *is* what is not. None of these expressions of ours is
accurate. But I don't suppose this is a good time right now to be too
meticulous about these matters.

Time, then, came to be together with the universe so that just as they
were begotten together, they might also be undone together, should there

ever be an undoing of them. And it came to be after the model of that
c which is sempiternal, so that it might be as much like its model as possible.
For the model is something that has being for all eternity, while it, on the
other hand, has been, is, and shall be for all time, forevermore. Such was
the reason, then, such the god's design for the coming to be of time, that
he brought into being the Sun, the Moon and five other stars, for the
begetting of time. These are called "wanderers," and they came to be in
order to set limits to and stand guard over the numbers of time. When
the god had finished making a body for each of them, he placed them into
d the orbits traced by the period of the Different—seven bodies in seven
orbits. He set the Moon in the first circle, around the earth, and the Sun
in the second, above it. The Dawnbearer (the Morning Star, or Venus) and
the star said to be sacred to Hermes (Mercury) he set to run in circles that
equal the Sun's in speed, though they received the power contrary to its
power. As a result, the Sun, the star of Hermes and the Dawnbearer alike
overtake and are overtaken by one another. As for the other bodies, if I
were to spell out where he situated them, and all his reasons for doing
e so, my account, already a digression, would make more work than its
purpose calls for. Perhaps later on we could at our leisure give this subject
the exposition it deserves.

Now when each of the bodies that were to cooperate in producing time
had come into the movement prepared for carrying it and when, bound
by bonds of soul, these bodies had been begotten with life and learned
their assigned tasks, they began to revolve along the movement of the
39 Different, which is oblique and which goes through the movement of the
Same, by which it is also dominated.[17] Some bodies would move in a larger
circle, others in a smaller one, the latter moving more quickly and the
former more slowly. Indeed, because of the movement of the Same, the
ones that go around most quickly appeared to be overtaken by those going
more slowly, even though in fact they were overtaking them. For as it
revolves, this movement gives to all these circles a spiral twist, because
b they are moving forward in two contrary directions at once. As a result,
it makes that body which departs most slowly from it—and it is the fastest
of the movements—appear closest to it.

And so that there might be a conspicuous measure of their relative
slowness and quickness with which[18] they move along in their eight revolu-
tions, the god kindled a light in the orbit second from the earth, the light
that we now call the Sun. Its chief work would be to shine upon the whole
universe and to bestow upon all those living things appropriately endowed
and taught by the revolution of the Same and the uniform, a share in
c number. In this way and for these reasons night-and-day, the period of a
single circling, the wisest one, came to be. A month has passed when the

17. Reading *iousan . . . kratoumenēn* in a1–2.

18. Accepting the emendation *kath'ha* in b3.

Moon has completed its own cycle and overtaken the Sun; a year when the Sun has completed its own cycle.

As for the periods of the other bodies, all but a scattered few have failed to take any note of them. Nobody has given them names or investigated their numerical measurements relative to each other. And so people are all but ignorant of the fact that time really is the wanderings of these d
bodies, bewilderingly numerous as they are and astonishingly variegated. It is none the less possible, however, to discern that the perfect number of time brings to completion the perfect year at that moment when the relative speeds of all eight periods have been completed together and, measured by the circle of the Same that moves uniformly, have achieved their consummation. This, then, is how as well as why those stars were begotten which, on their way through the universe, would have turnings. The purpose was to make this living thing as like as possible to that perfect e
and intelligible Living Thing, by way of imitating its sempiternity.

Prior to the coming to be of time, the universe had already been made to resemble in various respects the model in whose likeness the god was making it, but the resemblance still fell short in that it didn't yet contain all the living things that were to have come to be within it. This remaining task he went on to perform, casting the world into the nature of its model. And so he determined that the living thing he was making should possess the same kinds and numbers of living things as those which, according to the discernment of Intellect, are contained within the real Living Thing. Now there are four of these kinds: first, the heavenly race of gods; next, the kind that has wings and travels through the air; third, the kind that 40
lives in water; and fourth, the kind that has feet and lives on land. The gods he made mostly out of fire, to be the brightest and fairest to the eye.[19] He made them well-rounded, to resemble the universe, and placed them in the wisdom of the dominant circle [i.e., of the Same], to follow the course of the universe. He spread the gods throughout the whole heaven to be a true adornment [*kosmos*] for it, an intricately wrought whole. And he bestowed two movements upon each of them. The first was rotation, an unvarying movement in the same place, by which the god would always think the same thoughts about the same things. The other was revolution, b
a forward motion under the dominance of the circular carrying movement of the Same and uniform. With respect to the other five motions, the gods are immobile and stationary, in order that each of them may come as close as possible to attaining perfection.

This, then, was the reason why all those everlasting and unwandering stars—divine living things which stay fixed by revolving without variation in the same place—came to be. Those that have turnings and thus wander in that sort of way came to be as previously described.

19. These are the fixed stars, i.e., those other than the moon, sun, and planets, which have already been created (cf. below, 40b).

The Earth he devised to be our nurturer, and, because it winds around
c the axis that stretches throughout the universe, also to be the maker and
guardian of day and night. Of the gods that have come to be within the
universe, Earth ranks as the foremost, the one with greatest seniority.

To describe the dancing movements of these gods, their juxtapositions
and the back-circlings and advances of their circular courses on themselves;
to tell which of the gods come into line with one another at their conjunc-
tions and how many of them are in opposition, and in what order and at
which times they pass in front of or behind one another, so that some are
occluded from our view to reappear once again, thereby bringing terrors
d and portents of things to come to those who cannot reason—to tell all this
without the use of visible models would be labor spent in vain. We will
make do with this account, and so let this be the conclusion of our discus-
sion of the nature of the visible and generated gods.

As for the other spiritual beings [*daimones*], it is beyond our task to know
and speak of how they came to be. We should accept on faith the assertions
of those figures of the past who claimed to be the offspring of gods. They
must surely have been well informed about their own ancestors. So we
e cannot avoid believing the children of gods, even though their accounts
lack plausible or compelling proofs. Rather, we should follow custom and
believe them, on the ground that what they claim to be reporting are
matters of their own concern. Accordingly, let us accept their account of
how these gods came to be and state what it is.

Earth and Heaven gave birth to Ocean and Tethys, who in turn gave
birth to Phorcys, Cronus and Rhea and all the gods in that generation.
41 Cronus and Rhea gave birth to Zeus and Hera, as well as all those siblings
who are called by names we know. These in turn gave birth to yet another
generation. In any case, when all the gods had come to be, both the
ones who make their rounds conspicuously and the ones who present
themselves only to the extent that they are willing, the begetter of this
universe spoke to them. This is what he said:

"O gods, works divine whose maker and father I am, whatever has
come to be by my hands cannot be undone but by my consent.[20] Now
b while it is true that anything that is bound is liable to being undone, still,
only one who is evil would consent to the undoing of what has been well
fitted together and is in fine condition. This is the reason why you, as
creatures that have come to be, are neither completely immortal nor exempt
from being undone. Still, you will not be undone nor will death be your
portion, since you have received the guarantee of my will—a greater, more
sovereign bond than those with which you were bound when you came
to be. Learn now, therefore, what I declare to you. There remain still three
kinds of mortal beings that have not yet been begotten; and as long as
they have not come to be, the universe will be incomplete, for it will still
c lack within it all the kinds of living things it must have if it is to be

20. Accepting the emendation *theiōn* and the supplement <*ta*> before *di' emou* in a7.

sufficiently complete. But if these creatures came to be and came to share
in life by my hand, they would rival the gods. It is you, then, who must
turn yourselves to the task of fashioning these living things, as your nature
allows. This will assure their mortality, and this whole universe will really
be a completed whole. Imitate the power I used in causing you to be. And
to the extent that it is fitting for them to possess something that shares
our name of 'immortal', something described as divine and ruling within
those of them who always consent to follow after justice and after you, I
shall begin by sowing that seed, and then hand it over to you. The rest of d
the task is yours. Weave what is mortal to what is immortal, fashion and
beget living things. Give them food, cause them to grow, and when they
perish, receive them back again."

When he had finished this speech, he turned again to the mixing bowl
he had used before, the one in which he had blended and mixed the soul
of the universe. He began to pour into it what remained of the previous
ingredients and to mix them in somewhat the same way, though these
were no longer invariably and constantly pure, but of a second and third
grade of purity. And when he had compounded it all, he divided the
mixture into a number of souls equal to the number of the stars and
assigned each soul to a star. He mounted each soul in a carriage, as it e
were, and showed it the nature of the universe. He described to them the
laws that had been foreordained: They would all be assigned one and the
same initial birth, so that none would be less well treated by him than
any other. Then he would sow each of the souls into that instrument of
time suitable to it, where they were to acquire the nature of being the most 42
god-fearing of living things, and, since humans have a twofold nature, the
superior kind should be such as would from then on be called "man." So,
once the souls were of necessity implanted in bodies, and these bodies
had things coming to them and leaving them, the first innate capacity they
would of necessity come to have would be sense perception, which arises
out of forceful disturbances. This they all would have. The second would
be love, mingled with pleasure and pain. And they would come to have fear
and spiritedness as well, plus whatever goes with having these emotions, as b
well as all their natural opposites. And if they could master these emotions,
their lives would be just, whereas if they were mastered by them, they
would be unjust. And if a person lived a good life throughout the due
course of his time, he would at the end return to his dwelling place in his
companion star, to live a life of happiness that agreed with his character.
But if he failed in this, he would be born a second time, now as a woman. c
And if even then he still could not refrain from wickedness, he would be
changed once again, this time into some wild animal that resembled the
wicked character he had acquired. And he would have no rest from these
toilsome transformations until he had dragged that massive accretion of fire-
water-air-earth into conformity with the revolution of the Same and uniform
within him, and so subdued that turbulent, irrational mass by means of d
reason. This would return him to his original condition of excellence.

Having set out all these ordinances to them—which he did to exempt himself from responsibility for any evil they might afterwards do—the god proceeded to sow some of them into the Earth, some into the Moon, and others into the various other instruments of time. After the sowing, he handed over to the young gods the task of weaving mortal bodies. He had them make whatever else remained that the human soul still needed
e to have, plus whatever goes with those things. He gave them the task of ruling over these mortal living things and of giving them the finest, the best possible guidance they could give, without being responsible for any evils these creatures might bring upon themselves.

When he had finished assigning all these tasks, he proceeded to abide at rest in his own customary nature. His children immediately began to attend to and obey their father's assignment. Now that they had received the immortal principle of the mortal living thing, they began to imitate the craftsman who had made them. They borrowed parts of fire, earth,
43 water and air from the world, intending to pay them back again, and bonded together into a unity the parts they had taken, but not with those indissoluble bonds by which they themselves were held together. Instead, they proceeded to fuse them together with copious rivets so small as to be invisible, thereby making each body a unit made up of all the components. And they went on to invest this body—into and out of which things were to flow—with the orbits of the immortal soul. These orbits, now bound within a mighty river, neither mastered that river nor were mastered by it, but tossed it violently and were violently tossed by it. Consequently
b the living thing as a whole did indeed move, but it would proceed in a disorderly, random and irrational way that involved all six of the motions.[21] It would go forwards and backwards, then back and forth to the right and the left, and upwards and downwards, wandering every which way in these six directions. For mighty as the nourishment-bearing billow was in its ebb and flow, mightier still was the turbulence produced by the disturbances caused by the things that struck against the living things.
c Such disturbances would occur when the body encountered and collided with external fire (i.e., fire other than the body's own) or for that matter with a hard lump of earth or with the flow of gliding waters, or when it was caught up by a surge of air-driven winds. The motions produced by all these encounters would then be conducted through the body to the soul, and strike against it. (That is no doubt why these motions as a group came afterwards to be called "sensations," as they are still called today.)[22] It was just then, at that very instant, that they produced a very long and
d intense commotion. They cooperated with the continually flowing channel

21. Timaeus is here describing the uncontrolled movements of a new-born animal. He goes on to describe the confusion produced in its soul by its first sensations.

22. It is not clear what etymological point involving the word *aisthēseis* (sensations) Plato wants to make here. Perhaps he thinks (incorrectly) that *aisthēsis* is etymologically related to *aïssein*, "to shake."

to stir and violently shake the orbits of the soul. They completely bound
that of the Same by flowing against it in the opposite direction, and held
it fast just as it was beginning to go its way. And they further shook the
orbit of the Different right through, with the result that they twisted every
which way the three intervals of the double and the three of the triple, as
well as the middle terms of the ratios of 3/2, 4/3 and 9/8 that connect
them.[23] [These agitations did not undo them, however,] because they cannot
be completely undone except by the one who had bound them together.
They mutilated and disfigured the circles in every possible way so that e
the circles barely held together and though they remained in motion, they
moved without rhyme or reason, sometimes in the opposite direction,
sometimes sideways and sometimes upside down—like a man upside
down, head propped against the ground and holding his feet up against
something. In that position his right side will present itself both to him
and to those looking at him as left, and his left side as right. It is this
very thing—and others like it—that had such a dramatic effect upon the
revolutions of the soul. Whenever they encounter something outside of 44
them characterizable as *same* or *different*, they will speak of it as "the same
as" something, or as "different from" something else when the truth is
just the opposite, so proving themselves to be misled and unintelligent.
Also, at this stage souls do not have a ruling orbit taking the lead. And
so when certain sensations come in from outside and attack them, they
sweep the soul's entire vessel along with them. It is then that these revolutions,
however much in control they seem to be, are actually under their
control. All these disturbances are no doubt the reason why even today
and not only at the beginning, whenever a soul is bound within a mortal
body, it at first lacks intelligence. But as the stream that brings growth b
and nourishment diminishes and the soul's orbits regain their composure,
resume their proper courses and establish themselves more and more with
the passage of time, their revolutions are set straight, to conform to the
configuration each of the circles takes in its natural course. They then
correctly identify what is the same and what is different, and render
intelligent the persons who possess them. And to be sure, if such a person
also gets proper nurture to supplement his education, he'll turn out per- c
fectly whole and healthy, and will have escaped the most grievous of
illnesses. But if he neglects this, he'll limp his way through life and return
to Hades uninitiated and unintelligent.

But this doesn't happen until later. Our present subject, on the other
hand, needs a more detailed treatment. We must move on to treat the
prior questions—the ones that deal with how bodies came to be, part by
part, as well as the soul. What were the gods' reasons, what was their
plan when they caused these to be? In discussing these questions we shall d
hold fast to what is most likely, and proceed accordingly.

23. See 36b above.

Copying the revolving shape of the universe, the gods bound the two
divine orbits into a ball-shaped body, the part that we now call our head.
This is the most divine part of us, and master of all our other parts. They
then assembled the rest of the body and handed the whole of it to the
head, to be in its service. They intended it to share in all the motions there
e were to be. To keep the head from rolling around on the ground without
any way of getting up over its various high spots and out of the low, they
gave it the body as a vehicle to make its way easy. This is the reason why
the body came to have length and grow four limbs that could flex and
extend themselves, divinely devised for the purpose of getting about.
Holding on and supporting itself with these limbs, it would be capable of
45 making its way through all regions, while carrying at the top the dwelling
place of that most divine, most sacred part of ourselves. This is how as
well as why we have all grown arms and legs. And considering the front
side to be more honorable and more commanding than the back, the gods
gave us the ability to travel for the most part in this direction. Human
beings no doubt ought to have the front sides of their bodies distinguishable
from and dissimilar to their backs, and so the gods began by setting the
b face on that side of the head, the soul's vessel. They bound organs inside
it to provide completely for the soul, and they assigned this side, the
natural front, to be the part that takes the lead.

The eyes were the first of the organs to be fashioned by the gods, to
conduct light. The reason why they fastened them within the head is this.
They contrived that such fire as was not for burning but for providing a
gentle light should become a body, proper to each day. Now the pure fire
inside us, cousin to that fire, they made to flow through the eyes: so they
made the eyes—the eye as a whole but its middle in particular—close-
c textured, smooth and dense, to enable them to keep out all the other,
coarser stuff, and let that kind of fire pass through pure by itself. Now
whenever daylight surrounds the visual stream, like makes contact with
like and coalesces with it to make up a single homogeneous body aligned
with the direction of the eyes. This happens wherever the internal fire
strikes and presses against an external object it has connected with. And
because this body of fire has become uniform throughout and thus uni-
d formly affected, it transmits the motions of whatever it comes in contact
with as well as of whatever comes in contact with it, to and through the
whole body until they reach the soul. This brings about the sensation we
call "seeing." At night, however, the kindred fire has departed and so the
visual stream is cut off. For now it exits only to encounter something unlike
itself. No longer able to bond with the surrounding air, which now has
lost its fire, it undergoes changes and dies out. So it not only stops seeing,
but even begins to induce sleep. For when the eyelids—which the gods
e devised to keep eyesight safe—are closed, they shut in the power of the
internal fire, which then disperses and evens out the internal motions, and
when these have been evened out, a state of quietness ensues. And if this
quietness is deep, one falls into an all but dreamless sleep. But if some

fairly strong motions remain, they produce images similar in kind and in 46
number to the kind of motions they are, and the kind of regions in which
they remain—images which, though formed within, are recalled upon
waking as external objects.

And so there is no longer any difficulty in understanding how images
are produced in mirrors or in any other smooth reflecting surfaces. On
such occasions the internal fire joins forces with the external fire, to form
on the smooth surface a single fire which is reshaped in a multitude of
ways. So once the fire from the face comes to coalesce with the fire from b
sight on the smooth and bright surface, you have the inevitable appearance
of all images of this sort. What is left will appear as right, because the
parts of the fire from sight connect with the opposite parts of the fire from
the face, contrary to the usual manner of encounter. But, on the other
hand, what is right does appear as right, and what is left as left whenever
light switches sides in the process of coalescing with the light with which
it coalesces. And this happens whenever the mirror's smooth surface is c
curled upwards on both sides, thereby bending the right part of the fire
from sight towards the left, and the left part towards the right. And when
this same smooth surface is turned along the length of the face [i.e., verti-
cally], it makes the whole object appear upside down, because it bends
the lower part of the ray toward the top, and the upper part toward
the bottom.

Now all of the above are among the auxiliary causes employed in the
service of the god as he does his utmost to bring to completion the character
of what is most excellent. But because they make things cold or hot, compact d
or disperse them, and produce all sorts of similar effects, most people
regard them not as auxiliary causes, but as the actual causes of all things.
Things like these, however, are totally incapable of possessing any reason
or understanding about anything. We must pronounce the soul to be the
only thing there is that properly possesses understanding. The soul is an
invisible thing, whereas fire, water, earth and air have all come to be as
visible bodies. So anyone who is a lover of understanding and knowledge
must of necessity pursue as primary causes those that belong to intelligent
nature, and as secondary all those belonging to things that are moved by e
others and that set still others in motion by necessity. We too, surely, must
do likewise: we must describe both types of causes, distinguishing those
which possess understanding and thus fashion what is beautiful and good,
from those which, when deserted by intelligence, produce only haphazard
and disorderly effects every time.

Let us conclude, then, our discussion of the accompanying auxiliary
causes that gave our eyes the power which they now possess. We must
next speak of that supremely beneficial function for which the god gave 47
them to us. As my account has it, our sight has indeed proved to be a
source of supreme benefit to us, in that none of our present statements
about the universe could ever have been made if we had never seen any
stars, sun or heaven. As it is, however, our ability to see the periods of

day-and-night, of months and of years, of equinoxes and solstices, has led
to the invention of number, and has given us the idea of time and opened
b the path to inquiry into the nature of the universe. These pursuits have
given us philosophy, a gift from the gods to the mortal race whose value
neither has been nor ever will be surpassed. I'm quite prepared to declare
this to be the supreme good our eyesight offers us. Why then should we
exalt all the lesser good things, which a non-philosopher struck blind
would "lament and bewail in vain"?[24] Let us rather declare that the cause
and purpose of this supreme good is this: the god invented sight and gave
it to us so that we might observe the orbits of intelligence in the universe
c and apply them to the revolutions of our own understanding. For there
is a kinship between them, even though our revolutions are disturbed,
whereas the universal orbits are undisturbed. So once we have come to
know them and to share in the ability to make correct calculations according
to nature, we should stabilize the straying revolutions within ourselves
by imitating the completely unstraying revolutions of the god.

Likewise, the same account goes for sound and hearing—these too are
the gods' gifts, given for the same purpose and intended to achieve the
same result. Speech was designed for this very purpose—it plays the
d greatest part in its achievement. And all such composition as lends itself
to making audible musical sound[25] is given in order to express harmony,
and so serves this purpose as well. And harmony, whose movements are
akin to the orbits within our souls, is a gift of the Muses, if our dealings
with them are guided by understanding, not for irrational pleasure, for
which people nowadays seem to make use of it, but to serve as an ally in
the fight to bring order to any orbit in our souls that has become unharmo-
nized, and make it concordant with itself. Rhythm, too, has likewise been
e given us by the Muses for the same purpose, to assist us. For with most
of us our condition is such that we have lost all sense of measure, and are
lacking in grace.

Now in all but a brief part of the discourse I have just completed I have
presented what has been crafted by Intellect. But I need to match this
account by providing a comparable one concerning the things that have
48 come about by Necessity. For this ordered world is of mixed birth: it is
the offspring of a union of Necessity and Intellect. Intellect prevailed over
Necessity by persuading it to direct most of the things that come to be
toward what is best, and the result of this subjugation of Necessity to wise
persuasion was the initial formation of this universe. So if I'm to tell the
story of how it really came to be in this way, I'd also have to introduce
the character of the Straying Cause—how it is its nature to set things adrift.
b I shall have to retrace my steps, then, and, armed with a second starting
point that also applies to these same things, I must go back once again to

24. A near-quotation from Euripides, *Phoenician Women*, 1762.

25. Reading *phōnēs* in d1.

the beginning and start my present inquiry from there, just as I did with my earlier one.

We shall of course have to study the intrinsic nature of fire, water, air and earth prior to the heaven's coming to be, as well as the properties they had then. So far no one has as yet revealed how these four came to be. We tend to posit them as the elemental "letters" of the universe and tell people they are its "principles" on the assumption that they know what fire and the other three are. In fact, however, they shouldn't even be compared to syllables. Only a very unenlightened person might be c
expected to make such a comparison. So let me now proceed with my treatment in the following way: for the present I cannot state "the principle" or "principles" of all things, or however else I think about them, for the simple reason that it is difficult to show clearly what my view is if I follow my present manner of exposition. Please do not expect me to do so then. I couldn't convince even myself that I could be right to commit myself to d
undertaking a task of such magnitude. I shall keep to what I stated at the beginning, the virtue of likely accounts, and so shall try right from the start to say about things, both individually and collectively, what is no less likely than any—more likely, in fact, than what I have said before.[26] Let us therefore at the outset of this discourse call upon the god to be our savior this time, too, to give us safe passage through a strange and unusual exposition, and lead us to a view of what is likely. And so let me begin e
my speech again.

The new starting point in my account of the universe needs to be more complex than the earlier one. Then we distinguished two kinds, but now we must specify a third, one of a different sort. The earlier two sufficed for our previous account: one was proposed as a model, intelligible and always changeless, a second as an imitation of the model, something that 49
possesses becoming and is visible. We did not distinguish a third kind at the time, because we thought that we could make do with the two of them. Now, however, it appears that our account compels us to attempt to illuminate in words a kind that is difficult and vague. What must we suppose it to do and to be? This above all: it is a *receptacle* of all becoming—its wetnurse, as it were.

However true that statement may be, we must nevertheless describe it more clearly. This is a difficult task, particularly because it requires us to b
raise a preliminary problem about fire and the other three:

It is difficult to say of each of them—in a way that employs a reliable and stable account—which one is the sort of thing one should really call *water* rather than *fire*, or which one one should call some one of these rather than just any and every one of them. What problem, then, do they present for us to work through in likely fashion? And then how and in what manner are we to go on to speak about this third kind?

26. Accepting the insertion of <*tōn*> after *mallon de* in d3.

First, we see (or think we see) the thing that we have just now been
c calling *water* condensing and turning to stones and earth. Next, we see this same thing dissolving and dispersing, turning to wind and air, and air, when ignited, turning to fire. And then we see fire being condensed and extinguished and turning back to the form of air, and air coalescing and thickening and turning back into cloud and mist. When these are compressed still more we see them turning into flowing water, which we see turning to earth and stones once again. In this way, then, they transmit their coming to be one to the other in a cycle, or so it seems. Now then,
d since none of these appears ever to remain the same, which one of them can one categorically assert, without embarrassment, to be some particular thing, *this* one, and not something else? One can't. Rather, the safest course by far is to propose that we speak about these things in the following way: what we invariably observe becoming different at different times—fire for example—to characterize that, i.e., fire, not as "this," but each time as "what is such," and speak of water not as "this," but always as "what is such." And never to speak of anything else as "this," as though it has
e some stability, of all the things at which we point and use the expressions "that" and "this" and so think we are designating something. For it gets away without abiding the charge of "that" and "this," or any other expression that indicts them of being stable. It is in fact safest not to refer to it by any of these expressions. Rather, "what is such"—coming around like what it was, again and again—*that's* the thing to call it in each and every case. So fire—and generally everything that has becoming—it is safest to call "what is altogether such." But that *in* which they each appear to keep coming into being and *from* which they subsequently pass out of being,
50 *that's* the only thing to refer to by means of the expressions "that" and "this." A thing that is some "such" or other, however,—hot or white, say, or any one of the opposites, and all things constituted by these—should be called none of these things [i.e., "this" or "that"].[27]

27. An alternative translation of 49c7–50a4 has been proposed by H. F. Cherniss (*Am. J. of Philol.* 75, 113 ff.):

> Since these thus never appear as severally identical, concerning which of them could one without shame firmly assert that this is any particular thing and not another? It is not possible, but by far the safest way is to speak of them on this basis: What we ever see coming to be at different times in different places, for example fire, not to say "this is fire," but "what on any occasion is such and such is fire," nor "this is water," but "what is always such and such is water," nor ever "[this]," as if it had some permanence, "is some other" of the things that we think we are designating as something when by way of pointing we use the term "this" or "that." For it slips away and does not abide the assertion of "that" and "this" or any assertion that indicts them of being stable. But [it is safest] not to speak of these as severally distinct but so to call the such and such that always recurs alike in each and all cases together, for example [to call] that which is always such and such fire, and so with everything

I must make one more effort to describe it, more clearly still. Suppose you were molding gold into every shape there is, going on non-stop remolding one shape into the next. If someone then were to point at one of them and ask you, "What *is* it?," your safest answer by far, with respect b
to truth, would be to say, "gold," but never "triangle" or any of the other shapes that come to be in the gold, as though it *is* these, because they change even while you're making the statement. However, that answer, too, should be satisfactory, as long as the shapes are willing to accept "what is such" as someone's designation. This has a degree of safety.

Now the same account, in fact, holds also for that nature which receives all the bodies. We must always refer to it by the same term, for it does not depart from its own character in any way. Not only does it always receive all things, it has never in any way whatever taken on any character- c
istic similar to any of the things that enter it. Its nature is to be available for anything to make its impression upon, and it is modified, shaped and reshaped by the things that enter it. These are the things that make it appear different at different times. The things that enter and leave it are imitations of those things that always are, imprinted after their likeness in a marvellous way that is hard to describe. This is something we shall pursue at another time. For the moment, we need to keep in mind three types of things: that which comes to be, that in which it comes to be, and d
that after which the thing coming to be is modeled, and which is the source of its coming to be. It is in fact appropriate to compare the receiving thing to a mother, the source to a father, and the nature between them to their offspring. We also must understand that if the imprints are to be varied, with all the varieties there to see, this thing upon which the imprints are to be formed could not be well prepared for that role if it were not itself devoid of any of those characters that it is to receive from elsewhere. For e
if it resembled any of the things that enter it, it could not successfully copy their opposites or things of a totally different nature whenever it were to receive them. It would be showing its own face as well. This is why the thing that is to receive in itself all the elemental kinds must be totally devoid of any characteristics. Think of people who make fragrant ointments. They expend skill and ingenuity to come up with something just like this [i.e., a neutral base], to have on hand to start with. The liquids that are to receive the fragrances they make as odorless as possible. Or think of people who work at impressing shapes upon soft materials. They emphatically refuse to allow any such material to already have some definite shape. Instead, they'll even it out and make it as smooth as it can be. In the same 51

---

that comes to be; and, on the other hand, that in which these severally distinct characteristics are ever and anon being manifested as they come to be in it and out of which again they are passing away, it is safest to designate it alone when we employ the word "this" or "that" but what is of any kind soever, hot or white or any of the contraries and all that consist of these, not in turn to call it any of these.

way, then, if the thing that is to receive repeatedly throughout its whole self the likenesses of the intelligible objects, the things which always are[28]—if it is to do so successfully, then it ought to be devoid of any inherent characteristics of its own. This, of course, is the reason why we shouldn't call the mother or receptacle of what has come to be, of what is visible or perceivable in every other way, either earth or air, fire or water, or any of their compounds or their constituents. But if we speak of it as an invisible
b and characterless sort of thing, one that receives all things and shares in a most perplexing way in what is intelligible, a thing extremely difficult to comprehend, we shall not be misled. And in so far as it is possible to arrive at its nature on the basis of what we've said so far, the most correct way to speak of it may well be this: the part of it that gets ignited appears on each occasion as fire, the dampened part as water, and parts as earth or air in so far as it receives the imitations of these.

But we must prefer to conduct our inquiry by means of rational argument. Hence we should make a distinction like the following: Is there such a thing as a Fire *by itself*? Do all these things of which we always say that
c each of them is something "by itself" really exist? Or are the things we see, and whatever else we perceive through the body, the only things that possess this kind of actuality, so that there is absolutely nothing else besides them at all? Is our perpetual claim that there exists an intelligible Form for each thing a vacuous gesture, in the end nothing but mere talk? Now we certainly will not do justice to the question before us if we dismiss it, leaving it undecided and unadjudicated, and just insist that such things
d exist, but neither must we append a further lengthy digression to a discourse already quite long. If, however, a significant distinction formulated in few words were to present itself, that would suit our present needs best of all. So here's how I cast my own vote: If understanding and true opinion are distinct, then these "by themselves" things definitely exist—these Forms, the objects not of our sense perception, but of our understanding only. But if—as some people think—true opinion does not differ in any way from understanding, then all the things we perceive through our
e bodily senses must be assumed to be the most stable things there are. But we do have to speak of understanding and true opinion as distinct, of course, because we can come to have one without the other, and the one is not like the other. It is through instruction that we come to have understanding, and through persuasion that we come to have true belief. Understanding always involves a true account while true belief lacks any account. And while understanding remains unmoved by persuasion, true belief gives in to persuasion. And of true belief, it must be said, all men have a share, but of understanding, only the gods and a small group of people do.

52 Since these things are so, we must agree that that which keeps its own form unchangingly, which has not been brought into being and is not

28. Accepting the insertion of *noētōn* before *pantōn* in a1.

destroyed, which neither receives into itself anything else from anywhere
else, nor itself enters into anything else anywhere, is one thing. It is invisi-
ble—it cannot be perceived by the senses at all—and it is the role of
understanding to study it. The second thing is that which shares the other's
name and resembles it. This thing can be perceived by the senses, and it
has been begotten. It is constantly borne along, now coming to be in a
certain place and then perishing out of it. It is apprehended by opinion,
which involves sense perception. And the third type is space, which exists
always and cannot be destroyed. It provides a fixed state for all things b
that come to be. It is itself apprehended by a kind of bastard reasoning
that does not involve sense perception, and it is hardly even an object of
conviction. We look at it as in a dream when we say that everything that
exists must of necessity be somewhere, in some place and occupying some
space, and that that which doesn't exist somewhere, whether on earth or
in heaven, doesn't exist at all.

We prove unable to draw all these distinctions and others related to
them—even in the case of that unsleeping, truly existing reality—because
our dreaming state renders us incapable of waking up and stating the c
truth, which is this: Since that for which an image has come to be is not
at all intrinsic to the image, which is invariably borne along to picture
something else, it stands to reason that the image should therefore come
to be *in* something else, somehow clinging to being, or else be nothing at
all. But that which really is receives support from the accurate, true ac-
count—that as long as the one is distinct from the other, neither of them
ever comes to be in the other in such a way that they at the same time d
become one and the same, and also two.

Let this, then, be a summary of the account I would offer, as computed
by my "vote." There are being, space, and becoming, three distinct things
which existed even before the universe came to be.

Now as the wetnurse of becoming turns watery and fiery and receives
the character of earth and air, and as it acquires all the properties that e
come with these characters, it takes on a variety of visible aspects, but
because it is filled with powers that are neither similar nor evenly balanced,
no part of it is in balance. It sways irregularly in every direction as it is
shaken by those things, and being set in motion it in turn shakes them.
And as they are moved, they drift continually, some in one direction and
others in others, separating from one another. They are winnowed out, as
it were, like grain that is sifted by winnowing sieves or other such imple-
ments. They are carried off and settle down, the dense and heavy ones in 53
one direction, and the rare and light ones to another place.

That is how at that time the four kinds were being shaken by the receiver,
which was itself agitating like a shaking machine, separating the kinds
most unlike each other furthest apart and pushing those most like each
other closest together into the same region. This, of course, explains how
these different kinds came to occupy different regions of space, even before
the universe was set in order and constituted from them at its coming to

be. Indeed, it is a fact that before this took place the four kinds all lacked
b proportion and measure, and at the time the ordering of the universe was
undertaken, fire, water, earth and air initially possessed certain traces of
what they are now. They were indeed in the condition one would expect
thoroughly god-forsaken things to be in. So, finding them in this natural
condition, the first thing the god then did was to give them their distinctive
shapes, using forms and numbers.

Here is a proposition we shall always affirm above all else: The god
fashioned these four kinds to be as perfect and excellent as possible, when
they were not so before. It will now be my task to explain to you what
c structure each of them acquired, and how each came to be. My account
will be an unusual one, but since you are well schooled in the fields of
learning in terms of which I must of necessity proceed with my exposition,
I'm sure you'll follow me.

First of all, everyone knows, I'm sure, that fire, earth, water and air
are bodies. Now everything that has bodily form also has depth. Depth,
moreover, is of necessity comprehended within surface, and any surface
bounded by straight lines is composed of triangles. Every triangle, more-
d over, derives from two triangles, each of which has one right angle and
two acute angles. Of these two triangles, one [the isosceles right-angled
triangle] has at each of the other two vertices an equal part of a right angle,
determined by its division by equal sides; while the other [the scalene
right-angled triangle] has unequal parts of a right angle at its other two
vertices, determined by the division of the right angle by unequal sides.
This, then, we presume to be the originating principle of fire and of the other
bodies, as we pursue our likely account in terms of Necessity. Principles yet
more ultimate than these are known only to the god, and to any man he
may hold dear.

e We should now say which are the most excellent four bodies that can
come to be. They are quite unlike each other, though some of them are
capable of breaking up and turning into others and vice-versa. If our
account is on the mark, we shall have the truth about how earth and fire
and their proportionate intermediates [water and air] came to be. For we
shall never concede to anyone that there are any visible bodies more
excellent than these, each conforming to a single kind. So we must whole-
heartedly proceed to fit together the four kinds of bodies of surpassing
excellence, and to declare that we have come to grasp their natures well
enough.

54 Of the two [right-angled] triangles, the isosceles has but one nature,
while the scalene has infinitely many. Now we have to select the most
excellent one from among the infinitely many, if we are to get a proper
start. So if anyone can say that he has picked out another one that is more
excellent for the construction of these bodies, his victory will be that of a
friend, not an enemy. Of the many [scalene right-angled] triangles, then,
we posit as the one most excellent, surpassing the others, that one from
[a pair of] which the equilateral triangle is constructed as a third figure.

Why this is so is too long a story to tell now. But if anyone puts this b
claim to the test and discovers that it isn't so, his be the prize, with our
congratulations. So much, then, for the selection of the two triangles out
of which the bodies of fire and the other bodies are constructed—the [right-
angled] isosceles, and [the right-angled] scalene whose longer side squared
is always triple its shorter side squared [i.e., the half-equilateral].

At this point we need to formulate more precisely something that was
not stated clearly earlier. For then it appeared that all four kinds of bodies
could turn into one another by successive stages.[29] But the appearance is
wrong. While there are indeed four kinds of bodies that come to be from c
the [right-angled] triangles we have selected, three of them come from
triangles that have unequal sides, whereas the fourth alone is fashioned
out of isosceles triangles. Thus not all of them have the capacity of breaking
up and turning into one another, with a large number of small bodies
turning into a small number of large ones and vice-versa. There are three
that can do this. For all three are made up of a single type of triangle, so
that when once the larger bodies are broken up, the same triangles can
go to make up a large number of small bodies, assuming shapes appropriate
to them. And likewise, when numerous small bodies are fragmented into d
their triangles, these triangles may well combine to make up some single
massive body belonging to another kind.

So much, then, for our account of how these bodies turn into one another.
Let us next discuss the form that each of them has come to have, and the
various numbers that have combined to make them up.

Leading the way will be the primary form [the tetrahedron], the tiniest
structure, whose elementary triangle is the one whose hypotenuse is twice
the length of its shorter side. Now when a pair of such triangles are
juxtaposed along the diagonal [i.e., their hypotenuses] and this is done
three times, and their diagonals and short sides converge upon a single e
point as center, the result is a single equilateral triangle, composed of six
such triangles. When four of these equilateral triangles are combined, a
single solid angle is produced at the junction of three plane angles. This, 55
it turns out, is the angle which comes right after the most obtuse of the
plane angles.[30] And once four such solid angles have been completed, we
get the primary solid form, which is one that divides the entire circumfer-
ence [sc. of the sphere in which it is inscribed] into equal and similar parts.

The second solid form [the octahedron] is constructed out of the same
triangles which, however, are now arranged in eight equilateral triangles
and produce a single solid angle out of four plane angles. And when
six such solid angles have been produced, the second body has reached
its completion.

Now the third body [the icosahedron] is made up of a combination of
one hundred and twenty of the elementary triangles, and of twelve solid b

29. Cf. 49b–c.

30. The solid angle is the conjunction of three 60° plane angles, totalling 180°.

angles, each enclosed by five plane equilateral triangles. This body turns
out to have twenty equilateral triangular faces. And let us take our leave
of this one of the elementary triangles, the one that has begotten the above
three kinds of bodies and turn to the other one, the isosceles [right-angled]
triangle, which has begotten the fourth [the cube]. Arranged in sets of
four whose right angles come together at the center, the isosceles triangle
produced a single equilateral quadrangle [i.e., a square]. And when six of
c these quadrangles were combined together, they produced eight solid
angles, each of which was constituted by three plane right angles. The shape
of the resulting body so constructed is a cube, and it has six quadrangular
equilateral faces.

One other construction, a fifth, still remained, and this one the god used for the whole universe, embroidering figures on it.[31]

Anyone following this whole line of reasoning might very well be puz-
zled about whether we should say that there are infinitely many worlds
d or a finite number of them. If so, he would have to conclude that to answer,
"infinitely many," is to take the view of one who is really "unfinished" in
things he ought to be "finished" in. He would do better to stop with the
question whether we should say that there's really just one world or five
and be puzzled about that. Well, our "probable account" answer declares
there to be but one world, a god—though someone else, taking other things
into consideration, will come to a different opinion. We must set him
aside, however.

Let us now assign to fire, earth, water and air the structures which have
just been given their formations in our speech. To earth let us give the
e cube, because of the four kinds of bodies earth is the most immobile and
the most pliable—which is what the solid whose faces are the most secure
must of necessity turn out to be, more so than the others. Now of the
[right-angled] triangles we originally postulated, the face belonging to
those that have equal sides has a greater natural stability than that belong-
ing to triangles that have unequal sides, and the surface that is composed
of the two triangles, the equilateral quadrangle [the square], holds its
position with greater stability than does the equilateral triangle, both in
56 their parts and as wholes. Hence, if we assign this solid figure to earth,
we are preserving our "likely account." And of the solid figures that are
left, we shall next assign the least mobile of them to water, to fire the most
mobile, and to air the one in between. This means that the tiniest body
belongs to fire, the largest to water, and the intermediate one to air—and
also that the body with the sharpest edges belongs to fire, the next sharpest
to air, and the third sharpest to water. Now in all these cases the body
that has the fewest faces is of necessity the most mobile, in that it, more
b than any other, has edges that are the sharpest and best fit for cutting in
every direction. It is also the lightest, in that it is made up of the least

31. The dodecahedron, the remaining one of the regular solids. It approaches most nearly a sphere in volume—the shape of the universe, on Timaeus' story.

number of identical parts. The second body ranks second in having these
same properties, and the third ranks third. So let us follow our account,
which is not only likely but also correct, and take the solid form of the
pyramid that we saw constructed as the element or the seed of fire. And
let us say that the second form in order of generation is that of air, and
the third that of water.

Now we must think of all these bodies as being so small that due to
their small size none of them, whatever their kind, is visible to us individu- c
ally. When, however, a large number of them are clustered together, we
do see them in bulk. And in particular, as to the proportions among their
numbers, their motions and their other properties, we must think that
when the god had brought them to complete and exact perfection (to the
degree that Necessity was willing to comply obediently), he arranged them
together proportionately.

Given all we have said so far about the kinds of elemental bodies, the
following account [of their transformations] is the most likely: When earth d
encounters fire and is broken up by fire's sharpness, it will drift about—
whether the breaking up occurred within fire itself, or within a mass of
air or water—until its parts meet again somewhere, refit themselves to-
gether and become earth again. The reason is that the parts of earth will
never pass into another form. But when water is broken up into parts by
fire or even by air, it could happen that the parts recombine to form one
corpuscle of fire and two of air. And the fragments of air could produce, e
from any single particle that is broken up, two fire corpuscles. And con-
versely, whenever a small amount of fire is enveloped by a large quantity
of air or water or perhaps earth and is agitated inside them as they move,
and in spite of its resistance is beaten and shattered to bits, then any two
fire corpuscles may combine to constitute a single form of air. And when
air is overpowered and broken down, then two and one half entire forms
of air will be consolidated into a single, entire form of water.

Let us recapitulate and formulate our account of these transformations
as follows: Whenever one of the other kinds is caught inside fire and gets 57
cut up by the sharpness of fire's angles and edges, then if it is reconstituted
as fire, it will stop getting cut. The reason is that a thing of any kind that
is alike and uniform is incapable of effecting any change in, or being
affected by, anything that is similar to it. But as long as something involved
in a transformation has something stronger than it to contend with, the
process of its dissolution will continue non-stop. And likewise, when a
few of the smaller corpuscles are surrounded by a greater number of bigger b
ones, they will be shattered and quenched. The quenching will stop when
these smaller bodies are willing to be reconstituted into the form of the
kind that prevailed over them, and so from fire will come air, and from
air, water. But if these smaller corpuscles are in process of turning into
these and one of the other kinds encounters them and engages them in
battle, their dissolution will go on non-stop until they are either completely
squeezed and broken apart and escape to their own likes, or else are

defeated, and, melding from many into one, they are assimilated to the
kind that prevailed over them, and come to share its abode from then on.
c And, what is more, as they undergo these processes, they all exchange
their territories: for as a result of the Receptacle's agitation the masses of
each of the kinds are separated from one another, with each occupying
its own region, but because some parts of a particular kind do from time
to time become unlike their former selves and like the other kinds, they
are carried by the shaking towards the region occupied by whatever masses
they are becoming like to.

These, then, are the sorts of causes by which the unalloyed primary
bodies have come to be. Now the fact that different varieties are found
within their respective forms is to be attributed to the constructions of
d each of the elementary triangles. Each of these two constructions did not
originally yield a triangle that had just one size, but triangles that were
both smaller and larger, numerically as many as there are varieties within
a given form. That is why when they are mixed with themselves and with
each other they display an infinite variety, which those who are to employ
a likely account in their study of nature ought to take note of.

Now as for motion and rest, unless there is agreement on the manner
and the conditions in which these two come to be, we will have many
e obstacles to face in our subsequent course of reasoning. Although we have
already said something about them, we need to say this as well: there will
be no motion in a state of uniformity. For it is difficult, or rather impossible,
for something to be moved without something to set it in motion, or
something to set a thing in motion without something to be moved by it.
When either is absent, there is no motion, but [when they are present] it
is quite impossible for them to be uniform. And so let us always presume
that rest is found in a state of uniformity and to attribute motion to non-
58 uniformity. The latter, moreover, is caused by inequality, the origin of
which we have already discussed.[32]

We have not explained, however, how it is that the various corpuscles
have not reached the point of being thoroughly separated from each other
kind by kind, so that their transformations into each other and their move-
ment [toward their own regions] would have come to a halt. So let us
return to say this about it: Once the circumference of the universe has
comprehended the [four] kinds, then, because it is round and has a natural
tendency to gather in upon itself, it constricts them all and allows no empty
b space to be left over. This is why fire, more than the other three, has come
to infiltrate all of the others, with air in second place, since it is second in
degree of subtlety, and so on for the rest. For the bodies that are generated
from the largest parts will have the largest gaps left over in their construc-
tion, whereas the smallest bodies will have the tiniest. Now this gathering,
contracting process squeezes the small parts into the gaps inside the big
ones. So now, as the small parts are placed among the large ones and the
smaller ones tend to break up the larger ones while the larger tend to

32. The reference is unclear. Cf. perhaps 52e.

cause the smaller to coalesce, they all shift, up and down, into their own
respective regions. For as each changes in quantity, it also changes the c
position of its region. This, then, is how and why the occurrence of non-
uniformity is perpetually preserved, and so sets these bodies in perpetual
motion, both now and in the future without interruption.

Next, we should note that there are many varieties of fire that have
come to be. For example, there is both flame and the effluence from flame
which, while it doesn't burn, gives light to the eyes. And then there is the
residue of flame which is left in the embers when the flame has gone out. d
The same goes for air. There is the brightest kind that we call "aether,"
and also the murkiest, "mist" and "darkness." Then there are other, name-
less sorts which result from inequality among the triangles. The varieties
of water can first of all be divided into two groups, the liquid and the
liquifiable. Because the former possesses water parts that are not only
unequal but also small, it turns out to be mobile, both in itself and when
acted upon by something else. This is due to its non-uniformity and the
configuration of its shape. The other type of water, composed of large and e
uniform kinds, is rather more immobile and heavy, compacted as it is by
its uniformity. But when fire penetrates it and begins to break it up, it
loses its uniformity, and once that is lost it is more susceptible to motion.
When it has become quite mobile it is spread out upon the ground under
pressure from the air surrounding it. Each of these changes has its own
name: "melting" for the disintegration of its bulk and "flowing" for the
spreading on the ground. But when, conversely, the fire is expelled from 59
it, then, since the fire does not pass into a void, pressure is exerted upon
the surrounding air, which in turn compresses the still mobile liquid mass
into the places previously occupied by the fire and mixes it with itself. As
it is being compressed, the mass regains its uniformity now that fire, the
agent of non-uniformity, has left the scene, and it resettles into its own
former state. The departure of the fire is called "cooling," and the compres-
sion that occurs when the fire is gone is called "jelling." Of all these types
of water that we have called liquifiable, the one that consists of the finest, b
the most uniform parts and has proved to be the most dense, one that is
unique in its kind and tinged with brilliant yellow, is gold, our most
precious possession, filtered through rocks and thereby compacted. And
gold's offshoot, which because of its density is extremely hard and has a
black color, is called adamant. Another has parts that approximate gold
and comes in more than one variety. In terms of density, it is in one way
denser than gold and includes a small, fine part of earth, so that it is
harder. But it is actually lighter than gold, because it has large gaps inside c
of it. This, it turns out, is copper, one variety of the bright, jelled kinds of
water. Whenever the earth part of the mixture separates off again from
the rest in the passage of time, this part, called verdigris, becomes visible
by itself.

As for going further and giving an account of other stuffs of this sort along the lines of the likely stories we have been following, that is no complicated matter. And should one take a break and lay aside accounts

d about the things that always are, deriving instead a carefree pleasure from surveying the likely accounts about becoming, he would provide his life with a moderate and sensible diversion. So shall we, then, at this time give free rein to such a diversion and go right on to set out the next likelihoods on these subjects, as follows:

Take now the water that is mixed with fire. It is fine and liquid and on account of its mobility and the way it rolls over the ground it is called "liquid." It is soft, moreover, in that its faces, being less firm than those of earth, give way to it. When this water is separated from its fire and air
e and is isolated, it becomes more uniform, and it is pressed together into itself by the things that leave it. So compacted, the water above the earth which is most affected by this change turns to hail, while that on earth turns to ice. Some water is not affected quite so much, being still only half compacted. Such water above the earth becomes snow while that on the earth becomes what is called "frost," from dew that is congealed.

Now most of the varieties of water which are mixed with one another
60 are collectively called "saps," because they have been filtered through plants that grow out of the earth. Because they are mixed, each of them has its own degree of non-uniformity. Many of these varieties are nameless, though four of them, all with fire in them, are particularly conspicuous and so have been given names. First, there is wine, which warms not only the body but the soul as well. Second, there are the various oils, which are smooth and divide the ray of sight and for that reason glisten, appearing bright and shiny to the eye: these include resin, castor oil, olive oil and
b others that share their properties. And third, there is what is most commonly called honey, which includes all that relaxes the taste passages of the mouth back to their natural state, and which by virtue of this property conveys a sense of sweetness. Fourth, there is what has been named tart juice, quite distinct from all the other saps. It is a foamy stuff, and is caustic and hence hazardous to the flesh.

As for the varieties of earth, first, such earth as has been filtered through water turns into a stony body in something like the following way: When the water that is mixed with it disintegrates in the mixing process, it is
c transformed into the form of air, and, once it has turned into air, it thrusts its way upwards toward its own region. And since there is no void above it, it pushes aside the air next to it. And when this air, heavy as it is, is pressed and poured around the mass of earth, it squeezes it hard and compresses it to fill the places vacated by the recently formed air. When so compressed by air, earth is insoluble in water and constitutes itself as stone. The more beautiful kind of stone is stone that is transparent and made up of equal and uniform parts; the uglier kind is just the opposite.
d Second, there is the kind of earth from which moisture has been completely expelled by a swiftly burning fire and which thus comes to have a rather more brittle constitution than the first kind of earth. This is a kind to which the name "pottery" has been given. Sometimes, however, moisture gets left in and we get earth that is made liquifiable by fire. When it has cooled

it turns to stone that is black in color (i.e., lava). Then, thirdly, there are
the two varieties of earth that both alike are the residue of a mixture of a
great quantity of water. They are briny, made up of the finest parts of
earth, and turn out to be semi-solid and water soluble again. One of these
is soda, a cleansing agent against oil and dirt; the other is salt, which is
well suited to enhance various blends of flavor and has, not unreasonably, e
proven itself to be a stuff pleasing to the gods.

There are also compounds of earth and water which are soluble by fire
but not by water.[33] These are compacted in this way for the following sort
of reason: Neither air nor fire will dissolve masses of earth, because air
and fire consist of parts that by nature are smaller than are the gaps within
earth. They thus pass without constraint through the wide gaps of a mass
of earth, leaving it intact and undissolved. But since the parts of water are
naturally bigger, they must force their way through, and in so doing they
undo and dissolve the earth. For water alone can in this way dissolve 61
earth that isn't forcibly compressed, but when earth is compressed nothing
but fire can dissolve it. That is because fire is the only thing left that can
penetrate it. So also, only fire can disperse water that has been compressed
with the greatest force, whereas both fire and air can disperse water that
is in a looser state. Air does it by entering the gaps, and fire by breaking
up the triangles. The only way in which air that has been condensed under
force can be broken up is into its elemental triangles, and even when it is
not forcibly compressed only fire can dissolve it.

So as for these bodies that are mixtures of earth and water, as long as
the gaps within a given mass of earth are occupied by its own water which b
is tightly packed within the gaps, the water parts that come charging upon
it from the outside have no way of getting into the mass and so flow
around the whole of it, leaving it undissolved. The fire parts, however,
do penetrate the gaps within the water parts and hence as fire they do to
water[34] what water did to earth. They alone, it turns out, cause this body,
this partnership of earth and water to come apart and become fluid. These
compounds of earth and water include not only bodies that have less water
in them than earth, such as glass and generally all stone formations that
can be called liquifiable, but also bodies that have more water than earth,
namely all those that have the consistency of wax or of incense. c

We have now pretty much completed our presentation of the kinds of
bodies that are distinguished by their multifarious shapes, their combinations and their intertransformations. Now we must try to shed some light
on what has caused them to come to have the properties they do. First,
we need at every step in our discourse to appeal to the existence of sense
perception, but we have so far discussed neither the coming to be of flesh,
or of what pertains to flesh, nor the part of the soul that is mortal. It so

33. I.e., glass, wax, and similar bodies; see below.

34. Accepting the conjecture *hudōr* at b5.

d happens, however, that we cannot give an adequate account of these
matters without referring to perceptual properties, but neither can we give
an account of the latter without referring to the former, and to treat them
simultaneously is all but impossible. So we must start by assuming the
one or the other, and later revisit what we have assumed. Let's begin by
taking for granted for now the existence of body and soul. This will allow
our account of these properties to succeed the account we've just given
of the elemental kinds.

First, then, let us see what we mean when we call fire *hot.* Let's look at
it in this way: We notice how fire acts on our bodies by dividing and
e cutting them. We are all well aware that the experience is a sharp one.
The fineness of fire's edges, the sharpness of its angles, the minuteness of
its parts and the swiftness of its motion—all of which make fire severely
62 piercing so that it makes sharp cuts in whatever it encounters—must be
taken into consideration as we recall how its shape came to be. It is this
substance, more than any other, that divides our bodies throughout and
cuts them up into small pieces, thereby giving us the property (as well as
the name [*kermatizein*]) that we now naturally call *hot* [*thermon*].

What the opposite property is, is quite obvious; we should not, however,
keep anything left out of our account. As the larger parts of the moisture
surrounding our bodies penetrate our bodies and push out the smaller
parts, but are unable to take up the places vacated by those smaller parts,
b they compress the moisture within us and congeal it by rendering it in a
state of motionlessness in place of a state of moving non-uniformity, by
virtue of the uniformity and compression so introduced. But anything
which is being unnaturally compressed has a natural tendency to resist
such compression, and pushes itself outward, in the opposite direction.
This resistance, this shaking is called "shivering" and "chill," and the
experience as a whole, as well as what brings it about, has come to have
the name *cold.*

*Hard* we call whatever our flesh gives way to; *soft,* whatever gives way
to our flesh. And this is how they are relative to each other. Whatever stands
c upon a small base tends to give way. The form composed of quadrangles,
however, is the least liable to being displaced because its bases are very
secure, and that which is compacted to its maximum density is particularly
resistant to being displaced.

*Heavy* and *light* can be most clearly explained if we examine them in
conjunction with what we call *above* and *below.* It is entirely wrong to hold
that there are by nature two separate regions, divorced from and entirely
opposite one another, the one the region "below," toward which anything
that has physical mass tends to move, and the other the region "above"
toward which everything makes its way only under force. For given that
d the whole heaven is spherical, all the points that are situated as extremes
at an equal distance from the center must by their nature be extremes of
just the same sort, and we must take it that the center, being equidistant
from the extremes, is situated at the point that is the opposite to all the

extremes. Now if this is the universe's natural constitution, which of the
points just mentioned could you posit as "above" or "below" without
justly giving the appearance of using totally inappropriate language? There
is no justification for describing the universe's central region either as a
natural "above" or a natural "below," but just as "at the center." And the
region at the circumference is, to be sure, not the center, but neither is one
of its parts so distinguished from any other that it is related to the center
in a specific way more so than any of the parts opposite to it. What contrary
terms could you apply to something that is by nature all alike in every
direction? How could you think to use such terms appropriately? If, further,
there is something solid and evenly balanced at the center of the universe, 63
it could not move to any of the extreme points, because these are all alike
in all directions. But if you could travel around it in a circle, you would
repeatedly take a position at your own antipodes and call the very same
part of it now the part "above," and then the part "below." For the whole
universe, as we have just said, is spherical, and to say that some region
of it is its "above," and another its "below," makes no sense. The origin
of these terms and the subjects to which they really apply, which explain
how we have become accustomed to using them in dividing the world as a
whole in this way, we must resolve by adopting the following supposition: b
Imagine a man stepping onto that region of the universe that is the particu-
lar province of fire, where the greatest mass of fire is gathered together,
and toward which other fire moves. Imagine, further, that he has the power
to remove some parts of the fire and place them on scales. When he raises
the beam and drags the fire into the alien air, applying force to it, clearly c
the lesser quantity of fire somehow gives way to his force more easily
than the greater. For when two things are raised by one and the same
exertion, the lesser quantity will invariably yield more readily and the
greater (which offers more resistance) less readily, to the force applied.
And so the large quantity will be described as *heavy* and moving *downward,*
and the small one as *light* and moving *upward.* Now this is the very thing
we must detect ourselves doing in our own region. When we stand on
the earth and weigh out one earth-like thing against another, and some-
times some earth itself, we drag these things by force, contrary to their
natural tendency, into the alien air. While both of them tend to cling to d
what is akin to them, nevertheless the smaller one will yield sooner and
more readily than the larger one to the force we apply that introduces it
into the alien stuff. Now this is what we call *light,* and the region into
which we force it to go we call *above*; their opposites we call *heavy* and
*below.* Now the things [having any of these designations] necessarily differ
relatively to one another, because the various masses of the elemental
kinds of body occupy opposite regions: what in one region is light, heavy,
below or above will all be found to become, or to be, directly opposite to, e
or at an angle to, or in any and every different direction from, what is
light, heavy, below or above in the opposite region. In fact, this is the one
thing that should be understood to apply in all these cases: the path towards

its own kind is what makes a thing moving along it "heavy" and the region into which it moves, "below," whereas the other set of terms ["light" and "above"] are for things behaving the other way. This, then, concludes our account of what causes [things to have] these properties.

As for *smooth* and *rough,* I take it that anyone could discern the explanation of those properties and communicate it to someone else: roughness results from the combination of hardness with non-uniformity, while
64 smoothness is the result of uniformity's contribution to density.

The most important point that remains concerning the properties that have a common effect upon the body as a whole, pertains to the causes of pleasures and pains in the cases we have described as well as all cases in which sensations are registered throughout the bodily parts, sensations which are also simultaneously accompanied by pains and pleasures in those parts. With every property, whether perceived or not, let us take up the question of the causes of pleasure or pain in the following way, recalling
b the distinction made in the foregoing between what is easily moved and what is hard to move. This is the way in which we must pursue all that we intend to comprehend. When even a minor disturbance affects that which is easily moved by nature, the disturbance is passed on in a chain reaction with some parts affecting others in the same way as they were affected, until it reaches the center of consciousness and reports the property that produced the reaction. On the other hand, something that is hard to move remains fixed and merely experiences the disturbance without
c passing it on in any chain reaction. It does not disturb any of its neighboring parts, so that in the absence of some parts passing on the disturbance to others, the initial disturbance affecting them fails to move on into the living thing as a whole and renders the disturbance unperceived. This is true of our bones and hair and of the other mostly earth-made parts that we possess. But the former is true of our sight and hearing in particular, and this is due to the fact that their chief inherent power is that of air and of fire.

This, then, is what we should understand about pleasure and pain: an
d unnatural disturbance that comes upon us with great force and intensity is painful, while its equally intense departure, leading back to the natural state, is pleasant. One that is mild and gradual is not perceived, whereas the opposite is the case with the opposite disturbance. Further, one that occurs readily can be completely perceived, more so than any other, though neither pleasure nor pain is involved. Take, for example, those involved in the act of seeing. Earlier[35] we described the ray of sight as a body that comes into being with the daylight as an extension of ourselves. The cuttings, the burnings and whatever else it undergoes don't cause any
e pains in it, nor does the return to its former state yield any pleasures. Its perceptions are the more vivid and clear the more it is affected and the greater the number of things it encounters and makes contact with, for there is absolutely no violence involved when it is severed [by the cutting

35. At 45c.

and burning, etc.] and reconstituted. Bodies consisting of larger parts, on
the other hand, won't easily give way to what acts upon them. They pass
on the motions they receive to the entire body, and so they do get pleasures
and pains—pains when they are alienated from their natural condition
and pleasures when they are once again restored to it. All those bodies 65
which experience only gradual departures from their normal state or grad-
ual depletions but whose replenishments are intense and substantial are
bodies that are unaware of their depletions but not of their replenishments,
and hence they introduce very substantial pleasures in the mortal part of
the soul but not any pains. This is clear in the case of fragrances. But all
those bodies whose alienations are intense while their restorations to their
former states are but gradual and slow, pass on motions that are entirely b
contrary to those mentioned just before. Again, this clearly turns out to
be the case when the body suffers burns or cuts.

We have now pretty much covered those disturbances that affect the
whole body in a common way, as well as all the terms that have come to
be applied to the agents that produce them. We must now try to discuss,
if we can, those that take place in our various particular parts, and, as
before, their causes, which lie in the agents that produce them. First, then, c
we need to shed what light we can on what we left untreated earlier when
we talked about tastes, and these are the properties specifically connected
to the tongue. It seems that these, too, in common with most other proper-
ties, come about as a result of contractions and dilations, but apart from
that, these tongue-related properties seem rather more than any of the
others to involve roughness and smoothness. Now as earth-like parts
penetrate the area around the tiny vessels that act as testers for the tongue
and reach down to the heart, they impact upon the moist, soft flesh of the d
tongue and are melted away. In the process they contract the vessels and
dry them up. When they tend to be rather rough, we taste them as *sour;*
when less rough, as *tangy*. Things that rinse the vessels and wash the entire
area around the tongue are all called *bitter* when they do so to excess and
so assault the tongue as to dissolve some of it, as soda actually can do. e
When they are not as strong as soda and effect only a moderate rinsing,
they taste *salty* to us. They have none of the harsh bitterness, and we find
them rather agreeable. Things that absorb the heat of the mouth, by which
they are also worn smooth, are ignited and in their turn return their fire
to that which made them hot. Their lightness carries them up to the senses
in the head, as they cut any and everything they come up against. Because 66
this is what they do, things of this sort have all been called *pungent*. On
the other hand, there are those things which have been refined by the
process of decomposition and which then intrude themselves into the
narrow vessels. These are proportioned both to the earth parts and those
of air that are contained within the vessels, so that they agitate the earth
and air parts and cause them to be stirred one around the other. As these
are being stirred, they surround one another, and, as parts of one sort
intrude themselves into parts of another, they make hollows which envelop

b the parts that go inside. So when a hollow envelope of moisture, whether earthy or pure, as the case may be, is stretched around air, we get moist vessels of air, hollow spheres of water. Some of these, those that form a transparent enclosure consisting of a pure moisture are called "bubbles"; those, on the other hand, whose moisture is earthy and agitates and rises upward all at once are called by the terms "effervescence" and "fermentation." That which causes these disturbances is called *acid* to the taste.

c There is a disturbance that is the opposite of all the ones we have just discussed, one that is the effect of an opposite cause. Whenever the composition of the moistened parts that enter the vessels of the tongue is such that it is congruent with the natural condition of the tongue, these entering parts make smooth and lubricate the roughened parts and in some cases constrict while in others they relax the parts that have been abnormally dilated or contracted. They decisively restore all those parts back to their natural position. As such, they prove to be a cure for the violent disturbances [just discussed], being fully pleasant and agreeable to one and all, and are called *sweet*.

d So much for the subject of tastes. As for the power belonging to the nostrils, there are no types within it. This is because a smell is always a "half-breed." None of the elemental shapes, as it happens, has the proportions required for having any odor. The vessels involved in our sense of smell are too narrow for the varieties of earth and water parts, yet too wide for those of earth and air. Consequently no one has ever perceived any odor coming from these elemental bodies. Things give off odors when they
e either get damp or decay, or melt or evaporate; for when water changes to air or air to water, odors are given off in the transition. All odors collectively are either vapor or mist, mist being what passes from air to water, and vapor what passes from water to air, and this is why odors as a group turn out to be finer than water, yet grosser than air. Their character becomes clear when one strains to draw one's breath through something that obstructs one's breathing. There will be no odor that filters through. All that comes through is just the breath itself, devoid of any odor.

67 These variations among odors, then, form two sets, neither of which has a name, since they do not consist of a specific number of simple types. Let us draw the only clear distinction we can draw here, that between the *pleasant* and the *offensive*. The latter of these irritates and violates the whole upper body from the top of the head to the navel, while the former soothes that area and welcomes it back to its natural state.

b A third kind of perception that we want to consider is hearing. We must describe the causes that produce the properties connected with this perception. In general, let us take it that sound is the percussion of air by way of the ears upon the brain and the blood and transmitted to the soul, and that hearing is the motion caused by the percussion that begins in the head and ends in the place where the liver is situated. And let us take it that whenever the percussion is rapid, the sound is *high-pitched*, and that the slower the percussion, the lower the pitch. A regular percussion produces a

uniform, smooth sound, while a contrary one produces one that is *rough*. A forceful percussion produces a *loud* sound, while a contrary one produces c
one that is *soft*. But we must defer discussion of harmonization in sounds to a later part of our discourse.

The fourth and remaining kind of perception is one that includes a vast number of variations within it, and hence it requires subdivision. Collectively, we call these variations *colors*. Color is a flame which flows forth from bodies of all sorts, with its parts proportional to our sight so as to produce perception. At an earlier point in our discourse we treated only the causes that led to the origination of the ray of sight;[36] now, at this d
point, it is particularly appropriate to provide a well-reasoned account of colors.

Now the parts that move from the other objects and impinge on the ray of sight are in some cases smaller, in others larger than, and in still other cases equal in size to, the parts of the ray of sight itself. Those that are equal are imperceptible, and these we naturally call *transparent*. Those that are larger contract the ray of sight while those that are smaller, on the other hand, dilate it, and so are "cousin" to what is cold or hot in the case of the flesh, and, in the case of the tongue, with what is sour, or with all those e
things that generate heat and that we have therefore called "pungent." So *black* and *white*, it turns out, are properties of contraction and dilation, and are really the same as these other properties, though in a different class, which is why they present a different appearance. This, then, is how we should speak of them: *white* is what dilates the ray of sight, and *black* is what does the opposite.

Now when a more penetrating motion of a different type of fire pounces on the ray of sight and dilates it right up to the eyes, and forces its way 68
through the very passages within the eyeballs and melts them, it discharges from those passages a glob of fire and water which we call a tear. The penetrating motion itself consists of fire, and as it encounters fire from the opposite direction, then, as the one fire leaps out from the eyes like a lightning flash and the other enters them but is quenched by the surrounding moisture, the resulting turmoil gives rise to colors of every hue. The disturbance so produced we call "dazzling," and that which produces it we name *bright* and *brilliant*.

On the other hand, the type of fire that is intermediate between white b
and bright is one that reaches the moisture in the eyes and blends with it, but is not brilliant. As the fire shines through the moisture with which it is mixed, it yields the color of blood, which we call *red*. And when bright is mixed with red and white, we get *orange*. But it would be unwise to state the proportions among them, even if one could know them. It is impossible, even approximately, to provide a proof or a likely account on these matters.

36. See 45b–d.

c Now red mixed with black and white is of course *purple*. When this combination is burnt further and more black is mixed with it, we get *violet*. *Gray* is a mixture of black and white, and the mixture of orange and gray produces *amber*. *Beige* comes from white mixed with orange. White combined with bright and immersed in a saturated black produces a *cobalt blue* color, which, when blended with white, becomes *turquoise*. A mixture
d of amber with black yields *green*. As for the other hues, it should be fairly clear from the above cases by what mixtures they are to be represented in a way that preserves our "likely story." But if anyone in considering these matters were to put them to an actual test, he would demonstrate his ignorance of the difference between the human and the divine. It is god who possesses both the knowledge and power required to mix a plurality into a unity and, conversely, to dissolve a unity into a plurality, while no human being could possess either of these, whether at the present time or at any time in the future.

e And so all these things were taken in hand, their natures being determined then by necessity in the way we've described, by the craftsman of the most perfect and excellent among things that come to be, at the time when he brought forth that self-sufficient, most perfect god. Although he did make use of the relevant auxiliary causes, it was he himself who gave their fair design to all that comes to be. That is why we must distinguish two forms of cause, the divine and the necessary. First, the divine, for
69 which we must search in all things if we are to gain a life of happiness to the extent that our nature allows, and second, the necessary, for which we must search for the sake of the divine. Our reason is that without the necessary, those other objects, about which we are serious, cannot on their own be discerned, and hence cannot be comprehended or partaken of in any other way.

We have now sorted out the different kinds of cause, which lie ready for us like lumber for carpenters. From them we are to weave together the remainder of our account. So let us briefly return to our starting point and quickly proceed to the same place from which we arrived at our
b present position.[37] Let us try to put a final "head" on our account, one that fits in with our previous discussion.

To repeat what was said at the outset, the things we see were in a condition of disorderliness when the god introduced as much proportionality into them and in as many ways—making each thing proportional both to itself and to other things—as was possible for making them be commensurable and proportionate. For at the time they had no proportionality at all, except by chance, nor did any of them qualify at all for the names we now use to name them, names like *fire, water,* etc. All these
c things, rather, the god first gave order to, and then out of them he proceeded to construct this universe, a single living thing that contains within itself all living things, mortal or immortal. He himself fashioned those that were

37. Cf. 31b–32c and 48b, 48e–49a, respectively.

divine, but assigned his own progeny the task of fashioning the generation of those that were mortal.

They imitated him: having taken the immortal origin of the soul, they
proceeded next to encase it within a round mortal body [the head], and
to give it the entire body as its vehicle. And within the body they built
another kind of soul as well, the mortal kind, which contains within it
those dreadful but necessary disturbances: pleasure, first of all, evil's most d
powerful lure; then pains, that make us run away from what is good;
besides these, boldness also and fear, foolish counselors both; then also
the spirit of anger hard to assuage, and expectation easily led astray. These
they fused with unreasoning sense perception and all-venturing lust, and
so, as was necessary, they constructed the mortal type of soul. In the face
of these disturbances they scrupled to stain the divine soul only to the
extent that this was absolutely necessary, and so they provided a home e
for the mortal soul in another place in the body, away from the other,
once they had built an isthmus as boundary between the head and the
chest by situating a neck between them to keep them apart. Inside the
chest, then, and in what is called the trunk they proceeded to enclose the
mortal type of soul. And since one part of the mortal soul was naturally
superior to the other, they built the hollow of the trunk in sections, dividing
them the way that women's quarters are divided from men's. They situated 70
the midriff between the sections to serve as a partition. Now the part of
the mortal soul that exhibits manliness and spirit, the ambitious part, they
settled nearer the head, between the midriff and the neck, so that it might
listen to reason and together with it restrain by force the part consisting
of appetites, should the latter at any time refuse outright to obey the
dictates of reason coming down from the citadel. The heart, then, which b
ties the veins together, the spring from which blood courses with vigorous
pulse throughout all the bodily members, they set in the guardhouse. That
way, if spirit's might should boil over at a report from reason that some
wrongful act involving these members is taking place—something being
done to them from outside or even something originating from the appetites within—every bodily part that is sensitive may be keenly sensitized,
through all the narrow vessels, to the exhortations or threats and so listen
and follow completely. In this way the best part among them all can be
left in charge.

The gods foreknew that the pounding of the heart (which occurs when c
one expects what one fears or when one's spirit is aroused) would, like
all such swelling of the passions, be caused by fire. So they devised something to relieve the pounding: they implanted lungs, a structure that is
first of all soft and without blood and that secondly contains pores bored
through it like a sponge. This enables it to take in breath and drink and
thereby cool the heart, bringing it respite and relaxation in the heat. That, d
then, is why they cut the passages of the windpipe down to the lungs,
and situated the lungs around the heart like padding, so that when spirit
within the heart should reach its peak, the heart might pound against

something that gives way to it and be cooled down. By laboring less, it
might be better able to join spirit in serving reason.

The part of the soul that has appetites for food and drink and whatever
e else it feels a need for, given the body's nature, they settled in the area
between the midriff and the boundary toward the navel. In the whole
of this region they constructed something like a trough for the body's
nourishment. Here they tied this part of the soul down like a beast, a wild
one, but one they could not avoid sustaining along with the others if a
mortal race were ever to be. They assigned it its position there, to keep it
ever feeding at its trough, living as far away as possible from the part that
takes counsel, and making as little clamor and noise as possible, thereby
71 letting the supreme part take its counsel in peace about what is beneficial
for one and all. They knew that this part of the soul was not going to
understand the deliverances of reason and that even if it were in one way
or another to have some awareness of them, it would not have an innate
regard for any of them, but would be much more enticed by images and
phantoms night and day. Hence the god conspired with this very tendency
b by constructing a liver, a structure which he situated in the dwelling place
of this part of the soul. He made it into something dense, smooth, bright
and sweet, though also having a bitter quality, so that the force of the
thoughts sent down from the mind might be stamped upon it as upon a
mirror that receives the stamps and returns visible images. So whenever
the force of the mind's thoughts could avail itself of a congenial portion
of the liver's bitterness and threaten it with severe command, it could then
frighten this part of the soul. And by infusing the bitterness all over the
liver, it could project bilious colors onto it and shrink the whole liver,
c making it wrinkled and rough. It could curve and shrivel up the liver's
lobe and block up and close off its receptacles and portal fissures, thereby
causing pains and bouts of nausea. And again, whenever thought's gentle
inspiration should paint quite opposite pictures, its force would bring
respite from the bitterness by refusing to stir up or to make contact with
a nature opposite to its own. It would instead use the liver's own natural
d sweetness on it and restore the whole extent of it to be straight and smooth
and free, and make that portion of the soul that inhabits the region around
the liver gracious and well behaved, conducting itself with moderation
during the night when, seeing that it has no share in reason and understand-
ing, it practices divination by dreams. For our creators recalled their father's
instruction to make the mortal race as excellent as possible, and so, redeem-
e ing even the base part of ourselves in this way, they set the center of
divination here, so that it might have some grasp of truth.

The claim that god gave divination as a gift to human folly has good support: while he is in his right mind no one engages in divination, however divinely inspired and true it may be, but only when his power of understanding is bound in sleep or by sickness, or when some sort of possession works a change in him. On the other hand, it takes a man who has his wits about him to recall and ponder the pronouncements produced by

this state of divination or possession, whether in sleep or while awake. It
takes such a man to thoroughly analyze any and all visions that are seen, 72
to determine how and for whom they signify some future, past or present
good or evil. But as long as the fit remains on him, the man is incompetent
to render judgment on his own visions and voices. As the ancient proverb
well puts it, "Only a man of sound mind may know himself and conduct
his own affairs." This is the reason why it is customary practice to appoint b
interpreters to render judgment on an inspired divination. These persons
are called "diviners" by some who are entirely ignorant of the fact that
they are expositors of utterances or visions communicated through riddles.
Instead of "diviners," the correct thing to call them is, "interpreters of
things divined."

This, then, explains why the liver's nature is what it is, and why it is
situated in the region we say—it is for the purpose of divination. Now
while each creature is still alive, an organ of this sort will display marks
that are fairly clear, but once its life has gone, the organ turns blind and
its divinations are too faint to display any clear marks. Moreover, the c
neighboring organ situated on its left turns out to have a structure which
is meant to serve the liver in keeping it bright and clean continuously,
like a dust cloth provided for wiping a mirror, placed next to it and always
available. Hence, whenever impurities of one sort or another, the effects
of bodily illnesses, turn up all around the liver, the spleen, a loosely-woven
organ with hollow spaces that contain no blood, cleans them all away and
absorbs them. In consequence it becomes engorged with the impurities it d
has cleaned off, swells to great size and festers. Later, when the body's
cleansing is complete, the swelling subsides, and the spleen once again
shrinks back to its normal size.

So, as for our questions concerning the soul—to what extent it is mortal and to what extent divine; where its parts are situated, with what organs they are associated, and why they are situated apart from one another—that the truth has been told is something we could affirm only if we had divine confirmation. But that our account is surely at least a "likely" one is a claim we must risk, both now and as we proceed to examine the matter more closely. Let that be our claim, then.

Our next topic must be pursued along the same lines. This was to e
describe how the rest of the body came to be.[38] The following train of
reasoning should explain its composition best of all. The creators of our
race knew that we were going to be undisciplined in matters of food and
drink. They knew that our gluttony would lead us to consume much more
than the moderate amount we needed. So, to prevent the swift destruction
of our mortal race by diseases and to forestall its immediate, premature 73
demise, they had the foresight to create the lower abdomen, as it's called,
as a receptacle for storing the excess food and drink. They wound the
intestines round in coils to prevent the nourishment from passing through

38. Cf. 61c.

so quickly that the body would of necessity require fresh nourishment just as quickly, thereby rendering it insatiable. Such gluttony would make our whole race incapable of philosophy and the arts, and incapable of heeding the most divine part within us.

b As for flesh and bones and things of that nature, this is how it is. The starting point for all these was the formation of marrow. For life's chains, as long as the soul remains bound to the body, are bound within the marrow, giving roots for the mortal race. The marrow itself came to be out of other things. For the god isolated from their respective kinds those primary triangles which were undistorted and smooth and hence, owing to their exactness, were particularly well suited to make up fire, water, air
c and earth. He mixed them together in the right proportions, and from them made the marrow, a "universal seed" contrived for every mortal kind. Next, he implanted in the marrow the various types of soul and bound them fast in it. And in making his initial distribution, he proceeded immediately to divide the marrow into the number and kinds of shapes that matched the number and kinds of shapes that the types of soul were to possess, type by type. He then proceeded to mold the "field," as it were,
d that was to receive the divine seed, making it round, and called this portion of the marrow, "brain." Each living thing was at its completion to have a head to function as a container for this marrow. That, however, which was to hold fast the remaining, mortal part of the soul, he divided into shapes that were at once round and elongated, all of which he named "marrow." And from these as from anchors he put out bonds to secure the whole soul and so he proceeded to construct our bodies all around this marrow, beginning with the formation of solid bone as a covering for the whole of it.

e This is how he constructed bone. He sifted earth that was pure and smooth, kneaded it and soaked it with marrow. Next, he set this mixture in fire, and then dipped it in water, then back in fire, followed by water again. By moving it this way repeatedly from the one and then back to the other, he made it insoluble by both. He made use of this material in shaping a round, bony globe to enclose the brain, and left it with a narrow
74 passage out. From the material he then proceeded to mold vertebrae to enclose marrow of the neck and back, and set them in place one underneath another, beginning with the head and proceeding along the whole length of the trunk, to function as pivots. And so, to preserve all of the seed, he fenced it in with a stony enclosure. In this enclosure he made joints, employing in their case the character of the Different situated between them to allow them to move and to flex.

b Moreover, the god thought that bone as such was rather too brittle and inflexible, and also that repeatedly getting extremely hot and cold by turns would cause it to disintegrate and to destroy in short order the seed within it. That is why he contrived to make sinews and flesh. He bound all the limbs together with sinews that could contract and relax, and so enabled the body to flex about the pivots and to stretch itself out. The flesh he

made as a defense against summer's heat and as protection against winter's
cold. And, as protection against injuries, too, he made the flesh so that it c
would give way softly and gently to bodies like the felted coverings we
wear. He made it to contain within itself a warm moisture that would
come out as perspiration during summertime, when, by moistening the
body on the outside, it would impart the body's own coolness to the
whole of it. And conversely, in wintertime this moisture would provide an
adequate defense, by means of this fire, against the frost which surrounds it
and attacks it from outside. Such were the designs of him who molded
us like wax: he made a mixture using water, fire and earth, which he
adjusted together, and created a compound of acid and brine, a fermented d
mixture which he combined with the previous mixture, and so he formed
flesh, sappy and soft. The sinews he made out of a mixture of bone and
unfermented flesh, to make up a single yellow stuff whose character was
intermediate between them both. That is the reason the sinews came to
have a stretchier and tougher character than flesh, yet softer and more
moist than bone. With these the god wrapped the bones and the marrow.
First he bound the bones to each other with sinews, and then he laid a e
shroud of flesh upon them all.

All those bones that had more soul than others he proceeded to wrap in a very thin layer of flesh, while those that contained less he wrapped in a very thick layer of very dense flesh. And indeed, at the joints of the bones, where it appeared that reason did not absolutely require the presence of flesh, he introduced only a thin layer of flesh, so that the ability of the joints to flex would not be impeded, a condition that would have made it very difficult for the bodies to move. A further reason was this: if there were a thick layer of flesh there, packed extremely densely together, its hardness would cause a kind of insensibility, which would make thinking less retentive and more obscure. This he wanted to prevent.

This explains why thighs and calves, the area around the hips, arms 75
(both upper and lower), and all other bodily parts where there are no
joints as well as all the internal bones, are all fully provided with flesh. It
is because they have only small amounts of soul in their marrow, and so
are devoid of intelligence. On the other hand, all those bodily parts that
do possess intelligence are less fleshy, except perhaps for a fleshy thing—
the tongue, for example—that was created to be itself an organ of sensation.
But in most cases it is as I said. For there is no way that anything whose
generation and composition are a consequence of Necessity can accommo- b
date the combination of thick bone and massive flesh with keen and respon-
sive sensation. If these two characteristics had not refused their concomi-
tance, our heads above all else would have been so constituted as to possess
this combination, and the human race, crowned with a head fortified with
flesh and sinews would have a life twice, or many more times as long, a
healthier and less painful life than the one we have now. As it was, however,
our makers calculated the pros and cons of giving our race greater longevity c
but making it worse, versus making it better, though less long-lived, and

decided that the superior though shorter life-span was in every way preferable for everyone to the longer but inferior one. This is why they capped the head with a sparse layer of bone—and not with flesh and sinew, given that the head has no joints. For all these reasons, then, the head has turned out to be more sensitive and intelligent but also, in every man's case, much
d weaker than the body to which it is attached. With this in mind the god thus positioned sinews at the very edge of the head, around the neck, and welded them uniformly. To these sinews he fastened the ends of the jawbones underneath the face. The other sinews he shared out among all the limbs, fastening joint to joint.

Our makers fitted the mouth out with teeth, a tongue and lips in their
e current arrangement, to accommodate both what is necessary and what is best: they designed the mouth as the entry passage for what is necessary, and as the exit for what is best: for all that comes in and provides nourishment for the body is necessary, while that stream of speech that flows out through the mouth, that instrument of intelligence, is the fairest and best of all streams.

Moreover, the head couldn't be left to consist of nothing but bare bone, in view of the extremes of seasonal heat and cold. On the other hand, any mass of flesh with which it might be veiled couldn't be allowed to make
76 it dull and insensitive, either. And so, an outer layer, disproportionately large (the thing we now call "skin"), was separated off from the flesh [of the upper body] that wasn't drying out completely. The moisture in the area of the brain enabled this layer to draw together toward itself and grow so as to envelop the head all around. Coming up under the sutures, this moisture watered it, and closed it together upon the crown, drawing it together in a knot, as it were. The sutures varied considerably, owing to the effect of the revolutions [in the head][39] and of the nourishment taken: the greater the conflict among these revolutions, the more numerous the
b sutures—the lesser the conflict, the less numerous they were.

Now the divine part [the brain] began to puncture this whole area of skin all around with its fire. Once the skin was pierced and the moisture had exuded outward through it, all that was purely wet and hot went away. The part that was compounded of the same stuff that the skin was made up of, caught up by this motion, was stretched to a great length outside this skin, no thicker than the punctured hole [through which it passed]. However, it moved slowly, and so the surrounding air pushed it
c back inside to curl underneath the skin and take root there. This is the process by which hair has come to grow on the skin. Hair is something fibrous, made of the same stuff as the skin, though harder and more dense due to the felting effect of the cooling process: once a hair separates off from skin, it is cooled and so gets felted together.

With this stuff, then, our maker made our heads bushy, availing himself of the causal factors just described. His intention was that this, not bare

39. Cf. 43a ff.

flesh, ought to provide a protective covering for the part of the head that d
holds the brain: it was light, and just right for providing shade in summer,
and shelter in winter, without obstructing or interfering with the head's
sensitivity in any way.

Sinew, skin and bone were interwoven at the ends of our fingers and
toes. The mixture of these three was dried out, resulting in the formation
of a single stuff, a piece of hard skin, the same in every case. Now these
were merely auxiliary causes in its formation—the preeminent cause of
its production was the purpose that took account of future generations:
our creators understood that one day women and the whole realm of wild e
beasts would one day come to be from men, and in particular they knew
that many of these offspring would need the use of nails and claws or
hoofs for many purposes.[40] This is why they took care to include nails
formed in a rudimentary way in their design for humankind, right at the
start. This was their reason, then, and these the professed aims that guided
them in making skin, hair and nails grow at the extremities of our
limbs.

So all the parts, all the limbs of the mortal living thing came to constitute
a natural whole. Of necessity, however, it came about that he lived his life 77
surrounded by fire and air, which caused him to waste away and be
depleted, and so to perish. The gods, therefore, devised something to
protect him. They made another mixture and caused another nature to
grow, one congenial to our human nature though endowed with other
features and other sensations, so as to be a different living thing. These
are now cultivated trees, plants and seeds, taught by the art of agriculture
to be domesticated for our use. But at first the only kinds there were were b
wild ones, older than our cultivated kinds. We may call these plants "living
things" on the ground that anything that partakes of life has an incontest-
able right to be called a "living thing."[41] And in fact, what we are talking
about now partakes of the third type of soul, the type that our account
has situated between the midriff and the navel. This type is totally devoid
of opinion, reasoning or understanding, though it does share in sensation,
pleasant and painful, and desires. For throughout its existence it is com-
pletely passive, and its formation has not entrusted it with a natural ability
to discern and reflect upon any of its own characteristics, by revolving
within and about itself, repelling movement from without and exercising c
its own inherent movement. Hence it is alive, to be sure, and unmistakably
a living thing, but it stays put, standing fixed and rooted, since it lacks
self-motion.

All these varieties were planted by our masters, to whom we are subject,
to nourish us. Having done that, they proceeded to cut channels throughout

40. See below, 90e–92c.

41. The word for living things here, *zōa* (which is often appropriately translated "animals"), is cognate with Timaeus' word for "life." His point is that because plants have "life" (*zēn*), they are appropriately called *zōa*, even though they are not animals.

our bodies, like water pipes in a garden, so that our bodies could be
irrigated, as it were, by an oncoming stream. First, they cut two blood
d veins, channels hidden underneath the skin where the flesh joins it, to go
down either side of the back—the body is a twofold thing, with a right
and a left side. They situated these veins alongside the spine, and between
them they placed the life-giving marrow as well, to give it its best chance
to flourish, and to allow the bloodstream, which courses downhill, to flow
readily from this region and uniformly irrigate the other parts of the body.
e They next split these veins in the region of the head, and wove them
through one another, crossing them in opposite directions. They diverted
the veins from the right toward the left side of the body, and those from
the left toward the right, so that they, together with the skin, would act
as a bond to keep the head fastened to the body, seeing that there were
no sinews attached to the crown to enclose the head all around. They did
this especially to make sure that the stimulations received by the senses,
coming from either side of the body, might register clearly upon the body
as a whole.

From here the gods proceeded to fashion the irrigation system in the
78 following way. We'll come to see it more easily if we can first agree on
this point: whatever is made up of smaller parts holds in larger parts,
while what consists of larger parts is incapable of holding in smaller parts.
Of all the elemental kinds, fire is made up of the smallest parts, and that
is the reason it can pass through water, earth and air, and any of their
compounds. Nothing can hold it in. Now we must apply the same point
b to our belly. When food and drink descend into it, it holds them in, but
it cannot hold in air and fire, consisting as they do of smaller parts than
it does. And so the god availed himself of fire and air to conduct moisture
from the belly to the [two] veins. He wove together an interlaced structure
of air and fire, something like a fish trap. At its entrance it had a pair of
funnels, one of which in turn he subdivided into two. And from the funnels
he stretched reeds, as it were, all around throughout the structure, right
c to its extremities. All the interior parts of this network he made of fire;
the funnels and the shell he made of air.

He took this structure and set it around the living thing which he had
fashioned, in the following way. The funnel part he inserted into the mouth,
and, consisting as it did of two funnels, he let one of them descend into
the lungs down the windpipe, and the other alongside the windpipe into
the belly. He made a split in the first one and assigned each of its parts a
common outlet by way of the nostrils, so that when the one part fails to
d provide passage by way of the mouth, all of its currents also might be
replenished from that one. The shell, the other part of the trap, he made
to grow around the hollow part of the body, and he made this whole thing
now flow together onto the funnels [compressing them]—gently, because
they are made of air—now, when the funnels flow back [expanding again],
he made the interlaced structure sink into and through the body—a rela-

tively porous thing—and pass outside again.[42] The interior rays of fire
[inside the shell], bound from side to side, he made to follow the air as it
passed in both directions. This process was to go on non-stop for as long e
as the mortal living thing holds together; and this, of course, is the phenom-
enon to which the name-giver (so we claim) assigned the names of *inhalation*
and *exhalation*. This entire pattern of action and reaction, irrigating and
cooling our bodies, supports their nutrition and life. For whenever the
internal fire, united with the breath that passes in or out, follows it along,
it surges up and down continually and makes its way through and into
the belly, where it gets hold of the food and drink. These it dissolves or 79
breaks up into tiny parts, which it then takes through the outbound pas-
sages along which it is advancing, and transfers them into the [two] veins,
as water from a spring is transferred into water pipes. And so it causes
the currents of the veins to flow through the body as through a conduit.

Let us, however, take another look at what happens in respiration. What
explains its having the character that it now actually has? It is this. Since b
there is no void into which anything that is moving could enter, and since
the air we breathe out does move out, away from us, it clearly follows
that this air doesn't move into a void, but pushes the air next to it out of
its place. As this air is pushed out, it drives out the air next to it, and so
on, and so inevitably the air, displaced all around, enters the place from
which the original air was breathed out and refills that place, following
hard on the breath. This all takes place at once, like the rotation of a wheel, c
because there is no such thing as a void. Consequently even as the breath
is being discharged, the area of the chest and the lungs fills up again
with the air that surrounds the body, air that goes through the cycle of
displacement and penetrates the porous flesh. And again, when the air is
turned back and passes outward through the body, it comes round to push
respiration inward by way of the mouth and the nostrils.

How did these processes get started? The explanation, we must suppose,
is this: in the case of every living thing, its inner parts that are close to d
the blood and the veins are its hottest parts—an inner spring of fire inside
it, as it were. This, of course, is what we've been comparing to the interlaced
structure of a fish trap; it is entirely woven of fire, we said, and extended
throughout its middle, while the rest of it, the external parts, are woven
of air. Now it is beyond dispute that what is hot has a natural tendency
to move outward into its own proper region, toward that which is akin
to it. In this case there are two passages out, one out through [the pores
of] the body, and the other out through the mouth and nose. So whenever e
hot air rushes out the one passage, it pushes air around into the other,
and the air so pushed around gets hot as it encounters the fire, while the

42. As 79c–e seems to show, Timaeus appears to envisage the "shell" as an envelope of air surrounding the exterior of the torso, being drawn through the interstices of the body into the interior and then pushed out again, as breathing takes place.

air that passes out is cooled down. Now as the temperature changes and the air that enters by way of one or the other of the passages gets hotter, the hotter air is more inclined to return by way of the passage it entered, since it moves toward what is like itself, and so it pushes air around to and through the other passage. This air is affected the same way, and produces the same effect every time; and so, due to both these principles it produces an oscillation back and forth, thereby providing for inhalation and exhalation to occur.

In this connection we should pursue along these lines an inquiry into
80 the causes of the phenomena associated with medical cupping, and of swallowing, as well as of the motion of all projectiles that are dispatched into the air and along the ground. We should also investigate all sounds, whether fast or slow—sounds that appear to us as high pitched or low. Sometimes, when the motion they produce in us as they move towards us lacks conformity, these sounds are inharmonious; at other times, when the motion does have conformity, the sounds are harmonious. [What happens in the latter case is this.] The slower sounds catch up with the motions
b of the earlier and quicker sounds as these are already dying away and have come to a point of conformity with the motions produced by the slower sounds that travel later. In catching up with them, the slower sounds do not upset them, even though they introduce another motion. On the contrary, they graft onto the quicker movement, now dying away, the beginning of a slower one that conforms to it, and so they produce a single effect, a mixture of high and low. Hence the pleasure they bring to fools and the delight they afford—by their expression of divine harmony in mortal movement—to the wise.

c And what is more, every kind of water current, even the descent of a thunderbolt as well as that marvellous "attraction" exercised by amber and by the lodestone, in all these cases there is no such thing as a force of attraction. As any careful investigator will discover, there is no void; these things push themselves around into each other; all things move by exchanging places, each to its own place, whether in the process of combination or of dissolution. He will discover that these "works of wizardry" are due to the interactive relationships among these phenomena.

d The phenomenon of respiration, which provided the occasion for this account, is a case in point. The above are the principles and causes to which it owes its existence, as we have said before. The fire cuts up the food [in our bellies] and as it follows the breath it oscillates inside us. As the oscillation goes on, the fire pumps the cut-up bits of food from the belly and packs them into the veins. This is the mechanism by which the streams of nourishment continue to flow throughout the bodies of all living things. The bits of food, freshly cut up and derived from things like
e themselves—from fruits or from vegetables which the god had caused to grow for this very purpose, to serve us as food—come to have a variety of colors as a result of being mixed together, but a reddish color pervading them predominates, a character that is the product of the cutting and

staining action of fire upon moisture. This is why the color of the liquid
that flows in our bodies looks the way we've described; this liquid we call
*blood,* which feeds our flesh and indeed our whole bodies. From this source 81
the various parts of our bodies are watered and so replenish the supports
of the depleted areas. Now both processes, the replenishment and the
depletion, follow the manner of the movement of anything within the
universe at large: everything moves toward that which is of its own kind.
In this case, our external environment continually wastes us away and
distributes our bulk by dispatching each [elemental] kind toward its own
sort. The ingredients in our blood, then, having been chopped up inside
us and encompassed by the individual living thing as by the frame of the b
universe, of necessity imitate the universe's motion. And so, as each of
the fragmented parts inside moves toward its own kind, it replenishes
once again the area just then depleted. In every case, whenever there is
more leaving a body than flowing in [to replenish it], it diminishes; when-
ever less, the body grows. So while a living thing's constitution is still
young, and its elemental triangles are "fresh from the slips," as it were,
the triangles are firmly locked together, even though the frame of its entire
mass is pliable, seeing that it has just lately been formed from marrow c
and nourished with milk. Now when the triangles that constitute the young
living thing's food and drink enter its body from the outside and are
enveloped within it, the body's own new triangles cut and prevail over
these others, which are older and weaker than they are. The living thing
is thus nourished by an abundance of like parts, and so made to grow
big. But when the roots of the triangles are slackened as a result of numerous
conflicts they have waged against numerous adversaries over a long period
of time, they are no longer able to cut up the entering food-triangles into d
conformity with themselves. They are themselves handily destroyed by
the invaders from outside. Every living thing, then, goes into decline when
it loses this battle, and it suffers what we call "old age." Eventually the
interlocking bonds of the triangles around the marrow can no longer hold
on, and come apart under stress, and when this happens they let the bonds
of the soul go. The soul is then released in a natural way, and finds it
pleasant to take its flight. All that is unnatural, we recall, is painful while e
all that occurs naturally is pleasant. This is true of death as well: a death
that is due to disease or injury is painful and forced, while a death that
comes naturally, when the aging process has run its course, is of all deaths
the least distressing—a pleasant, not a painful death.

How diseases originate is, I take it, obvious to all. Given that there are 82
four kinds of stuff out of which the body has been constructed—earth,
fire, water and air—it may happen that some of these unnaturally increase
themselves at the expense of the others. Or they may switch regions, each
leaving its own and moving into another's region. Or again, since there
is in fact more than one variety of fire and the other stuffs, it may happen
that a given bodily part accommodates a particular variety that is not
appropriate for it. When these things happen, they bring on conflicts and

diseases. For when any of these unnatural occurrences and changes take
b place, bodily parts that used to be cold become hot, or those that are dry
go on to become moist, and so with light and heavy, too. They undergo
all sorts of changes in all sorts of ways. Indeed, it is our view that only
when that which arrives at or leaves a particular bodily part is the same
as that part, consistent, uniform and in proper proportion with it, will the
body be allowed to remain stable, sound and healthy. On the other hand,
anything that causes offense by passing beyond these bounds as it arrives
or departs will bring on a multiplicity of altered states, and an infinity of
diseases and degenerations.

Furthermore, since there is a class of secondary structures to be found
c in nature, anyone who intends to understand diseases will have a second
set of subjects to study. Since marrow and bone, flesh and sinew are
composed of the elemental stuffs—from which blood also has been formed,
though in a different way—most of the diseases are brought on in the
manner just described. But the most serious and grievous diseases are
contracted when the process of generation that led to the formation of
these structures is reversed. When this happens, they degenerate. It is
natural for flesh and sinews to be formed from blood, the sinew from the
d fiber (which is of its own kind) and the flesh from the part of the blood
that congeals when the sinew is separated from it. And the sticky and oily
stuff that in its turn emerges from the sinew and the flesh both glues the
flesh to the bone and feeds the marrow-encompassing bone itself, so caus-
ing it to grow. And because the bone is so dense, the part of this stuff that
filters through, consisting as it does of the purest, smoothest and oiliest
e kind of triangles, forms droplets inside the bone and waters the marrow.
And when this is the way it actually happens in each case, health will
generally result.

Disease, however, will result if things happen the other way around.
For when flesh that is wasting away passes its waste back into the veins,
the veins will contain not only air but also an excess of blood of great
variety. This blood will have a multitude of colors and bitter aspects, and
even acidic and salty qualities, and will contain bile and serum and phlegm
of every sort. These are all back-products and agents of destruction. To
83 begin with, they corrupt the blood itself, and then also they do not supply
the body any further with nourishment. They move everywhere through-
out the veins, no longer keeping to the order of natural circulation. They
are hostile to one another, since none receives any advantage from any
other, and they wage a destructive and devastating war against the constit-
uents of the body that have stayed intact and kept to their posts.

Now as the oldest part of the flesh wastes away, it resists assimilation.
It turns black as a result of being subjected to a prolonged process of
b burning, and because it is thoroughly eaten up it is bitter, and so it launches
a severe attack against any part of the body that has not yet been destroyed.
Sometimes the bitterness is largely refined away, and then the black color
acquires an acidic quality that replaces the bitter. At other times, though,

the bitterness is steeped in blood, and then it comes to have more of a reddish color, and when the black is mixed with this, it becomes a grass-like green. Further, when the flesh that is disintegrated by the fire of the inflammation is fairly young, the color that is mixed with the bitterness is a yellowish orange. Now the name "bile," common to all these varieties, was given to them either by doctors, possibly, or else by someone who c
had the ability to look at a plurality of unlike things and see in them a single kind that deserves to be called by a single name. As for everything that can be called a variety of bile, each has its own distinctive definition, depending on its color. In the case of serum, some of it, the watery part of the blood, is benign while that which is a part of the black, acid bile is malignant when heat causes it to be mixed with a salty quality. This kind of thing is called acid phlegm. Furthermore, when the stuff that comes from the disintegration of young, tender flesh is exposed to air and blown d
up with wind and enveloped in moisture, bubbles form as a result, each one too small to be seen though collectively amounting to a visible mass. These bubbles look white, as foam begins to form. All this disintegration of tender flesh reacting with air is what we call white phlegm. Newly formed phlegm, furthermore, has a watery part which consists of perspiration and tears, as well as any other impurities that are discharged every e
day. So whenever the blood, instead of being replenished in the natural way by nutrients from food and drink, derives its volume from opposite sources, contrary to nature's way, all these things, it turns out, serve as instruments of disease.

Now when a certain part of the flesh is decomposed by disease, as long as the foundations of the flesh remain intact, the effect of the calamity is only half of what it would otherwise be, for there is still a chance of an easy recovery. But when the stuff that binds the flesh to the bones becomes 84
diseased and no longer nourishes the bone or binds the flesh to the bone because it is now separated from flesh and bone as well as from sinews,[43] it turns from being slick and smooth and oily to being rough and briny, shriveled up in consequence of its bad regimen. When this occurs, all the stuff that this happens to crumbles away back into the flesh and the sinew, and separates from the bone. The flesh, which collapses with it away from its roots, leaves the sinews bare and full of brine. And the flesh itself b
succumbs back into the bloodstream, where it works to aggravate the previously mentioned diseases.

Severe as these bodily processes are, those disorders that affect the more basic tissues are even more serious. When the density of the flesh prevents the bone from getting enough ventilation, the bone gets moldy, which causes it to get too hot. Gangrene sets in and the bone cannot take in its nourishment. It then crumbles and, by a reverse process, is dissolved into c
that nourishment which, in its turn, enters the flesh, and as the flesh lands in the blood it causes all of the previously mentioned diseases to become

43. Reading *au to ex ekeinōn hama kai neurōn* in a2.

more virulent still. But the most extreme case of all is when the marrow becomes diseased, either as a result of some deficiency or some excess. This produces the most serious, the most critically fatal diseases, in which all the bodily processes are made to flow backwards.

Further, there is a third class of diseases, which we should think of as
d arising in three ways. (a) One way is from air, (b) another from phlegm and (c) the third from bile. (a) When the lungs, the dispensers of air to the body, are obstructed by humors, they do not permit a clear passage. At some places the air cannot get in, while at others more than the appropriate amount gets in. In the former case, there will be parts of the body that don't get any breath and so begin to decay, while in the latter case the air forces its way through the veins and twists them together like strands. It makes its way into the central region of the body, the region that contains the midriff, where it is shut in, thereby causing the body to waste away.
e These factors produce countless painful diseases, often accompanied by profuse perspiration. And often, when flesh disintegrates inside the body, air is produced there, but is unable to get out. This air then causes just as much excruciating pain as the air that comes in from outside. The pain is most severe when the air settles around the sinews and the veins there and causes them to swell, thereby stretching backwards the "back stays" (the great sinews of the shoulder and arm) and the sinews attached to them. It is from this phenomenon of stretching, of course, that the diseases called *tetanus* ("tension") and *opisthotonus* ("backward stretching") have received their names. These diseases are difficult to cure. In fact, the onset
85 of a fever affords the best prospects for relief from such ailments.

(b) Now as for the white phlegm, as long as it is trapped in the body, it is troublesome because of the air in its bubbles. But if it finds a vent to the outside of the body, it is gentler, even though it does deck the body with white, leprous spots and engenders the corresponding diseases. If it is mixed with black bile and the mixture is sprayed against the divine circuits in the head, thereby throwing them into confusion, the effect is
b fairly mild if it comes during sleep, but should it come upon someone while awake, it is much harder to shake off. Seeing that it is a disease of the sacred part of our constitution, it is entirely just that it should be called the "sacred" disease (i.e., epilepsy).

Acid and salty phlegm is the source of all those diseases that come about by passage of fluids. These disorders have been given all sorts of different names, in view of the fact that the bodily regions into which the fluids flow are quite diverse.

(c) All inflammations in the body (so called from their being burned or
c "set aflame") are caused by bile. When bile finds a vent to the outside, it boils over and sends up all sorts of tumors, but when it is shut up inside, it creates many inflammatory diseases. The worst occurs when the bile gets mixed with clean blood and disrupts the disposition of the blood's fibers, which are interspersed throughout the blood. These fibers act to preserve a balance of thinness and thickness, i.e., to prevent both the blood

from getting so liquid, due to the body's heat, that it oozes out from the
body's pores, and, on the other hand, its getting so dense that it is sluggish
and hardly able to circulate within the veins. The fibers, then, by virtue d
of their natural composition, preserve the appropriate state between these
conditions. And even after death, when the blood cools down, if the fibers
are [extracted from the blood and] collected, the residue will still be com-
pletely runny, while if they are left in the blood, they, along with the
surrounding cold, congeal it in no time. Given, then, that the fibers have
this effect upon the blood, though the bile—which originated as primitive
blood and then from flesh was dissolved into blood again—is hot and
liquid at first as a little of it invades the blood, it congeals under the effect e
of the fibers, and as it congeals and is forced to extinguish its heat it causes
internal cold and shivering. But as more of it flows in, it overpowers the
fibers with its own heat. It boils over and shakes them up into utter
confusion. And if it proves capable of sustaining its power to the end, it
penetrates to the marrow and burns it up, thereby loosening the cables
that hold the soul there, like a ship, and setting the soul free. But when
there is rather little of it and the body resists its dissolution, the bile is
itself overpowered and is expelled either by way of the body as a whole
or else it is compressed through the veins into the lower or upper belly,
and is expelled from the body like an exile from a city in civil strife, so 86
bringing on diarrhea, dysentery and every disease of that kind. Bodies
afflicted mostly by an excess of fire will generate continuous states of heat
and fevers; those suffering from an excess of air produce fevers that recur
every day; while those that have an excess of water have fevers that recur
only every other day, given that water is more sluggish than air or fire.
Bodies afflicted by an excess of earth, the most sluggish of the four, are
purged within a fourfold cycle of time and produce fevers that occur every
fourth day, fevers that are hard to get over.

The foregoing described how diseases of the body happen to come about. b
The diseases of the soul that result from a bodily condition come about
in the following way. It must be granted, surely, that mindlessness is the
disease of the soul, and of mindlessness there are two kinds. One is mad-
ness, and the other is ignorance. And so if a man suffers from a condition
that brings on either one or the other, that condition must be declared
a disease.

We must lay it down that the diseases that pose the gravest dangers for
the soul are excessive pleasures and pains. When a man enjoys himself
too much or, in the opposite case, when he suffers great pain, and he c
exerts himself to seize the one and avoid the other in inopportune ways,
he lacks the ability to see or hear anything right. He goes raving mad and
is at that moment least capable of rational thought. And if the seed of a
man's marrow grows to overflowing abundance like a tree that bears an
inordinately plentiful quantity of fruit, he is in for a long series of bursts
of pain, or of pleasures, in the area of his desires and their fruition. These
severe pleasures and pains drive him mad for the greater part of his life,

d and though his body has made his soul diseased and witless, people will think of him not as sick, but as willfully evil. But the truth about sexual overindulgence is that it is a disease of the soul caused primarily by the condition of a single stuff which, due to the porousness of the bones, flows within the body and renders it moist. And indeed, just about every type of succumbing to pleasure is talked about as something reproachable, as though the evils are willfully done. But it is not right to reproach people
e for them, for no one is willfully evil. A man becomes evil, rather, as a result of one or another corrupt condition of his body and an uneducated upbringing. No one who incurs these pernicious conditions would will to have them.

And as for pains, once again it is the body that causes the soul so much trouble, and in the same ways. When any of a man's acid and briny phlegms or any bitter and bilious humors wander up and down his body
87 without finding a vent to the outside and remain pent up inside, they mix the vapor that they give off with the motion of the soul and so are confounded with it. So they produce all sorts of diseases of the soul, some more intense and some more frequent than others. And as they move to the three regions of the soul, each of them produces a multitude of varieties of bad temper and melancholy in the region it attacks, as well as of recklessness and cowardice, not to mention forgetfulness and stupidity. Further-
b more, when men whose constitutions are bad in this way have bad forms of government where bad civic speeches are given, both in public and in private and where, besides, no studies that could remedy this situation are at all pursued by people from their youth on up, that is how all of us who are bad come to be that way—the products of two causes both entirely beyond our control. It is the begetters far more than the begotten, and the nurturers far more than the nurtured, that bear the blame for all this. Even so, one should make every possible effort to flee from badness, whether with the help of one's upbringing, or the pursuits or studies one undertakes, and to seize its opposite. But that is the subject for another speech.

c The counterpart to the subject just dealt with, i.e., how to treat our bodies and states of mind and preserve them whole, is one that it is now fitting and right to give its turn. After all, good things have more of a claim to be the subject of our speech than bad things. Now all that is good is beautiful, and what is beautiful is not ill-proportioned. Hence we must take it that if a living thing is to be in good condition, it will be well-proportioned. We can perceive the less important proportions and do some figuring about them, but the more important proportions, which are of
d the greatest consequence, we are unable to figure out. In determining health and disease or virtue and vice no proportion or lack of it is more important than that between soul and body—yet we do not think about any of them nor do we realize that when a vigorous and excellent soul is carried about by a too frail and puny frame, or when the two are combined in the opposite way, the living thing as a whole lacks beauty, because it is lacking in the most important of proportions. That living thing, however,

which finds itself in the opposite condition is, for those who are able to observe it, the most beautiful, the most desirable of all things to behold.
Imagine a body which lacks proportion because its legs are too long or e
something else is too big. It is not only ugly but also causes itself no end of troubles. As its parts try to cooperate to get its tasks done it frequently tires itself out or gets convulsive, or, because it lurches this way and that, it keeps falling down. That's how we ought to think of that combination of soul and body which we call the living thing. When within it there is
a soul more powerful than the body and this soul gets excited, it churns 88
the whole being and fills it from inside with diseases, and when it concentrates on one or another course of study or inquiry, it wears the body out. And again, when the soul engages in public or private teaching sessions or verbal battles, the disputes and contentions that then occur cause the soul to fire the body up and rock it back and forth, so inducing discharges which trick most so-called doctors into making misguided diagnoses. But when, on the other hand, a large body, too much for its soul, is joined
with a puny and feeble mind, then, given that human beings have two b
sets of natural desires—desires of the body for food and desires of the most divine part of us for wisdom—the motions of the stronger part will predominate, and amplify their own interest. They render the functions of the soul dull, stupid and forgetful, thereby bringing on the gravest disease of all: ignorance.

From both of these conditions there is in fact one way to preserve oneself, and that is not to exercise the soul without exercising the body, nor the body without the soul, so that each may be balanced by the other and so
be sound. The mathematician, then, or the ardent devotee of any other c
intellectual discipline should also provide exercise for his body by taking part in gymnastics, while one who takes care to develop his body should in his turn practice the exercises of the soul by applying himself to the arts and to every pursuit of wisdom, if he is to truly deserve the joint epithets of "fine and good." And the various bodily parts should also be
looked after in this same way, in imitation of the structure of the universe. d
For since the body is heated and cooled inside by things that enter it and is dried and moistened by things outside of it and made to undergo the consequent changes by both of these motions, it will happen that when a man subjects his body to these motions when it has been in a state of rest, the body is overcome and brought to ruin. But if he models himself after what we have called the foster-mother and nurse of the universe and persistently refuses to allow his body any degree of rest but exercises and
continually agitates it through its whole extent, he will keep in a state of e
natural equilibrium the internal and the external motions. And if the agitation is a measured one, he will succeed in bringing order and regularity to those disturbances and those elemental parts that wander all over the body according to their affinities in the way described in the account we gave earlier about the universe. He will not allow one hostile element to position itself next to another and so breed wars and diseases in the body.

89 Instead, he will have one friendly element placed by another, and so bring
about health.

Now the best of the motions is one that occurs within oneself and is
caused by oneself. This is the motion that bears the greatest kinship to
understanding and to the motion of the universe. Motion that is caused
by the agency of something else is less good. Worst of all is the motion
that moves, part by part, a passive body in a state of rest, and does so by
means of other things. That, then, is why the motion induced by physical
exercise is the best of those that purify and restore the body. Second is
that induced by the rocking motion of sea travel or travel in any other
b kind of conveyance that doesn't tire one out. The third type of motion is
useful in an occasional instance of dire need; barring that, however, no
man in his right mind should tolerate it. This is medical purging by means
of drugs. We should avoid aggravating with drugs diseases that aren't
particularly dangerous. Every disease has a certain makeup that in a way
resembles the natural makeup of living things. In fact, the constitution of
such beings goes through an ordered series of stages throughout their life.
This is true of the species as a whole, and also of its individual members,
c each of which is born with its allotted span of life, barring unavoidable
accidents. This is because its triangles are so made up, right from the
beginning, as to have the capacity to hold up for a limited time beyond
which life cannot be prolonged any further. Now diseases have a similar
makeup, so that when you try to wipe them out with drugs before they
have run their due course, the mild diseases are liable to get severe, and
the occasional ones frequent. That is why you need to cater to all such
diseases by taking care of yourself to the extent you are free and have the
d time to do that. What you should not do is aggravate a stubborn irritation
with drugs.

Let these remarks suffice, then, on the subject of the living thing as a
whole and its bodily parts, and how a man should both lead and be led
by himself in order to have the best prospects for leading a rational life.
Indeed, we must give an even higher priority to doing our utmost to make
sure that the part that is to do the leading is as superbly and perfectly as
e possible fitted for that task. Now a thoroughgoing discussion of these
matters would in and of itself be a considerable task, but if we treat it as
a side issue, in line with what we have said before, it may not be out of
turn to conclude our discourse with the following observations.

There are, as we have said many times now, three distinct types of soul
that reside within us, each with its own motions. So now too, we must
say in the same vein, as briefly as we can, that any type which is idle and
keeps its motions inactive cannot but become very weak, while one that
90 keeps exercising becomes very strong. And so we must keep watch to
make sure that their motions remain proportionate to each other.

Now we ought to think of the most sovereign part of our soul as god's
gift to us, given to be our guiding spirit. This, of course, is the type of
soul that, as we maintain, resides in the top part of our bodies. It raises

us up away from the earth and toward what is akin to us in heaven, as
though we are plants grown not from the earth but from heaven. In saying
this, we speak absolutely correctly. For it is from heaven, the place from
which our souls were originally born, that the divine part suspends our
head, i.e., our root, and so keeps our whole body erect. So if a man has b
become absorbed in his appetites or his ambitions and takes great pains
to further them, all his thoughts are bound to become merely mortal. And
so far as it is at all possible for a man to become thoroughly mortal, he
cannot help but fully succeed in this, seeing that he has cultivated his
mortality all along. On the other hand, if a man has seriously devoted
himself to the love of learning and to true wisdom, if he has exercised
these aspects of himself above all, then there is absolutely no way that his c
thoughts can fail to be immortal and divine, should truth come within his
grasp. And to the extent that human nature can partake of immortality,
he can in no way fail to achieve this: constantly caring for his divine part
as he does, keeping well-ordered the guiding spirit that lives within him,
he must indeed be supremely happy. Now there is but one way to care
for anything, and that is to provide for it the nourishment and the motions
that are proper to it. And the motions that have an affinity to the divine
part within us are the thoughts and revolutions of the universe. These, d
surely, are the ones which each of us should follow. We should redirect
the revolutions in our heads that were thrown off course at our birth,[44] by
coming to learn the harmonies and revolutions of the universe, and so
bring into conformity with its objects our faculty of understanding, as it
was in its original condition. And when this conformity is complete, we
shall have achieved our goal: that most excellent life offered to humankind
by the gods, both now and forevermore.

And now indeed, it seems, we have all but completed our initial assign- e
ment, that of tracing the history of the universe down to the emergence
of humankind. We should go on to mention briefly how the other living
things came to be—a topic that won't require many words. By doing this
we'll seem to be in better measure with ourselves so far as our words on
these subjects are concerned.

Let us proceed, then, to a discussion of this subject in the following way.
According to our likely account, all male-born humans who lived lives of
cowardice or injustice were reborn in the second generation as women.
And this explains why at that time the gods fashioned the desire for sexual 91
union, by constructing one ensouled living thing in us as well as another
one in women. This is how they made them in each case: There is [in a
man] a passage by which fluids exit from the body, where it receives the
liquid that has passed through the lungs down into the kidneys and on
into the bladder and expels it under pressure of air. From this passage
they bored a connecting one into the compacted marrow that runs from
the head along the neck through the spine. This is in fact the marrow that b

44. See 43a–44a.

we have previously called "seed."[45] Now because it has soul in it and had now found a vent [to the outside], this marrow instilled a life-giving desire for emission right at the place of venting, and so produced the love of procreation. This is why, of course, the male genitals are unruly and self-willed, like an animal that will not be subject to reason and, driven crazy by its desires, seeks to overpower everything else. The very same causes
c operate in women. A woman's womb or uterus, as it is called, is a living thing within her with a desire for childbearing. Now when this remains unfruitful for an unseasonably long period of time, it is extremely frustrated and travels everywhere up and down her body. It blocks up her respiratory passages, and by not allowing her to breathe it throws her into extreme emergencies, and visits all sorts of other illnesses upon her until finally
d the woman's desire and the man's love bring them together, and, like plucking the fruit from a tree, they sow the seed into the ploughed field of her womb, living things too small to be visible and still without form. And when they have again given them distinct form, they nourish these living things so that they can mature inside the womb. Afterwards, they bring them to birth, introducing them into the light of day.

That is how women and females in general came to be. As for birds, as a kind they are the products of a transformation. They grow feathers instead of hair. They descended from innocent but simpleminded men,
e men who studied the heavenly bodies but in their naiveté believed that the most reliable proofs concerning them could be based upon visual observation. Land animals in the wild, moreover, came from men who had no tincture of philosophy and who made no study of the universe whatsoever, because they no longer made use of the revolutions in their heads but instead followed the lead of the parts of the soul that reside in the chest. As a consequence of these ways of theirs they carried their forelimbs and their heads dragging towards the ground, like towards like. The tops of their heads became elongated and took all sorts of shapes,
92 depending on the particular way the revolutions were squeezed together from lack of use. This is the reason animals of this kind have four or more feet. The god placed a greater number of supports under the more mindless beings, so that they might be drawn more closely to the ground. As for the most mindless of these animals, the ones whose entire bodies stretch out completely along the ground, the gods made them without feet, crawl-
b ing along the ground, there being no need of feet anymore. The fourth kind of animal, the kind that lives in water, came from those men who were without question the most stupid and ignorant of all. The gods who brought about their transformation concluded that these no longer deserved to breathe pure air, because their souls were tainted with transgressions of every sort. Instead of letting them breathe rare and pure air, they shoved them into water to breathe its murky depths. This is the origin of fish, of all shellfish, and of every water-inhabiting animal. Their justly

45. At 73c1; 74a4.

due reward for their extreme stupidity is their extreme dwelling place. c
These, then, are the conditions that govern, both then and now, how all the animals exchange their forms, one for the other, and in the process lose or gain intelligence or folly.

And so now we may say that our account of the universe has reached its conclusion. This world of ours has received and teems with living things, mortal and immortal. A visible living thing containing visible ones, perceptible god, image of the intelligible Living Thing,[46] its grandness, goodness, beauty and perfection are unexcelled. Our one universe, indeed the only one of its kind, has come to be.

46. Cf. 30c, d and 39e.

# CRITIAS

*At the beginning of* Timaeus*, Socrates, Critias, Timaeus, and Hermocrates agree to an exchange of speeches. For the entertainment of the others on the previous day, Socrates had explained the institutions of the* Republic*'s ideal city. But a truly satisfying account of their excellence would require more than that 'theoretical' description: we need to see them fully in effect, functioning in a city's actual life—especially in wartime, the most severe test of a city's mettle. Critias (an Athenian) offers to do this, on the supposition that the Athens of nine thousand years before was governed by the institutions of Socrates' city, as a myth from Egypt that he has heard recited has suggested to him. (This Critias is either Plato's mother's cousin—the Critias of* Charmides, Protagoras, *and* Eryxias*—or that cousin's grandfather.) He will tell the tale of ancient Athens' war with the inhabitants of Atlantis, an island then located in the Atlantic Ocean near the entrance to the Mediterranean sea. Under their kings, the technologically advanced Atlantids had conquered Europe as far as Italy, and Africa up to the border of Egypt, and it fell to the freedom-loving, well-governed Athenians to defeat these interlopers and save the Mediterranean peoples from outside domination. At the successful conclusion of the war, Atlantis itself was destroyed in an earthquake and sank into the sea, carrying its inhabitants and all the warriors of Athens—its adult male population—to their deaths.*

*The* Timaeus *itself is taken up with Timaeus' preliminary account of the creation of the world, down to that of human beings, whose paragon specimens are the men of Athens at the time of the Atlantic war. Having heard that account, Critias now tells the tale of the conflict between Athens and Atlantis (or rather the introductory part of it—Plato left the dialogue incomplete, without reaching the war). To all appearances, Critias' speech would have completed the agenda agreed to at the outset; however, near the beginning of* Critias*, Socrates seems confusingly to suggest that the fourth personage of the dialogue, Hermocrates, an historical general and statesman of Syracuse, will have a turn to speak after that, though he does not indicate at all what his subject would be. If that marks an alteration of Plato's plan, he evidently never carried it out.*

*J.M.C.*

106 TIMAEUS: What a pleasure it is, Socrates, to have completed the long march of my argument. I feel the relief of the traveler who can rest after

Translated by Diskin Clay.

a long journey. Now I offer my prayer to that god who came to be long
ago in reality, but who has just now been created in my words. My prayer b
is that he grant the preservation of all that has been spoken properly; but
that he will impose the proper penalty if we have, despite our best intentions,
spoken any discordant note. For the musician who strikes the wrong
note the proper penalty is to bring him back into harmony. To assure,
then, that in the future we will speak as we should concerning the origin
of the gods we pray that he will grant the best and most perfect remedy—
understanding. And, now that we have offered our prayer, we will keep
our agreement and hand over to Critias the speech that is to follow ours
in its proper sequence.

CRITIAS: Very well, Timaeus. I will accept the task, but I will make the
same plea as you made at the beginning of your speech, when you asked c
for our sympathy and understanding on account of the magnitude of the
argument you were undertaking. I make this same entreaty now too, but 107
I ask to be granted even greater understanding for what I am going to
say. And I must admit that I realize that what I am pleading for is self-
indulgent and a less polite request than it should be. But I must make it
nonetheless. Now, who in his senses would undertake to maintain that
your speech was not an excellent speech? As for the speech you are about
to hear, I must somehow bring home to you the fact that it requires greater
indulgence, given the difficulty of my subject. It is easier, Timaeus, for b
someone to give the impression that he is a successful speaker when he
speaks of gods to an audience of mortals. The audience's lack of experience
and sheer ignorance concerning a subject they can never know for certain
provide the would-be speaker with great eloquence. We know how we
stand when it comes to our knowledge of the gods. To make my meaning
plainer, let me ask you to follow me in this illustration.

It is inevitable, I suppose, that everything we have all said is a kind of
representation and attempted likeness. Let us consider the graphic art of the
painter that has as its object the bodies of both gods and men and the relative
ease and difficulty involved in the painter's convincing his viewers that he
has adequately represented the objects of his art. We will observe first that c
we are satisfied if an artist is able to represent—even to some small extent—
the earth and mountains and rivers and forests and all of heaven and the
bodies that exist and move within it, and render their likeness; and next that,
since we have no precise knowledge of such things,we do not examine these
paintings too closely or find fault with them, but we are content to accept an d
art of suggestion and illusion for such things, as vague and deceptive as this
art is. But, when a painter attempts to create a likeness of our bodies, we
are quick to spot any defect, and, because of our familiarity and life-long
knowledge, we prove harsh critics of the painter who does not fully reproduce
every detail. We must view the case of speeches as precisely the
same. We embrace what is said about the heavens and things divine with
enthusiasm, even when what is said is quite implausible; but we are nice
critics of what is said of mortals and human beings.

Now, with these reflections in mind, which I have offered for the present
e occasion, if we are unable to speak fully and fittingly in representing our theme, we deserve your sympathy. You must realize that human life is no easy subject for representation, but is rather one of great difficulty, if
108 we are to satisfy people's opinions. I wanted to remind you of this, Socrates, to make my plea not for less but for greater sympathy and understanding as you listen to what I am about to say. If you find that I made a just claim on this favor, grant it with good will.

SOCRATES: Why, Critias, would we hesitate to grant it? Let this favor of ours be granted to Hermocrates as well who will follow you as the third to speak. It is clear that a little later, when it comes his turn to speak he
b will make the same entreaty as have you and Timaeus. So to make it possible for him to invent another preamble and not compel him to repeat what Timaeus and Critias have said, let him speak when his turn comes, knowing that he has our sympathy. But now, my dear Critias, I must caution you about the attitude of your audience in this theater: the first of the poets to compete in it put on such a glorious performance that you will need a great measure of sympathy if you are going to be able to compete after him.

HERMOCRATES: The injunction you made to Critias here applies to me,
c Socrates, as well. But, even so, Critias, the faint hearted have never yet set up a victory monument. You must march bravely forward to encounter your speech, and, as you invoke Paeon[1] and the Muses, display in your hymn of praise the bravery of your ancient citizens.

CRITIAS: Dear Hermocrates, you stand last in rank, but, since there is someone standing in front of you, you are still confident. That courage is needed, you will discover yourself, when you take my place. But I must
d pay attention to your exhortation and encouragement, and, in addition to the gods you just named, invoke the other gods and make a special prayer to Mnemosyne.[2] The success or failure of just about everything that is most important in our speech lies in the lap of this goddess. For, if we can sufficiently recall and relate what was said long ago by the priests and brought here to Athens by Solon, you the audience in our theater will find, I am confident, that we have put on a worthy performance and acquitted ourselves of our task. So much said. Now we must act. Let us delay no more.

e We should recall at the very beginning that, in very rough terms, it was some nine thousand years since the time when a war is recorded as having broken out between the peoples dwelling outside the pillars of Heracles[3] and all those dwelling within. This war I must now describe. Now they

1. Apollo, the Healer.
2. The mother of the nine Muses and the goddess of memory.
3. The Straits of Gibraltar.

said that this city of Athens was the ruler of the [Mediterranean] peoples and fought for the duration of the entire war. They said, too, that the kings of the island of Atlantis were the rulers of the other peoples. This island, as we were saying,[4] was at one time greater than both Libya and Asia combined.[5] But now because of earthquakes it has subsided into the great Ocean and has produced a vast sea of mud that blocks the passage of mariners who would sail into the great Ocean from Greek waters and for 109
this reason it is no longer navigable.

In its progress, our tale will describe, as if it were unrolled, the many barbarian nations and all the different Greek peoples of that time, encountering them as they emerge from place to place. It is first necessary at the beginning of this tale to describe the condition of the Athenians of that age and the adversaries with whom they waged war: their respective power and their respective constitutions. But of these themes, pride and place must go to the condition of Athens before this war.

At one time, the gods received their due portions over the entire earth b
region by region—and without strife. To claim that gods did not recognize what was proper to each would not be fitting, nor would it be right to say that, although they recognized what belonged by just title to others, some would attempt to take possession of this for themselves—in open strife. But, as they received what was naturally theirs in the allotment of justice, they began to settle their lands. Once they had settled them, they began to raise us as their own chattel and livestock, as do shepherds their sheep. But they did not compel us by exerting bodily force on our bodies, c
as do shepherds who drive their flocks to pasture by blows, but rather, by what makes a creature turn course most easily; as they pursued their own plans, they directed us from the stern, as if they were applying to the soul the rudder of Persuasion. And in this manner they directed everything mortal as do helmsmen their ships.

Now, as the gods received their various regions lot by lot, they began to improve their possessions. But, in the case of Hephaestus and Athena, since they possessed a common nature, both because she was his sister of the same father and because they had entered the same pursuits in their love of wisdom and the arts, they both received this land as their portion in a single lot, because it was congenial to their character and was naturally suited to them in its excellence and intelligence. And they fashioned in it d
good men sprung from the land itself and gave them a conception of how to govern their society. The names of these first inhabitants have been preserved, but their deeds have perished on account of the catastrophes that befell those who succeeded them and the long passage of time intervening.

4. See *Timaeus* 24e–25d.

5. For Critias' contemporaries Asia was defined by the Nile and the Hellespont, and Libya enclosed the entire coast of Saharan Africa west of the Nile. Thus, with Europe, these were the other two parts of the known world.

Those of their race who survived these successive destructions were, as I said before,[6] left as an illiterate mountain people who had only heard the tradition of the names of the rulers of their country and beyond these only little of their deeds. Now, they were pleased to give their descendants
e the names of these rulers, even though they were unaware of their ancestors' virtues and institutions—except for some dim legends concerning each of them. Then, for many generations, these survivors and their children lived in distress for their survival and gave thought to their needs;
110 they spoke only of supplying these needs, and had no interest in the events of the distant past. For it is in the train of Leisure that Mythology and Inquiry into the Past arrive in cities, once they have observed that in the case of some peoples the necessities of life have been secured, but not before.

This is why the names of the ancients have been preserved but not their deeds. I make this claim and cite as my evidence the statement of Solon, who said that, in their account of the war of that time, the Egyptian priests gave for the most part names such as Cecrops and Erechtheus, and
b Erichthonius, and Erysichthon,[7] and the names of most of the others which have come down in tradition before the generation of Theseus. And the same is true of the names of the women. Consider too the attributes of the goddess Athena and her statue. At that time the military training of women and men was common. For this reason the people of that time fashioned the statue of the goddess as armed to reflect that ancient custom—an indication that all the female and male creatures that live together
c in a flock can very well pursue in common, as much as is possible, the special talents that are suited to each species.

Now, at that time, the other classes of citizens who dwelt in our city were engaged in manufacture and producing food from the earth, but the warrior class that had originally been separated from them by god-like men lived apart. They had all that was appropriate to their training and
d education. None of them had any private possession, but they thought of all their possessions as the common property of all, and they asked to receive nothing from the other citizens beyond what they needed to live. Their activities were all of the activities that were spoken of yesterday, when the guardians proposed by our theory were discussed.

The report of the Egyptian priests concerning our territory was plausible and true. First of all, at that time its boundaries extended to the Isthmus of Corinth, and, on the mainland to the north, they extended to the summits
e of Cithaeron and Parnes. And, descending to the east, the boundaries extended down to the region of Oropus to the north and they were defined by the Asopus river down to the sea. In its great fertility our land far surpassed every other, for it was then capable of supporting a great army of men who did not work the land. There is impressive evidence for this

6. *Timaeus* 22d ff.

7. Mythical figures in the early history of Athens and Attica, the first three as kings.

excellence. What has now survived of this land can rival any other land in the variety and quality of its crops and the pasture it offers all species of animals. But, at that time, our land produced all this not only of high 111
quality but in great abundance. You might ask how this is credible and how our present land could possibly be called a vestige of our earlier land.

From the interior this entire land extends a great distance into the sea, as if it jutted out as a promontory. It so happens that the entire basin of the sea that surrounds falls off precipitously. Many and great were the floods that occurred in the space of nine thousand years—for this is the number of years between that time and the present—and during this b
succession of natural disasters the soil was washed down from the high places. It did not form any considerable alluvial deposits, as in other regions, but it disappeared into the deep, as in flood after flood it was continuously washed into the sea from all sides. What actually remains is like our small and barren islands, and, compared to the land it once was, Attica of today is like the skeleton revealed by a wasting disease, once all the rich topsoil has been eroded and only the thin body of the land remains. But in that age our land was undiminished and had high hills with soil upon them; what we now call the Rocky Barrens were covered with deep c
rich soil. And in the mountains there were dense forests of which there still survives clear evidence. Some of our mountains can now grow just barely enough for bees, but it was not so long ago that [lofty trees grew there].[8] There can still be found intact rafters cut from trees that were felled and brought down to be used for the greatest building projects. And there were many trees that were cultivated for their fruit and they provided limitless fodder for flocks of sheep and goats.

Every year there was a harvest of Zeus-sent rain. It was not lost, as it d
is now, as it flows off the hard surface of the ground into the sea, but the deep soil absorbed the rain and it stored it away as it created a reservoir with a covering of clay soil above it; and, as it distributed the water it had absorbed from the high places into its hollows, it produced an abundant flow of water to feed springs and rivers throughout every region of the country. There are even today some sacred monuments at these ancient springs that are evidence of the truth of what we are now saying about our country.

This was the nature of the countryside. The land was cultivated with e
great skill, as we can reasonably conjecture, by farmers who were farmers in the true sense of the word and who devoted themselves to this single occupation—but farmers who had an eye for beauty and were of a truly noble nature, and who in addition possessed a most fertile land and water in abundance, and above this land a climate and seasons that were most temperate.

As for the city itself, it was laid out at that time in a plan that I will now describe. First of all, the acropolis was very different then than it is

8. There is a lacuna of a few words here in the mss.

112 now. A single night of torrential rain stripped the acropolis of its soil
and reduced it to bare limestone in a storm that was accompanied by
earthquakes. Before the destructive flood of Deucalion, this was the third
such cataclysmic storm. In the past, the acropolis extended to the Eridanus
and Ilisus and held within its circuit the Pnyx and Mt. Lycabettus that
faces the Pnyx. It was entirely covered by soil and, except for some small
b outcroppings, level on top. Outside the acropolis and under its slopes
there lived the class of artisans and those of the farmers who worked the
neighboring land. But on the heights the class of warriors lived in isolation,
as if they belonged to a single household, around the sanctuary of Athena
and Hephaestos, which they had enclosed by a single garden wall. On the
far northern edge of the acropolis they inhabited common dwellings and
ate together in common messes in buildings they had constructed for their
winter quarters. And they had a supply of all that was needed for their
c communal institutions—both in buildings for themselves and for the
priests. They made no use of gold or silver—possessions they never had
any need of. But, in pursuing a mean between ostentation and servility,
they built for themselves tasteful houses and they grew old in them in the
company of their grandchildren; and for generation after generation they
passed these dwellings down to descendants who were like themselves.
As for the south of the acropolis, when they left their orchards, gymnasia,
and common messes, as they would for the summer season, they converted
it to these uses.

d There was a single spring in the location of the present acropolis, but
it has been choked by the debris of the earthquakes [of that night], and
its waters now flow only in a trickle about the circuit wall. But it provided
the men of that age with an abundant supply of water, since it was situated
in a location that made it neither too cold in the winter nor too hot in
the summer.

This was the manner of their life: they were the guardians of their own citizens and the leaders of the rest of the Greek world, which followed them willingly. And they kept their population stable as far as they could—both of men and women—for generation after generation, maintaining the population of those who had reached military age or were still of military age at close to twenty thousand at most.

e Such, to conclude, was the character of this people and such was their
life generation after generation as they directed the life of their city and
of Greece with justice. Their fame for the beauty of their bodies and for
the variety and range of their mental and spiritual qualities spread through
all of Asia and all of Europe. And the consideration in which they were
held and their renown was the greatest of all the nations of that age.

As for the state of those who went to war against them and the origins
of that state, we will now openly reveal its history to you our friends, as
the common property of friends, if we have not lost the memory of what
113 we heard when we were still boys. I must explain one small point before
I enter into my history so that you will not be astonished as you hear

Greek names frequently used for people who are not Greek. You will now learn the origins of these names. Solon, when he was contemplating his own poetic version of this legend and was inquiring into the meaning of these names, discovered that his Egyptian sources had been the first to record them, once they had translated their meaning into their own language. He, in his turn, recovered the meaning of each of these names and recorded it as he translated them into Greek. These very manuscripts were b
in the possession of my grandfather and they now remain in my possession. When I was a boy, I studied them carefully. Consequently, do not be astonished if you hear names that sound like Greek names; you now know their explanation.

What follows, approximately, was the introduction to the long account I heard then. As I said before concerning the distribution of lands among the gods, in some regions they divided the entire earth into greater apportionments and in others into lesser apportionments, as they established c
sanctuaries and sacrifices for themselves. So it was that Posidon received as one of his domains the island of Atlantis and he established dwelling places for the children he had fathered of a mortal woman in a certain place on the island that I shall describe.

Now seaward, but running along the middle of the entire island, was a plain which is said to have been the loveliest of all plains and quite fertile. Near this plain in the middle of the island and at about fifty stades'[9] distance was a uniformly low and flat hill. Now, there lived on this hill one of the people of this island who had originally sprung up from the earth. His name was Evenor and he dwelt there with his wife Leucippe. d
They had an only child, a daughter by the name of Clito. When this girl grew to marriageable age, both her mother and father died. It was then that Posidon conceived a desire for her and slept with her. To make the hill on which she lived a strong enclosure he broke it to form a circle and he created alternating rings of sea and land around it. Some he made wider and some he made more narrow. He made two rings of land and three of sea as round as if he had laid them out with compass and lathe.

They were perfectly equidistant from one another. And so the hill became e
inaccessible to humans. For at that time ships and the art of navigation had not yet come into existence.

And the god himself greatly beautified the island he had created in the middle to make it a dwelling suitable for a god. Because he was a god, he did this with little effort. He drew up two subterranean streams into springs. One gushed out in a warm fountain and the other in a cold fountain. And from the earth he produced all varieties of crops that were sufficient to his island. He sired five pairs of twin sons and he raised them to manhood. He divided the entire island of Atlantis into ten districts: to the first born of the first set of twins he gave as his portion the dwelling

9. There are three units of measure in Critias' description of the island: the foot, the *plethron* (100 feet), and the stade (600 feet).

114 of his mother and the circular island, since it was the largest and the best.
And he made him king over the others. The other sons he made governors
and to each of these he gave the rule over many men and a great extent
of land.

And he gave each of his sons names. To the son who was oldest and
king he gave the name from which the entire island and its surrounding
sea derive their names, because he was the first of the kings of that time.
His name was Atlas; the island is called Atlantis and the sea Atlantic after
b him. To the twin born after him, who had received as his portion the cape
of the island facing the pillars of Heracles opposite what is now called the
territory of Gadira after this region, he gave the name that translates into
Greek as Eumelos, but in the language of Atlantis, it is Gadirus. It would
seem that he gave his name to the region of Cadiz. The two brothers of
the second set of twins he called Ampheres and the Euaemon. To the third
set he gave the name Mneseas to the first-born and Autochthon to the
c second-born. Of the fourth set Elasippus was the first-born, Mestor the
second. For the fifth set he gave the name Azaes to the first-born and the
name Diaprepes to the second. Now all of these sons inhabited the island,
as did their sons and descendants over many generations. They were the
rulers of many other islands in the Atlantic and, as I have said,[10] they
even extended their rule into the Mediterranean as near to us as Etruria
and Egypt.

d The race of Atlas increased greatly and became greatly honored. And
they maintained their kingdom through many generations, as the oldest
king would hand his kingship on to his oldest son. They amassed more
wealth than had ever been amassed before in the rule of any previous
kings or could easily be amassed after them. And they provided for every-
thing that was needed, both in the city and in the rest of the island. For
e their empire brought them many imports from outside, and the island
itself provided most of what was needed for their livelihood. First, there
were the mines that produced both hard and fusible ore. And in many
regions of the island they exploited that metal which is now only a name
to us, but which was then more than a name—*oreichalkos*.[11] In that age it
was valued only less than gold. And the island provided all trees to be
hewn and worked by builders and this in great abundance. It also produced
abundant animal life, both domestic and wild. In addition to these there
was a great population of elephants. There was pasture land for the other
animals who graze in marshlands and along lakes and rivers and on
115 mountainsides and plains, and there was plenty for them and for this the
greatest of animals, which consumes the most fodder.

The island produced in addition all the aromatic plants the earth pro-
duces now—sweet smelling roots and greens, herbs, trees, and gums from

10. *Timaeus* 25a–b.

11. "Mountain copper" or yellow copper ore.

flowers and fruits as well, and they flourished there. The island also produced the domesticated crop of grains on which we live and all the other crops on which we depend for our food. It also produced the kinds of
crops we call "pulse" and the trees that give us our drink, food, and oils— b
and the crop that sprung up for the sake of our entertainment and pleasure, is hard to preserve, and comes from tree tops; it produced the side dishes we offer the weary guest as a relief after he has eaten his fill and that refresh him after dinner. All of these did that sacred island once bear in that age under a fostering sun—products lovely, marvelous, and of abundant bounty. And they took all these products from the earth and from their
proceeds they constructed their sanctuaries and their palaces, their harbors c
and their ship-sheds, and they improved the rest of their land according to the plan I will now describe.

First, they constructed bridges joining the rings of sea, which surrounded the ancient metropolis, making a road out from the palace and in to the palace. Their first project was to build a palace in the dwelling of the god and of their ancestors. One king inherited the project from his predecessor,
and, as he improved on the beauty of what had already been improved, d
he would surpass to the extent of his resources what his predecessor had been able to achieve. They continued this progress until they had created for themselves a dwelling astonishing in its size and in its manifold beauty. And starting at the sea they excavated a canal three plethra in width, one hundred feet in depth, and fifty stades in length up to the outermost sea ring. They then made passage from the sea into the interior possible by opening a channel into the sea ring that was wide enough for the largest ships to sail into it as if it were a harbor. And, as for the land rings that
separated the rings of sea, they pierced them at the point of the bridges, e
and thus joined them by water. The resulting canal was wide enough for a single trireme to sail through as it passed into a ring of water. They constructed a roof over the channel to protect the passage of ships, for the walls of the canal through the land rings were high enough from the sea to the bridge above to allow ships to pass under. The largest of the water rings into which the passage from the sea had been excavated was three stades in width and the next land ring was equal to it. Of the next rings of water and land, the ring of water was two stades wide and, as in the first case, the land ring was equal to it as well. And, finally, the ring of water running around the island in the middle was a stade wide.

The island where the palace was located had a diameter of five stades. 116
They threw up an unbroken stone circuit wall around this island, and they also walled the land rings, and the bridge, which was a plethron wide. They built towers and gates at the point where the bridges crossed over the rings of water. They quarried stone from under the circular island that formed the center ring and from the inner and outer land rings as well. There were three colors of stone: white, black, and red. As they quarried this stone, they fashioned ship sheds for two ships in the rock roofed by the stone of the quarry itself.

b Some of their buildings they constructed of stones of uniform color. But to delight themselves they made of others a tapestry of stones of different colors, variegating the colors to bring out their natural charm. And they invested the entire circuit wall of the outermost land ring with bronze, as if the bronze revetment were a bright dye. The interior of the land wall they invested with tin. And the wall surrounding the acropolis itself they
c invested with *oreichalkos,* which glittered like darting fire.

I will now describe the palace buildings erected within the acropolis. At its center was the shrine of Clito and Posidon. It was kept consecrated and no one was permitted to enter it. It was surrounded by a wall of gold. It was here that Posidon and Clito first begot and produced the race of the ten kings. It was to this shrine that each of the ten divisions came to offer their first fruits to each of these original kings in a yearly festival. The temple of Posidon was in this area. It was one stade long, three plethra
d wide, and of a height that appeared to be proportional to its length and width, but it had something barbaric about its appearance. They invested the entire exterior of the temple with silver, except for the acroteria, which they gilded with gold. The interior presented a roof of solid ivory inlaid with gold, silver, and *oreichalkos;* and they plated all the other areas of the temple with this same metal—the cella walls, the interior columns, and the floors. They placed gold statues within the temple. There was a statue
e of Posidon standing in a chariot with a team of six winged horses. This statue was so tall that his head touched the rafter of the temple roof; there were a hundred Nereids riding dolphins and arranged in a circle about him, for men of that age thought that the Nereids were a hundred in number; and there were many other statues inside which were the offerings of private individuals.

Outside and surrounding the temple there stood gold statues of all the descendants of the ten kings and their wives and many other dedications of great size made by the kings and private individuals who came from the city of Atlantis itself and from the subject peoples elsewhere. There
117 was an altar on the same scale as the temple and its workmanship was equally lavish. The palace was magnificent in its monumental architecture and it was worthy of the greatness of their empire and the adornment of the temple and shrines.

They drew their water from two springs—a spring of cold water and a spring of hot water. Both had an abundant flow and in the amazing natural freshness and quality of its waters each had its own use. They built fountain houses around them and plantations of trees suitable to the temperature
b of the waters. And they also built reservoirs around the springs. Some they left open, but to the north they covered the reservoirs to convert them to warm baths. The reservoirs of the kings were separate from those of the rest of the population. Some reservoirs were reserved for the use of women, others for watering horses and other draft animals, and each they fashioned appropriately to its use. The overflow they channeled into the grove of Posidon, where, thanks to the fertility of the soil, there grew all

varieties of trees of extraordinary beauty and height. They also irrigated the outer land rings by means of canals that crossed over along the bridges joining them.

Here there were constructed numerous shrines to numerous gods and c
the land was laid out for many orchards and gymnasia. There were gymnasia for men on each of the two ring islands and tracks for horses were set apart as well. And, remarkably, through the middle of the greatest of the islands they laid out a separate race course for horses, one stade wide, and it extended in a circle around the entire island. Located on each side of the central race course were quarters for the palace guard.

The garrison of the most reliable soldiers was established on the smaller d
of the ring islands, the island situated nearest to the acropolis. And quarters were built on the acropolis for the most reliable soldiers of all, surrounding the palaces of the kings themselves. The ship-sheds were filled with triremes and all the fittings needed for triremes, and all were in good working order. Such, then, were the buildings they constructed around the [dwellings of the] kings themselves.

Now, once you had crossed over the three rings of water, you would
come to a circuit wall that began at the sea and surrounded the greatest e
of the land rings on all sides at a uniform distance of fifty stades from the greatest land ring and its harbor. It began at the point where the channel had been dug through to the sea. The entire area within was settled by a dense population whose houses were crowded close together. The waterway into the interior and the greatest harbor was teeming with ships and crowds of merchants who had arrived from all over the world and whose voices and bustle produced a commotion and hubbub that could be heard day and night.

I have recalled this description of the capital and the ancient dwelling
of the kings pretty much as it was told [to Solon] at that time. But now I 118
must attempt to recall the nature of the rest of the country and the manner in which it was improved. To begin with, the priests said that the entire country was very high and that it rose sheer from the sea. The entire plain that surrounded the capital was itself surrounded by a ring of mountains that sloped down as far as the sea. The plain was smooth and level and entirely rectangular. On its long sides it extended for three thousand stades and, as measured from the sea, it was over two thousand stades across.
The slope of the island was to the south and it was protected from the b
northerly winds. The mountains surrounding the plain were legendary for their number and size and beauty. None of the mountain ranges that exist today can compare with them. They contained on their slopes and in their valleys many populous and wealthy villages. And they contained rivers and lakes and meadows that supplied enough to feed all the animals there, both domesticated and wild. In their abundance and variety, the shrubs and trees were plentiful for all kinds of constructions and uses.

I will now relate how this plain had been developed by nature, and by c
many kings and over a long period of time. For the most part, the plain

was naturally rectangular, regular, and oblong. Where it was not perfectly straight and even they evened it out by excavating a Great Canal around it. As described, its depth and width and length provoke disbelief, since it was the work of human hands and so vast when compared to the other building projects. Nevertheless, I must repeat precisely what we heard then. The Great Canal was excavated to the depth of a plethron, it measured
d a stade wide along its entire length, and as it framed the entire plain it came to a total length of ten thousand stades. As it received the flow of water that came off the mountains, and as this water circulated and reached the city on two sides, the trench allowed the water to flow out to the sea. Towards the interior, canals were cut in straight lines from the city over the plain a hundred feet broad at most and these emptied their waters into the Great Canal facing the sea. These were spaced at an interval of a hundred stades. They also cut horizontal connecting channels linking one
e canal with another and with the city, and it is by these canals that they transported timber and the other products of the land on barges from the mountains to the city.

They harvested their crops twice a year. In the winter season they relied on the water of Zeus-sent rains, and in the summer season they used the waters stored in the earth drawing it into their canal system to irrigate the crops.

Now, as for the numbers of the men of the plain who were fit to serve in the army: each military district was assigned to contribute one com-
119 mander. The area of each district was as much as a hundred stades. The total of these districts came to sixty thousand. And as far as the population of the mountainous regions and the rest of the country goes, it was said to be too large to calculate. But, counted by regions and villages, all men fit for military service were assigned to one of the sixty thousand military districts and they served under the commander of each district. In times of war each commander was assigned to have in readiness a sixth part of the complement of a war chariot as a contribution to a force of ten thousand
b chariots; and in addition, two horses and two riders, a pair of horses without a chariot, with its complement of two riders, a runner, a rider who could fight on foot armed with a small shield, and serving as a charioteer a rider who could mount either horse, two hoplites, two archers, and two sling men; three light armed soldiers with stones and three with javelins. He also had to contribute four sailors to the crews manning twelve thousand ships. These were the principles for raising an army in the royal city. The formulas varied in the nine other cities, and it would take a long time to describe them.

c The original ordering of powers and honors in Atlantis was as follows. Within his own patrimony and in his own city, each of the ten kings held power over the inhabitants and over most of the laws, and he could punish or put to death whomever he wished. But, as for their common empire and federation, the kings were regulated by the laws of Posidon as these had been passed down by tradition and according to an inscription which

the first kings had cut on a stele of *oreichalkos.* This inscription was placed d
in the middle of the island in the sanctuary of Posidon. Here in every fifth
or sixth year, and in alternating sequence, it was their custom to gather.
To both the even and to the odd they accorded an equal share. Once they
had assembled, they deliberated on matters of common concern and held
an assize to determine if anyone of them had broken the law, and they
gave judgment. Whenever they were about to declare judgment, they first
offered one another pledges in this manner: as all ten kings were alone in
the sanctuary of Posidon, where bulls had been allowed to run free, they
joined in prayer to ask the god to be allowed to capture the bull which
would be the most acceptable offering to him. They pursued the bulls with e
staffs and nooses—but with no iron weapon, and they led the bull they
had captured to the stele.[12] There they slaughtered it on the crest of the
stele and let its blood spill down over the inscription. In addition to the
laws written on the stele there was an oath inscribed calling terrible curses
down upon those who broke them. And, when they had then sacrificed
the bull following this ritual, they would burn all the limbs of the bull 120
and, mixing his blood in a mixing-bowl, they would pour a clot of his
blood over the head of each of them, and, once they had scrubbed the
stele clean, they would bring the remaining blood over to the fire.

After this, they would draw the blood from the mixing-bowl into gold
pouring vessels. Pouring the blood over the fire they would take an oath
to render justice according to the laws inscribed on the stele and to punish
anyone who had violated these laws since last they met. They swore that
in the future they would not willingly violate any of the provisions of the
inscription and that they would neither rule nor obey a ruler if either they
or he did not issue commands that were in conformity with the laws of b
their father. When each of the kings had made this oath and engaged both
himself and his descendants, they drank and dedicated their pouring-
vessels in the sanctuary of the god. And, once they had finished with their
dinner and everything else they had to do and night had fallen and the
fire about the sacrificial offerings had subsided, they all put on a deep
blue robe of the most splendid appearance and, sitting on the ground next
to the embers of the sacrificial victim, at night, they put out the fire still
flickering in the sanctuary and judged anyone accused of violating any of c
their laws and were judged themselves. Once they had passed judgment,
when day dawned, they recorded their judgments on a gold tablet which
they dedicated as a memorial offering along with their robes.

There were many other particular laws concerning the prerogatives of
each of the kings, but the most important of these were those forbidding
them to bear arms against one another and commanding them to help one
another should anyone in any of their cities make an attempt to over-
turn the divine family; that they should deliberate together, as had their

12. A block or slab, of the sort to be inscribed with a record of victories, dedications, treaties, decrees, etc.

d ancestors before them, over their decisions concerning war and their other actions, but that they should cede leadership to the royal family of Atlantis; and, finally, that the king should have power to put none of his kinsmen to death, if he could not obtain the approval of the majority of the ten kings.

Now, this was the power, so great and so extraordinary, that existed in that distant region at that time. This was the power the god mustered and brought against these [Mediterranean] lands. It was said that his pretense
e was something like what I shall describe. For many generations and as long as enough of their divine nature survived, they were obedient unto their laws and they were well disposed to the divinity they were kin to. They possessed conceptions that were true and entirely lofty. And in their attitude to the disasters and chance events that constantly befall men and in their relations with one another they exhibited a combination of mildness and prudence, because, except for virtue, they held all else in disdain and thought of their present good fortune of no consequence. They bore their vast wealth of gold and other possessions without difficulty, treating them
121 as if they were a burden. They did not become intoxicated with the luxury of the life their wealth made possible; they did not lose their self-control and slip into decline, but in their sober judgment they could see distinctly that even their very wealth increased with their amity and its companion, virtue. But they saw that both wealth and concord decline as possessions become pursued and honored. And virtue perishes with them as well.

Now, because these were their thoughts and because of the divine nature that survived in them, they prospered greatly as we have already related. But when the divine portion in them began to grow faint as it was often
b blended with great quantities of mortality and as their human nature gradually gained ascendancy, at that moment, in their inability to bear their great good fortune, they became disordered. To whoever had eyes to see they appeared hideous, since they were losing the finest of what were once their most treasured possessions. But to those who were blind to the true way of life oriented to happiness it was at this time that they gave the semblance of being supremely beauteous and blessed. Yet inwardly they were filled with an unjust lust for possessions and power. But as Zeus, god of the gods, reigning as king according to law, could clearly see this state of affairs, he observed this noble race lying in this
c abject state and resolved to punish them and to make them more careful and harmonious as a result of their chastisement. To this end he called all the gods to their most honored abode, which stands at the middle of the universe and looks down upon all that has a share in generation. And when he had gathered them together, he said . . .

# MINOS

*Socrates and a friend try to find a definition of 'law'. While his friend thinks that laws are whatever is decided upon in various cities, Socrates argues that laws reveal a certain reality, the truth of how civilized life should be regulated. This reality is common and unchanging, and has been grasped best of all in the ancient Cretan legal system. It was King Minos, under the tutelage of Zeus, who established these laws for the benefit of the Cretans; he was a hero of legislation, and one must not believe the slanders heaped upon him by Athenian dramatists.*

*The assumptions and techniques of argument in* Minos *are thoroughly Platonic; indeed, it is a sort of preface to Plato's* Laws. *It explains why the* Laws *begins with the story that Minos was the divinely inspired law-giver of Crete, which is the starting point of a discussion about legislation between three old men on their way from Cnossus (the capital city of Minos) to the Idaean cave (where Minos was said to have learned about legislation from Zeus). In* Minos, *bodies of laws are conceived as written texts which can be true or false, a conception shared by Plato, who also held that legal texts benefit from literary elaboration (*Laws *718c–723d). Proper laws express the reality of social life, a reality which is as enduring as the ideal city which the three old men sketch in* Laws*—the best possible social, political, and legal system under which people can live in cities in permanent peace and stability. Although* Minos *was probably written after* Laws, *it adopts an earlier conception of politics as the skill of herding human beings, the conception discussed and rejected in Plato's* Statesman.

*The Greek word for law is* nomos, *which is also used for custom or an established usage or practice. Socrates' friend in* Minos *attempts to define* nomos *as something* nomizomenon *(the present passive participle of the related verb* nomizō*)—that is, 'accepted'. Indeed,* nomizō *has a wide range of uses, including 'practice', 'have in common or customary use', 'enact', 'treat, consider as', 'accept the idea that', 'hold the customary or conventional belief that', 'believe, hold'. Most of these uses, and the translation of* nomizomenon *by 'accepted', fit rather more easily with* nomos *conceived as custom than as written law.*

*From the formal point of view,* Minos *is composed of dry Academic dialectic together with a literary-historical excursus. The classic example of such an excursus is the Atlantis myth in Plato's* Timaeus *and* Critias, *and there are other examples in* Alcibiades, Second Alcibiades, Hipparchus, *and probably in the (now mostly lost) Socratic dialogues of Antisthenes and Aeschines. The*

*Academic dialectic of* Minos *is a good example of the way questions were discussed in the mid-fourth-century Academy, the dialectic studied in Aristotle's* Topics *and* Sophistical Refutations. *The combination of dialectic and excursus in* Minos *is very similar to that in* Hipparchus, *as is the skepticism toward the values implicit in Athenian popular culture and history; many scholars conclude that they are the work of the same author, probably writing soon after the middle of the fourth century* B.C.

*D.S.H.*

313 SOCRATES: Law—in our view, what is it?

FRIEND: What sort of laws are you asking about?

SOCRATES: Well, now! Is it possible that law differs from law in this very respect of being law? Think about the question I'm actually asking you. If I had asked: "What is gold?," then if you had asked me in the same way: "What sort of gold am I referring to?," I reckon that your question would have been incorrect. For surely gold does not differ at all from gold
b nor stone from stone in respect of being stone or in respect of being gold. And so law too, I suppose, does not differ at all from law—they are all the same thing. Each of them is law alike, not one more, another less. What I am asking, then, is just this—the global question: what is law? If you have an answer to hand, say it.

FRIEND: What else would law be, Socrates, but what is accepted?

SOCRATES: And so speech, in your view, is what is spoken, or sight what
c is seen, or hearing what is heard? Or is speech one thing, what is spoken another, sight one thing, what is seen another, hearing one thing, what is heard another—and so law one thing, what is accepted another? Is that so, or what is your view?

FRIEND: They are two different things, as it now seems to me.

SOCRATES: Law, then, is not what is accepted.

FRIEND: I don't think so.

SOCRATES: So what can law be? Let's investigate the question as follows. Suppose someone had asked us about what we said just now: "Since you
314 say it is by sight that what is seen is seen, what is this sight by which such things are seen?" We would have replied to him: "That form of sense perception which reveals such things through the eyes." And if he had asked us another question: "Well, now: since it is by hearing that what is heard is heard, what is this hearing?," we would have replied to him: "That form of sense perception which reveals sounds to us through our ears." So, then, if he were to ask us: "Since it is by law that what is accepted is accepted, what is this law by which such things are accepted? Is it a
b form of perception or revealing, as what is learned is learned by the

Translated by Malcolm Schofield.

revelations of knowledge? Or is it a form of discovery, as what is discovered is discovered—for example, facts about health and sickness by medicine, or the intentions of the gods (as the diviners say) by divination: for a skill is surely in our view a discovery of things, is it not?

Friend: Certainly.

Socrates: Which among these alternatives, then, would we be most inclined to suppose law to be?

Friend: The resolutions and decrees themselves, in my own view. What c else could one say that law is? So it looks as though the answer to your global question about law has to be: resolution of a city.

Socrates: Political judgment, it appears, is what you call law.

Friend: I do.

Socrates: And perhaps this is a good answer. But maybe we'll get a better one in the following way. Do you call certain people wise?

Friend: I do.

Socrates: Aren't the wise wise in virtue of wisdom?

Friend: Yes.

Socrates: Well then, aren't the just just in virtue of justice?

Friend: Certainly.

Socrates: And aren't the law-abiding law-abiding in virtue of law?

Friend: Yes.

Socrates: And the lawless lawless by virtue of lawlessness? d

Friend: Yes.

Socrates: And the law-abiding are just?

Friend: Yes.

Socrates: And the lawless unjust?

Friend: Unjust.

Socrates: Aren't justice and law something very fine?

Friend: That is so.

Socrates: But injustice and lawlessness are something very shameful?

Friend: Yes.

Socrates: And the one preserves cities and everything else, but the other destroys and subverts them?

Friend: Yes.

Socrates: Then we must think about law as something that is fine, and seek it as something good.

Friend: Obviously.

Socrates: Now we said that law is resolution of a city?

Friend: We did say so. e

Socrates: Well, now: is it not the case that some resolutions are admirable, others wicked?

Friend: It is.

Socrates: Yet law was not wicked?

Friend: No.

Socrates: It is not correct, then, to reply in such unqualified terms that law is resolution of a city.

Friend: Not in my view.

Socrates: It would not be in order, then, to take it that a wicked resolution is law.

Friend: No indeed.

Socrates: But still, it is quite apparent to me for my part that law is a kind of judgment. And since it is not the wicked judgment, is it not quite obvious by now that it is the admirable, given that law is judgment?

Friend: Yes.

Socrates: But what is admirable judgment? Is it not true judgment?

315 Friend: Yes.

Socrates: Now isn't true judgment discovery of reality?

Friend: It is.

Socrates: Then ideally law is discovery of reality.

Friend: How is it, Socrates, if law is discovery of reality, that we do not always make use of the same laws on the same matters, assuming we have discovered reality?

Socrates: Ideally, nevertheless, law is discovery of reality. So it must
b be that any human beings who do not always make use of the same laws, as appears to be the case with us, are not always capable of discovering what ideally the law does discover—reality. Let's have a look and see whether it actually does become quite clear to us from our inquiry whether we always make use of the same laws, or different ones at different times, and whether all make use of the same laws, or different people different ones.

Friend: That's not difficult to determine, Socrates: the same people do not always make use of the same laws, and different people make use of different ones. For example, with us there is no law providing for human sacrifice—indeed it is unholy, whereas the Carthaginians make such sacri-
c fices as something that is holy and lawful for them, and in fact some of them sacrifice even their own sons to Cronus, as perhaps you have heard yourself. And it is not just foreigners who make use of different laws from us, but those people in Lycia and the descendants of Athamas perform the sacrifices they perform even though they are Greeks. You know about ourselves too, I imagine, from what you have heard yourself, the sorts of laws we made use of in the past with regard to those who died, slaughtering
d sacred victims before the corpse was carried out and sending for urn women. Again, those who lived in still earlier times used to bury their dead right there in the house. We do none of these things. One could give thousands of such examples—there is ample room to prove that we do not always make use of the same laws as we ourselves recognize, nor do people make use of the same laws as one another.

Socrates: Look, my friend, it wouldn't be at all surprising if what you say was correct but went over my head. So long as you express your views
e in lengthy speeches in your own style and I do too in my turn, I don't think we'll ever reach any agreement. But if the inquiry is made a common

enterprise, maybe we would agree. So join in a common inquiry with me, asking questions of me if you like, or answering them if you would rather.

FRIEND: Socrates, I'm willing to answer whatever you like.

SOCRATES: Right, then: do you accept that just things are unjust and unjust things just, or that the just are just and the unjust unjust?

FRIEND: I accept that the just are just and the unjust unjust. 316

SOCRATES: Now are they accepted as such among all people as they are here?

FRIEND: Yes.

SOCRATES: So among the Persians as well?

FRIEND: Among the Persians as well.

SOCRATES: Always, I suppose.

FRIEND: Always.

SOCRATES: Are things which pull down the scale more accepted here as heavier, and those which pull it down less as lighter, or the opposite?

FRIEND: No, those which pull it down more as heavier, those less as lighter.

SOCRATES: And is this the case in Carthage and in Lycia as well?

FRIEND: Yes.

SOCRATES: Things that are fine are accepted as fine everywhere, it appears, b
and things that are shameful as shameful, and not the shameful as fine or the fine as shameful.

FRIEND: That is so.

SOCRATES: Therefore, to generalize to all cases, what is so is accepted as being so, not what is not so, both among us and among all other people.

FRIEND: That is my view.

SOCRATES: Then anyone who mistakes what is so mistakes what is accepted.

FRIEND: When you express things this way, Socrates, these things do seem to be accepted always both by us and by the others. But when I consider that we are constantly turning the laws upside down, I cannot c
be persuaded.

SOCRATES: Perhaps you do not take into consideration that when we move the pieces at checkers they remain the same pieces. But look at the question with me in the following way. Have you ever come across a treatise on health for the sick?

FRIEND: I have.

SOCRATES: Then you know what skill it is that this is the treatise of?

FRIEND: I do know—medicine.

SOCRATES: Don't you call those who possess knowledge of these matters doctors?

FRIEND: I agree.

SOCRATES: Do people who possess knowledge accept the same things on d
the same matters, or do different people accept different things?

FRIEND: The same things, in my view.

SOCRATES: Is it simply that the Greeks accept the same things as the Greeks on the matters they know about, or do foreigners too accept the same things, agreeing among themselves and with the Greeks?

FRIEND: I would suppose it definitely has to be the case that those who know agree in accepting the same things, both Greeks and foreigners.

SOCRATES: Well answered. And won't they always agree?

FRIEND: Yes, always.

SOCRATES: And don't the doctors in their treatises on health write what
e they accept as being so?

FRIEND: Yes.

SOCRATES: Then these treatises of the doctors are medical, and laws of medicine.

FRIEND: Medical, to be sure.

SOCRATES: So farming treatises too are laws of farming?

FRIEND: Yes.

SOCRATES: And whose are the treatises and accepted ideas on working a garden?

FRIEND: Gardeners.

SOCRATES: Then these are our laws of gardening.

FRIEND: Yes.

SOCRATES: Formulated by people who know how to manage a garden?

FRIEND: Obviously.

SOCRATES: And it is the gardeners who have the knowledge?

FRIEND: Yes.

SOCRATES: And whose are the treatises and accepted ideas on preparing a meal?

FRIEND: Cooks.

SOCRATES: Then these are the laws of cookery?

FRIEND: Cookery.

317 SOCRATES: Formulated, as it appears, by people who know how to manage the preparation of a meal?

FRIEND: Yes.

SOCRATES: And it is the cooks who have the knowledge, as they claim?

FRIEND: Yes, they have the knowledge.

SOCRATES: Very well. But then, whose are the treatises and accepted ideas on administration of a city? Isn't it those who know how to manage cities?

FRIEND: In my view it is.

SOCRATES: And does anyone possess this knowledge except those who are skilled in politics and kingship?

FRIEND: Those it is.

SOCRATES: Then these writings which people call laws are treatises on
b politics—treatises by kings and good men.

FRIEND: What you say is true.

SOCRATES: Then surely those who possess knowledge will not write different things at different times on the same matters?

FRIEND: No.

Socrates: Nor yet will they ever change one set of accepted ideas for another on the same matters?

Friend: Certainly not.

Socrates: So if we see anyone doing this anywhere, shall we say that those who do it are in possession of knowledge, or not in possession?

Friend: Not in possession.

Socrates: And won't we also say that whatever is correct is the accepted idea in each sphere, whether in medicine or in cookery or in gardening?

Friend: Yes. c

Socrates: And whatever is not correct, we shall never again say that it is the accepted idea?

Friend: Never again.

Socrates: Then it proves to be unlawful.

Friend: It must be.

Socrates: And in treatises on what is just and unjust and in general on the organization of a city and on how one should administer a city, isn't what is correct a law of royal skill? But not what is not correct, although it is taken to be law by those who don't know. That is unlawful.

Friend: Yes.

Socrates: Then we were correct in agreeing that law is discovery of re- d
ality.

Friend: It seems so.

Socrates: Now to a further point that we need to note carefully on the topic. Who has knowledge of how to distribute seed over land?

Friend: A farmer.

Socrates: Does he distribute appropriate seed for each sort of land?

Friend: Yes.

Socrates: Then the farmer is a good apportioner of it, and his laws and distributions are correct in this sphere?

Friend: Yes.

Socrates: And who is a good apportioner of notes in songs?[1] Whose laws are correct here?

Friend: The laws of the flautist and the lute-player. e

Socrates: Then the person whose laws are most authoritative in this sphere is the person whose command of flute-playing is best.

Friend: Yes.

Socrates: And who is best at distributing nourishment for human bodies? Is it not the person who distributes it appropriately?

Friend: Yes.

Socrates: Then his distributions and laws are best, and the person whose laws are most authoritative in this sphere is also the best apportioner.

Friend: Certainly.

Socrates: Who is this person?

Friend: A trainer. 318

1. Conjecturally deleting *kai ta axia neimai* in d8–9.

SOCRATES: He is supreme at driving a human herd?[2]

FRIEND: Yes.

SOCRATES: And who is supreme at driving a herd of sheep? What is his name?

FRIEND: A shepherd.

SOCRATES: Then it is the laws of the shepherd that are best for the sheep.

FRIEND: Yes.

SOCRATES: And the laws of the cowherd for cattle?

FRIEND: Yes.

SOCRATES: And whose laws are best for human souls? Isn't it those of the king? Agreed?

FRIEND: I do agree.

b SOCRATES: You're doing well in your answers. Can you now say who in antiquity proved himself a good lawgiver in the sphere of laws of flute-playing? Perhaps you don't call him to mind—would you like me to remind you?

FRIEND: Certainly.

SOCRATES: Isn't it said to be Marsyas, and his boyfriend Olympus the Phrygian?[3]

FRIEND: What you say is true.

SOCRATES: Now their flute tunes are absolutely divine, and alone stir
c and make manifest those who are in need of the gods—and to this day there are still only these, because they are divine.

FRIEND: That is so.

SOCRATES: And who among the ancient kings is said to have proved himself to be a good lawgiver, so that even to this day his accepted provisions remain in force, because they are divine?

FRIEND: I cannot call him to mind.

SOCRATES: Don't you know which of the Greeks make use of the most ancient laws?

FRIEND: Are you referring to the Spartans, and Lycurgus the lawgiver?

SOCRATES: But that is not yet three hundred years ago, perhaps, or a
d little more than that. Where do the best of their accepted provisions come from? Do you know?

FRIEND: People say from Crete.

SOCRATES: So among the Greeks it is the Cretans who make use of the most ancient laws?

FRIEND: Yes.

SOCRATES: Then do you know who were their good kings? Minos and Rhadamanthus, the sons of Zeus and Europa: these laws were theirs.

2. Accepting a conjectural deletion of *tou sōmatos* in a1–2.

3. Marsyas was said to have invented a form of music for wind instruments (such as the *aulos*, here conventionally but misleadingly translated "flute"). Olympus was credited with bringing this music from the Near East to Greece and developing it further.

FRIEND: People certainly claim that Rhadamanthus was a just man, Socrates; but they say Minos was savage and harsh and unjust.

SOCRATES: My good friend, you are telling a theatrical Attic version of the story.

FRIEND: Well, isn't that what they say about Minos? e

SOCRATES: Not Homer and Hesiod. Yet they are more persuasive than all the tragedians put together—who are the people you are listening to if this is what you are saying.

FRIEND: And what is it that Homer and Hesiod say about Minos?

SOCRATES: I will tell you, so that you won't commit impiety along with the mass of people. There cannot be anything more impious than this, nor anything over which one should take more precautions, than being mistaken in word and deed with regard to gods, and in second place, with regard to divine humans. You should always exercise very great forethought, when you are about to criticize or praise a man, to ensure 319
that you don't speak incorrectly. This is why you should learn to distinguish admirable from wicked men. For god vents his anger when anyone criticizes someone similar to himself, or praises someone whose condition is opposite to his own; the former is the good man. For you really mustn't think that there are sacred stones and pieces of wood and birds and snakes, but not humans.[4] A good human being is the most sacred of all of these, and one who is wicked the most defiled.

So now I will speak about Minos, and how Homer and Hesiod sing his b
praises, with this purpose in mind: that you, as a human and the son of a human, may not be mistaken in what you say about a hero who is son of Zeus. Homer when telling us about Crete and how there are many men in it and "ninety cities," says:

> *Among them is Cnossus, a great city, where Minos*
> *was King in the ninth season, having converse with great Zeus.*[5]

This, then, is how Homer sings the praises of Minos: briefly expressed— c
but Homer composed nothing like it for any of the heroes. That Zeus is a sophist and that this art of his is something altogether excellent, he makes clear here as well as in many other places. For he means that during the ninth year Minos got together with Zeus to discuss things, and went regularly to be educated by Zeus as though he were a sophist. So the fact that Homer assigns this privilege of being educated by Zeus to no one among the heroes but to Minos is extraordinary praise. And in the book of the dead in the *Odyssey* he represents Minos, not Rhadamanthus, d
as giving judgment with a golden scepter.[6] He does not represent

4. Reading *toi* for *ti* in a5.
5. *Odyssey* xix.178–79.
6. *Odyssey* xi.568–71.

Rhadamanthus as giving judgment in this passage, nor as associated with Zeus in any passage. For this reason I say that Minos beyond all others has had his praises sung by Homer.

To be the son of Zeus and then to be the only one educated by Zeus is praise that cannot be exceeded. For this verse, "was king in the ninth season, having converse with great Zeus" indicates that Minos was an
e associate of Zeus. "Converses" are discussions, and someone who "has converse" is an associate in discussions. In other words, every nine years Minos would go into the Cave of Zeus, partly to learn and partly to demonstrate what he had learned from Zeus in the preceding ninth year. There are those who suppose that someone who "has converse" is a drinking and partying companion of Zeus, but one may use the following as
320 evidence that those who make this supposition talk nonsense. Of all the many human beings there are, Greeks and foreigners, none abstain from drinking sessions and the sort of partying there is when wine is present except Cretans and in second place Spartans, who have learned it from the Cretans. In Crete it is one of the laws Minos laid down that people are not to drink together to the point of drunkenness. And indeed it is clear that what he accepted as admirable he laid down as accepted practice
b also for his own citizens. For Minos would surely not have accepted one thing but done something different from what he accepted, like a dishonest person. His form of association was as I say, through discourses for education into virtue. This is why he laid down for his own citizens those laws which have made Crete happy for all time, and Sparta from when she began to make use of them, because they are divine.

c Rhadamanthus was a good man: he had been educated by Minos. But he had been educated not in the art of kingship as a whole, but in one subsidiary to it, confined to presiding in law courts; that is why he was said to be a good judge. Minos used him as watcher over the law in the town, but Talos in the rest of Crete. Talos used to tour the villages three times a year, preserving a watch over the law in them by having the laws written on bronze tablets: this is why he was called "bronze."

d Hesiod too has said some things akin to these with regard to Minos. After making mention of his name he says

> *Who proved to be most kingly of mortal kings, and ruled over most of the people in the countryside, holding the scepter of Zeus—with which he exercised kingship also over cities.*[7]

He means by "the scepter of Zeus" nothing other than the education he received from Zeus, by means of which he governed Crete.

e FRIEND: Why, then, Socrates, has this rumor about Minos as someone who was uneducated and harsh ever been spread about?

SOCRATES: Because of something over which you, my good friend, will take precautions, if you are sensible, and so will anyone else who cares for a good reputation: never to fall out with any man who is skilled

7. Hesiod frg. 144 (Merkelbach-West).

in poetry. The poets have great power where reputation is concerned, whichever mode—eulogy or abuse—they adopt in writing about people. Which was the mistake Minos made in waging war on this city, where as well as many other forms of wisdom there are poets of every kind, who compose tragedy as well as every other kind of poetry. Tragedy is an 321
ancient form here, not beginning with Thespis as some suppose nor with Phrynichus:[8] if you care to consider the matter you will find it to be a very ancient discovery, made in this very city. Tragedy is that form of poetry which most delights the populace and which most seduces the soul. So it is in tragedy that we torture Minos and take vengeance upon him for that tribute he compelled us to pay.[9] This, then, was the mistake Minos made, in falling out with us. And that is why, to answer your question, he has come to have a worse and worse reputation. He was good and lawabiding, b
as we said at the outset, a good apportioner. And the greatest indication of this is that his laws are unaltered: that shows how well he did at discovering reality as regards habitation of a city.

FRIEND: In my view, Socrates, the account you have given is a likely one.

SOCRATES: Now if what I say is true, is it your view that the Cretans, who are citizens of Minos and Rhadamanthus, make use of the most ancient laws?

FRIEND: They seem to.

SOCRATES: Then these two have proved to be the best lawgivers among c
the ancients, apportioners and shepherds of men, just as Homer said that the good general was "shepherd of the people."[10]

FRIEND: Certainly.

SOCRATES: Please, now, by Zeus god of friendship: if someone were to ask us what are these things that the good lawgiver and apportioner for the body distributes to the body to make it better, we would say if we were to reply well and briefly: food and hard work, building it up with the one, and exercising and constituting the body itself with the other.

FRIEND: Quite correct.

SOCRATES: If then after this he were to ask us: "Whatever then are those d
things that the good lawgiver and apportioner distributes to the soul to make it better?," what reply would we make if we are not to be ashamed both of ourselves and of our mature years?

FRIEND: I don't any more know what to say.

SOCRATES: Yet it really is a disgrace to the soul in each of us that it plainly doesn't know what in it constitutes goodness and badness for it, whereas what constitutes goodness and badness for the body, and for other things, is something it has already considered.

8. Thespis was the first playwright to win a prize at the Athenian festival of Dionysus, about 535 B.C. Phrynichus was a tragic playwright active in the early fifth century.

9. According to legend, after Minos defeated the Athenians, he exacted a tribute every nine years of seven maidens and seven young men, whom he imprisoned in the Labyrinth, eventually to be devoured by the Minotaur, the 'bull of Minos'.

# LAWS

*This work, Plato's longest and a product of his last years, was left unpublished at his death, perhaps because he felt it still needed revision. Plato's associate Philip of Opus is said to have transcribed it for publication. It seems to be complete as it stands.*

*Three elderly gentlemen, all apparently fictional—Clinias from Crete, Megillus, a Spartan, and an unnamed Athenian—begin a journey on foot from Cnossus in Crete to the shrine of Zeus' birthplace on Mount Ida. The Athenian begins a conversation on 'laws and constitutions' (which continues till the end of book III) by querying the central purpose of his Cretan and Spartan friends' famously similar civic institutions: the optimal conduct of war, as Clinias maintains. As one might expect in an Athenian, this strikes him as too narrow and exclusive a focus on one aspect of civic life, and that a secondary one: wars are undertaken to make secure the activities of peacetime. Laws should indeed see to the training of citizens in the virtues of wartime, but also, and even more, in those of peace. A broader and culturally deeper education and range of experience are needed to produce truly good human beings. Athens itself, however, had been ruined by its predilection for the personal freedoms provided by democratic institutions; the best laws would follow the Cretan and Spartan lead by establishing strong civic authority and discipline, but they would aim at the fullest possible development of all the human virtues.*

*At the end of book III Clinias reveals that he is one of ten commissioners entrusted with establishing the laws for a new city being founded in Crete, and the conversation continues, with the Athenian now offering his advice on the laws that will be needed to achieve this objective. Since these are to be citizens of a free, self-governing state, the laws must have 'preambles' that explain the purposes for which they are instituted, so as to gain the willing acquiescence of those to whom they apply: commands backed by threats (contained in the bare text of the law) are otherwise not appropriately addressed to a free person (book IV). And it is in the preliminary discussion and preambles to the laws set out in the following books—running the gamut from family law and education to administrative, trade, property, and criminal law—that we find the philosophical core of the dialogue's jurisprudence and social and political theory.*

*Of special note are the theory of punishment and its legitimate purposes in book IX and the elaborate argument in book X to prove the existence of gods and to establish the law forbidding behavior that denies them due deference and enacting the appropriate punishments for infractions.*

*Understandably, most people nowadays read the* Laws *for its theoretical ideas more than for any practical applications. Scholars debate whether the constitution of* Laws *replaces—and implicitly criticizes—the constitution of* Republic, *with its rule by philosopher-kings essentially untrammeled by law. And they compare—and contrast—the accounts of the rule of law and its philosophical basis given in* Statesman *and* Laws. *But Plato's Academy was not merely an institute for higher education and for research in mathematics, the sciences, philosophy, and ethical and political thought; Plato and his associates were called upon also for concrete advice about 'laws and constitutions' in reforming existing states and founding new ones. In writing* Laws *Plato was perhaps not engaging in pure constitutional and legislative theory, as in* Statesman *and* Republic. *In considering* Laws *in relation to these other works, one should bear in mind this context of possible practical applications.*

*J.M.C.*

# Book I

Athenian: Tell me, gentlemen, to whom do you give the credit for 624
establishing your codes of law? Is it a god, or a man?

Clinias: A god, sir, a god—and that's the honest truth. Among us Cretans it is Zeus; in Sparta—which is where our friend here hails from—they say it is Apollo, I believe. Isn't that right?

Megillus: Yes, that's right.

Athenian: You follow Homer, presumably, and say that every ninth
year Minos used to go to a consultation with his father Zeus,[1] and laid b
down laws for your cities on the basis of the god's pronouncements?

Clinias: Yes, that's our Cretan version, and we add that Minos' brother,
Rhadamanthus—doubtless you know the name—was an absolute paragon 625
of justice. We Cretans would say that he won this reputation because of the scrupulously fair way in which he settled the judicial problems of his day.

Athenian: A distinguished reputation indeed, and one particularly appropriate for a son of Zeus. Well then, since you and your companion have been raised under laws with such a splendid ancestry, I expect you will be quite happy if we spend our time together today in a discussion
about constitutions and laws, and occupy our journey in a mutual exchange b
of views. I've heard it said that from Cnossus to Zeus' cave and shrine is quite a long way, and the tall trees along the route provide shady resting-places which will be more than welcome in this stiflingly hot weather. At

Translated by Trevor J. Saunders. Text: Budé, bks. I–VI ed. E. des Places, VII–XII ed. A. Diès, Paris (1951, 1956).

1. *Odyssey* xix.178–79. Minos was a legendary king of Crete.

our age, there is every excuse for having frequent rests in them, so as to
refresh ourselves by conversation. In this way we shall come to the end
of the whole journey without having tired ourselves out.

c Clinias: And as you go on, sir, you find tremendously tall and graceful
cypress trees in the sacred groves; there are also meadows in which we
can pause and rest.

Athenian: That sounds a good idea.

Clinias: It is indeed, and it'll sound even better when we see them. Well
then, shall we wish ourselves *bon voyage*, and be off?

Athenian: Certainly. Now, answer me this. You have meals which you
eat communally; you have a system of physical training, and a special
type of military equipment. Why is it that you give all this the force of law?

Clinias: Well, sir, I think that these customs are quite easy for anyone
to understand, at any rate in our case. You see the Cretan terrain in general
d does not have the flatness of Thessaly: hence we usually train by running
(whereas the Thessalians mostly use horses), because our land is hilly and
more suited to exercise by racing on foot. In this sort of country we have
to keep our armor light so that we can run without being weighed down,
and bows and arrows seem appropriate because of their lightness. All
these Cretan practices have been developed for fighting wars, and that's
e precisely the purpose I think the legislator intended them to serve when
he instituted them. Likely enough, this is why he organized the common
meals, too: he observed that when men are on military service they are
all obliged by the pressure of events, for their own protection, to eat
together throughout the campaign. In this, I think, he censured the stupidity
of ordinary men, who do not understand that they are all engaged in a
never-ending lifelong war against all other states. So, if you grant the
626 necessity of eating together for self-protection in war-time, and of appoint-
ing officers and men in turn to act as guards, the same thing should be
done in peace-time too. The legislator's position would be that what most
men call 'peace' is really only a fiction, and that in cold fact all states are
by nature fighting an undeclared war against every other state. If you see
things in this light, you are pretty sure to find that the Cretan legislator
established all these institutions of ours, both in the public sphere and the
private, with an eye on war, and that this was the spirit in which he gave
b us his laws for us to keep up. He was convinced that if we don't come
out on top in war, nothing that we possess or do in peace-time is of the
slightest use, because all the goods of the conquered fall into the possession
of the victors.

Athenian: You certainly have had a splendid training, sir! It has, I think,
enabled you to make a most penetrating analysis of Cretan institutions.
But explain this point to me rather more precisely: the definition you gave
c of a well-run state seems to me to demand that its organization and
administration should be such as to ensure victory in war over other
states. Correct?

CLINIAS: Of course, and I think our companion supports my definition.

MEGILLUS: My dear sir, what other answer could one possibly make, if one is a Spartan?

ATHENIAN: But if this is the right criterion as between states, what about as between villages? Is the criterion different?

CLINIAS: Certainly not.

ATHENIAN: It is the same, then?

CLINIAS: Yes.

ATHENIAN: Well now, what about relations between the village's separate households? And between individual and individual? Is the same true?

CLINIAS: The same is true.

ATHENIAN: What of a man's relations with himself—should he think of d *himself* as his own enemy? What's our answer now?

CLINIAS: Well done, my Athenian friend! (I'd rather not call you 'Attic', because I think it is better to call you after the goddess,[2] as you deserve.) You have made the argument clearer by expressing it in its most elementary form. Now you will find it that much easier to realize that the position we took up a moment ago is correct: not only is everyone an enemy of everyone else in the public sphere, but each man fights a private war against himself.

ATHENIAN: You *do* surprise me, my friend. What do you mean? e

CLINIAS: This, sir, is where a man wins the first and best of victories—over himself. Conversely, to fall a victim to oneself is the worst and most shocking thing that can be imagined. This way of speaking points to a war against ourselves within each one of us.

ATHENIAN: Now let's reverse the argument. You hold that each one of us is either 'conqueror of' or 'conquered by' himself: are we to say that 627 the same holds good of household, village and state? Or not?

CLINIAS: You mean that they are individually either 'conquerors of' or 'conquered by' themselves?

ATHENIAN: Yes.

CLINIAS: This again is a good question to have asked. Your suggestion is most emphatically true, particularly in the case of states. Wherever the better people subdue their inferiors, the state may rightly be said to be 'conqueror of' itself, and we should be entirely justified in praising it for its victory. Where the opposite happens, we must give the opposite verdict.

ATHENIAN: It would take too long a discussion to decide whether in fact b there *is* a sense in which the worse element could be superior to the better, so let's leave that aside. For the moment, I understand your position to amount to this: sometimes evil citizens will come together in large numbers and forcibly try to enslave the virtuous minority, although both sides are members of the same race and the same state. When they prevail, the state may properly be said to be 'inferior to' itself and to be an evil one; but

2. Athena, goddess of wisdom and patron of Athens in Attica.

when they are defeated, we can say it is 'superior to' itself and that it is a good state.

c Clinias: That's a paradoxical way of putting it, sir, but it is impossible to disagree.[3]

Athenian: But now wait a minute. Let's look at this point again: suppose a father and mother had several sons—should we be surprised if the majority of these brothers were unjust, and the minority just?

Clinias: By no means.

Athenian: We could say that if the wicked brothers prevail the whole
d household and family may be called 'inferior to' itself, and 'superior to' itself if they are subdued—but it would be irrelevant to our purpose to labor the point. The reason why we're now examining the usage of the common man is not to pass judgment on whether he uses language properly or improperly, but to determine what is essentially right and wrong in a given law.

Clinias: Very true, sir.

Megillus: I agree—it's been nicely put, so far.

Athenian: Let's look at the next point. Those brothers I've just mentioned—they'd have a judge, I suppose?

Clinias: Of course.

e Athenian: Which of these judges would be the better, the one who put all the bad brothers to death and told the better ones to run their own lives, or the one who put the virtuous brothers in command, but let the scoundrels go on living in willing obedience to them? And we can probably add a third and even better judge—the one who will take this single
628 quarrelling family in hand and *reconcile* its members, without killing any of them; by laying down regulations to guide them in the future, he will be able to ensure that they remain on friendly terms with each other.

Clinias: Yes, this judge—the legislator—would be incomparably better.

Athenian: But in framing these regulations he would have his eye on the exact opposite of war.

Clinias: True enough.

Athenian: But what about the man who brings harmony to the state?
b In regulating its life, will he pay more attention to external war, or internal? This 'civil' war, as we call it, does break out on occasion, and is the last thing a man would want to see in his own country; but if it did flare up, he would wish to have it over and done with as quickly as possible.

Clinias: He'll obviously pay more attention to the second kind.

Athenian: One side might be destroyed through the victory of the other, and then peace would follow the civil war; or, alternatively, peace and friendship might be the result of reconciliation. Now, which of these results

3. Clinias is struck by the paradox that when 'inferior' numbers conquer, the state is morally 'superior', and when 'superior' numbers conquer, it is morally 'inferior'.

would you prefer, supposing the city then had to turn its attention to a foreign enemy? c

CLINIAS: Everybody would prefer the second situation to the first, so far as his own state was concerned.

ATHENIAN: And wouldn't a legislator have the same preference?

CLINIAS: He certainly would.

ATHENIAN: Now surely, every legislator will enact his every law with the aim of achieving the greatest good?

CLINIAS: Of course.

ATHENIAN: The greatest good, however, is neither war nor civil war (God forbid we should ever need to resort to either of them), but peace and goodwill among men. And so the victory of a state over itself, it seems, does not after all come into the category of ideals; it is just one of d
those things in which we've no choice. You might just as well suppose that the sick body which has been purged by the doctor was therefore in the pink of condition, and disregard the body that never had any such need. Similarly, anyone who takes this sort of view of the happiness of a state or even an individual will never make a true statesman in the true sense—if, that is, he adopts foreign warfare as his first and only concern; he'll become a *genuine* lawgiver only if he designs his legislation about war as a tool for peace, rather than his legislation for peace as an instrument e
of war.

CLINIAS: What you say, sir, has the air of having been correctly argued. Even so, I shall be surprised if our Cretan institutions, and the Spartan ones as well, have not been wholly orientated towards warfare.

ATHENIAN: Well, that's as may be. At the moment, however, there's no 629
call for a stubborn dispute on the point. What we need to do is to conduct our inquiry into these institutions dispassionately, seeing that we share this common interest with their authors. So keep me company in the conversation I'm going to have. Let's put up Tyrtaeus,[4] for example, an Athenian by birth who became a citizen of Sparta. He, of all men, was particularly concerned with what we are discussing. He said:

*'I'd not mention a man, I'd take no account of him,*

no matter' (he goes on) 'if he were the richest of men, no matter if he had b
a huge number of good things' (he enumerated pretty nearly all of them) 'unless his prowess in war were beyond compare.' Doubtless you too have heard the lines; Megillus here knows them backwards, I expect.

4. Tyrtaeus (mid-seventh century) was noted for his poems in praise of courage in war. The Athenian quotes the first line of the poem verbatim and then summarizes the next nine; at 629e he gives a somewhat adapted quotation of lines 11 and 12. For the whole poem see J. M. Edmonds, *Elegy and Iambus* (Loeb), vol. I, pp. 74–77.

MEGILLUS: I certainly do.

CLINIAS: And they have certainly got as far as Crete: they were brought across from Sparta.

ATHENIAN: Now then, let's jointly ask our poet some such question as
c this: 'Tyrtaeus, you are a poet, and divinely inspired. We are quite sure of your wisdom and virtue, from the special commendation you have bestowed on those who have particularly distinguished themselves in active service. On this point we—Megillus here, Clinias of Cnossus and I—find ourselves, we think, emphatically in agreement with you; but we want to be quite clear that we are talking about the same people. Tell us: do you clearly distinguish, as we do, two sorts of war? Or what?' I fancy
d that in reply to this even a man far less gifted than Tyrtaeus would state the facts of the case and say 'Two'. The first would be what we all call 'civil' war, and as we were saying just now, this is the most bitterly fought of all; and we shall all agree, I think, in making the other type of war the one we fight when we quarrel with our foreign enemies from outside the state, which is a much less vicious sort of war than the other.

CLINIAS: I agree.

ATHENIAN: 'Well now, Tyrtaeus, which category of soldiers did you shower with your praises and which did you censure? Which was the type of war they were fighting, that led you to speak so highly of them? The war fought against foreign enemies, it would seem—at any rate, you
e have told us in your verses that you have no time for men who cannot "stand the sight of bloody butchery

*and do not attack in close combat with the foe."'*

So here is the next thing we'd say: 'It looks as if you reserve your special praise, Tyrtaeus, for those who fight with conspicuous gallantry in external war against a foreign enemy.' I suppose he'd agree to this, and say 'Yes'?

CLINIAS: Surely.

ATHENIAN: However, while not denying the courage of those soldiers,
630 we still maintain that those who display conspicuous gallantry in *total* war are very much more courageous. We have a poet to bear witness to this, Theognis,[5] a citizen of Megara in Sicily, who says:

*'Cyrnus, find a man you can trust in deadly feuding:*
*He is worth his weight in silver and gold.'*

5. Theognis (late sixth century) belonged to the landed gentry of Megara (probably the Megara near Athens, in spite of what is said here). He wrote lively, indignant poems from a conservative point of view about the social and political changes of his day. Some 1400 lines of his work survive: see J. M. Edmonds, *Elegy and Iambus* (Loeb), vol. I, pp. 216–401. The Athenian quotes lines 77–78.

Such a man, in our view, who fights in a tougher war, is far superior to
the other—to just about the same degree as the combination of justice, b
self-control and good judgment, reinforced by courage, is superior to cour-
age alone. In civil war a man will never prove sound and loyal unless he
has every virtue; but in the war Tyrtaeus mentions there are hordes of
mercenaries who are ready to dig their heels in and die fighting,[6] most of
whom, apart from a very small minority, are reckless and insolent rogues,
and just about the most witless people you could find. Now, what conclu-
sion does my argument lead to? What is the point I am trying to make
clear in saying all this? Simply that in laying down his laws every legislator c
who is any use at all—and especially your legislator here in Crete, duly
instructed by Zeus—will never have anything in view except the highest
virtue. This means, in Theognis' terms, 'loyalty in a crisis'; one might call
it 'complete justice'. The virtue that Tyrtaeus praised so highly is indeed
a noble one, and has been appropriately celebrated by the poet, but strictly
speaking, in order of merit it comes only fourth. d

Clinias: And that, sir, is to reduce our Cretan legislator to the status of a failure.

Athenian: No, my dear fellow, it is not. The failure was entirely on our part. We were quite wrong to imagine that when Lycurgus and Minos[7] established the institutions of Sparta and this country the primary end they had in view was invariably warfare.

Clinias: But what ought we to have said?

Athenian: We had no particular axes to grind in our discussion, and I
think we ought to have told the honest truth. We ought not to have said
that the legislator laid down his rules with an eye on only a part of virtue, e
and the most trivial part at that. We should have said that he aimed at
virtue in its entirety, and that the various separate headings under which
he tried to frame the laws of his time were quite different from those
employed by modern legal draftsmen. Each of these invents any category
he feels he wants, and adds it to his code. For instance, one will come up
with a category on 'Inheritances and Heiresses', another with 'Assault',
and others will suggest other categories *ad infinitum.* But we insist that the
correct procedure for framing laws, which is followed by those who do 631
the job properly, is precisely the one we have just embarked upon. I am
delighted at the way you set about explaining your laws: you rightly
started with *virtue,* and explained that this was the aim of the laws the
legislator laid down. However, you did say that he legislated entirely by
reference to only one part of virtue, and the most inconsiderable part at
that. Now there I thought you were wrong: hence all these additional

6. See Tyrtaeus 16–18.

7. Traditional founders of the Spartan and Cretan constitutions.

remarks. So what is this distinction I could have wished to hear you draw
b in your argument? Shall I tell you?

CLINIAS: Certainly.

ATHENIAN: 'Now, Sir,' you ought to have said, 'it is no accident that the laws of the Cretans have such a high reputation in the entire Greek world. They are sound laws, and achieve the happiness of those who observe them, by producing for them a great number of benefits. These benefits fall into two classes, "human" and "divine." The former depend on the
c latter, and if a city receives the one sort, it wins the other too—the greater include the lesser; if not, it goes without both. Health heads the list of the lesser benefits, followed by beauty; third comes strength, for racing and other physical exercises. Wealth is fourth—not "blind" wealth,[8] but the clear-sighted kind whose companion is good judgment—and good judgment itself is the leading "divine" benefit; second comes the habitual self-control of a soul that uses reason. If you combine these two with courage,
d you get (thirdly) justice; courage itself lies in fourth place. All these take a natural precedence over the others, and the lawgiver must of course rank them in the same order. Then he must inform the citizens that the other instructions they receive have these benefits in view: the "human" benefits have the "divine" in view, and all these in turn look towards reason, which is supreme. The citizens join in marriage; then children,
e male and female, are born and reared; they pass through childhood and later life, and finally reach old age. At every stage the lawgiver should supervise his people, and confer suitable marks of honor or disgrace. Whenever they associate with each other, he should observe their pains,
632 pleasures and desires, and watch their passions in all their intensity; he must use the laws themselves as instruments for the proper distribution of praise and blame. Again, the citizens are angry or afraid; they suffer from emotional disturbances brought on by misfortune, and recover from them when life is going well; they have all the feelings that men usually experience in illness, war, poverty or their opposites. In all these instances
b the lawgiver's duty is to isolate and explain what is good and what is bad in the way each individual reacts. Next, the lawgiver must supervise the way the citizens acquire money and spend it; he must keep a sharp eye on the various methods they all employ to make and dissolve (voluntarily or under duress) their associations with one another, noting which methods are proper and which are not; honors should be conferred upon those who
c comply with the laws, and specified penalties imposed on the disobedient. When the lawgiver comes to the final stages of organizing the entire life of the state, he must decide what honors should be accorded the dead and how the manner of burial should be varied. His survey completed, the author of the legal code will appoint guardians (some of whom will have

8. Plutus, the god of wealth, was traditionally represented as blind.

rational grounds for their actions, while others rely on "true opinion"), so
that all these regulations may be welded into a rational whole, demonstra-
bly inspired by considerations of justice and self-restraint, not of wealth
and ambition.' That is the sort of explanation, gentlemen, that I should d
have liked you to give, and still want now—an explanation of how all
these conditions are met in the laws attributed to Zeus and the Pythian
Apollo, which Minos and Lycurgus laid down. I wish you could have told
me why the system on which they are arranged is obvious to someone
with an expert technical—or even empirical—knowledge of law, while to
laymen like ourselves it is entirely obscure.

CLINIAS: Well then, sir, where do we go from here?

ATHENIAN: I think we ought to go back and start again. As before, we e
should consider first the activities that promote courage; then, if you like,
we'll work through the other kinds of virtue, one by one. We'll take the
way we deal with the first as a model, and try to while away the journey
by discussing the others in the same way. Then after dealing with virtue
as a whole, we shall show, God willing, that the regulations we have just
listed had this in view.

MEGILLUS: A splendid idea! Our friend here is an admirer of Zeus, so 633
try examining him, to start with.

ATHENIAN: I'll try to examine not only him, but you and myself as well—
we all have a stake in the discussion. Tell me, then, you two: do we maintain
that the common meals and gymnastic exercises have been invented by
your legislator for the purpose of war?

MEGILLUS: Yes.

ATHENIAN: What about a third such institution, and a fourth? To make
a full list like this will probably be the right procedure in the case of the
other 'parts' of virtue, too (or whatever the right terminology is: no matter,
so long as one's meaning is clear).

MEGILLUS: I—and any Spartan, for that matter—would mention the legis- b
lator's invention of hunting as the third item.

ATHENIAN: Let's have a shot at adding a fourth, and a fifth too, if we can.

MEGILLUS: Well, I might try to add a fourth: the endurance of pain. This
is a very conspicuous feature of Spartan life. You find it in our boxing
matches, and also in our 'raids', which invariably lead to a severe whipping.
There is also the 'Secret Service',[9] as it is called, which involves a great
deal of hard work, and is a splendid exercise in endurance. In winter, its c
members go barefoot and sleep without bedclothes. They dispense with
orderlies and look after themselves, ranging night and day over the whole
country. Next, in the 'Naked Games', men display fantastic endurance,
contending as they do with the full heat of summer. There are a great

9. An official organization of young Spartans, who had the job of keeping the Spartan slave class (helots) in subjection.

many other practices of the same kind, but if you produced a detailed list it would go on pretty well forever.

ATHENIAN: You've put it all very well, my Spartan friend. But what is
d to be our *definition* of courage? Are we to define it simply in terms of a fight against fears and pains only, or do we include desires and pleasures, which cajole and seduce us so effectively? They mold the heart like wax—even the hearts of those who loftily believe themselves superior to such influences.

MEGILLUS: Yes, I think so—the fight is against all these feelings.

ATHENIAN: Now, if we remember aright what was said earlier on, our friend from Cnossus spoke of a city and an individual as 'conquered by' themselves. Isn't that right?

CLINIAS: Surely.

e ATHENIAN: Well, shall we call 'bad' only the man who is 'conquered by' pains, or shall we include the victim of pleasures as well?

CLINIAS: The term 'bad' we apply, I think, to the victim of pleasures even more than to the other. When we say that a man has been shamefully 'conquered by' himself, we are all, I fancy, much more likely to mean someone defeated by pleasures than by pains.

634 ATHENIAN: But the legal code of those lawgivers (inspired as they are by Zeus and Apollo) certainly did not envisage a courage with one hand tied behind its back, able to hit out on the left, but powerless in face of the cunning and seductive blandishments from the right. Surely it was supposed to resist in both directions?

CLINIAS: Yes, both, I think.

ATHENIAN: We ought to mention next what practices exist in your two cities that give a man a taste of pleasure rather than teach him how to avoid it—you remember how a man could not avoid pains, but was surrounded by them, and then forced, or persuaded by awards of honor, to
b get the better of them. Now where in your codes of law is the institution that does the same for pleasure? Could you say, please, what institution you have that makes one and the same body of citizens courageous in face of pains and of pleasures alike, so that they conquer where they ought to conquer and never fall victims to these their most intimate and dangerous enemies?

MEGILLUS: I was certainly able to point to a good many laws that were
c designed to counteract pains, stranger, but I doubt if I should find it so easy to give striking and clear examples in the case of pleasures. I might have some success, perhaps, in finding minor cases.

CLINIAS: No more would I be able to find an obvious illustration of this sort of thing in the laws of Crete.

ATHENIAN: My dear sirs, this should not surprise us. (I hope, by the way, that if in his desire to discover goodness and truth any of us is led to criticize some legal detail in the homeland of either of his companions,

we shall receive such criticism from each other tolerantly and without truculence.)

CLINIAS: You have put it quite fairly, my Athenian friend. We must do as you say.

ATHENIAN: Truculence, Clinias, would be hardly the thing for men of d
our age.

CLINIAS: No indeed.

ATHENIAN: The criticisms people bring against the way Sparta and Crete are run may be right or wrong: that is another issue. At any rate, I am probably better able than either of you to report what most people generally say. However, granted that your codes of law have been composed with reasonable success, as indeed they have been, one of the best regulations you have is the one which forbids any young man to inquire into the relative merits of the laws; everyone has to agree, with one heart and e
voice, that they are all excellent and exist by divine *fiat;* if anyone says differently, the citizens must absolutely refuse to listen to him. If an old man has some point to make about your institutions, he must make such remarks to an official, or someone of his own age when no young man is present.

CLINIAS: That's absolutely right, sir—you must be a wizard! You are far removed in time from the legislator who laid down these laws, but I think you have hit on his intentions very nicely, and state them with 635
perfect accuracy.

ATHENIAN: Well, there are no young men here now. In view of our age, the legislator surely grants us the indulgence of having a private discussion on these topics without giving offense.

CLINIAS: So be it: don't hesitate to criticize our laws. There is no disgrace in being told of some blemish—indeed, if one takes criticism in good part, without being ruffled by it, it commonly leads one to a remedy. b

ATHENIAN: Splendid. But criticism of your laws is not what I propose: that can wait until we have scrutinized them exhaustively. I shall simply mention my difficulties. Among all the Greek and foreign peoples who have come to my knowledge, you are unique in that you have been instructed by your lawgiver to keep away from the most attractive entertainments and pleasures, and to refrain from tasting them. Yet when it came to pains and fears, your legislator reckoned that if a man ran away from them on every occasion from his earliest years and was then faced with hardships, pains c
and fears he could not avoid, he would likewise run away from any enemies who *had* received such a training, and become their slaves. I think this same lawgiver ought to have taken this same line in the case of pleasures too. He ought to have said to himself: 'If our citizens grow up without any experience of the keenest pleasures, and if they are not trained to stand firm when they encounter them, and to refuse to be pushed into any disgraceful action, their fondness for pleasure will bring them to the d

same bad end as those who capitulate to fear. Their slavery will be of a different kind, but it will be more humiliating: they will become the slaves of those who are able to stand firm against the onslaughts of pleasure and who are past-masters in the art of temptation—utter scoundrels, sometimes. Spiritually, our citizens will be part slave, part free, and only in a limited sense will they deserve to be called courageous and free.' Just consider this argument: do you think it has any relevance at all?

e CLINIAS: Yes, I think it has, at first blush. But it is a weighty business, and to jump to confident conclusions so quickly may well be childish and naive.

ATHENIAN: Well then, Clinias and our friend from Sparta, let's turn to the next item we put on the agenda: after courage, let's discuss self-control. We found, in the case of war, that your two political systems were superior to those of states with a more haphazard mode of government. Where's
636 the superiority in the case of self-control?

MEGILLUS: That's rather a difficult question. Still, I should think the common meals and the gymnastic exercises are institutions well calculated to promote both virtues.

ATHENIAN: Well, my friends, *I* should think the real difficulty is to make political systems reflect in practice the trouble-free perfection of theory. (The human body is probably a parallel. One cannot rigidly prescribe a given regimen for a given body, because any regimen will invariably turn
b out, in some respects, to injure our bodies at the same time as it helps them in others.) For instance, these gymnastic exercises and common meals, useful though they are to a state in many ways, are a danger in their encouragement of revolution—witness the example of the youth of Miletus, Boeotia and Thurii. More especially, the very antiquity of these practices seems to have corrupted the natural pleasures of sex, which are common to man and beast. For these perversions, your two states may well be the
c first to be blamed, as well as any others that make a particular point of gymnastic exercises. Circumstances may make you treat this subject either light-heartedly or seriously; in either case you ought to bear in mind that when male and female come together in order to have a child, the pleasure they experience seems to arise entirely naturally. But homosexual intercourse and lesbianism seem to be unnatural crimes of the first rank, and are committed because men and women cannot control their desire for pleasure. It is the Cretans we all hold to blame for making up the story
d of Ganymede:[10] they were so firmly convinced that their laws came from Zeus that they saddled him with this fable, in order to have a divine 'precedent' when enjoying that particular pleasure. That story, however, we may dismiss, but not the fact that when men investigate legislation, they

10. A handsome boy carried off to be Zeus' companion and cupbearer: see Homer, *Iliad* xx.231 ff.

investigate almost exclusively pleasures and pains as they affect society and
the character of the individual. Pleasure and pain, you see, flow like two
springs released by nature. If a man draws the right amount from the right e
one at the right time, he lives a happy life; but if he draws unintelligently
at the wrong time, his life will be rather different. State and individual
and every living being are on the same footing here.

MEGILLUS: Well, sir, I suppose that what you say is more or less right;
at any rate, we're baffled to find an argument against it. But in spite of
that I still think the legislator of Sparta is right to recommend a policy of
avoiding pleasure (our friend here will come to the rescue of the laws of
Cnossus, if he wants to). The Spartan law relating to pleasures seems to 637
me the best you could find anywhere. It has completely eliminated from
our country the thing which particularly prompts men to indulge in the
keenest pleasures, so that they become unmanageable and make every kind
of a fool of themselves: drinking parties, with all their violent incitements to
every sort of pleasure, are not a sight you'll see anywhere in Sparta, either
in the countryside or in the towns under her control. None of us would
fail to inflict there and then the heaviest punishment on any tipsy merry- b
maker he happened to meet; he would not let the man off even if he had
the festival of Dionysus as his excuse. Once, I saw men in that condition
on wagons in your country, and at Tarentum, among our colonials, I saw
the entire city drunk at the festival of Dionysus. *We* don't have anything
like that.

ATHENIAN: My Spartan friend, all this sort of thing is perfectly laudable
in men with a certain strength of character; it is when they cannot stop
themselves that it becomes rather silly. A countryman of mine could soon c
come back at you tit for tat by pointing to the easy virtue of your women.
There is one answer, however, which in Tarentum and Athens and Sparta
too is apparently thought to excuse and justify all such practices. When a
foreigner is taken aback at seeing some unfamiliar custom there, the reply
he gets on all hands is this: 'There is no need to be surprised, stranger:
this is what we do here; probably you handle these things differently.'
Still, my friends, the subject of this conversation is not mankind in general d
but only the merits and faults of legislators. In fact, there is a great deal
more we ought to say on the whole subject of drinking: it is a custom of
some little importance, and needs a legislator of some little skill to under-
stand it properly. I am not talking about merely drinking wine or totally
abstaining from it: I mean *drunkenness*. How should we deal with it? One
policy is that adopted by the Scythians and Persians, as well as by the
Carthaginians, Celts, Iberians and Thracians—belligerent races, all of them. e
Or should we adopt your policy? This, as you say, is one of complete
abstention, whereas the Scythians and Thracians (the women as well as
the men) take their wine neat, and tip it down all over their clothes; in
this they reckon to be following a glorious and splendid custom. And the

Persians indulge on a grand scale (though with more decorum) in these and other luxuries which you reject.

638 MEGILLUS: Oh, but my fine sir, when we get weapons in our hands we rout the lot of them.

ATHENIAN: Oh, but my *dear* sir, you must not say that. Many a time an army has been defeated and routed in the past, and will be in the future, without any very obvious reason. Merely to point to victory or defeat in battle is hardly to advance a clear and indisputable criterion of the merits
b or demerits of a given practice. Larger states, you see, defeat smaller ones in battle, and the Syracusans enslave the Locrians, the very people who are supposed to be governed by the best laws you could find in those parts; the Athenians enslave the Ceians, and we could find plenty of other similar instances. It is by discussing the individual practice itself that we should try to convince ourselves of its qualities: for the moment, we ought to leave defeats and victories out of account, and simply say that such-and-such a practice is good and such-and-such is bad. First, though, listen to my explanation of the correct way to judge the relative value of these practices.

c MEGILLUS: Well then, let's have the explanation.

ATHENIAN: I think that everyone who sets out to discuss a practice with the intention of censuring it or singing its praises as soon as it is mentioned is employing quite the wrong procedure. You might as well condemn cheese[11] out of hand when you heard somebody praising its merits as a food, without stopping to ask about what effect it has and how it is taken (by which I mean such questions as how it should be given, who should take it, what should go with it, in what condition it should be served, and
d the state of health required of those who eat it). But this is just what I think we are doing in our discussion. We have only to hear the word 'drunkenness', and one side immediately disparages it while the other praises it—a pointless procedure if there ever was one. Each puts up enthusiastic witnesses to endorse its recommendations: one side thinks that the number of its witnesses clinches the matter, the other points to the sight of the teetotalers conquering in battle—not that the facts of the case are beyond dispute even here. Now, if this is the way we are going
e to work one by one through the other customs, I for one shall find it goes against the grain. I want to discuss our present subject, drunkenness, by following a different—and, I think, correct—procedure, to see if I can demonstrate the right way to conduct an inquiry into such matters as these in general. Thousands and thousands of states, you see, differ from your pair of states in their view of these things, and would be prepared to fight it out in discussion.

639 MEGILLUS: Certainly, if a correct method of inquiry into such matters is available, we ought not to shy away from hearing what it is.

11. Accepting the conjecture of *turous* in c5.

Athenian: Let us conduct the inquiry more or less like this: suppose somebody were to praise goat-keeping, and commended the goat as a valuable article of possession; suppose somebody else were to disparage goats because he had seen some doing damage to cultivated land by grazing on it without a goatherd, and were to find similar fault with every animal he saw under incompetent control or none at all. What do we think of the censure of someone like that? Does it carry any weight at all?

Megillus: Hardly.

Athenian: If a man possesses only the science of navigation, can we say that he will be a useful captain on board a ship, and ignore the question b
whether he suffers from seasickness or not? Can we say that, or can't we?

Megillus: Certainly not, at any rate if, for all his skill, he's prone to the complaint you mention.

Athenian: What about the commander of an army? Is he capable of taking command just by virtue of military skill, in spite of being a coward in face of danger? The 'seasickness' in this case is produced by being, as it were, drunk with terror.

Megillus: Hardly a capable commander, that.

Athenian: And what if he combines cowardice with incompetence?

Megillus: You are describing a downright useless fellow—a commander of the daintiest of dainty women, not of men at all.

Athenian: Take any social gathering you like, which functions naturally c
under a leader and serves a useful purpose under his guidance: what are we to think of the observer who praises or censures it although he has never seen it gathered together and running properly under its leader, but always with bad leaders or none at all? Given that kind of observer and that kind of gathering, do we reckon that his blame or praise will have any value?

Megillus: How could it, when he has never seen or joined any of these d
gatherings run in the proper way?

Athenian: Hold on a moment. There are many kinds of gatherings, and presumably we'd say drinkers and drinking-parties were one?

Megillus: Of course.

Athenian: Has anyone *ever* seen such a gathering run in the proper way? You two, of course, find the answer easy: 'Never, absolutely never'; drinking-parties are just not held in your countries, besides being illegal. But I have come across a great many, in different places, and I have investigated pretty nearly all of them. However, I have never seen or heard e
of one that was properly conducted throughout; one could approve of a few insignificant details, but most of them were mismanaged virtually all the time.

Clinias: What are you getting at, sir? Be a little more explicit. As you said, we have no experience of such events, so that even if we did find ourselves at one we would probably be unable to tell off-hand which 640
features were correct and which not.

ATHENIAN: Very likely. But you can try to understand from my explanation. You appreciate that each and every assembly and gathering for any purpose whatever should invariably have a leader?

CLINIAS: Of course.

ATHENIAN: We said a moment ago that if it is a case of men fighting, their leader must be brave.

CLINIAS: Yes, indeed.

ATHENIAN: And a brave man, surely, is less thrown off balance by fears than cowards are.

b CLINIAS: That too is true enough.

ATHENIAN: If there were some device by which we could put in charge of an army a commander who was completely fearless and imperturbable, this is what we should make every effort to do, surely?

CLINIAS: It certainly is.

ATHENIAN: But the man we are discussing now is not going to take the lead in hostile encounters as between enemies, but in the peaceful meetings of friends with friends, gathering to foster mutual goodwill.

CLINIAS: Exactly.

c ATHENIAN: But we can assume that this sort of assembly will get rather drunk, so it won't be free of a certain amount of disturbance, I suppose.

CLINIAS: Of course not—I imagine precisely the opposite.

ATHENIAN: To start with, then, the members of the gathering will need a leader?

CLINIAS: Of course they will, more than anybody else.

ATHENIAN: Presumably we should if possible equip them with a leader who can keep his head?

CLINIAS: Naturally.

ATHENIAN: And he should also, presumably, be a man who knows how to handle a social gathering, because his duty is not only to preserve the existing friendliness among its members, but to see that it is strengthened
d as a result of the party.

CLINIAS: Quite true.

ATHENIAN: So, when men become merry with drink, don't they need someone put in charge of them who is sober and discreet rather than the opposite? If the man in charge of the revellers were himself a drinker, or young and indiscreet, he ought to thank his lucky stars if he managed to avoid starting some serious trouble.

CLINIAS: Lucky? I'll say so!

ATHENIAN: Consequently, an attack on such gatherings in cities where
e they are conducted impeccably might not in itself amount to unjustified criticism, provided the critic were attacking the institution itself. But if he abuses the institution simply because he sees every possible mistake being made in running it, he clearly does not realize, first, that this is a case of mismanagement, and secondly that any and every practice will appear in

the same light if it is carried on without a sober leader to control it. Surely you appreciate that a drunken steersman, or any commander of anything, 641 will always make a total wreck of his ship or chariot or army, or whatever else he may be directing?

CLINIAS: Yes, sir, there's truth in *that,* certainly. But the next step is for you to tell us what conceivable benefit this custom of drinking parties would be to us, given proper management. For instance, to take our example of a moment ago, if an army were properly controlled, its soldiers would win the war and this would be a considerable benefit, and the same b reasoning applies to our other instances. But what solid benefit would it be to individuals or the state to instruct a drinking party how to behave itself?

ATHENIAN: Well, what solid benefit are we to say it is to the state when just one lad or just one chorus of them has been properly instructed? If the question were put like that, we should say that the state gets very little benefit from just one; but ask in general what great benefit the state derives from the training by which it educates its citizens, and the reply will be perfectly straightforward. The good education they have received will make them good men, and being good they will achieve success in other c ways, and even conquer their enemies in battle. Education leads to victory; but victory, on occasions, results in the *loss* of education, because men often swell with pride when they have won a victory in war, and this pride fills them with a million other vices. Men have won many 'Cadmean victories', and will win many more, but there has never been such a thing as 'Cadmean education'.[12]

CLINIAS: It looks to us, my friend, as if you mean to imply that passing d the time with friends over a drink—provided we behave ourselves—is a considerable contribution to education.

ATHENIAN: Most certainly.

CLINIAS: Well then, could you now produce some justification for this view?

ATHENIAN: Justification? Only a god, sir, would be entitled to insist that this view is correct—there are so many conflicting opinions. But if necessary I am quite prepared to give my own, now that we have launched into a discussion of laws and political organizations.

CLINIAS: This is precisely what we are trying to discover — your own e opinion of the business we are now debating.

ATHENIAN: Well then, let that be our agenda: you have to direct your efforts to understanding the argument, while I direct mine to expounding it as clearly as I can. But first listen to this, by way of preface: you'll find every Greek takes it for granted that my city likes talking and does a great

12. Compare our expression 'Pyrrhic victory', i.e., one which is more disastrous for the victors than the vanquished. Cadmus, founder of Thebes, sowed the teeth of a dragon; armed men sprang up and killed each other.

deal of it, whereas Sparta is a city of few words and Crete cultivates the
642 intellect rather than the tongue. I don't want to make you feel that I am
saying an awful lot about a triviality, if I deal exhaustively and at length
with such a limited topic as drinking. In fact, the genuinely correct way
to regulate drinking can hardly be explained adequately and clearly except
in the context of a correct theory of culture; and it is impossible to explain
this without considering the whole subject of education. That calls for a
very long discussion indeed. So what do you think we ought to do now?
What about skipping all this for the moment, and passing on to some
b other legal topic?

MEGILLUS: As it happens, sir—perhaps you haven't heard—my family
represents the interests of your state, Athens, in Sparta. I dare say all
children, when they learn they are *proxeni*[13] of a state, conceive a liking
for it from their earliest years; each of us thinks of the state he represents
as a fatherland, second only to his own country. This is exactly my own
c experience now. When the Spartans were criticizing or praising the Atheni-
ans, I used to hear the little children say, 'Megillus, your state has done
the dirty on us,' or, 'it has done us proud.' By listening to all this and
constantly resisting on your behalf the charges of Athens' detractors, I
acquired a whole-hearted affection for her, so that to this day I very much
enjoy the sound of your accent. It is commonly said that when an Athenian
is good, he is 'very very good', and I'm sure that's right. They are unique
in that they are good not because of any compulsion, but spontaneously,
d by grace of heaven; it is all so genuine and unfeigned. So you're welcome
to speak as long as you like, so far as I'm concerned.

CLINIAS: I endorse your freedom to say as much as you like, sir: you'll
see that when you've heard what I have to say, too. You have probably
heard that Epimenides, a man who was divinely inspired, was born here-
abouts. He was connected with my family, and ten years before the Persian
e attack he obeyed the command of the oracle to go to Athens,[14] where
he performed certain sacrifices which the god had ordered. He told the
Athenians, who were apprehensive at the preparations the Persians were
making, that the Persians would not come for ten years, and that when
they did, they would go back with all their intentions frustrated, after
sustaining greater losses than they had inflicted. That was when my ances-
tors formed ties of friendship with you Athenians, and ever since then my
643 forebears and I have held you in affection.

ATHENIAN: Well then, on your part you are prepared to listen, apparently;
on my side, I am ready and willing to go ahead, but the job will certainly
tax my abilities. Still, the effort must be made. To assist the argument, we

13. A *proxenos* looked after the interests of a foreign state in his own country.

14. Clinias' chronology is a trifle confused. He thinks that Epimenides, a seer and wonder-worker, lived about 500 B.C., which is 100 years later than his actual date.

ought to take the preliminary step of defining education and its potentialities, because we have ventured on a discussion which is intended to lead us to the god of wine, and we are agreed that education is as it were the route we have to take.

CLINIAS: Certainly let's do that, if you like.

ATHENIAN: I am going to explain how one should describe education: b
see if you approve of my account.

CLINIAS: Your explanation, then, please.

ATHENIAN: It is this: I insist that a man who intends to be good at a particular occupation must practice it from childhood: both at work and at play he must be surrounded by the special 'tools of the trade'. For instance, the man who intends to be a good farmer must play at farming, and the man who is to be a good builder must spend his playtime building c
toy houses; and in each case the teacher must provide miniature tools that copy the real thing. In particular, in this elementary stage they must learn the essential elementary skills. For example, the carpenter must learn in his play how to handle a rule and plumb-line, and the soldier must learn to ride a horse (either by actually doing it, in play, or by some similar activity). We should try to use the children's games to channel their pleasures and desires towards the activities in which they will have to engage when they are adult. To sum up, we say that the correct way to bring up d
and educate a child is to use his playtime to imbue his soul with the greatest possible liking for the occupation in which he will have to be absolutely perfect when he grows up. Now, as I suggested, consider the argument so far: do you approve of my account?

CLINIAS: Of course.

ATHENIAN: But let's not leave our description of education in the air. When we abuse or commend the upbringing of individual people and say that one of us is educated and the other uneducated, we sometimes use this latter term of men who have in fact had a thorough education—one directed towards petty trade or the merchant-shipping business, or e
something like that. But I take it that for the purpose of the present discussion we are not going to treat this sort of thing as 'education'; what we have in mind is education from childhood in *virtue,* a training which produces a keen desire to become a perfect citizen who knows how to rule and be ruled as justice demands. I suppose we should want to mark 644
off this sort of training from others and reserve the title 'education' for it alone. A training directed to acquiring money or a robust physique, or even to some intellectual facility not guided by reason and justice, we should want to call coarse and illiberal, and say that it had no claim whatever to be called education. Still, let's not quibble over a name; let's stick to the proposition we agreed on just now: as a rule, men with a correct education become good, and nowhere in the world should education be b
despised, for when combined with great virtue, it is an asset of incalculable

value. If it ever becomes corrupt, but can be put right again, this is a lifelong task which everyone should undertake to the limit of his strength.

Clinias: True. We agree with your description.

Athenian: Here is a further point on which we agreed some time ago:[15] those who can control themselves are good, those who cannot are bad.

Clinias: Perfectly correct.

c Athenian: Let's take up this point again and consider even more closely just what we mean. Perhaps you'll let me try to clarify the issue by means of an illustration.

Clinias: By all means.

Athenian: Are we to assume, then, that each of us is a single individual?

Clinias: Yes.

Athenian: But that he possesses within himself a pair of witless and mutually antagonistic advisers, which we call pleasure and pain?

Clinias: That is so.

Athenian: In addition to these two, he has opinions about the future, whose general name is 'expectations'. Specifically, the anticipation of pain
d is called 'fear', and the anticipation of the opposite is called 'confidence'. Over and against all these we have 'calculation', by which we judge the relative merits of pleasure and pain, and when this is expressed as a public decision of a state, it receives the title 'law'.

Clinias: I can scarcely follow you; but assume I do, and carry on with what comes next.

Megillus: Yes, I'm in the same difficulty.

Athenian: I suggest we look at the problem in this way: let's imagine that each of us living beings is a puppet of the gods. Whether we have been constructed to serve as their plaything, or for some serious reason,
e is something beyond our ken, but what we certainly do know is this: we have these emotions in us, which act like cords or strings and tug us about; they work in opposition, and tug against each other to make us perform actions that are opposed correspondingly; back and forth we go across the boundary line where vice and virtue meet. One of these dragging forces, according to our argument, demands our constant obedience, and this is
645 the one we have to hang on to, come what may; the pull of the other cords we must resist. This cord, which is golden and holy, transmits the power of 'calculation', a power which in a state is called the public law; being golden, it is pliant, while the others, whose composition resembles a variety of other substances, are tough and inflexible. The force exerted by law is excellent, and one should always co-operate with it, because although 'calculation' is a noble thing, it is gentle, not violent, and its efforts need assistants, so that the gold in us may prevail over the other substances. If
b we do give our help, the moral point of this fable, in which we appear as

15. See 626e.

puppets, will have been well and truly made; the meaning of the terms 'self-superior' and 'self-inferior'[16] will somehow become clearer, and the duties of state and individual will be better appreciated. The latter must digest the truth about these forces that pull him, and act on it in his life; the state must get an account of it either from one of the gods or from the human expert we've mentioned, and incorporate it in the form of a law to govern both its internal affairs and its relations with other states. A
further result will be a clearer distinction between virtue and vice; the c
light cast on that problem will perhaps in turn help to clarify the subject of education and the various other practices, particularly the business of drinking parties. It may well be thought that this is a triviality on which a great deal too much has been said, but equally it may turn out that the topic really does deserve this extended discussion.

CLINIAS: You are quite right; we certainly ought to give full consideration to anything that deserves our attention in the 'symposium' we are having now.

ATHENIAN: Well then, tell me: if we give drink to this puppet of ours, d
what effect do we have on it?

CLINIAS: What's your purpose in harking back to that question?

ATHENIAN: No particular purpose, for the moment. I'm just asking, in a general way, what effect is had on something when it is associated with something else. I'll try to explain my meaning even more clearly. This is what I'm asking; does drinking wine make pleasures and pains, anger and love, more intense?

CLINIAS: Very much so.

ATHENIAN: What about sensations, memory, opinions and thought? Do e
these too become more intense? Or rather, don't they entirely desert a man if he fills himself with drink?

CLINIAS: Yes, they desert him entirely.

ATHENIAN: So he reverts to the mental state he was in as a young child?

CLINIAS: Indeed.

ATHENIAN: And it's then that his self-control would be at its lowest?

CLINIAS: Yes, at its lowest. 646

ATHENIAN: A man in that condition, we agree, is very bad indeed.

CLINIAS: Very.

ATHENIAN: So it looks as if it's not only an old man who will go through a second childhood, but the drunkard too.

CLINIAS: That's well said, sir.

ATHENIAN: Now, is there any argument that could even begin to persuade us that we ought to venture on this practice, rather than make every possible effort to avoid it?

16. Cf. 620d ff.

Clinias: Apparently there is; at any rate, this is what you say, and a minute ago you were ready to produce it.

b Athenian: A correct reminder; I'm ready still, now that you have both said you would be glad to listen to me.

Clinias: We'll be all ears, sir, if only because of your amazing paradox that a man should, on occasions, voluntarily abandon himself to extreme depravity.

Athenian: You mean spiritual depravity, don't you?

Clinias: Yes.

Athenian: And what about degradation of the body, my friend—emaciation, disfigurement, ugliness, impotence? Shouldn't we be startled to find
c a man voluntarily reducing himself to such a state?

Clinias: Of course we should.

Athenian: We don't suppose, do we, that those who voluntarily take themselves off to the surgery in order to drink down medicines are unaware of the fact that very soon after, for days on end, their condition will be such that, if it were to be anything more than temporary, it would make life insupportable? We know, surely, that those who resort to gymnasia for vigorous exercises become temporarily enfeebled?

Clinias: Yes, we are aware of all this.

Athenian: And of the fact that they go there of their own accord, for the sake of the benefit they will receive after the initial stages?

d Clinias: Most certainly.

Athenian: So shouldn't we look at the other practices in the same light?

Clinias: Yes indeed.

Athenian: So the same view should be taken of time spent in one's cups—if, that is, we may think of it as a legitimate parallel.

Clinias: Of course.

Athenian: Now if time so spent turned out to benefit us no less than time devoted to the body, it would have the initial advantage over physical exercises in that, unlike them, it is painless.

e Clinias: You're right enough in that, but I'd be surprised if we could discover any such benefit in this case.

Athenian: Then this is the point it looks as if we ought to be trying to explain. Tell me: can we conceive of two roughly opposite kinds of fear?

Clinias: Which?

Athenian: These: when we expect evils to occur, we are in fear of them, I suppose?

Clinias: Yes.

Athenian: And we often fear for our reputation, when we imagine we
647 are going to get a bad name for doing or saying something disgraceful. This is the fear which we, and I fancy everyone else, call 'shame'.

Clinias: Surely.

Athenian: These are the two fears I meant. The second resists pains and the other things we dread, as well as our keenest and most frequent pleasures.

CLINIAS: Very true.

ATHENIAN: The legislator, then, and anybody of the slightest merit, values this fear very highly, and gives it the name 'modesty'. The feeling of confidence that is its opposite he calls 'insolence', and reckons it to be the biggest curse anyone could suffer, whether in his private or his public life.

CLINIAS: True. b

ATHENIAN: So this fear not only safeguards us in a lot of other crucial areas of conduct but contributes more than anything else, if we take one thing with another, to the security that follows victory in war. Two things, then, contribute to victory: fearlessness in face of the enemy, and fear of ill-repute among one's friends.

CLINIAS: Exactly.

ATHENIAN: Every individual should therefore become both afraid and unafraid, for the reasons we have distinguished in each case. c

CLINIAS: Certainly.

ATHENIAN: Moreover, if we want to make an individual proof against all sorts of fears, it is by exposing him to fear, in a way sanctioned by the law, that we make him unafraid.

CLINIAS: Evidently we do.

ATHENIAN: But what about our attempts to make a man *afraid,* in a way consistent with justice? Shouldn't we see that he enters the lists against impudence, and give him training to resist it, so as to make him conquer in the struggle with his pleasures? A man has to fight and conquer his d
feelings of cowardice before he can achieve perfect courage; if he has no experience and training in that kind of struggle, he will never more than half realize his potentialities for virtue. Isn't the same true of self-control? Will he ever achieve a perfect mastery here without having fought and conquered, with all the skills of speech and action both in work and play, the crowd of pleasures and desires that stimulate him to act shamelessly and unjustly? Can he afford *not* to have the experience of all these struggles?

CLINIAS: It would seem hardly likely.

ATHENIAN: Well then, has any god given me a drug to produce fear, so e
that the more a man agrees to drink of it, the more the impression grows on him, after every draft, that he is assailed by misfortune? The effect would be to make him apprehensive about his present and future prospects, until finally even the boldest of men would be reduced to absolute terror; 648
but when he had recovered from the drink and slept it off, he would invariably be himself again.

CLINIAS: And what drink does that, sir? There's hardly an example we could point to anywhere in the world.

ATHENIAN: No. But if one had cropped up, would a legislator have been able to make any use of it to promote courage? This is the sort of point we might well have put to him about it: 'Legislator—whether your laws are to apply to Cretans or to any other people—tell us this: wouldn't you

b be particularly glad to have a criterion of the courage and cowardice of
your citizens?

Clinias: Obviously, every legislator would say 'Yes'.

Athenian: 'Well, you'd like a safe test without any serious risks, wouldn't you? Or do you prefer one full of risks?'

Clinias: They will all agree to this as well: safety is essential.

Athenian: 'Your procedure would be to test these people's reactions
c when they had been put into a state of alarm, and by encouraging, rebuking
and rewarding individuals you would compel them to become fearless. You would inflict disgrace on anyone who disobeyed and refused to become in every respect the kind of man you wanted; you would discharge without penalty anyone who had displayed the proper courage and finished his training satisfactorily; and the failures you would punish. Or would you refuse point-blank to apply the test, even though you had nothing against the drink in other respects?'

Clinias: Of course he would apply it, sir.

Athenian: Anyway, my friend, compared with current practice, this
training would be remarkably straightforward, and would suit individuals,
d small groups, and any larger numbers you may want. Now if a man
retreated into some decent obscurity, out of embarrassment at the thought of being seen before he is in good shape, and trained against his fears alone and in privacy, equipped with just this drink instead of all the usual paraphernalia, he would be entirely justified. But he would be no less justified if, confident that he was already well equipped by birth and
breeding, he were to plunge into training with several fellow drinkers.
e While inevitably roused by the wine, he would show himself strong enough
to escape its other effects: his virtue would prevent him from committing even one serious improper act, and from becoming a different kind of person. Before getting to the last round he would leave off, fearing the way in which drink invariably gets the better of a man.

Clinias: Yes, sir, even he would be prudent enough to do that.

649 Athenian: Let's repeat the point we were making to the legislator:
'Agreed then: there is probably no such thing as a drug to produce fear, either by divine gift or human contrivance (I leave quacks out of account: they're beyond the pale). But is there a drink that will banish fear and stimulate over-confidence about the wrong thing at the wrong moment? What do we say to this?'

Clinias: I suppose he'll say 'There is', and mention wine.

Athenian: And doesn't this do just the opposite of what we described
a moment ago? When a man drinks it, it immediately makes him more
b cheerful than he was before; the more he takes, the more it fills him with
boundless optimism: he thinks he can do anything. Finally, bursting with self-esteem and imposing no restraint on his speech and actions, the fellow loses all his inhibitions and becomes completely fearless: he'll say and

do anything, without a qualm. Everybody, I think, would agree with us about this.

CLINIAS: Certainly.

ATHENIAN: Now let's think back again to this point: we said that there were two elements in our souls that should be cultivated, one of them in
order to make ourselves supremely confident, its opposite to make our- c
selves supremely fearful.

CLINIAS: The latter being modesty, I suppose.

ATHENIAN: Well remembered! But in view of the fact that one has to learn to be courageous and intrepid when assailed by fears, the question arises whether the opposite quality will have to be cultivated in opposite circumstances.

CLINIAS: Probably so.

ATHENIAN: So the conditions in which we naturally become unusually bold and daring seem to be precisely those required for practice in reducing our shamelessness and audacity to the lowest possible level, so that we
become terrified of ever venturing to say, suffer, or do anything disgraceful. d

CLINIAS: Apparently.

ATHENIAN: Now aren't we affected in this way by all the following conditions—anger, love, pride, ignorance and cowardice? We can add wealth, beauty, strength and everything else that turns us into fools and makes us drunk with pleasure. However, we are looking for an inexpensive and less harmful test we can apply to people, which will also give us a chance to train them, and this we have in the scrutiny we can make of
them when they are relaxed over a drink. Can we point to a more suitable e
pleasure than this—provided some appropriate precautions are taken? Let's look at it in this way. Suppose you have a man with an irritable and savage temper (this is the source of a huge number of crimes). Surely, to make contracts with him, and run the risk that he may default, is a more
dangerous way to test him than to keep him company during a festival 650
of Dionysus? Or again, if a man's whole being is dominated by sexual pleasures, it is dangerous to try him out by putting him in charge of your wife and sons and daughters; this is to scrutinize the character of his soul at the price of exposing to risk those whom you hold most dear. You could cite dozens of other instances, and still not do justice to the superiority of this wholly innocuous 'examination by recreation'. In fact, I think neither
the Cretans nor any other people would disagree if we summed it all up b
like this: we have here a pretty fair test of each other, which for cheapness, safety and speed is absolutely unrivaled.

CLINIAS: True so far.

ATHENIAN: So this insight into the nature and disposition of a man's soul will rank as one of the most useful aids available to the art which is concerned to foster a good character—the art of *statesmanship,* I take it?

CLINIAS: Certainly.

# Book II

652 ATHENIAN: It looks as if the next question we have to ask is this: is the
insight we somehow get into men's natural temperaments the *only* thing
in favor of drinking parties? Or does a properly run drinking party confer
some other substantial benefit that we ought to consider very seriously?
What do we say to this? We need to be careful here: as far as I can see,
our argument does tend to point to the answer 'Yes', but when we try to
b discover how and in what sense, we may get tripped up by it.

CLINIAS: Tell us why, then.

ATHENIAN: I want to think back over our definition of correct education,
653 and to hazard the suggestion now that drinking parties are actually its
*safeguard*, provided they are properly established and conducted on the
right lines.

CLINIAS: That's a large claim!

ATHENIAN: I maintain that the earliest sensations that a child feels in
infancy are of pleasure and pain, and this is the route by which virtue
and vice first enter the soul. (But for a man to acquire good judgment,
and unshakable correct opinions, however late in life, is a matter of good
luck: a man who possesses them, and all the benefits they entail, is perfect.)
b I call 'education' the initial acquisition of virtue by the child, when the
feelings of pleasure and affection, pain and hatred, that well up in his soul
are channeled in the right courses before he can understand the reason
why. Then when he does understand, his reason and his emotions agree in
telling him that he has been properly trained by inculcation of appropriate
habits. Virtue is this general concord of reason and emotion. But there is
one element you could isolate in any account you give, and this is the
c correct formation of our feelings of pleasure and pain, which makes us
hate what we ought to hate from first to last, and love what we ought to
love. Call this 'education', and I, at any rate, think you would be giving
it its proper name.

CLINIAS: Yes, sir, we entirely approve of what you have just said about
education and that goes for your previous account, too.[1]

ATHENIAN: Splendid. Education, then, is a matter of correctly disciplined
feelings of pleasure and pain. But in the course of a man's life the effect
wears off, and in many respects it is lost altogether. The gods, however,
d took pity on the human race, born to suffer as it was, and gave it relief
in the form of religious festivals to serve as periods of rest from its labors.
They gave us the Muses, with Apollo their leader, and Dionysus; by having
these gods to share their holidays, men were to be made whole again, and
thanks to them, we find refreshment in the celebration of these festivals.
Now, there is a theory which we are always having dinned into our ears:
let's see if it squares with the facts or not. It runs like this: virtually all

1. See 643a ff.

young things find it impossible to keep their bodies still and their tongues
quiet. They are always trying to move around and cry out; some jump e
and skip and do a kind of gleeful dance as they play with each other, while others produce all sorts of noises. And whereas animals have no sense of order and disorder in movement ('rhythm' and 'harmony', as we call it), we human beings have been made sensitive to both and can enjoy
them. This is the gift of the same gods whom we said were given to us 654
as companions in dancing; it is the device which enables them to be our chorus-leaders and stimulate us to movement, making us combine to sing and dance—and as this naturally[2] 'charms' us, they invented the word 'chorus'.[3] So shall we take it that this point is established? Can we assume that education comes originally from Apollo and the Muses, or not?

CLINIAS: Yes.

ATHENIAN: So by an 'uneducated' man we shall mean a man who has
not been trained to take part in a chorus; and we must say that if a man b
*has* been sufficiently trained, he is 'educated'.

CLINIAS: Naturally.

ATHENIAN: And of course a performance by a chorus is a combination of dancing and singing?

CLINIAS: Of course.

ATHENIAN: And this means that the well-educated man will be able both to sing and dance *well?*

CLINIAS: So it seems.

ATHENIAN: Now let's see just what that word implies.

CLINIAS: What word?

ATHENIAN: We say 'he sings *well*' or 'he dances *well*'. But should we c
expand this and say 'provided he sings *good* songs and dances *good* dances'? Or not?

CLINIAS: Yes, we should expand it.

ATHENIAN: Now then, take a man whose opinion about what is good is correct (it really *is* good), and likewise in the case of the bad (it really *is* bad), and follows this judgment in practice. He may be able to represent, by word and gesture, and with invariable success, his intellectual conception of what is good, even though he gets no pleasure from it and feels
no hatred for what is bad. Another man may not be very good at keeping d
on the right lines when he uses his body and his voice to represent the good, or at trying to form some intellectual conception of it; but he may be very much on the right lines in his feelings of pleasure and pain, because he welcomes what is good and loathes what is bad. Which of these two will be the better educated musically, and the more effective member of a chorus?

CLINIAS: As far as education is concerned, sir, the second is infinitely superior.

2. Reading *hēi dē* in a3.

3. A playful etymology: *choros* (chorus) is derived from *chara* (charm, joy, delight).

Athenian: So if the three of us grasp what 'goodness' is in singing and
dancing, we have also a sound criterion for distinguishing the educated
man from the uneducated. If we fail to grasp it, we'll never be able to
make up our minds whether a safeguard for education exists, or where
e we ought to look for it. Isn't that so?

Clinias: Yes, it is.

Athenian: The next quarry we have to track down, like hounds at a hunt, will be what constitutes a 'good' bodily movement, tune, song and dance. But if all these notions give us the slip and get away, it will be pointless utterly to prolong our discussion of correct education, Greek or foreign.

Clinias: Quite.

Athenian: Good. Now, what is to be our definition of a good tune or
bodily movement? Tell me—imagine a courageous soul and a cowardly
655 soul beset by one and the same set of troubles: do similar sounds and
movements of the body result in each case?

Clinias: Of course not. The complexion is different, to start with.

Athenian: You are absolutely right, my friend. But music is a matter of
rhythm and harmony, and involves tunes and movements of the body; this
means that while it is legitimate to speak of a 'rhythmical' or a 'harmonious'
movement or tune, we cannot properly apply to either of them the chorus-
masters' metaphor 'brilliantly colored'. But what *is* the appropriate lan-
guage to describe the movement and melody used to portray the brave
b man and the coward? The correct procedure is to call those of brave men
'good' and those of cowards 'disgraceful'. But let's not have an inordinately
long discussion about the details; can we say, without beating about the
bush, that all movements and tunes associated with spiritual or bodily
excellence (the real thing or a representation) are good? And conversely
bad if they have to do with vice?

Clinias: Yes, that's a reasonable proposal. You may assume we agree.

Athenian: Here's a further point: do we all enjoy every type of perfor-
c mance by a chorus to the same degree? Or is that far from being true?

Clinias: As far as it could be!

Athenian: But can we put our finger on the cause of our confusion? Is
it that 'good' varies from person to person? Or that it is *thought* to vary,
although in point of fact it does not? No one, I fancy, will be prepared to
say that dances portraying evil are better than those portraying virtue, or
that although other people enjoy the virtuous Muse, his own personal
liking is for movements expressing depravity. Yet most men do maintain
d that the power of music to give pleasure to the soul is the standard by
which it should be judged. But this is an insupportable doctrine, and it is
absolute blasphemy to speak like that. More likely, though, it's something
else that's misleading us.

Clinias: What?

Athenian: Performances given by choruses are representations of character, and deal with every variety of action and incident. The individual

performers enact their roles partly by expressing their own characters, partly by imitating those of others. That is why, when they find that the speaking or singing or any other element in the performance of a chorus e appeals to their natural character or acquired habits, or both, they can't help applauding with delight and using the term 'good'. But sometimes they find these performances going against the grain of their natural character or their disposition or habits, in which case they are unable to take any pleasure in them and applaud them, and in this case the word they use is 'shocking'. When a man's natural character is as it should be, but he has acquired bad habits, or conversely when his habits are correct but his natural character is vicious, his pleasure and his approval fail to coincide: he calls the performances 'pleasant, but depraved'. Such performers, in 656 the company of others whose judgment they respect, are ashamed to make this kind of movement with their bodies, and to sing such songs as though they genuinely approved of them. But in their heart of hearts, they enjoy themselves.

CLINIAS: You are quite right.

ATHENIAN: Now, does a man's enjoyment of bad bodily movements or bad tunes do him any harm? And does it do him any good to take pleasure in the opposite kind?

CLINIAS: Probably.

ATHENIAN: 'Probably'? Is that all? Surely there *must* be a precise analogy b here with the man who comes into contact with depraved characters and wicked people, and who does not react with disgust, but welcomes them with pleasure, censuring them half-heartedly because he only half-realizes, as in a dream, how perverted such a state is: he just cannot escape taking on the character of what he enjoys, whether good or bad—even if he is ashamed to go so far as to applaud it. In fact we could hardly point to a greater force for good—or evil—than this inevitable assimilation of character.

CLINIAS: No, I don't think we could.

ATHENIAN: So, in a society where the laws relating to culture, education c and recreation are, or will be in future, properly established, do we imagine that authors will be given a free hand? The choruses will be composed of the young children of law-abiding citizens: will the composer be free to teach them *anything* by way of rhythm, tune and words that amuses him when he composes, without bothering what effect he may have on them as regards virtue and vice?

CLINIAS: That's certainly not sensible; how could it be?

ATHENIAN: But it is precisely this that they are allowed to do in virtually d all states—except in Egypt.

CLINIAS: Egypt! Well then, you'd better tell us what legislation has been enacted there.

ATHENIAN: Merely to hear about it is startling enough. Long ago, apparently, they realized the truth of the principle we are putting forward only now, that the movements and tunes which the children of the state are to

practice in their rehearsals must be good ones. They compiled a list of
e them according to style, and displayed it in their temples. Painters and
everyone else who represent movements of the body of any kind were
restricted to these forms; modification and innovation outside this tradi-
tional framework were prohibited, and are prohibited even today, both in
this field and the arts in general. If you examine their art on the spot, you
will find that ten thousand years ago (and I'm not speaking loosely: I mean
657 literally ten thousand), paintings and reliefs were produced that are no
better and no worse than those of today, because the same artistic rules
were applied in making them.

Clinias: Fantastic!

Athenian: No: simply a supreme achievement of legislators and states-
men. You might, even so, find some other things to criticize there, but in
the matter of music this inescapable fact deserves our attention: it has in
fact proved feasible to take the kind of music that shows a natural correct-
ness and put it on a firm footing by legislation.[4] But it is the task of a god,
b or a man of god-like stature; in fact, the Egyptians do say that the tunes
that have been preserved for so long are compositions of Isis. Consequently,
as I said, if one could get even a rough idea of what constitutes 'correctness'
in matters musical, one ought to have no qualms about giving the whole
subject systematic expression in the form of a law. It is true that the craving
for pleasure and the desire to avoid tedium lead us to a constant search
for novelty in music, and choral performances that have been thus conse-
crated may be stigmatized as out-of-date; but this does not have very much
power to corrupt them. In Egypt, at any rate, it does not seem to have
had a corrupting effect at all: quite the contrary.

c Clinias: So it would seem, to judge from your account.

Athenian: So, equally without qualms, we can surely describe the proper conditions for festive music and performances of choruses more or less like this. When we think things are going well for us, we feel delight; and to put it the other way round, when we feel delight, we come to think that things are going well. Isn't that so?

Clinias: It is.

Athenian: In addition, when we are in that state—I mean 'delight'—we can't keep still.

Clinias: That's true.

d Athenian: Our youngsters are keen to join the dancing and singing themselves, but we old men think the proper thing is to pass the time as spectators. The delight we feel comes from their relaxation and merry-making. Our agility is deserting us, and as we feel its loss we are only too pleased to provide competitions for the young, because they can best stir in us the memory of our youth and re-awaken the instincts of our younger days.

Clinias: Very true.

4. Deleting *tharrounta* in a7.

Athenian: So we'd better face the fact that there is a grain of truth in e
contemporary thought on the subject of holiday-makers. Most people say
that the man who delights us most and gives us most pleasure should be
highly esteemed for his skill, and deserves to be awarded first prize,
because the fact that we are allowed to relax on such occasions means that
we ought to lionize the man who gives most people most pleasure, so
that, as I said just now, he deserves to carry off the prize. In theory that's
right, isn't it? And wouldn't it be equally right in practice? 658

Clinias: Maybe.

Athenian: Ah, my fine fellow, such a conclusion 'may be' rash! We must
make some distinctions, and examine the question rather like this: suppose
somebody were to arrange a competition, and were to leave its character
entirely open, not specifying whether it was to be gymnastic, artistic or
equestrian. Assume that he gathers together all the inhabitants of the state,
and offers a prize: anyone who wishes should come and compete in giving
pleasure, and this is to be the sole criterion; the competitor who gives the b
audience most pleasure will win; he has an entirely free hand as to what
method he employs, but provided he excels in this one respect he will be
judged the most pleasing of the competitors and win the prize. What effect
do we think such an announcement would have?

Clinias: In what way do you mean?

Athenian: Likely enough, I suppose, one competitor will play the Homer
and present epic poetry, another will sing lyric songs to music, another
will put on a tragedy, and another a comedy; and it will be no surprise
if somebody even reckons his best chance of winning lies in putting on a c
puppet-show. Now, with all these competitors and thousands of others
entering, can we say which would *really* deserve to win?

Clinias: That's an odd question! Who could answer it for you with authority before hearing the contestants, and listening to them individually on the spot?

Athenian: Well then, do you want me to give you an equally odd answer?

Clinias: Naturally.

Athenian: Suppose the decision rests with the smallest infant children. They'll decide for the exhibitor of puppets, won't they?

Clinias: Of course. d

Athenian: If it rests with the older children, they will choose the producer of comedies. Young men, ladies of cultivated taste, and I dare say pretty nearly the entire populace, will choose the tragedy.

Clinias: Yes, I dare say.

Athenian: We old men would probably be most gratified to listen to a reciter doing justice to the *Iliad* or *Odyssey*, or an extract from Hesiod: we'd say he was the winner by a clear margin. Who, then, would be the *proper* winner? That's the next question, isn't it?

Clinias: Yes.

Athenian: Clearly you and I are forced to say that the proper winners e
would be those chosen by men of our vintage. To us, from among all the

customs followed in every city all over the world today, this looks like the best.

CLINIAS: Surely.

ATHENIAN: I am, then, in limited agreement with the man in the street. Pleasure is indeed a proper criterion in the arts, but not the pleasure experienced by anybody and everybody. The productions of the Muse are at their finest when they delight men of high calibre and adequate education—but particularly if they succeed in pleasing the single individ-
659 ual whose education and moral standards[5] reach heights attained by no one else. This is the reason why we maintain that judges in these matters need high moral standards: they have to possess not only a discerning taste,[6] but courage too. A judge won't be doing his job properly if he reaches his verdict by listening to the audience and lets himself be thrown off balance by the yelling of the mob and his own lack of training; nor must he shrug his shoulders and let cowardice and indolence persuade him into a false verdict against his better judgment, so that he lies with
b the very lips with which he called upon the gods when he undertook office. The truth is that he sits in judgment as a teacher of the audience, rather than as its pupil; his function (and under the ancient law of the Greeks he used to be allowed to perform it) is to throw his weight *against* them, if the pleasure they show has been aroused improperly and illegitimately. For instance, the law now in force in Sicily and Italy, by truckling to the majority of the audience and deciding the winner by a show of
c hands, has had a disastrous effect on the authors themselves, who compose to gratify the depraved tastes of their judges; the result is that in effect *they* are taught by the audience. It has been equally disastrous for the quality of the pleasure felt by the spectators: they ought to come to experience more elevated pleasures from listening to the portrayal of characters invariably better than their own, but in fact just the opposite happens, and they have no one to thank but themselves. Well, then, now that we have finished talking about that, what conclusion is indicated? Let's see if it isn't this—

CLINIAS: What?

d ATHENIAN: For the third or fourth time, I think, our discussion has come full circle. Once again, education has proved to be a process of attraction, of leading children to accept right principles as enunciated by the law and endorsed as genuinely correct by men who have high moral standards and are full of years and experience. The soul of the child has to be prevented from getting into the habit of feeling pleasure and pain in ways not sanctioned by the law and those who have been persuaded to obey it; he should follow in their footsteps and find pleasure and pain in the

5. 'Moral standards' here and 'high moral standards' just below translate *aretē,* elsewhere normally translated 'virtue.'

6. 'Discerning taste' translates *phronēsis,* elsewhere usually translated 'good judgment' or 'wisdom'—it is one of the four basic virtues Plato recognizes, along with justice, courage, and self-control (or moderation or restraint—*sōphrosunē*).

same things as the old. That is why we have what we call songs, which are really 'charms' for the soul. These are in fact deadly serious devices e
for producing this concord[7] we are talking about; but the souls of the young cannot bear to be serious, so we use the terms 'recreation' and 'song' for the charms, and children treat them in that spirit. We have an analogy in the sick and ailing; those in charge of feeding them try to administer the proper diet in tasty foods and drinks, and offer them un- 660
wholesome items in revolting foods, so that the patients may get into the desirable habit of welcoming the one kind and loathing the other. That is just what the true legislator will persuade (or, failing persuasion, compel) the man with a creative flair to do with his grand and marvelous language: to compose correctly by portraying, with appropriate choreography and musical setting, men who are moderate, courageous and good in every way.

CLINIAS: Good Heavens, sir, do you really think that's how they compose b
nowadays in other cities? My experience is limited, but I know of no such proceeding as you describe, except among us Cretans or in Sparta. In dancing and all the other arts one novelty follows another; the changes are made not by law but are prompted by wildly changing fancies that are very far from being permanent and stable like the Egyptian tastes you're explaining: on the contrary, they are never the same from minute c
to minute.

ATHENIAN: Well said, Clinias. But if I gave you the impression that I was speaking of the present day when I referred to the procedure you mention, I expect it was my own lack of clarity in expressing my thoughts that led you astray and caused me to be misunderstood. I was only saying what I want to see happen in the arts, but perhaps I used expressions that made you think I was referring to facts. It always goes against the grain to pillory habits that are irretrievably on the wrong lines, but sometimes one has to. d
So, seeing that we are agreed in approving this custom, tell me this, if you will: is it more prevalent among you Cretans and the Spartans than among the other Greeks?

CLINIAS: Certainly.

ATHENIAN: And what if it became prevalent among the others as well? Presumably we'd say that that was an improvement on present practice?

CLINIAS: Yes, I suppose it would be a tremendous improvement if they adopted the procedure of Crete and Sparta—which is also in accordance with the recommendations you made just now.

ATHENIAN: Now then, let's make sure we understand each other in this e
business. The essence of the entire cultural education of your countries is surely this: you oblige your poets to say that the good man, because he is temperate and just, enjoys good fortune and is happy, no matter whether he is big and strong, or small and weak, or rich, or poor; and that even if he is 'richer than Midas or Cinyras', and has not justice, he is a wretch,

7. See 653b.

and lives a life of misery. 'I'd not mention a man', says your poet,[8] and
how right he is, and 'I'd take no account of him', even if all his actions
661 and possessions were what people commonly call 'good', if he were without
justice, nor even if, with a character like that, he 'attacked in close combat
with the foe'. If he is unjust, I wouldn't want him to 'stand the sight of
bloody butchery' nor 'outdo in speed the north wind of Thrace', nor ever
achieve any of the things that are generally said to be 'good'. You see,
these things men usually call 'good' are misnamed. It is commonly said
that health comes first, beauty second, and wealth third. The list goes on
b indefinitely: keen sight and hearing, and acute perception of all the objects
of sensation; being a dictator and doing whatever you like; and the seventh
heaven is supposed to be reached when one has achieved all this and is
made immortal without further ado. You and I, presumably, hold that all
these things are possessions of great value to the just and pious, but that
to the unjust they are a curse, every one of them, from health all the way
c down the list. Seeing, hearing, sensation, and simply being alive, are great
evils, if in spite of having all these so-called good things a man gains
immortality without justice and virtue in general; but if he survives for
only the briefest possible time, the evil is less. I imagine you will persuade
or compel the authors in your states to embody this doctrine of mine in
the words, rhythms and 'harmonies' they produce for the education of
d your youth. Isn't that right? Look here, now: my position is quite clear.
Although so-called evils are in fact evil for the just, they are good for the
unjust; and so-called 'goods', while genuinely good for the good, are evils
for the wicked. Let me ask the same question as before: are you and I in
agreement, or not?

CLINIAS: In some ways I think we are, but certainly not in others.

ATHENIAN: I expect this is where I sound implausible: suppose a man
were to enjoy health and wealth and permanent absolute power—and, if
e you like, I'll give him enormous strength and courage as well, and exempt
him from death and all the other 'evils', as people call them. But suppose
he had in him nothing but injustice and insolence. It is obvious, I maintain,
that his life is wretchedly *un*happy.

CLINIAS: True, that's precisely where you fail to convince.

ATHENIAN: Very well, then, How should we put it now? If a man is
662 brave, strong, handsome, and rich, and enjoys a life-long freedom to do
just what he wants to, don't you think—if he is unjust and insolent—that
his life will inevitably be a disgrace? Perhaps at any rate you'd allow the
term 'disgrace'?

CLINIAS: Certainly.

ATHENIAN: Will you go further, and say he will live 'badly'?[9]

8. Tyrtaeus: see 629a and note. The Athenian makes further brief quotations from the same poem. Midas and Cinyras, kings of Phrygia and Cyprus respectively, were notorious for extreme wealth.

9. The expression is ambiguous: it may mean 'miserably' or 'wickedly'. In his reply, Clinias is thinking of the first meaning.

CLINIAS: No, we'd not be so ready to admit that.

ATHENIAN: What about going further still, and saying he will live 'unpleasantly and unprofitably'?

CLINIAS: How could we possibly be prepared to go as far as that?

ATHENIAN: 'How'? My friend, it looks as if it would be a miracle if we b
ever harmonized on this point: at the moment your tune and mine are
scarcely in the same key. To me, these conclusions are inescapably true—
in fact, my dear Clinias, rather more true and obvious than that Crete is
an island. If I were a lawgiver, I should try to compel the authors and
every inhabitant of the state to take this line; and if anybody in the land c
said that there are men who live a pleasant life in spite of being scoundrels,
or that while this or that is useful and profitable, something else is more
just, I should impose pretty nearly the extreme penalty. There are many
other things I should persuade my citizens to say, which would flatly
contradict what Cretans and Spartans maintain nowadays, apparently—
to say nothing of the rest of the world. Zeus and Apollo! Just you imagine,
my fine fellows, asking these gods who inspired your laws, 'Is the life of d
supreme justice also the life that gives most pleasure? Or are there two kinds
of life, one being "the supremely just," the other "the most pleasurable"?'
Suppose they replied 'There are two.' If we knew the right question to
ask, we might perhaps pursue the point: 'Which category of men should
we call the most blessed by heaven? Those who live the supremely just
life, or the most pleasurable?' If they said 'Those who live the most pleasurable life', then that would be, for them, a curious thing to say. However,
I am unwilling to associate the gods with such a statement; I prefer to
think of it in connection with forefathers and lawgivers. So let's suppose e
those first questions have been put to a forefather and lawgiver, and that
he has replied that the man who lives the life of greatest pleasure enjoys
the greatest happiness. This is what I'd say then: 'Father, didn't you want
me to receive as many of the blessings of heaven as I could? Yet in spite
of that you never tired of telling me to order my life as *justly* as possible'.
In taking up that kind of position our forefather or lawgiver will, I think,
appear in rather an odd light: it will look as if he cannot speak without
contradicting himself. However, if he declared that the life of supreme
justice was the most blessed, I imagine that everybody who heard him
would want to know what splendid benefit, superior to pleasure, was to
be found in this kind of life. What was there in it that deserved the 663
commendation of the law? Surely, any benefit a just man got out of it
would be *inseparable* from pleasure? Look: are we to suppose that fame
and praise from gods and men are fine and good, but unpleasant (and
vice versa in the case of notoriety)? ('My dear legislator,' we'd say, 'of
course not'.) Or, if you neither injure another nor are injured yourself by
someone else, is that unpleasant, in spite of being fine and good? Is the
opposite pleasant, but disgraceful and wicked?

CLINIAS: Certainly not.

ATHENIAN: So the argument that does not drive a wedge between 'pleas- b
ant' on the one hand and 'just' and 'fine' and 'good' on the other, even if

it achieves nothing else, will do something to persuade a man to live a just and pious life. This means that any teaching which denies the truth of all this is, from the lawgiver's standpoint, a complete disgrace and his worst enemy. (Nobody would willingly agree to do something which would not bring him more pleasure than pain.)

Looking at a thing from a distance makes nearly everyone feel dizzy, especially children; but the lawgiver will alter that for us, and lift the fog
c that clouds our judgment: somehow or other—by habituation, praise, or argument—he will persuade us that our ideas of justice and injustice are like pictures drawn in perspective. Injustice looks pleasant to the enemy of justice,[10] because he regards it from his own personal standpoint, which is unjust and evil; justice, on the other hand, looks *un*pleasant to him. But from the standpoint of the just man the view gained of justice and injustice is always the opposite.

Clinias: So it seems.

Athenian: And which of these judgments are we to say has a better claim to be the correct one? The judgment of the worse soul or the better?

d Clinias: That of the better, certainly.

Athenian: Then it is equally certain that the unjust life is not only more shocking and disgraceful, but also in fact less pleasant, than the just and holy.

Clinias: On this argument, my friends, it certainly looks like it.

Athenian: But just suppose that the truth had been different from what the argument has now shown it to be, and that a lawgiver, even a mediocre one, had been sufficiently bold, in the interests of the young, to tell them a lie. Could he have told a more useful lie than this, or one more effective
e in making everyone practice justice in everything they do, willingly and without pressure?

Clinias: Truth is a fine thing, and it is sure to prevail, but to persuade men of it certainly seems no easy task.

Athenian: Yes, but what about that fairy story about the Sidonian?[11] That was well-nigh incredible, but it was easy enough to convince men of it, and of thousands of other similar stories.

Clinias: What sort of stories?

Athenian: The sowing of the teeth and the birth of armed men from
664 them. This remarkable example shows the legislator that the souls of the young can be persuaded of anything; he has only to try. The only thing he must consider and discover is what conviction would do the state most good; in that connection, he must think up every possible device to ensure that as far as possible the entire community preserves in its songs and stories and doctrines an absolute and lifelong unanimity. But if you see the matter in any other light, have no hesitation in disputing my view.

10. Accepting the conjecture of *enantiōi* in c3.

11. Cadmus. See 641c and note.

Clinias: No, I don't think either of us would be able to dispute that. b

Athenian: Then it will be up to me to introduce the next point. I maintain that our choruses—all three of them—should charm the souls of the children while still young and tender, and uphold all the admirable doctrines we have already formulated, and any we may formulate in the future. We must insist, as the central point of these doctrines, that the gods say the best life does in fact bring most pleasure. If we do that, we shall be telling c
the plain truth, and we shall convince those whom we have to convince more effectively than if we advanced any other doctrine.

Clinias: Yes, one has to agree with what you say.

Athenian: To start with, it will be only right and proper if the children's chorus (which will be dedicated to the Muses) comes on first to sing these doctrines with all its might and main before the entire city. Second will come the chorus of those under thirty, which will call upon Apollo Paean[12]
to bear witness that what they say is true, and pray that he will vouchsafe d
to convince the young. Thirdly, there must be the songs of those between thirty and sixty. That leaves the men who are older than this, who are, of course, no longer up to singing; but they will be inspired to tell stories in which the same characters will appear.

Clinias: You mention these three choruses, sir: what are they? We are not very clear what you mean to say about them.

Athenian: But the greater part of the discussion we have had so far has been precisely for their sake!

Clinias: We still haven't seen the point. Could you try to elucidate e
still further?

Athenian: If we remember, we said at the beginning of our discussion[13] that all young things, being fiery and mettlesome by nature, are unable to keep their bodies or their tongues still—they are always making uncoordinated noises and jumping about. No other animal, we said, ever develops a sense of order in either respect; man alone has a natural ability to 665
do this. Order in movement is called 'rhythm', and order in the vocal sounds—the combination of high and low notes—is called 'harmony'; and the union of the two is called 'a performance by a chorus'. We said that the gods took pity on us and gave us Apollo and the Muses as companions and leaders of our choruses; and if we can cast our minds back, we said that their third gift to us was Dionysus.

Clinias: Yes, of course we remember.

Athenian: Well, we've mentioned the choruses of Apollo and the Muses; the remaining one, the third, must be identified as belonging to Dionysus. b

Clinias: What! You had better explain yourself: a chorus of elderly men dedicated to Dionysus sounds a weird and wonderful idea, at any rate at first hearing. Are men of more than thirty and even fifty, up to sixty, really going to dance in honor of Dionysus?

12. The god of healing.

13. See 653d ff.

ATHENIAN: You are absolutely right—to show how this could be reasonable in practice does need, I think, some explanation.

CLINIAS: It certainly does.

ATHENIAN: Are we agreed on the conclusions we have reached so far?

c CLINIAS: Conclusions about what?

ATHENIAN: About this—that every man and child, free-man and slave, male and female—in fact, the whole state—is in duty bound never to stop repeating to each other the charms[14] we have described. Somehow or other, we must see that these charms constantly change their form; at all costs they must be continually varied, so that the performers always long to sing the songs, and find perpetual pleasure in them.

CLINIAS: Agreed: that's exactly the arrangement we want.

d ATHENIAN: This last chorus is the noblest element in our state; it carries more conviction than any other group, because of the age and discernment of its members. Where, then, should it sing its splendid songs, if it is to do most good? Surely we are not going to be silly enough to leave this question undecided? After all, this chorus may well prove to be consummate masters of the noblest and most useful songs.

CLINIAS: No; if that's really the way the argument is going, we certainly can't leave this undecided.

ATHENIAN: So what would be a suitable method of procedure? See if this will do.

CLINIAS: What, then?

e ATHENIAN: As he grows old, a man becomes apprehensive about singing; it gives him less pleasure, and if it should happen that he cannot avoid it, it causes him an embarrassment which grows with the increasingly sober tastes of his advancing years. Isn't that so?

CLINIAS: Indeed it is.

ATHENIAN: So naturally he will be even more acutely embarrassed at standing up and singing in front of the varied audience in a theater. And if men of that age were forced to sing in the same condition as members of choruses competing for a prize—lean and on a diet after a course of voice-training—then of course they would find the performance positively unpleasant and humiliating, and would lose every spark of enthusiasm.

666 CLINIAS: Yes, that would be the inevitable result.

ATHENIAN: So how shall we encourage them to be enthusiastic about singing? The first law we shall pass, surely, is this: children under the age of eighteen are to keep off wine entirely. We shall teach them that they must treat the violent tendencies of youth with due caution, and not pour fire on the fire already in their souls and bodies until they come to undertake the real work of life. Our second law will permit the young man under
b thirty to take wine in moderation, but he must stop short of drunkenness and bibulous excesses. When he reaches his thirties, he should regale himself at the common meals, and invoke the gods; in particular, he should

14. See 659e.

summon Dionysus to what is at once the play-time and the prayer-time of the old, which the god gave to mankind to help cure the crabbiness of age. This is the gift he gave us to make us young again: we forget our c
peevishness, and our hard cast of mind becomes softer and grows more malleable, just like iron thrust in a fire. Surely any man who is brought into that frame of mind would be ready to sing his songs (that is 'charms', as we've called them often enough) with more enthusiasm and less embarrassment? I don't mean in a large gathering of strangers, but in a comparatively small circle of friends.

CLINIAS: Certainly.

ATHENIAN: As a method of inducing them to join us in our singing, there wouldn't be anything you could particularly object to in this. d

CLINIAS: By no means.

ATHENIAN: But what sort of philosophy of music will inspire their songs? Obviously, it will have to be one appropriate to the performers.

CLINIAS: Of course.

ATHENIAN: And the performers are men of almost divine distinction. What notes would be appropriate for them? Those produced by the choruses?

CLINIAS: Well, sir, we Cretans, at any rate—and the same goes for the Spartans—would hardly be up to singing any song except those we learned to sing by growing familiar with them in our choruses.

ATHENIAN: Naturally enough. In cold fact, you have failed to achieve e
the finest kind of song. You organize your state as though it were a military camp rather than a society of people who have settled in towns, and you keep your young fellows together like a herd of colts at grass. Not a man among you takes his own colt and drags him, furiously protesting, away from the rest of the herd; you never put him in the hands of a private groom, and train him by combing him down and stroking him. You entirely fail to lavish proper care on an education which will turn him out not merely a good soldier but a capable administrator of a state and its towns. 667
Such a man is, as we said early on, a better fighter than those of Tyrtaeus, precisely because he does not value courage as the principal element in virtue: he consistently relegates it to *fourth* place wherever he finds it, whether in the individual or the state.

CLINIAS: I suspect, sir, you are being rather rude about our legislators again.

ATHENIAN: If I am, my dear fellow, it is entirely unintentionally. But if you don't mind, we ought to follow where the argument leads us. If we know of any music that is of finer quality than the music of choruses and the public theaters, we ought to try to allocate it to these older people. b
They are, as we said, embarrassed at the other kind; but music of the highest quality is just what they are keen to take part in.

CLINIAS: Yes, indeed.

ATHENIAN: The most important point about everything that has some inherent attractive quality must be *either* this very quality *or* some kind of

'correctness' *or* (thirdly) its usefulness. For instance, I maintain that eating and drinking and taking nourishment in general are accompanied by the
c particular attractive quality that we might call pleasure; as for their usefulness and 'correctness', we invariably speak of the 'wholesomeness' of the foods we serve, and in their case the most 'correct' thing in them is precisely this.

Clinias: Quite.

Athenian: An element of attractiveness—the pleasure we feel—goes with the process of learning, too. But what gives rise to its 'correctness' and usefulness, its excellence and nobility, is its accuracy.

Clinias: Exactly.

Athenian: What about the arts of imitation, whose function is to produce
d likenesses? When they succeed in doing this, it will be quite proper to say that the pleasure—if any—that arises out of and accompanies that success constitutes the attractive quality of these arts.

Clinias: Yes.

Athenian: Generally speaking, I suppose, the 'correctness' in such cases would depend not so much on the pleasure given, as on the accurate representation of the size and qualities of the original?

Clinias: Well put.

Athenian: So pleasure would be the proper criterion in one case only. A work of art may be produced with nothing to offer by way of usefulness
e or truth or accuracy of representation (or harm, of course). It may be produced solely for the sake of this element that normally accompanies the others, the attractive one. (In fact, it is when this element is associated with none of the others that it most genuinely deserves the name 'pleasure'.)

Clinias: You mean only harmless pleasure?

Athenian: Yes, and it is precisely this that I call 'play', when it has no particular good or bad effect that deserves serious discussion.

Clinias: Quite right.

Athenian: And we could conclude from all this that no imitation at all should be judged by reference to incorrect opinions about it or by the criterion of the pleasure it gives. This is particularly so in the case of
668 every sort of equality. What is equal is equal and what is proportional is proportional, and this does not depend on anyone's opinion that it is so, nor does it cease to be true if someone is displeased at the fact. Accuracy, and nothing else whatever, is the only permissible criterion.

Clinias: Yes, that is emphatically true.

Athenian: So do we hold that all music is a matter of representation and imitation?

Clinias: Of course.

Athenian: So when someone says that music is judged by the criterion of pleasure, we should reject his argument out of hand, and absolutely
b refuse to go in for such music (if any were ever produced) as a serious *genre*. The music we ought to cultivate is the kind that bears a resemblance to its model, beauty.

CLINIAS: Very true.

ATHENIAN: These people, then, who are anxious to take part in the finest possible singing, should, apparently, look not for a music which is sweet, but one which is correct; and correctness, as we said, lies in the imitation and successful reproduction of the proportions and characteristics of the model.

CLINIAS: It does indeed.

ATHENIAN: This is certainly so in the case of music: everyone would admit that all musical compositions are matters of imitation and representation. In c fact, composers, audiences and actors would register universal agreement on this point, wouldn't they?

CLINIAS: Certainly.

ATHENIAN: So it looks as if a man who is not to go wrong about a given composition must appreciate what it is, because failure to understand its nature—what it is trying to do and what in fact it is a representation of—will mean that he gets virtually no conception of whether the author has achieved his aim correctly or not.

CLINIAS: No, virtually none, naturally.

ATHENIAN: And if he cannot gauge the correctness of the composition, d surely he won't be able to judge its moral goodness or badness? But this is all rather obscure. Perhaps this would be a clearer way of putting it.

CLINIAS: What?

ATHENIAN: There are, of course, thousands of representations that strike the eye?

CLINIAS: Yes.

ATHENIAN: Now, imagine someone who didn't know the character of each of the objects that are imitated and represented. Would he ever be able to estimate the correctness of the finished article? This is the sort of point I have in mind: does it preserve the overall proportions of the body and the position of each of its various parts? Does it hit off the proportions e exactly and keep the parts in their proper positions relative to one another? And what of their colors and contours? Have all these features been reproduced higgledy-piggledy? Do you think that if a man did not know the character of the creature represented he would ever be able to assess these points?

CLINIAS: Of course not.

ATHENIAN: What if we knew that the thing molded or painted is a man, 669 and that all his parts with their colors and contours have been caught by the artist's skill? Suppose a man knows all that; is he without further ado necessarily ready to judge whether the work is beautiful or falls short of beauty in some respect?

CLINIAS: In that case, sir, pretty well all of us would be judges of the quality of a representation.

ATHENIAN: You have hit the nail on the head. So anyone who is going to be a sensible judge of any representation—in painting and music and every other field—should be able to assess three points: he must know,

b first, *what* has been represented; second, how *correctly* it has been copied;
and then, third, the *moral value* of this or that representation produced by
language, tunes and rhythms.

CLINIAS: Apparently so.

ATHENIAN: We ought not to fail to mention the peculiar difficulty about
music, which is discussed much more than any other kind of artistic
representation and needs much more careful handling than all the others.
A man who goes wrong on this subject will suffer a good deal of harm
c because he feels attracted to evil dispositions; and his mistake is very
difficult to detect, because the authors hardly have the same degree of
creative ability as the actual Muses. The Muses would never make the
ghastly mistake of composing the speech of men to a musical idiom suitable
for women, or of fitting rhythms appropriate to the portrayal of slaves
and slave-like people to the tune and bodily movements used to represent
free men (or again of making rhythms and movements appropriate to free
men accompany a combination of tune and words that conflicted with
those rhythms). Nor would they ever mix up together into one production
d the din of wild animals and men and musical instruments and all kinds
of other noises and still claim to be representing a unified theme. But
human authors, in their silly way, jumble all these things together into
complicated combinations; in Orpheus' words, anyone 'whose delight in
life is in its springtime', will find them a rich source of amusement. And
in the midst of all this confusion, he will find that the authors also divorce
e rhythm and movement from the tune by putting unaccompanied words
into meter, and rob tune and rhythm of words by using stringed instru-
ments and pipes on their own without singers. When this is done, it is
extraordinarily difficult to know what the rhythm and harmony without
speech are supposed to signify and what worthwhile object they imitate
and represent. The conclusion is inevitable: such practices appeal to the
taste of the village idiot. It is this fondness for speed and dexterity (as in
670 reproducing the noises of wild animals) which prompts the use of pipes
and lyre otherwise than as an accompaniment to dancing and singing.
Using either instrument on its own is in fact sheer showmanship that has
nothing to do with art. But enough of theory: what we are considering is
not what sort of music our citizens over thirty and fifty should avoid, but
what sort they should go in for. I think our argument so far seems to point
b to the conclusion that the fifty-year-olds who have the duty of singing
must have enjoyed an education that reached a higher standard than the
music of choruses. They must, of course, have a nice appreciation of
rhythms and harmonies and be able to understand them. Otherwise how
could a man assess the correctness of the tunes, and tell whether the Dorian
mode was appropriate or not in a given case, or judge whether the author
has set the tunes to the right rhythm or not?

CLINIAS: Clearly he couldn't.

ATHENIAN: The belief of the general public, that they can form an adequate
judgment of merit and demerit in matters of harmony and rhythm, is

laughable: they have only been drilled into singing to the pipes and march-
ing in step, and they never stop to think that they do all this without the c
smallest understanding of it. In fact, every tune with the right elements
is correct, but if it has the wrong ones, it is faulty.

CLINIAS: Inevitably.

ATHENIAN: What about the man who doesn't even understand what the
elements are? As we said, will he ever be able to decide that any aspect
of the piece is correct?

CLINIAS: No, how could he?

ATHENIAN: So it looks as if once again we are discovering that it is
virtually indispensable for these singers of ours (who are not only being
encouraged to sing but *compelled* to do it in a willing spirit, if I may put d
it like that), to have been educated up to at least this point: they should
each be able to follow the notes of the tunes and the basic units of rhythm,
so that they may examine the harmonies and rhythms and select those
that men of their age and character could appropriately sing. If that is
how they sing, they will give themselves harmless pleasure, and at the
same time stimulate the younger generation to adopt virtuous customs e
with the proper enthusiasm. Assuming the education of these singers
reaches that level, they will have pursued a more advanced course of
training than will be given to ordinary men, or even the authors themselves.
The author is more or less obliged to have a knowledge of rhythm and
harmony, but there is no necessity for him to be able to assess the third
point—whether the imitation is a morally good one or not. The men we
are talking about, however, must be equally competent in all three fields,
so that they can isolate the primary and secondary degrees of goodness; 671
otherwise they will never prove capable of charming the young in the
direction of virtue.

ATHENIAN: Our argument has done its level best: we have to consider
whether it has succeeded in its original intention of showing that our
defense of Dionysus' chorus was justified. A gathering like that, of course,
inevitably gets increasingly rowdier as the wine flows more freely. (In fact,
our initial assumption in the present discussion of this business was that
such a tendency is unavoidable.) b

CLINIAS: Yes, it is unavoidable.

ATHENIAN: Everyone is taken out of himself and has a splendid time;
the exuberance of his conversation is matched only by his reluctance to
listen to his companions, and he thinks himself entitled to run their lives
as well as his own.

CLINIAS: He certainly does.

ATHENIAN: And didn't we say that when this happens the souls of the
drinkers get hot and, like iron in a fire, grow younger and softer, so that
anyone who has the ability and skill to mold and educate them, finds them c
as easy to handle as when they were young? The man to do the molding
is the same one as before—the good lawgiver. When our drinker grows
cheerful and confident and unduly shameless and unwilling to speak and

keep quiet, to drink and sing, at the proper times, the lawgiver's job will be to lay down drinking laws which will be able to make this fellow willing
d to mend his ways; and to do battle with this disgraceful over-confidence as soon as it appears, they will be able to send into the arena, with the blessing of justice, this divine and splendid fear we have called 'modesty' and 'shame'.[15]

CLINIAS: Exactly.

ATHENIAN: The cool-headed and sober should guard and co-operate with these laws by taking command of those who are not sober; fighting the enemy without cool-headed leaders is actually *less* dangerous than fighting drink without such help as this. If a man cannot show a willing spirit and
e obey these commanders and the officials of Dionysus (who are upwards of sixty years of age), the dishonor he incurs must equal or even exceed that incurred by the man who disobeys the officials of the god of war.

CLINIAS: Precisely.

ATHENIAN: So, if they drank and made merry like that, the revelers who took part in the proceedings would surely benefit? They would go their way on better terms with each other than they were before, instead of loathing each other, which is what happens nowadays; and this would be
672 because they had rules to regulate the whole of their intercourse and had followed every instruction given by the sober to the tipsy.

CLINIAS: Precisely—if indeed the party were to go as you describe.

ATHENIAN: So let's not abuse the gift of Dionysus any longer in the old unqualified terms, saying that it is bad and does not deserve to be received into the state. One could, indeed, enlarge on its benefits even more. But in front of the general public I would be chary of mentioning the *main* benefit conferred by the gift, because people misconstrue and misunder-
b stand the explanation.

CLINIAS: What is the benefit?

ATHENIAN: There is a little-known current of story and tradition[16] which says that Dionysus was robbed of his wits by his stepmother Hera, and that he gets his revenge by stimulating us to Bacchic frenzies and all the mad dancing that results; and this was precisely the reason why he made us a present of wine. This sort of story, however, I leave to those who see no danger in speaking of the gods in such terms. But I am quite certain
c of this: no animal that enjoys the use of reason in its maturity is ever born with that faculty, or at any rate with it fully developed. During the time in which it has not yet attained its characteristic level of intelligence, it is completely mad: it bawls uncontrollably, and as soon as it can get on its feet it jumps about with equal abandon. Let's think back: we said that this situation gave rise to music and gymnastics.

15. 646e ff.

16. Cf. Euripides, *Cyclops,* 3.

CLINIAS: We remember, of course.

ATHENIAN: And also that this was the source of man's appreciation of d
rhythm and harmony, and Apollo and the Muses and Dionysus were the
gods who co-operated to implant it in us.

CLINIAS: Yes, indeed.

ATHENIAN: In particular, it seems that according to the common story wine was given to men as a means of taking vengeance on us—it was intended to drive us insane. But our interpretation is entirely the opposite: the gift was intended to be a medicine and to produce reverence in the soul, and health and strength in the body.

CLINIAS: Yes, sir, that's a splendid recapitulation of the argument.

ATHENIAN: We are now half-way through our examination of singing e
and dancing. Shall we carry on with the other half in whatever way
recommends itself, or shall we pass it over?

CLINIAS: What halves do you mean? Where do you put your dividing-line?

ATHENIAN: We found that singing and dancing, taken together, amounted, in a sense, to education as a whole. One part of it—the vocal part—was concerned with rhythms and 'harmonies'.

CLINIAS: Yes.

ATHENIAN: The second part concerned the movement of the body. Here
too we had rhythm, a feature shared with the movement of the voice; but
the body's movements were its own particular concern, just as in the other 673
half the tune was the special job of the vocal movements.

CLINIAS: True enough.

ATHENIAN: When the sound of the voice penetrates the soul, we took that to be an education in virtue, and we hazarded the term 'music' to describe it.

CLINIAS: And quite rightly.

ATHENIAN: When the movements of the body, which we described as 'dancing in delight', are such as to result in a fine state of physical fitness, we ought to call the systematic training which does this 'gymnastics'.

CLINIAS: Exactly.

ATHENIAN: So much, then, for music, which is roughly the half of the b
subject of choruses that we said we had examined and finished with; so
that's that. Shall we discuss the other half? Or what method should we
follow now?

CLINIAS: Really, my dear fellow! You are having a conversation with Cretans and Spartans, and we have discussed music thoroughly—leaving gymnastics still to come. What sort of answer do you think you'll get to that question, from either of us?

ATHENIAN: I should say that question was a pretty unambiguous answer. c
I take it that your question, as I said, amounts in fact to a reply, an order
even, to finish off our examination of gymnastics.

CLINIAS: You understand me perfectly: do just that.

Athenian: Yes, I must. Of course, discussing a subject so familiar to you both is not very difficult. You see, you have had much more experience of this particular skill than of the other.

Clinias: True enough.

d Athenian: Again, the origin of this form of recreation too lies in the fact
that every animal has the natural habit of jumping about. The human animal, as we said, acquired a sense of rhythm, and that led to the birth of dancing. The tune suggested rhythm and awakened the memory of it, and out of the union of the two was born choral singing and dancing as a recreation.

Clinias: Exactly.

Athenian: We have already discussed one of these two; now we are going to set about the discussion of the other.

Clinias: Yes, indeed.

e Athenian: However, if you are agreeable, let's give our discussion of
the use of drink its final flourish.

Clinias: What flourish do you mean?

Athenian: Suppose a state takes this practice we are now discussing sufficiently seriously to control it by a set of rules and use it to cultivate moderate habits; suppose it permits a similar enjoyment of other pleasures on the same principle, seeing it simply as a device for mastering them. In each and every case, our method will be the one that must be followed.
But if the state treats a drink as recreation pure and simple, and anybody
674 who wants to can go drinking and please himself when and with whom
he does it, and do whatever else he likes at the same time, then my vote would be in favor of never allowing this state or individual to take wine at all. I would go further than Cretan and Spartan practice: I would support the law of the Carthaginians, which forbids anyone on military service to take a drink of wine, and makes water the only permissible beverage
during the entire campaign. As for civilians, it forbids slaves, male and
b female, ever to touch wine; it forbids magistrates during their year of
office; steersmen and jurymen on duty are absolutely prohibited from touching it, and so too is any councillor who is going to take part in an important discussion; nobody at all is permitted to drink wine during the day, except for reasons of training or health, nor at night if they intend to procreate children (this prohibition applying to men and women alike);
and one could point to a great many other situations in which any sensible
c person with a respect for the law would find it proper not to drink wine.
This kind of approach would mean that no state would need many vines and as part of the regulations covering agriculture in general and the whole question of diet, the production of wine in particular would be restricted to the most modest quantities. With your permission, gentlemen, let's take that as the final flourish to our discussion of wine.

Clinias: Splendid! Permission granted.

# Book III

ATHENIAN: We can take that as settled, then. But what about political 676
systems? How are we to suppose they first came into existence? I feel sure that the best and easiest way to see their origins is this.

CLINIAS: What?

ATHENIAN: To use the same method that we always have to adopt when we look into a state's moral progress or decline.

CLINIAS: What method have you in mind?

ATHENIAN: We take an indefinitely long period of time and study the
changes that occur in it. b

CLINIAS: How do you mean?

ATHENIAN: Look, do you think you could ever grasp how long it is that states have existed and men have lived under some sort of political organization?

CLINIAS: No, not very easily.

ATHENIAN: But at any rate you realize it must be an enormously long time?

CLINIAS: Yes, I see *that*, of course.

ATHENIAN: So surely, during this period, thousands upon thousands of
states have come into being, while at least as many, in equally vast numbers, c
have been destroyed? Time and again each one of them has adopted every type of political system. And sometimes small states have become bigger, and big ones have grown smaller; superior states have deteriorated and bad ones have improved.

CLINIAS: Inevitably.

ATHENIAN: Let's try to pin down just why these changes took place, if we can; then perhaps we shall discover how the various systems took root and developed.

CLINIAS: Admirable! Let's get down to it. You must do your best to explain your views, and we must try to follow you.

ATHENIAN: Do you think there is any truth in tradition? 677

CLINIAS: What sort of tradition do you mean?

ATHENIAN: This: that the human race has been repeatedly annihilated by floods and plagues and many other causes, so that only a small fraction of it survived.

CLINIAS: Yes, of course, all that sort of thing strikes everyone as entirely credible.

ATHENIAN: Now then, let's picture just one of this series of annihilations—I mean the effect of the flood.

CLINIAS: What special point are we to notice about it?

ATHENIAN: That those who escaped the disaster must have been pretty b
nearly all hill-shepherds—a few embers of mankind preserved, I imagine, on the tops of mountains.

CLINIAS: Obviously.

ATHENIAN: Here's a further point: such men must have been in general unskilled and unsophisticated. In particular, they must have been quite innocent of the crafty devices that city-dwellers use in the rat-race to do each other down; and all the other dirty tricks that men play against one another must have been unknown.

CLINIAS: Quite likely.

c ATHENIAN: And we can take it, can't we, that the cities that had been built on the plains and near the sea were destroyed root-and-branch?

CLINIAS: Yes, we can.

ATHENIAN: So all their tools were destroyed, and any worthwhile discovery they had made in politics or any other field was entirely lost? You see, my friend, if their discoveries had survived throughout at the same level of development as they have attained today, it is difficult to see what room there can ever have been for any new invention.

d CLINIAS: The upshot of all this, I suppose, is that for millions of years these techniques remained unknown to primitive man. Then, a thousand or two thousand years ago, Daedalus and Orpheus and Palamedes made their various discoveries, Marsyas and Olympus pioneered the art of music, Amphion invented the lyre, and many other discoveries were made by other people. All this happened only yesterday or the day before, so to speak.

ATHENIAN: How tactful of you, Clinias, to leave out your friend, who really was born 'yesterday'!

CLINIAS: I suppose you mean Epimenides?

e ATHENIAN: Yes, that's the man. His discovery, my dear fellows, put him streets ahead of all the other inventors. Hesiod had foreshadowed it in his poetry long before, but it was Epimenides who achieved it in practice, so you Cretans claim.[1]

CLINIAS: We certainly do claim that.

ATHENIAN: Perhaps we can describe the state of mankind after the cataclysm like this: in spite of a vast and terrifying desolation, plenty of fertile land was available, and although animals in general had perished it happened that some cattle still survived, together with perhaps a small stock of goats. They were few enough, but sufficient to maintain the correspondingly few herdsmen of this early period.

678

CLINIAS: Agreed.

ATHENIAN: But at the moment we are talking about the state, and the business of legislation and political organization. Is it conceivable that any trace at all of such things survived—even, so to speak, in the memory?

1. Epimenides' 'magic brew' was believed to have been inspired by Hesiod's mention (*Works and Days* 40-41) of the virtue of mallow and asphodel. For Epimenides, see 642d ff. and note.

CLINIAS: Of course not.

ATHENIAN: So out of those conditions all the features of our present-day life developed: states, political systems, technical skills, laws, rampant vice and frequent virtue.

CLINIAS: What do you mean?

ATHENIAN: My dear sir, can we really suppose that the men of that b
period, who had had no experience of city life in all its splendor and squalor, ever became totally wicked or totally virtuous?

CLINIAS: A good point. We see what you mean.

ATHENIAN: So it was only as time went on, and the numbers of the human race increased, that civilization advanced and reached its present stage of development?

CLINIAS: Exactly.

ATHENIAN: The process was probably not sudden, but gradual, and took a considerable time.

CLINIAS: Yes, that's perfectly plausible. c

ATHENIAN: I imagine men were all numbed with fear at the prospect of descending from the hills to the plains.

CLINIAS: Naturally enough.

ATHENIAN: And what a pleasure it must have been to see each other, there being so few of them at that time! However, pretty well all vehicles they might have used to visit each other by land or sea had been destroyed, and the techniques used to construct them had been lost, so that I suppose they found getting together none too easy. They suffered from a scarcity d
of timber, because iron, copper and mineral workings in general had been overlaid with sludge and had been lost to sight, so that it was virtually impossible to refine fresh supplies of metal. Even if there was the odd tool left somewhere on the mountains, it was quickly worn down to nothing by use. Replacements could not be made until the technique of mining sprang up again among men.

CLINIAS: True.

ATHENIAN: And how many generations later did that happen, on our calculation?

CLINIAS: A good many, obviously. e

ATHENIAN: Well then, during that period, or even longer, all techniques that depend on a supply of copper and iron and so on must have gone out of use?

CLINIAS: Of course.

ATHENIAN: For several reasons, then, war and civil war alike came to an end.

CLINIAS: How so?

ATHENIAN: In the first place, men's isolation prompted them to cherish and love one another. Second, their food supply was nothing they needed 679
to quarrel about. Except perhaps for a few people in the very early stages,

there was no shortage of flocks and herds, which is what men mostly lived on in that age. They always had a supply of milk and meat, and could always add to it plenty of good food to be got by hunting. They also had an abundance of clothes, bedding, houses, and equipment for cooking and other purposes. (Molding pottery and weaving, skills that have no need
b of iron, were a gift from God to men—his way, in fact, of supplying them with all that kind of equipment. His intention was that whenever the human race was reduced to such a desperate condition it could still take root and develop.) Because of all this, they were not intolerably poor, nor driven by poverty to quarrel with each other; but presumably they did not grow rich either, in view of the prevailing lack of gold and silver. Now the community in which neither wealth nor poverty exists will generally
c produce the finest characters because tendencies to violence and crime, and feelings of jealousy and envy, simply do not arise. So these men were *good*, partly for that very reason, partly because of what we might call their 'naïveté'. When they heard things labeled 'good' or 'bad', they were so artless as to think it a statement of the literal truth and believe it. This lack of sophistication precluded the cynicism you find today: they accepted as the truth the doctrine they heard about gods and men, and lived their lives in accordance with it. That is why they were the sort of people we have described.

d CLINIAS: Megillus and I, at least, agree with your account.

ATHENIAN: If we compare them with the era before the flood and with the modern world, we shall have to say that the many generations which lived in that way were inevitably unskilled and ignorant of techniques in general, and particularly of the military devices used on land and sea nowadays. They must also have been innocent of the techniques of warfare
e peculiar to city-life—generally called 'lawsuits' and 'party-strife'—in which men concoct every possible device to damage and hurt each other by word and deed. Weren't our primitive men simple and manlier and at the same time more restrained and upright in every way? We have already explained why.

CLINIAS: Yes, you're quite right.

ATHENIAN: Let's remind ourselves that this reconstruction, and the con-
680 clusions we shall draw from it, are supposed to make us appreciate how early man came to feel the need of laws, and who their lawgiver was.

CLINIAS: Well reminded!

ATHENIAN: Presumably they felt no need for legislators, and in that era law was not yet a common phenomenon. Men born at that stage of the world cycle[2] did not yet have any written records, but lived in obedience to accepted usage and 'ancestral' law, as we call it.

2. A 'cycle' is apparently thought of as the interval between one cosmic upheaval (e.g. the flood) and the next.

CLINIAS: Quite likely.

ATHENIAN: But this is already a political system, of a sort.

CLINIAS: What sort?

ATHENIAN: Autocracy—the name which everyone, I believe, uses for the b
political system of that age. You can still find it in many parts of the world today, both among Greeks and non-Greeks. I suppose this is what Homer is describing in his account of the household of the Cyclopes:[3]

> *No laws, no councils for debate have they:*
> *They live on the tips of lofty mountains*
> *In hollow caves; each man lays down the law*
> *To wife and children, with no regard for neighbor.* c

CLINIAS: That poet of yours sounds as if he was a charming fellow. I have gone through other verses of his, and very polished they were too. Not that I know his work to any great extent—we Cretans don't go in for foreign poetry very much.

MEGILLUS: But we at Sparta do, and we think Homer is the prince of
epic poets, even though the way of life he describes is invariably Ionian d
rather than Spartan. In this instance he certainly seems to bear you out when he points in his stories to the wild life of the Cyclopes as an explanation of their primitive customs.

ATHENIAN: Yes, he does testify in my favor. So let's take him as our evidence that political systems of this kind do sometimes develop.

CLINIAS: Very well.

ATHENIAN: And they arise among these people who live scattered in
separate households and individual families in the confusion that follows
the cataclysms. In such a system the eldest member rules by virtue of e
having inherited power from his father or mother; the others follow his lead and make one flock like birds. The authority to which they bow is that of their patriarch: they are governed, in effect, by the most justifiable of all forms of kingship.

CLINIAS: Yes, of course.

ATHENIAN: The next stage is when several families amalgamate and form
larger communities. They turn their attention to agriculture, initially in 681
the foot-hills, and build rings of dry stones to serve as walls to protect themselves against wild animals. The result now is a single large unit, a common homestead.

CLINIAS: I suppose that's quite probable.

ATHENIAN: Well then, isn't this probable too?

CLINIAS: What?

3. *Odyssey* ix.112–15.

ATHENIAN: As these original relatively tiny communities grew bigger,
each of the small constituent families lived under its own ruler—the eldest
b member—and followed its own particular customs which had arisen be-
cause of its isolation from the others. The various social and religious
standards to which people had grown accustomed reflected the bias of
their ancestors and teachers: the more restrained or adventurous the ances-
tor, the more restrained or adventurous would be the character of his
descendants. Consequently, as I say, the members of each group entered
the larger community with laws peculiar to themselves, and were ready
to impress their own inclinations on their children and their children's
children.

CLINIAS: Naturally.

c ATHENIAN: And of course each group inevitably approved of its own
laws and looked on those of other people with rather less favor.

CLINIAS: Exactly.

ATHENIAN: So it looks as if we have unwittingly stumbled on the origin of legislation.

CLINIAS: We certainly have.

ATHENIAN: At any rate the next and necessary step in this amalgamation
is to choose some representatives to review the rules of all the families,
and to propose openly to the leaders and heads of the people—the 'kings',
d so to speak—the adoption of those rules that particularly recommend
themselves for common use. These representatives will be known as law-
givers, and by appointing the leaders as officials they will create out of
the separate autocracies a sort of aristocracy, or perhaps kingship. And
while the political system passes through this transitional stage they will
administer the state themselves.

CLINIAS: Yes, that sort of change would certainly come about by stages.

ATHENIAN: So we can now go on to describe the birth of a third type of political system, one which in fact admits *all* systems and all their modifications and exhibits equal variety and change in the actual states as well.

e CLINIAS: What type is this?

ATHENIAN: The one which Homer too listed as the successor of the second. This is how he describes the origin of the third:[4] 'He founded Dardania'—I think this is how it goes—'when holy Ilium,

*A town upon the plain for mortal men, had not been built:*
*For still they lived upon the lower slopes of many-fountained Ida.'*

682 He composed these lines, as well as those about the Cyclopes, under some
sort of inspiration from God. And how true to life they are! This is because

4. *Iliad* xx.216–18. 'He' is Dardanus; Ilium is Troy.

poets as a class are divinely gifted and are inspired when they sing, so that with the help of Graces and Muses they frequently hit on how things really happen.

CLINIAS: They do indeed.

ATHENIAN: Let's carry on with the story we are telling: it may suggest something to our purpose. I take it this is what we ought to do?

CLINIAS: Of course. b

ATHENIAN: Ilium was founded, according to us, when men had descended from the hills to a wide and beautiful plain. They built their city on a hill of moderate height near several rivers which poured down from Ida above.

CLINIAS: So the story goes.

ATHENIAN: I suppose we may assume that this descent of theirs took place many ages after the flood?

CLINIAS: Yes, naturally, many ages later.

ATHENIAN: I mean that apparently the disaster we've just described must have been forgotten to a quite remarkable degree if they founded their c city on the lower reaches of several rivers flowing down from the mountains, and put their trust in hills that were none too high.

CLINIAS: Yes, a clear proof that they were far removed in time from any such experience.

ATHENIAN: With the increase in the human population many other cities, one supposes, were already being founded.

CLINIAS: Naturally.

ATHENIAN: These cities also mounted an expedition against Ilium, probably by sea as well, because by then all mankind had overcome its fear and d had taken to ships.

CLINIAS: So it seems.

ATHENIAN: And after a siege of about ten years the Achaeans sacked Troy.

CLINIAS: Indeed they did.

ATHENIAN: They besieged Ilium for ten years, and during this period the domestic affairs of the individual attackers took a turn for the worse. The younger generation revolted, and the ugly and criminal reception they gave the troops when they returned to their own cities and homes led to murder, massacre and expulsion on a large scale. When the exiles came e back again they adopted a new name, and were now known as Dorians instead of Achaeans, in honor of Dorieus, who had rallied them while they were in exile. A full and exhaustive account of subsequent events can be found in your traditional Spartan stories.

MEGILLUS: Of course.

ATHENIAN: When we were starting to discuss legislation, the question of the arts and drinking cropped up, and we made a digression.[5] But now

5. At 636e ff.

we really do have a chance to come to grips with our subject. As if God himself were guiding us, we've come back to the very point from which
683 we digressed: the actual foundation of Sparta. You maintained that Sparta was established on the right lines, and you said the same of Crete, because it has laws that bear a family resemblance to Sparta's. We have had a rather random discussion about various foundations and political systems, but we have achieved at least this much: we have watched the first, second and third type of state being founded in succession over a vast period of time, and now we discover this fourth state (or 'nation', if you like) whose historical foundation and development we are tracing down to its maturity
b today.[6] After all this, perhaps we can get some idea of what was right and wrong in the way these foundations were established. Can we see what kind of laws are responsible for continued preservation of the features that survive and the ruin of those that collapse? What detailed alterations will produce happiness in a state? If we can understand all this, Clinias and Megillus, we shall have to discuss the whole business all over again: it will be like making a fresh start. However, we may be able to find some fault in our account so far.

c MEGILLUS: Well, sir, if some god were to give us his word that if we do make a second attempt to look at the problem of legislation, we shall hear an account of at least the quality and length of the one we have just had, I for one would willingly extend our journey, and the present day would seem not a moment too long—though it is in fact more or less the day when the Sun-god turns past summer towards winter.

ATHENIAN: So it looks as if we must press on with the investigation.

MEGILLUS: Certainly.

ATHENIAN: Let's imagine that we are living at the time when the territory
d of Sparta, Argos and Messene, and the districts nearby, had in effect come under the control of your ancestors, Megillus. Their next decision, or so the story goes, was to split their forces into three and establish three states—Argos, Messene and Sparta.

MEGILLUS: That's quite right.

ATHENIAN: Temenus became king of Argos, Cresphontes of Messene, and Procles and Eurysthenes of Sparta.

MEGILLUS: True.

ATHENIAN: And all their contemporaries swore to them that they would
e go to their help if anybody tried to subvert their thrones.

MEGILLUS: Precisely.

ATHENIAN: Now when a monarchy is overthrown (and indeed when any other type of authority has been destroyed at any time) surely no one but

6. The four are: (1) single families under autocratic rule, (2) collections of families under aristocratic rule, (3) the cities of the plains (e.g. Troy) with various constitutions, (4) a league of such cities, now to be discussed.

the rulers themselves are to blame? That was the line we took when the subject cropped up a little time ago—or have we forgotten by now?

MEGILLUS: No, of course not.

ATHENIAN: So now we can put our thesis on a firmer footing, because it looks as if our study of history has led us to the same conclusion as
before. This means we shall carry on our investigation on the basis of the 684
actual facts rather than conjecture. The facts are, of course, as follows: each of the three royal families, and each of the three royal states they ruled, exchanged oaths in accordance with mutually binding laws which they had adopted to regulate the exercise of authority and obedience to it. The kings swore never to stiffen their rule as the nation continued down the years; the others undertook, provided the rulers kept to their side of
the bargain, never themselves to overthrow the kingships nor tolerate an b
attempt to do so by others. The kings would help the kings and peoples if they were wronged, and the peoples would help the peoples and the kings likewise. That's right, isn't it?

MEGILLUS: Certainly.

ATHENIAN: Now whether it was the kings or someone else who laid down laws for this political system thus established in the three states, the crucial provision, surely, was this—

MEGILLUS: What?

ATHENIAN: Whenever a given state broke the established laws, an alliance of the other two would always be there to take the field against it.

MEGILLUS: Obviously.

ATHENIAN: Of course, most people only ask their legislators to enact the c
kind of laws that the population in general will accept without objection. But just imagine asking your trainer or doctor to give you pleasure when he trains or cures your body!

MEGILLUS: Exactly.

ATHENIAN: In fact, you often have to be satisfied if you can restore your body to health and vigor without undue pain.

MEGILLUS: True.

ATHENIAN: In another respect too the people of that time were particularly d
well placed to make legislation a painless process.

MEGILLUS: What respect?

ATHENIAN: Their legislators' efforts to establish a certain equality of property among them were not open to one particularly damaging accusation which is frequently made in other states. Suppose a legal code is being framed and someone adopts the policy of a change in the ownership of land and a cancellation of debts, because he sees that this is the only way
in which equality can be satisfactorily achieved. 'Hands off fundamentals' e
is the slogan everybody uses to attack a legislator who tries to bring in that kind of reform, and his policy of land-redistribution and remission of debts earns him only curses. It's enough to make any man despair. So

here is another tremendous advantage the Dorians enjoyed: the absence of resentment. No one could object to the way the land was parceled out, and large long-standing debts did not exist.

Megillus: True.

Athenian: Then why on earth, my friends, did this foundation and its legislation turn out such a dismal failure?

685 Megillus: What do you mean by that? What's your objection?

Athenian: Three states were founded but in two of them the political system and the legal code were quickly corrupted. Only the third settlement survived—that of your state, Sparta.

Megillus: A pretty difficult problem you're posing!

Athenian: Nevertheless, it demands our attention. So now let's look
into it, and while away the journey, as we said when we set out, by
amusing ourselves with laws—it's a dignified game and it suits our time
b of life.

Megillus: Of course. We must do as you say.

Athenian: No laws could form a better subject for our investigation than those by which these states have been administered. Or are there any bigger or more famous states whose foundation we might examine?

Megillus: No, it's not easy to think of alternatives.

Athenian: Well then, it's pretty obvious that they intended the arrange-
c ments they made to protect adequately not only the Peloponnese but
the Greeks in general against any possible attack by non-Greeks—as for
example occurred when those who then lived in the territory of Ilium
trusted to the power of the Assyrian empire, which Ninos had founded,
and provoked the war against Troy by their arrogance. You see, a good
deal of the splendor of the Assyrian empire still remained, and the dread
of its united organization was the counterpart in that age of our fear of
the Great King of Persia today. The Assyrians had a tremendous grudge
d against the Greeks: Troy, which was part of the Assyrian empire, had been
captured for a second time.[7] To meet such dangers the Dorian army formed
a single unified body, although at that period it was distributed among
the three states under the command of the kings (who were brothers, being
sons of Hercules). It seemed to be excellently conceived and equipped—
better even than the army which sailed against Troy. For a start, people
thought the sons of Hercules were, as commanders, a cut above the grand-
e sons of Pelops;[8] secondly, they rated the prowess of the army itself higher
than that of the expedition which went to Troy. After all, they calculated,
*that* had consisted of Achaeans, the very people the Dorians had defeated.
So may we take it that this was the nature and purpose of the arrangements
they made?

7. For the first capture, see *Iliad* v.640.

8. Agamemnon and Menelaus, who led the expedition against Troy.

MEGILLUS: Certainly.

ATHENIAN: And for various reasons they probably expected these ar- 686
rangements would be permanent and last a long time. They had been
comrades in a great many toils and dangers in the past, and now they
had been brought under the control of a single family (the kings being
brothers); and they had also consulted a large number of prophets, notably
Apollo's at Delphi.

MEGILLUS: Yes, that's probable enough, of course.

ATHENIAN: But apparently these large expectations evaporated pretty
quickly, except, as we said a minute ago, in the case of just one small part b
of the alliance—your state, Sparta. And right up to the present day Sparta
has never stopped fighting the other two members. But if they had done
as they intended and had agreed on a common policy, their power would
have been irresistible, militarily speaking.

MEGILLUS: It certainly would.

ATHENIAN: So just how did their plans misfire? This is surely a problem we ought to look into: why was such a vast and tremendous organization unlucky enough to be destroyed?

MEGILLUS: True: this is the right direction to look. Neglect these, and c
you'll never find any other laws or political systems preserving (or eliminat-
ing) such remarkable and important features.

ATHENIAN: What a stroke of luck! It looks as if we've somehow got on to a crucial point.

MEGILLUS: No doubt about it.

ATHENIAN: Well now, my fine fellow, what hackneyed thoughts we've
been having, without realizing it! When people see some tremendous
achievement, they always think to themselves, 'What terrific results it
would have led to, if someone had known how to set about putting it to d
proper use!' Here and now, perhaps our ideas on the topic we are discuss-
ing are just as wrong and unrealistic as anybody else's who looks at
anything in that sort of way.

MEGILLUS: Well really, what *do* you mean? What are we supposed to think you're driving at when you say that?

ATHENIAN: I was poking fun at no one but myself, my friend. I was thinking about the army we are discussing and it occurred to me how splendid it was and what a marvellous tool (as I said) had been put into the hands of the Greeks—if only someone had put it to the proper use at the time!

MEGILLUS: And you were quite right and sensible in everything you said, e
and we heartily agreed with you—equally rightly and sensibly.

ATHENIAN: Maybe so. Still, my view is that everyone who sets eyes on something big and strong and powerful immediately gets the feeling that if the owner knew how to take advantage of its size and scale he would get tremendous results and be a happy man.

687 MEGILLUS: And this again is surely right and proper. Or do you see it differently?

ATHENIAN: Well now, just consider what criteria a man ought to employ if he is going to be 'right' to give such praise in an individual case. What about the one we are discussing, for a start? Suppose those who undertook the organization of the army in that age had known their job: somehow, they would have succeeded in it—but the question is *how*. They ought, of course, to have consolidated their army and kept it on a permanent footing; this would have ensured them their own freedom while they ruled over anybody else they liked, and in general it would have enabled them to
b do whatever they or their children wanted all over the world, among Greeks and non-Greeks indifferently. This is what men would praise them for, isn't it?

MEGILLUS: It is indeed.

ATHENIAN: Again, anyone who notices a case of great wealth or exceptional family distinction or something like that takes precisely the same line. He assumes that just because a man enjoys these advantages his every wish will be granted—or at any rate most of them, and the most important ones.

MEGILLUS: Quite likely.

c ATHENIAN: Now then, this shows that there is one specific desire common to all mankind. Isn't this the upshot of our discussion?

MEGILLUS: What desire?

ATHENIAN: That events should obey whatever orders one feels like giving—invariably, if possible, but failing that, at least where human affairs are concerned.

MEGILLUS: Very true.

ATHENIAN: So seeing that this is the constant wish of us all, right from childhood to old age, isn't it inevitably what we are always *praying* for too?

MEGILLUS: Of course.

d ATHENIAN: And I suppose our prayers on behalf of those whom we love will be for precisely what they themselves pray for on their own behalf?

MEGILLUS: Certainly.

ATHENIAN: A man who is a father loves the child who is his son?

MEGILLUS: Of course.

ATHENIAN: Yet there is a good deal in the son's prayers that the father will beg the gods never to grant.

MEGILLUS: You mean when the son who prays is still young and irresponsible?

ATHENIAN: Yes, and I'm thinking too of when the father is senile or even
e unduly impulsive because of second childhood, and has lost all sense of what is right and proper. He gets into the same state as Theseus when he

dealt with Hippolytus, who died so wretchedly,[9] and his prayers become
very vehement indeed. But if the son understands the situation, do you
think he will join in his father's prayers, given those circumstances?

Megillus: I know what you mean. Your point, I take it, is that you
should demand your own way in your prayers only if your wishes are
supported by your rational judgment—and this, a rational outlook, should
be the object of the prayers and efforts of us all, states and individuals alike.

Athenian: It should indeed, and in particular—let me remind myself— 688
it should always be the aim of a state's legislator when he frames the
provisions of his laws. And I remind *you* again—to recollect the beginning
of our discussion—of what you two recommended: you said that the good
legislator should construct his entire legal code with a view to war;[10] for
my part, I maintained that this was to order him to establish his laws with
an eye on only one virtue out of the four. I said he ought to keep virtue b
as a whole in mind but especially and preeminently the virtue that heads
the list—judgment and wisdom, and a strength of mind such that desires
and appetites are kept under control. Our discussion has come full circle,
and being the speaker at the moment I make the same point as before.
You can treat it as a joke if you like, but if you prefer, you can take it
seriously: I maintain that, if you lack wisdom, praying is a risky business,
because you get the opposite of what you want. If you like to suppose c
that I am in earnest, do so: I'm confident that if you follow the line of
argument we opened up a moment ago you'll soon discover that the cause
of the ruin of the kings and the whole enterprise was not cowardice nor
a lack of military expertise in the commanders or in those whose role it
was to obey them. The disaster was caused by every other sort of vice,
and in particular ignorance about mankind's most vital concerns. And if d
that was true then it is even more so today; and precisely the same will
be true in the future. If you like, I'll try to press on with the next stages
in the argument and develop the point. As you are my friends, I'll do my
very best to make it clear.

Clinias: To make a speech in your praise, sir, would be a tasteless thing
to do. Our actions rather than our words will show our regard for you:
we shall give you our closest attention. This is the best way to tell whether
a gentleman approves or not.

Megillus: Well said, Clinias. Let's do as you say. e

Clinias: And so we shall, God willing. Now let's have your explanation.

Athenian: Well then, to go back on to the track of the argument, we
maintain that crass ignorance destroyed that great empire, and that it has

9. Hippolytus' stepmother Phaedra falsely accused him of sexual misconduct towards herself; Theseus, her husband, prayed for the death of his son. The prayer was granted, but then Theseus discovered Hippolytus' innocence.

10. 625d ff.

a natural tendency to produce precisely the same results today. If this is so, it means that the legislator must try to inspire states with as much good sense as possible, and eradicate folly, as far as he can.

Clinias: Obviously.

689 Athenian: So what kind of ignorance would deserve the title 'crass'?
See if you agree with my description. I suggest this kind.

Clinias: What?

Athenian: The kind involved when a man thinks something is fine and
good, but loathes it instead of liking it, and conversely when he likes and
welcomes what he believes is wicked and unjust. I maintain that this
disaccord between his feelings of pleasure and pain and his rational judg-
ment constitutes the very lowest depth of ignorance. It is also the most
b 'crass', in that it affects the most extensive element in the soul (the element
that experiences pleasure and pain, which corresponds to the most exten-
sive part of a state, the common people). So when the soul quarrels with
knowledge or opinion or reason, its natural ruling principles, you have
there what I call 'folly'. This applies both to the state in which people
disobey their rulers and laws, and to the individual, when the fine princi-
ples in which he really believes prove not only ineffective but actually
harmful. It's all these examples of ignorance that I should put down as
c the worst kind of discord in a state and individual, not the mere professional
ignorance of a workman. I hope you see what I mean, gentlemen.

Clinias: We do, my friend, and we agree with what you say.

Athenian: So let's adopt this as an agreed statement of policy: no citizens
who suffer from this kind of ignorance should be entrusted with any
degree of power. They must be reproved for their ignorance, even if their
ability to reason is outstanding and they have worked hard at every nice
d accomplishment that makes a man quick-witted. It is those whose charac-
ters are at the other extreme who must be called 'wise', even if, as the
saying is, 'they cannot read, they cannot swim'; and it is these sensible
people who must be given the offices of state. You see, my friends, without
concord, how could you ever get even a glimmer of sound judgment? It's
out of the question. But we should be entirely justified in styling the
greatest and most splendid concord of all 'the greatest wisdom'. Anyone
who lives a rational life shares in this wisdom, but the man who lacks it
will invariably turn out to be a spendthrift and no savior to the city—
e quite the reverse, because he suffers from this particular kind of ignorance.
So as we said just now, let's adopt this as the statement of our views.

Clinias: Adopted it is.

Athenian: Now, I take it that states must contain some people who govern and others who are governed?

Clinias: Naturally.

690 Athenian: Good. Well then, what titles are there to either rank? Can we
count them? (I mean both in the state and in the family, in each case

irrespective of size.) One claim, surely, could be made by father and mother; and in general the title of parents to exercise control over their children and descendants would be universally acknowledged, wouldn't it?

CLINIAS: Of course.

ATHENIAN: Close behind comes the title of those of high birth to govern those of low birth. Next in order comes our third demand: that younger people should consent to be governed by their elders.

CLINIAS: Certainly.

ATHENIAN: The fourth is that slaves should be subject to the control of b
their masters.

CLINIAS: No doubt about it.

ATHENIAN: And I suppose the fifth is that the stronger should rule and the weaker should obey.

CLINIAS: A pretty compelling claim to obedience, that!

ATHENIAN: Yes, and one which prevails throughout the animal kingdom—by decree of nature, as Pindar of Thebes once remarked.[11] But it looks as if the most important claim will be the sixth, that the ignorant man should follow the leadership of the wise and obey his orders. In spite of you, my clever Pindar, what I'd called the 'decree of nature' is in fact c
the rule of law that governs willing subjects, without being imposed by force; I'm certainly not prepared to say it's *un*natural.

CLINIAS: Quite right.

ATHENIAN: And we persuade a man to cast lots, by explaining that this, the seventh title to authority, enjoys the favor of the gods and is blessed by fortune. We tell him that the fairest arrangement is for him to exercise authority if he wins, but to be subject to it if he loses.

CLINIAS: That's very true.

ATHENIAN: 'So you see, O legislator' (as we might jocularly address d
someone who sets about legislation with undue optimism), 'you see how many titles to authority there are, and how they naturally conflict with each other. Now here's a source of civil strife we've discovered for you, which you must put to rights. First, though, join us in trying to find out how the kings of Argos and Messene went astray and broke these rules, and so destroyed themselves and the power of Greece, for all its splendor at that time. Wasn't it because they didn't appreciate the truth of Hesiod's e
remark that the half is often greater than the whole?[12] He thought that when it is harmful to get the whole, and the half is enough, then enough is *better* than a feast, and is the preferable alternative.'

CLINIAS: True enough.

11. The Athenian alludes to a few lines of a poem now largely lost (frg. 109 Snell): cf. 714e and 890a.

12. *Works and Days* 40.

ATHENIAN: So where do we suppose this destructive process invariably starts? Among kings or people?

691 CLINIAS: Most instances suggest that this is probably a disease of kings whose life of luxury has made them arrogant.

ATHENIAN: So it is clear that it was the kings of that era who were first infected by the acquisitive spirit in defiance of the law of the land. The precise point to which they had given their seal of approval by their word and oath became the ground of their disagreement, and this lack of harmony (which is, in our view, the 'crassest' stupidity, though it looks like wisdom) put the whole arrangement jarringly off key and out of tune: hence its destruction.

CLINIAS: Quite likely.

b ATHENIAN: Very well. Then what precautions ought a contemporary legislator to have taken in his code to nip this disease in the bud? God knows, the answer's not difficult nowadays, and the point is quite simple to understand—though if anyone had foreseen the problem then, assuming it was possible to do so, he'd have been wiser than we are.

MEGILLUS: What do you mean?

ATHENIAN: Hindsight, Megillus! In the perspective of today it's easy to understand what should have been done then, and once understood it's equally easy to explain.

MEGILLUS: You'd better be even clearer than that.

ATHENIAN: The clearest way of putting it would be this.

MEGILLUS: What?

c ATHENIAN: If you neglect the rule of proportion and fit excessively large sails to small ships, or give too much food to a small body, or too high authority to a soul that doesn't measure up to it, the result is always disastrous. Body and soul become puffed up: disease breaks out in the one, and in the other arrogance quickly leads to injustice. Now, what are we getting at? Simply this: the mortal soul simply does not exist, my friends, which by dint of its natural qualities will ever make a success of
d supreme authority among men while it is still young and responsible to no one. Full of folly, the worst of diseases, it inevitably has its judgment corrupted, and incurs the enmity of its closest friends; and once that happens, its total ruin and the loss of all its power soon follow. A first-class lawgiver's job is to have a sense of proportion and to guard against this danger. Nowadays it is a reasonable guess that this was in fact done at that time. However, it looks as if there was. . .

MEGILLUS: What?

ATHENIAN: . . . some god who was concerned on your behalf and saw what was going to happen. He took your single line of kings and split it into two,[13] so as to restrict its powers to more reasonable proportions. After

13. Procles and Eurysthenes, the first kings of Sparta, were the twin sons of Aristodemus.

that, a man[14] who combined human nature with some of the powers of a god observed that your leadership was still in a feverish state, so he blended the obstinacy and vigor of the Spartans with the prudent influence of age by giving the twenty-eight elders the same authority in making important decisions as the kings. Your 'third savior'[15] saw that your government was still fretting and fuming with restless energy, so he put a kind of bridle on it in the shape of the power of the ephors[16]—a power which came very close to being held by lot. This is the formula that turned your kingship into a mixture of the right elements, so that thanks to its own stability it ensured the stability of the rest of the state. If things had been left to the discretion of Temenus and Cresphontes and the legislators of that time, whoever in fact they were, not even Aristodemus' part[17] would have survived. You see, they were tiros in legislation: otherwise it would never have occurred to them to rely on oaths[18] to restrain the soul of a young man who had taken over power from which a tyranny could develop. But the fact is that God has demonstrated the sort of thing a position of authority ought to have been then and should be now, if it is to have any prospects of permanency. As I said before, we don't need any great wisdom to recognize all this now—after all, it's not difficult to see the point if you have a historical example to go by. But if anyone had seen all this then, and had been able to control the various offices and produce a single authority out of the three, he would have saved all the splendid projects of that age from destruction, and neither the Persians nor anyone else would ever have sent a fleet to attack Greece, contemptuously supposing that we were people who counted for very little.

e 692 b c

CLINIAS: That's true.

ATHENIAN: After all, Clinias, the way the Greeks repulsed them was a disgrace. In saying this, I don't mean that those who won the battles of that war by land and sea did not do so magnificently. By 'disgrace' I mean that, to start with, only one of those three states fought to defend Greece. The other two were rotten to the core. One of them[19] even hindered Sparta's attempts to help the defense, and fought her tooth and nail, while the other, Argos (which used to be paramount when the territory was first

d e

14. Lycurgus, who created the Spartan Council of Elders.

15. The expression 'third savior' is proverbial, and refers to the custom of offering Zeus the Savior the third libation at banquets. Plato probably means Theopompus, a king of Sparta in the eighth century.

16. Five annually elected officials who in addition to wide executive and judicial powers exercised close control over the conduct of the kings.

17. I.e., Sparta: see 683c ff. and 684e ff.

18. See 684a.

19. Messene. Cf. 698c–e.

divided up), although called upon to repel the barbarian, ignored the
request and failed to contribute to the defense. A detailed history of the
course of that war would have some pretty ugly charges to make against
Greece: indeed, there is no reason why it should report that Greece made
any defense at all. If it hadn't been for the joint determination of the
693 Athenians and the Spartans to resist the slavery that threatened them, we
should have by now virtually a complete mixture of the races—Greek with
Greek, Greek with barbarian, and barbarian with Greek. We can see a
parallel in the nations whom the Persians lord it over today: they have
been split up and then horribly jumbled together again into the scattered
communities in which they now live. Well now, Clinias and Megillus, why
are we making these accusations against the so-called 'statesmen' and
legislators of that day and this? Because if we find out *why* they went
b wrong we shall discover what different course of action they ought to
have followed. That is what we were doing just now, when we said that
legislation providing for powerful or extreme authority is a mistake. One
should always remember that a state ought to be free and wise and enjoy
internal harmony, and that this is what the lawgiver should concentrate
on in his legislation. (It ought not to surprise us if several times before now we
c have decided on a number of other aims and said *they* were what a lawgiver
should concentrate on, so that the aims proposed never seem to be the same
from minute to minute. When we say that the legislator should keep self-control or good judgment or friendship in view, we must bear in mind that
all these aims are the same, not different. Nor should we be disconcerted if
we find a lot of other expressions of which the same is true.)

Clinias: Yes, when we think back over the argument we'll certainly try
to remember that. But you wanted to explain what the legislator ought to
aim at in the matter of friendship and good judgment and liberty. So tell
d us now what you were going to say.

Athenian: Listen to me then. There are two mother-constitutions, so to
speak, which you could fairly say have given birth to all the others. Monarchy is the proper name for the first, and democracy for the second. The
former has been taken to extreme lengths by the Persians, the latter by
my country; virtually all the others, as I said, are varieties of these two.
It is absolutely vital for a political system to combine them, *if* (and this is
of course the point of our advice, when we insist that no state formed
e without these two elements can be constituted properly)—*if* it is to enjoy
freedom and friendship applied with good judgment.

Clinias: Of course.

Athenian: One state was over-eager in embracing only the principle of
monarchy, the other in embracing only the ideal of liberty; neither has
achieved a balance between the two. Your Spartan and Cretan states have
done better, and time was when you could say much the same of the
694 Athenians and Persians, but things have changed since then. Let's run
through the reasons for this, shall we?

CLINIAS: Yes, of course—if, that is, we mean to finish what we have set out to do.

ATHENIAN: Then let's listen to the story. Under Cyrus, the life of the Persians was a judicious blend of liberty and subjection, and after gaining their own freedom they became the masters of a great number of other people. As rulers, they granted a degree of liberty to their subjects and put them on the same footing as themselves, with the result that soldiers felt more affection for their commanders and displayed greater zeal in the b
face of danger. The king felt no jealousy if any of his subjects was intelligent and had some advice to offer; on the contrary, he allowed free speech and valued those who could contribute to the formulation of policy; a sensible man could use his influence to help the common cause. Thanks to freedom, friendship, and the practice of pooling their ideas, during that period the Persians made progress all along the line.

CLINIAS: It does rather look as if that was the situation in the period you describe.

ATHENIAN: So how are we to explain the disaster under Cambyses, and c
the virtually complete recovery under Darius?[20] To help our reconstruction of events, shall we have a shot at some inspired guessing?

CLINIAS: Yes, because this topic we've embarked on will certainly help our inquiry.

ATHENIAN: My guess, then, about Cyrus, is that although he was doubtless a good commander and a loyal patriot, he never considered, even superficially, the problem of correct education; and as for running a household, I'd say he never paid any attention to it at all.

CLINIAS: And what interpretation are we to put on a remark like that?

ATHENIAN: I mean that he probably spent his entire life after infancy on d
campaign, and handed over his children to the women to bring up. These women reared them from their earliest years as though they were already Heaven's special favorites and darlings, endowed with all the blessings that implies. They wouldn't allow anyone to thwart 'their Beatitudes' in anything, and they forced everybody to rhapsodize about what the children said or did. You can imagine the sort of person they produced.

CLINIAS: And a fine old education it must have been, to judge from your account.

ATHENIAN: It was a womanish education, conducted by the royal harem. e
The teachers of the children had recently come into considerable wealth, but they were left all on their own, without men, because the army was preoccupied by wars and constant dangers.

CLINIAS: That makes sense.

20. Cambyses, son of Cyrus, was King of Persia from 529 to 521. 'Disaster' refers to the military failures of his reign, his tyrannical madness, and the short-lived seizure of his throne by Gomates (see 695b and note). Cambyses was succeeded by Darius (521-486), who followed the prudent policies described in 695c–d. See Herodotus, III, 61 ff.

ATHENIAN: The children's father, for his part, went on accumulating
herds and flocks for their benefit—and many a herd of human beings too,
695 quite apart from every other sort of animal; but he didn't know that his
intended heirs were not being instructed in the traditional Persian disci-
pline. This discipline (the Persians being shepherds, and sons of a stony
soil) was a tough one, capable of producing hardy shepherds who could
camp out and keep awake on watch and turn soldier if necessary. He just
didn't notice that women and eunuchs had given his sons the education
of a Mede[21] and that it had been debased by their so-called 'blessed' status.
b That is why Cyrus' children turned out as children naturally do when
their teachers have never corrected them. So, when they succeeded to their
inheritance on the death of Cyrus, they were living in a riot of unrestrained
debauchery. First, unwilling to tolerate an equal, one of them killed the
other; next, he himself, driven out of his senses by liquor and lack of self-
control, was deprived of his dominions by the Medes and 'the Eunuch'
(as he was then called), to whom the idiot Cambyses was an object of con-
tempt.[22]

c CLINIAS: So the story goes, and it seems probable enough.

ATHENIAN: And it goes on, I think, to say that the empire was regained
for the Persians by Darius and 'the Seven'.

CLINIAS: Certainly.

ATHENIAN: Now let's carry on with this story of ours and see what
happened. Darius was no royal prince, and his upbringing had not encour-
aged him to self-indulgence. When he came and seized the empire with
the aid of the other six, he split it up into seven divisions, of which some
faint outlines still survive today. He thought the best policy was to govern
it by new laws of his own which introduced a certain degree of equality
d for all; and he also included in his code regulations about the tribute
promised to the people by Cyrus. His generosity in money and gifts rallied
all the Persians to his side, and stimulated a feeling of community and
friendship among them; consequently his armies regarded him with such
affection that they added to the territory Cyrus had bequeathed at least
as much again. But Darius was succeeded by Xerxes, whose education
had reverted to the royal pampering of old. ('Darius'—as perhaps we'd
be entitled to say to him—'you haven't learned from Cyrus' mistake, so
e you've brought up Xerxes in the same habits as Cyrus brought up
Cambyses.') So Xerxes, being a product of the same type of education,
naturally had a career that closely reproduced the pattern of Cambyses'
misfortunes. Ever since then, hardly any king of the Persians has been
genuinely 'great', except in style and title. I maintain that the reason for

21. I.e., an education of extreme luxury.

22. Gomates impersonated Cambyses' dead brother in order to seize the kingdom.

this is not just bad luck, but the shocking life that the children of dictators 696
and fantastically rich parents almost always lead: no man, you see, however old or however young, will ever excel in virtue if he has had this sort of upbringing. We repeat that this is the point the legislator must look out for, and so must we here and now. And in all fairness, my Spartan friends, one must give your state credit for at least this much: rich man, poor man, commoner and king are held in honor to the same degree and are educated in the same way, without privilege, except as determined by the supernatural instructions you received from some god when your state was b
founded.[23] A man's exceptional wealth is no more reason for a state to confer specially exalted office on him than his ability to run, his good looks, or his physical strength, in the absence of some virtue—or even if he *has* some virtue, if it excludes self-control.

MEGILLUS: What do you mean by that, sir?

ATHENIAN: Courage, I take it, is one part of virtue.

MEGILLUS: Of course.

ATHENIAN: So now that you've heard the story, use your own judgment: would you be glad to have as a resident in your house or as a neighbor a man who in spite of considerable courage was immoderate and licentious?

MEGILLUS: Heaven forbid! c

ATHENIAN: Well then, what about a skilled workman, knowledgeable in his own field, but unjust?

MEGILLUS: No, I'd never welcome him.

ATHENIAN: But surely, in the absence of self-control, justice will never spring up.

MEGILLUS: Of course not.

ATHENIAN: Nor indeed will the 'wise' man we put forward just now,[24] who keeps his feelings of pleasure and pain in tune with right reason and obedient to it.

MEGILLUS: No, he certainly won't.

ATHENIAN: Now here's another point for us to consider, which will help us to decide whether civic distinctions are, on a given occasion, conferred d
correctly or incorrectly.

MEGILLUS: And what is that?

ATHENIAN: If we found self-control existing in the soul in isolation from all other virtue, should we be justified in admiring it? Or not?

MEGILLUS: I really couldn't say.

ATHENIAN: A very proper reply. If you had opted for either alternative it would have struck an odd note, I think.

MEGILLUS: So my reply was all right, then.

23. 624a ff. and 691d ff.

24. 689d ff.

Athenian: Yes. But if you have something which in itself deserves to
be admired or execrated, a mere additional element isn't worth talking
e about: much better pass it over and say nothing.

Megillus: Self-control is the element you mean, I suppose.

Athenian: It is. And in general, whatever benefits us most, when this element is added, deserves the highest honor, the second most beneficial thing deserves the second highest honor, and so on: as we go down the list, everything will get in due order the honor it deserves.

697 Megillus: True.

Athenian: Well then, shan't we insist again[25] that the distribution of these honors is the business of the legislator?

Megillus: Of course.

Athenian: Would you prefer us to leave the entire distribution to his discretion and let him deal with the details of each individual case? But as we too have something of a taste for legislation, perhaps you'd like us to try our hands at a three-fold division and distinguish the most important class, then the second and the third.

Megillus: Certainly.

b Athenian: We maintain that if a state is going to survive to enjoy all
the happiness that mankind can achieve, it is vitally necessary for it to
distribute honors and marks of disgrace on a proper basis. And the proper
basis is to put spiritual goods at the top of the list and hold them—provided
the soul exercises self-control—in the highest esteem; bodily goods and
advantages should come second, and third those said to be provided by
property and wealth. If a legislator or a state ever ignores these guide-
c lines by valuing riches above all or by promoting one of the other inferior
goods to a more exalted position, it will be an act of political and religious
folly. Shall we take this line, or not?

Megillus: Yes, emphatically and unambiguously.

Athenian: It was our scrutiny of the political system of the Persians that
made us go into this business at such length. Our verdict was that their
corruption increased year by year; and the reason we assign for this is
that they were too strict in depriving the people of liberty and too energetic
d in introducing authoritarian government, so that they destroyed all friend-
ship and community of spirit in the state. And with that gone, the policy
of rulers is framed not in the interests of their subjects the people, but to
support their own authority: let them only think that a situation offers
them the prospect of some profit, even a small one, and they wreck cities
and ruin friendly nations by fire and sword; they hate, and are hated in
return, with savage and pitiless loathing. When they come to need the
e common people to fight on their behalf, they discover the army has no
loyalty, no eagerness to face danger and fight. They have millions and

25. Cf. 631e ff.

millions of soldiers—all useless for fighting a war, so that just as if
manpower were in short supply, they have to hire it, imagining that
mercenaries and foreigners will ensure their safety. Not only this, they 698
inevitably become so stupid that they proclaim by their very actions that
as compared with gold and silver everything society regards as good and
valuable is in their eyes so much trash.

MEGILLUS: Exactly.

ATHENIAN: So let's have done with the Persians. Our conclusion is that the empire is badly run at the moment because the people are kept in undue subjection and the rulers excessively authoritarian.

MEGILLUS: Precisely.

ATHENIAN: Next we come to the political system of Attica. We have to
demonstrate, on the same lines as before, that complete freedom from b
all authority is infinitely worse than submitting to a moderate degree
of control.

At the time of the Persian attack on the Greeks—on virtually everyone
living in Europe, is perhaps a better way of putting it—we Athenians had
a constitution, inherited from the distant past, in which a number of public
offices were held on the basis of four property-classes. Lady Modesty was
the mistress of our hearts, a despot who made us live in willing subjection
to the laws then in force. Moreover, the enormous size of the army that
was coming at us by land and sea made us desperately afraid, and served c
to increase our obedience to the authorities and the law. For all these
reasons we displayed a tremendous spirit of co-operation. You see, about
ten years before the battle of Salamis, Datis had arrived at the head of a
Persian army; he had been sent by Darius against the Athenians and the
Eretrians with explicit instructions to make slaves of them and bring them
home, and he had been warned that failure would mean death. With his
vast numbers of soldiers, Datis made short work of the Eretrians, whom d
he completely overpowered and captured. He then sent to Athens a blood-
curdling report that not a single Eretrian had got away—propaganda which
asked us to believe that Datis' soldiers, hand in hand in a long line, had
combed over every inch of Eretria. Well, whatever the truth or otherwise
of this tale, it terrified the Greeks; the Athenians were particularly scared,
and they sent off envoys in all directions, but no one was prepared to e
help them except the Spartans—who were, however, prevented by the
Messenian war, which was going on at that time, or perhaps by some
other distraction (I'm not aware of any information being given on the
point). However that may be, the Spartans arrived at Marathon one day
too late for the battle. After this, reports of vast preparations and endless
threats on the part of the king came thick and fast. The years went by,
and then we were told that Darius was dead, but that his son, young and
impetuous, had inherited the kingdom and was determined not to give
up the invasion. The Athenians reckoned that all these preparations were 699
directed against themselves, because of what had happened at Marathon;

and when they heard of the canal that had been dug through Athos, the bridging of the Hellespont and the huge number of Xerxes' ships, they calculated that neither land nor sea offered any prospects of safety. No one, they thought, would come to help them. They remembered the previous attack and the success of the Persians in Eretria: no one had assisted
b the Athenians then, no one had faced the danger by fighting at their side. On land they expected the same thing to happen this time; and as for the sea, they realized that escape by this route was out of the question, in view of the thousand or more ships coming to the attack. They could think of only one hope, and a thin, desperate hope it was; but there was simply no other. Their minds went back to the previous occasion, and they reflected how the victory they won in battle had been gained in equally desperate
c circumstances. Sustained by this hope, they began to recognize that no one but they themselves and their gods could provide a way out of their difficulties. All this inspired them with a spirit of solidarity. One cause was the actual fear they felt at the time, but there was another kind too, encouraged by the traditional laws of the state. I mean the 'fear' they had learned to experience as a result of being subject to an ancient code of laws. In the course of our earlier discussion[26] we have called this fear 'modesty' often enough, and we said that people who aspire to be good must be its slave. A coward, on the other hand, is free of this particular kind of fear and never experiences it. And if 'ordinary' fear had not overtaken the cowards on that occasion, they would never have combined to defend themselves or protected temples, tombs, fatherland, and friends and rela-
d tives as well, in the way they did. We would all have been split up and scattered over the face of the earth.

MEGILLUS: Yes, sir, you are quite right, and your remarks reflect credit both on your country and yourself.

ATHENIAN: No doubt, Megillus; and it is only right and proper to tell you of the history of that period, seeing that you've been blessed with your ancestors' character. Now then, you and Clinias, consider: have these remarks of ours any relevance at all to legislation? After all, this is the
e object of the exercise—I'm not going through all this simply for the story. Look: in a way, we Athenians have had the same experience as the Persians. They, of course, reduced the people to a state of complete subjection, and we encouraged the masses to the opposite extreme of unfettered liberty, but the discussion we have had serves well enough as a pointer to the next step in the argument, and shows us the method to follow.

700 MEGILLUS: Splendid! But do try to be even more explicit about what you mean.

ATHENIAN: Very well. When the old laws applied, my friends, the people were not in control: on the contrary, they lived in a kind of 'voluntary slavery' to the laws.

26. At 647a, 671d.

MEGILLUS: Which laws have you in mind?

ATHENIAN: I'm thinking primarily of the regulations about the music of
that period (music being the proper place to start a description of how
life became progressively freer of controls). In those days Athenian music
comprised various categories and forms. One type of song consisted of b
prayers to the gods, which were termed 'hymns'; and there was another
quite different type, which you might well have called 'laments'. 'Paeans'
made up a third category, and there was also a fourth, called a 'dithyramb'
(whose theme was, I think, the birth of Dionysus). There existed another
kind of song too, which they thought of as a separate class, and the name
they gave it was this very word that is so often on our lips: 'nomes'[27] ('for
the lyre', as they always added). Once these categories and a number of
others had been fixed, no one was allowed to pervert them by using one
sort of tune in a composition belonging to another category. And what was c
the authority which had to know these standards and use its knowledge in
reaching its verdicts, and crack down on the disobedient? Well, certainly
no notice was taken of the catcalls and uncouth yelling of the audience,
as it is nowadays, nor yet of the applause that indicates approval. People
of taste and education made it a rule to listen to the performance with
silent attention right through to the end; children and their attendants and
the general public could always be disciplined and controlled by a stick. d
Such was the rigor with which the mass of the people was prepared to
be controlled in the theatre, and to refrain from passing judgment by
shouting. Later, as time went on, composers arose who started to set a
fashion of breaking the rules and offending good taste. They did have a
natural artistic talent, but they were ignorant of the correct and legitimate
standards laid down by the Muse. Gripped by a frenzied and excessive
lust for pleasure, they jumbled together laments and hymns, mixed paeans
and dithyrambs, and even imitated pipe tunes on the lyre. The result
was a total confusion of styles. Unintentionally, in their idiotic way, they e
misrepresented their art, claiming that in music there are no standards of
right and wrong at all, but that the most 'correct' criterion is the pleasure
of a man who enjoyed the performance, whether he is a good man or not.
On these principles they based their compositions, and they accompanied
them with propaganda to the same effect. Consequently they gave the
ordinary man not only a taste for breaking the laws of music but the
arrogance to set himself up as a capable judge. The audiences, once silent, 701
began to use their tongues; they claimed to know what was good and
bad in music, and instead of a 'musical meritocracy', a sort of vicious
'theatrocracy' arose. But if this democracy had been limited to gentlemen
and had applied only to music, no great harm would have been done; in
the event, however, music proved to be the starting point of everyone's
conviction that he was an authority on everything, and of a general

27. The Greek word is *nomoi*, which also means 'laws'. Cf. 722d, 775b, 799e.

disregard for the law. Complete license was not far behind. The conviction
b that they *knew* made them unafraid, and assurance engendered effrontery.
You see, a reckless lack of respect for one's betters is effrontery of peculiar viciousness, which springs from a freedom from inhibitions that has gone much too far.

MEGILLUS: You're absolutely right.

ATHENIAN: This freedom will then take other forms. First people grow unwilling to submit to the authorities, then they refuse to obey the admonitions of their fathers and mothers and elders. As they hurtle along towards the end of this primrose path, they try to escape the authority of the laws;
c and the very end of the road comes when they cease to care about oaths
and promises and religion in general. They reveal, reincarnated in themselves, the character of the ancient Titans[28] of the story, and thanks to getting into the same position as the Titans did, they live a wretched life of endless misery. Again I ask: what's the purpose of saying all this? My tongue has been galloping on and obviously I ought to curb it constantly; I must keep a bridle in my mouth and not let myself be carried away by
d the argument so as to 'take a toss from the hoss', as the saying is. Let me
repeat the question: what's the point of this speech I've made?

MEGILLUS: Well asked!

ATHENIAN: The point is one we've made before.

MEGILLUS: What?

ATHENIAN: We said [29] that a lawgiver should frame his code with an eye on three things: the freedom, unity and wisdom of the city for which he legislates. That's right, isn't it?

MEGILLUS: Certainly.

e ATHENIAN: That was why we selected two political systems, one authori-
tarian in the highest degree, the other representing an extreme of liberty; and the question is now, which of these two constitutes correct government? We reviewed a moderate authoritarianism and a moderate freedom, and saw the result: tremendous progress in each case. But when either the Persians or the Athenians pushed things to extremes (of subjection in the one case and its opposite in the other), it did neither of them any good at all.

702 MEGILLUS: You're quite right.

ATHENIAN: We had precisely the same purpose when we looked at the settlement of the Dorian forces, Dardanus' dwellings in the foothills, the foundation by the sea, and the original survivors of the flood; earlier, we discussed music and drink from the same point of view, as well as other topics before that. The object was always to find out what would be the
b ideal way of administering a state, and the best principles the individual

28. Children of Heaven and Earth, long-standing enemies ultimately overthrown by the Olympian gods.

29. See 693b.

can observe in running his own life. But has it been worth our while? I wonder, Clinias and Megillus, if there's some test of this that we could set ourselves?

Clinias: I think I can see one, sir. As luck would have it, I find that all the subjects we have discussed in our conversation are relevant to my needs here and now. How fortunate that I've fallen in with you and b
Megillus! I won't keep you in the dark about my position—indeed, I think that meeting you is a good omen for the future. The greater part of Crete is attempting to found a colony, and has given responsibility for the job to the Cnossians; and the state of Cnossus has delegated it to myself and nine colleagues. Our brief is to compose a legal code on the basis of such local laws as we find satisfactory, and to use foreign laws as well—the fact that they are not Cretan must not count against them, provided their quality seems superior. So what about doing me—and you—a favor? Let's d
take a selection of the topics we have covered and construct an imaginary community, pretending that we are its original founders. That will allow us to consider the question before us, and it may be that I'll use this framework for the future state.

Athenian: Well, Clinias, that's certainly welcome news! You may take it that I for my part am entirely at your disposal, unless Megillus has some objection.

Clinias: Splendid!

Megillus: Yes, I too am at your service.

Clinias: I'm delighted you both agree. Now then, let's try—initially only e
in theory—to found our state.

# Book IV

Athenian: Well, now, how should we describe our future state? I don't 704
mean just its name: I'm not asking what it's called now, nor what it ought to be called in the future. (This might well be suggested by some detail of the actual foundation or by some spot nearby: perhaps a river or spring or some local gods will give the new state their own style and title.) This b
is my real question: is it to be on the coast, or inland?

Clinias: The state I was talking about a moment ago, sir, is approximately eighty stades[1] from the sea.

Athenian: Well, what about harbors? Are there any along the coast on that side of the state, or are they entirely absent?

Clinias: No, sir. The state has harbors in that direction which could hardly be bettered.

Athenian: A pity, that. What about the surrounding countryside? Does c
it grow everything or are there some deficiencies?

1. Nine or ten miles.

Clinias: No, it grows practically everything.

Athenian: Will it have some nearby state for a neighbor?

Clinias: Absolutely none—that's just why it's being founded. Ages ago, there was a migration from the district, which has left the land deserted for goodness knows how long.

Athenian: What about plains and mountains and forests? How is it off for each of these?

d Clinias: Very much like the rest of Crete in general.

Athenian: Rugged rather than flat, you mean?

Clinias: Yes, that's right.

Athenian: Then the state will have tolerably healthy prospects of becoming virtuous. If it were going to be founded near the sea and have good harbors, and were deficient in a great number of crops instead of growing everything itself, then a very great savior indeed and lawgivers of divine stature would be needed to stop sophisticated and vicious characters developing on a grand scale: such a state would simply invite it. As it is, we can take comfort in those eighty stades. Even so, it lies nearer the sea than it should, and you say that it is rather well off for harbors, which makes
705 matters worse; but let's be thankful for small mercies. For a country to have the sea nearby is pleasant enough for the purpose of everyday life, but in fact it is a 'salty-sharp and bitter neighbor'[2] in more senses than one. It fills the land with wholesaling and retailing, breeds shifty and deceitful habits in a man's soul, and makes the citizens distrustful and hostile, not only among themselves, but also in their dealings with the world outside. Still, the fact that the land produces everything will be
b some consolation for these disadvantages, and it is obvious in any case that even if it does grow every crop, its ruggedness will stop it doing so in any quantity; if it yielded a surplus that could be exported in bulk, the state would be swamped with the gold and silver money it received in return—and this, if a state means to develop just and noble habits, is pretty nearly the worst thing that could happen to it, all things considered (as we said, if we remember, earlier in our discussion).

Clinias: Of course we remember, and we agree that our argument then was right, and still is now.

c Athenian: The next point is this: how well is the surrounding district supplied with timber for building ships?

Clinias: There are no firs or pines worth mentioning, and not much by way of cypress, though you'll find a small quantity of plane and Aleppo pine, which is, of course, the standard material shipwrights must have to construct the interior parts of a boat.

Athenian: That too is a feature of the country which will do it no harm.

Clinias: Oh?

2. Apparently in part a quotation from Alcman, a Spartan poet of the seventh century. See D. A. Campbell, *Greek Lyric* (Loeb), vol. II, pp. 468–69.

Athenian: It's a good thing that a state should find it difficult to lower d
itself to copy the wicked customs of its enemies.

Clinias: And what on earth has been said to prompt *that* remark?

Athenian: My dear sir, cast your mind back to the beginning of our discussion and watch what I'm up to. Do you remember the point we made about the laws of the Cretans having only one object, and how in particular the two of you asserted that this was warfare? I took you up on the point and argued that in so far as such institutions were established with virtue as their aim, they were to be approved; but I took strong exception to their aiming at only a part of virtue instead of the whole. e
Now it's your turn: keep a sharp eye on this present legislation, in case I lay down some law which is not conducive to virtue, or which fosters only a part of it. I'm going on the assumption that a law is well enacted only if it constantly aims, like an archer, at that unique target which is the 706
only object of legislation to be invariably and uninterruptedly attended by some good result; the law must ignore everything else (wealth or anything like that), if it happens not to meet the requirements I have stipulated. This 'disgraceful copying of enemies' to which I was referring occurs when people live by the sea and are plagued by such foes as Minos, who once forced the inhabitants of Attica to pay a most onerous tribute (though of course in saying this I've no wish at all to hark back to our old grudges against you).[3] Minos exercised tremendous power at sea, whereas the Athenians had not yet acquired the fighting ships they have today, b
nor was their country so rich in supplies of suitable timber that they could readily construct a strong fleet; consequently they couldn't turn themselves into sailors at a moment's notice and repel the enemy by copying the Cretan use of the sea. Even if they *had* been able to do that, it would have done them more good to lose seven boys over and over again rather than c
get into bad habits by forming themselves into a navy. They had previously been infantrymen, and infantrymen can stand their ground; but sailors have the bad habit of dashing at frequent intervals and then beating a very rapid retreat indeed back to their ships. They see nothing disgraceful at all in a craven refusal to stand their ground and die as the enemy attacks, nor in the plausible excuses they produce so readily when they drop their weapons and take to their heels—or, as they put it, 'retreat without dishonor'. This is the sort of terminology you must expect if you make your soldiers into sailors; these expressions are not 'beyond praise' (far d
from it): men ought never to be trained in bad habits, least of all the citizen-elite. Even from Homer, I suspect, you can see that this is bad policy. He has Odysseus pitching into Agamemnon for ordering the ships to be put to sea just when the Achaeans were being hard put to it in their fight with the Trojans. In his anger, Odysseus says to him:

3. The Athenians killed Androgeos, son of Minos, King of Crete, who then exacted a tribute of seven girls and seven boys as victims for the Minotaur, a Cretan monster.

e *Why bid the well-benched ships be put to sea,*
*When in our ears the noise of battle rings?*
*Do you want the Trojans' dearest wish fulfilled,*
*and utter ruin send us to the grave?*
*Put the ships to sea, and watch the Achaeans*
*buckle to the fight! No: they'll scuttle off*
*and shrink away from battle. The advice you give*
*will mean the end of us.*[4]

707 So Homer too realized that it is bad tactics to have triremes lined up at sea in support of infantry in the field. This is the sort of habit-training that will soon make even lions run away from deer. And that's not all. When a state which owes its power to its navy wins a victory, the bravest soldiers never get the credit for it, because the battle is won thanks to the skill of
b steersman, boatswain and rower and the efforts of a motley crowd of ragamuffins, which means that it is impossible to honor each individual in the way he deserves. Rob a state of its power to do that, and you condemn it to failure.

CLINIAS: I suppose that's more or less inevitable. But in spite of that, sir, it was by fighting at sea at Salamis against the barbarians that the Greeks saved their country—according to us Cretans, anyway.

c ATHENIAN: Yes, that's what most people say, Greek and non-Greek alike. Still, my friend, we—Megillus here and myself—are arguing in favor of two battles fought on land: Marathon, which first got the Greeks out of danger, and Plataea, which finally made them really safe. We maintain that these battles *improved* the Greeks, whereas the fighting at sea had the opposite effect. I hope this isn't too strong language to use about battles that at the time certainly helped to ensure our survival (and I'll concede you the battle at Artemisium as well as the one at Salamis). That's all very
d well, but when we examine the natural features of a country and its legal system, our ultimate object of scrutiny is of course the quality of its social and political arrangements. We do not hold the common view that a man's highest good is to survive and simply continue to exist. His highest good is to become as virtuous as possible and to continue to exist in that state as long as life lasts. But I think we've already taken this line before.

CLINIAS: Of course.

ATHENIAN: Then we need consider only one thing: is the method we are following the same as before? Can we assume it is the best way to found a state and legislate for it?

CLINIAS: Yes, it's by far the best.

e ATHENIAN: Now for the next point. Tell me, what people will you be settling? Will your policy be to accept all comers from the whole of Crete, on the grounds that the population in the individual cities has exceeded

4. *Iliad* xiv.96–102.

the number that can be supported by the land? I don't suppose you're taking all comers from the Greeks in general—though in fact I notice that some settlers from Argos and Aegina and other parts of Greece have come 708
to settle in your country. But tell me what you intend on this occasion: where do you think your citizen body will come from this time?

CLINIAS: They will probably come from all over Crete; as for the other Greeks, I imagine settlers from the Peloponnese will be particularly welcome. You are quite right in what you said just now, that there are some here from Argos: they include the Gortynians, the most distinguished of the local people, who hail from the well-known Gortyn in the Peloponnese.

ATHENIAN: So it won't be all that easy for the Cretan states to found b
their colony. The emigrants, you see, haven't the unity of a swarm of bees: they are not a single people from a single territory settling down to form a colony with mutual goodwill between themselves and those they have left behind. Such migrations occur because of the pressures of land-shortage or some similar misfortune: sometimes a given section of the community may be obliged to go off and settle elsewhere because it is harassed by civil war, and on one occasion a whole state took to its heels after being overcome by an attack it could not resist. In all these cases to found a state c
and give it laws is, in some ways, comparatively easy, but in others it's rather difficult. When a single people speaks the same language and observes the same laws you get a certain feeling of community, because everyone shares the same religious rites and so forth; but they certainly won't find it easy to accept laws or political systems that differ from their own. Sometimes, when it's bad laws that have stimulated the revolt, and the rebels try in their new home to keep to the same familiar habits that ruined them before, their reluctance to toe the line presents the founder d
and lawgiver with a difficult problem. On the other hand, a miscellaneous combination of all kinds of different people will perhaps be more ready to submit to a new code of laws—but to get them to 'pull and puff as one' (as they say of a team of horses) is very difficult and takes a long time. There's no escaping it: founding a state and legislating for it is a superb test that separates the men from the boys.

CLINIAS: I dare say; but what do you mean? Please be a little clearer.

ATHENIAN: My dear fellow, now that I'm going back to considering e
legislators again, I think I'm actually going to insult them: but no matter, so long as the point is relevant. Anyway, why should I have qualms about it? It seems true of pretty nearly all human affairs.

CLINIAS: What are you getting at?

ATHENIAN: I was going to say that no man ever legislates at all. Accidents 709
and calamities occur in a thousand different ways, and it is they that are the universal legislators of the world. If it isn't pressures of war that overturn a constitution and rewrite the laws, it's the distress of grinding poverty; and disease too forces us to make a great many innovations, when plagues beset us for years on end and bad weather is frequent and prolonged. Realizing all these possibilities, you may jump to conclusions

b and say what I said just now, that no mortal ever passes any law at all, and that human affairs are almost entirely at the mercy of chance. Now of course this same view could equally plausibly be taken of the profession of the steersman or doctor or general—but at the same time there's another point that could be made about all these examples, and with no less justification.

CLINIAS: What?

ATHENIAN: That the all-controlling agent in human affairs is God, assisted by the secondary influences of 'chance' and 'opportunity'. A less uncom-
c promising way of putting it is to acknowledge that there must be a third factor, namely 'skill', to back up the other two. For instance, in a storm the steersman may or may not use his skill to seize any favorable opportunity that may offer. I'd say it would help a great deal if he did, wouldn't you?

CLINIAS: Yes.

ATHENIAN: So the same will apply in the other cases too, and legislation in particular must be allowed to play the same role. If a state is to live in happiness, certain local conditions must be present, and when all these coincide, what the community needs to find is a legislator who understands the right way to go about things.

CLINIAS: Very true.

d ATHENIAN: So a professional man in each of the fields we've enumerated could hardly go wrong if he prayed for conditions in which the workings of chance needed only to be supplemented by his own skill.

CLINIAS: Certainly.

ATHENIAN: And all the other people we've instanced would of course be able to tell you what conditions they were praying for, if you asked them.

CLINIAS: Of course.

ATHENIAN: And I fancy a legislator would do just the same.

CLINIAS: I agree.

e ATHENIAN: 'Well now, legislator,' let's say to him, 'tell us your requirements. What conditions in the state we are going to give you will enable you to run it properly on your own from now on?' What's the right answer to a question like that? (We're giving the legislator's answer for him, I take it.)

CLINIAS: Yes.

ATHENIAN: Then this is what he'll say: 'Give me a state under the absolute control of a dictator, and let the dictator be young, with a good memory, quick to learn, courageous, and with a character of natural elevation. And
710 if his other abilities are going to be any use, his dictatorial soul should also possess that quality which was earlier agreed to be an essential adjunct to all the parts of virtue.'

CLINIAS: I think the 'essential adjunct' our companion means, Megillus, is self-control. Right?

ATHENIAN: Yes, Clinias—but the everyday kind, not the kind we speak of in a heightened sense, when we compel self-control to be good judgment

as well. I mean the spontaneous instinct that flowers earlier in life in children and animals and in some cases succeeds in imposing a certain restraint in the search for pleasure, but fails in others. We said that if this quality existed in isolation from the many other merits we are discussing, b
it was not worth consideration. You see my point, I take it.

CLINIAS: Of course.

ATHENIAN: This is the innate quality our dictator must have, in addition to the others, if the state is going to get, as quickly and efficiently as possible, a political system that will enable it to live a life of supreme happiness. You see, there is no quicker or better method of establishing a political system than this one, nor could there ever be.

CLINIAS: Well sir, how can a man convince himself that he is talking c
sense in maintaining all this? What arguments are there for it?

ATHENIAN: It's easy enough, surely, to see that the very facts of the case make the doctrine true.

CLINIAS: What do you mean? If we were to get a dictator, you say, who is young, restrained, quick to learn, with a retentive memory, courageous and elevated—

ATHENIAN: —and don't forget to add 'lucky' too, in this one point: he should be the contemporary of a distinguished lawgiver, and be fortunate enough to come into contact with him. If that condition is fulfilled, God d
will have done nearly all that he usually does when he wants to treat a state with particular favor. The next best thing would be a pair of such dictators; the third best would be several of them. The difficulties are in direct proportion to the numbers.

CLINIAS: It looks as if your position is this: the best state will be the product of a dictatorship, thanks to the efforts of a first-rate legislator and a well-behaved dictator, and this will be the quickest and easiest way to bring about the transformation. The second best will be to start with an oligarchy—is that your point, or what?—and the third to start with e
a democracy.

ATHENIAN: Certainly not. The ideal starting point is dictatorship, the next best is constitutional kingship, and the third is some sort of democracy. Oligarchy comes fourth, because it has the largest number of powerful people, so that it admits the growth of a new order only with difficulty. And we maintain, of course, that such a growth takes place when circumstances throw up a genuine lawgiver who comes to share a degree of power with the most influential persons in the state. Where the most influential element 711
is both extremely powerful and numerically as small as it could be, as in a dictatorship, you usually get a rapid and trouble-free transition.

CLINIAS: How? We don't understand.

ATHENIAN: We've made the point more than once, I think. Perhaps you two have not so much as seen a state under the control of a dictator.

CLINIAS: No, and I don't particularly want to, either.

ATHENIAN: Still, suppose you did: you'd notice something we remarked b
on just now.

CLINIAS: What's that?

ATHENIAN: That when a dictator wants to change the morals of a state,
he doesn't need to exert himself very much or spend a lot of time on the
job. He simply has to be the first to set out on the road along which he
wishes to urge the citizens—whether to the practice of virtue or vice—
and give them a complete moral blueprint by setting his own personal
c example; he must praise and commend some courses of action and censure
others, and in every field of conduct he must see that anyone who disobeys
is disgraced.

CLINIAS: And why should we expect the citizens to obey, with such alacrity, a man who combines persuasion with compulsion like that?

ATHENIAN: My friends, there's no quicker or easier way for a state to
change its laws than to follow the leadership of those in positions of power;
there is no other way now, nor will there be in the future, and we shouldn't
let anyone persuade us to the contrary. Actually, you see, it's not simply
d this that is impossible or difficult to achieve. What *is* difficult, and a very
rare occurrence in the history of the world, is something else; but when
it does occur, the state concerned reaps the benefit on a grand scale—
indeed, there's no blessing that will pass it by.

CLINIAS: What occurrence do you mean?

ATHENIAN: A situation in which an inspired passion for the paths of
restraint and justice guides those who wield great power. The passion
may seize a single supreme ruler, or perhaps men who owe their power
e to exceptional wealth or high birth; or you may get a reincarnation of
Nestor, who, superior as he was to all mankind for the vigor of his speech,
is said to have put them in the shade even more by his qualities of restraint.
In Trojan times, they say, such a paragon did exist, but he is certainly
unheard of today. Still, granted someone like that did in fact exist in the
past or is going to in the future, or is alive among us now, blessed is the
life of this man of moderation, and blessed they who listen to the words
712 that fall from his lips. And whatever the form of government, the same
doctrine holds true: where supreme power in a man joins hands with wise
judgment and self-restraint, there you have the birth of the best political
system, with laws to match; you'll never achieve it otherwise. So much
for my somewhat oracular fiction! Let's take it as established that though
in one sense it is difficult for a state to acquire a good set of laws, in
another sense nothing could be quicker or easier—granted, of course, the
conditions I've laid down.

CLINIAS: How so?

b ATHENIAN: What about pretending the fiction is true of your state, Clinias,
and having a shot at making up its laws? Like children, we old men love
a bit of make-believe.

CLINIAS: Yes, what are we waiting for? Let's get down to it.

ATHENIAN: Let us therefore summon God to attend the foundation of the state. May he hear our prayers, and having heard, come graciously and benevolently to help us settle our state and its laws.

Clinias: May he come indeed.

Athenian: Well now, what political system do we intend to impose on the state? c

Clinias: Please be a little more explicit about what you really mean by that question. Do you mean we have to choose between a democracy, an oligarchy, and an aristocracy? Presumably you're hardly contemplating a dictatorship—or so we'd think, at any rate.

Athenian: Well then, which of you would be prepared to answer first and tell us which of these terms fits the political system of your homeland?

Megillus: Isn't it right and proper for me to answer first, as the elder?

Clinias: Perhaps so. d

Megillus: Very well. When I consider the political system in force at Sparta, sir, I find it impossible to give you a straight answer: I just can't say what one ought to call it. You see, it really does look to me like a dictatorship (it has the ephors, a remarkably dictatorial institution), yet on occasions I think it gets very close to being run democratically. But then again, it would be plain silly to deny that it is an aristocracy; and there is e also a kingship (held for life), which both we and the rest of the world speak of as the oldest kingship of all. So when I'm asked all of a sudden like this, the fact is, as I said, that I can't distinguish exactly which of these political systems it belongs to.

Clinias: I'm sure I'm in the same predicament as you, Megillus. I find it acutely difficult to say for sure that the constitution we have in Cnossus comes into any of these categories.

Athenian: And the reason, gentlemen, is this: you really do operate constitutions worthy of the name. The ones we called constitutions just now are not really that at all: they are just a number of ways of running a state, all of which involve some citizens living in subjection to others like slaves, and the state is named after the ruling class in each case. But 713 if that's the sort of principle on which your new state is to be named, it should be called after the god who really does rule over men who are rational enough to let him.

Clinias: What god is that?

Athenian: Well, perhaps we ought to make use of this fiction a little more, if we are going to clear up the question at issue satisfactorily.

Clinias: Yes, that will be the right procedure.

Athenian: It certainly will. Well now, countless ages before the formation b of the states we described earlier,[5] they say there existed, in the age of Cronus, a form of government and administration which was a great success, and which served as a blueprint for the best run of our present-day states.

Clinias: Then I think we simply must hear about it.

Athenian: Yes, I agree. That's just why I introduced it into the discussion.

5. Accepting the conjecture of *anerōtētheis* in e4.

CLINIAS: You were quite right to do so, and seeing how relevant it is,
c you'll be entirely justified in giving a systematic account of what happened.

ATHENIAN: I must try to meet your wishes. The traditional account that
has come down to us tells of the wonderfully happy life people lived then,
and how they were provided with everything in abundance and without
any effort on their part. The reason is alleged to be this: Cronus was of
course aware that human nature, as we've explained,[6] is never able to take
complete control of all human affairs without being filled with arrogance
d and injustice. Bearing this in mind, he appointed kings and rulers for our
states; they were not men, but beings of a superior and more divine order—
spirits. We act on the same principle nowadays in dealing with our flocks
of sheep and herds of other domesticated animals: we don't put cattle in
charge of cattle or goats in charge of goats, but control them ourselves,
because we are a superior species. So Cronus too, who was well-disposed
to man, did the same: he placed us in the care of the spirits, a superior
order of beings, who were to look after our interests—an easy enough
e task for them, and a tremendous boon to us, because the result of their
attentions was peace, respect for others, good laws, justice in full measure,
and a state of happiness and harmony among the races of the world. The
story has a moral for us even today, and there is a lot of truth in it: where
the ruler of a state is not a god but a mortal, people have no respite from
toil and misfortune. The lesson is that we should make every effort to
imitate the life men are said to have led under Cronus; we should run our
public and our private life, our homes and our cities, in obedience to what
714 little spark of immortality lies in us, and dignify these edicts of reason
with the name of 'law'. But take an individual man, or an oligarchy, or
even a democracy, that lusts in its heart for pleasure and demands to have
its fill of everything it wants—the perpetually unsatisfied victim of an evil
greed that attacks it like the plague—well, as we said just now, if a power
like that controls a state or an individual and rides roughshod over the
laws, it's impossible to escape disaster. This is the doctrine we have to
b examine, Clinias, and see whether we are prepared to go along with it—
or what?

CLINIAS: Of course we must go along with it.

ATHENIAN: You realize that some people maintain that there are as many
different kinds of laws as there are of political systems? (And of course
we've just run through the many types of political systems there are
popularly supposed to be.) Don't think the question at issue is a triviality:
it's supremely important, because in effect we've got back to arguing about
the criteria of justice and injustice. These people take the line that legislation
c should be directed not to waging war or attaining complete virtue, but to
safeguarding the interests of the established political system, whatever
that is, so that it is never overthrown and remains permanently in force.

6. See 691c.

They say that the definition of justice that measures up to the facts is best formulated like this.

Clinias: How?

Athenian: It runs: 'Whatever serves the interest of the stronger'.

Clinias: Be a little more explicit, will you?

Athenian: The point is this: according to them, the element in control at any given moment lays down the law of the land. Right?

Clinias: True enough.

Athenian: 'So do you imagine,' they say, 'that when a democracy has d
won its way to power, or some other constitution has been established (such as dictatorship), it will ever pass any laws, unless under pressure, except those designed to further its own interests and ensure that it remains permanently in power? That'll be its main preoccupation, won't it?'

Clinias: Naturally.

Athenian: So the author of these rules will call them 'just' and claim that anyone who breaks them is acting 'unjustly', and punish him?

Clinias: Quite likely.

Athenian: So this is why such rules will always add up to 'justice'.

Clinias: Certainly, on the present argument.

Athenian: We are, you see, dealing with one of those 'claims to au- e
thority'.[7]

Clinias: What claims?

Athenian: The ones we examined before, when we asked who should rule whom. It seemed that parents should rule children, the elder the younger, and the noble those of low birth; and there was a large number of other titles to authority, if you remember, some of which conflicted with others. The claim we're talking about now was certainly one of these: we said, I think, that Pindar turned it into a law of nature—which meant that
he 'justified the use of force extreme', to quote his actual words.[8] 715

Clinias: Yes, those are the points that were made.

Athenian: Now look: to which side in the dispute should we entrust our state? In some cities, you see, this is the sort of thing that has happened thousands of times.

Clinias: What?

Athenian: When offices are filled competitively, the winners take over the affairs of state so completely that they totally deny the losers and the losers' descendants any share of power. Each side passes its time in a
narrow scrutiny of the other, apprehensive lest someone with memories b
of past injustices should gain some office and lead a revolution. Of course, our position is that this kind of arrangement is very far from being a genuine political system; we maintain that laws which are not established for the good of the whole state are bogus laws, and when they favor

7. See 690a ff.

8. See 690b and note.

particular sections of the community, their authors are not citizens but
party-men; and people who say those laws have a claim to be obeyed are
wasting their breath. We've said all this because in your new state we
c aren't going to appoint a man to office because of his wealth or some other
claim like that, say strength or stature or birth. We insist that the highest
office in the service of the gods must be allocated to the man who is best
at obeying the established laws and wins *that* sort of victory in the state;
the man who wins the second prize must be given second rank in that
service, and so on, the remaining posts being allocated in order on the
same system. Such people are usually referred to as 'rulers', and if I have
d called them 'servants of the laws' it's not because I want to mint a new
expression but because I believe that the success or failure of a state hinges
on this point more than on anything else. Where the law is subject to some
other authority and has none of its own, the collapse of the state, in my
view, is not far off; but if law is the master of the government and the
government is its slave, then the situation is full of promise and men enjoy
all the blessings that the gods shower on a state. That's the way I see it.
e Clinias: By heaven, sir, you're quite right. You've the sharp eye of an
old man for these things.

Athenian: Yes, when we're young, we're all pretty blind to them; old
age is the best time to see them clearly.

Clinias: Very true.

Athenian: Well, what now? I suppose we should assume our colonists
have arrived and are standing before us. So we shall have to finish off the
topic by addressing them.

Clinias: Of course.

Athenian: Now then, our address should go like this: 'Men, according
to the ancient story, there is a god who holds in his hands the beginning
716 and end and middle of all things, and straight he marches in the cycle of
nature. Justice, who takes vengeance on those who abandon the divine
law, never leaves his side. The man who means to live in happiness latches
on to her and follows her with meekness and humility. But he who bursts
with pride, elated by wealth or honors or by physical beauty when young
and foolish, whose soul is afire with the arrogant belief that so far from
needing someone to control and lead him, he can play the leader to others—
b there's a man whom God has deserted. And in his desolation he collects
others like himself, and in his soaring frenzy he causes universal chaos.
Many people think he cuts a fine figure, but before very long he pays to
Justice no trifling penalty and brings himself, his home and state to rack
and ruin. Thus it is ordained. What action, then, should a sensible man take,
and what should his outlook be? What must he *avoid* doing or thinking?'

Clinias: This much is obvious: every man must resolve to belong to
those who follow in the company of God.

c Athenian: 'So what conduct recommends itself to God and reflects his
wishes? There is only one sort, epitomized in the old saying "like approves
of like" (excess apart, which is both its own enemy and that of due

proportion). In our view it is God who is preeminently the "measure of
all things," much more so than any "man," as they say.[9] So if you want
to recommend yourself to someone of this character, you must do your
level best to make your own character reflect his, and on this principle d
the moderate man is God's friend, being like him, whereas the immoderate
and unjust man is not like him and is his enemy; and the same reasoning
applies to the other vices too.

'Let's be clear that the consequence of all this is the following doctrine
(which is, I think, of all doctrines the finest and truest): If a good man
sacrifices to the gods and keeps them constant company in his prayers
and offerings and every kind of worship he can give them, this will be
the best and noblest policy he can follow; it is the conduct that fits his
character as nothing else can, and it is his most effective way of achieving e
a happy life. But if the wicked man does it, the results are bound to be
just the opposite. Whereas the good man's soul is clean, the wicked man's
soul is polluted, and it is never right for a good man or for God to receive
gifts from unclean hands—which means that even if impious people do 717
lavish a lot of attention on the gods, they are wasting their time, whereas
the trouble taken by the pious is very much in season. So this is the target
at which we should aim—but what "missiles" are we to use to hit it, and
what "bow" is best carried to shoot them? Can we name these "weapons"?
The first weapon in our armory will be to honor the gods of the underworld
next after those of Olympus, the patron-gods of the state; the former should
be allotted such secondary honors as the Even and the Left, while the b
latter should receive superior and contrasting honors like the Odd.[10] That's
the best way a man can hit his target, piety. After these gods, a sensible
man will worship the spirits, and after them the heroes. Next in priority
will be rites celebrated according to law at private shrines dedicated to
ancestral gods. Last come honors paid to living parents. It is meet and
right that a debtor should discharge his first and greatest obligation and
pay the debt which comes before all others; he must consider that all he c
has and holds belongs to those who bore and bred him, and he is meant
to use it in their service to the limit of his powers. He must serve them
first with his property, then with hand and brain, and so give to the old
people what they desperately need in view of their age: repayment of all
that anxious care and attention they lavished on him, the longstanding
"loan" they made him as a child. Throughout his life the son must be very
careful to watch his tongue in addressing his parents, because there is a
very heavy penalty for careless and ill-considered language; Retribution, d
messenger of Justice, is the appointed overseer of these things. If his parents
get angry, he must submit to them, and whether they satisfy their anger

9. Protagoras, a philosopher and sophist of the fifth century, maintained that 'man is the measure of all things'.

10. A reference to the Pythagorean list of opposites: Odd, Even; Right, Left; Male, Female; Good, Bad; and a number of others.

in speech or in action, he must forgive them; after all, he must reflect, it's
natural enough for a father to get very angry if he thinks he's being harmed
by his own son. When the parents die, the most modest burial will be best,
and the ceremonies should not be more elaborate than custom demands nor
e inferior to those with which his forefathers laid their own parents to rest.
Year by year he should honor the departed by similar acts of devotion;
718 he will honor them best by never failing to provide a perpetual memorial
to them, spending on the dead a proper proportion of the money he
happens to have available. If we do that, and live in accordance with these
rules, each of us will get the reward we deserve from the gods and such
beings as are superior to ourselves, and live in a spirit of cheerful confidence
for most of the years of our life.'

The laws themselves will explain the duties we owe to children, relatives,
friends and fellow citizens, as well as the service heaven demands we
render to foreigners; they will tell us the way we have to behave in the
company of each of these categories of people, if we want to lead a full
b and varied life without breaking the law. The laws' method will be partly
persuasion and partly (when they have to deal with characters that defy
persuasion) compulsion and chastisement; and with the good wishes of
the gods they will make our state happy and prosperous. There are a
c number of other topics which a legislator who thinks as I do simply must
mention, but they are not easily expressed in the form of a law. So he
should, I think, put up to himself and those for whom he is going to
legislate an example of the way to deal with the remaining subjects, and
when he has explained them all as well as he can, he should set about
laying down his actual code of laws. So what's the particular form in which
such topics are expressed? It's none too easy to confine one's exposition of
them to a single example, but let's see if we can crystallize our ideas by
looking at the matter rather like this.

CLINIAS: Tell us what you have in mind.

ATHENIAN: I should like the citizens to be supremely easy to persuade along the paths of virtue; and clearly this is the effect the legislator will try to achieve throughout his legislation.

d CLINIAS: Of course.

ATHENIAN: It occurs to me that the sort of approach I've just explained,[11]
provided it is not made to totally uncouth souls, will help to make people
more amenable and better disposed to listen to what the lawgiver recom-
mends. So even if the address has no great effect but only makes his listener
a trifle easier to handle, and so that much easier to teach, the legislator
should be well pleased. People who are anxious to attain moral excellence
with all possible speed are pretty thin on the ground and it isn't easy to
find them: most only go to prove the wisdom of Hesiod's remark that the
e road to vice is smooth and can be traveled without sweating, because it
is very short; but 'as the price of virtue', he says,

11. Reading *toi nundē* in d2.

*The gods have imposed the sweat of our brows,*
*And long and steep is the ascent that you have to make*
*And rough, at first; but when you get to the top,* 719
*Then the rugged road is easy to endure.*[12]

Clinias: It sounds as if he hit off the situation very well.

Athenian: He certainly did. But after this discussion I'm left with certain impressions which I want to put forward for your consideration.

Clinias: Do so, then.

Athenian: Let's have a word with the legislator and address him like
this: 'Tell us, legislator, if you were to discover what we ought to do and b
say, surely you'd tell us?'

Clinias: Of course.

Athenian: 'Now didn't we hear you saying a few minutes ago[13] that a legislator ought not to allow the poets to compose whatever happened to take their fancy? You see, they'd never know when they were saying something in opposition to the law and harming the state.'

Clinias: You're quite right.

Athenian: Well, then, if we took the poets' side and addressed the legislator, would this be a reasonable line to take?

Clinias: What?

Athenian: This: 'There is an old proverb, legislator, which we poets c
never tire of telling and which all laymen confirm, to the effect that when
a poet takes his seat on the tripod of the Muse, he cannot control his
thoughts. He's like a fountain where the water is allowed to gush forth
unchecked. His art is the art of representation, and when he represents
men with contrasting characters he is often obliged to contradict himself,
and he doesn't know which of the opposing speeches contains the truth.
But for the legislator, this is impossible: he must not let his law say two d
different things on the same subject; his rule has to be "one topic, one
doctrine." For example, consider what you said just now. A funeral can
be extravagant, inadequate or modest, and your choice falls on one of these
three—the moderate—which you recommend with unqualified praise. But
if I were composing a poem about a woman of great wealth and how she
gave instructions for her own funeral, I should recommend the elaborate e
burial; a poor and frugal character, on the other hand, would be in favor
of the cheap funeral, while the moderate man of moderate means would
recommend accordingly. But you ought not to use the term "moderate"
in the way you did just now: you must say what "moderate" means and
how big or small it may be. If you don't, you must realize that a remark
such as you made still has some way to go before it can be a law.'

12. *Works and Days* 287–92.

13. See 656c ff.

Clinias: That's quite right.

Athenian: So should the legislator whom we appoint skip any such
announcement at the beginning of his laws? Is he to say without ceremony
720 what one should and should not do, and simply threaten the penalty for
disobedience before passing on to the next law, without adding to his
statutes a single word of encouragement or persuasion? It's just the same
with doctors, you know, when we're ill: one follows one method of treat-
ment, one another. Let's recall the two methods, so that we can make the
same request of the legislator that a child might make of its doctor, to
treat him as gently as possible. You want an example? Well, we usually
speak, I think, of doctors and doctors' assistants, but of course we call the
latter 'doctors' too.

b Clinias: Certainly.

Athenian: And these 'doctors' (who may be free men or slaves) pick up the skill empirically, by watching and obeying their masters; they've no systematic knowledge such as the free doctors have learned for themselves and pass on to their pupils. You'd agree in putting 'doctors' into these two categories?

Clinias: Of course.

c Athenian: Now here's another thing you notice. A state's invalids in-
clude not only free men but slaves too, who are almost always treated by
other slaves who either rush about on flying visits or wait to be consulted
in their surgeries. This kind of doctor never gives any account of the
particular illness of the individual slave, or is prepared to listen to one;
he simply prescribes what he thinks best in the light of experience, as if
he had precise knowledge, and with the self-confidence of a dictator. Then
he dashes off on his way to the next slave-patient, and so takes off his
d master's shoulders some of the work of attending the sick. The visits of
the free doctor, by contrast, are mostly concerned with treating the illnesses
of free men; *his* method is to construct an empirical case-history by consult-
ing the invalid and his friends; in this way he himself learns something
from the sick and at the same time he gives the individual patient all the
instruction he can. He gives no prescription until he has somehow gained
the invalid's consent; then, coaxing him into continued cooperation, he
e tries to complete his restoration to health. Which of the two methods do
you think makes a doctor a better healer, or a trainer more efficient? Should
they use the *double* method to achieve a *single* effect, or should the method
too be single—the less satisfactory approach that makes the invalid
more recalcitrant?

Clinias: The double, sir, is much better, I think.

Athenian: Would you like us to see how this double method and the single work out when applied to legislation?

Clinias: Yes, I'd like that very much.

Athenian: Well then, in heaven's name, what will be the first law our legislator will establish? Surely the first subject he will turn to in his

regulations will be the very first step that leads to the birth of children in the state. 721

CLINIAS: Of course.

ATHENIAN: And this first step is, in all states, the union of two people in the partnership of marriage?

CLINIAS: Naturally.

ATHENIAN: So the correct policy for every state will probably be to pass marriage laws first.

CLINIAS: No doubt about it.

ATHENIAN: Now then, to start with, let's have the simple form. It might run more or less like this:

> A man must marry between the ages of thirty and thirty-five. b
> If he does not, *he must* be punished by fines and disgrace—

and the fines and disgrace will then be specified. So much for the simple version of the marriage law; this will be the double version:

> A man must marry between the ages of thirty and thirty-five, reflecting that there is a sense in which nature has not only somehow endowed the human race with a degree of immortality, but also planted in us all a longing to achieve it, which we express in every way we can. One c expression of that longing is the desire for fame and the wish not to lie nameless in the grave. Thus mankind is by nature a companion of eternity, and is linked to it, and will be linked to it, forever. Mankind is immortal because it always leaves later generations behind to preserve its unity and identity for all time: it gets its share of immortality by means of procreation. It is never a holy thing voluntarily to deny oneself this prize, and he who neglects to take a wife and have children does d precisely that. So if a man obeys the law he will be allowed to go his way without penalty, but
> If a man disobeys, and reaches the age of thirty-five without having married, *he must* pay a yearly fine

(of a sum to be specified; that ought to stop him thinking that life as a bachelor is all cakes and ale),

> *and be* deprived too of all the honors which the younger people in the state pay to their elders on the appropriate occasions.

When one has heard this law and compared it with the other, one can judge whether in general laws should run to at least twice the length by e combining persuasion and threats, or restrict themselves to threats alone and be of 'single' length only.

MEGILLUS: The Spartan instinct, sir, is always to prefer brevity. But if I were asked to sit in judgment on these statutes and say which of the two I'd like to see committed to writing in the state, I'd choose the longer one, 722 and my choice would be precisely the same for every law drafted in the

alternative versions of which you've given us specimens. Still, I suppose
Clinias here too must approve this present legislation, seeing that it's his
state that is contemplating the adoption of laws modeled on it.

CLINIAS: You've put it all very well, Megillus.

ATHENIAN: However, it would be pretty fatuous to spend our time talking
b about the length or brevity of the text: it's high quality that we should
value, I think, not extreme brevity or length. One of the kinds of laws we
mentioned just now is twice as valuable for practical purposes as the other,
but that's not all: as we said a little while ago, the two types of doctors
were an extremely apt parallel:[14] A relevant point here is that no legislator
ever seems to have noticed that in spite of its being open to them to use
two methods in their legislation, compulsion and persuasion (subject to
the limitations imposed by the uneducated masses), in fact they use only
c one. They never mix in persuasion with force when they brew their laws,
but administer compulsion neat. As for myself, my dear sirs, I can see a
third condition that should be observed in legislation—not that it ever is.

CLINIAS: What condition do you mean?

ATHENIAN: Providentially enough, the point is brought out by the very
conversation we've had today. Since we began to discuss legislation dawn
has become noon and we've reached this splendid resting-place; we've
d talked about nothing but laws—and yet I suspect it was only a moment
ago that we really got round to framing any, and that everything we've
said up till now has been simply legislative preamble. Now why have I
pointed this out? I want to make the point that the spoken word, and in
general all compositions that involve using the voice, employ 'preludes'
(a sort of limbering up, so to speak), and that these introductions are
artistically designed to aid the coming performance. For instance, the
'nomes' of songs to the harp, and all other kinds of musical composition,
e are preceded by preludes of fantastic elaboration. But in the case of the
real 'nomes',[15] the kind we call 'administrative', nobody has ever so much
as breathed the word 'prelude' or composed one and given it to the world;
the assumption has been that such a thing would be repugnant to nature.
But in my opinion the discussion we've had indicates that it is perfectly
natural; and this means that the laws which seemed 'double' when I
described them a moment ago are not really 'double' in the straightforward
sense the term suggests: it's just that they have *two elements,* 'law' and
'preface to law'. The 'dictatorial prescription', which we compared to the
723 prescriptions of the 'slavish' doctors, is the law pure and simple; and the
part that comes before it, although in point of fact 'persuasive' (as Megillus
put it), nevertheless has a function, analogous to that of a preamble in a
speech. It seems obvious to me that the reason why the legislator gave

14. The point seems to be that in the case of the doctors, one kind of treatment was '*much* better' (720e) than the other (not simply twice as good). In other words, if you double the length of your laws, you *more* than double their value.

15. I.e., laws, the Greek word *nomoi* meaning both 'laws' and 'melodies'.

that entire persuasive address was to make the person to whom he promul-
gated his law accept his orders—the law—in a more co-operative frame
of mind and with a correspondingly greater readiness to learn. That's why,
as I see it, this element ought properly to be termed not the 'text' of the b
law, but the 'preamble'. So after all that, what's the next point I'd like
made? It's this: the legislator must see that both the permanent body of
laws and the individual sub-divisions are always supplied with preambles.
The gain will be just as great as it was in the case of the two specimens
we gave just now.

Clinias: As far as I'm concerned, I'd certainly instruct our lawgiver,
master of his art though he is, to legislate in no way but that.

Athenian: Yes, Clinias, I think you're right to agree that all laws have c
their preambles and that the first task must be to preface the text of
each part of the legal code with the appropriate introduction, because the
announcement it introduces is important, and it matters a great deal
whether it is clearly remembered or not. However, we should be wrong
to demand that both 'major' laws and minor rules should *invariably* be d
headed by a preface. Not every song and speech, after all, needs this
treatment. (They all have introductions in the nature of the case, but it's
not always appropriate to use them.) Still, the decision in all these cases
must be left to the discretion of the orator or singer or legislator.

Clinias: I think all this is very true. But let's not waste any more time
delaying, sir. Let's get back to our theme and make a fresh start, if you
are agreeable, on the subject you dealt with before, when you were not
professing to compose in preamble form; let's go over the topic again
('second time lucky', as they say in games), on the understanding that we e
are not talking at random, as we did just now, but composing a preface;
and we should begin by agreeing that this is what we are doing. We've
heard enough said just now about the worship of the gods and the services
to be rendered to our ancestors;[16] let's try to deal with the subsequent
topics until you think the entire preface has been adequately put together.
Then you will go on to work through the actual laws.

Athenian: So our feeling at the moment is that we have already produced 724
an adequate preface about the gods and the powers below them, and about
parents living and dead. Your instructions now, I think, are that I should,
as it were, take the covers off the remainder of the preface.

Clinias: Certainly.

Athenian: Well now, the next thing is this: how far should a man
concentrate or relax the efforts he devotes to looking after his soul, his
body, and his property? This is a suitable topic, and it will be to the mutual b
advantage of both speaker and listeners to ponder it and so perfect their
education as far as they can. So beyond a shadow of a doubt here's the
next subject for explanation and the next topic to listen to.

Clinias: You're quite right.

16. See 715e–718a.

# Book V

726 ATHENIAN: Everyone who was listening to the address just now about
the gods and our dearly beloved ancestors, should now pay attention.

Of all the things a man can call his own, the holiest (though the gods
are holier still) is his soul, his most intimate possession. There are two
elements that make up the whole of every man. One is stronger and
superior, and acts as master; the other, which is weaker and inferior, is a
slave; and so a man must always respect the master in him in preference
to the slave. Thus when I say that next after the gods—our masters—and
727 their attendant spirits, a man must honor his soul, my recommendation
is correct. But hardly a man among us honors it in the right way: he only
thinks he does. You see, nothing that is evil can confer honor, because to
honor something is to confer marvelous benefits upon it; and anyone who
reckons he is magnifying his soul by flattery or gifts or indulgence, so that
he fails to make it better than it was before, may *think* he is honoring it,
but in fact that is not what he is doing at all. For instance, a person has
b only to reach adolescence to imagine he is capable of deciding everything;
he thinks he is honoring his soul if he praises it, and he is only too keen
to tell it to do what it likes. But our present doctrine is that in doing this
he is not honoring but harming it; whereas we are arguing that he should
honor it next after the gods. Similarly when a man thinks that the responsi-
bility for his every fault lies not in himself but in others, whom he blames
for his most frequent and serious misfortunes, while exonerating himself,
c he doubtless supposes he is honoring his soul. But far from doing that,
he is injuring it. Again, when he indulges his pleasures and disobeys the
recommendations and advice of the legislator, he is not honoring his soul
at all, but dishonoring it, by filling it with misery and repentance. Or, to
take the opposite case, he may not brace himself to endure the recom-
mended toils and fears and troubles and pains, and simply give up; but
his surrender confers no honor on his soul, because all such conduct brings
d disgrace upon it. Nor does he do it any honor if he thinks that life is a
good thing no matter what the cost. This too dishonors his soul, because
he surrenders to its fancy that everything in the next world is an evil,
whereas he should resist the thought and enlighten his soul by demonstra-
ting that he does not really know whether our encounter with the gods
in the next world may not be in fact the best thing that ever happens to
us. And when a man values beauty above virtue, the disrespect he shows
his soul is total and fundamental, because he would argue that the body
e is more to be honored than the soul—falsely, because nothing born on
earth is to be honored more than what comes from heaven; and anyone
who holds a different view of the soul does not realize how wonderful is
this possession which he scorns. Again, a man who is seized by lust to
728 obtain money by improper means and feels no disgust in the acquisition,

will find that in the event he does his soul no honor by such gifts—far from it: he sells all that gives the soul its beauty and value for a few paltry pieces of gold; but all the gold upon the earth and all the gold beneath it does not compensate for lack of virtue.

To sum up, the legislator will list and classify certain things as disgraceful and wicked, and others as fine and good; everyone who is not prepared to make all efforts to refrain from the one kind of action and practice the other to the limits of his power must be unaware that in all such conduct he is treating his soul, the most holy possession he has, in the most disre- b
spectful and abominable manner. You see, practically no one takes into account the greatest 'judgment', as it is called, on wrongdoing. This is to grow to resemble men who are evil, and as the resemblance increases to shun good men and their wholesome conversation and to cut oneself off from them, while seeking to attach oneself to the other kind and keep their company. The inevitable result of consorting with such people is that what you do and have done to you is exactly what *they* naturally do and say c
to each other. Consequently, this condition is not really a 'judgment' at all, because justice and judgment are fine things: it is mere punishment, suffering that follows a wrongdoing. Now whether a man is made to suffer or not, he is equally wretched. In the former case he is not cured, in the latter he will ultimately be killed to ensure the safety of many others.

To put it in a nutshell, 'honor' is to cleave to what is superior, and, where practicable, to make as perfect as possible what is deficient. Nothing that nature gives a man is better adapted than his soul to enable him to avoid evil, keep on the track of the highest good, and when he has captured d
his quarry to live in intimacy with it for the rest of his life.

For those reasons the soul has been allotted the second rank of honor;[1] third—as everyone will realize—comes the honor naturally due to the body. Here again it is necessary to examine the various reasons for honoring it, and see which are genuine and which are false; this is the job of a legislator, and I imagine he will list them as follows. The body that deserves to be honored is not the handsome one or the strong or the swift—nor yet the healthy (though a good many people would think it was); and it e
is certainly not the one with the opposite qualities to all these. He will say that the body which achieves a mean between all these extreme conditions is by far the soundest and best-balanced, because the one extreme makes the soul bold and boastful, while the other makes it abject and groveling.

The same is true of the possession of money and goods: its value is measured by the same yardstick. Both, in excess, produce enmity and 729
feuds in private and public life, while a deficiency almost invariably leads to slavery.

No one should be keen on making money for the sake of leaving his children as rich as possible, because it will not do them any good, or the state either. A child's fortune will be most in harmony with his

1. The first rank has been given to the gods (726e–727a).

circumstances, and superior to all other fortunes, if it is modest enough
not to attract flatterers, but sufficient to supply all his needs; to our ears
b such a fortune strikes exactly the right note, and it frees our life from
anxiety. Extreme modesty, not gold, is the legacy we should leave our
children. We imagine that the way to bequeath them modesty is to rebuke
them when they are immodest, but that is not the result produced in the
young when people admonish them nowadays and tell them that youth
must show respect to everyone. The sensible legislator will prefer to instruct
the older men to show respect to their juniors, and to take especial care
not to let any young man see or hear them doing or saying anything
c disgraceful: where the old are shameless the young too will inevitably be
disrespectful to a degree. The best way to educate the younger generation
(as well as yourself) is not to rebuke them but patently to practice all your
life what you preach to others.

If a man honors and respects his relatives, who all share the worship
of the family gods and have the same blood in their veins, he can reasonably
expect to have the gods of birth look with benevolence on the procreation
of his own children. And as for friends and companions, you will find
d them easier to get on with in day-to-day contact if you make more of their
services to you and esteem them more highly than they do, and put a
smaller value on your own good turns to your friends and companions
than they do themselves. In dealings with the state and one's fellow citizens,
the best man by far is the one who, rather than win a prize at Olympia
or in any of the other contests in war and peace, would prefer to beat
everyone by his reputation for serving the laws of his country—a reputation
e for having devoted a lifetime of service to them with more distinction than
anyone else.

As to foreigners, one should regard agreements made with them as
particularly sacrosanct. Practically all offenses committed as between or
against foreigners are quicker to attract the vengeance of God than offenses
as between fellow citizens. The foreigner is not surrounded by friends and
companions, and stirs the compassion of gods and men that much more,
so that anyone who has the power to avenge him comes to his aid more
readily; and that power is possessed preeminently by the guardian spirit
730 or god, companion of Zeus the God of Strangers, who is concerned in each
case. Anyone who takes the smallest thought for the future will therefore
take great care to reach the end of his days without having committed
during his life any crime involving foreigners. The most serious of offenses
against foreigners or natives is always that affecting suppliants; the god
the victim supplicated and invoked when he won his promise becomes a
devoted protector of his suppliant, who can consequently rely on the
promise he received never to suffer without vengeance being taken for
the wrongs done to him.

b We've now dealt fairly thoroughly with a man's treatment of his parents,
himself and his own possessions, and his contacts with the state, his friends,

his relatives, foreigners and countrymen. The next question for consideration is the sort of person he must be himself, if he is to acquit himself with distinction in his journey through life; it's not the influence of law that we're concerned with now, but the educational effect of praise and blame, which makes the individual easier to handle and better disposed towards the laws that are to be established.

Truth heads the list of all things good, for gods and men alike. Let c
anyone who intends to be happy and blessed be its partner from the start, so that he may live as much of his life as possible a man of truth. You can trust a man like that, but not the man who is fond of telling deliberate lies (and anyone who is happy to go on producing falsehoods in *ignorance* of the truth is an idiot). Neither state is anything to envy: no one has any friends if he is a fool or cannot be trusted. As the years go by he is recognized for what he is, and in the difficulties of old age as life draws to its close he isolates himself completely; he has just about as much contact d
with his surviving friends and children as with those who are already dead.

A man who commits no crime is to be honored; yet the man who will not even allow the wicked to do wrong deserves more than twice as much respect. The former has the value of a single individual, but the latter, who reveals the wickedness of another to the authorities, is worth a legion. Anyone who makes every effort to assist the authorities in checking crime should be declared to be the great and perfect citizen of his state, winner of the prize for virtue.

The same praise should also be given to self-control and good judg- e
ment, and to all the other virtues which the possessor can communicate to others as well as displaying in his own person. If a man does so communicate them, he should be honored as in the top rank; if he is prepared to communicate them but lacks the ability, he must be left in second place; but if he is a jealous fellow and churlishly wants to monopolize his virtues, then we should certainly censure him, but without 731
holding the virtue itself in less esteem because of its possessor—on the contrary, we should do our best to acquire it. We want everyone to compete in the struggle for virtue in a generous spirit, because this is the way a man will be a credit to his state—by competing on his own account but refraining from fouling the chances of others by slander. The jealous man, who thinks he has to get the better of others by being rude about them, makes less effort himself to attain true virtue and discourages his competitors by unfair criticism. In this way he hinders the whole state's struggle b
to achieve virtue and diminishes its reputation, in so far as it depends on him.

Every man should combine in his character high spirit with the utmost gentleness, because there is only one way to get out of the reach of crimes committed by other people and which are dangerous or even impossible to cure: you have to overcome them by fighting in self-defense and rigidly punishing them, and no soul can do this without righteous indignation. c
On the other hand there are some criminals whose crimes are curable, and

the first thing to realize here is that every unjust man is unjust against his
will. No man on earth would ever deliberately embrace any of the supreme
evils, least of all in the most precious parts of himself—and as we said,
the truth is that the most precious part of every man is his soul. So no
one will ever voluntarily accept the supreme evil into the most valuable
part of himself and live with it throughout his life. No: in general, the
d unjust man deserves just as much pity as any other sufferer. And you may
pity the criminal whose disease is curable, and restrain and abate your
anger, instead of persisting in it with the spitefulness of a shrew; but when
you have to deal with complete and unmanageably vicious corruption,
you must let your anger off its leash. That is why we say that it must be
the good man's duty to be high-spirited or gentle as circumstances require.

The most serious vice innate in most men's souls is one for which
e everybody forgives himself and so never tries to find a way of escaping.
You can get some idea of this vice from the saying that a man is in the
nature of the case 'his own best friend', and that it is perfectly proper for
him to have to play this role. It is truer to say that the cause of each and
every crime we commit is precisely this excessive love of ourselves, a love
which blinds us to the faults of the beloved and makes us bad judges of
732 goodness and beauty and justice, because we believe we should honor
our own ego rather than the truth. Anyone with aspirations to greatness
must admire not himself and his own possessions, but acts of justice, not
only when they are his own, but especially when they happen to be done
by someone else. It's because of this same vice of selfishness that stupid
people are always convinced of their own shrewdness, which is why we
think we know everything when we are almost totally ignorant, so that
b thanks to not leaving to others what we don't know how to handle, we
inevitably come to grief when we try to tackle it ourselves. For these
reasons, then, every man must steer clear of extreme love of himself, and
be loyal to his superior instead; and he mustn't be put off by shame at
the thought of abandoning that 'best friend'.

There is a certain amount of more detailed but no less useful advice
which one hears often enough, and one should go through it to oneself
by way of reminder. (Where waters ebb, there is always a corresponding
flow, and the act of remembering is the 'flow' of thought that has
drained away.)

c So then: excessive laughter and tears must be avoided, and this is the
advice every man must give to every other; one should try to behave
decently by suppressing all extremes of joy and grief, both when one's
guardian angel brings continued prosperity and when in times of trouble
our guardians face difficulties as insurmountable as a high, sheer cliff. We
should always have the hope that the blessings God sends will decrease
d the troubles that assail us, change our present circumstances for the better,
and make us lucky enough to see our good fortune always increase. These
are the hopes that every man should live by; he must remember all this

advice and never spare any effort to recall it vividly to his own mind and
that of others, at work and in leisure time alike.

Now then, from the point of view of religion, we've expounded pretty
thoroughly what sort of activities we should pursue and what sort of e
person the individual ought to be; but we have not yet come down to
the purely secular level. But we must, because we are addressing men,
not gods.

Human nature involves, above all, pleasures, pains, and desires, and no
mortal animal can help being hung up dangling in the air (so to speak)
in total dependence on these powerful influences. That is why we should
praise the noblest life—not only because it enjoys a fine and glorious
reputation, but because (provided one is prepared to try it out instead of 733
recoiling from it as a youth) it excels in providing what we all seek: a
predominance of pleasure over pain throughout our lives. That this result
is guaranteed, if it is tried out in the correct manner, will be perfectly
obvious in an instant. But what is 'correctness' here? One should consider
this point in the light of the following thesis. We have to ask if one condition
suits our nature while another does not, and weigh the pleasant life against
the painful with that question in mind. We want to have pleasure; we b
neither choose nor want pain; we prefer the neutral state if we are thereby
relieved of pain, but not if it involves the loss of pleasure. We want less
pain and more pleasure, we do not want less pleasure and more pain; but
we should be hard put to it to be clear about our wishes when faced
with a choice of two situations bringing pleasure and pain in the same
proportions. These considerations of number or size or intensity or equality
(or their opposites) which determine our wishes all influence or fail to c
influence us whenever we make a choice. This being inevitably the way
of things, we want a life in which pleasures and pains come frequently
and with great intensity, but with pleasure predominating; if pains predom-
inate, we reject that life. Similarly when pleasures and pains are few and
small and feeble: if pain outweighs pleasure, we do not want that life, but
we do when pleasure outweighs pain. As for the 'average' life, which
experiences only moderate pleasures or pains, we should observe the same
point as before: we desire it when it offers us a preponderance of pleasure
(which we enjoy), but not when it offers us a preponderance of pain (which d
we abhor). In that sense, then, we should think of all human lives as bound
up in these two feelings, and we must think to what kind of life our natural
wishes incline. But if we assert that we want anything outside this range,
we are talking out of ignorance and inexperience of life as it is really lived.

So when a man has considered his likes and dislikes, what he would
willingly do and what not, and adopted that as a working rule to guide
him in choosing what he finds congenial and pleasant and supremely e
excellent, he will select a life that will enable him to live as happily as a
man can. So what are these lives, and how many are there, from which
he must make this choice? Let us list them: there is the life of self-control
for one, the life of wisdom for another, and the life of courage too; and

let us treat the healthy life as another. As opposed to these, we have another
four lives—the licentious, the foolish, the cowardly and the diseased. Now
anyone who knows what the life of self-control is like will describe it as
734 gentle in all respects, with mild pleasures and pains, light appetites, and
desires without frenzy; the licentious life he will say is violent through
and through, involving extreme pleasures and pains, intense and raging
appetites and desires of extreme fury. He will say that in the life of self-
control the pleasures outweigh the pains, and in the licentious life the
pains exceed the pleasures, in point of size, number and frequency. That
b is why we inevitably and naturally find the former life more pleasant, the
latter more painful, and anyone who means to live a pleasant life no longer
has the option of living licentiously. On the contrary, it is already clear (if
our present position is correct) that if a man is licentious it must be without
intending to be. It is either because of ignorance or lack of self-control, or
both, that the world at large lives immoderately. The healthy and unhealthy
life should be regarded in the same way: they both offer pleasures and
c pains, but the pleasures outweigh the pains in the healthy life, vice versa
in the unhealthy. But what we want when we choose between lives is not
a predominance of pain: we have chosen as the pleasanter life the one where
pain is the weaker element. And so we can say that the self-controlled, the
wise and the courageous, experience pleasure and pain with less intensity
and on a smaller and more restricted scale than the profligate, the fool
and the coward. The first category beats the second on the score of pleasure,
d while the second beats the other when it comes to pain. The courageous
man does better than the coward, the wise man than the fool; so that, life
for life, the former kind—the restrained, the courageous, the wise and the
healthy—is pleasanter than the cowardly, the foolish, the licentious and
the unhealthy.

To sum up, the life of physical fitness, and spiritual virtue too, is not
only pleasanter than the life of depravity but superior in other ways as well:
it makes for beauty, an upright posture, efficiency and a good reputation, so
e that if a man lives a life like that it will make his whole existence infinitely
happier than his opposite number's.

At this point we may stop expounding the preface to the laws, it being
now complete. After the 'prelude' should come the 'tune',[2] or (more accu-
rately) a sketch of a legal and political framework. Now it is impossible,
when dealing with a web or any piece of weaving, to construct the warp
735 and the woof from the same stuff: the warp must be of a superior type of
material (strong and firm in character, while the woof is softer and suitably
workable). In a rather similar way it will be reasonable to distinguish
between the authorities who are going to rule in a city and the citizens
whose education has been slighter and less testing. You may assume, you

2. A pun: the Greek *nomos* means both 'tune' and 'law'. Cf. 722d–e.

see, that there are two elements in a political system: the installation of individuals in office, and equipping those officials with a code of laws.

But before all that, here are some further points to notice. Anyone who takes charge of a herd of animals—a shepherd or cattle-man or breeder of horses or what have you—will never get down to looking after them without first performing the purge appropriate to his particular animal-community: that is, he will weed out the unhealthy and inferior stock and send it off to other herds, and keep only the thoroughbreds and the healthy animals to look after. He knows that otherwise he would have to waste endless effort on sickly and refractory beasts, degenerate by nature and ruined by incompetent breeding, and that unless he purges the existing stock these faults will spread in any herd to the animals that are still physically and temperamentally healthy and unspoilt. This is not too serious in the case of the lower animals, and we need mention it only by way of illustration, but with human beings it is vitally important for the legislator to ascertain and explain the appropriate measures in each case, not only as regards a purge, but in general. To purge a whole state, for instance, several methods may be employed, some mild, some drastic; and if a legislator were a dictator too he'd be able to purge the state drastically, which is the best way. But if he has to establish a new society and new laws without dictatorial powers, and succeeds in administering no more than the mildest purge, he'll be well content even with this limited achievement. Like drastic medicines, the best purge is a painful business: it involves chastisement by a combination of 'judgment' and 'punishment',[3] and takes the latter, ultimately, to the point of death or exile. That usually gets rid of the major criminals who are incurable and do the state enormous harm. The milder purge we could adopt is this. When there is a shortage of food, and the underprivileged show themselves ready to follow their leaders in an attack on the property of the privileged, they are to be regarded as a disease that has developed in the body politic, and in the friendliest possible way they should be (as it will tactfully be put) 'transferred to a colony'. Somehow or other everyone who legislates must do this in good time; but our position at the moment is even more unusual. There's no need for us here and now to have resort to a colony or arrange to make a selection of people by a purge. No: it's as though we have a number of streams from several sources, some from springs, some from mountain torrents, all flowing down to unite in one lake. We have to apply ourselves to seeing that the water, as it mingles, is as pure as possible, partly by draining some of it off, partly by diverting it into different channels. Even so, however you organize a society, it looks as if there will always be trouble and risk. True enough: but seeing that we are operating at the moment on a theoretical rather than a practical level, let's suppose we've recruited our citizens and their purity meets with our approval. After all, when we

3. See 728b–c.

c have screened the bad candidates over a suitable period and given them
every chance to be converted, we can refuse their application to enter and
become citizens of the state; but we should greet the good ones with all
possible courtesy and kindness.

We should not forget that we are in the same fortunate position as the
Heraclids when they founded their colony: we noticed[4] how they avoided
vicious and dangerous disputes about land and cancellations of debts and
distribution of property. When an old-established state is forced to resort
d to legislation to deal with these problems, it finds that both leaving things
as they are and reforming them are somehow equally impossible. The only
policy left them is to mouth pious hopes and make a little cautious progress
over a long period by advancing a step at a time. (This is the way it can
be done. From time to time some of the reformers should be themselves
great land-owners and have a large number of debtors; and they should
be prepared, in a philanthropic spirit, to share their prosperity with those
debtors who are in distress, partly by remitting debts and partly by making
e land available for distribution. Their policy will be a policy of moderation,
dictated by the conviction that poverty is a matter of increased greed rather
than diminished wealth. This belief is fundamental to the success of a
state, and is the firm base on which you can later build whatever political
737 structure is appropriate to such conditions as we have described. But when
these first steps towards reform falter, subsequent constitutional action in
any state will be hard going.) Now as we say, such difficulties do not
affect us. Nevertheless, it's better to have explained how we could have
escaped them if they had. Let's take it, then, that the explanation has been
given: the way to escape those difficulties is through a sense of justice
b combined with an indifference to wealth; there is no other route, broad
or narrow, by which we can avoid them. So let's adopt this principle as
a prop for our state. Somehow or other we must ensure that the citizens'
property does not lead to disputes among them—otherwise, if people have
longstanding complaints against each other, anyone with any sense at all
will not go any further with organizing them, if he can help it. But when,
as with us now, God has given a group of people a new state to found,
in which so far there is no mutual malice—well, to stir up ill-will towards
each other because of the way they distribute the land and houses would
be so criminally stupid that no man could bring himself to do it.

c So what's the correct method of distribution? First, one has to determine
what the total number of people ought to be, then agree on the question
of the distribution of the citizens and decide the number and size of the
subsections into which they ought to be divided; and the land and houses
must be divided equally (so far as possible) among these subsections. A
d suitable total for the number of citizens cannot be fixed without considering
the land and the neighboring states. The land must be extensive enough

4. See 684d–e.

to support a given number of people[5] in modest comfort, and not a foot
more is needed. The inhabitants should be numerous enough to be able
to defend themselves when the adjacent peoples attack them, and contrib-
ute at any rate some assistance to neighboring societies when they are
wronged. When we have inspected the land and its neighbors, we'll deter-
mine these points and give reasons for the action we take; but for the
moment let's just give an outline sketch and get on with finishing our legis-
lation.

Let's assume we have the convenient number of five thousand and forty e
farmers and protectors of their holdings, and let the land with its houses
be divided up into the same number of parts, so that a man and his holding
always go together. Divide the total first by two, then by three: you'll see
it can be divided by four and five and every number right up to ten.
Everyone who legislates should have sufficient appreciation of arithmetic
to know what number will be most use in every state, and why. So let's 738
fix on the one which has the largest number of consecutive divisors. Of
course, an infinite series of numbers would admit all possible divisions
for all possible uses, but our 5040 admits no more than 59 (including 1 to
10 without a break), which will have to suffice for purposes of war and
every peacetime activity, all contracts and dealings, and for taxes and b
grants.

Anyone who is legally obliged to understand these mathematical facts
should try to deepen his understanding of them even in his spare time.
They really are just as I say, and the founder of a state needs to be told
of them, for the following reasons. It doesn't matter whether he's founding
a new state from scratch or reconstructing an old one that has gone to
ruin: in either case, if he has any sense, he will never dream of altering
whatever instructions may have been received from Delphi or Dodona or c
Ammon[6] about the gods and temples that ought to be founded by the
various groups in the state, and the gods or spirits after whom the temples
should be named. (Alternatively, such details may have been suggested
by stories told long ago of visions or divine inspiration, which somehow
moved people to institute sacrifices with their rituals—either native or
taken from Etruria or Cyprus or some other country—so that on the
strength of these reports they consecrated statues, altars, temples and sites
of oracles, providing each with its own sacred plot of land.) The legislator d
must not tamper with any of this in the slightest detail. He must allocate
to each division of citizens a god or spirit or perhaps a hero, and when
he divides up the territory he must give these priority by setting aside
plots of land for them, endowed with all the appropriate resources. Thus
when the different divisions gather together at fixed times they will have
an opportunity of satisfying their various needs, and the citizens will

5. Reading *posous* in d1 with accent on the second syllable.

6. There were sites of prestigious oracles of Apollo at Delphi, Zeus at Dodona in northwest Greece, and the Egyptian god Ammon at the oasis of Siwa in the Libyan desert.

e recognize and greet each other at the sacrifices in mutual friendship—and
there can be no greater benefit for a state than that the citizens should be
well-known one to another. Where they have no insight into each other's
characters and are kept in the dark about them, no one will ever enjoy
the respect he merits or fill the office he deserves or obtain the legal verdict
to which he is entitled. So every citizen of every state should make a
particular effort to show that he is straightforward and genuine, not shifty,
and try to avoid being hoodwinked by anyone who is.

739 The next move in this game of legislation is as unusual as going 'across
the line' in checkers, and may well cause surprise at first hearing. But
reflection and experience will soon show that the organization of a state
is almost bound to fall short of the ideal. You may, perhaps—if you don't
know what it means to be a legislator without dictatorial powers—refuse
to countenance such a state; nevertheless the right procedure is to describe
not only the ideal society but the second and third best too, and then leave
b it to anyone in charge of founding a community to make a choice between
them. So let's follow this procedure now: let's describe the absolutely ideal
society, then the second-best, then the third. On this occasion we ought
to leave the choice to Clinias, but we should not forget anyone else who
may at some time be faced with such a choice and wish to adopt for his
own purposes customs of his native country which he finds valuable.

c You'll find the ideal society and state, and the best code of laws, where
the old saying 'friends' property is genuinely shared' is put into practice
as widely as possible throughout the entire state. Now I don't know
whether in fact this situation—a community of wives, children and all
property—exists anywhere today, or will ever exist, but at any rate in such
a state the notion of 'private property' will have been by hook or by crook
completely eliminated from life. Everything possible will have been done
to throw into a sort of common pool even what is by nature 'my own',
d like eyes and ears and hands, in the sense that to judge by appearances
they all see and hear and act in concert. Everybody feels pleasure and
pain at the same things, so that they all praise and blame with complete
unanimity. To sum up, the laws in force impose the greatest possible unity
on the state—and you'll never produce a better or truer criterion of an
absolutely perfect law than that. It may be that gods or a number of the
children of gods inhabit this kind of state: if so, the life they live there,
e observing these rules, is a happy one indeed. And so men need look no
further for their ideal: they should keep this state in view and try to find
the one that most nearly resembles it. This is what we've put our hand
to, and if in some way it could be realized, it would come very near
immortality and be second only to the ideal. Later, God willing, we'll
describe a third best. But for the moment, what description should we
give of this second-best state? What's the method by which a state like
this is produced?

First of all, the citizens must make a distribution of land and houses;
740 they must not farm in common, which is a practice too demanding for

those born and bred and educated as ours are. But the distribution should
be made with some such intention as this: each man who receives a portion
of land should regard it as the common possession of the entire state. The
land is his ancestral home and he must cherish it even more than children
cherish their mother; furthermore, Earth is a goddess, and mistress of
mortal men. (And the gods and spirits already established in the locality
must be treated with the same respect.)

Additional measures must be taken to make sure that these arrangements b
are permanent: the number of hearths established by the initial distribution
must always remain the same; it must neither increase nor decrease. The
best way for every state to ensure this will be as follows: the recipient of
a holding should always leave from among his children only *one* heir to
inherit his establishment. This will be his favorite son, who will succeed
him and give due worship to the ancestors (who rank as gods) of the
family and state; these must be taken to include not only those who have c
already passed on, but also those who are still alive. As for the other
children, in cases where there are more than one, the head of the family
should marry off the females in accordance with the law we shall establish
later; the males he must present for adoption to those citizens who have
no children of their own—priority to be given to personal preferences as
far as possible. But some people may have no preferences, or other families
too may have surplus offspring, male or female; or, to take the opposite d
problem, they may have too few, because of the onset of sterility. All these
cases will be investigated by the highest and most distinguished official
we shall appoint. He will decide what is to be done with the surpluses or
deficiencies, and will do his best to discover a device to keep the number
of households down to 5040. There are many devices available: if too many
children are being born, there are measures to check propagation; on the
other hand, a high birthrate can be encouraged and stimulated by confer-
ring marks of distinction or disgrace, and the young can be admonished e
by words of warning from their elders. This approach should do the trick,
and if in the last resort we are in complete despair about variations from our
number of 5040 households, and the mutual love of wives and husbands
produces an excessive flow of citizens that drives us to distraction, we
have that old expedient at hand, which we have often mentioned before. We
can send out colonies of people that seem suitable, with mutual goodwill
between the emigrants and their mother-city. By contrast, we may be
flooded with a wave of diseases or by the ravages of wars, so that bereave- 741
ments depress the citizens far below the appointed number. In this event
we ought not to import citizens who have been brought up by a bastard
education, if we can help it; but not even God, they say, can grapple
with necessity.

So let's pretend our thesis can talk and gives us this advice: 'My dear sirs,
don't ignore the facts and be careless enough to undervalue the concepts of
likeness, equality, identity and agreement, either in mathematics or in any
other useful and productive science. In particular, your first task now is b

to keep to the said number as long as you live; you must respect the upper limits of the total property which you originally distributed as being reasonable, and not buy and sell your holdings among yourselves. The lot by which they were distributed is a god, so there will be no support for you there, or from the legislator either. And there are two warnings
c the law has for the disobedient: (A) You may choose or decline to take part in the distribution, but if you do take part you must observe the following conditions: (i) you must acknowledge that the land is sacred to all the gods; (ii) after priests and priestesses have offered prayers for that intention at the first, second and third sacrifices,

1. Anyone buying or selling his allotted land or house
*must suffer* the penalty appropriate to the crime.[7]

You are to inscribe the details on pieces of cypress wood and put these
d written records on permanent deposit in the temples. (B) You must appoint the official who seems to have the sharpest eyes to superintend the observance of the rule, so that the various contraventions may be brought to your notice and the disobedient punished by the law and the god alike. What a boon this rule is to all the states that observe it, given the appropriate arrangements, no wicked men—as the saying goes—will ever understand; such knowledge is the fruit of experience and virtuous habits. Such arrange-
e ments, you see, involve very little by way of profit-making, and there is no need or opportunity for anyone to engage in any of the vulgar branches of commerce (you know how a gentleman's character is coarsened by manual labor, which is generally admitted to be degrading), and no one will presume to rake in money from occupations such as that.'

All these considerations suggest a further law that runs like this: no
742 private person shall be allowed to possess any gold or silver, but only coinage for day-to-day dealings which one can hardly avoid having with workmen and all other indispensable people of that kind (we have to pay wages to slaves and foreigners who work for money). For these purposes, we agree, they must possess coinage, legal tender among themselves, but valueless to the rest of mankind. The common Greek coinage is to be used for expeditions and visits to the outside world, such as when a man has
b to be sent abroad as an ambassador or to convey some official message; to meet these occasions the state must always have a supply of Greek coinage. If a private individual should ever need to go abroad, he should first obtain leave of the authorities, and if he returns home with some surplus foreign money in his pocket he must deposit it with the state and take local money to the same value in exchange.

2. If he is found keeping it for himself,
*it must* be confiscated by the state.

7. In this translation the laws making up the legal code proposed for Clinias' city are set off from the surrounding text and numbered consecutively.

3. If anyone who knows of its concealment fails to report it,
*he must* be liable to a curse and a reproach (and so must the importer), c
and in addition be fined in a sum not less than that of the foreign
currency brought in.

When a man marries or gives in marriage, no dowry whatsoever must be given or received. Money must not be deposited with anybody whom one does not trust. There must be no lending at interest, because it will be quite in order for the borrower to refuse absolutely to return both interest and principal.

The best way to appreciate that these are the best policies for a state to
follow is to examine them in the light of the fundamental aim. Now we d
maintain that the aim of a statesman who knows what he's about is not
in fact the one which most people say the good legislator should have.
They'd say that if he knows what he's doing his laws should make the
state as huge and as rich as possible; he should give the citizens gold
mines and silver mines, and enable them to control as many people as
possible by land and sea. And they'd add, too, that to be a satisfactory
legislator he must want to see the state as good and as happy as possible. e
But some of these demands are practical politics, and some are not, and
the legislator will confine himself to what can be done, without bothering
his head with wishful thinking about impossibilities. I mean, it's pretty
well inevitable that happiness and virtue should come hand in hand (and
this is the situation the legislator will want to see), but virtue and great
wealth are quite incompatible, at any rate great wealth as generally understood (most people would think of the extreme case of a millionaire, who
will of course be a rogue into the bargain). In view of all this, I'll never 743
concede to them that the rich man can become really happy without being
virtuous as well: to be extremely virtuous and exceptionally rich at the
same time is absolutely out of the question. 'Why?' it may be asked.
'Because,' we shall reply, 'the profit from using just *and* unjust methods
is more than twice as much as that from just methods alone, and a man
who refuses to spend his money either worthily or shamefully spends
only half the sum laid out by worthwhile people who are prepared to
spend on worthy purposes too.[8] So anyone who follows the opposite policy b
will never become richer than the man who gets twice as much profit and
makes half the expenditures. The former is a good man; the latter is not
actually a rogue so long as he uses his money sparingly, but on some
occasions[9] he is an absolute villain; thus, as we have said, he is *never* good.
Ill-gotten and well-gotten gains plus expenditure that is neither just nor
unjust, when a man is also sparing with his money, add up to wealth; the
absolute rogue, who is generally a spendthrift, is quite impoverished. The

8. I.e., as well as on 'neutral' objects.

9. I.e., when he *makes* money (by dishonest means).

c man who spends his money for honest ends and uses only just methods to come by it, will not easily become particularly rich or particularly poor. Our thesis is therefore correct: the very rich are not good; and if they are not good, they are not happy either.'

The whole point of our legislation was to allow the citizens to live supremely happy lives in the greatest possible mutual friendship. How-
d ever, they will never be friends if injuries and lawsuits arise among them on a grand scale, but only if they are trivial and rare. That is why we maintain that neither gold nor silver should exist in the state, and there should not be much money made out of menial trades and charging interest, nor from prostitutes; the citizens' wealth should be limited to the products of farming, and even here a man should not be able to make so much that he can't help forgetting the real reason why money was invented (I mean for the care of the soul and body, which without physical and
e cultural education respectively will never develop into anything worth mentioning). That's what has made us say more than once that the pursuit of money should come last in the scale of value. Every man directs his efforts to three things in all, and if his efforts are directed with a correct sense of priorities he will give money the third and lowest place, and his soul the highest, with his body coming somewhere between the two. In particular, if this scale of values prevails in the society we're now describing, then it has been equipped with a good code of laws. But if any of the
744 laws subsequently passed is found giving pride of place to health in the state rather than the virtue of self-control, or to wealth rather than health and habits of restraint, then quite obviously its priorities will be wrong. So the legislator must repeatedly try to get this sort of thing straight in his own mind by asking 'What do I want to achieve?' and 'Am I achieving it, or am I off target?' If he does that, perhaps he'll complete his legislation by his own efforts and leave nothing to be done by others. There's no other way he could possibly succeed.

b So when a man has drawn his lot, he must take over his holding on the terms stated.[10] It would have been an advantage if no one entering the colony had had any more property than anyone else; but that's out of the question, and some people will arrive with relatively large fortunes, others with relatively little. So for a number of reasons, and especially because the state offers equality of opportunity, there must be graded property-classes, to ensure that offices and taxes and grants may be arranged on the basis of what a man is worth. It's not only his personal virtues or his ancestors' that should be considered, or his physical strength or good
c looks: what he's made of his wealth or poverty should also be taken into account. In short, the citizens must be esteemed and given office, so far as possible, on exactly equal terms of 'proportional inequality', so as to avoid ill-feeling. For these reasons four permanent property-classes must

10. See 741b–c.

be established, graded according to wealth: the 'first', 'second', 'third', and
'fourth' classes, or whatever other names are employed. A man will either
keep his original classification, or, when he has grown richer or poorer d
than he was before, transfer to the appropriate class.

In view of all this, the next law I'd pass would be along the following
lines. (We maintain that if a state is to avoid the greatest plague of all—
I mean civil war, though civil disintegration would be a better term—
extreme poverty and wealth must not be allowed to arise in any section
of the citizen-body, because both lead to both these disasters. That is why
the legislator must now announce the acceptable limits of wealth and
poverty.) The lower limit of poverty must be the value of the holding e
(which is to be permanent: no official nor anyone else who has ambitions
to be thought virtuous will ever overlook the diminution of any man's
holding). The legislator will use the holding as his unit of measure and
allow a man to possess twice, thrice, and up to four times its value. If
anyone acquires more than this, by finding treasure-trove or by gift or by
a good stroke of business or some other similar lucky chance which presents 745
him with more than he's allowed, he should hand over the surplus to the
state and its patron deities, thereby escaping punishment and getting a
good name for himself.

> 4. If a man breaks this law,
> *anyone* who wishes may lay information and be rewarded with half the amount involved, the other half being given to the gods; and besides this the guilty person must pay a fine equivalent to the surplus out of his own pocket.

The total property of each citizen over and above his holding of land
should be recorded in a public register kept in the custody of officials
legally appointed for that duty, so that lawsuits on all subjects—in so far b
as they affect property—may go smoothly because the facts are clear.

After this, the legislator's first job is to locate the city as precisely as
possible in the center of the country, provided that the site he chooses is
a convenient one for a city in all other respects too (these are details which
can be understood and specified easily enough). Next he must divide the
country into twelve sections. But first he ought to reserve a sacred area
for Hestia, Zeus and Athena (calling it the 'acropolis'), and enclose its
boundaries; he will then divide the city itself and the whole country into c
twelve sections by lines radiating from this central point. The twelve sec-
tions should be made equal in the sense that a section should be smaller
if the soil is good, bigger if it is poor. The legislator must then mark out
five thousand and forty holdings, and further divide each into two parts;
he should then make an individual holding consist of two such parts
coupled so that each has a partner near the center or the boundary of the
state as the case may be. (A part near the city and a part next to the
boundary should form one holding, the second nearest the city with the d
second from the boundary should form another, and so on.) He must

apply to the two parts the rule I've just mentioned about the relative quality of the soil, making them equal by varying their size. He should also divide the population into twelve sections, and arrange to distribute among them as equally as possible all wealth over and above the actual holdings (a comprehensive list will be compiled). Finally, they must allocate
e the sections as twelve 'holdings' for the twelve gods, consecrate each section to the particular god which it has drawn by lot, name it after him, and call it a 'tribe'. Again, they must divide the city into twelve sections in the same way as they divided the rest of the country; and each man should be allotted two houses, one near the center of the state, one near the boundary. That will finish off the job of getting the state founded.

But there's a lesson here that we must take to heart. This blueprint as a whole is never likely to find such favorable circumstances that every
746 single detail will turn out precisely according to plan. It presupposes men who won't turn up their noses at living in such a community, and who will tolerate a moderate and fixed level of wealth throughout their lives, and the supervision of the size of each individual's family as we've suggested. Will people really put up with being deprived of gold and other things which, for reasons we went into just now, the legislator is obviously going to add to his list of forbidden articles? What about this description of a city and countryside with houses at the center and in all directions round about? He might have been relating a dream, or modeling a state
b and its citizens out of wax. The ideal impresses well enough, but the legislator must reconsider it as follows (this being, then, a *reprise* of his address to us).[11] 'My friends, in these talks we're having, don't think it has escaped me either that the point of view you are urging has some truth in it. But I believe that in every project for future action, when you are displaying the ideal plan that ought to be put into effect, the most satisfactory procedure is to spare no detail of absolute truth and beauty.
c But if you find that one of these details is impossible in practice, you ought to put it on one side and not attempt it: you should see which of the remaining alternatives comes closest to it and is most nearly akin to your policy, and arrange to have that done instead. But you must let the legislator finish describing what he really wants to do, and only then join him in considering which of his proposals for legislation are feasible, and which
d are too difficult. You see, even the maker of the most trivial object must make it internally consistent if he is going to get any sort of reputation.'

Now that we've decided to divide the citizens into twelve sections, we should try to realize (after all, it's clear enough) the enormous number of divisors the subdivisions of each section have, and reflect how these in turn can be further subdivided and subdivided again until you get to 5040.[12] This is the mathematical framework which will yield you your

11. See 739a ff.

12. $5040 = 12 \times 420$. A 'section' (420) has many divisors (including all numbers from 1 to 7), and several (e.g. 12, 15, 20) can be conveniently subdivided. Division of all the 12

brotherhoods, local administrative units, villages, your military companies
and marching-columns, as well as units of coinage, liquid and dry mea- e
sures, and weights. The law must regulate all these details so that the
proper proportions and correspondences are observed. And not only that:
the legislator should not be afraid of appearing to give undue attention
to detail. He must be bold enough to give instructions that the citizens
are not to be allowed to possess any equipment that is not of standard
size. He'll assume it's a general rule that numerical division in all its variety 747
can be usefully applied to every field of conduct. It may be limited to the
complexities of arithmetic itself, or extended to the subtleties of plane and
solid geometry; it's also relevant to sound, and to motion (straight up or
down or revolution in a circle). The legislator should take all this into
account and instruct all his citizens to do their best never to operate outside
that framework. For domestic and public purposes, and all professional b
skills, no single branch of a child's education has such an enormous range
of applications as mathematics; but its greatest advantage is that it wakes
up the sleepy ignoramus and makes him quick to understand, retentive
and sharpwitted; and thanks to this miraculous science he does better
than his natural abilities would have allowed. These subjects will form a
splendidly appropriate curriculum, *if* by further laws and customs you c
can expel the spirit of pettiness and greed from the souls of those who
are to master them and profit from them. But if you fail, you'll find that
without noticing it you've produced a 'twister' instead of a man of learn-
ing—just what can be seen to have happened in the case of the Egyptians
and Phoenicians, and many other races whose approach to wealth and
life in general shows a narrowminded outlook. (It may have been an
incompetent legislator who was to blame for this state of affairs, or some
stroke of bad luck, or even some natural influences that had the same effect.) d

And that's another point about the choice of sites, Clinias and Megillus,
that we mustn't forget. Some localities are more likely than others to
produce comparatively good (or bad) characters, and we must take care
to lay down laws that do not fly in the face of such influences. Some sites
are suitable or unsuitable because of varying winds or periods of heat,
others because of the quality of the water; in some cases the very food
grown in the soil can nourish or poison not only the body but the soul as e
well. But best of all will be the places where the breeze of heaven blows,
where spirits hold possession of the land and greet with favor (or disfavor)
the various people who come and settle there. The sensible legislator will
ponder these influences as carefully as a man can, and then try to lay
down laws that will take account of them. This is what you must do too,
Clinias. You're going to settle a territory, so here's the first thing you have
to attend to.

CLINIAS: Well said, sir. I must follow your advice.

---

sections, if carried far enough, will ultimately give you 5040. The brotherhoods and units mentioned just below would be subdivisions of the tribes (a tribe = 420 citizens).

# Book VI

751 Athenian: Well then, now that I've got all that off my chest, your next
job will be to appoint officials for the state.

Clinias: It certainly will.

Athenian: There are two stages involved in organizing a society.[1] First
you establish official positions and appoint people to hold them: you decide
how many posts there should be and how they ought to be filled. Then
b each office has to be given its particular laws: you have to decide which
laws will be appropriate in each case, and the number and type required.
But before we make our choice, let's pause a moment and explain a point
that will affect it.

Clinias: And what's that?

Athenian: This. It's obvious to anyone that legislation is a tremendous
task, and that when you have a well constructed state with a well-framed
legal code, to put incompetent officials in charge of administering the code
is a waste of good laws, and the whole business degenerates into farce.
c And not only that: the state will find that its laws are doing it damage
and injury on a gigantic scale.

Clinias: Naturally.

Athenian: Now let's notice the relevance of this to your present society
and state. You appreciate that if your candidates are to deserve promotion
to positions of power, their characters and family background must have
been adequately tested, right from their childhood until the moment of
d their election. Furthermore, the intending electors ought to have been well
brought up in law-abiding habits, so as to be able to approve or disapprove
of the candidates for the right reasons and elect or reject them according
to their deserts.[2] But in the present case we are dealing with people who
have only just come together and don't know each other—and they're
uneducated too. So how could they ever elect their officials without going wrong?

Clinias: It's pretty well impossible.

Athenian: But look here, 'once in the race, you've no excuses', as the
saying is. That's just our predicament now: you and your nine colleagues,
e you tell us, have given an undertaking to the people of Crete to turn your
752 energies to founding this state; I, for my part, have promised to join in
with this piece of fiction I'm now relating. Seeing that I've got on to telling
a story, I'd be most reluctant to leave it without a head: it would look a
grim sight wandering about like that!

Clinias: And a fine story it's been, sir.

Athenian: Surely, but I also intend to give you actual help along those lines, so far as I can.

1. Cf. 735a; after the preliminaries of 735b–750e, the Athenian now resumes his discussion of political offices.

2. Deleting *te* in c9 and reading *pros to* in d1.

CLINIAS: Then let's carry out our program, certainly.

ATHENIAN: Yes, we shall, God willing, if we can keep old age at bay for long enough.

CLINIAS: 'God willing' can probably be taken for granted. b

ATHENIAN: Of course. So let's be guided by him and notice something else.

CLINIAS: What?

ATHENIAN: That we'll find we've been pretty bold and foolhardy in launching this state of ours.

CLINIAS: What's made you say that? What have you in mind?

ATHENIAN: I'm thinking of the cheerful way we're legislating for people who'll be new to the laws we've passed, without bothering how they'll
ever be brought to accept them. It's obvious to us all, Clinias, even if we're c
not very clever, that at the start they won't readily accept any at all. Ideally, we'd remain on the spot long enough to see people getting a taste of the laws while they're still children; then when they've grown up and have become thoroughly accustomed to them, they can take part in the elections to all the offices of the state. If we can manage that (assuming acceptable ways and means are available), then I reckon that the state would have a firm guarantee of survival when its 'schooldays' are over.

CLINIAS: That's reasonable enough. d

ATHENIAN: So let's see if we can find ways and means. Will this do? I maintain, Clinias, that of all the Cretans, the citizens of Cnossus have a special duty. They must not be content with simply doing all that religion demands for the mere soil of your settlement: they must also take scrupulous care to see that the first officials are appointed by the best and safest
methods. And it's absolutely vital to give your best attention to choosing, e
first of all, Guardians of the Laws. (Less trouble need be taken over the other officials.)

CLINIAS: So can we find a reasonable way of going about it?

ATHENIAN: Yes. 'Sons of Crete' (I say), 'as the Cnossians take precedence over your many cities, they should collaborate with the newly arrived settlers in choosing a total of thirty-seven men from the two sides, nineteen
from the settlers, the rest from Cnossus itself'—the gift of the Cnossians 753
to this state of yours, Clinias. They should include you in the eighteen, and make you yourself a citizen of the colony, with your consent (failing which, you'll be gently compelled).

CLINIAS: But why on earth, sir, haven't you, and Megillus too, enrolled as joint administrators?

ATHENIAN: Ah, Clinias, Athens is a high and mighty state, and so is Sparta; besides, they're both a long way off. But it's just the right thing
for you and the other founders, and what I said a moment ago of you b
applies equally to them. So let's take it we've explained how to deal with the present situation. But as time goes on and the constitution has become established, the election of these officials should be held more or less as follows. Everyone who serves in the cavalry or infantry, and has fought in the field while young and strong enough to do so, should participate.

c They must proceed to election in the temple which the state considers to
be the most venerable; each elector should place on the altar of the god a
small tablet on which he has written the name of the person he wishes to
vote for, adding the candidate's father, tribe, and deme; and he should
append his own name with the same details. For at least thirty days anyone
who wishes should be allowed to remove any tablet bearing a name he
finds objectionable and put it on display in the market-place. Then the
d officials must exhibit to the state at large the three hundred tablets that
head the list; on the basis of this list the voters must then again record
their nominations, and the hundred names that lead this second time must
be publicly displayed as before. On the third occasion anyone who wishes
should walk between the victims of a sacrifice and record which of these
three hundred he chooses. The thirty-seven who receive most votes must
then submit to scrutiny and be declared elected.

e Well then, Clinias and Megillus, who will make all these arrangements
about these officials in our state, and their scrutiny? We can surely appreci-
ate that as the state apparatus is as yet only rudimentary such people have
to be on hand; but they could hardly be available before any officials at
all have been appointed. Even so, we must have them, and these two
hundred persons mustn't be feeble specimens, either, but men of the highest
caliber. As the proverb says, 'getting started is half the battle', and a *good*
754 beginning we all applaud. But in my view a good start is more than 'half',
and no one has yet given it the praise it deserves.

CLINIAS: That's quite true.

ATHENIAN: So as we acknowledge the value of a good beginning, let's not skip discussion of it in this case. Let's get it quite clear in our own minds how we can tackle it. I've no particular points to make, except one, which is vitally relevant to the situation.

CLINIAS: And what's that?

ATHENIAN: Apart from the city which is founding it, this state we are
b about to settle has, so to speak, no father or mother. I'm quite aware, of
course, that many a foundation has quarreled repeatedly with its founder-
state, and will again, but in the present circumstances we have, as it were,
the merest infant on our hands. I mean, any child is going to fall out with
his parents sooner or later, but while he's young and can't help himself,
he loves them and they love him; he's forever scampering back to his
family and finding his only allies are his relatives. That's exactly the way
c I maintain our young state regards the citizens of Cnossus and how they
regard it, in virtue of their role as its guardians. I therefore repeat what I
said just now—there's no harm in saying a good thing twice—that the
citizen of Cnossus should choose colleagues from among the newly arrived
colonists and take charge of all these arrangements; they should choose
at least a hundred of them, the oldest and most virtuous they can find;
and they themselves should contribute another hundred. They should
enter the new state and collaborate in seeing that the officials are designated
d according to law, and after designation, scrutinized. When they've done

all that, the citizens of Cnossus should resume living in Cnossus and leave the infant state to work out its own salvation and flourish unaided.

The duties for which the members of the body of thirty-seven should be appointed are as follows (not only here and now, but permanently): first, they are to act as Guardians of the Laws; second, they are to take charge of the documents in which each person has made his return to the officials of his total property. (A man may leave four hundred drachmas undeclared if he belongs to the highest property-class, three hundred if to the second, two e
hundred if to the third, and one hundred if he belongs to the fourth.)

5. If anyone is found to possess anything in addition to the registered sum,
*the entire* surplus should be confiscated by the state,

and on top of that anyone who wants to should bring a charge against him—and an ugly, discreditable and disgraceful charge it will be, if the man is convicted of being enticed by the prospect of gain to hold the laws in contempt. The accuser, who may be anyone, should accordingly enter a charge of 'money-grubbing' against him, and prosecute in the court of the Law-Guardians themselves.

6. If the defendant is found guilty,
*he must* be excluded from the common resources of the state, and when 755
a grant of some kind is made, he must go without and be limited to his holding; and for as long as he lives his conviction should be recorded for public inspection by all and sundry.

A Law-Guardian must not hold office for longer than twenty years; he should be not less than fifty years old on appointment, and if he is appointed at sixty, his maximum tenure must be ten years, and so on. And if a man survives beyond seventy, he should no longer expect to hold b
such an important post as membership of this board.

That gives us three duties to assign to the Guardians of the Laws. As the legal code is extended, every new law will give this body of men additional duties to perform, over and above the ones we've mentioned.

Now for the election of the other officials, one by one.

Next, then, we have to elect Generals and their aides-de-camp, so to c
speak: Cavalry-Commanders, Tribe-Leaders, and controllers of the tribal companies of infantry ('Company-Commanders' will be a good name for these officers, which is in fact what most people do call them).

*Generals.* The Guardians of the Laws must compile a preliminary list of candidates, restricted to citizens, and the Generals should then be elected from this list by all those who have served in the armed forces at the proper age, or are serving at the time. If anybody thinks that someone d
not on the preliminary list is better qualified than someone who is, he must name his proposed substitute, and say whom he should replace; then, having sworn his oath, he must propose the alternative candidate.

Whichever of the two the voting favors should be a candidate in the
election. The three candidates who receive most votes should become
Generals and take over the organization of military affairs, after being
scrutinized in the same way as the Guardians of the Laws.

e *Company-Commanders.* The elected Generals should make their own prelim-
inary list of twelve Company-Commanders, one for each tribe; the counter-
nominations, the election and the scrutiny must be conducted as they were
for the Generals themselves.

*The Elections.* For the moment, before a council and executive committees
have been chosen, your assembly must be convened by the Guardians of
the Laws in the holiest and most capacious place they can find; and they
must seat the heavy-armed soldiers, the cavalry, and finally all other ranks,
in separate blocks. The Generals and Cavalry-Commanders should be
756 elected by the whole assembly, the Company-Commanders by the shield-
bearers, and their Tribe-Leaders by the entire cavalry; as for light-armed
troops, archers, or whatever other ranks there may be, the appointment
of their leaders should be left to the Generals' discretion.

*Cavalry-Commanders.* That will leave us with the appointment of the Cav-
alry-Commanders. The preliminary list must be drawn up by the same
persons as drew up the list of Generals, and the election and counter-
proposals should be conducted in the same way; the cavalry must hold
b the election watched by the infantry, and the two candidates with the most
votes must become leaders of the entire mounted force.

*Disputed Votes.* Votes may be disputed no more than twice. If anyone
contests the vote on the third occasion, the tellers must decide the issue
by voting among themselves.

The council should have thirty dozen members, as three hundred sixty
will be a convenient number for subdivision. The total will be divided
c into four sections of ninety, this being the number of members to be elected
from each property-class. The first step in the election is to be compulsory
for all: everyone must take part in the nomination of members of the
highest class, and anybody who neglects his duty must pay the approved
fine. When the nominations are completed, the names must be noted down.

On the next day, using the same procedure as before, they will nominate
members of the second class.

On the third day, nominating for Councillors from the third class will
d be optional, except for voters of the first three classes: voters of the fourth
and lowest class will be exempted from the fine if they do not care to
make a nomination.

The fourth day will see the nomination for representatives of the fourth
and lowest class; everyone must take part, but voters of the third and
fourth class who do not wish to nominate should not be fined—unlike

voters of the second and first classes, who must be fined treble and quadruple the standard fine respectively if they do not make a nomination.

On the fifth day the officials must display to the entire citizen body the e
names duly noted down, and on the basis of these lists every man must cast his vote or pay the standard fine. One hundred eighty must be selected from each property-class, and half of them finally chosen by lot. These, after scrutiny, are to be Councillors for the year.

A system of selection like that will effect a compromise between a monarchical and a democratic constitution, which is precisely the sort of compromise a constitution should always be. You see, even if you proclaim
that a master and his slave shall have equal status, friendship between 757
them is inherently impossible. The same applies to the relations between an honest man and a scoundrel. Indiscriminate equality for all amounts to *in*equality, and both fill a state with quarrels between its citizens. How correct the old saying is, that 'equality leads to friendship'! It's right enough and it rings true, but what *kind* of equality has this potential is a problem
which produces ripe confusion. This is because we use the same term for b
two concepts of 'equality', which in most respects are virtual opposites. The first sort of equality (of measures, weights and numbers) is within the competence of any state and any legislator: that is, one can simply distribute equal awards by lot. But the most genuine equality, and the best, is not so obvious. It needs the wisdom and judgment of Zeus, and only in a limited number of ways does it help the human race; but when states or even individuals do find it profitable, they find it very profitable indeed.
The general method I mean is to grant much to the great and less to the c
less great, adjusting what you give to take account of the real nature of each—specifically, to confer high recognition on great virtue, but when you come to the poorly educated in this respect, to treat them as they deserve. We maintain, in fact, that statesmanship consists of essentially
this—strict justice. This is what we should be aiming at now, Clinias: this d
is the kind of 'equality' we should concentrate on as we bring our state into the world. The founder of any other state should also concentrate on this same goal when he frames his laws, and take no notice of a bunch of dictators, or a single one, or even the power of the people. He must always make *justice* his aim, and this is precisely as we've described it: it consists of granting the 'equality' that unequals deserve to get. Yet on occasion a state as a whole (unless it is prepared to put up with a degree of friction in one part or another) will be obliged to apply these concepts in a rather
rough and ready way, because complaisance and toleration, which always e
wreck complete precision, are the enemies of strict justice. You can now see why it was necessary to avoid the anger of the man in the street by giving him an equal chance in the lot (though even then we prayed to the gods of good luck to make the lot give the right decisions). So though force of circumstances compels us to employ both sorts of equality, we
should employ the second, which demands good luck to prove successful, 758
as little as possible.

So much, my friends, for the justification of our policy, which is the
policy a state must follow if it means to survive. The state is just like a
ship at sea, which always needs someone to keep watch night and day:
as it is steered through the waves of international affairs, it lives in constant
peril of being captured by all sorts of conspiracies. Hence the need of an
b unbroken chain of authority right through the day and into the night and
then on into the next day, guard relieving guard in endless succession.
But a large body will never be able to act quickly enough, and most of
the time we have to leave the majority of council members free to live
their private lives and administer their own establishments. We must
therefore divide the members of the council into twelve groups, one for
c each month, and have them go on guard by turns. They must be available
promptly, whenever anyone from abroad or from within the state itself
approaches them wishing to give information or inquire about those topics
on which a state must arrange to answer the questions of other states and
receive replies to its own. They must be particularly concerned with the
d constant revolutions of all kinds that are apt to occur in a state; if possible,
they must prevent them, but failing that they must see that the state gets
to know as soon as possible, so that the outbreak can be cured. That is
why this executive committee has to be in charge of convening and dissolv-
ing not only statutory meetings but also those held in some national emer-
gency. The authority that should see to all this—a twelfth of the council—
will of course be *off* duty for eleven-twelfths of the year: it's the section
of the council *on* duty that must co-operate with other officials and keep
a watchful eye on the state.

e That will be a reasonable arrangement for the city, but what about the
rest of the country? How should it be superintended and organized? Well
now, the entire city and the entire country have been divided into twelve
sections; there are the roads of the central city; there are houses, public
buildings, harbors, the market, and fountains; there are, above all, sacred
enclosures and similar places. Shouldn't all these things have officials
appointed to look after them?

CLINIAS: Naturally.

759 ATHENIAN: We can say, then, that the temples should have Attendants
and Priests and Priestesses. Next, there are the duties of looking after
streets and public buildings, ensuring that they reach the proper standards,
stopping men and animals doing them damage, and seeing that conditions
both in the suburbs and the city itself are in keeping with a civilized life.
All these duties require three types of officials to be chosen: the 'City-
Wardens' (as they will be called) will be responsible for the points we've just
mentioned, and the 'Market-Wardens' for the correct conduct of the market.

b Priests or Priestesses of temples who have hereditary priesthoods should
not be turned out of office. But if (as is quite likely in a new foundation)
few or no temples are thus provided for, the deficiencies must be made
good by appointing Priests and Priestesses to be Attendants in the temples
of the gods. In all these cases the appointments should be made partly by

election and partly by lot, so that a mixture of democratic and non-democratic methods in every rural and urban division may lead to the greatest possible feeling of solidarity. In electing Priests, one should leave it to the god himself to express his wishes, and allow him to guide the luck of the c
draw. But the man whom the lot favors must be screened to see that he is healthy and legitimate, reared in a family whose moral standards could hardly be higher, and that he himself and his father and mother have lived unpolluted by homicide and all such offenses against heaven.

They must get laws on all religious matters from Delphi, and appoint Expounders of them; that will provide them with a code to be obeyed. d
Each priesthood must be held for a year and no longer, and anyone who intends to celebrate our rites in due conformity with religious law should not be less than sixty years old. The same rules should apply to Priestesses too.

There should be three[3] Expounders. The tribes will be arranged in three sets of four, and every man should nominate four persons, each from the same set as himself; the three candidates who receive most votes should be scrutinized, and nine names should then be sent to Delphi for the oracle to select one from each group of three. Their scrutiny, and the requirement as to age, should be the same as in the case of the Priests; these three must e
hold office for life, and when one dies the group of four tribes in which the vacancy occurs should make nominations for a replacement.

The highest property-class must elect Treasurers to control the sacred funds of each temple, and to look after the temple-enclosures and their 760
produce and revenues; three should be chosen to take charge of the largest temples, two for the less large, and one for the very small. The election and scrutiny of these officials should be conducted as it was for the Generals.

So much by way of provision for the holy places.

As far as practicable, nothing should be left unguarded. The protection of the city is to be the business of the Generals, Company-Commanders, Cavalry-Commanders, Tribe-Leaders and members of the Executive—and b
the City-Wardens and Market-Wardens too, once we have them elected and satisfactorily installed in office. The whole of the rest of the country should be protected as follows. Our entire territory has been divided as exactly as possible into twelve equal sections, and every year one tribe must be allocated by lot to each of them. Every tribe must provide five 'Country-Wardens' or 'Guards-in-Chief', each of whom will be allowed to choose from his own tribe[4] twelve young men who must be not younger than twenty-five nor older than thirty. The effect of the lot will be that c
each group will take a different section every month, so that they all get experience and knowledge of the entire country. The guards and their

3. Reading *treis* in d5.

4. Alternatively, " . . . 'Guards-in-Chief', who will be allowed to choose from their own tribe . . ." On the translation in the text there will be 60 assistant guards; on this alternative translation, 12.

officers in charge are to hold their respective commissions for two years.
Starting from the original sections (i.e., districts of the country) assigned
d by lot, the Guards-in-Chief are to take their groups round in a circle,
transferring them each month to the next district on the right ('on the
right' should be understood to mean 'to the East'). But it's not enough
that as many of the guards as possible should get experience of the country
at only one season of the year: we want them to add to their knowledge
of the actual territory by discovering what goes on in every district at
every season. So their leaders for the time being should follow up the first
e year by spending a second leading them back through the various districts,
moving this time to the left. For the third year, a tribe must choose other
Country-Wardens, and five new Guards-in-Chief, each in charge of
twelve assistants.

While stationed in the various districts, their duties should be as follows.
To start with, they must see that the territory is protected against enemies
as thoroughly as possible. They must dig ditches wherever necessary, and
excavate trenches and erect fortifications to check any attempt to harm the
761 land and the livestock. They will requisition the beasts of burden and
slaves of the local residents for these purposes, and employ them at their
discretion, picking as far as possible times when they are not required for
their normal duties. The wardens must arrange that the enemy would be
impeded at every turn, whereas movement by our own side (by men or
beasts of burden or cattle) would be facilitated; and they must see that
every road is as easy for the traveler as can be managed.

The rain God sends must do the countryside good, not harm, so the
b wardens must see that the water flowing off the high ground down into
any sufficiently deep ravines between the hills is collected by dikes and
ditches, so that the ravines can retain and absorb it, and supply streams
and springs for all the districts in the countryside below, and give even
the driest of spots a copious supply of pure water. As for water that springs
from the ground, the wardens must beautify the fountains and rivers that
c form by adorning them with trees and buildings; they must use drains to
tap the individual streams and collect an abundant supply, and any grove
or sacred enclosure which has been dedicated nearby must be embellished
by having a perennial flow of water directed by irrigation into the very
temples of the gods. The young men should erect in every quarter gymnasia
for themselves and senior citizens, construct warm baths for the old folk,
and lay up a large stock of thoroughly dry wood. All this will help to
d relieve invalids, and farmers wearied by the labor of the fields—and it
will be a much kinder treatment than the tender mercies of some fool of
a doctor.

All these and similar projects will beautify and improve a district, and
permit some welcome recreation into the bargain. The Wardens' really
serious duties should be as follows. Each squad of sixty must protect its
own district not only from enemies, but from those who profess to be
e friends. If a slave or a free man injures a neighbor or any other citizen,

the Wardens must try the case brought by the plaintiff. The five leaders should deal with the trivial cases on their own authority, but in the more important cases (when one man sues another for any sum up to three minas) they should sit in judgment with one group of twelve assistants as a bench of seventeen. Apart from the officials whose decisions (like those of kings) are final, no judge shall hold court, and no official shall fill his position, without being liable to be called to account for his actions. The Country-Wardens are to be no exception, if they treat the people in their care at all high-handedly by giving them unfair orders or by trying 762
to grab and remove any agricultural equipment without permission, or allow their palms to be greased, or go so far as to deliver unjust verdicts. For giving way to boot-lickers they must be publicly disgraced. When the actual injury they have done to an inhabitant of their district does not exceed one mina in value, they should voluntarily submit to a trial before the villagers and neighbors. Whenever larger sums are involved (or even b
smaller sums, if the accused is not prepared to submit to trial because he's confident that by moving to a fresh district every month he will get away and 'get off' too), the injured party should file suit against him in the common courts.

7. If the plaintiff wins the day,
*then this* elusive fellow who was not prepared to pay a penalty with a good grace must pay him double the amount at issue.

The way of life of the Country-Wardens and their officers during their two years on duty will be something like this. First, in every district of the country there should be communal restaurants, at which everyone will c
have to eat together.

8. If a Warden fails to turn up at these meals even for one day, or sleeps away from his quarters at night, except on the express orders of his superiors or because of some unavoidable necessity,
*the five* leaders may post his name in the market-place as a deserter from his post; if they do, he will have to bear the disgrace of having turned traitor to the state, and everyone who happens to meet him will be entitled to give him a beating if he wants to, without being punished for it.

If one of the actual officers goes so far as to commit this sort of offense, d
all his fifty-nine colleagues must look into the business.

9. If one of them notices (or is told) what is going on and fails to bring a case,
*the same laws* should be invoked against him, and he must be punished with greater severity than his juniors: that is, he is to be stripped of his right to exercise any authority over the young.

The Guardians of the Laws should keep a sharp eye on these offenses and
try to stop them being committed at all; failing that, they must see that
the proper penalties are inflicted.

e No one will ever make a commendable master without having been a
servant first; one should be proud not so much of ruling well but of serving
well—and serving the laws above all (because this is the way we serve
the gods), and secondly, if we are young, those who are full of years and
honor. It is vital that everyone should be convinced that this rule applies
to us all. The next point, then, is that when someone who has joined the
Country-Wardens gets to the end of his two years, he ought to be no
stranger to a meager daily ration of uncooked food. In fact, after being
selected, the groups of twelve assistant Wardens must assemble with the
763 five officers and resolve that, being servants, they will not possess other
servants and slaves for themselves, nor employ the attendants of other
people (the farmers and villagers) for their own private needs, but only
for public tasks. With that exception, they must expect to double as their
own servants and fend for themselves; and on top of all that they must
reckon to investigate the entire country, summer and winter, in arms, to
b protect and get to know every district in succession. Everyone should be
closely familiar with his own country: probably no study is more valuable.
This is the real reason why the youths must go in for hunting with dogs,
and other types of chase—quite apart from the pleasure and profit that
everyone gets out of such activities.

So much for these 'secret-service men' or 'Country-Wardens' (call them
c what you will), and their regimen—a regimen into which everyone who
means to play his part in keeping his country safe must throw himself
heart and soul.

The next election on our list was that of the Market-Wardens and City-
Wardens. There are to be three of the latter, who will divide the twelve
sections of the city into three groups, and like their counterparts (the
Country-Wardens), will look after the roads, both the streets within the
city boundaries and the various routes that extend into the capital from
d the country; and they must also supervise the buildings, to see that they
are constructed to the statutory standards. In particular, they must ensure
that the water which the Guards-in-Chief have transmitted and sent on
to them in good condition reaches the fountains pure and in sufficient
quantities, so that it enhances the beauty and amenities of the city. So
these officials too must be men of some caliber, with time to go in for
public affairs, which means that every citizen nominating City-Wardens
must confine his choice to members of the highest property-class. When
e they have held the election and produced a short list of six candidates
with the most votes, the officials responsible are to select three of them
by lot; and these, after scrutiny, should hold office in accordance with the
laws provided for them.

Next, five Market-Wardens must be elected from the first and second
property-classes. In general, their election should be conducted as for the

City-Wardens: ten should be selected from the list of candidates by voting, and then five selected by lot, who after due scrutiny should be appointed to office. (Voting is compulsory for all in every election, and everyone who fails in his duty and is denounced to the authorities should be fined 764
fifty drachmas and get the reputation of being a scoundrel. Attendance at the assembly (the general meeting of the state) is to be optional, except for members of the first and second property-classes, who will be fined ten drachmas if their absence from such a meeting is proved. But the third and fourth classes will not be forced to attend and should not be subject to any penalty unless the authorities, for some pressing reason, instruct everyone to come.) To get back to the Market-Wardens: they are to maintain b
due order in the market, and look after the temples and fountains, to see that no one damages them. They must punish anyone who commits an offense, a slave or foreigner by whipping him and putting him in chains; but if a native citizen misbehaves himself in this way, the Market-Wardens should be authorized to decide the case on their own and fine the culprit up to a hundred drachmas, the limit being increased to two hundred if they sit in association with the City-Wardens. In their own sphere, the c
City-Wardens too should have the same power of fining and punishing, and inflict fines up to one mina on their own, and up to two minas in association with the Market-Wardens.

The right thing to do next will be to appoint officials in charge of (A) culture and (B) physical training—two categories of them in each case, one (1) to handle the educational side and the other (2) to organize competitions. By (1) 'education officials' the law means superintendents of gymnasia and schools, who see that they are decently run, supervise the d
curriculum and organize such related matters as the attendance and accommodation of the boys and girls. (2) 'Officials in charge of competitions' means judges of competitors in athletics and contests of the arts (there being here again two categories (AB) of officials, one for the arts, one for athletics). (B2) Men and horses in athletic contests can have the same judges, but (A2) in the arts, choruses should properly have (A2a) one set of judges, while solo dramatic performances (given by reciters of poetry, e
lyre-players, pipe-players and such people) ought to have another (A2b). So I suppose a good start will be to select (A2a) the authority to supervise children, men and girls as they enjoy themselves in choruses by dancing and every other type of cultural activity. One official, who is to be not less than forty years old, will suffice, and one of not less than thirty (A2b) will 765
also be enough to present the solo performances and give an adequate decision between the contestants. The Chief Organizer of the Choruses (A2a) must be chosen in some such way as this. All those who are keen on such things should attend the election meeting and be liable to a fine if they don't (this is a point for the Guardians of the Laws to decide), whereas others who do not wish to attend should not be compelled. In b
proposing their choice the electors should confine themselves to the experts, and in the scrutiny there must be only one reason for accepting or rejecting

the candidate the lot has favored: that he is experienced or inexperienced
as the case may be. One of the ten nominees with the most votes must be
selected by lot, scrutinized, and be in charge of the choruses for the year
according to law. Similarly with the year's entrants for solo performances
and combined pieces on the pipes: only after the application of the same
criterion should the candidate (A2b) favored by the lot take charge of them
and decide between them, having referred the decision in his own case to
c his judges. Next, (B2) Umpires for athletic contests and exercises of horses
and men must be chosen from the second and also the third property-
class; it will be compulsory for members of the first three classes to take
part in the election, but the lowest class may be let off without a fine. The
Umpires should number three, chosen by lot from the twenty candidates
who head the poll, and duly sanctioned by the scrutineers.

d If anyone is judged and found wanting in the scrutiny after being drawn
by lot for any office, another person must be chosen in his place by the
same methods, and his scrutiny conducted in the same way.

The remaining official in this field is the director of the entire education
of the boys and girls. Here too there should be one official in charge under
the law. He must be not younger than fifty years old, and the father of
legitimate children—preferably both sons and daughters, though either
e alone will do. The chosen candidate himself and those who choose him
should appreciate that this is by far the most important of all the supreme
offices in the state. Any living creature that flourishes in its first stages of
growth gets a tremendous impetus towards its natural perfection and the
final development appropriate to it, and this is true of both plants and
766 animals (tame and wild), and men too. Man is a 'tame' animal, as we put
it, and of course if he enjoys a good education and happens to have the
right natural disposition, he's apt to be a most heavenly and gentle creature;
but his upbringing has only to be inadequate or misguided and he'll
become the wildest animal on the face of the earth. That's why the legislator
should not treat the education of children cursorily or as a secondary
matter; he should regard the right choice of the man who is going to be
in charge of the children as something of crucial importance, and appoint
b as their Minister the best all-round citizen in the state. So all the officials
except the council and members of the Executive[5] should meet at the
temple of Apollo and hold a secret ballot, each man voting for whichever
Guardian of the Laws he thinks would make the best Minister of Education.
The one who attracts the largest number of votes should be scrutinized
by the officials who have elected him, the Guardians of the Laws standing
c aside. The Minister should hold office for five years, and in the sixth
he should be replaced by his successor after an election held under the
same rules.

If any public official dies in office and there are more than thirty days
of his tenure left to run, the officials concerned must follow the same

5. See 758a ff.

procedure as before and appoint a replacement. If a guardian of orphans
dies, the relatives on both the mother's and the father's side (as far as the
children of first cousins), provided they are living in the state, should
appoint a successor within ten days, or be fined a drachma for every day d
they let pass without appointing the children's new guardian.

Of course, any state without duly established courts simply ceases to *be*
a state. If a judge is silent, and (as in arbitration) has no more to say than
the litigants in a preliminary hearing he'll never be able to come to a
satisfactory decision on the cases before him. That's why a large bench
finds it difficult to return good verdicts—and so does a small one, if its
members are of poor caliber. The point in dispute between the parties e
must always be made crystal clear, and leisurely and repeated interrogation
over a period of time helps a lot to clarify the issues. That is the justification
for making litigants bring their charges initially before a court of neighbors,
who will be their friends and understand best the actions which provoke 767
the dispute. If a litigant is dissatisfied with the judgment of this court, he
may apply to a second, but if the first two courts are both unable to settle
the argument, the verdict of the third must close the case.

In a sense, to establish a court is to elect officials. Every official, you see,
sometimes has to set up as a judge as well; and a judge, although strictly
he has no official position, becomes in a way an official of considerable
importance during the day on which he sits in judgment and gives his
verdict. So on the assumption that judges too are officials, let's specify b
what judges will be appropriate, the disputes they will decide, and how
many should sit on each case. The court appointed by the common choice
of the litigants themselves for their own private cases should have absolute
authority. Cases may be brought before the other courts for two reasons:
one private person may charge another with having done him wrong, and
bring him to court so that the issue can be decided; or someone may believe
that one of the citizens is acting against the public interests and wish to
come to the community's assistance. Now we must specify the character c
and identity of the judges.

First, let's set up a common court for all private persons who are contest-
ing an issue with each other for the third time. It is to be formed in some
such way as this. All officials whose tenure lasts for a year or longer should
assemble in a single temple on the day just before the new year opens in d
the month after the summer solstice; then, after swearing to the god, they
must offer him their choicest fruit, so to speak: each board of officials
should contribute one judge, the man who appears to be the outstanding
member of his board and seems likely to judge the cases of his fellow
citizens during the coming year in the best and most god-fearing manner.
When the judges have been chosen, their scrutiny should be conducted
before their very electors, and if any one of them is rejected, a replacement
should be chosen under the same rules. Those who pass the scrutiny are
to sit in judgment on the cases of the litigants who refuse to accept
the decision of the other courts. They are to vote openly, and it will be e

compulsory for the Councillors and the other officials who elected the judges to watch and listen to the trials; others may attend if they wish.

If anyone accuses a man of having knowingly returned a false verdict, he must go to the Guardians of the Laws to prefer the charge.

> 10. If the accused is found guilty as charged,
> *he will* have to pay to the injured party half the damages awarded; if he is thought to deserve a stiffer punishment, his judges must calculate the additional penalty he should suffer or additional fine he ought to pay to the state and his prosecutor.

768 As for charges of crimes against the state, the first need is to let the man in the street play his part in judging them. A wrong done to the state is a wrong done to all its citizens, who would be justifiably annoyed if they were excluded from deciding such cases. But although we should allow the opening and closing stages of this kind of trial to be in the hands of the people, the detailed examination should be conducted by three of the highest officials, chosen by agreement between prosecutor and defendant. If they are unable to reach agreement themselves, the council should decide between their respective choices.

b Everyone should have a part to play in private suits too, because anyone excluded from the right to participate in trying cases feels he has no stake in the community whatever. Hence we must also have courts organized on a tribal basis, where the judges, being chosen by lot as occasion arises, will give their verdicts uncorrupted by external pressures. But the final decision in all these cases is to be given by that other court which deals
c with litigants who cannot settle their case either before their neighbors or in the tribal courts, and which for their benefit has been made (we claim) as incorruptible a court as can be assembled by human power.

So much for our courts (and we admit that to call their members either 'officials' or 'non-officials' without qualification raises difficulties of terminology). We've given a sort of superficial sketch, which in spite of including a number of details, nevertheless omitted a good many, because a better place for presenting an exact legal procedure and classification of suits
d will be towards the end of our legislation. So this theme may be dismissed till we are finishing off. We have already explained most of the rules for establishing official posts, but we still can't get a completely clear and exact picture of every individual detail of the entire constitutional organization of the state: for that, we need to take every single topic in proper sequence and go through the whole subject from beginning to end. So far, then,
e we've described the election of officials, and that brings us to the end of our introduction. Now to start the actual legislation: there's no need to postpone or delay it any longer.

CLINIAS: I very much approve of your introduction, sir, and I'm even more impressed by the way you've rounded it off so that it leads into the opening of the next theme.

769 ATHENIAN: So far, then, these ideas we old men have been tossing about have given us splendid sport.

CLINIAS: Splendid indeed, but I fancy you really meant they were 'a splendid challenge for men in their prime of life'.

ATHENIAN: I dare say. But here's another point. I wonder if you agree with me?

CLINIAS: What about? What point?

ATHENIAN: You know how painting a picture of anything seems to be a never-ending business. It always looks as if the process of touching up b by adding color or relief (or whatever it's called in the trade) will never finally get to the point where the clarity and beauty of the picture are beyond improvement.

CLINIAS: Yes, I too get much the same sort of impression, though only from hearsay—I've never gone in for that sort of skill.

ATHENIAN: Well, you haven't missed anything. But we can still use this passing mention of it to illustrate the next point. Suppose that one day somebody were to take it into his head to paint the most beautiful picture c in the world, which would never deteriorate but always improve at his hands as the years went by. You realize that as the painter is not immortal, he won't achieve anything very permanent by lavishing such care and attention on his picture unless he leaves some successor to repair the ravages of time? Won't his successor also have to be able to supplement deficiencies in his master's skill and improve the picture by touching it up?[6]

CLINIAS: True.

ATHENIAN: Well then, don't you think the legislator will want to do d something similar? First of all he'll want to write his laws and make them as accurate as he can; then as time goes on and he tries to put his pet theories into practice—well, do you think there's any legislator so stupid as not to realize that his code has many inevitable deficiencies which must be put right by a successor, if the state he's founded is to enjoy a continuous e improvement in its administrative arrangements, rather than suffer a decline?

CLINIAS: Yes, I think—indeed I'm sure—that this is the sort of thing any legislator will want to do.

ATHENIAN: So if a legislator were able to discover a way of doing this—that is, if by instruction or pointing to concrete examples he could make someone else understand (perfectly or imperfectly) how to keep laws in good repair by amending them—I suppose he'd never give up explaining his method until he'd got it across?

CLINIAS: Of course. 770

ATHENIAN: So isn't this what you two and I ought to be doing now?

CLINIAS: What do you mean?

ATHENIAN: Now that we (in the evening of life) are on the point of framing laws, for which we have guardians already chosen (our juniors),

6. Deleting *eis to prosthen* in c6.

oughtn't we to combine our law-giving with an attempt to turn *them* into
law-'givers' as well as law-'guardians', as far as we can?
b Clinias: Of course we ought, assuming we're up to it.

Athenian: Anyhow, we ought to try, and do our level best.

Clinias: Certainly.

Athenian: Let's address them as follows: 'Colleagues and protectors of
our laws, we shall—inevitably—leave a great many gaps in every section
of our code. However, we shall certainly take care to outline a sort of
sketch of the complete system with its main points, and it will be your
c job to take this sketch and fill in the details. You ought to hear what
your aims should be when you do this. Megillus and Clinias and I have
mentioned it to each other more than once, and we are agreed that our
formula is a good one. We want you to be sympathetic to our way of
thinking and become our pupils, keeping in view this aim which the three
of us are unanimous a giver and guardian of laws should have. The central
point on which we agree amounted to this. "Our aim in life should be
d goodness and the spiritual virtue appropriate to mankind. There are vari-
ous things that can assist us: it may be some pursuit we follow, a particular
habit, or something we possess; we may get help from some desire we
have or some opinion we hold or some course of study; and all this is
true of both male and female members of the community, young or old.
Whatever the means, it's this aim we've described that we must all strain
every muscle to achieve throughout our lives. No man, whoever he is,
e should ever be found valuing anything else, if it impedes his progress—
not even, in the last resort, the state. Rather than have the state tolerate
the yoke of slavery and be ruled by unworthy hands, it may be absolutely
necessary to allow it to be destroyed, or abandon it by going into exile.
All that sort of hardship we simply have to endure rather than permit a
change to the sort of political system which will make men worse." This,
then, is the agreed statement; now it's up to you to consider this double
771 aim of ours and censure the laws that can do nothing to help us; but you
must commend and welcome the effective ones with enthusiasm, and
cheerfully live as they dictate. You must have no truck with other pursuits
which aim at different "goods" (as people call them).'

The best way to start the next section of our code will be to deal with
matters of religion. First, we should go back to the figure of 5040 and
b reflect again how many convenient divisors we found both in this total
and its subdivision the tribe (which is one-twelfth of the total, as we
specified, i.e., exactly the product of twenty-one multiplied by twenty).
Our grand total is divisible by twelve, and so is the number of persons in
a tribe (420) and in each case this subdivision must be regarded as holy,
a gift of God, corresponding to the months of the year and the revolution
of the universe. This is exactly why every state is guided by innate intuition
to give these fractions the sanction of religion, though in some cases the
divisions have been made more correctly than in others and the religious
c backing has proved more successful. So for our part we claim that we had

every justification for preferring 5040, which can be divided by every number from one to twelve, except eleven (a drawback that's very easily cured: one way to remedy it is simply to omit two hearths). The truth of this could be demonstrated very briefly in any idle moment. So let's trust d
to the rule we've just explained, and divide our number along those lines. We must allocate a god, or child of a god, to each division and subdivision of the state and provide altars and the associated equipment; we must establish two meetings per month for the purposes of sacrifice, one in each of the twelve tribes into which the state is divided, and another in each of the twelve local communities that form the divisions of each tribe. This arrangement is intended to ensure, first, that we enjoy the favor of the gods and heaven in general, and secondly (as we'd be inclined to stress[7]) that we should grow familiar and intimate with each other in every kind of social contact.

You see, when people are going to live together as partners in marriage, e
it is vital that the fullest possible information should be available about the bride and her background and the family she'll marry into. One should regard the prevention of mistakes here as a matter of supreme importance—so important and serious, in fact, that even the young people's recreation must be arranged with this in mind. Boys and girls must dance 772
together at an age when plausible occasions can be found for their doing so, in order that they may have a reasonable look at each other; and they should dance naked, provided sufficient modesty and restraint are displayed by all concerned.

The controllers and organizers of the choruses should be in charge of all these arrangements and maintain due order; and in conjunction with the Guardians of the Laws they will settle anything we leave out. As we said, it's inevitable that a legislator will omit the numerous details of such b
a topic; those who administer his laws from year to year will have to learn from experience and settle the details by annual refinements and amendments, until they think they've made the rules and procedures sufficiently precise. In the case of sacrifices and dances, a reasonable and adequate period to allow for experiment, in general and in detail, will be ten years. So long as the original legislator is alive, the various officials c
should bring him into the consultations, but when he is dead they must use their own initiative in putting up to the Guardians of the Laws proposals for remedying the deficiencies in their respective spheres. This process should continue until every detail is thought to have received its final polish. After that, they must assume that the rules are immutable, and observe them along with the rest of the code which the legislator laid down and imposed on them originally. Not a single detail should be altered, if they can help it; but if they ever believe that the force of circumstances has become irresistible, they must consult all the officials, the entire citizen d
body and all the oracles of the gods. If the verdict is unanimously in favor,

7. See 738b–e.

then they may amend, but never in any other conditions whatever; the law will be that the opposition must always win the day.

To resume, then: when a man of twenty-five has observed others and been observed by them and is confident that he has found a family offering someone to his taste who would make a suitable partner for the procreation
e of children, he should get married, and in any case before he reaches thirty. First, however, he ought to hear the correct method of trying to find a suitable and congenial partner. As Clinias says, the appropriate preface should stand at the head of every law.

CLINIAS: Well reminded, sir—and at just the right moment in our conversation, I fancy.

ATHENIAN: Quite so. 'My boy,' let's say to this son of a good family,
773 'you must make a marriage that will be approved by sensible folk. They will advise you not to be over keen to avoid marrying into a poor family or to seek to marry into a rich one; other things being equal, you should always prefer to marry somewhat beneath you. That will be best both for the state and the union of your two hearths and homes, because it is infinitely better for the virtue of a man and wife if they balance and complement each other than if they are both at the same extreme. If a man
b knows he's rather headstrong and apt to be too quick off the mark in everything he does, he ought to be anxious to ally himself to a family of quiet habits, and if he has the opposite kind of temperament he should marry into the opposite kind of family. One general rule should apply to marriage: we should seek to contract the alliance that will benefit the state, not the one that we personally find most alluring. Everyone is naturally drawn to the person most like himself, and that puts the whole state off
c balance, because of discrepancies in wealth and character, and these in turn generally lead, in most states, to results we certainly don't want to see in ours.'

If we give explicit instructions in the form of a law—'no rich man to marry into a rich family, no powerful person to marry into a powerful house, the headstrong must be forced to join in marriage with the phlegmatic and the phlegmatic with the headstrong'—well, it's ludicrous, of course,
d but it will also annoy a great many people who find it hard to understand why the state should be like the mixture in a mixing-bowl. When you pour in the wine it seethes furiously, but once dilute it with the god of the teetotalers, and you have a splendid combination which will make you a good and reasonable drink. Very few people have it in them to see that the same principle applies to the alliance that produces children. For these reasons we are forced to omit such topics from our actual laws. However, we must resort to our 'charms'[8] and try to persuade everybody
e to think it more important to produce well-balanced children than to marry his equal and never stop lusting for wealth. Anyone who is set on enriching

8. See 659e.

himself by his marriage should be headed off by reproaches rather than compelled by a written law.

So much for marriage: these exhortations should be added to our previous account of how we should become partners in eternity by leaving a line of descendants to serve God forever in our stead.[9] A correctly composed 774
preface would have all that and more to say about the obligation to marry.

11. If anyone disobeys (except involuntarily), and unsociably keeps himself to himself so that he is still unmarried at the age of thirty-five,
*he must* pay an annual fine: one hundred drachmas if he belongs to the highest property-class, seventy if to the second, sixty if to the third, and
thirty if to the fourth; the sum to be consecrated to Hera. b

12. If he refuses to pay his annual fine,
*his debt* must be increased ten times.

(The fine is to be collected by the treasurer of the goddess.

13. If he fails to collect it,
*he will* have to owe the sum himself.

Every treasurer must give an account of himself in this respect at the scrutiny.) So much for the financial penalty to be paid by anyone refusing to marry, but

12. (cont.)
*he should* also be barred from receiving the respect due to him from his juniors, none of whom should ever readily take the slightest notice of him. If the bachelor tries to chastise a man, everyone should take the victim's side and protect him.

14. If a bystander fails to give the victim help, c
*the law* should see that he gets the reputation of being a rotten, lily-livered citizen.

We've already discussed dowries,[10] but we ought to repeat that even if the poor do have to marry and give in marriage on limited resources, it will not affect their prospects of a long life one way or the other, because in this state no one will go without the necessities of life. Nor will wives be so inclined to give themselves airs, and their husbands will be less
humiliated by kowtowing to them for financial reasons. If a man obeys d
this law, so much to his credit.

15. If he does not, and gives or receives more than fifty drachmas for the trousseau in the case of the lowest property-class (or more than a hundred or a hundred and fifty or two hundred according to class),

9. See 721b–d.

10. See 742c.

*he must* owe as much again to the treasury, and the amount given or received must be dedicated to Hera and Zeus.

e 16. The treasurers of these gods are to exact these sums in the same way as we said the treasurers of Hera had to collect the fines in every case of refusal to marry,
*or pay out* of their own pockets.

The right to make a valid betrothal should rest initially with the bride's father, secondly with her grandfather, thirdly with her brothers by the same father. If none of these is available, the right should belong to the relatives on the mother's side in the same order. If any exceptional misfortune occurs, the nearest relatives shall be authorized to act in conjunction with the girl's guardians.

775 That leaves us with the pre-marriage sacrifices and any other relevant rites that should be performed before, during or after the wedding. A citizen should ask the Expounders about these matters, and be confident that if he does as they tell him, everything will be in order.

As for the wedding-feast, neither family should invite more than five friends of both sexes, and the number of relatives and kinsmen from either side should be limited similarly. No one should incur expense beyond his means: that is, no more than a mina in the case of the wealthiest class,
b half a mina for the next and so on down the scale according to class. Everyone should commend the man who obeys the regulation, but

17. The Guardians of the Laws must chastise the disobedient as a philistine who has never been trained to appreciate the melodies[11] of the Muses of marriage.

To drink to the point of inebriation is improper whatever the place (except at the feasts of the god who made us the gift of wine), and it's dangerous too, especially if you want to make your marriage a success. On the day of their wedding particularly, when they are at a turning-point
c in their lives, bride and groom ought to show restraint, so as to make as sure as they can (it being practically impossible to tell the day or night in which by the favor of God conception will take place) that any child they may have should have parents who were sober when they conceived him. Apart from that, children should not be conceived when the parents' bodies are in a state of drunken relaxation; the fetus should be compactly formed and firmly planted, and its growth should be orderly and undisturbed. But when he's drunk a man reels about all over the place and bumps into
d things, and a raging passion invades his body and soul; this means that as a sower of his seed a drunkard will be clumsy and inefficient, and he'll produce unbalanced children who are not to be trusted, with devious

11. 'Nomes': the same pun as in 700b, 722d–e.

characters, and in all probability with misshapen bodies too. That's why
all the year round, throughout his life (but particularly during the age of
procreation), a man must take great care to do nothing to injure his health,
if he can help it, and nothing with any hint of insolence or injustice, which
will inevitably rub off on to the souls and bodies of his children, and
produce absolutely degenerate creatures who have been stamped with the e
likeness of their father. At the very least, he must shun such vices on the
day of his wedding and the following night, because if a human institution
gets off to a good and careful start, there is a sort of divine guarantee that
it will prosper.

The bridegroom must regard one of the two homes included in the lot 776
as the nest in which he will bring up his brood of young; here he must
be married, after leaving his father and mother, and here he must make
his home and become the breadwinner for himself and his children. You
see, when people feel the need of absent friends, the ties that bind them
are strengthened, but when they overdo it and are too much together so
that they're not apart long enough to miss each other, they drift apart.
That's why the newly-weds must leave their father and mother and the
wife's relatives in the old home and live somewhere else, rather as if they
had gone off to a colony; and each side should visit, and be visited by, b
the other. The young couple should produce children and bring them up,
handing on the torch of life from generation to generation, and always
worshipping the gods in the manner prescribed by law.

Now for the question of property: what will it be reasonable for a man
to possess? Mostly, it's not difficult to see what it would be, and acquire
it; but slaves offer difficulties at every turn. The reason is this. The terms c
we employ are partly correct and partly not, in that the actual language
we use about slaves is partly a reflection and partly a contradiction of our
practical experience of them.

MEGILLUS: Oh? What do you mean? We don't yet see your point, sir.

ATHENIAN: No wonder, Megillus. The Spartan helot-system is probably
just about the most difficult and contentious institution in the entire Greek
world;[12] some people think it's a good idea, others are against it (though
less feeling is aroused by the slavery to which the Mariandynians have d
been reduced at Heraclea, and by the race of serfs to be found in Thessaly).
Faced with these and similar cases, what should our policy be on the
ownership of slaves? The point I happened to bring up in my discussion
of the subject, and which naturally made you ask what I meant, was this:
we know we'd all agree that a man should own the best and most docile
slaves he can get—after all, many a paragon of a slave has done much
more for a man than his own brother or son, and they have often been

12. The Spartan helots were a numerous class of state serfs, in part the descendants of the original non-Doric population conquered by the Dorian settlers (c. 1000 B.C.); see 633b above.

e the salvation of their masters' persons and property and entire homes. We know quite well, don't we, that some people do tell such stories about slaves?

MEGILLUS: Certainly.

ATHENIAN: And don't others take the opposite line, and say that a slave's soul is rotten through and through, and that if we have any sense we won't trust such a pack at all? The most profound of our poets actually
777 says (speaking of Zeus) that

> *If you make a man a slave, that very day*
> *Far-sounding Zeus takes half his wits away.*[13]

Everyone sees the problem differently, and takes one side or the other. Some people don't trust slaves as a class in anything: they treat them like animals, and whip and goad them so that they make the souls of their slaves three times—no, a thousand times—more slavish than they were. Others follow precisely the opposite policy.

MEGILLUS: True.

b CLINIAS: Well then, sir, in view of this conflict of opinion, what should we do about our own country? What's our line on the possession of slaves, and the way to punish them?

ATHENIAN: Look here, Clinias: the animal 'man' quite obviously has a touchy temper, and it looks as if it won't be easy, now or in the future, to persuade him to fall neatly into the two categories (slave and freeman master) which are necessary for practical purposes. Your slave, therefore,
c will be a difficult beast to handle. The frequent and repeated revolts in Messenia, and in the states where people possess a lot of slaves who all speak the same language, have shown the evils of the system often enough; and we can also point to the various crimes and adventures of the robbers who plague Italy, the 'Rangers', as they're called. In view of all this you may well be puzzled to know what your general policy ought to be. In fact, there are just two ways of dealing with the problem open to us: first,
d if the slaves are to submit to the condition without giving trouble, they should not all come from the same country or speak the same tongue, as far as it can be arranged; secondly, we ought to train them properly, not only for their sakes but above all for our own. The best way to train slaves is to refrain from arrogantly ill-treating them, and to harm them even less (assuming that's possible) than you would your equals. You see, when a man can hurt someone as often as he likes, he'll soon show whether or not his respect for justice is natural and unfeigned and springs from a
e genuine hatred of injustice. If his attitude to his slaves and his conduct towards them are free of any taint of impiety and injustice, he'll be splendidly effective at sowing the seeds of virtue. Just the same can be said of

13. *Odyssey* xvii.322–23.

the way in which any master or dictator or person in any position of
authority deals with someone weaker than himself. Even so, we should
certainly punish slaves if they deserve it, and not spoil them by simply
giving them a warning, as we would free men. Virtually everything you
say to a slave should be an order, and you should never become at all 778
familiar with them—neither the women nor the men. (Though this is how
a lot of silly folk do treat their slaves, and usually only succeed in spoiling
them and in making life more difficult—more difficult, I mean, for the
slaves to take orders and for themselves to maintain their authority.)

CLINIAS: You're quite right.

ATHENIAN: So now that the citizen has been supplied with a sufficient
number of suitable slaves to help him in his various tasks, the next thing
will be to outline a housing-plan, won't it?

CLINIAS: Certainly. b

ATHENIAN: Our state is new, and has no buildings already existing, so it
rather looks as if it will have to work out the details of its entire architectural
scheme for itself, particularly those of the temples and city walls. Ideally,
Clinias, this subject would have been dealt with before we discussed mar-
riage, but as the whole picture is theoretical anyway, it's perfectly possible
to turn to it now, as we are doing. Still, when we put the scheme into
practice, we'll see to the buildings, God willing, *before* we regulate marriage,
and marriage will then crown our labors in this field. But here and now, c
let's just give a swift sketch of the building program.

CLINIAS: By all means.

ATHENIAN: Temples should be built all round the marketplace and on
high ground round the perimeter of the city, for purposes of protection
and sanitation. Next to them should be administrative offices and courts
of law. This is holy ground, and here—partly because the legal cases
involve solemn religious issues, partly because of the august divinities d
whose temples are nearby—judgment will be given and sentence received.
Among these buildings will be the courts in which cases of murder, and
all other crimes which deserve the death penalty, may properly be heard.

As for city walls, Megillus, I'd agree with the Spartan view that they
should be left lying asleep and undisturbed in the ground. My reasons?
As the poet neatly puts it, in those words so often cited, 'a city's walls
should be made of bronze and iron, not stone'.[14] Besides, what fools people
would take us for, and rightly, if we sent our young men out into the e
countryside every year to excavate trenches and ditches and various struc-
tures to ward off the enemy and stop them coming over the boundaries at
all[15]—and then were to build a wall round the city! A wall never contributes
anything to a town's health, and in any case is apt to encourage a certain
softness in the souls of the inhabitants. It invites them to take refuge behind 779

14. We do not know the poet referred to, but the sentiment is fairly common: see e.g. Aeschylus, *Persians* 349.

15. See 760e.

it instead of tackling the enemy and ensuring their own safety by mounting
guard night and day; it tempts them to suppose that a foolproof way of
protecting themselves is to barricade themselves in behind their walls and
gates, and then drop off to sleep, as if they were brought into this world
for a life of luxury. It never occurs to them that comfort is really to be
won by the sweat of the brow, whereas the only result of such disgusting
luxury and idleness is a fresh round of troubles, in my view. However, if
b men are to have a city wall at all, the private houses should be constructed
right from the foundations so that the whole city forms in effect a single
wall: that is, all the houses should be easy to defend because they present
to the street a regular and unbroken front. A whole city looking like a
single house will be quite a pretty sight, and being easy to guard it will
be superior to any other for safety. The job of seeing that the buildings
c always keep to the original scheme should properly belong to their occu-
pants, but the City-Wardens should keep an eye on them and even impose
fines to force any negligent person to do his duty. They should also super-
vise all the sanitary arrangements of the town and stop any private person
encroaching on public land by buildings or excavations. The same officials
must take particular care to see that rainwater flows away properly, and
in general they must make all the appropriate arrangements inside and
outside the city. To deal with all these points, and to supplement any other
d deficiency in the law (which cannot be exhaustive), the Guardians of the
Laws are to make additional rules in the light of experience.

So much for these buildings, together with those round the market-place, and gymnasia and all the schools: they are now ready and waiting to be entered, and the theaters are prepared for the arrival of their audiences. Now let's pass on to the next item in our legislation, the time after the wedding.

CLINIAS: By all means.

e ATHENIAN: Let's suppose the ceremony is over, Clinias; between then
and the birth of a child there may well be a complete year. Now, in a state
which sets its sights higher than others, how this year is to be spent by a
bride and groom (you remember we broke off when we got to this point)
is not the easiest thing in the world to specify. We've had knotty problems
like this before, but the common man will find our policy this time more
difficult to swallow than ever. However, we should never shrink from
speaking the truth as we see it, Clinias.

CLINIAS: Of course.

780 ATHENIAN: Take someone who proposes to promulgate laws to a state
about the correct conduct of the public life of the community. What if he
reckons that *in principle* one ought not to use compulsion—even in so far as
one *can* use it in private affairs? Suppose he thinks that a man ought to be
allowed to do what he likes with the day, instead of being regulated at every
turn. Well, if he excludes private life from his legislation, and expects that the
citizens will be prepared to be law-abiding in their public life as a community,
he's making a big mistake. Now, what's made me say this? It's because we

are going to assert that our newly-marrieds ought to attend communal meals b
no more and no less than they did before their wedding. I know that this
custom of eating together caused eyebrows to be raised when it was intro-
duced in your parts of the world, but I suppose it was dictated by war or
some other equally serious emergency that pressed hard on a small people
in a critical situation. But once you had had this enforced experience of com-
munal meals, you realized just how much the custom contributed to your
security. It must have been in some such way that the practice of communal c
feeding established itself among you.

CLINIAS: That sounds plausible enough.

ATHENIAN: As I was saying, it was once an astonishing custom and some
people were apprehensive about imposing it. But if a legislator wanted to
impose it today, he wouldn't have half so much trouble. But the custom
points to another measure, which would probably prove equally successful,
if tried. Today, it's absolutely unheard-of, and that's what makes the legisla-
tor 'card his wool into the fire', as the saying is, and make so many efforts
fruitlessly. This measure is neither easy to describe nor simple in execution. d

CLINIAS: Well then, sir, what's the point you're trying to make? You
seem to be awfully reluctant to tell us.

ATHENIAN: Listen to me, then: let's not waste time lingering over this
business. The blessings that a state enjoys are in direct proportion to the
degree of law and order to be found in it, and the effects of good regulations
in some fields are usually vitiated to the extent that things are controlled
either incompetently or not at all in others. The point is relevant to the
subject in hand. Thanks to some providential necessity, Clinias and Megil- e
lus, you have a splendid and—as I was saying—astonishing institution:
communal meals for men. But it is entirely wrong of you to have omitted 781
from your legal code any provision for your women, so that the practice
of communal meals for them has never got under way. On the contrary,
half the human race—the female sex, the half which in any case is inclined
to be secretive and crafty, because of its weakness—has been left to its
own devices because of the misguided indulgence of the legislator. Because
you neglected this sex, you gradually lost control of a great many things
which would be in a far better state today if they had been regulated by
law. You see, leaving women to do what they like is not just to lose *half* b
the battle (as it may seem): a woman's natural potential for virtue is inferior
to a man's, so she's proportionately a greater danger, perhaps even twice
as great. So the happiness of the state will be better served if we reconsider
the point and put things right, by providing that all our arrangements
apply to men and women alike. But at present, unhappily, the human race
has not progressed as far as that, and if you're wise you won't breathe a c
word about such a practice in other parts of the world where states do
not recognize communal meals as a public institution at all. So when it
comes to the point, how on earth are you going to avoid being laughed
to scorn when you try to force women to take their food and drink in
public? There's nothing the sex is likely to put up with more reluctantly:

women have got used to a life of obscurity and retirement, and any attempt to force them into the open will provoke tremendous resistance from them,
d and they'll be more than a match for the legislator. Elsewhere, as I said, the very mention of the correct policy will be met with howls of protest. But perhaps this state will be different. So if you want our discussion about political systems to be as complete as theory can ever be, I'd like to explain the merits and advantages of this institution—that is, if you are equally keen to listen to me. If not, then let's skip it.

CLINIAS: No, no, sir: we're very anxious to hear the explanation.

ATHENIAN: Let's listen, then. But don't be disconcerted if I appear to be
e starting a long way back. We've time to spare, and there's no compelling reason why we shouldn't look into the business of legislation from all possible angles.

CLINIAS: You're quite right.

ATHENIAN: Let's go back to what we said at the beginning.[16] Here's something that everyone must be perfectly clear about: *either* mankind had
782 absolutely no beginning in time and will have no end, but always existed and always will, *or* it has existed for an incalculably long time from its origin.

CLINIAS: Naturally.

ATHENIAN: Well, now we may surely assume that in every part of the world cities have been formed and destroyed, and all sorts of customs have been adopted, some orderly, some not, along with the growth of every sort of taste in food, solid and liquid. And the various changes in the seasons have developed, which have probably stimulated a vast number of
b natural changes in living beings.

CLINIAS: Of course.

ATHENIAN: Well, we believe, don't we, that at a certain point virtues made their appearance, not having existed before, and olives likewise, and the gifts of Demeter and Kore,[17] which Triptolemus, or whoever it was, handed on to us? So long as these things did not exist, we can take it that animals resorted to feeding on each other, as they do now?

CLINIAS: Certainly.

c ATHENIAN: We observe, of course, the survival of human sacrifice among many people today. Elsewhere, we gather, the opposite practice prevailed, and there was a time when we didn't even dare to eat beef, and the sacrifices offered to the gods were not animals, but cakes and meal soaked in honey and other 'pure' offerings like that. People kept off meat on the grounds that it was an act of impiety to eat it, or to pollute the altars of the gods with blood. So at that time men lived a sort of 'Orphic'[18] life,

16. See 676a ff.

17. Grains.

18. The Orphics held that a human soul could be reborn in the body of another human being or an animal, and the soul of an animal in another animal or a human being. Hence they strictly prohibited killing and meat-eating.

keeping exclusively to inanimate food and entirely abstaining from eating d
the flesh of animals.

Clinias: So it's commonly said, and it's easy enough to believe.

Athenian: Then the question naturally arises, why have I related all this to you now?

Clinias: A perfectly correct assumption, sir.

Athenian: Now then, Clinias, I'll try to explain the next point, if I can.

Clinias: Carry on, then.

Athenian: Observation tells me that all human actions are motivated by a set of three needs and desires. Give a man a correct education, and e
these instincts will lead him to virtue, but educate him badly and he'll end up at the other extreme. From the moment of their birth men have a desire for food and drink. Every living creature has an instinctive love of satisfying this desire whenever it occurs, and the craving to do so can fill a man's whole being, so that he remains quite unmoved by the plea that he should do anything except satisfy his lust for the pleasures of the body, so as to make himself immune to all discomfort. Our third and greatest 783
need, the longing we feel most keenly, is the last to come upon us: it is the flame of the imperious lust to procreate, which kindles the fires of passion in mankind. These three unhealthy instincts must be canalized *away* from what men call supreme pleasure, and *towards* the supreme good. We must try to keep them in check by the three powerful influences of fear, law, and correct argument; but in addition, we should invoke the help of the Muses and the gods who preside over competitions, to smother b
their growth and dam their tide.

The topic which should come after marriage, and before training and education, is the birth of children. Perhaps, as we take these topics in order, we shall be able to complete each individual law as we did before, when we approached the question of communal meals—I mean that when we've become intimate with our citizens, perhaps we shall be able to see more clearly whether such gatherings should consist of men only or whether, after all, they should include women. Similarly, when we've won control of certain institutions that have never yet been controlled by law, c
we'll use them as 'cover', just as other people do, with the result I indicated just now: thanks to a more detailed inspection of these institutions, we may be able to lay down laws that take account of them better.

Clinias: Quite right.

Athenian: So let's bear in mind the points we've just made, in case we find we need to refer to them later on.

Clinias: What points in particular are you telling us to remember?

Athenian: The three impulses we distinguished by our three terms: the desire for 'food' (I think we said) and 'drink', and thirdly 'sexual stimu- d
lation'.

Clinias: Yes, sir, we'll certainly remember, just as you tell us.

Athenian: Splendid. Let's turn our attention to the bridal pair, and instruct them in the manner and method by which they should produce

children. (And if we fail to persuade them, we'll threaten them with a law or two.)

CLINIAS: How do you mean?

ATHENIAN: The bride and groom should resolve to present the state with
e the best and finest children they can produce. Now, when human beings co-operate in any project, and give due attention to its planning and execution, the results they achieve are always of the best and finest quality; but if they act carelessly, or are incapable of intelligent action in the first place, the results are deplorable. So the bridegroom had better deal with his wife and approach the task of begetting children with a sense of responsibility, and the bride should do the same, especially during the period when no
784 children have yet been born to them. They should be supervised by women whom we have chosen[19] (several or only a few—the officials should appoint the number they think right, at times within their discretion). These women must assemble daily at the temple of Eileithuia[20] for not more than a third of the day, and when they have convened each must report to her colleagues any wife or husband of childbearing age she has seen who is concerned with anything but the duties imposed on him or her at the time of the
b sacrifices and rites of their marriage. If children come in suitable numbers, the period of supervised procreation should be ten years and no longer. But if a couple remain childless throughout this period, they should part, and call in their relatives and the female officials to help them decide terms of divorce that will safeguard the interests of them both. If some dispute arises about the duties and interests of the parties, they must choose ten
c of the Guardians of the Laws as arbitrators, and abide by their decisions on the points referred to them. The female officials must enter the homes of the young people and by a combination of admonition and threats try to make them give up their ignorant and sinful ways. If this has no effect, they must go and report the case to the Guardians of the Laws, who must resort to sterner methods. If even the Guardians prove ineffective, they should make the case public and post up the relevant name, swearing on their oath that they are unable to reform so-and-so.

d 18. (a) Unless the person whose name is posted up succeeds in convicting in court those who published the notice,
*he must* be deprived of the privilege of attending weddings and parties celebrating the birth of children.

19. If he persists in attending,
*anyone who wishes* should chastise him by beating him, and not be punished for it.

19. No such women have been mentioned. (In other ways too the state of the text hereabouts suggests a lack of revision.)

20. Goddess of childbirth.

18. (b) If a woman misbehaves and her name is posted up, and she fails to win the day in court,
*the same* regulations are to apply to her too: she must be excluded from female processions and distinctions, and be forbidden to attend weddings and parties celebrating the birth of children.

20. When children have been produced as demanded by law, if a man e
has intercourse with another woman, or a woman with another man, and the other party is still procreating,
*they must* suffer the same penalty as was specified for those who are still having children.

21. After the period of child-bearing, the chaste man or woman should be highly respected;
*the promiscuous* should be held in the opposite kind of 'repute' (though *dis*repute would be a better word).

When the majority of people conduct themselves with moderation in 785
sexual matters, no such regulations should be mentioned or enacted; but if there is misbehavior, regulations should be made and enforced after the pattern of the laws we've just laid down.

Our first year is the beginning of our whole life, and every boy's and girl's year of birth should be recorded in their family shrines under the heading 'born'. Alongside, on a whitened wall, should be written up in every brotherhood the sequence-numbers of the officials who facilitate the numbering of the years. The names of the living members of the brother- b
hood should be inscribed nearby, and those of the deceased expunged.

The age limits for marriage shall be: for a girl, from sixteen to twenty (these will be the extreme limits specified), and for a man, from thirty to thirty-five. A woman may hold office from the age of forty, a man from thirty. Service in the armed forces shall be required of a man from twenty to sixty. As for women, whatever military service it may be thought necessary to impose (after they have finished bearing children) should be performed up to the age of fifty; practicable and appropriate duties should be specified for each individual.

## Book VII

ATHENIAN: Now that the boys and girls have been born, I suppose their 788
education and training will be the most suitable topic to deal with next. This is not something we can leave on one side: that would be out of the question. However, we shall clearly do better to confine our remarks to advice and instruction, and not venture on precise regulations. In the privacy of family life, you see, a great many trivial activities never get publicity, and under the stimulus of feelings of pleasure or pain or desire b

they can all too easily fly in the face of the lawgiver's recommendations and produce citizens whose characters are varied and conflicting, which is a social evil. Now although these activities are so trivial and so common that one cannot decently arrange to punish them by law, they do tend to undermine the written statutes, because men get into the habit of repeatedly
c breaking rules in small matters. That's why in spite of all the difficulties of legislating on such points, we can't simply say nothing about them. But I must try to clarify my point by showing you some samples, as it were. At the moment, I expect it looks as if I'm rather concealing my meaning.

Clinias: You're quite right, it does.

Athenian: I take it we were justified in asserting that if an education is to qualify as 'correct', it simply must show that it is capable of making our souls and bodies as fine and as handsome as they can be?

Clinias: Of course.

d Athenian: And I suppose (to take the most elementary requirement), that if a person is going to be supremely good-looking, his posture must be as erect as possible, right from his earliest years?

Clinias: Certainly.

Athenian: Well now, we observe, don't we, that the earliest stages of growth of every animal are by far the most vigorous and rapid? That's why a lot of people actually maintain that in the case of man, the first five years of life see more growth than the next twenty.

Clinias: That's true.

789 Athenian: But we're aware that rapid growth without frequent and appropriately graded exercises leads to a lot of trouble for the body?

Clinias: Yes, indeed.

Athenian: And isn't it precisely when a body is getting most nourishment that it needs most exercise?

Clinias: Good Heavens, sir, are we going to demand such a thing of new-born babies and little children?

Athenian: No—I mean even earlier, when they're getting nourishment in their mother's body.

Clinias: What's that you say? My dear sir! Do you really mean in the womb?

b Athenian: Yes, I do. But it's hardly surprising you haven't heard of these athletics of the embryo. It's a curious subject, but I'd like to tell you about it.

Clinias: Do so, of course.

Athenian: It's something it would be easier to understand in Athens, where some people go in for sport more than they should. Not only boys, but some elderly men as well, rear young birds and set them to fight one
c another. But they certainly don't think just pitting them one against another will give such creatures adequate exercise. To supplement this, each man keeps birds somewhere about his person—a small one in the cup of his hand, a larger one under his arm—and covers countless stades in walking

about, not for the sake of his own health, but to keep these animals in
good shape. To the intelligent person, the lesson is obvious: all bodies find
it helpful and invigorating to be shaken by movements and joltings of all d
kinds, whether the motion is due to their own efforts or they are carried
on a vehicle or boat or horse or any other mode of conveyance. All this
enables the body to assimilate its solid and liquid food, so that we grow
healthy and handsome and strong into the bargain. In view of all this, can
we say what our future policy should be? If you like, we could lay down e
precise rules (and how people would laugh at us!): (1) A pregnant woman
should go for walks, and when her child is born she should mold it like
wax while it is still supple, and keep it well wrapped up for the first two
years of its life. (2) The nurses must be compelled under legal penalty to
contrive that the children are always being carried to the country or temples
or relatives, until they are sturdy enough to stand on their own feet. (3)
Even then, the nurses should persist in carrying the child around until it's
three, to keep it from distorting its young limbs by subjecting them to too
much pressure. (4) The nurses should be as strong as possible, and there
must be plenty of them—and we could provide written penalties for each 790
infringement of the rules. But no! That would lead to far too much of what
I mentioned just now.

CLINIAS: You mean . . .

ATHENIAN: . . . the tremendous ridicule we'd provoke. And the nurses
(women and slaves, with characters to match) would refuse to obey us
anyway.

CLINIAS: Then why did we insist that the rules should be specified?

ATHENIAN: For this reason. A state's free men and masters have quite b
different characters to the nurses', and there's a chance that if they hear
these regulations they may be led to the correct conclusion: the state's
general code of laws will never rest on a firm foundation as long as private
life is badly regulated, and it's silly to expect otherwise. Realizing the truth
of this, they may themselves spontaneously adopt our recent suggestions
as rules, and thereby achieve the happiness that results from running their
households and their state on proper lines.

CLINIAS: Yes, that's all very reasonable.

ATHENIAN: Still, let's not abandon this style of legislation yet. We started c
to talk about young children's bodies: let's use the same sort of approach
to explain how to shape their personalities.

CLINIAS: Good idea.

ATHENIAN: So let's take this as our basic principle in both cases: all
young children, and especially very tiny infants, benefit both physically
and mentally from being nursed and kept in motion, as far as practicable,
throughout the day and night; indeed, if only it could be managed, they
ought to live as though they were permanently on board ship. But as that's
impossible, we must aim to provide our new-born infants with the closest d
possible approximation to this ideal.

Here's some further evidence, from which the same conclusions should be drawn: the fact that young children's nurses, and the women who cure Corybantic conditions,[1] have learned this treatment from experience and have come to recognize its value. And I suppose you know what a mother does when she wants to get a wakeful child to sleep. Far from keeping
e him still, she takes care to move him about, rocking him constantly in her arms, not silently, but humming a kind of tune. The cure consists of *movement*, to the rhythms of dance and song; the mother makes her child *'pipe down'* just as surely as the music of the *pipes* bewitches the frenzied Bacchic reveler.[2]

Clinias: Well then, sir, have we any particular explanation for all this?

Athenian: The reason's not very hard to find.

Clinias: What is it?

Athenian: Both these conditions are a species of fear, and fear is the result
791 of some inadequacy in the personality. When one treats such conditions by vigorous movement, this external motion, by canceling out the internal agitation that gives rise to the fear and frenzy, induces a feeling of calm and peace in the soul, in spite of the painful thumping of the heart experienced by each patient. The result is very gratifying. Whereas the wakeful children are sent to sleep, the revelers (far from asleep!), by being set to dance to the music of the pipes, are restored to mental health after their
b derangement, with the assistance of the gods to whom they sacrifice so propitiously. This explanation, brief as it is, is convincing enough.

Clinias: Yes, indeed.

Athenian: Well then, seeing how effective these measures are, here's another point to notice about the patient.[3] Any man who has experienced terrors from his earliest years will be that much more likely to grow up timid. But no one will deny that this is to train him to be a coward, not a hero.

Clinias: Of course.

c Athenian: Contrariwise, we'd agree that a training in courage right from infancy demands that we overcome the terrors and fears that assail us?

Clinias: Exactly.

Athenian: So we can say that exercising very young children by keeping them in motion contributes a great deal towards the perfection of one aspect of the soul's virtue.

Clinias: Certainly.

Athenian: Further, good humor and bad humor will be a conspicuous element in a good or bad moral character respectively.

1. Frenzied pathological states accompanied by a strong desire to dance, popularly supposed to be caused by the Corybantes, spirits in attendance on the goddess Cybele. The condition was cured homoeopathically by the *disciplined* music and dancing of Corybantic ritual.

2. Reading *bakcheiōn* in e3 with acute accent on the second syllable.

3. Reading *autois* in b6.

Clinias: Of course.

Athenian: So how can we instil into the new-born child, right from the d
start, whichever of these two characteristics we want? We must try to indi-
cate how far they are within our control, and the methods we have to use.

Clinias: Quite so.

Athenian: I belong to the school of thought which maintains that luxury makes a child bad-tempered, irritable, and apt to react violently to trivial things. At the other extreme, unduly savage repression turns children into cringing slaves and puts them so much at odds with the world that they become unfit to be members of a community.

Clinias: So how should the state as a whole set about bringing up e
children who are as yet unable to understand what is said to them or
respond to any attempt to educate them?

Athenian: More or less like this. Every new-born animal is apt to give a sort of loud yell—especially the human child, who in addition to yelling is also exceptionally prone to tears.

Clinias: He certainly is.

Athenian: So if a nurse is trying to discover what a child wants, she 792
judges from these reactions to what it is offered. Silence, she thinks, means
she is giving it the right thing, whereas crying and bawling indicate the
wrong one. Clearly these tears and yells are the child's way of signaling
his likes and dislikes—and ominous signs they are, too, because this stage
lasts at least three years, and that's quite a large part of one's life to spend
badly (or well).

Clinias: You're right.

Athenian: Now don't you two think that a morose and ungenial fellow b
will on the whole be a more of a moaner and a grumbler than a good man
has any right to be?

Clinias: Yes, *I* think so, at any rate.

Athenian: Well then, suppose you do your level best during these years to shelter him from distress and fright and any kind of pain at all. Shouldn't we expect that child to be educated into a more cheerful and genial disposition?

Clinias: Certainly, and especially, sir, if one surrounded him with lots c
of pleasures.

Athenian: Now here, my dear sir, is just where Clinias no longer carries me with him. That's the best way to ruin a child, because the corruption invariably sets in at the very earliest stages of his education. But perhaps I'm wrong about this: let's see.

Clinias: Tell us what you mean.

Athenian: I mean that we're now discussing a topic of great importance.
So you too, Megillus, see what your views are, and help us to make up
our minds. My position is this: the right way of life is neither a single-
minded pursuit of pleasure nor an absolute avoidance of pain, but a genial d
(the word I used just now) contentment with the state between those

extremes—precisely the state, in fact, which we always say is that of God himself (a conjecture that's reasonable enough, supported as it is by the statements of the oracles). Similarly if one of *us* aspires to live like a god, this is the state he must try to attain. He must refuse to go looking for pleasure on his own account, aware that this is not a way of avoiding pain; nor must he allow anyone else to behave like that, young or old,
e male or female—least of all newly-born children, if he can help it, because that's the age when habits, the seeds of the entire character, are most effectively implanted. I'd even say, at the risk of appearing flippant, that all expectant mothers, during the year of their pregnancy, should be supervised more closely than other women, to ensure that they don't experience frequent and excessive pleasures, or pains either. An expectant mother should think it important to keep calm and cheerful and sweet-tempered throughout her pregnancy.

793 CLINIAS: There's no need to ask Megillus which of us two has made the better case, sir. I agree with you that everyone should avoid a life of extreme pleasure and pain, and always take the middle course between them. Your point has been well and truly put, and you've heard it well and truly endorsed.

ATHENIAN: Admirable, Clinias! Well then, here's a related point that the three of us should consider.

CLINIAS: What's that?

ATHENIAN: That all the rules we are now working through are what
b people generally call 'unwritten customs', and all this sort of thing is precisely what they mean when they speak of 'ancestral law'. Not only that, but the conclusion to which we were driven a moment ago was the right one: that although 'laws' is the wrong term for these things, we can't afford to say *nothing* about them, because they are the bonds of the entire social framework, linking all written and established laws with those yet to be passed. They act in the same way as ancestral customs dating from time immemorial, which by virtue of being soundly established and in-
c stinctively observed, shield and protect existing written law. But if they go wrong and get 'out of true'—well, you know what happens when carpenters' props buckle in a house: they bring the whole building crashing down, one thing on top of another, stays and superstructure (however well built) alike—all because the original timberwork has given way. So you see, Clinias, this is what we have to bear in mind in thoroughly binding your state together while it is still a new foundation; we must do our best
d not to omit anything, great or small, whether 'laws', 'habits' or 'institutions', because they are all needed to bind a state together, and the permanence of the one kind of norm depends on that of the other. So we ought not to be surprised to see a flood of apparently unimportant customs or usages making our legal code a bit on the long side.

CLINIAS: You're quite right, and we'll keep the point in mind.

ATHENIAN: Up to the age of three the early training of a boy or girl will
e be helped enormously by this regimen, provided it is observed punctili-

ously and systematically. In the fourth, fifth, sixth and even seventh year
of life, a child's character will need to be formed while he plays; we should
now stop spoiling him, and resort to discipline, but not such as to humiliate
him. We said, in the case of slaves,[4] that discipline should not be enforced
so high-handedly that they become resentful, though on the other hand
we mustn't spoil them by letting them go uncorrected; the same rule 794
should apply to free persons too. When children are brought together,
they discover more or less spontaneously the games which come naturally
to them at that age. As soon as they are three, and until they reach the
age of six, all children must congregate at the village temples—the children
of each village to assemble at the same place. They should be kept in order
and restrained from bad behavior by their nurses, who should themselves
be supervised, along with their groups as a whole, by the twelve women b
elected for the purpose, one to be in charge of one group for a year at a
time, the allocations to be made by the Guardians of the Law. The twelve
must be elected by the women in charge of supervising marriage, one
must be chosen from each tribe, and they must be of the same age as their
electors. The woman allotted to a given tribe will discharge her duties by
visiting the temple daily and punishing any cases of wrongdoing. She may
use a number of state slaves to deal with male and female slaves and
aliens on her own authority; however, if a citizen disputes his punishment, c
she must take the case to the City-Wardens, but if he does not dispute it,
she may punish him too on her own authority. When the boys and girls
have reached the age of six, the sexes should be separated; boys should
spend their days with boys, and girls with girls. Each should attend lessons.
The males should go to teachers of riding, archery, javelin-throwing and d
slinging—and the females too, if they are agreeable, may attend at any
rate the lessons, especially those in the use of weapons. In this business,
you see, pretty nearly everyone misunderstands the current practice.

CLINIAS: How so?

ATHENIAN: People think that where the hands are concerned right and
left are *by nature* suited for different specialized tasks—whereas of course
in the case of the feet and the lower limbs there is obviously no difference
in efficiency at all. Thanks to the silly ideas of nurses and mothers we've e
all been made lame-handed, so to speak. The natural potential of each arm
is just about the same, and the difference between them is our own fault,
because we've habitually misused them. Of course, in activities of no
consequence—using the left hand for the lyre and the right for the plectrum
and so on—it doesn't matter in the slightest. But to take these examples
as a model for other activities too, when there's no need, is pretty stupid. 795
The Scythian practice is an illustration of this: a Scythian doesn't use his
left hand exclusively to draw his bow and his right hand exclusively to
fit in the arrow, but uses both hands for both jobs indifferently. There are

4. See 777d ff.

a lot of other similar examples to be found—in driving chariots, for instance,
and other activities—from which we can see that when people train the
left hand to be weaker than the right they are going *against* nature. As we
said, that doesn't matter when it's a case of *plectra* of horn and similar
b instruments. But it matters enormously when one has to use iron weapons
of war (javelins, arrows or whatever), and it matters most of all when you
have to use your weapons in fighting hand to hand. And what a difference
there is between a man who has learned this lesson and one who has not,
between the trained and the untrained fighter! You know how a trained
pancratiast or boxer or wrestler can fight on his left, so that when his
opponent makes him change over and fight on that side, he doesn't stagger
round as though he were lame, but keeps his poise. And I reckon we have
c to suppose that precisely the same rule applies to the use of weapons and
to all other activities: when a man has two sets of limbs for attack and
defense, he ought to leave neither of them idle and untrained if he can
help it. In fact, if you were born with the body of a Geryon or a Briareus,
you ought to be able to throw a hundred shafts with your hundred hands.
d All these points should come under the supervision of the male and female
officials, the latter keeping an eye on the training the children get at play,
the former superintending their lessons. They must see that every boy and
girl grows up versatile in the use of both hands and both feet, so that they
don't ruin their natural abilities by their acquired habits, so far as they
can be prevented.

In practice, formal lessons will fall into two categories, physical training
for the body, and cultural education to perfect the personality. Physical
e training can be further subdivided into two branches: dancing and wres-
tling. Now when people dance, they are either acting the words of the
composer, and a dignified and civilized style is their prime concern, or
they are aiming at physical fitness, agility and beauty. In this case they
are preoccupied with bending and stretching in the approved fashion, so
that each limb and other part of the body can move with its own peculiar
grace—a grace which is then carried over and infused into dancing in
796 general. As for wrestling, the kind of trick introduced as part of their
technique by Antaeus and Cercyon because of their wretched obsession
with winning, and the boxing devices invented by Epeius and Amycus,
are absolutely useless in a military encounter and don't merit the honor
of being described.[5] But if the legitimate maneuvers of *regular* wrestling—
extricating the neck and hands and sides from entanglement—are practiced
for the sake of strength and health with a vigorous desire to win and
without resort to undignified postures, then they are extremely useful,
b and we mustn't neglect them. So when we reach the proper place in our
legal code we must tell the future teachers to present all this kind of

5. E.g. dropping on to the ground in wrestling (Antaeus), and the use of gloves in boxing (Amycus).

instruction in an attractive way, and the pupils to receive it with gratitude. Nor should we omit to mention the chorus-performances that may appropriately be imitated: for instance, here in Crete the 'games in armor' of the Curetes,[6] and those of the Dioscuri[7] in Sparta. And at Athens our Virgin Lady,[8] I believe, charmed by the pleasure of performing in a chorus, and disapproving of empty hands in recreation, thought she should perform c
the dance only when arrayed in full armor. Our boys and girls should imitate her example wholeheartedly, and prize the gift which the goddess has made them, because it increases their fighting skill and embellishes their festivals. Young boys, right from the early stages up to the age of military service, should be equipped with weapons and horses whenever they parade and process in honor of any god; and when they supplicate the gods and sons of gods they must dance and march in step, sometimes briskly, sometimes slowly. Even contests and preliminary heats, if they d
are to prove their worth in war and peace to the state and private households, must be conducted with these purposes in view and no other. Other kinds of physical exercise, Megillus and Clinias, whether serious or by way of recreation, are beneath the dignity of a gentleman.

I've now pretty well described the sort of physical education which needed to be described, as I said early on.[9] So there it is, in all its detail. If you know of a better system than that, let's have it. e

CLINIAS: No sir, if we cry off these ideas of yours a better program of competitions and physical training won't be easy to find.

ATHENIAN: The next subject is the gifts of Apollo and the Muses. When we discussed this before,[10] we thought we'd exhausted the topic, and that physical training alone remained for discussion. But it's clear now that a number of points were omitted—points which everyone ought in fact to hear first. So let's go through them in order.

CLINIAS: Yes, they should certainly be mentioned.

ATHENIAN: Listen to me then. You've done that before, of course, but 797
such a curious eccentricity calls for extreme caution in the speaker and his audience. You see, I'm going to spin a line that almost makes me afraid to open my mouth; still, I'll pluck up my courage and go ahead.

CLINIAS: What is this thesis of yours, sir?

ATHENIAN: I maintain that no one in any state has really grasped that children's games affect legislation so crucially as to determine whether the laws that are passed will survive or not. If you control the way children play, and the same children always play the same games under the same b

6. Cretan spirits who protected the infant Zeus.
7. Castor and Pollux.
8. Athena.
9. See 673b ff.
10. In Books I–II.

rules and in the same conditions, and get pleasure from the same toys, you'll find that the conventions of adult life too are left in peace without alteration. But in fact games are always being changed and constantly modified and new ones invented, and the younger generation never enthuses over the same thing for two days running. They have no permanent agreed standard of what is becoming or unbecoming either in deportment
c or their possessions in general; they worship anyone who is always introducing some novelty or doing something unconventional to shapes and colors and all that sort of thing. In fact, it's no exaggeration to say that this fellow is the biggest menace that can ever afflict a state, because he quietly changes the character of the young by making them despise old things and value novelty. That kind of language and that kind of outlook is—again I say it—the biggest disaster any state can suffer. Listen: I'll tell you just how big an evil I maintain it is.

d Clinias: You mean the way the public grumbles at old-fashioned ways of doing things?

Athenian: Exactly.

Clinias: Well, you won't find us shutting our ears to that kind of argument—you couldn't have a more sympathetic audience.

Athenian: So I should imagine.

Clinias: Go on then.

Athenian: Well now, let's listen to the argument with even greater attention than usual, and expound it to each other with equal care. Change, we shall find, except in something evil, is extremely dangerous. This is true of seasons and winds, the regimen of the body and the character of
e the soul—in short, of everything without exception (unless, as I said just now, the change affects something evil). Take as an example the way the body gets used to all sorts of food and drink and exercise. At first they upset it, but then in the course of time it's this very regimen that is responsible for its putting on flesh. Then the regimen and the flesh form
798 a kind of partnership, so that the body grows used to this congenial and familiar system, and lives a life of perfect happiness and health. But imagine someone forced to change again to one of the other recommended systems: initially, he's troubled by illnesses, and only slowly, by getting used to his new way of life, does he get back to normal. Well, we must suppose that precisely the same thing happens to a man's outlook and personality.
b When the laws under which people are brought up have by some heaven-sent good fortune remained unchanged over a very long period, so that no one remembers or has heard of things ever being any different, the soul is filled with such respect for tradition that it shrinks from meddling with it in any way. Somehow or other the legislator must find a method of bringing about this situation in the state. Now here's my own solution of the problem. All legislators suppose that an alteration to children's
c games really is just a 'game', as I said before, which leads to no serious or genuine damage. Consequently, so far from preventing change, they

feebly give it their blessing. They don't appreciate that if children introduce novelties into their games, they'll inevitably turn out to be quite different people from the previous generation; being different, they'll demand a different kind of life, and that will then make them want new institutions and laws. The next stage is what we described just now as the biggest evil that can affect a state—but not a single legislator takes fright at the prospect. d
Other changes, that affect only deportment, will do less harm, but it is a very serious matter indeed to keep changing the criteria for praising or censuring a man's moral character, and we must take great care to avoid doing so.

Clinias: Of course.

Athenian: Well then, are we still happy about the line we took earlier, when we said that rhythms and music in general were means of representing the characters of good men and bad? Or what? e

Clinias: Yes, our view remains exactly the same.

Athenian: So our position is this: we must do everything we possibly can to distract the younger generation from wanting to try their hand at presenting new subjects, either in dance or song; and we must also stop pleasure-mongers seducing them into the attempt.

Clinias: You're absolutely right.

Athenian: Now, does any of us know of a better method of achieving 799
such an object than that of the Egyptians?

Clinias: What method is that?

Athenian: To *sanctify* all our dances and music. The first job will be to settle the festivals by drawing up the year's program, which should show the dates of the various holidays and the individual gods, children of gods, or spirits in whose honor they should be taken. Second, it has to be decided what hymn should be sung at the various sacrifices to the gods and the type of dancing that should dignify the ritual in question. These decisions b
should be taken by some authority or other, and then the whole body of the citizens together should ratify them by sacrificing to the Fates and all the other gods, and by pouring a libation to consecrate the various songs to their respective divinities and other powers.

22. If anybody disobeys and introduces any different hymns or dances in honor of any god,
*the priests* and priestesses, in association with the Guardians of the Laws, will have the backing of sacred and secular law in expelling him.

23. If he resists expulsion,
*he must* be liable to a charge of impiety for the rest of his life at the hands of anyone who wishes to bring it.

Clinias: And serve him right.

Athenian: Now seeing that we've got on to this topic, we must watch c
our step and behave ourselves.

CLINIAS: How do you mean?

ATHENIAN: No young man, much less an old one, on seeing or hearing anything paradoxical or unfamiliar, is ever going to brush aside his doubts all in a hurry and reach a snap decision about it. More probably, like a
d traveler who has come to a crossroads, alone or with others, and is rather uncertain about the right road, he'll pause, and put the problem to himself or his companions; and he won't continue his journey until he's pretty sure of his direction and bearings. That's precisely what we must do now. Our discussion has led us to a legal paradox, and naturally we must go into it in details and not—at our age—rashly claim to pontificate in such an important field off the cuff.

CLINIAS: You're absolutely right.

e ATHENIAN: So we won't hurry over the problem, and only when we've looked into it properly shall we draw any firm conclusions. Still, there's no point in being deterred from completing the formal presentation of these 'laws' we're dealing with now, so let's press on till we get to the end of them. God willing, the completion of the whole exposition may perhaps point to an adequate solution of our present problem.

CLINIAS: You've put it very well, sir; let's do as you say.

ATHENIAN: So let's assume we've agreed on the paradox: our songs have turned into 'nomes' (apparently the ancients gave some such name to
800 tunes on the lyre—perhaps they had some inkling of what we're saying, thanks to the intuition of someone who saw a vision either in his sleep or while awake). However that may be, let's adopt this as our agreed policy: no one shall sing a note, or perform any dance-movement, other than those in the canon of public songs, sacred music, and the general body of chorus performances of the young—any more than he would violate any other 'nome' or law. If a man obeys, he shall go unmolested by the law; but if he disobeys, the Guardians of the Laws and the priests and priestesses must punish him, as we said just now. Can we accept this as a statement
b of policy?

CLINIAS: We can.

ATHENIAN: Then how could one put these rules in proper legal form, without being laughed to scorn? Well now, there's a new point we ought to notice: in this business, the safest method is to sketch a few model rules. Here's one for you: imagine a sacrifice has been performed and the offerings
c burnt as demanded by law and someone standing in a private capacity near the altar and offerings—a son or brother, say—breaks out into the most extreme blasphemy: wouldn't his words fill his father and his other relations with alarm and despondency and forebodings of despair? Isn't that what we'd expect?

CLINIAS: Of course.

ATHENIAN: But it is hardly an exaggeration to say that in our corner of the world this is exactly what happens in pretty nearly every state. When an official has performed a public sacrifice, a chorus—or rather a mob of

choruses—arrives and takes up position not far from the altar and some- d
times right next to it. Then they swamp the holy offerings with a flood of absolute blasphemy. With words and rhythms and music of the most morbid kind they work up the emotions of their audience to a tremendous pitch, and the prize is awarded to the chorus which succeeds best in making the community burst into tears—the very community which has just offered sacrifice. Well, that's certainly a 'nome' on which we must pass an unfavorable verdict, isn't it? If there is ever any real need for the public to listen to such lugubrious noises, on days that are unclean and e
unlucky, it will be much better, and entirely appropriate, to hire some foreign choruses to sing such songs (just as one hires mourners to accompany funerals with Carian dirges). In particular, the costume appropriate for such funeral dirges will not be garlands or trappings of gilt, but—to polish off the topic as quickly as possible—quite the opposite kind of thing. I merely repeat the question we're always asking ourselves: are we happy to adopt this, for a start, as one of our model rules of singing?

CLINIAS: What?

ATHENIAN: The rule of auspicious language. This is the characteristic 801
that is absolutely vital for our kind of song. Or shall I simply lay down the rule without repeating the question?

CLINIAS: Lay it down by all means: your law's been approved without a single vote against it.

ATHENIAN: After auspicious language, then, what will be the second law of music? Surely this: that the gods to whom we sacrifice should always be offered our prayers.

CLINIAS: Of course.

ATHENIAN: And the third law, I suppose, will be this: poets should appreciate that prayers are requests for something from the gods, so they must take great care that they never inadvertently request an evil under b
the impression that it is a benefit. What a ludicrous calamity it would be to offer that kind of prayer!

CLINIAS: It certainly would.

ATHENIAN: Now didn't our remarks a short time ago[11] persuade us that 'Gold and Silver, the gods of Wealth, ought to have neither temple nor home in our state'?

CLINIAS: Absolutely.

ATHENIAN: So what lesson can we say this doctrine holds for us? Surely this: that authors in general are quite unable to tell good from bad. We c
conclude that a composer who embodies this error in his words or even in his music, and who produces mistaken prayers, will make our citizens pray improperly when it comes to matters of importance—and, as we were saying, we shan't find many more glaring mistakes than that. So can we establish this as one of our model laws of music?

11. See 727e ff., 741e ff.

Clinias: What?

d Athenian: That a poet should compose nothing that conflicts with society's conventional notions of justice, goodness and beauty. No one should be allowed to show his work to any private person without first submitting it to the appointed assessors and to the Guardians of the Laws, and getting their approval. (In effect, we've got our assessors already appointed—I mean the legislators we chose to regulate the arts, and the person we elected as Minister of Education.) Well then, here's the same question yet again: are we satisfied to adopt this as our third principle and our third model law? Or what do you think?

Clinias: Of course we'll adopt it.

e Athenian: The next point is that it will be proper to sing hymns and panegyrics, combined with prayers, in honor of the gods. After the gods, we may similarly give the spirits and heroes their meed of praise, and pray to each of them as appropriate.

Clinias: Certainly.

Athenian: And the next law, which should be adopted quite ungrudgingly, will run as follows: deceased citizens who by their physical efforts or force of personality have conspicuous and strenuous achievements to their credit, and who have lived a life of obedience to the laws, should be regarded as proper subjects for our panegyrics.

Clinias: Of course.

802 Athenian: But to honor a man with hymns and panegyrics during his lifetime is to invite trouble: we must wait until he has come to the end of the course after running the race of life successfully. (Men and women who have shown conspicuous merit should qualify for all these honors without distinction of sex.)

The following arrangements should be made with regard to singing and dancing. Among the works we've inherited from the past there are a great many grand old pieces of music—dances too, for occasions when we want to exercise our bodies—from which we should not hesitate to choose those
b suitable and appropriate for the society we are organizing. Censors of at least fifty years of age should be appointed to make the selection, and any ancient composition that seems to come up to standard should be approved; absolutely unsuitable material must be totally rejected, and substandard pieces revised and re-arranged, on the advice of poets and musicians. (Although we shall exploit the creative talents of these people, we
c shan't—with rare exceptions—put our trust in their tastes and inclinations. Instead, we shall interpret the wishes of the lawgiver and arrange to *his* liking our dancing and singing and chorus performances in general.) Music composed in an undisciplined style is always infinitely improved by the imposition of form, even if that makes it less immediately attractive. But music doesn't *have* to be disciplined to be pleasant. Take someone who has right from childhood till the age of maturity and discretion grown familiar with a controlled and restrained style of music. Play him some
d of the other sort, and how he'll loathe it! 'What vulgar stuff!' he'll say.

Yet, if he's been brought up to enjoy the strong appeal of popular music, it's the disciplined kind he'll call frigid and repellent. So as I said just now, on the score of pleasure or the lack of it, neither type is superior nor inferior to the other. The difference is simply this: the one musical environment is invariably a good influence, the other a bad.

CLINIAS: Well said!

ATHENIAN: In addition, we shall have to distinguish, in a rough and
ready way, the songs suitable for men and those suitable for women, and e
give each its proper mode and rhythm. It would be terrible if the words failed to fit the mode, or if their meter were at odds with the beat of the music, which is what will happen if we don't match properly the songs to each of the other elements in the performance—elements which must therefore be dealt with, at any rate in outline, in our legal code. One possibility is simply to ensure that the songs men and women sing are accompanied by the rhythms and modes imposed by the words in either case; but our regulations about female performances must be more precise than this and be based on the natural difference between the sexes. So an elevated manner and courageous instincts must be regarded as characteristic of the male, while a tendency to modesty and restraint must be presented—in theory and law alike—as a peculiarly feminine trait.

Now to deal with how this doctrine should be taught and handed on. 803
What method of instruction should we use? Who should be taught, and when should the lessons take place? Well, you know that when a shipwright is starting to build a boat, the first thing he does is to lay down the keel as a foundation and as a general indication of the shape. I have a feeling my own procedure now is exactly analogous. I'm trying to distinguish for you the various ways in which our character shapes the kind of life we live; I really am trying to 'lay down the keel', because I'm giving
proper consideration to the way we should try to live—to the 'character- b
keel' we need to lay if we are going to sail through this voyage of life successfully. Not that human affairs are worth taking very seriously—but take them seriously is just what we are forced to do, alas. Still, perhaps it will be realistic to recognize the position we're in and direct our serious efforts to some suitable purpose. My meaning?—yes, you'd certainly be right to take me up on that.

CLINIAS: Exactly. c

ATHENIAN: I maintain that serious matters deserve our serious attention, but trivialities do not; that all men of good will should put God at the center of their thoughts; that man, as we said before,[12] has been created as a toy for God; and that this is the great point in his favor. So every man and every woman should play this part and order their whole life accordingly, engaging in the best possible pastimes—in a quite different frame of mind to their present one.

CLINIAS: How do you mean? d

12. See 644d ff.

ATHENIAN: The usual view nowadays, I fancy, is that the purpose of serious activity is leisure—that war, for instance, is an important business, and needs to be waged efficiently for the sake of peace. But in cold fact neither the immediate result nor the eventual consequences of warfare ever turn out to be *real* leisure or an education that really deserves the name—and education is in our view just about the most important activity of all. So each of us should spend the greater part of his life at peace, and
e that will be the best use of this time. What, then, will be the right way to live? A man should spend his whole life at 'play'—sacrificing, singing, dancing—so that he can win the favor of the gods and protect himself from his enemies and conquer them in battle. He'll achieve both these aims if he sings and dances in the way we've outlined; his path, so to speak, has been marked out for him and he must go on his way confident that the poet's words are true.

804 *Some things, Telemachus, your native wit will tell you,*
*And Heaven will prompt the rest. The very gods, I'm sure,*
*Have smiled upon your birth and helped to bring you up.*[13]

And those *we* bring up, too, must proceed in the same spirit. They must expect that although our advice is sound as far as it goes, their guardian deity will make them further suggestions about sacrifices and dancing—
b telling them the various divinities in whose honor they should hold their various games, and on what occasions, so as to win the gods' good will and live the life that their own nature demands, puppets that they are, mostly, and hardly real at all.

MEGILLUS: That, sir, is to give the human race a very low rating indeed.

CLINIAS: Don't be taken aback, Megillus. You must make allowances for me. I said that with my thoughts on God, and was quite carried away. So, if you like, let's take it that our species is *not* worthless, but something
c rather important.

To resume, then. So far, we have provided for the public gymnasia and the state schools to be housed in three groups of buildings at the center of the city; similarly, on three sites in the suburbs, there should be training grounds for horses, and open spaces adapted for archery and the discharge of other long-range missiles, where the young may practice and learn these skills. Anyway, if we haven't explained all this adequately before, let's do so now, and put our requirements into legal form.

d Foreign teachers should be hired to live in these establishments and provide the pupils with complete courses of instruction in both military and cultural subjects. Children must not be allowed to attend or not attend school at the whim of their father; as far as possible, education must be

13. *Odyssey* iii.26–28.

compulsory for 'every man and boy' (as the saying is), because they belong
to the state first and their parents second.

Let me stress that this law of mine will apply just as much to girls as
to boys. The girls must be trained in precisely the same way, and I'd like e
to make this proposal without any reservations whatever about horse-
riding or athletics being suitable activities for males but not for females.
You see, although I was already convinced by some ancient stories I have
heard, I now know for sure that there are pretty well countless numbers
of women, generally called Sarmatians, round the Black Sea, who not only 805
ride horses but use the bow and other weapons. There, men and women
have an equal duty to cultivate these skills, so cultivate them equally they
do. And while we're on the subject, here's another thought for you. I
maintain that if these results can be achieved, the state of affairs in our
corner of Greece, where men and women do *not* have a common purpose
and do *not* throw all their energies into the same activities, is absolutely
stupid. Almost every state, under present conditions, is only half a state,
and develops only half its potentialities, whereas with the same cost and
effort, it could double its achievement. Yet what a staggering blunder for b
a legislator to make!

CLINIAS: I dare say. But a lot of these proposals, sir, are incompatible
with the average state's social structure. However, you were quite right
when you said we should give the argument its head, and only make up
our minds when it had run its course. You've made me reproach myself
for having spoken. So carry on, and say what you like. c

ATHENIAN: The point I'd like to make, Clinias, is the same one as I made
a moment ago, that there might have been something to be said against
our proposal, if it had not been proved by the facts to be workable. But
as things are, an opponent of this law must try other tactics. We are not
going to withdraw our recommendation that so far as possible, in education
and everything else, the female sex should be on the same footing as the d
male. Consequently, we should approach the problem rather like this.
Look: if women are *not* to follow absolutely the same way of life as men,
then surely we shall have to work out some other program for them?

CLINIAS: Inevitably.

ATHENIAN: Well then, if we deny women this partnership we're now
prescribing for them, which of the systems actually in force today shall
we adopt instead? What about the practice of the Thracians and many
other peoples, who make their women work on the land and mind sheep
and cattle, so that they turn into skivvies indistinguishable from slaves? e
Or what about the Athenians and all the other states in that part of the
world? Well, here's how we Athenians deal with the problem: we 'concen-
trate our resources', as the expression is, under one roof, and let our women
take charge of our stores and the spinning and wool-working in general.
Or we could adopt the Spartan system, Megillus, which is a compromise.
You make your girls take part in athletics and you give them a compulsory 806

education in the arts; when they grow up, though dispensed from working
wool, they have to 'weave' themselves a pretty hard-working sort of life
which is by no means despicable or useless: they have to be tolerably
efficient at running the home and managing the house and bringing up
children—but they *don't* undertake military service. This means that even
if some extreme emergency ever led to a battle for their state and the lives
b of their children, they wouldn't have the expertise to use bows and arrows,
like so many Amazons, nor could they join the men in deploying any
other missile. They wouldn't be able to take up shield and spear and copy
Athena,[14] so as to terrify the enemy (if nothing more) by being seen in
some kind of battle-array gallantly resisting the destruction threatening
their native land. Living as they do, they'd never be anything like tough
enough to imitate the Sarmatian women, who by comparison with such
c femininity would look like men. Anyone who wants to commend your
Spartan legislators for this state of affairs, had better get on with it: I'm
not going to change *my* mind. A legislator should go the whole way and
not stick at half-measures; he mustn't just regulate the men and allow the
women to live as they like and wallow in expensive luxury. That would
be to give the state only half the loaf of prosperity instead of the whole
of it.

MEGILLUS: What on earth are we to do, Clinias? Are we going to let our
visitor run down Sparta for us like this?

d CLINIAS: Yes, we are. We told him he could be frank, and we must give
him his head until we've properly worked through every section of our
legal code.

MEGILLUS: Very well.

ATHENIAN: So I suppose I should try to press straight on with the next topic?

CLINIAS: Naturally.

ATHENIAN: Now that our citizens are assured of a moderate supply of
necessities, and other people have taken over the skilled work, what will
e be their way of life? Suppose that their farms have been entrusted to slaves,
who provide them with sufficient produce of the land to keep them in
modest comfort; suppose they take their meals in separate messes, one for
themselves, another nearby for their families, including their daughters
and their daughters' mothers; assume the messes, are presided over by
officials, male and female as the case may be, who have the duty of
dismissing their respective assemblies after the day's review and scrutiny
807 of the diners' habits; and that when the official and his company have
poured libations to whatever gods that day and night happen to be dedi-
cated, they all duly go home. Now, do such leisured circumstances leave
them no pressing work to do, no genuinely appropriate occupation? Must
each of them get plumper and plumper every day of his life, like a fatted

14. A reference to 796b–c.

beast? No: we maintain that's *not* the right and proper thing to do. A man
who lives like that won't be able to escape the fate he deserves; and the
fate of an idle fattened beast that takes life easy is usually to be torn to pieces b
by some other animal—one of the skinny kind, who've been emaciated by
a life of daring and endurance. (Our ideal, of course, is unlikely to be
realized *fully* so long as we persist in our policy of allowing individuals
to have their own private establishments, consisting of house, wife, children
and so on.[15] But if we could ever put into practice the second-best scheme
we're now describing, we'd have every reason to be satisfied.) So we must
insist that there is something left to do in a life of leisure, and it's only c
fair that the task imposed, far from being a light or trivial one, should be
the most demanding of all. As it is, to dedicate your life to winning a
victory at Delphi or Olympia keeps you far too busy to attend to other
tasks; but a life devoted to the cultivation of every physical perfection *and*
every moral virtue (the only life worth the name) will keep you at least d
twice as busy. Inessential business must never stop you taking proper
food and exercise, or hinder your mental and moral training. To follow
this regimen and to get the maximum benefit from it, the whole day and
the whole night is scarcely time enough.

In view of this, every gentleman must have a timetable prescribing what e
he is to do every minute of his life, which he should follow at all times
from the dawn of one day until the sun comes up at the dawn of the next.
However, a lawgiver would lack dignity if he produced a mass of details
about running a house, especially when he came to the regulations for
curtailing sleep at night, which will be necessary if the citizens are going
to protect the entire state systematically and uninterruptedly. Everyone
should think it a disgrace and unworthy of a gentleman, if any citizen
devotes the whole of any night to sleep; no, he should always be the first
to wake and get up, and let himself be seen by all the servants. (It doesn't 808
matter what we ought to call this kind of thing—either 'law' or 'custom'
will do.) In particular, the mistress of the house should be the first to wake
up the other women; if she herself is woken by some of the maids, then
all the slaves—men, women and children—should say 'How shocking!'
to one another, and so too, supposing they could, should the very walls b
of the house. While awake at night, all citizens should transact a good
proportion of their political and domestic business, the officials up and
down the town, masters and mistresses in their private households. By
nature, prolonged sleep does not suit either body or soul, nor does it help
us to be active in all this kind of work. Asleep, a man is useless; he may
as well be dead. But a man who is particularly keen to be physically active c
and mentally alert stays awake as long as possible, and sets aside for sleep
only as much time as is necessary for his health—and that is only a little,
once that little has become a regular habit. Officials who are wide awake

15. Reading *nun ei* in b3.

at night in cities inspire fear in the wicked, whether citizens or enemies, but by the just and the virtuous they are honored and admired; they benefit themselves and are a blessing to the entire state. And an additional advantage of spending the night in this way will be the courage thus inspired in individual members of the state.

d When dawn comes up and brings another day, the children must be sent off to their teachers. Children must not be left without teachers, nor slaves without masters, any more than flocks and herds must be allowed to live without attendants. Of all wild things, the child is the most unmanageable: an unusually powerful spring of reason, whose waters are not
e yet canalized in the right direction, makes him sharp and sly, the most unruly animal there is. That's why he has to be curbed by a great many 'bridles', so to speak. Initially, when he leaves the side of his nurse and mother, and is still young and immature, this will be his tutor's duty, but later on it will devolve on his instructors in the various subjects—subjects which will be an extra discipline in themselves. So far, he will be treated as a young gentleman deserves. However, both the boy and his tutor or teacher must be punished by any passing gentleman who finds either of them misbehaving, and here the child must be treated as though he were a slave.

> 24. Any passer-by who fails to inflict due punishment,
> *must for* a start be held in the deepest disgrace, and the Guardian of
> 809 the Laws who has been put in charge of the young must keep under observation this fellow who has come across miscreants of the kind we mentioned and has either failed to inflict the necessary punishment, or not inflicted it in the approved fashion.

Our sharp-eyed and efficient supervisor of the education of the young must redirect their natural development along the right lines, by always setting them on the paths of goodness as embodied in the legal code.

b But how will the law itself adequately convey its teaching to this Guardian? So far, the instruction he has had from the law has been cursory and obscure, because only a selection of topics has been covered. But nothing, as far as possible, should be omitted; the Guardian should have every point explained to him so that he in turn may enlighten and educate others. Now, the business of choruses has already been dealt with: we've seen what types of song and dance should be selected or revised, and then consecrated. But what type of *prose* works should be put in front of your pupils? How should they be presented? Now here, my dear Director of
c Youth, is something we've not explained. Of course, we've told you what military skills they must practice and learn, but what about (a) literature, (b) playing the lyre, (c) arithmetic? We stipulated that they must each understand enough of these subjects to fight a war and run a house and administer a state; for the same reasons they must acquire such knowledge about the heavenly bodies in their courses—sun, moon and stars—as will

help them with the arrangements that every state is forced to make in this d
respect. You ask what arrangements we are referring to? We mean that
the days must be grouped into months, and the months into years, in such
a way that the seasons, along with their various sacrifices and festivals,
may each receive proper recognition by being duly observed in their natural
sequence. The result will be to keep the state active and alert, to render
the gods due honor, and to make men better informed on these matters.
All this, my friend, has not yet been adequately explained to you by the e
legislator. So pay attention to the points which are going to be made next.

We said that you have insufficient information about literature, for a
start. Now, what's our complaint against the instructions you were given?
It's simply that you've not yet been told whether a *complete* mastery of
the subject is necessary before one can become a decent citizen or whether
one shouldn't attempt it at all; and similarly in the case of the lyre. Well,
we maintain that these subjects do have to be tackled. About three years
will be a reasonable time for a child of ten to spend on literature, and a
further three years, beginning at the age of thirteen, should be spent on 810
learning the lyre. These times must be neither shortened nor lengthened:
neither the child nor its father must be allowed to extend or curtail these
periods of study out of enthusiasm for, or distaste of, the curriculum; that
will be against the law.

> 25. Cases of disobedience must be punished by disqualification from the school prizes we shall have to describe a little later.

First, though, you yourself must grasp just what must be taught by the
teachers and learned by the pupils in those periods of time. Well, the b
children must work at their letters until they are able to read and write,
but any whose natural abilities have not developed sufficiently by the end
of the prescribed time to make them into quick or polished performers
should not be pressed.

The question now arises of the study of written works which the authors
have not set to music. Although some of these works are in meter, others
lack any rhythmical pattern at all—they are writings that simply reproduce
ordinary speech, unadorned by rhythm and music. Some of the many c
authors of such works have left us writings that constitute a danger. Now,
my splendid Guardians of the Laws, how are you going to deal with these
works? What will be the right instructions for the lawgiver to give you
about coping with them? I reckon he's going to be very much at a loss.

CLINIAS: What is the difficulty you're talking about, sir? It looks as if
you're faced by a genuine personal problem.

ATHENIAN: Your assumption is quite right, Clinias. But the two of you
are my partners in legislation, and I'm obliged to tell you when I think I
anticipate a difficulty and when I do not.

CLINIAS: Oh? What makes you bring up that aspect of the business at d
this point? What's the matter?

Athenian: I'll tell you: the idea of contradicting many thousands of voices. That's always difficult.

Clinias: Well, bless my soul! Do you really imagine that your existing legislative proposals flout popular prejudices in just a few tiny details?

Athenian: Yes, that's fair comment. The point you're making, I take it, is that although a lot of people set their face against the path we are following in our discussion, just as many are enthusiastic about it (or even
e if they *are* fewer in number, they're not inferior in quality)—and you're telling me to rely on the support of the latter and proceed with boldness and resolution along the legislative path opened up for us by our present discussion, and not to hang back.

Clinias: Naturally.

Athenian: Best foot forward, then. Now, what I say is this. We have a great many poets who compose in hexameters and trimeters and all the standard meters; some of these authors try to be serious, while others aim at a comic effect. Over and over again it's claimed that in order to educate young people properly we have to cram their heads full of this stuff; we
811 have to organize recitations of it so that they never stop listening to it and acquire a vast repertoire, getting whole poets off by heart. Another school of thought excerpts the outstanding work of all the poets and compiles a treasury of complete passages, claiming that if the wide knowledge of a fully informed person is to produce a sound and sensible citizen, these extracts must be committed to memory and learned by rote. I suppose you're now pressing me to be quite frank and show these people where they are right and where they've gone wrong?

Clinias: Of course.

b Athenian: Well then, in a nutshell, what sort of estimate will do them all justice? I imagine everybody would agree if I put it rather like this. Each of these authors has produced a lot of fine work, and a lot of rubbish too—but if that's so, I maintain that learning so much of it puts the young at risk.

Clinias: So what recommendation would you give the Guardian of the Laws?

Athenian: What about?

Clinias: The model work that will enable him to decide what material
c all the children may learn, and what not. Tell us, without any hesitation.

Athenian: My dear Clinias, I suspect I've had a bit of luck.

Clinias: How's that?

Athenian: Because I haven't got far to look for a model. You see, when I look back now over this discussion of ours, which has lasted from dawn up till this very moment—a discussion in which I think I sense the inspiration of heaven—well, it's come to look, to my eyes, just like a literary composition. Perhaps not surprisingly, I was overcome by a feeling of
d immense satisfaction at the sight of my 'collected works', so to speak, because, of all the addresses I have ever learned or listened to, whether in verse or in this kind of free prose style I've been using, it's *these* that

have impressed me as being the most eminently acceptable and the most entirely appropriate for the ears of the younger generation. So I could hardly commend a better model than this to the Guardian of the Laws in charge of education. Here's what he must tell the teachers to teach the children, and if he comes across similar and related material while working e
through prose writings, or the verse of poets, or when listening to unwritten compositions in simple prose that show a family resemblance to our discussion today, he must on no account let them slip through his fingers, but have them committed to writing. His first job will be to compel the teachers to learn this material and speak well of it, and he must not employ as his assistants any teachers who disapprove of it; he should employ only those who endorse his own high opinion, and entrust them with the teaching 812
and education of the children. That, then, is my doctrine on literature and its teachers, so let me finish there.

CLINIAS: Well, sir, as far as I can judge from our original program, we've not strayed off the subjects we set out to discuss. But is our general policy the right one, or not? I suspect it would be difficult to say for sure.

ATHENIAN: That, Clinias, as we have often remarked, is something which will probably become clearer of its own accord when we've completely finished expounding our laws.

CLINIAS: True enough. b

ATHENIAN: After the teacher of literature, surely, we have to address the lyre-master?

CLINIAS: Of course.

ATHENIAN: Now when we allocate these masters the duties of teaching this instrument and giving instruction in the subject in general, I think we ought to remember the line we took earlier.

CLINIAS: What line do you mean?

ATHENIAN: We said[16] I think, that the sixty-year-old singers of Dionysus should be persons who are particularly sensitive to rhythm and the way in which 'harmonies' are constructed, so that when faced with good or c
vicious musical representations, and the emotions aroused by them, they may be able to select the works based on good representation and reject those based on bad. The former they should present and sing to the community at large, so as to charm the souls of the young people, encouraging each and every one of them to let these representations guide them along the path that leads to virtue.

CLINIAS: You're absolutely right.

ATHENIAN: With this object in view, here's how the lyre-master and his d
pupil must employ the notes of their instruments. By exploiting the fact that each string makes a distinct sound, they must produce notes that are identical in pitch to the words being sung. The lyre should not be used to play an elaborate independent melody: that is, its strings must produce no notes except those of the composer of the melody being played; small

16. See 644b ff. and 669b ff.

intervals should not be combined with large, nor quick tempo with slow,
e nor low notes with high. Similarly, the rhythms of the music of the lyre must not be tricked out with all sorts of frills and adornments. All this sort of thing must be kept from students who are going to acquire a working knowledge of music in three years, without wasting time. Such conflict and confusion makes learning difficult, whereas the young people should above all be swift learners, because they have a great many important compulsory subjects laid down for them as it is—and in due time, as our discussion progresses, we shall see what these subjects are. But all these musical matters should be controlled, according to his brief, by our official in charge of education. As regards the actual singing, and the words, we have explained earlier what tunes and style of language the
813 chorus-masters must teach: we said—remember?—that these things should be consecrated and each allocated to a suitable festival, so as to benefit society by the welcome pleasure they give.

CLINIAS: Here again you've spoken the truth —

ATHENIAN: — the whole truth and nothing but the truth! So these are the regulations the person appointed as our Director of Music must adopt and enforce: let's wish him the best of luck in his task.

b We, however, must supplement our previous regulations about dancing and the training of the body in general. We've filled in the gaps in our tuition in the case of music, so now let's deal with physical training in the same way. Both boys and girls, of course, must learn to dance and perform physical exercises?

CLINIAS: Yes.

ATHENIAN: So it won't come amiss if we provide dancing masters for the boys and dancing mistresses for the girls, so as to facilitate practice.

CLINIAS: Agreed.

c ATHENIAN: So now let's summon once again the official that has the hardest job of all—the Director of Children. He'll be in charge both of music and of physical training, so he won't get much time off.

CLINIAS: How then will a man of his advancing years be able to supervise so much?

ATHENIAN: There is no problem here, my friend. The law has already given him permission, which it will not withdraw, to recruit as assistant supervisors any citizens he may wish, of either sex. He will know whom
d to choose, and a sober respect for his office and a realization of its importance will make him anxious not to choose wrongly, because he'll be well aware that only if the younger generation has received and goes on receiving a correct education shall we find everything is 'plain sailing', whereas if not—well, it would be inappropriate to describe the consequences, and as the state is young we shall refrain from doing so, out of respect for the feelings of the excessively superstitious.

Well then, on these topics too—I mean dances and the entire range of movements involved in physical training—we have already said a great

deal. We are establishing gymnasia for all physical exercises of a military kind—archery and deployment of missiles in general, skirmishing, heavy- e
armed fighting of every variety, tactical maneuvers, marches of every sort, pitching camp, and also the various disciplines of the cavalryman. In all these subjects there must be public instructors paid out of public funds; their lessons must be attended by the boys and men of the state, and the girls and women as well, because they too have to master all these techniques. While still girls, they must practice every kind of dancing and fighting in armor; when grown women, they must play their part in maneuvering, getting into battle formation and taking off and putting on weapons, 814
if only to ensure that if it ever proves necessary for the whole army to leave the state and take the field abroad, so that the children and the rest of the population are left unprotected, the women will at least be able to defend them. On the other hand—and this is one of those things we can't swear is impossible—suppose a large and powerful army, whether Greek or not, were to force a way into the country and make them fight a desperate battle for the very existence of the state. It would be a disaster for their society if its women proved to have been so shockingly ill-educated that b
they couldn't even rival female birds, who are prepared to run every risk and die for their chicks fighting against the most powerful of wild animals. What if, instead of that, the women promptly made off to temples and thronged every altar and sanctuary, and covered the human race with the disgrace of being by nature the most lily-livered creatures under the sun?

CLINIAS: By heaven, sir, no state in which that happened could avoid disgrace—quite apart from the damage that would be caused. c

ATHENIAN: So let's lay down a law to the effect that women must not neglect to cultivate the techniques of fighting, at any rate to the extent indicated. These are skills which all citizens, male and female, must take care to acquire.

CLINIAS: That gets my vote, at least.

ATHENIAN: Now for wrestling. We've partly dealt with this already, but we haven't described what in my eyes is its most important feature. But it's not easy to find words to explain it unless at the same time someone gives an actual demonstration with his body. So we'll postpone a decision on this point till we can support our statements with concrete examples d
and prove, among other points we've mentioned, that of all physical movements, those involved in our kind of wrestling are the most closely related to those demanded in warfare, and in particular that we should practice wrestling for the sake of military efficiency, rather than cultivate the latter in order to be better wrestlers.

CLINIAS: You're right in that, at least.

ATHENIAN: So let's accept what we've said so far as an adequate statement of what wrestling can do for a man. The proper term for most of the other e
movements that can be executed by the body as a whole is 'dancing'. Two varieties, the decent and the disreputable, have to be distinguished. The

first is a representation of the movements of graceful people, and the aim
is to create an effect of grandeur; the second imitates the movements of
unsightly people and tries to present them in an unattractive light. Both
have two subdivisions. The first subdivision of the decent kind represents
handsome, courageous soldiers locked in the violent struggles of war; the
second portrays a man of temperate character enjoying moderate pleasures
815 in a state of prosperity, and the natural name for this is 'dance of peace'.
The dance of war differs fundamentally from the dance of peace, and the
correct name for it will be the 'Pyrrhic'. It depicts the motions executed
to avoid blows and shots of all kinds (dodging, retreating, jumping into
the air, crouching); and it also tries to represent the opposite kind of motion,
the more aggressive postures adopted for shooting and discharging javelins
and delivering various kinds of blows. In these dances, which portray fine
b physiques and noble characters, the correct posture is maintained if the
body is kept erect in a state of vigorous tension, with the limbs extended
nearly straight. A posture with the opposite characteristics we reject as
*not* correct. As for the dance of peace, the point we have to watch in every
chorus-performer is this: how successfully—or how disastrously—does he
keep up the fine style of dancing to be expected from men who've been
brought up under good laws? This means we'd better distinguish the
c dubious style of dancing from the style we may accept without question.
So can we define the two? Where should the line be drawn between them?
'Bacchic' dances and the like, which (the dancers allege) are a 'representa-
tion' of drunken persons they call Nymphs and Pans and Sileni and Satyrs,
and which are performed during 'purifications' and 'initiations', are some-
thing of a problem: taken as a group, they cannot be termed either 'dances
of peace' or 'dances of war', and indeed they resist all attempts to label
them. The best procedure, I think, is to treat them as separate from 'war-
d dances' and 'dances of peace', and put them in a category of their own
which a statesman may ignore as outside his province. That will entitle
us to leave them on one side and get back to dances of peace and war,
both of which undeniably deserve our attention.

Now, what about the non-combatant Muse? The dances she leads in
honor of the gods and children of gods will comprise one broad category
of dances performed with a sense of well-being. This is how we shall
e distinguish between the two forms this feeling may take: (1) the particularly
keen pleasure felt by people who have emerged from trouble and danger
to a state of happiness; (2) the quieter pleasures of those whose past good
fortune has not only continued but increased. Now, take a man in either of
these situations. The greater his pleasure the brisker his body's movements;
more modest pleasures make his actions correspondingly less brisk. Again,
the more composed the man's temperament, and the tougher he has been
816 trained to be, the more deliberate are his movements; on the other hand,
if he's a coward and has not been trained to show restraint, his actions
are wilder and his postures change more violently. And in general, when

a man uses his voice to talk or sing, he finds it very difficult to keep his
body still. This is the origin of the whole art of dancing: the gestures that
express what one is saying. Some of us make gestures that are invariably
in harmony with our words, but some of us fail. In fact, one has only to
reflect on many other ancient terms that have come down to us, to see b
that they should be commended for their aptness and accuracy. One such
term describes the dances performed by those who enjoy prosperity and
seek only moderate pleasures: it's just the right word, and whoever coined
it must have been a real musician. He very sensibly gave all such dances
the name '*emmeleiai*',[17] and established two categories of approved dancing,
the 'war-dance' (which he called 'Pyrrhic') and 'dance of peace' (*'emme-* c
*leiai')*, thus giving each its apt and appropriate title. The lawgiver should
give an outline of them, and the Guardian of the Laws should see where
they are to be found; then, after hunting them out, he must combine
the dance-sequences with the other musical elements, and allocate each
sacrifice and feast in the calendar the style of dance that is appropriate.
After thus consecrating the whole list of dances, he must henceforth refrain
from altering any feature either of the dancing or the singing: the same
state and the same citizens (who should all be the same sort of people, as d
far as possible), should enjoy the same pleasures in the same fashion: that
is the secret of a happy and a blessed life.

So much for the way men of superior physique and noble character
should perform in choruses of the kind we've prescribed. We are now
obliged to examine and pronounce on the misshapen bodies and degraded
outlook of those performers who have turned to producing ludicrous and
comic effects by exploiting the opportunities for humorous mimicry offered
by dialogue, song and dance. Now anyone who means to acquire a discern- e
ing judgment will find it impossible to understand the serious side of things
in isolation from their ridiculous aspect, or indeed appreciate anything at
all except in the light of its opposite. But if we intend to acquire virtue,
even on a small scale, we can't be serious and comic too, and this is
precisely why we must learn to recognize buffoonery, to avoid being
trapped by our ignorance of it into doing or saying anything ridiculous
when there's no call for it. Such mimicry must be left to slaves and hired
aliens, and no one must ever take it at all seriously. No citizen or citizeness
must be found learning it, and the performances must always contain
some new twist. With that law, and that explanation of it, humorous 817
amusements—usually known as 'comedy'—may be dismissed.

But what about our 'serious' poets, as they're called, the tragedians?
Suppose some of them were to come forward and ask us some such
question as this: 'Gentlemen, may we enter your state and country, or not?
And may we bring our work with us? Or what's your policy on this point?'
What would be the right reply for us to make to these inspired geniuses? b

17. The key to the sequence of thought is that 'in harmony' (816a) = *emmelōs.*

This, I think: 'Most honored guests, we're tragedians ourselves, and our tragedy is the finest and best we can create. At any rate, our entire state has been constructed so as to be a "representation" of the finest and noblest life—the very thing we maintain is most genuinely a tragedy. So we are poets like yourselves, composing in the same *genre,* and your competitors as artists and actors in the finest drama, which true law alone has the
c natural powers to "produce" to perfection (of that we're quite confident). So don't run away with the idea that we shall ever blithely allow you to set up stage in the market-place and bring on your actors whose fine voices will carry further than ours. Don't think we'll let you declaim to women and children and the general public, and talk about the same practices as we do but treat them differently—indeed, more often than not, so as virtually to contradict us. We should be absolutely daft, and so would any
d state as a whole, to let you go ahead as we've described before the authorities had decided whether your work was fit to be recited and suitable for public performance or not. So, you sons of the charming Muses, first of all show your songs to the authorities for comparison with ours, and if your doctrines seem the same as or better than our own, we'll let you produce your plays; but if not, friends, that we can never do.'

e So as regards chorus performances in general and the question of learning a part in them, custom will march hand in hand with law—dealing with slaves and their masters separately, if you are agreeable.

CLINIAS: How could we fail to agree, at any rate for the moment?

ATHENIAN: For gentlemen three related disciplines still remain: (1) computation and the study of numbers; (2) measurements of lines, surfaces and solids; (3) the mutual relationship of the heavenly bodies as they
818 revolve in their courses. None of these subjects must be studied in minute detail by the general public, but only by a chosen few (and who they are, we shall say when the time comes, when our discussion is drawing to a close). But what about the man in the street? It would certainly be a disgrace for him to be ignorant of what people very rightly call the 'indispensable rudiments'; but it will be difficult—impossible, even—for him to make a minute study of the entire subject. However, we can't dispense with the basic necessities, which was probably the point in the mind of the coiner
b of that saying about God, to the effect that 'not even God will be found at odds with necessity'[18]—presumably divine necessities, because if you interpret the remark as referring to necessities in the mortal realm, as do most people who quote such things, it's by far the most naive remark that could be made.

CLINIAS: Well, then, sir, what necessities, divine rather than the other sort, are relevant to these studies?

18. Perhaps the poet Simonides (late sixth and early fifth century); see D. A. Campbell, *Greek Lyric* (Loeb), vol. III, pp. 434–37.

ATHENIAN: These, I think: the necessities of which at least *some* practical and theoretical knowledge will always be essential for every god, spirit c
or hero who means to take charge of human beings in a responsible fashion. A man, at any rate, will fall a long way short of such godlike standards if he can't recognize one, two and three, or odd and even numbers in general, or hasn't the faintest notion how to count, or can't reckon up the days and nights, and is ignorant of the revolutions of the sun and moon and the other heavenly bodies. It's downright stupid to expect that anyone who wants to make the slightest progress in the highest branches of knowl- d
edge can afford to ignore any of these subjects. But what parts of them should be studied, and how intensively, and when? Which topics should be combined, and which kept separate? How will they be synthesized? These are the first questions we have to answer, and then with these preliminary lessons to guide us we may advance to the remaining studies. This is the natural procedure enforced by the necessity with which we maintain no god contends now, or ever will.

CLINIAS: Yes, sir, those proposals of yours, put like that, seem natural e
and correct.

ATHENIAN: They certainly are, Clinias, but such a preliminary statement of them is difficult to put into legal form. If you like, we'll postpone more precise legislation till later.

CLINIAS: It looks to us, sir, as if you're deterred by the way our countrymen commonly neglect this sort of subject. But your fears are quite groundless, so try to tell us what you think, without keeping anything back on that account.

ATHENIAN: I am indeed deterred, for the reasons you mention, but I am 819
even more appalled at those who have actually undertaken those studies, but in the wrong manner. Total ignorance over an entire field is never dangerous or disastrous; much more damage is done when a subject is known intimately and in detail, but has been improperly taught.

CLINIAS: You're right.

ATHENIAN: So we should insist that gentlemen should study each of these b
subjects to at least the same level as very many children in Egypt, who acquire such knowledge at the same time as they learn to read and write. First, lessons in calculation have been devised for tiny tots to learn while they are enjoying themselves at play: they divide up a given number of garlands or apples among larger or smaller groups, and arrange boxers or wrestlers in an alternation of 'byes' and 'pairs', or in a sequence of either, and in the various further ways in which 'byes' and 'pairs' naturally succeed each other. Another game the teachers play with them is to jumble up bowls of gold and c
bronze and silver and so on, or distribute whole sets of one material. In this way, as I indicated, they make the uses of elementary arithmetic an integral part of their pupils' play, so that they get a useful introduction to the art of marshaling, leading and deploying an army, or running a household; and in general they make them more alert and resourceful persons. Next, the

d teacher puts the children on to measuring lengths, surfaces and solids—a study which rescues them from the deep-rooted ignorance, at once comic and shocking, that all men display in this field.

Clinias: What sort of ignorance do you mean, in particular?

Athenian: My dear Clinias, even I took a very long time to discover mankind's plight in this business; but when I did, I was amazed, and could scarcely believe that human beings could suffer from such swinish
e stupidity. I blushed not only for myself, but for Greeks in general.

Clinias: Why so? Go on, sir, tell us what you're getting at.

Athenian: I'll explain—or rather, I'll make my point by asking you a few questions. Here's a simple one: you know what's meant by a 'line', I suppose?

Clinias: Of course.

Athenian: Very well. What about 'surface'?

Clinias: Surely.

Athenian: You appreciate that these are two distinct things, and that 'volume' is a third?

Clinias: Naturally.

Athenian: And you regard all these as commensurable?

Clinias: Yes.

Athenian: And one length, I suppose, is essentially expressible in terms
820 of another length, one surface in terms of another surface, and one volume in terms of another volume?

Clinias: Exactly.

Athenian: Well, what if some of these can't be thus expressed, either 'exactly' or approximately. What if some can, and some cannot, in spite of your thinking they *all* can? What do you think of your ideas on the subject now?

Clinias: They're worthless, obviously.

Athenian: What about the relationship of line and surface to volume, or surface and line to each other? Don't all we Greeks regard them as in some sense commensurable?

b Clinias: We certainly do.

Athenian: But if, as I put it, 'all we Greeks' believe them to be commensurable when fundamentally they are *in*commensurable, one had better address these people as follows (blushing the while on their behalf): 'Now then, most esteemed among the Greeks, isn't this one of those subjects we said[19] it was disgraceful not to understand—not that a knowledge of the basic essentials was much to be proud of?'

Clinias: Of course.

Athenian: Now there are a number of additional and related topics
c which are a fertile breeding-ground for mistakes similar to those we've mentioned.

19. Reading *ephamen* in b5.

CLINIAS: What sort of topics?

ATHENIAN: The real relationship between commensurables and incommensurables. We must be very poor specimens if on inspection we can't tell them apart. These are the problems we ought to keep on putting up to each other, in a competitive spirit, when we've sufficient time to do them justice; and it's a much more civilized pastime for old men than checkers.

CLINIAS: Perhaps so. Come to think of it, checkers is not radically different d
from such studies.

ATHENIAN: Well, Clinias, I maintain that these subjects are what the younger generation should go in for. They do no harm, and are not very difficult: they can be learned in play, and so far from harming the state, they'll do it some good. But if anyone disagrees, we must listen to his case.

CLINIAS: Of course.

ATHENIAN: However, although obviously we shall sanction them if that proves to be their effect, we shall reject them if they seem to disappoint our expectations.

CLINIAS: Obviously indeed. No doubt about it. e

ATHENIAN: Well then, sir, so that our legal code shall have no gaps, let's regard these studies as an established but independent part of the desired curriculum—independent, that is, of the rest of the framework of the state, so that they can be 'redeemed' like 'pledges', in case the arrangements fail to work out to the satisfaction of us the depositors or you the pledgees.

CLINIAS: Yes, that's a fair way to present them.

ATHENIAN: Next, consider astronomy. Would a proposal to teach it to the young meet with your approval, or not?

CLINIAS: Just tell us what you think.

ATHENIAN: Now here's a very odd thing, that really is quite intoler-
able. 821

CLINIAS: What?

ATHENIAN: We generally say that so far as the supreme deity and the universe are concerned, we ought not to bother our heads hunting up explanations, because that is an act of impiety. In fact, precisely the opposite seems to be true.

CLINIAS: What's your point?

ATHENIAN: My words will surprise you, and you may well think them out of place on the lips of an old man. But it's quite impossible to keep quiet about a study, if one believes it is noble and true, a blessing to society
and pleasing in the sight of God. b

CLINIAS: That's reasonable enough, but what astronomy are we going to find of which we can say all that?

ATHENIAN: My dear fellows, at the present day nearly all we Greeks do the great gods—Sun and Moon—an injustice.

CLINIAS: How so?

ATHENIAN: We say that they, and certain other heavenly bodies with them, never follow the same path. Hence our name for them: 'planets.'[20]

c CLINIAS: Good heavens, sir, that's absolutely right. In the course of my life I've often seen with my own eyes how the Morning and the Evening Star, and a number of others, never describe the same course, but vary from one to another; and we all know that the sun and moon always move like that.[21]

ATHENIAN: Megillus and Clinias, this is precisely the sort of point about the gods of the heavens that I am insisting our citizens and young men
d must study, so as to learn enough about them all to avoid blasphemy, and to use reverent language whenever they sacrifice and offer up their pious prayers.

CLINIAS: Right enough—if it's possible, in the first place, to acquire the knowledge you mention. On the assumption that investigation will enable us to correct any errors in our present statements, I too agree that this subject must be studied, in view of its grandeur and importance. So do your level best to convince us of the case you're making, and we'll try to follow you and take in what you say.

e ATHENIAN: My point is not an easy one to appreciate, but it's not unduly difficult either, and won't take up a lot of time, as I'll prove to you by my ability to keep my explanation brief—even though it wasn't so very long ago, when I was no youngster, that I heard of these things. If the subject were difficult, I'd never be able to explain it to you, old men that we all are.

822 CLINIAS: You're right. But what is this subject you say is so wonderful, so suitable for young men to learn, yet unknown to us? Try to tell us that much about it, at any rate, as clearly as you can.

ATHENIAN: Yes, try I must. This belief, my dear fellows, that the moon and sun and other heavenly bodies do in fact 'wander', is incorrect: precisely the opposite is true. Actually, each of them perpetually describes just one fixed orbit, although it is true that to all appearances its path is always changing.
b Further, the quickest body is wrongly supposed to be the slowest, and vice versa. So if the facts are as stated, and we are in error, we're no better than spectators at Olympia would be, if they said that the fastest horse in the race or the fastest long-distance runner was the slowest, and the slowest the fastest, and composed panegyrics and songs extolling the loser as the winner. I don't suppose the praises showered on the runners would be at all apt or welcome to them—they're only men, after all! At Olympia, such
c a mistake would be merely ludicrous. But what are we to think of the

20. Greek *planēta,* lit. 'wanderers'.

21. Reading *tauta* in c5.

analogous theological errors we're committing nowadays? In this field
such mistakes are not funny at all; and it certainly gives the gods no
pleasure to have us spread false rumors about them.

CLINIAS: Very true—if you're right about the facts.

ATHENIAN: So if we can prove I *am* right, all such topics as these must
be studied to the level indicated, but in the absence of proof they must
be left alone. May we adopt this as agreed policy?

CLINIAS: Certainly. d

ATHENIAN: So it's high time to call a halt to our regulations about the
subjects to be studied in the educational curriculum, and turn our attention
to hunting and all that sort of thing. Here too we must adopt the same
procedure as before, because the legislator's job is not done if he simply
lays down laws and gets quit of the business. In addition to his legislation,
he must provide something else, which occupies a sort of no-man's land
between admonition and law. This is a point, of course, that we've come
across often enough as we talked of this and that, as for instance when e
we dealt with the training of very young children. We hold that although
education at that level is certainly the sort of topic on which suggestions are
needed, it would be plain silly to think of these suggestions as formal laws.
Even when the actual laws and the complete constitution have been thus
formally committed to writing, you don't exhaust the praises of a supremely
virtuous citizen by saying 'Here's a good man for you, a devoted and utterly
obedient servant of the laws'. Your praise will be more comprehensive if you
can say, 'He's a good man because he has given a lifetime of unswerving
obedience to the written words of the legislator, whether they took the form 823
of a law, or simply expressed approval or disapproval'. There is no truer
praise of a citizen than that. The real job of the legislator is not only to write
his laws, but to blend into them an explanation of what he regards as respect-
able and what he does not, and the perfect citizen must be bound by these
standards no less than by those backed by legal sanctions.

We can cite our present subject as a kind of witness to demonstrate the
point more clearly. You know how 'hunting' takes a great many forms, b
almost all of which are nowadays covered by this one term. There is a
variety of ways of hunting water animals, and the same goes for the birds
of the air, and the animals that live on land too—and not only the wild
ones, either: we also have to take into account the hunting of men, not
merely by their enemies in war (such as the raids carried out by
robbers and the pursuit of army by army), but by their lovers, who 'pursue'
their quarry for many different reasons, some admirable, some execrable.
When the legislator comes to lay down his laws about hunting he cannot c
leave all this unexplained, but neither can he produce a set of menacing
regulations by imposing rules and punishments for all cases. So how are
we going to tackle this kind of thing? He—the legislator—having asked
himself 'Are these suitable exercises and activities for the young, or not?',

must then approve or condemn the various forms of hunting. The young men, for their part, must listen to the lawgiver and obey him, without being seduced by the prospect of pleasure or deterred by vigorous effort;
d and they should pay much more attention to carrying out warm recommendations than to the detailed threats and punishment of the formal law.

With those preliminaries, we may now put in due form our approval or disapproval of the various forms of hunting, commending the kind that is a good influence on the younger generation and censuring the other sort. So let's now follow up with a talk to the young people, and address them in this idealistic vein:

e 'Friends, we hope you'll never be seized by a desire or passion to fish in the sea or to angle or indeed to hunt water animals at all; and don't resort to creels, which a lazybones will leave to catch his prey whether he's asleep or awake. We hope you never feel any temptation to capture men on the high seas and take to piracy, which will make you into brutal hunters and outlaws; and we hope it never so much as occurs to you to turn thief in town or country. Nor should any young man ever be seduced by a fancy to trap birds—away with such an uncivilized desire! That leaves
824 only land animals for the athletes of our state to hunt and capture. Now sometimes this is done by what is called "night-hunting," when the participants, sluggards that they are, take it in turn to sleep. This sort of hunting is *not* to be recommended, nor is the sort that offers periods of rest from exertion, where the savage strength of the animals is subdued by nets and traps, rather than because a hunter who relishes the fight has got the better of them. All men who wish to cultivate the "divine"[22] courage have only one type of hunting left, which is the best: the capture of four-footed animals with the help of dogs and horses and by your own exertions, when you hunt in person and subdue all your prey by chasing and striking them and hurling weapons at them.'

This address may be taken as an explanation of what we approve and condemn in this entire business. Here's the actual law:

(1) No one should restrain these genuinely 'holy' hunters from taking their hounds where they like and as they like; but the night-trapper, who relies on nets and snares, must not be allowed by anyone, at any time or place, to hunt his prey.

(2) The fowler is not to be restrained on fallow-land or on the mountain side, but any passer-by should chase him off cultivated or holy ground.

(3) The fisherman is to be allowed to fish anywhere except in harbors and sacred rivers, ponds and lakes, provided only that he does not make the water turbid by using noxious juices.

So here's where we have to say that our regulations about education are finally complete.

CLINIAS: That's good news!

22. See 631b–d.

# Book VIII

ATHENIAN: Now then, the next job is to enlist the aid of the oracles 828
reported from Delphi to draw up a program of festivals to be established by law, and discover what sacrifices the state will find it 'meet and right' to offer and which gods should receive them. It will probably be within our own discretion to decide the number and the occasions.

CLINIAS: Yes, I dare say the number will be up to us.

ATHENIAN: So let's deal with that first. There are to be no less than three b
hundred and sixty-five of them, so as to ensure that there is always at least one official sacrificing to some god or spirit on behalf of the state, its citizens and their property. The Expounders, Priests, Priestesses and Prophets are to hold a meeting with the Guardians of the Laws and fill in the details the legislator has inevitably omitted (in fact, this same combined board will also have to spot where such deficiencies exist in the first place). The law will provide for twelve festivals in honor of the twelve gods who c
give their names to the individual tribes. Every month the citizens should sacrifice to each of these gods and arrange chorus performances and cultural and gymnastic contests, varied according to the deity concerned and appropriate to the changing seasons of the year; and they must divide festivals for women into those that must be celebrated in the absence of men, and those that need not be. Further, they must not confuse the cult of the gods of the underworld with that of the 'heavenly' gods (as we must style them) and their retinue. They are to keep the two kinds of celebration separate, and put the former by law in the twelfth month, which is sacred to Pluto. Men of battle should feel no horror for such a d
god as this—on the contrary, they should honor him as a great friend of the human race. The union of body and soul, you see, can never be superior to their separation (and I mean that quite seriously).

There's a further point they will have to appreciate if they are going to allocate these events satisfactorily. Although on the score of leisure-time and abundance of all necessities our state has no rivals at the present day, it still has to live the *good* life, just like the individual person; and the first 829
requirement for a happy life is to do yourself no injury nor allow any to be done to you by others. Of course, the first half of the requirement presents no great problem; the difficulty lies in becoming strong enough to be immune to injury—and the one and only thing that brings such immunity is complete virtue. The same applies to a state: if it adopts the ways of virtue, it can live in peace; but if it is wicked, war and civil war will plague it. That's the situation in a nutshell, and it means that each and every citizen must undertake military training in peace-time, and not b
leave it till war breaks out. So a state that knows its business should reserve at least one day per month (and more than one, if the authorities think fit) for military maneuvers, to be held without regard for the weather, come rain come shine. Men, women and children should participate, and the authorities will decide from time to time whether to take them out on

maneuvers *en masse* or in sections. They must never fail to mount a program
of wholesome recreation, accompanied by sacrifices; and the program
ought to include 'war-games' which should simulate the conditions of
c actual fighting as realistically as possible. On each field-day they should
distribute prizes and awards of merit, and compose speeches in commenda-
tion or reproof of each other according to the conduct of individuals not
only in the contests but in daily life too: those who are deemed to have
acquitted themselves particularly well should be honored, while the fail-
ures should be censured. But not everyone should produce such composi-
tions. For a start, a composer must be at least fifty years old, and he must
not be one of those people who for all their poetical and musical competence
have not a single noble or outstanding achievement to their credit. The
d compositions that ought to be sung (even if in terms of art they leave
something to be desired) are those of citizens who have achieved a high
standard of conduct and whose personal merits have brought them distinc-
tion in the state. The official in charge of education, together with the other
Guardians of the Laws, are to select them and grant them alone the privilege
of giving their Muses free rein; other people are to be entirely forbidden.
No one should dare to sing any unauthorized song, not even if it is sweeter
e than the hymns of Orpheus or of Thamyras.[1] Our citizens must confine
themselves to such pieces as have been given the stamp of approval and
consecrated to the gods, and to compositions which on the strength of their
authors' reputation are judged to be suitable vehicles for commendation or
censure. (I intend the same regulations to apply to men and women alike,
both as regards military excursions and freedom to compose unsuper-
vised.)

The legislator should think things over and employ this sort of analogy:
'Let's see, now, once I've organized the state as a whole, what sort of
830 citizen do I want to produce? *Athletes* are what I want—competitors against
a million rivals in the most vital struggles of all. Right?' 'Very much
so', one would reply, correctly. Well then, if we were training boxers or
pancratiasts or competitors in some other similar contest should we go
straight into the ring unprepared by a daily work-out against an opponent?
If we were boxers, surely we'd have spent days on end *before* the contest
in strenuous practice, learning how to fight, and trying out all those maneu-
b vers we intended to use when the time came to fight to win? We'd come
as close as we could to the real conditions of the contest by putting on
practice-gloves instead of thongs, so as to get as much practice as possible
in delivering and dodging punches. And if we ran particularly short of
sparring partners then we'd go to the trouble of hanging up a lifeless
dummy to practice against; and we certainly wouldn't be put off by the
idiots who might laugh at us. Come to that, if one day we ran out of sparring
c partners completely, living or otherwise, and had no one to practice with

1. Orpheus' singing was said to be able to charm animals and trees and even rocks.
Thamyras was a bard who boasted that not even the Muses could rival his music.

at all, we'd go so far as to box against our own shadows—shadow-boxing with a vengeance! After all, how else can you describe a practice-session in which you just throw punches at the air?

Clinias: No, sir, there's no other term for it than the one you've just used.

Athenian: Very well. So when the fighting force of our state comes to brace itself to face the most important contest of all—to fight for life and d
children and property and the entire state—is it really to be after less intensive training than combatants such as these have enjoyed? Is our citizens' legislator going to be so scared that their practice against each other may look silly to some people that he will neglect his duty? I mean his duty of instructing that maneuvers on a small scale, without arms, should be held every day, if possible (and for this purpose he should arrange teams to compete in every kind of gymnastic exercise), whereas the 'major' exercises, in which arms are carried, should be held not less than once per month. The citizens will compete with each other throughout the entire country, to see who is best at occupying positions and laying e
ambushes, and they must reproduce the conditions of every kind of battle (that will give them *real* practice, because they will be aiming at the closest possible approximation to the *real* targets).[2] And they should use missiles that are moderately dangerous: we don't want the competitions they hold against each other to be entirely unalarming, but to inspire them with fear and do something to reveal the brave man and the coward; and the legislator should confer honors or inflict disgrace as appropriate, so as to prepare 831
the whole state to be an efficient fighter in the real struggle that lasts a lifetime. In fact, if anyone is killed in such circumstances, the homicide should be regarded as involuntary, and the legislator should decree that the killer's hands are clean when once he has been purified according to law. After all, the lawgiver will reflect, even if a few people do die, others who are just as good will be produced to replace them, whereas if fear dies (so to speak), he'll not be able to find in all these activities a yardstick to separate the good performers from the bad—and that would be a bigger disaster for the state than the other. b

Clinias: Yes, sir, we'd agree that this is the sort of law that every state should pass and observe.

Athenian: Now we all know, don't we, the reason why this kind of teamwork and competition is not to be found in any state at the present time, except on a very modest scale indeed? I suppose we'd say it was because the masses and their legislators suffer from ignorance?

Clinias: Maybe so.

Athenian: Not a bit of it, my dear Clinias! We ought to say there are c
*two* causes, and pretty powerful ones at that.

Clinias: What are they?

2. The translation of this parenthesis is something of a paraphrase of some difficult and obscure Greek.

ATHENIAN: The first is a passion for wealth which makes men unwilling to devote a minute of their time to anything except their own personal property. This is what every single citizen concentrates on with all his heart and soul; his ruling passion is his daily profit and he's quite incapable of worrying about anything else. Everyone is out for himself, and is very
d quick off the mark indeed to learn any skill and apply himself to any technique that fills his pocket; anything that doesn't do that he treats with complete derision. So we can treat this as one reason why states are not prepared to undertake this[3] or any other praiseworthy activity in a serious spirit, whereas their insatiable desire for gold and silver makes them perfectly willing to slave away at any ways and means, fair or foul, that promise to make them rich. It doesn't matter whether something is sanctioned by heaven, or forbidden and absolutely disgusting—it's all the same to them, and causes not the slightest scruple, provided it enables them to make beasts of themselves by wallowing in all kinds of food and drink
e and indulging every kind of sexual pleasure.

CLINIAS: You're quite right.

ATHENIAN: So I've described one cause: let's treat this obsession as the first obstacle that prevents states from following an adequate course of training, either for military or for any other purposes: naturally decent folk are turned into traders or merchant-venturers or just plain servants,
832 and bold fellows are made into robbers and burglars, and become bellicose and overbearing. Quite often, though, they are not naturally corrupt: they're simply unlucky.

CLINIAS: How do you mean?

ATHENIAN: Well, if you have to live out your life with a continual hunger in your soul, aren't you 'unlucky' to a degree? What other term could I use?

CLINIAS: Very well, that's one reason. What's your second, sir?

ATHENIAN: Ah, yes, thank you for jogging my memory.

b CLINIAS:[4] According to you, one cause is the insatiable and lifelong acquisitive urge which obsesses us all and stops us undertaking military training in the proper way. All right—now tell us the second.

ATHENIAN: I dare say it looks as if I'm putting off getting round to it because I don't know what to say?

CLINIAS: No, but you do seem to be such a 'good hater' of this sort of character that you're berating it more than the subject in hand requires.

ATHENIAN: That's a very proper rebuke, gentlemen. So you're all ready for the next point, it seems.

CLINIAS: Just tell us, that's all!

c ATHENIAN: The cause I want to put forward are those 'non-constitutions' that I've often mentioned earlier in our conversation—democracy, oligarchy and tyranny. None of these is a genuine political system: the best

3. Military exercises.

4. This speech and Clinias' next one are attributed to Megillus in the Budé text.

name for them all would be 'party rule', because under none of them do willing rulers govern willing subjects: that is, the rulers are always willing enough, but they never hold power with the consent of the governed. They hold it by constant resort to a degree of force, and they are never prepared to allow any of their subjects to cultivate virtue or acquire wealth or strength or courage—and least of all will they tolerate a man who can fight. So much for the two main roots of pretty nearly all evil, and certainly the main roots of the evils we're discussing. However, the political system which we are now establishing by law has avoided both of them. Our d
state enjoys unparalleled leisure, the citizens live free of interference from each other, and I reckon these laws of ours are quite unlikely to turn them into money-grubbers. So it's a reasonable and natural supposition that a political system organized along these lines will be unique among contemporary constitutions in finding room for the military training-cum-sport that we've just described—and described in the detail it deserves, too.

CLINIAS: Splendid.

ATHENIAN: The next thing we have to bear in mind about any athletic contest is this: if it helps us to train for war we must go in for it and put e
up prizes for the winners, but leave it strictly alone if it does not. Isn't that right? It will be better to stipulate from the start the contests we want, and provide for them by law. First, I take it we should arrange races, and contests of speed in general?

CLINIAS: Yes, we should.

ATHENIAN: At any rate, what makes a man a fine soldier more than anything else is general agility, a ready use of his hands as well as his feet. If he's a good runner, he can make a capture or show a clean pair of 833
heels, and versatile hands will stand him in good stead in tangling with the enemy in close combat, where strength and force are essential.

CLINIAS: Certainly.

ATHENIAN: But if he hasn't any weapons, neither ability will help him as much as it might.

CLINIAS: Of course not.

ATHENIAN: So in our contests the first competitor our herald will summon will be (as now) the single-length runner, and he will come forward armed; we shan't put up any prizes for competitors who are *un*armed. So, as I say, the competitor who intends to run one length will come on first, carrying his arms; second will come the runner over two lengths, and third the middle-distance runner; the long-distance man will come on fourth. b
The fifth competitor we shall call the 'heavy-armed' runner, from his heavier equipment. We shall start by sending him in full armor over a distance of sixty lengths to some temple of Ares and back. His course will be over comparatively level ground, whereas the other runner,[5] an archer in full archer rig, will run a course of 100 lengths over hills and constantly

5. The runner in a sixth race? The passage is confusingly written. (A 'length' = a 'stade' = about 200 yards; 60 lengths = about 7 miles; 100 lengths = about 11½ miles.)

c changing terrain to a temple of Apollo and Artemis. While we're waiting for these runners to return, we'll hold the other contests and finally award the prizes to the winners of each event.

CLINIAS: Fine.

ATHENIAN: Let's arrange these contests in three groups, one for boys, one for youths, and one for men. When youths and boys compete as archers and heavy-armed runners, we shall make the course for youths two-thirds of the full distance and for the boys one-half. As for females, girls below
d the age of puberty must enter (naked) for the single-length, double-length, middle and long-distance races, their competition being confined to the stadium. Girls from thirteen till the marriage-age must enter till they are at least eighteen, but not beyond the age of twenty. (They, however, must put on some suitable clothing before presenting themselves as competitors in these races.)

So much for men's and women's races; now to deal with trials of strength. Instead of wrestling and other he-man contests that are the fashion nowa-
e days, we'll have our citizens fight each other *armed*—man to man, two a side, and any number per team up to ten. We ought to take our cue from the authorities in charge of wrestling, who have established criteria which will tell you whether a wrestler's performance is good or bad. We must call in the leading exponents of armed combat and ask them to assist us in framing rules about the blows one needs to avoid or inflict to win in
834 this sort of of contest, and similarly the points we need to look for to decide the loser. The same set of rules should also apply to the female competitors (who must be below the age of marriage). To replace the *pancration*[6] we shall establish a general contest of light-infantry; the weapons of the competitors are to be bows, light shields, javelins, and stones cast by hand and sling. Here too we'll lay down rules, and give the honor of victory to the competitor who reaches the highest standard as defined by the regulations.

The next thing for which we must provide rules is horse-racing. In Crete,
b of course, horses are of rather limited use and you don't find very many of them, so that the comparatively low level of interest in rearing and racing them is inevitable. No one in this country keeps a team of horses for a chariot, nor is ever likely to covet such a thing, so that if we established contests in something so foreign to the local customs, we'd be taken for
c idiots (and rightly). The way to modify this sport for the local Cretan terrain is to put up prizes for skill in *riding* the animals—as foals, when half-grown, and when fully grown. So our law should provide for contests in which jockeys can compete with each other in these categories; Tribe-Leaders and Cavalry-Commanders should be entrusted with the job of deciding the actual courses and deciding which competitor has won (in full armor, of course: just as in the athletic events, if we established contests for unarmed competitors we'd be failing in our duty as legislators). And

6. A form of wrestling-cum-boxing that permitted kicking and choking as well.

since your Cretan is no fool at archery and javelin-throwing in the saddle, d
people should amuse themselves by competing in this sort of contest too.
As for women, there's no point in making it legally compulsory for them
to join in all this, but if their previous training has got them into the habit,
and girls and young women are in good enough shape to take part without
hardship, then they should be permitted to do so and not discouraged.

That brings us to the end of our discussion of competitions and the
teaching of physical training, and we've seen what strenuous efforts are e
involved in the contests and the daily sessions with instructors. In fact,
we've also dealt pretty thoroughly with the role of the arts, although
arrangements about reciters of poetry and similar performers, and the
chorus-competitions obligatory at festivals, can wait till the gods and the
minor deities have had their days and months and years allocated to them;
then we can decide whether festivals should be held at two-year or four-
year intervals, or whether the gods suggest some other pattern. On these 835
occasions we must also expect the various categories of competitions in
the arts to be held. This is the province of the stewards of the games, the
Minister of Education and the Guardians of the Laws, who should all meet
as an ad hoc committee and produce their own regulations about the date
of each chorus-competition and dance, and specify who should compete
and who may watch. The original legislator has often enough explained
the sort of thing each of these performances should be, and has dealt with b
the songs, the spoken addresses and the musical styles that accompany
the rhythmical movements of the dancers. His successors must emulate
his example in their own legislation and match the right contests with the
right sacrifices at the right times, and so provide festivals at which the
state may make merry.

ATHENIAN: It's not difficult to see how to cast these and similar matters
in the form of a law, and making this or that alteration won't help or harm
the state very much. But now for something which is not a triviality at
all. It's a point on which it is difficult to convince people, and God himself
is really the only person to do it—supposing, that is, we could in fact c
somehow get explicit instructions from him. Since that's impossible, it
looks as if we need some intrepid mortal, who values frankness above all,
to specify the policy he believes best for the state and its citizens, give a
firm 'no' to our most compelling passions, and order his audience of
corrupted souls to observe standards of conduct in keeping with, and
implied by, the whole organization of the state. There will be no one to
back him up. He'll walk alone, with reason alone to guide him.

CLINIAS: What new topic is this, sir? We don't see what you're getting at. d

ATHENIAN: That's not surprising. Well, I'll try to put the point more
explicitly. When I came to discuss education, I envisaged young men and
women associating with each other on friendly terms. Naturally enough,
I began to feel some disquiet. I wondered how one would handle a state
like this, with everyone engaged on a life-long round of sacrifices and
festivals and chorus-performances, and the young men and women well- e

nourished and free of those demanding and degrading jobs that damp down lust so effectively. Reason, which is embodied in law as far as it can be, tells us to avoid indulging the passions that have ruined so many people. So how will the members of *our* state avoid them? (Actually, most
836 desires may well be kept in check by the regulations we have already framed. If so, we needn't be surprised. After all, the law against excessive wealth will do a great deal to encourage self-control, and the educational curriculum is full of sound rules designed for the same purpose. The officials too, who have been rigorously trained to watch this point closely, and to keep the young people themselves under constant surveillance, will do something to restrain ordinary passions, as far as any man can.) But
b there are *sexual* urges too—of boys and girls and heterosexual love among adults. What precautions should one take against passions which have had a such a powerful effect on public and private life? What's the remedy that will save us from the dangers of sex in each? It's a great problem, Clinias. We're faced with the fact that though in several other respects Crete in general and Sparta give us pretty solid help when we frame laws that flout common custom, in affairs of the heart (there's no one listening,
c so let's be frank) they are totally opposed to us. Suppose you follow nature's rule and establish the law that was in force before the time of Laius.[7] You'd argue that one may have sexual intercourse with a woman but not with men or boys. As evidence for your view, you'd point to the animal world, where (you'd argue) the males do not have sexual relations with each other, because such a thing is unnatural. But in Crete and Sparta your argument would not go down at all well, and you'd probably persuade nobody. However, another argument is that such practices are incompatible with what in our view should be the constant aim of the
d legislator—that is, we're always asking 'which of our regulations encourages virtue, and which does not?' Now then, suppose in the present case we agreed to pass a law that such practices are desirable, or not at all *un*desirable—what contribution would they make to virtue? Will the spirit of courage spring to life in the soul of the seduced person? Will the soul of the seducer learn habits of self-control? No one is going to be led astray by that sort of argument—quite the contrary. Everyone will censure the
e weakling who yields to temptation, and condemn his all-too-effeminate partner who plays the role of the woman. So who on earth will pass a law like that? Hardly anyone, at any rate if he knows what a genuine law really is. Well, how do we show the truth of this? If you want to get these
837 things straight, you have to analyze the nature of friendship and desire and 'love', as people call it. There are two separate categories, plus a third which is a combination of both. But one term covers all three, and that causes no end of muddle and confusion.

CLINIAS: How's that?

7. In myth, Laius (Oedipus' father) abducted his host Pelops' son, thus inaugurating homosexual attachments between men and teenage boys.

Athenian: When two people are virtuous and alike, or when they are equals, we say that one is a 'friend' of the other; but we also speak of the poor man's 'friendship' for the man who has grown rich, even though they are poles apart. In either case, when the friendship is particularly ardent, we call it 'love'.

Clinias: Yes, we do. b

Athenian: And a violent and stormy friendship it is, when a man is attracted to someone widely different to himself, and only seldom do we see it reciprocated. When men are alike, however, they show a calm and mutual affection that lasts a lifetime. But there is a third category, compounded of the other two. The first problem here is to discover what this third kind of lover is really after. There is the further difficulty that he himself is confused and torn between two opposing instincts: one tells him to enjoy his beloved, the other forbids him. The lover of the body, c
hungry for his partner who is ripe to be enjoyed, like a luscious fruit, tells himself to have his fill, without showing any consideration for his beloved's character and disposition. But in another case physical desire will count for very little and the lover will be content to gaze upon his beloved without lusting for him—a mature and genuine desire of soul for soul. That body should sate itself with body he'll think outrageous; his reverence and respect for self-control, courage, high principles and good judgment will make him want to live a life of purity, chaste lover with chaste beloved. d
This combination of the first two is the 'third' love we enumerated a moment ago.

So there's your list of the various forms love can take: should the law forbid them all, and keep them out of our community? Or isn't it obvious that in our state we'd want to see the virtuous kind spring up—the love that aims to make a young man perfect? It's the other two we'll forbid, if we can. Or what *is* our policy, Megillus, my friend?

Megillus: Indeed, sir, I heartily endorse what you've said on the subject. e

Athenian: So it looks as if I've won you over, my dear fellow, as I guessed I would, and there's no call for me to inquire what line the law of Sparta takes on this topic: it is enough to note your assent to my argument. Later on I'll come back to the subject and try to charm Clinias also into agreeing with me. Let's assume you've both conceded my point, and press on with our laws without delay.

Megillus: Fair enough.

Athenian: I want to put the law on this subject on a firm footing, and 838
at the moment I'm thinking of a method which is, in a sense, simplicity itself. But from another point of view, nothing could be harder.

Megillus: What are you getting at?

Athenian: We're aware, of course, that even nowadays most men, in spite of their general disregard for the law, are very effectively prevented from having relations with people they find attractive. And they don't refrain reluctantly, either—they're more than happy to.

Megillus: What circumstances have you in mind?

Athenian: When it's one's brother or sister whom one finds attractive.
b And the same law, unwritten though it is, is extremely effective in stopping
a man sleeping—secretly or otherwise—with his son or daughter, or mak-
ing any kind of amorous approach to them. Most people feel not the
faintest desire for such intercourse.

Megillus: That's perfectly true.

Athenian: So the desire for this sort of pleasure is stifled by a few words?

Megillus: What words do you mean?

Athenian: The doctrine that 'these acts are absolutely unholy, an abomi-
nation in the sight of the gods, and that nothing is more revolting'. We
c refrain from them because we never hear them spoken of in any other
way. From the day of our birth each of us encounters a complete unanimity
of opinion wherever we go; we find it not only in comedies but often in
the high seriousness of tragedy too, when we see a Thyestes on the stage,
or an Oedipus or a Macareus, the clandestine lover of his sister.[8] We
watch these characters dying promptly by their own hand as a penalty
for their crimes.

d Megillus: You're right in this, anyway, that when no one ventures to
challenge the law, public opinion works wonders.

Athenian: So we were justified in what we said just now. When the
legislator wants to tame one of the desires that dominate mankind so
cruelly, it's easy for him to see his method of attack. He must try to make
everyone—slave and free, women and children, and the entire state without
any exception—believe that this common opinion has the backing of reli-
e gion. He couldn't put his law on a securer foundation than that.

Megillus: Very true. But how on earth it will ever be possible to produce
such spontaneous unanimity—

Athenian: I'm glad you've taken me up on the point. This is just what
I was getting at when I said I knew of a way to put into effect this law of
ours which permits the sexual act only for its natural purpose, procreation,
and forbids not only homosexual relations, in which the human race is
deliberately murdered, but also the sowing of seeds on rocks and stone,
839 where it will never take root and mature into a new individual; and we
should also have to keep away from any female 'soil' in which we'd be
sorry to have the seed develop. At present, however, the law is effective
only against intercourse between parent and child, but if it can be put on
a permanent footing and made to apply effectively, as it deserves to, in
other cases as well, it'll do a power of good. The first point in its favor is
that it is a *natural* law. But it also tends to check the raging fury of the
sexual instinct that so often leads to adultery; it discourages excesses in
b food and drink, and inspires men with affection for their own wives. And
there are a great many other advantages to be gained, if only one could
get this law established.

8. Thyestes had intercourse with his own daughter; Oedipus married his own mother.

But suppose some impatient young man were standing here, bursting with seed, and heard us passing this law. He'd probably raise the echoes with his bellows of abuse, and say our rules were stupid and unrealistic. Now this is just the sort of protest I had in mind when I remarked that I
knew of a very simple—and yet very difficult—way of putting this law c
into effect permanently. It's easy to see that it *can* be done, and easy to see *how*: if the rule is given sufficient religious backing, it will get a grip on every soul and intimidate it into obeying the established laws. But in fact we've reached a point where people still think we'd fail, even granted those conditions. It's just the same with the supposed impossibility of the
common meals: people see no prospect of a whole state keeping up the d
practice permanently. The proven facts of the case in your countries do nothing to convince your compatriots that it would be natural to apply the practice to women. It was this flat disbelief that made me remark on the difficulty of turning either proposal into an established law.

MEGILLUS: You're absolutely right.

ATHENIAN: Even so, I could put up quite a convincing case for supposing that the difficulties are not beyond human powers, and can be overcome. Do you want me to try to explain?

CLINIAS: Of course.

ATHENIAN: When will a man find it easier to keep off sex, and do as he's e
told in a decent and willing spirit? When he's not neglected his training and is in the pink of condition, or when he's in poor shape?

CLINIAS: He'll find it a great deal easier if he's in training.

ATHENIAN: Now of course we've all heard the story of how Iccus of 840
Tarentum set about winning contests at Olympia and elsewhere. He was so ambitious to win, they say, and his expertise was strengthened by a character of such determination and self-discipline, that he never had a woman or even a boy during the whole time he was under intensive training. In fact, we are told very much the same about Crison, Astylus, Diopompus, and a great many others. And yet, Clinias, their characters were far less well educated than the citizens you and I have to deal with,
and physically they were much lustier. b

CLINIAS: Yes, you're right—our ancient sources are quite definite that these athletes did in fact do as you say.

ATHENIAN: Well then, they steeled themselves to keep off what most people regard as sheer bliss, simply in order to win wrestling matches and races and so forth. But there's a much nobler contest to be won than that, and I hope the young people of our state aren't going to lack the stamina for it. After all, right from their earliest years we're going to tell
them stories and talk to them and sing them songs, so as to charm them, c
we trust, into believing that this victory is the noblest of all.

CLINIAS: What victory?

ATHENIAN: The conquest of pleasure. If they win this battle, they'll have a happy life—but so much the worse for them if they lose. That apart, the

fear that the act is a ghastly sin will, in the end, enable them to tame the
passions that their inferiors have tamed before them.

CLINIAS: Quite likely.

d ATHENIAN: So thanks to the general corruption, that's the predicament
we've got into at this point in our consideration of the law about sex. My
position, therefore, is that the law must go ahead and insist that our citizens'
standards should not be lower than those of birds and many other wild
animals which are born into large communities and live chaste and un-
married, without intercourse, until the time comes for them to breed. At
e the appropriate age they pair off; the male picks a wife, and female chooses
a husband, and forever afterwards they live in a pious and law-abiding way,
firmly faithful to the promises they made when they first fell in love. Clearly
our citizens ought to reach standards higher than the animals'. But if they
are corrupted by seeing and hearing how most other Greeks and non-Greeks
go in for 'free' love on a grand scale, they may prove unable to keep them-
selves in check. In that case, the law-guardians must turn themselves into
law-makers and frame a second law for people to observe.

841 CLINIAS: So if they find it impossible to enforce the ideal law now pro-
posed, what other law do you advise them to pass?

ATHENIAN: The second best, Clinias, obviously.

CLINIAS: Namely?

ATHENIAN: My point is that the appetite for pleasures, which is very strong
and grows by being fed, can be *starved* (you remember) if the body is given
plenty of hard work to distract it. We'd get much the same result if we were
incapable of having sexual intercourse without feeling ashamed; our shame
b would lead to infrequent indulgence, and infrequent indulgence would
make the desire less compulsive. So in sexual matters our citizens ought to
regard privacy—though not complete abstinence—as a decency demanded
by usage and unwritten custom, and lack of privacy as disgusting. That will
establish a second legal standard of decency and indecency—not the ideal
standard, but the next to it. People whose characters have been corrupted
(they form a single group we call the 'self-inferior') will be made prisoners
c of three influences that will compel them not to break the law.

CLINIAS: What influences do you mean?

ATHENIAN: Respect for religion, the ambition to be honored, and a mature
passion for spiritual rather than physical beauty. 'Pious wishes!' you'll
say; 'what romance!' Perhaps so. But if such wishes were to come true,
the world would benefit enormously.

However, God willing, perhaps we'll succeed in imposing one or other of
d two standards of sexual conduct. (1) Ideally, no one will dare to have relations
with any respectable citizen woman except his own wedded wife, or sow
illegitimate and bastard seed in courtesans, or sterile seed in males in defi-
ance of nature. (2) Alternatively, while suppressing sodomy entirely, we
might insist that if a man does have intercourse with any woman (hired or
procured in some other way) except the wife he wed in holy marriage with
e the blessing of the gods, he must do so without any other man or woman

getting to know about it. If he fails to keep the affair secret, I think we'd be
right to exclude him by law from the award of state honors, on the grounds
that he's no better than an alien. This law, or 'pair' of laws, as perhaps we
should say, should govern our conduct whenever the sexual urge and the
passion of love impel us, wisely or unwisely, to have intercourse. 842

Megillus: Speaking for myself, sir, I'd be very glad to adopt this law
of yours. Clinias must tell us his view on the subject himself.

Clinias: I'll do that later, Megillus, when I think a suitable moment has
arrived. For the nonce, let's not stop our friend from going on to the next
stage of his legislation.

Megillus: Fair enough.

Athenian: Well then, this is the stage we've reached now. We can assume b
that communal meals have been established (a thing that would be a
problem in other countries, we notice, but not in Crete, where no one
would think of doing anything else). But how should they be organized?
On the Cretan model, or the Spartan? Or is there some third type that
would suit us better than either? I don't think this is a difficulty, and
there's not much to be gained from settling the point. The arrangements
we have made are quite satisfactory as they are.

The next question is the organization of a food-supply in keeping with c
our communal meals. In other states the sources of supply are many and
varied—in fact, at least twice as many as in ours, because most Greeks
draw on both the land and the sea for their food, whereas our citizens
will use the land alone. For the legislator, this makes things simpler. It's
not just that half the number of laws or even substantially fewer will do, d
but they'll be more suitable laws for gentlemen to observe. Our state's
legislator, you see, need not bother his head very much about the merchant-
shipping business, trading, retailing, inn-keeping, customs duties, mining,
money-lending and compound interest. Waving aside most of these and
a thousand other such details, he'll legislate for farmers, shepherds, bee-
keepers, for the protectors of their stock and the supervisors of their equip- e
ment. His laws already cover such major topics as marriage and the birth
and rearing of children, as well as their education and the appointment
of the state's officials, so the next topic to which he must turn in his
legislation is their food, and the workers who co-operate in the constant
effort to produce it.

Let's first specify the 'agricultural' laws, as they're called. The first law—
sanctioned by Zeus the Protector of Boundaries—shall run as follows:

No man shall disturb the boundary stones of his neighbor, whether
fellow citizen or foreigner (that is, when a proprietor's land is on the
boundary of the state), in the conviction that this would be 'moving the
immovable'[9] in the crudest sense. Far better that a man should want to 843
try to move the biggest stone that does not mark a boundary, than a small

9. A proverbial expression of disapproval for fundamental social and political change. Cf. 684e.

one separating friend's land from foe's, and established by an oath sworn
to the gods. Zeus the God of Kin is witness in the one case, Zeus the
Protector of Foreigners in the other. Rouse him in either capacity, and the
most terrible wars break out. If a man obeys the law he will escape its
penalties, but if he holds it in contempt he is to be liable to two punishments,
b the first at the hands of the gods, the second under the law. No man, if
he can help it, must move the boundary stones of his neighbor's land, but
if anyone does move them, any man who wishes should report him to the
farmers, who should take him to court.

26. If anyone is found guilty of such a charge,
*he must* be regarded as a man who has tried to reallocate land, whether clandestinely or by force; and the court must bear that in mind when assessing what penalty he should suffer or what fine he should pay.

Next we come to those numerous petty injuries done by neighbor to
neighbor. The frequent repetition of such injuries makes feelings run high,
so that relations between neighbors become intolerably embittered. That's
c why everyone should do everything he can to avoid offending his neighbor;
above all, he must always go out of his way to avoid all acts of encroachment. Hurting a man is all too easy, and we all get the chance to do that;
but it's not everyone who is in a position to do a good turn.

27. If a man oversteps his boundaries and encroaches on his neighbor's land,
*he should* pay for the damage, and also, by way of cure for such uncivilized
d and inconsiderate behavior, give the injured party a further sum of twice
that amount.

In all these and similar cases the Country-Wardens should act as inspectors, judges and assessors (the entire divisional company in the graver cases, as indicated earlier,[10] and the Guards-in-Chief in the more trivial).

28. If a man lets his cattle graze on someone else's land,
*these officials* must inspect the damage, reach a decision, and assess the penalty.

e 29. If anyone takes over another man's bees, by making rattling noises
to please and attract them, so that he gets them for himself,
*he must* pay for the injury he has done.

30. If anyone burns his own wood without taking sufficient precautions to protect his neighbor's,
*he must* be fined a sum decided by the officials.

10. See 761d–e.

31. If when planting trees a man fails to leave a suitable gap between them and his neighbor's land,
*the same* regulation is to apply.

These are points that many legislators have dealt with perfectly adequately, and we should make use of their work rather than demand that the grand architect of our state should legislate on a mass of trivial details that can be handled by any run-of-the-mill lawgiver. For instance, the 844
water supply for farmers is the subject of some splendid old-established laws—but there's no call to let them overflow into our discussion! It is fundamental that anyone who wants to conduct a supply of water to his own land may do so, provided his source is the public reservoirs and he does not intercept the surface springs of any private person. He may conduct the water by any route he likes, except through houses, temples and tombs, and he must do no damage beyond the actual construction of the conduit. But in some naturally dry districts the soil may fail to retain b
the moisture when it rains, so that drinking water is in short supply. In that case the owner must dig down to the clay, and if he fails to strike water at that depth he should take from his neighbors sufficient drinking water for each member of his household. If the neighbors too are short of water, he should share the available supply with them and fetch his ration daily, the amount to be fixed by the Country-Wardens. A man may injure c
the farmer or householder next door on higher ground by blocking the flow of rainwater; on the other hand he may discharge it so carelessly as to damage the man below. If the parties are not prepared to co-operate in this matter, anyone who wishes should report the matter to an official—a City-Warden in the city, and a Country-Warden in the country—and obtain a ruling as to what each side should do. Anyone refusing to abide by the ruling must take the consequences of being a grudging and ill- d
tempered fellow:

32. If found guilty,
*he should* pay twice the value of the damage to the injured party as a penalty for disobeying the officials.

Everyone should take his share of the fruit harvest on roughly the following principles. The goddess of the harvest has graciously bestowed two gifts upon us, (a) the fruit which pleases Dionysus so much, but which won't keep, and (b) the produce which nature has made fit to store. So our law about the harvest should run as follows.

33. Anyone who consumes any part of the coarse crop of grapes or figs, whether on his own land or another's, before the rising of Arcturus[11] e
ushers in the vintage,
*must owe*

11. The autumn equinox.

(a) fifty drachmas, to be presented to Dionysus, if he takes the fruit from his own trees,
(b) one hundred if from his neighbor's, and
(c) sixty-six and two-thirds drachmas if from anyone else's trees.

If a man wants to gather in the 'dessert' grapes or figs (as they are called nowadays), he may do so whenever and however he likes, provided they come from his own trees; but

34. (a) if he takes them from anyone else's trees, without permission,
*he must* be punished in accordance with the provisions of the law which
845 forbids the removal of any object except by the depositor.[12]
(b) If a slave fails to get the landowner's permission before touching any of this kind of fruit,
*he must* be whipped, the number of lashes to be the same as the number of grapes in the bunch or figs picked off the fig tree.

A resident alien may buy dessert fruit and gather it in as he wishes. If a foreigner on a visit from abroad feels inclined to eat some fruit as he travels along the road, he may, if he wishes, take some of the dessert crop gratis,
b for himself and one attendant, as part of our hospitality. But foreigners must be prevented by law from sharing with us the 'coarse' and similar fruits.

35. If a foreigner, master or slave, touches such fruit in ignorance of the law,
(a) *the slave* is to be punished with a whipping;
(b) *the free* man is to be dismissed with a warning and told to stick to the crop that is unsuitable to be kept in store in the form of raisins, wine, or dried figs.

There should be nothing to be ashamed of in helping oneself inconspicuously to apples and pears and pomegranates and so on, but

c 36. (a) if a man under thirty is caught at it,
*he should* be cuffed and driven off, provided he suffers no actual injury.

A citizen should have no legal redress for such an assault on his person. (A foreigner is to be entitled to a share of these fruits too, on the same terms as he may take some of the dessert grapes and figs.) If a man *above* thirty years of age touches some fruits, consuming them on the spot and taking none away with him, he shall share them all on the same terms as the foreigner, but

(b) if he disobeys the law,
d *he should* be liable to be disqualified from competing for awards of merit, if anyone draws the attention of the assessors to the facts when the awards are being decided.

12. This offense is thus brought under the umbrella of the general law mentioned in 842e–843b.

Water is the most nourishing food a garden can have, but it's easily fouled, whereas the soil, the sun and the winds, which co-operate with the water in fostering the growth of the plants that spring up out of the ground, are not readily interfered with by being doctored or channeled off or stolen. But in the nature of the case, water is exposed to all these hazards. That is why it needs the protection of a law, which should run e
as follows.

If anyone deliberately spoils someone else's water supply, whether spring or reservoir, by poisons or excavations or theft, the injured party should take his case to the City-Wardens and submit his estimate of the damage in writing.

> 37. Anyone convicted of fouling water by magic poisons
> *should*, in addition to his fine, purify the spring or reservoir, using whatever method of purification the regulations of the Expounders[13] prescribe as appropriate to the circumstances and the individuals involved.

A man may bring home any crop of his own by any route he pleases, 846
provided he does no one any damage, or, failing that, benefits to at least three times the value of the damage he does his neighbor. The authorities must act as inspectors in this business, as well as in all other cases when someone uses his own property deliberately to inflict violent or surreptitious damage on another man or some piece of his property without his permission. When the damage does not exceed three minas, the injured party must report it to the magistrates and obtain redress; but if he has a larger claim to bring against someone, he must get his redress from the culprit by taking the case to the public courts. b

> 38. If one of the officials is judged to have settled the penalties in a biased fashion,
> *he must* be liable to the injured person for double the damages.

Offenses committed by the authorities in handling any claim should be taken to the public courts by anyone who may wish to do so. (There are thousands of procedural details like this that must be observed before a penalty can be imposed: the complaint has to be lodged, the summonses issued and served in the presence of two witnesses, or whatever the proper c
number is. All this sort of detail must not be left to look after itself, but it is not important enough for a legislator who is getting on in years. Our younger colleagues must settle these points, using the broad principles laid down by their predecessors as a guide for their own detailed regulations, which they must apply as need arises. They must thus proceed by trial and error until they think they have got a satisfactory set of formalities, and once the process of modification is over, they should finalize their rules of procedure and render them lifelong obedience.)

13. For these officials, see 759d–e.

d As for craftsmen in general, our policy should be this. First, no citizen
of our land nor any of his servants should enter the ranks of the workers
whose vocation lies in the arts and crafts. A citizen's vocation, which
demands a great deal of practice and study, is to establish and maintain
good order in the community, and this is not a job for part-timers. Following
e two trades or two callings efficiently—or even following one and supervis-
ing a worker in another—is almost always too difficult for human nature.
So in our state this must be a cardinal rule: no metal worker must turn to
carpentry and no carpenter must supervise workers in metal instead of
practicing his own craft. We may, of course, be met with the excuse that
847 supervising large numbers of employees is more sensible—because more
profitable—than just following one's own trade. But no! In our state each
individual must have one occupation only, and that's how he must earn
his bread. The City-Wardens must have the job of enforcing this rule.

39. If a citizen born and bred turns his attention to some craft instead of to the cultivation of virtue,
*the City-Wardens* must punish him with marks of disgrace and dishonor until they've got him back on the right lines.

40. If a foreigner follows two trades,
*the Wardens* must punish him by prison or fines or expulsion from the
b state, and so force him to play one role, not many.

As for craftsmen's pay, and cases of refusal to take delivery of their work, or any other wrong done to them by other parties or by them to others, the City-Wardens must adjudicate if the sum at issue does not exceed fifty drachmas; if more, the public courts must decide the dispute as the law directs.

In our state no duties will have to be paid by anyone on either imports
or exports. No one must import frankincense and similar foreign fragrant
c stuff used in religious ritual, or purple and similar dyes not native to the
country, or materials for any other process which only needs imports from
abroad for inessential purposes; nor, on the other hand, is anyone to export
anything that it is essential to keep in the state. The twelve Guardians of
the Laws next in order of seniority after the five eldest must act as inspectors
and supervisors in this entire field. But what about arms and other military
d equipment? Well, if we ever need, for military purposes, some technique,
vegetable product, mineral, binding material or animal that has to be
obtained from abroad, the *state* will receive the goods and pay for them,
and the Cavalry-Commanders and the Generals are to be in charge of
importing them and exporting other goods in exchange. The Guardians
of the Laws will lay down suitable and adequate regulations on the subject.
Nowhere in the whole country and whole state are these—or any other—
e goods to be retailed for profit.

It looks as if the right way to organize the food supply and distribute agricultural produce will be to adopt something like the regulations in

force in Crete. Every citizen must divide each crop into twelve parts corresponding to the twelve periods in which it is consumed. Take wheat or barley, for instance (though the same procedure must be followed for all the other crops too, as well as for any livestock there may be for sale in 848
each district): each twelfth part should be split proportionately into three shares, one for the citizens, one for their slaves, and the third for workmen and foreigners in general (i.e., communities of resident aliens in need of the necessities of life, and occasional visitors on some public or private business). It should be necessary to sell only this third share of all the necessities of life; there should be *no* necessity to sell any part of the other b
two. So what will be the right way to arrange the division? It's obvious, for a start, that the shares we allocate will in one sense be equal, but in another sense unequal.

CLINIAS: What do you mean?

ATHENIAN: Well, the land will grow a good crop of one thing and a bad crop of another. That's inevitable, I take it.

CLINIAS: Of course.

ATHENIAN: None of the three shares—for masters, slaves and foreigners—must be better than the others: when the distribution is made, each group should be treated on an equal footing and get the same share. Each citizen must take his two shares and distribute them at his discretion to the slaves c
and free persons in his charge (quality and quantity being up to him). The surplus should be distributed by being divided up according to the number of animals that have to be supported by the produce of the soil, and rationed out accordingly.

Next, the population should have houses grouped in separate localities. This entails the following arrangements. There should be twelve villages, one in the middle of each of the twelve divisions of the state; in each d
village the settlers should first select a site for a market-place with its temples for gods and their retinue of spirits. (Local Magnesian gods, and sanctuaries of other ancient deities who are still remembered, must be honored as they were in earlier generations.) In each division they must establish shrines of Hestia, Zeus, Athena, and the patron deity of the district; after this their first job must be to build houses on the highest ground in a circle round these temples, so as to provide the garrison with e
the strongest possible position for defense.

Thirteen groups of craftsmen must be formed to provide for all the rest of the territory. One should be settled in the central city and the others distributed all round it on the outskirts in twelve further sub-groups corresponding to the twelve urban districts; and the categories of craftsmen useful to farmers must be established in each village. They must all be under the supervision of the chief Country-Wardens, who must decide the number and type required in each district and say where they should settle in order to prove their full worth to the farmers and cause them as little trouble as possible. Similarly the board of City-Wardens must assume 849
permanent responsibility for the craftsmen in the city.

The detailed supervision of the market must naturally be in the hands
of the Market-Wardens. Their first job is to ensure that no one does any
damage to the temples round the marketplace; secondly, to see whether
people are conducting their business in an orderly or disorderly fashion,
and inflict punishment on anyone who needs it. They must ensure that
every commodity the citizens are required to sell to the aliens is sold in
b the manner prescribed by law. The law will be simply this. On the first
day of the month the agents (the foreigners or slaves who act for the
citizens) must produce the share that has to be sold to the aliens, beginning
with the twelfth part of corn. At this first market an alien must buy corn
and related commodities to last him the whole month. On the tenth day
the respective parties must buy and sell a whole month's supply of liquids.
c The third[14] market should be on the twentieth, when they should hold a
sale of the livestock that individuals find they need to buy or sell, and
also of all the equipment or goods sold by the farmers, and which aliens
cannot get except by purchase—skins, for example, and all clothing, woven
material, felt, and all that sort of thing. But these goods (and barley and
wheat ground into flour and every other kind of food) should never be
d bought by, or sold to, a citizen or his slave through *retail* channels. The
proper place for 'retail' trading (as it's generally called) in corn and wine
is the foreigners' market, where foreigners are to sell these goods to crafts-
men and their slaves; and when the butchers have cut up the animals, it
is to foreigners that they must dispose of the meat. Any foreigner who
wishes may buy any kind of firewood wholesale any day from the district
agents and sell it to other foreigners whenever he likes and in whatever
e quantity he pleases.

All other goods and equipment needed by various people should be
brought to the general market and put up for sale in the place allotted them.
(The Guardians of the Laws and the Market-Wardens, in conjunction with
the City-Wardens, will have marked out suitable spaces and decided
where each article is to be sold.) Here they must exchange money for
goods and goods for money, and never hand over anything without
getting something in return; anyone who doesn't bother about this and
trusts the other party must grin and bear it whether or not he gets
850 what he's owed, because for such transactions there will be no legal
remedy. If the amount or value of the object bought or sold is greater
than is allowed by the law which forbids increase or diminution of a
man's property above or below a given limit, the excess must immediately
be registered with the Guardians of the Laws; but if there is a deficiency,
it must be cancelled. The same rules are to apply to the registration of
the property of resident aliens.

Anyone who wishes may come to live in the state on specified conditions.
(a) There will be a community of foreigners open to anyone willing and
b able to join it. (b) The alien must have a skill and (c) not stay longer than

14. Reading *tritē* in b8.

twenty years from the date of registration. (d) He need pay no alien-tax, even a small one (apart from behaving himself), nor any tax on any purchase or sale. (e) When his time has expired, he is to collect his possessions and depart. (f) If during this period he has distinguished himself for some notable service to the state, and is confident he can persuade the council and the assembly to grant his request for an official extension of his stay, either temporarily or for life, he should present himself and make out his c
case; and he must be allowed to enjoy to the full whatever concessions the state grants him. (g) Children of resident aliens must be craftsmen, and (h) their period of residence must be deemed to have started when they reach the age of fifteen. On these conditions they may stay for twenty years, after which they must depart to whatever destination they like. If they wish to stay longer, they may do so provided they obtain permission as already specified. (i) Before a departing alien leaves he must cancel the entries that he originally made in the records kept in the custody of the officials.

## Book IX

ATHENIAN: Next, in accordance with the natural arrangement of our legal 853
code, will come the legal proceedings that arise out of all the occupations we have mentioned up till now. To some extent, so far as agricultural affairs and related topics are concerned, we have already listed the acts that should be prosecuted, but the most serious have yet to be specified. Our next task is to enumerate these one by one, mentioning what penalty b
each should attract and to which court it should be assigned.

CLINIAS: That's right.

ATHENIAN: The very composition of all these laws we are on the point of framing is, in a way, a disgrace: after all, we're assuming we have a state which will be run along excellent lines and achieve every condition favorable to the practice of virtue. The mere idea that a state of this kind could give birth to a man affected by the worst forms of wickedness found in other countries, so that the legislator has to anticipate his appearance by threats—this, as I said, is in a way a disgrace. It means we have to lay c
down laws against these people, to deter them and punish them when they appear, on the assumption that they will certainly do so. However, unlike the ancient legislators, we are not framing laws for heroes and sons of gods. The lawgivers of that age, according to the story told nowadays, were descended from gods and legislated for men of similar stock. But we are human beings, legislating in the world today for the children of humankind, and we shall give no offense by our fear that one of our citizens will turn out to be, so to speak, a 'tough egg', whose character d
will be so 'hard-boiled' as to resist softening; powerful as our laws are, they may not be able to tame such people, just as heat has no effect on tough beans. For their dismal sake, the first law I shall produce will deal

with robbery from temples, in case anyone dares to commit this crime. Now in view of the correct education our citizens will have received, we should hardly want any of them to catch this disease, nor is there much reason to expect that they will. Their slaves, however, as well as foreigners and the slaves of foreigners, may well make frequent attempts at such
854 crimes. For their sake principally—but still with an eye on the general weakness of human nature—I'll spell out the law about robbery from temples, and about all the other similar crimes which are difficult or even impossible to cure.

Following the practice we agreed earlier, we must first compose preambles, in the briefest possible terms, to stand at the head of all these laws. Take a man who is incited by day and kept awake at night by an evil impulse which drives him to steal some holy object. You might talk to him and exhort him as follows:

b 'My dear fellow, this evil impulse that at present drives you to go robbing temples comes from a source that is neither human nor divine. It is a sort of frenzied goad, innate in mankind as a result of crimes of long ago that remained unexpiated; it travels around working doom and destruction, and you should make every effort to take precautions against it. Now, take note what these precautions are. When any of these thoughts enters your head, seek the rites that free a man from guilt; seek the shrines of the gods who avert evil, and supplicate them; seek the company of men
c who have a reputation in your community for being virtuous. Listen to them as they say that every man should honor what is fine and just—try to bring yourself to say it too. But run away from the company of the wicked, with never a backward glance. If by doing this you find that your disease abates somewhat, well and good; if not, then you should look upon death as the preferable alternative, and rid yourself of life.'

These are the overtures we make to those who think of committing all these impious deeds that bring about the ruin of the state. When a man obeys us, we should silently omit the actual law; but in cases of disobedience, we must change our tune after the overture and sing this resounding strain:

d 41. If a man is caught thieving from a temple and is (a) a foreigner or slave,
*a brand* of his misfortune shall be made on his face and hands, and he shall be whipped, the number of lashes to be decided by his judges. Then he shall be thrown out beyond the boundaries of the land, naked.

(Perhaps paying this penalty will teach him restraint and make him a better man: after all, no penalty imposed by law has an evil purpose, but
e generally achieves one of two effects: it makes the person who pays the penalty either more virtuous or less wicked.)

(b) If a citizen is ever shown to be responsible for such a crime—to have perpetrated, that is, some great and unspeakable offense against the

gods or his parents or the state,
*the penalty* is death.

The judge should consider him as already beyond cure; he should bear in
mind the kind of education and upbringing the man has enjoyed from his
earliest years, and how after all this he has still not abstained from acts
of the greatest evil. But the very tiniest of evils will be what the offender
suffers, indeed, he will be of service to others, by being a lesson to them 855
when he is ignominiously banished from sight beyond the borders of the
state. And if the children and family escape taking on the character of the
father, they should be held in honor and win golden opinions for the spirit
and persistence with which they have shunned evil and embraced the good.

In a state where the size and number of the farms are to be kept perma-
nently unaltered, it would not be appropriate for the state to confiscate
the property of any of these criminals. But if a man commits a crime and
is thought to deserve a penalty in money, then provided he possesses a
surplus over and above the basic equipment of his farm, he must pay his b
fine. The Guardians of the Laws must scrutinize the registers and discover
the precise facts in these cases, and make an exact report to the court on
each occasion, so as to prevent any farm becoming unworked because of
a shortage of money. If a man appears to deserve a stiffer fine, and if some
of his friends are not prepared to bail him out by contributing the money
to set him free, his punishment should take the form of a prolonged period
of imprisonment (which should be open to public view), and various
humiliations. But no one, no matter what his offense, is ever to be deprived c
of his citizen rights completely, not even if he has gone into exile beyond
our frontiers for it. The penalties we impose will be death, imprisonment,
whipping, or various degrading postures (either standing or sitting), or
being rusticated and made to stand before temples on the boundaries of
the state; and payments of money may be made in certain cases which we
have just mentioned, where such a punishment is appropriate. In cases
involving the death penalty the judges are to be the Guardians of the
Laws, sitting in conjunction with the court whose members are selected
by merit from the officials of the previous year. The method of bringing d
these cases to court, the serving of the summonses and similar procedural
details must be the concern of the legislators who succeed us; what *we*
have to do is legislate about the voting. The vote should be taken openly,
but before this our judges should have ranged themselves according to
seniority and sat down close together facing the prosecutor and defendant;
all citizens who have some spare time should attend and listen carefully
to such trials. First, the prosecutor should deliver a single speech, then the e
defendant; the most senior judge should follow these addresses by cross-
questioning, and continue until he has gone into the arguments in sufficient
detail. One by one, the other judges should follow the most senior and
work through any points on which either litigant has left him dissatisfied
by some kind of error or omission. A judge who feels no such dissatisfaction

should hand on the interrogation to his colleague. All the judges should
856 endorse those arguments that appear pertinent by appending their signatures and then depositing the documents on the altar of Hestia. The next day they must reconvene in the same place, and after similar interrogation and examination again append their signatures to the depositions. Having followed this procedure three times, after giving due consideration to the evidence and witnesses, each judge should cast a sacred vote, swearing in the name of Hestia to give, as far as lies in him, a judgment just and true. In this way they should conclude this category of trial.

b We come next, after these matters of religion, to cases of political subversion. We should treat as the biggest enemy of the entire state the man who makes the laws into slaves, and the state into the servant of a particular interest, by subjecting them to the diktat of mere men. This transgressor of the law uses violence in all that he does and stirs up sedition. Second in the scale of wickedness, in our estimation, should come the holder of some high state office, who while not an accessory to any such crimes, nevertheless fails to detect them and exact the vengeance of his fatherland
c (or, if he does detect them, holds back through cowardice). Every man who is any good at all must denounce the plotter to the authorities and take him to court on a charge of violently and illicitly overthrowing the constitution. The court should consist of the same judges as for robbers from temples, and the procedure of the entire trial should be the same as it was for them, a majority vote being sufficient for the death penalty.

As a rule, penalties and disgrace incurred by a father should not be
d passed on to any of his children, except where a man's father, grandfather and great-grandfather have all in turn been sentenced to death. The state should deport such cases to the state and city from which their family originally came; and they should take their property with them, apart from all the basic equipment of their farm. Next, sons of citizens who have more than one son over ten years of age should be nominated by their father or grandfather on either the mother's or the father's side. Ten of them should be chosen by lot, and the names of those whom the lot selects
e should be reported to Delphi. The god's choice should then be installed as heir to the abandoned property—and he, we hope, will have better luck.

CLINIAS: Splendid.

ATHENIAN: The same regulations about the judges that should try the case, and the procedure to be followed at the trial, will apply in yet a third instance, when a man is brought to court on a charge of treason. In the
857 same way, a single law should apply to all three cases and decide whether the children of these criminals (traitor, temple-robber, and the violent wrecker of the laws of the state) should remain in their fatherland or leave it.

Again, a single law and legal penalty should apply to every thief, no matter whether his theft is great or small:

> 42. (a) *he must* pay twice the value of the stolen article, if he loses the day and has sufficient surplus property over and above his farm with which to make the repayment.

(b) if he has not,
*he must* be kept in prison until he pays up or persuades the man who has had him convicted to let him off.

43. If a man is convicted of stealing from *public* sources, b
*he shall* be freed from prison when he has either persuaded the state to let him off or paid back twice the amount involved.

CLINIAS: How on earth can we be serious, sir, in saying that it makes no odds whether his theft is large or small, or whether it comes from sacred or secular sources? And what about all the other different circumstances of a theft? Shouldn't a legislator vary the penalties he inflicts, so that he can cope with the various *categories* of theft?

ATHENIAN: That's a good question, Clinias: I have been walking in my
sleep, and you have bumped into me and woken me up. You have re- c
minded me of something that has occurred to me before, that the business
of establishing a code of law has never been properly thought out—as we
can see from the example that has just cropped up. Now, what am I getting
at? It wasn't a bad parallel we made, you know, when we compared all
those for whom legislation is produced today to slaves under treatment
from slave doctors.[1] Make no mistake about what would happen, if one
of those doctors who are innocent of theory and practice medicine by rule
of thumb were ever to come across a gentleman doctor conversing with d
a gentleman patient. This doctor would be acting almost like a philosopher,
engaging in a discussion that ranged over the source of the disease and
pushed the inquiry back into the whole nature of the body. But our other
doctor would immediately give a tremendous shout of laughter, and his
observations would be precisely those that most 'doctors' are always so
ready to trot out. 'You ass,' he would say, 'you are not treating the patient,
but tutoring him. Anybody would think he wanted to become a doctor
rather than get well again.' e

CLINIAS: And wouldn't he be right to say that?

ATHENIAN: Perhaps he would—if he were to bear in mind this further point, that anyone who handles law in the way we are now, *is* tutoring the citizens, not imposing laws on them. Wouldn't it be equally right to say that?

CLINIAS: Perhaps so.

ATHENIAN: However, at the moment, we are in a fortunate position.

CLINIAS: How do you mean?

ATHENIAN: I mean the lack of any necessity to legislate. We are simply 858
carrying out our own review of every kind of political system and trying
to see how we could put into effect the absolutely ideal kind, as well as
the least good sort that would still be acceptable. This is particularly true
of our legislation, where it looks as if we have a choice: either we can
examine ideal laws, if we want to, or again, if we feel like it, we can look

1. See 719e–720e.

at the minimum standard we are prepared to put up with. So we must choose which course we want to take.

CLINIAS: This is a ridiculous choice to give ourselves, my friend: it's not
b as if we were legislators forced by some irresistible necessity to legislate at a minute's notice, without being allowed to put the business off till tomorrow. We, God willing, can do as bricklayers do, or workmen starting some other kind of erecting. We can gather our materials in no particular order and then select—and select at leisure—the items which are appropriate for the forthcoming construction. Our assumption should be, therefore, that we are constructing something, but not under any constraint; we work at our convenience and spend part of the time preparing our material, part of the time fitting it together. So it would be quite fair to
c describe our penal code as already partially laid down, while other material for it lies ready to hand.

ATHENIAN: At any rate, Clinias, this will be the more realistic way to conduct our review of legislation. Well then, may we please notice this point that concerns legislators?

CLINIAS: What point?

ATHENIAN: I suppose literary compositions and written speeches by many other authors are current in our cities, besides those of the legislator?

CLINIAS: Of course they are.

ATHENIAN: To whose writings ought we to apply ourselves? Are we to
d read the poets and others who have recorded in prose or verse compositions their advice about how one should live one's life, to the neglect of the compositions of the legislators? Or isn't it precisely the latter that deserve our closest attention?

CLINIAS: Yes, it certainly is.

ATHENIAN: And I suppose the legislator, alone among writers, is to be denied permission to give advice about virtue and goodness and justice? Is he alone to be prevented from explaining their nature and how they should be reflected in our conduct, if we aim to be happy?

CLINIAS: No, of course not.

e ATHENIAN: Then is it really more scandalous in the case of Homer and Tyrtaeus and the other poets to have composed in writing[2] bad rules for the conduct of life, but less so for Lycurgus and Solon, and all others who have turned legislator and committed their recommendations to writing? The proper view, surely, is this: a city's writings on legal topics should turn out, on being opened, to be the finest and best of all those it has in
859 circulation; the writings of other men should either sound in harmony with them, or provoke ridicule by being out of tune. So what *is* the style in which a state's laws ought to be written, in our opinion? Should the regulations appear in the light of a loving and prudent father and mother? Or should they act the tyrant and the despot, posting their orders and

2. For Tyrtaeus, see 629a and note. Lycurgus was the traditional founder of the Spartan constitution. Solon legislated for Athens in 594 and wrote poems justifying his measures.

threats on walls and leaving it at that? Clearly, then, at this stage, we must decide whether we are going to try to talk about laws in the right spirit. Succeed or no, we shall at any rate show our good intentions. If we take b
this course and have to face some difficulties *en route*, then let's face them. Good luck to us, and God willing, we shall succeed.

CLINIAS: You've put it splendidly. Let's do as you suggest.

ATHENIAN: In the first place, we must continue the attempt we've just made: we must scrutinize our law about robbers of temples, theft in general, and every variety of crime. We should not let it daunt us if in the full spate of our legislation we find that although we have settled some matters, c
our inquiry into others has still to be completed. We are still aiming at the status of legislators, but we haven't achieved it yet; perhaps eventually we may succeed. So now let's look at these topics I've mentioned—if, that is, you are prepared to look at them in the way I have explained.

CLINIAS: Certainly we are prepared.

ATHENIAN: Now, on the whole subject of goodness and justice, we ought to try to see quite clearly just where we agree, and where there are differences of opinion between us. Again, how far do ordinary men agree? What differences are there between *them*? (Naturally, we should claim that we wanted there to be at least a small 'difference between' us and ordinary men!) d

CLINIAS: What sort of 'differences between us' have you in mind when you say that?

ATHENIAN: I'll try to explain. When we talk about justice in general—just men, just actions, just arrangements, we are, after a fashion, unanimous that all these things are 'good'. One might insist that even if just men happen to be shocking in their physical appearance, they are still preeminently 'good' because of their supremely just character. No one would think a man was talking nonsense in saying that. e

CLINIAS: Wouldn't that be right?

ATHENIAN: Perhaps. But if everything that has the quality of justice is 'good', we ought to note that we include in that 'everything' even the things done *to* us, which are about as frequent, roughly speaking, as the things *we* do to others.

CLINIAS: What now, then?

ATHENIAN: Any just action we do has the quality of being 'good' roughly in proportion to the degree to which it has the quality of justice.

CLINIAS: Indeed.

ATHENIAN: So surely, anything done *to* us, which has the quality of 860
justice, is to that extent agreed to be 'good'? This wouldn't involve our argument in any contradiction.

CLINIAS: True.

ATHENIAN: If we agree that something done to us is just, but at the same time shocking, the terms 'just' and 'good' will be in conflict with each other—the reason being that we have termed 'just' actions 'most shameful'.

CLINIAS: What are you getting at?

ATHENIAN: It's not difficult to understand. The injunctions of the laws we laid down a little while ago would seem to be in flat contradiction to what we are saying now.

CLINIAS: How so?

b ATHENIAN: Our ruling was, I think, that the temple-robber and the enemy of properly established laws would suffer a 'just' death. But then, on the brink of establishing a great many such rules, we held back. We saw ourselves becoming involved with penal suffering of infinite variety and on a grand scale. Of all sufferings, these were particularly just; but they were also the particularly shocking ones. Thus, surely, one minute we shall find 'just' and 'good' invariably turning out to be the same, and the next moment discover they are opposites.

CLINIAS: Likely enough.

c ATHENIAN: This is the source of the inconsistency in the language of the ordinary man: he destroys the unity of the terms 'good' and 'just'.

CLINIAS: That is indeed how it looks, sir.

ATHENIAN: Now, Clinias, we ought to examine our own position again. How far is it consistent in this business?

CLINIAS: Consistent? What consistency do you mean?

ATHENIAN: Earlier in our discussion I think I have said quite categorically—or if I haven't before, assume I'm saying it now—that . . .

CLINIAS: What?

d ATHENIAN: . . . all wicked men are, in all respects, *unwillingly* wicked. This being so, my next argument necessarily follows.

CLINIAS: What argument?

ATHENIAN: That the unjust man is doubtless wicked; but that the wicked man is in that state only against his will. However, to suppose that a voluntary act is performed involuntarily makes no sense. Therefore, in the eyes of someone who holds the view that injustice is involuntary, a man who acts unjustly would seem to be doing so against his will. Here and now, that is the position *I* have to accept: I allow that no one acts unjustly
e except against his will. (If anyone with a disputatious disposition or a desire to attract favorable notice says that although there *are* those who are unjust against their will, even so many men do commit unjust acts voluntarily, I would reject his argument and stick to what I said.) Well then, how am I to make my own arguments consistent? Suppose the two of you, Clinias and Megillus, were to ask me, 'If that's so, sir, what advice have you for us about laying down laws for the city of the Magnesians? Do we legislate, or don't we?' 'Of course we legislate', I'd say, and you'd ask: 'Are you going to make a distinction for the Magnesians between voluntary and involuntary acts of injustice? Shall we impose stiffer penal-
861 ties on voluntary wrongdoing and acts of injustice, and smaller penalties on the involuntary? Or shall we treat them all on an equal footing, on the grounds that there simply is no such thing as an act of voluntary injustice?'

CLINIAS: You are perfectly right, sir. So what use shall we make of this position we have just taken up?

Athenian: That's a good question. First of all, we shall make this use of it—

Clinias: What?

Athenian: Let's cast our minds back. A few minutes ago we were quite right to say that in the matter of justice we were in a state of great muddle and inconsistency. With that in mind, we may go back to asking questions of ourselves. 'We have not yet found a way out of our confusion in these b
things. We have not defined the difference between these two categories of wrongs, voluntary and involuntary. In all states, every lawgiver who has ever appeared treats them as distinct, and the distinction is reflected in his laws. Now, is the position we took up a moment ago to overrule all dissent, like a decision handed down from God? Shall we make just this one assertion and dismiss the topic, without adducing any reasons to show that our position is correct?' Impossible. What we must do, before we legislate, is some- c
how make clear that there *are* two categories, but that the distinction between them is a different one. Then, when one imposes the penalty on either, everybody will be able to appreciate the arguments for it, and make some kind of judgment whether it is the appropriate penalty to have imposed or not.

Clinias: We think you state the position fairly, sir. We must do one of two things, either stop insisting that unjust acts are always involuntary, or, before going any further, demonstrate its validity by means of a preliminary distinction. d

Athenian: The first of the two alternatives, denying the proposition when I believe it to represent the truth, is absolutely unacceptable to me. I should be breaking the laws of both God and man. But if the two things do not differ by virtue of being 'voluntary' and 'involuntary', how *do* they differ? What other factor is involved? That is what we have to try, somehow or other, to show.

Clinias: It is surely impossible, sir, to approach the problem in any other way.

Athenian: So this is what we shall try to do. Look: when citizens come e
together and associate with each other, they obviously inflict many *injuries*; and to these the terms 'voluntary' and 'involuntary' can be freely applied.

Clinias: Of course.

Athenian: But no one should describe all these injuries as acts of injustice, and conclude that therefore the unjust acts committed in these cases of injury fall into two categories, (a) involuntary (because if we add them all up, you see, the involuntary injuries are no less numerous and no less great than the voluntary ones), and (b) voluntary *as well*. Rather than do 862
that, consider the next step I am going to take in my argument: am I on to something or just driveling? My position, Clinias and Megillus, is not that, if someone hurts someone else involuntarily and without intending it, he is acting unjustly but involuntarily. I will not legislate so as to make this an involuntary act of injustice. Ignoring its relative seriousness or triviality, I shall refuse to put down such an injury under the heading of 'injustice' at all. Indeed, if my view is sustained, we shall often say of a

b benefactor that 'he is committing the injustice of conferring a benefit'—an
*improper* benefit. You see, my friends, in effect we should not simply call
it 'just' when one man bestows some object on another, nor simply 'unjust'
when correspondingly he takes it from him. The description 'just' is appli-
cable only to the benefit conferred or injury inflicted by someone with a
just character and outlook. This is the point the lawgiver has to watch; he
must keep his eyes on these two things, injustice and injury. He must use
c the law to exact damages for damage done, as far as he can; he must
restore losses, and if anyone has knocked something down, put it back
upright again; in place of anything killed or wounded, he must substitute
something in a sound condition. And when atonement has been made by
compensation, he must try by his laws to make the criminal and the victim,
in each separate case of injury, friends instead of enemies.

CLINIAS: So far, so good.

ATHENIAN: Now to deal with unjust injuries (and gains too, as when one man's unjust act results in a gain for someone else). The cases that are curable we must cure, on the assumption that the soul has been infected by disease. We must, however, state what general policy we pursue in our cure for injustice.

CLINIAS: What is this policy?

d ATHENIAN: This: when anyone commits an act of injustice, serious or
trivial, the law will combine instruction and constraint, so that in the future
either the criminal will never again dare to commit such a crime voluntarily,
or he will do it a very great deal less often; and in addition, he will pay
compensation for the damage he has done. This is something we can
achieve only by laws of the highest quality. We may take action, or simply
talk to the criminal; we may grant him pleasures, or make him suffer; we
may honor him, we may disgrace him; we can fine him, or give him gifts.
We may use absolutely *any* means to make him hate injustice and embrace
e true justice—or at any rate not hate it. But suppose the lawgiver finds a
man who's beyond cure—what legal penalty will he provide for this case?
He will recognize that the best thing for all such people is to cease to
live—best even for themselves. By passing on they will help others, too:
first, they will constitute a warning against injustice, and secondly they
863 will leave the state free of scoundrels. That is why the lawgiver should
prescribe the death penalty in such cases, by way of punishment for their
crimes—but in no other case whatever.

CLINIAS: In one way, what you have said seems eminently reasonable. However, we should be glad to hear a clearer explanation of two points: first, the difference between injustice and injury, and secondly the various senses of 'voluntary' and 'involuntary' that you distinguished so elaborately in the course of your argument.

b ATHENIAN: I must try to meet your request and explain these points.
Doubtless in the course of conversation you make at least this point to
each other about the soul: one of the constituent elements (whether 'part'
or 'state' is not important) to be found in it is 'anger', and this innate

impulse, unruly and difficult to fight as it is, causes a good deal of havoc by its irrational force.

Clinias: Yes, indeed.

Athenian: The next point is the distinction we make between 'pleasure' and 'anger'. We say Pleasure wields her power on the basis of an opposite kind of force; she achieves whatever her will desires by persuasive deceit that is irresistibly compelling.[3]

Clinias: Quite right.

Athenian: Thirdly, we would be saying nothing but the truth if we c
named ignorance as a cause of wrongdoing. The lawgiver would, in fact, do a better job if he divided ignorance into two: (1) 'simple' ignorance, which he would treat as the cause of trivial faults, (2) 'double' ignorance, which is the error of a man who is not only in the grip of ignorance but on top of that is convinced of his own wisdom, believing that he has a thorough knowledge of matters of which, in fact, his ignorance is total. When such ignorance is backed up by strength and power, the lawgiver will treat it as the source of serious and barbarous wrongdoing; but when d
it lacks power, he will treat the resultant faults as the peccadilloes of children and old men. He will of course regard these deeds as offenses, and will legislate against these people as offenders, but the laws will be of the most gentle character, full of understanding.

Clinias: Your proposals are perfectly reasonable.

Athenian: Most of us agree that some people are 'conquerors of' their desire for pleasure and feelings of anger, while others are 'conquered' by them. And that is in fact the situation.

Clinias: It certainly is.

Athenian: But we have never heard anyone say that some people are 'conquerors of' their ignorance, while others are 'conquered by' it.

Clinias: Very true. e

Athenian: But we do say that each of these influences often prompts every man to take the opposite course to the one which attracts him and which he *really* wishes to take.

Clinias: Yes, times without number.

Athenian: May I now clearly distinguish for you, without elaboration, what in my view the terms 'just' and 'unjust' mean. My general description of injustice is this: the mastery of the soul by anger, fear, pleasure, pain, envy and desires, whether they lead to any actual damage or not. But no 864
matter how states or individuals think they can achieve the good, it is a conception of what the good is that should govern every man and hold sway in his soul, even if he is a little mistaken. If it does, every action done in accordance with it, and any part of a man's nature that becomes subject to such control, we have to call 'just', and best for the entire life of mankind—and this in spite of the popular belief that damage done in such circumstances is an 'involuntary' injustice. However, we are not

3. Reading *biaiou* in b8.

engaging now in a captious dispute about terminology. But since it has
b become clear that there are three kinds of basic faults, we ought first to impress these upon our memory even more firmly. Our first kind is a painful one, and we call it anger and fear.

CLINIAS: Yes.

ATHENIAN: The second kind consists of pleasures and desires. The third, which is a distinct category, consists of hopes and opinion—a mere shot at the truth about the supreme good.[4] If we divide this last category twice,[5] we get three types; and that makes, according to our present argument, a total of five in all. We must enact different laws for the five kinds, and we must have two main categories.

c CLINIAS: And what are these?

ATHENIAN: The first category covers every occasion when crimes are committed openly with violence; secondly, we have crimes that take place under cover of darkness, involving secrecy and fraud. Sometimes we find a combination of both methods, in which case our laws will have to be very harsh indeed, if they are going to do their job.

CLINIAS: Of course.

d ATHENIAN: Now let's go back to the point where we started to digress, and carry on with our enactment of the legal code. Our regulations about those who pillage from the gods, and about traitors, had, I think, already been made; we had also dealt with those who do violence to the laws in order to subvert the existing constitution. A man who commits one of these crimes might be suffering from insanity, or be as good as insane either because of disease, or the effects of advanced senility, or because he is still in the years of childhood.

44. (a) If clear proof of any of these states is ever shown to the judges selected in each case, on the submission of either the criminal or his counsel, and in the opinion of the court the man was in that condition
e when he committed his crime,
*he must* pay, without fail, simple recompense for any damage he may have inflicted on anyone, but the other details of the penalty should be waived,
(b) if he has killed someone and his hands are polluted by murder,
*he must* depart to a place in another country and live there in exile for a year.

45. If he comes back before the legally appointed time, or even puts a foot into any part of his native country,

4. Reading . . . *kai doxēs, tou alēthous peri to ariston ephesis, triton* . . . in b7.

5. Assuming that the 'third' category here is equivalent to that of 'ignorance' as a cause of wrongdoing (863c–d), the reference here is to the 'simple' and 'double' forms of ignorance there noted, of which the latter was divided into that 'with power' and that 'without power'. That would yield 'three types', as the Athenian goes on to say here.

*he must* be imprisoned in the public jail by the Guardians of the Laws for two years, after which he shall be released.

The start we have made points the way forward: we need not scruple to lay down a comprehensive set of laws that will cover every category of murder. First we should deal with those committed with the use of force, but unintentionally: 865

46 A. If anyone has unintentionally killed a man who is not an enemy
(a) in a contest or public games—whether death occurs immediately, or later as a result of the wounds,
(b) in war similarly,
(c) in military training, whether in javelin-exercises without the protection of armor, or when some weapons are being carried in imitation of b
wartime usage,
*the offender* shall be free of pollution when he has been purified in accordance with the relevant law from Delphi.
(d) All doctors, if their patient dies as an unintended result of their treatment,
*are to be free* of pollution according to law.
B. If one man kills another by his own act, but unintentionally,
(α) by his own hand,
  (i) without weapons, or
  (ii) by tool, weapon, administration of food or drink, application of fire or cold, or deprivation of air, whether
(β) (i) he does the deed himself, or c
  (ii) through the agency of others,
*in all cases* it must be reckoned his own act and he must pay penalties as under:
If he kills
(a) a slave,
*he must* indemnify the dead man's master against the damage, reflecting what the loss would be if his own slave had been killed.
C. If he fails to indemnify the master,
*he must* pay a penalty of twice the value of the dead man, the judges making an estimate of it, and he must resort to greater and more numerous purifications than those who have killed in contests; and such expounders as are chosen by the oracle are to be in charge of these purifica- d
tions.
B. cont. (b) If he kills a slave of his own,
*let him* purify himself, and be quit of the murder according to law.
(c) If he kills a free man, inadvertently,
*he must* undergo the same purifications as the killer of a slave.

He should not take lightly an old story that comes from our collection of ancient tales. It runs as follows: Having lived in the full proud spirit of freedom, the man murdered by violence, freshly dead, turns his fury on

e the person responsible. The dead man is full of fear and loathing at his own violent sufferings; he abominates the sight of his own murderer going about localities once familiar to himself; to the full limit of his powers he visits his own anguish on the perpetrator of the crime, the man and his deeds; and his allies are the memories that haunt the murderer. Therefore

D. (a) *A killer* must keep clear of his victim for all the seasons of an entire year, by staying away from the dead man's usual haunts and the whole of his native country.
(b) If the deceased is a foreigner,
866 *the killer* should keep clear of the foreigner's homeland as well for an identical period.
If a man obeys this law without demur, the deceased's next of kin, who will take note of his compliance with these requirements, will grant him pardon and will be entirely correct to live on peaceable terms with him.
E. If the killer disobeys,
(a) by daring to enter temples and perform sacrifices, polluted as he is, and then
(b) by refusing to complete the above-mentioned period abroad,
b *the deceased's* next of kin must prosecute the killer on a charge of murder. In case of conviction, all penalties are to be doubled.
F. If the next of kin does not prosecute the crime,
*the pollution* must be deemed to have arrived at his own door, owing to the murdered man's supplications for atonement. Anyone who wishes may bring a charge against the next of kin and force him to keep away from his native country for five years, according to law.
G. (a) If a foreigner kills a foreigner who is living in the state,
c *anyone* who wishes should prosecute under the same laws.
(b) If the killer is
  (i) a resident alien,
*he must* go abroad for a year;
  (ii) a non-resident alien,
*he must* keep away, for the whole of his life, from the country that lays down these laws, in addition to performing the purifications; this is to apply whether he kills (1) a non-resident alien, (2) a resident alien, or (3) a citizen.
H. If he returns
(a) illegally,
*the Guardians of the Laws* must punish him by death, and if he has any property, they must present it to his victim's nearest relative;
(b) unintentionally,
d   (i) being shipwrecked on the coast,
*he must* camp out where the sea washes by his feet and await an opportunity to sail away;
  (ii) being forcibly brought in overland by someone,
*the first* official of the state that comes across him must set him free and dispatch him unharmed beyond the border.

If someone kills a free man by his own hand, but the deed is done in
anger, we must first make an internal distinction within this type of crime.
Anger is common to (1) those who kill a man by blows or similar means,
owing to a sudden impulse: here the action is immediate, there is no e
previous intention to kill, and regret for the deed follows at once; (2) those
who have been stung by insults or opprobrious actions and who pursue
their vengeance until, some time later, they kill somebody: they *intend* to
kill, and the deed causes no repentance. So it looks as if we have to establish
two categories of murder; broadly speaking, both are done in anger, but 867
a proper description would be 'falling somewhere midway between "vol-
untary" and "involuntary" '; however, each type comes closer to one or
other of these extremes. The man who nurses his anger and takes his
vengeance later—not suddenly, on the spur of the moment, but with
premeditation—approximates to the voluntary murderer. The man whose
anger bursts forth uncontrollably, whose action is instant, immediate, and
without premeditation, resembles the involuntary killer. Yet even so, he
is not an entirely involuntary killer: he only resembles one. It is therefore
sometimes difficult to categorize murders done under the influence of b
anger, and to know whether to treat them in law as voluntary or involun-
tary. The best course, which corresponds most closely to reality, is to
classify them both under what they most resemble, and to distinguish
them by the presence or absence of premeditation. We should lay down
comparatively severe penalties for those who have killed in anger and
with premeditation, and lighter ones for those who have killed on the spur
of the moment without previous intent. Something which resembles a
greater evil should attract a greater punishment, whereas a lesser penalty
should be visited on that which resembles a lesser evil. This, then, is the c
course our laws should take.

CLINIAS: Indeed it is.

ATHENIAN: Then let's go back to our subject and carry on as follows:

47 A. If someone kills a free man with his own hand, and the deed is done in a fit of anger, without previous intent,
*his penalty* should in general be that appropriate to a man who has killed without anger; but in addition he should be obliged to go into exile for two years, by way of a curb for his anger.
B. If a man kills in anger, but with premeditation, d
*his penalty* should in general be that inflicted in the previous instance; but his exile should be for three years as against the other's two, the period of punishment being longer because of the greater violence of his passion.

In such cases, regulations for the return from exile should run as follows. (It is not easy to make hard and fast rules: sometimes the fiercer criminal as defined by the law may turn out easier to manage, whereas the man who is supposedly more manageable may turn out to be a more difficult case, having committed a murder with some savagery; the other,

e conversely, may have dispatched his victim without brutality. However,
my account does describe the cases you'll find are typical.)

The Guardians of the Laws should act as assessors of all these points, and when the period of exile prescribed for either category has come to an end, they should send twelve of their number, as judges, to the borders of the country. During the time that has elapsed these twelve should have made a still more exact investigation into what the exiles did, so as to decide whether to grant pardon and permission to return; and the exiles are bound to acquiesce in the judgment of these authorities.

868 C. (a) If a returned exile of either category is ever again overcome by
anger and commits the same offense,

*he must* go into exile and never come back.

(b) If he does come back,

*his penalty* will be the same as that imposed on the foreigner who returns [46H].

D (a) If a man kills his own slave,

*he must* purify himself.

(b) If he kills another's slave, in anger,

*he must* pay double damages to the owner.

E. If a killer in any category flouts the law and in his unpurified state
pollutes the market-place, the sports stadium, and other holy places,
b *anyone who wishes* should prosecute both the killer and the relative of
the dead man who allows the killer to do this, and compel the relative
to exact payment of twice the fine and the other expenses; and the
prosecutor shall be legally entitled to take for himself the money so paid.

F. (a) If a slave kills his own master, in anger,

*the relatives* of the deceased shall treat the killer in whatever way they
c like (except that under no circumstances whatever may they let him go
on living), and be free of pollution.

(b) If a slave murders a free man who is not his master, in anger,

*his master* shall deliver him up to the relatives of the deceased, who will be obliged to kill him, the manner of the execution being within their discretion.

G. (This is a rare occurrence, but not unknown.)

(a) If a father or mother kills a son or daughter in anger by beating them or by using some other form of violence,

*the murderers* must undergo the same purifications as apply in the other
d cases, and go into exile for three years.

(b) When they come back, the female killer must be separated from her husband and the male from his wife, and they must have no more children; and they must never again share hearth and home with those whom they have robbed of a son or brother, or join in religious ceremonies with them.

H. If someone is impious enough to disobey these regulations,

*he shall* be liable to a charge of impiety at the hands of anyone who wishes.

e I. (a) If a man kills his wedded wife in a fit of anger, or a wife her husband,

*they must* undergo the same purifications and spend three years in exile.
(b) On his return, a person who has done such a deed must never join his children in religious ceremonies nor eat at the same table with them.
J. If the parent or the child disobeys,
*he shall* equally be liable to a charge of impiety at the hands of anyone who wishes.
K. If in anger
(a) a brother kills a brother or a sister, or
(b) a sister kills a brother or a sister,
*the same purifications* and periods of exile as applied to parents and children should be specified as applying in these cases too. (That is, they should never share hearth and home with the brothers whom they have deprived of their fellow brothers nor with parents whom they have deprived of children, nor join in religious ceremonies with them.)
L. If anyone disobeys this law,
*he will* be subject to the relevant law of impiety already laid down, as 869
is only right and proper.
M. If anyone gets into such an ungovernable temper with his parents and begetters that in his insane fury he dares to kill one of them, and
(a) is let off responsibility for murder by a voluntary statement of the deceased before death,
*he must* perform the same purifications as those who commit involuntary murder; and when he has followed the rest of the procedure prescribed for those cases, he may be considered purified.
(b) If he is not let off,

the perpetrator of such a crime will be indictable under many laws. He b
will be subject to the most huge penalties for assault, and likewise for impiety and temple-robbery—he has plundered the shrine that is his parent's body, and deprived it of life. Consequently if one man could die many times, the murderer of his father or mother who has acted in anger would deserve to die the death over and over again. To this one killer no
law will allow the plea of self-defense; no law will permit him to kill his c
father or mother, who brought him into the world. The law will instruct him to put up with all manner of suffering before he does such a thing. But what other penalty than death could the law appropriately lay down for this criminal? The law, then, should run:

(b) cont.
*the penalty* for the murderer of a father or mother is to be death.
N. (a) If a brother kills his own brother in a political brawl or some similar circumstances, in self-defense when his victim had struck first,
*he should* be regarded as free of pollution (as though he had killed d
an enemy).
(b) The same applies if
  (i) a citizen kills a citizen, or
  (ii) a foreigner kills a foreigner.

(c) If in self-defense
(i) a citizen kills a foreigner, or
(ii) a foreigner kills a citizen,
*the culprit* should be in the same position with regard to the freedom from pollution, and likewise if
(iii) a slave kills a slave.
O. If however a slave, in self-defense, kills a free man,
*he should* be subject to the same laws as the parricide [47M].
P. The regulations stated about the acquittal from responsibility for
e murder granted by a father are to apply to every acquittal in such cases (when, that is, one man voluntarily absolves another of responsibility, on the grounds that the murder has been committed involuntarily):
*the criminal* must undergo the purifications and spend one year away from the country according to law.

Let this more or less suffice as a description of involuntary murders, which involve violence and anger. Our next task is to speak of voluntary murders, which are premeditated and spring from sheer injustice—the lack of control over the desire for pleasure and over one's lusts and jealous feelings.

CLINIAS: True.

ATHENIAN: First of all, we ought again to make as complete a list as possible of these sources of crime.

870 The chief cause is lust, which tyrannizes a soul that has gone wild with desire. This lust is most usually for money, the object of most men's strongest and most frequent longing. Because of the innate depravity of men and their misdirected education, money has the power to produce in them a million cravings that are impossible to satisfy—all centering on the endless acquisition of wealth. The cause of this incorrect education is the pernicious praise given to wealth by the public opinion of Greeks and
b non-Greeks alike. In fact, wealth takes only third place in the scale of goodness;[6] but they make it preeminent, to the ruination of posterity and themselves. The best and the noblest policy for all cities to follow is to tell the truth about wealth, namely that it exists to serve the body, just as the body should be the servant of the soul. Although the ends which wealth naturally serves are indeed 'good', wealth itself will take third place, coming after the perfection of the soul and the body. Taking, therefore, this argument as our guide, we shall find that the man who means to be
c happy should not seek simply to be wealthy, but to be wealthy in a way consistent with justice and self-control. Murders needing still more murders in expiation would not occur in cities that had taken this lesson to heart. But as things are, as we said when we embarked on this topic, we have here one cause, and an extremely prominent cause at that, of the most serious charges of deliberate murder.

6. See the lists at 697b ff. and 743e.

Second, an ambitious cast of mind: this breeds feelings of jealousy, which are dangerous companions to live with, particularly for the person who actually feels jealous, but potentially harmful to the leading citizens of the state as well.

In the third place, many a murder has been prompted by the cowardly d
fears of a guilty man. When a man is committing some crime, or has already committed it, he wants no one to know about it, and if he cannot eliminate a possible informer in any other way, he murders him.

These remarks should constitute the preface applying to all these crimes. In addition, we must tell the story which is so strongly believed by so many people when they hear it from those who have made a serious study of such matters in their mystic ceremonies. It is this:

Vengeance is exacted for these crimes in the after-life, and when a man
returns to this world again he is ineluctably obliged to pay the penalty e
prescribed by the law of nature—to undergo the same treatment as he himself meted out to his victim, and to conclude his earthly existence by encountering a similar fate at the hands of someone else.

If a man obeys and heartily dreads such a penalty after merely hearing
the overture, there is no need to play over the relevant law. But in case 871
of disobedience the following law should be stated in writing:

48 A. (a) If a man by his own hand viciously kills a fellow citizen, with premeditation,

*he must* be excluded from the places where people usually gather, and not pollute temples or market or harbors or any other common place of assembly, *whether or not* someone makes a proclamation against the culprit in these terms. (The reason is that the law itself makes the proclamation. It makes a permanent and public proclamation on behalf of the whole state, and always will.)

B. If a man fails in his duty to prosecute the culprit or bar him by b
proclamation, and is a relative (no more distant than a cousin) of the deceased on either the father's side or the mother's,

*the pollution*, together with the enmity of the gods, should arrive at his own door. (The curse imposed by the law turns the edict of heaven against him.) He must be subject to prosecution at the hands of any man who wishes to take vengeance for the deceased, and the man who thus wishes to take vengeance must scrupulously perform all the
appropriate ablutions and all the other ritual details the god prescribes c
for such cases; and when he has published the proclamation, he must go and make the criminal submit to the imposition of the penalty, under the law.

It is easy for a legislator to demonstrate that all this should be accompanied by a number of prayers and sacrifices to those gods who make it their business to prevent murders occurring in society. The Guardians of
the Laws, in association with expounders, soothsayers, and the god, should d
rule who these gods are to be, and specify the procedure for bringing such

cases that would be most in harmony with the requirements of religion; they should then follow it themselves in bringing these cases to court, which should be the same as the one given final authority over temple-robbers.[7]

48 A. cont.
(b) If a man is found guilty,
*he must* be punished by death and be deprived of burial in the country of his victim. (In this way we can show he has not been forgiven, and avoid impiety.)
C. (a) If the defendant makes off and refuses to submit to trial,
*he must* remain in exile permanently.
(b) If such a person sets foot within the country of the murdered man,[8]
e *the first* of the relatives of the deceased who comes across him, or indeed any citizen, should either
(i) kill him with impunity, or
(ii) tie him up, and hand him over to the judges who tried the case for them to carry out the execution.
D. When a man undertakes a prosecution, he should immediately demand sureties from the accused. The latter must duly provide his sureties, who must be deemed, in the eyes of the judges who constitute the court in these cases, to be credit-worthy; and these three credit-worthy sureties must pledge themselves to produce the accused at his trial. If a man refuses, or is unable, to produce sureties,
*the authorities* must arrest him and keep him bound and under guard, so that they can produce him at the hearing of the case.
872 E. If a man does not actually kill with his own hands, but simply plans the murder, and although responsible for it by virtue of plotting arrangements, continues to live in the state with his soul polluted by homicide, his trial for this crime should proceed along the same lines as before, except as regards the bail. If he is convicted,
*he may* be granted burial in his native land, but the other details of the punishment should conform with the regulations previously laid down for this category.[9]
F. These same regulations about the actual commission and mere plotting of a murder should apply when
(a) (i) foreigners prosecute foreigners,
(ii) citizens prosecute foreigners and foreigners citizens, and
b (iii) slaves prosecute slaves.
(b) But an exception should be made in the business of the surety. Just as it was said [48D.] that *actual* murderers should provide sureties, the person who proclaims the ban arising from the murder should simultaneously demand sureties in these cases too [48F(a)(i-iii)].

7. 855c–856a.

8. Reading *toutōn* in d7.

9. That is, for those who *do* kill with their own hand.

G. If a slave intentionally kills a free man, whether he did the deed himself or planned it, and is convicted,
*the public executioner* should haul him off in the direction of the deceased's grave to a point from which the culprit can see the tomb. He should then scourge him, giving as many strokes as the successful prosecutor instructs. If the homicide survives the scourging, he is to be executed. c
H. If a man kills an innocent slave, fearing that he will inform against his own shocking and disgraceful conduct, or prompted by some similar motive,
*he should* submit to trial, when a slave has died in these circumstances, precisely as he would have submitted to trial for murder if he had killed a citizen.

Certain crimes, which may occur, make the mere composition of laws for them an unpleasant and distasteful business, but it is impossible to d
omit them from our code. I mean deliberate and wholly wicked murders of relatives, whether the murderer commits the crime in person or merely plots it. Generally speaking, these killings occur in states that are badly administered or have a defective system of education, but occasionally one of them might crop up even in a country where one would hardly look for it. What we have to do is to repeat our explanation of a moment ago, hoping that anyone who hears it will be more willing and able to avoid committing murders that are absolutely the most detestable in the sight of Heaven. The 'myth', or 'explanation', or whatever the right word is, has come down to us in unambiguous terms from the lips of priests of long ago. e

Justice stands on guard to exact vengeance for the spilling of the blood of relatives; she operates through the law we have just mentioned, and her decree is that a man who has done something of this kind is obliged to suffer precisely what he has inflicted. If ever a man has murdered his father, in the course of time he must suffer the same fate from violent treatment at the hands of his children. A matricide, before being reborn, must adopt the female sex, and after being born a woman and bearing children, be dispatched subsequently by them. No other purification is available when common blood has been polluted; the pollution resists 873
cleansing until, murder for murder, the guilty soul has paid the penalty and by this appeasement has soothed the anger of the deceased's entire line.

Thus the fear of such vengeance, exacted by the gods, should hold a man in check. But this is the law the human legislator will lay down in case some people should be overwhelmed by the terrible misfortune of committing such a crime:

I. (a) If they should dare to tear the soul from the body of their father, mother, brothers or children, deliberately and with premeditation,
*the proclamations* of banishment from places of public resort, and the sureties, should be identical to those detailed in previous cases. b

(b) If a man is convicted of such a murder, having killed one of the aforementioned persons,

*the court-assistants* and the officials shall execute him, and throw him out, naked, at a specified place where three roads meet outside the city. All the officials, on behalf of the entire state, must take a stone and throw it at the head of the corpse, and thus purify the entire state. After this, they must carry the corpse to the borders of the land and eject it,
c giving it no burial, as the law instructs.

But what about the killer of the person who is, above all, his 'nearest and dearest', as the expression is? What penalty ought he to undergo? I am talking about the man who kills *himself*, who (1) uses violence to take his fate out of the hands of destiny, (2) is not acting in obedience to any legal decision of his state, (3) whose hand is not forced by the pressure of some excruciating and unavoidable misfortune, (4) has not fallen into some irremediable disgrace that he cannot live with, and (5) imposes this unjust
d judgment on himself in a spirit of slothful and abject cowardice. In general, what ritual observances should take place with regard to purification and interment in this case, are matters known to God; the relatives must seek guidance from expounders and the relevant laws, and act in these instances according to their instructions. But

49. (a) People who perish in this way must be buried individually, with no one to share their grave.

(b) They must be buried in disgrace on the boundaries of the twelve territorial divisions, in deserted places that have no name.

(c) The graves must not be identifiable, either by headstone or title.

e 50. (a) If a beast of burden or any other animal kills anyone (except when the incident occurs while they are competing in one of the public contests),

(i) *the relatives* must prosecute the killer for murder;

(ii) *the next of kin* must appoint some Country-Wardens (whichever ones he pleases, and as many as he likes), and they must try the case:

(iii) if the animal is found guilty,

*they must* kill it and throw it out beyond the frontiers of the country.

(b) If some inanimate object causes loss of human life (but not if it is a stroke of lightning or some similar weapon wielded by God—it must be one of the other things that kill a man by falling on him, or because he falls on it),

874 (i) *the next of kin* must appoint the nearest neighbor to sit in judgment on the object, and thus effect the purification of himself and the deceased's entire line;

(ii) *the condemned* object must be thrown over the frontiers, in the way specified in the case of animals.

51. If someone is found dead, and the killer is not known and cannot be discovered by diligent efforts to trace him,

*the proclamations* should be the same as laid down in former cases, being made, however, against 'the murderer': when the prosecutor has established his case, he must give notice in the market-place to the killer and convicted murderer of so-and-so, that he must not enter holy places nor b
any part of the country of the deceased; he must threaten that if he does turn up and is recognized, he will be executed, denied burial, and his body ejected from the country of his victim.

So much, then, for the law on that sort of murder. In the following conditions, however, it will be right to regard the killer as innocent:

52. (a) If he catches a thief entering his home at night to steal his goods, and kills him,
*he shall* be innocent.
(b) If he kills a footpad in self-defense, c
*he shall* be innocent.
(c) If anyone sexually violates a free woman or boy,
*he may* be killed with impunity by the victim of the violence, or by the victim's father or brothers or sons.
(d) If a husband discovers his wedded wife being raped and kills the attacker,
*the law* will regard him as innocent.
(e) If a man kills someone while saving the life of his father (provided the latter is not committing a crime), or while rescuing his mother or children or brothers, or the mother of his children,
*he shall* be completely innocent. d

ATHENIAN: Let us assume we have completed our legislation concerning the training and education that the soul needs during a man's life (a life that is worth the living if these needs are met, but not if they are not), and the penalties that should apply in cases of death by violence. We have discussed, too, the training and education of the body, and the related topic in this case is the violent treatment, voluntary or involuntary, of one man by another. So far as we can, we must distinguish the various categories, see how many there are, and say what penalties will be appropriate for each. It looks as if this could properly form the next subject of our legis- e
lation.

Even the biggest bungler you could find among would-be legislators will put cases of wounding and mutilation immediately after cases of murder. Woundings ought to be distinguished as murders were: some are inflicted involuntarily, some in anger, some through fear, while others are committed voluntarily and with premeditation. A preliminary address must be given about all these categories as follows:

It is vital that men should lay down laws for themselves and live in
obedience to them; otherwise they will be indistinguishable from wild 875
animals of the utmost savagery. The reason is this: no man has sufficient natural gifts *both* to discern what benefits men in their social relationships

*and* to be constantly ready and able to put his knowledge to the best practical use. The first difficulty is to realize that the proper object of true political skill is not the interest of private individuals but the common good. This is what knits a state together, whereas private interests make
b it disintegrate. If the public interest is well served, rather than the private, then the individual and the community alike are benefited.

The second difficulty is that even if a man did get an adequate theoretical grasp of the truth of all this, he might then attain a position of absolute control over a state, with no one to call him to account. In these circumstances he would never have the courage of his convictions; he would never devote his life to promoting the welfare of the community as his first concern, making his private interests take second place to the public good. His human nature will always drive him to look to his own advantage and the lining of his own pocket. An irrational avoidance of pain and
c pursuit of pleasure will dominate his character, so that he will prefer these two aims to better and more righteous paths. Blindness, self-imposed, will ultimately lead the man's whole being, and the entire state, into a morass of evil. But if ever by the grace of God some natural genius were born, and had the chance to assume such power, he would have no need of laws to control him. Knowledge is unsurpassed by any law or regulation;
d reason, if it is genuine and really enjoys its natural freedom, should have universal power: it is not right that it should be under the control of anything else, as though it were some sort of slave. But as it is, such a character is nowhere to be found, except a hint of it here and there. That is why we need to choose the second alternative, law and regulation, which embody general principles, but cannot provide for every individual case.

I have pointed this out because we are now going to settle the penalty or fine to be imposed on someone who has wounded or harmed someone else. Anyone could quite easily and properly take us up on any point and
e ask: 'What attacker, what wound, what victim do you mean? How was the attack made, and when? The circumstances of these cases differ in a thousand and one different ways.' Now to leave all these details to the judgment of the courts is impracticable, and equally impracticable to leave them none. In every case, however, one point in particular simply must be left to the courts: in each separate instance, they must decide whether the crime did in fact take place, or not. But on the other hand it is hardly
876 feasible to produce laws oneself to cover every case, serious or trivial; one can scarcely leave the courts no discretion at all about the fine or punishment that ought to be imposed on a criminal of this kind.

CLINIAS: Well, then, where do we go from here?

ATHENIAN: We conclude that some details ought to be left to the courts, but not others; these should be regulated by the legislator.

CLINIAS: Which points, then, ought to be in the legal code, and which ought to be referred to the judgment of the courts?

ATHENIAN: In this connection, here's the next thing to notice: sometimes
b we find in a state that the juries are useless, dumb things; the individual

jurymen keep their opinions a mystery known only to themselves and give their decisions by secret ballot. It's even more serious when so far from keeping silent when they hear a case they make a tremendous disturbance as though they were in a theatre, and hurl shouts of applause or disapproval at the speaker on either side in turn. All this puts the state at large into an awkward predicament. It is a wretched business to be forced to lay down laws for courts of that type, but if one is forced, the right thing to do is to hand over to them the assessment of penalties only in very trivial cases, providing for the majority in explicit laws of one's own— c
if, that is, one ever does legislate for a state organized in this way. But in a country where the regulation of the courts is as satisfactory as can be achieved and the jurymen-to-be have received a good education and been examined by all kinds of tests, it is right and proper to grant them complete discretion on all points to do with the punishments or fines that convicted criminals should suffer. In the present case we cannot be blamed if we leave to their discretion the most frequent and important points that arise, d
because they are points which even inadequately educated jurymen could grasp and apply when they have to give each individual crime a penalty appropriate both to the damage done and to the wickedness which is at the root of the actual deed. We believe, in fact, that the people for whom we are legislating may well turn out quite conspicuously able judges of these matters, so we should leave most decisions to them. Even so, in enacting earlier parts of our legal code, we mentioned the practice of e
sketching some examples of penalties—models for the judges to imitate, to stop them exceeding the due limits of justice. We suited the action to the word; it was the right course then and it is the right course now, as I once again resume our legislation.

Our law on wounding, then, should be written in the following terms:

> 53 A. If a man deliberately intends to kill a fellow citizen (unless the latter is one of those whose death is sanctioned by the law [52(a-e)]), and wounds him without being able to kill him, no pity should be wasted on the man who has inflicted a wound with that sort of intention: 877
> he should be treated with no more respect than a killer, and made to stand trial for murder.

But we should have due respect for the luck that has saved him from total ruin, and for his guardian angel too, who in pity for the attacker and the wounded man has stopped the injury of the latter from proving fatal, and prevented the disastrous ill luck of the former from bringing a curse down upon his head. We should duly thank his guardian spirit and not obstruct its wishes:

> 53 A. cont.
> *He who* has inflicted the wound shall be spared the death penalty, but b
> he must suffer life-long banishment to some neighboring state, with full freedom to enjoy all the income from his property; he must pay full

compensation for whatever injury he has done the wounded man, the sum to be assessed by the court that tries the case. (The court will consist of the same people who would have tried him for murder if his victim had died of the wounds sustained.)

B. If with similar premeditation
(a) a child wounds his parents, or
(b) a slave wounds his master,
*death* is to be the penalty.

C. If similarly
(a) a brother wounds a brother or a sister, or
(b) a sister wounds a brother or a sister,
c and is convicted of wounding with premeditation,
*death* is to be the penalty.

D If with intent to kill
(a) a wife wounds her husband, or
(b) a husband wounds his wife,
*he or she* must go into permanent exile. If they have sons or daughters who are still in their minority, the trustees must administer their property in trust, and care for the children as though they were orphans. If the offspring are adult, they should themselves take possession of the property, and be under no obligation to support the exile.[10] If anyone
d who succumbs to such misfortune is childless, the relatives of the exile, as far as the children of the cousins on both the male and female side, must hold a meeting, and in consultation with the Guardians of the Laws appoint an heir for this property, the 5040th in the state.

(They should look at the matter in the following light: none of the 5040 farms belongs to its occupant or his family in general as much as to the state, which is entitled to it not only as a piece of public property but also
e as its own private possession; and the state ought to do its best to keep its own properties as holy and prosperous as possible.) Therefore:

54. When one of the properties falls away from this condition of holiness and prosperity to such an extent that the possessor leaves no children to succeed him, being unmarried, or married but childless, and meets his end convicted of
(a) (i) deliberate murder, or
(ii) some other crime against gods or citizens for which the death penalty is specifically laid down by law, or if
(b) someone without male issue goes into permanent exile,
*first of all*, this property must be cleansed and purified according to law;
878 then the relatives must hold the meeting we mentioned just now, and in consultation with the Guardians of the Laws pick out a family that has the best reputation for virtue of all the families in the state and is

10. Reading *mē* for *ēdē* in c6.

at the same time fortunate enough to have produced several children. One of these they must adopt on behalf of the deceased's father and forebears, who will receive him as their son; from them he will take his name, which should be an omen of good fortune. The relatives should pray that as a result of his adoption he will bring them children, and guard the hearth and look after the family affairs, both sacred and secular, with greater success than his adoptive father enjoyed. In this b
way they should install him, according to law, as heir to the property.
(c) When such disasters as we have mentioned [54.(a,b)] overwhelm the sinner,
*they should* let him lie nameless in his grave, childless and deprived of his family estate.

We can see that it is not universally true that one district extends right up to the boundary of another. In some cases there is a no man's land in between, which will extend so as to touch either boundary and occupy an intermediate position between the two. This, we said,[11] was true of an act done in anger: it falls somewhere between voluntary and involuntary. Our regulations concerning wounding inflicted in anger should therefore run as follows:

55 A. If a man is found guilty, and c
(a) the wound turns out to be curable,
*he must* pay double damages;
(b) if it is incurable,
*he must* pay quadruple damages.
(c) If he has inflicted a wound which, though curable, makes the wounded man feel acutely embarrassed and ashamed,
*he must* pay triple damages.
B. If one man wounds another and injures not only his victim but the state, by rendering him unable to defend his fatherland against the enemy,
*he must*, in addition to the other penalties, make restitution to the state for the loss it has sustained, viz. he must perform not only his own military service but that of the incapacitated person as well by serving d
in the army on his behalf.
C. If he fails so to serve,
*he shall* be liable under the law to a charge of evading military service, at the hands of anyone who wishes.
A. cont. The assessment of the damages, double, triple, or quadruple, must be made by the judges who found him guilty.
D. If one relative wounds another in any of these ways,
*the fellow clansmen* and close relatives, male and female, as far as sons of cousins on both the male and female side, must hold a meeting, and e

11. See 866d–867c.

when they have reached their verdict, they must entrust the assessment to the natural parents. If the assessment is challenged, the assessment of the relatives on the male side must be taken as final. If they cannot agree themselves, they must, in the end, hand over the matter to the Guardians of the Laws.

E. When children inflict this kind of wound on their parents, it is essential for the judges to be parents over sixty years of age who have children of their own and not merely adopted ones. If a man is found guilty,

*these judges* must decide whether a man who could do such a thing as this should die, or whether the penalty should be something even more severe,[12] or perhaps something a trifle less severe. None of the relations of
879 the culprit should act as a judge, not even if he is of the age required by law.

F. (a) If a slave wounds a free man in anger,

*the owner* must hand him over to the wounded man, who may treat him in whatever way he likes.

(b) If the owner fails to hand him over,

*he must* remedy the damage himself.

(c) If anyone alleges that the affair is the result of collusion between the slave and the wounded party, he must contest the point at law. If he does not win the case,

*he must* pay triple damages.

If he does win, he must prosecute the author of the collusion with the slave on a charge of kidnapping.

56. If anyone involuntarily wounds someone else,
b *he must* pay simple damages. (No legislator is capable of regulating the workings of chance.) The judges are to be the same as those appointed to try children who wound their parents; and they will have the duty of assessing the amount of the damages.

ATHENIAN: All the injuries we have so far mentioned involve the use of violence, and so too do the various kinds of assault. In these cases, the point that every man, woman and child should bear in mind is this:

Age is always very much more highly regarded than youth, and this is
c so both among the gods and among men, if they intend to live in security and happiness. Therefore, the assault of an older man by a younger in public is a disgusting sight, and the gods hate to see it. No young man who is struck by an old man should ever make a fuss, but put up with his bad temper, and so establish a claim to similar respect when he himself grows old.

Our law, then, should run as follows:

Everyone in our community must show, by his words and actions, respect for his senior. A man should avoid crossing any person (male or female) who is twenty years older than himself, regarding him or her in the same way as he would his father or mother. For the sake of the gods

12. Such as deprivation of burial.

of birth, he must always keep himself from striking anyone old enough d to have been his parent. Similarly, he must refrain from striking a foreigner, whether the latter is a long-established resident or a recent immigrant. He must never go so far as to punish such a person by hitting him, either by attacking him first, or in self-defense.

57 A. (a) If he thinks the foreigner is unruly and insolent in an attack on himself, and needs to be punished, he must arrest him and take him, without hitting him, to the court of the City-Wardens, so that the foreigner may learn to banish all thoughts of ever striking a citizen again. e
The City-Wardens must take the man and interrogate him, with proper respect for the god who is the protector of foreigners. If in fact the foreigner seems to have been in the wrong in striking the citizen,
*the City-Wardens* must put a stop to this unruliness, so characteristic of a foreigner; they must give him as many strokes of the lash as will equal the number of blows he himself inflicted.
(b) If he is not in the wrong,
*they must* warn and rebuke the man who made the arrest, and dismiss the pair of them.
B. If one man strikes another who
(a) is about the same age, or
(b) is older, but has no children,
whether the attacker is an old man striking an old man, or a young man 880
striking a young man, the man attacked must defend himself by natural means—with his own bare hands, without a weapon. But if a man over forty years of age has the face to fight someone, whether
(i) he strikes the first blow, or
(ii) fights in self-defense,
*he will* get the reputation of being an uncivilized boor with the manners of a slave, and this ignominious punishment will serve him right.

A man who is easily persuaded by these words of exhortation will give us no trouble; but stubborn people, who ignore the preamble, ought to be ready to take more notice of the following regulations:

C. If anyone strikes a man twenty years or more his senior, any bystander, b
if he is neither of the same age nor younger than the combatants, should separate them,
*or be treated* under the law as a wretched coward. If he is of the same age as the person attacked, or younger, he should go to his assistance as if it were his own brother or father being wronged, or some still more senior relative.
D. In addition, the man who dares to strike his senior as defined[13] must stand trial for assault. If he loses the case,

13. I.e., someone twenty years older.

c *he must* be imprisoned for not less than a year. If the court fixes a longer imprisonment, the period it decides on shall stand.

E. If a foreigner, or a resident alien, strikes a man twenty years or more his senior, the same regulation [57C] about assistance from passers-by shall be enforced in the same way as before.

(a) A man found guilty of such a charge, if he is a foreigner not resident in the state,
*must pay* his penalty by spending two years in prison.

(b) If it is a resident alien who is in breach of these regulations,
*he must* go to prison for three years, except that the court may specify
d a longer period by way of penalty.

F. The passer-by who comes across any of these cases of assault and does not give assistance as required by law
*must be* fined: a member of the first property-class one hundred drachmas, a member of the second fifty drachmas, a member of the third thirty drachmas, and a member of the fourth twenty drachmas. The court in such cases is to consist of the Generals, Company-Commanders, Tribe-Leaders and Cavalry-Commanders.

Some laws, it seems, are made for the benefit of honest men, to teach them the rules of association that have to be observed if they are to live
e in friendship; others are made for those who refuse to be instructed and whose naturally tough natures have not been softened enough to stop them turning to absolute vice. It will be they who have prompted the points I am just going to make, and it is for their benefit that the lawgiver will be compelled to produce his laws, although he would wish never to find any occasion to use them. Consider a man who will dare to lay hands on his father or mother or their forebears by way of violent assault. He will fear neither the wrath of the gods above nor the punishments said to
881 await him in the grave; he will hold the ancient and universal tradition in contempt, on the strength of his 'knowledge' in a field where he is in fact a total ignoramus. He will therefore turn criminal, and will stand in need of some extreme deterrent. Death, however, is not an extreme and final penalty; the sufferings said to be in store for these people in the world to come are much more extreme than that. But although the threat of these sufferings is no idle one, it has no deterrent effect at all on souls like these. If it did, we should never have to deal with assaults on mothers, and
b wicked and presumptuous attacks on other forebears. I conclude, therefore, that the punishments men suffer for these crimes here on earth while they are alive should as far as possible equal the penalties beyond the grave.

Our next enactment, then, should run as follows:

G. If a man who is not in the grip of insanity dares to strike his father or mother, or their father or mother, the first point is that the passer-by must render assistance as provided in former cases.

(a)(i) If the resident alien renders assistance,
*he shall* be invited to a front seat at the games;

(ii) if he does not render assistance,
*he must* go into permanent exile from the land.
(b)(i) If the non-resident alien renders assistance, c
*he shall* be commended.
(ii) If he does not render assistance,
*he must* be reprimanded.
(c)(i) If a slave renders assistance,
*he shall* be set free.
(ii) If he does not render assistance,
*he must* receive a hundred strokes of the lash.
If the crime was committed in the market-place, the whipping should be administered by the Market-Wardens; if in the city but not in the market, by the City Warden in residence; if somewhere in the countryside, by the chief Country-Wardens.
(d) Everyone of citizen birth who passes by, whether man, woman or child, must shout 'you wicked monster' at the attacker, and repel him. d
If the passer-by makes no attempt to repel him,
*he must* be liable under the law to a curse from Zeus, guardian of the family and protector of parents.
H. If a man is convicted of an assault on his parents,
*he must* be permanently rusticated from the city to some other part of the country, and be banned from all sacred places.
I. (a) If he returns to the city,
*he must* be punished by death,
(b) If he does not keep away from sacred places,
*the Country-Wardens* must punish him by a whipping, and by any other method at their discretion.
J. (a) If any free man eats or drinks in company with such a person, or associates with him in some other similar fashion, even by deliberately e
failing to cut him on meeting,
*he must* not enter any temple, or market-place, or any part of the city, before he has been purified, bearing in mind that he has come into contact with a misfortune that brings a curse upon a man.
K. If he disobeys the law and in defiance of it pollutes temples and city, *any official* who discovers the fact and does not take the man to court will find that this is one of the most serious charges against him at his scrutiny.[14]
L. If a slave strikes a free man, foreigner or citizen, the passer-by who 882
does not render assistance
*must pay* the penalty prescribed for his property-class.
M. The passers-by in conjunction with the person attacked must bind the slave and hand him over to his victim; the victim must take him, b
put him in chains, and give him as many strokes of the whip as he likes,

14. At the end of their term officials had to submit to an examination of their conduct in office before being discharged; see 945e–947b.

provided he does not diminish the value of the slave to his master; he should then hand him over to the latter's legal ownership. This legal ownership must be subject to the following provision. Any slave who has struck a free man, other than on the orders of the officials, must be
c tied up; his master must receive him from the assaulted person and not release him before the slave persuades his victim that he deserves to live free of constraint.

The same regulations should apply in all cases (a) of women against each other, (b) of women against men, and (c) of men against women.

# Book X

884 ATHENIAN: So much for cases of assault. Now let's state a single comprehensive rule to cover acts of violence. It will run more or less like this. No one may seize or make off with other people's property, nor use any of his neighbor's possessions without getting the permission of the owner. Contempt for this principle has always been (and still is and always will be) the source of all the evils just mentioned. But there are other acts of violence, too, of which the worst are the insolence and outrageous actions of the young. These actions are most serious when they affect sacred objects; and the damage is particularly grave when it is done to sacred property that also belongs to the public, or is held in common by the
885 members of a sub-division of the state, such as a tribe or some similar association. Second, and second in order of gravity, comes wanton damage to sacred objects that are privately owned, particularly tombs; third come attacks (apart from those already dealt with) on parents. A fourth category of outrageous conduct is when someone ignores the wishes of the authorities and seizes or removes or uses something belonging to them without their permission; and any violations of the civil rights of the private citizen which demand legal redress will constitute a fifth class. We have to frame a comprehensive law that will cover each individual case. As for robbery from temples, whether clandestine or open and violent, we have already specified in general terms the appropriate punishment;[1] but our statement
b of the penalty for offensive remarks about the gods or outrageous actions against their interests should be prefaced by these words of exhortation:

No one who believes in gods as the law directs ever voluntarily commits an unholy act or lets any lawless word pass his lips. If he does, it is because of one of three possible misapprehensions: either, as I said, he believes (1) the gods do not exist, or (2) that they exist but take no thought for the human race, or (3) that they are influenced by sacrifices and supplications and can easily be won over.

c CLINIAS: So what's the right thing for us to do or say to these people?

1. See 854d ff.

ATHENIAN: My friend, let's listen to the ridicule and scorn with which I imagine they put their case.

CLINIAS: What ridicule?

ATHENIAN: They'll probably go in for bantering, and address us like this: 'Gentlemen of Athens, of Sparta and of Crete, you are quite right. Some of us are indeed absolute atheists, whereas others do believe in such gods as you describe. So we demand of you what you yourselves demanded
of the laws, that before you resort to threats and bullying, you should try d
to convince us by argument and cogent proofs that gods do exist, and that they are in fact above being seduced by gifts into turning a blind eye to injustice. But you see, it's precisely in these and similar terms that we hear them spoken of by the most highly thought-of poets and orators and prophets and priests and thousands of other people too. That's why most
of us make little effort to avoid crime, but commit it first and try to put e
things right afterwards. So from lawgivers who profess to use the velvet glove rather than the iron fist we claim the right to be tackled by persuasion first. Even if, when you state your case for the existence of gods, your elegance of expression is only marginally superior to your opponents', persuade us that your argument is a better expression of the *truth*, and then perhaps we'll believe you. Isn't that fair enough? Well then, try to reply to our challenge.'

CLINIAS: Well sir, don't you think that the gods' existence is an easy truth to explain?

ATHENIAN: How? 886

CLINIAS: Well, just look at the earth and the sun and the stars and the universe in general; look at the wonderful procession of the seasons and its articulation into years and months! Anyway, you know that all Greeks and all foreigners are unanimous in recognizing the existence of gods.

ATHENIAN: My dear sir, when I think of the contempt these scoundrels will probably feel for us, I'm overcome with embarrassment—no, I withdraw that word: let's say they 'alarm' me—because you don't appreciate the real grounds of their opposition to you. You think it's just because they
can't resist temptation and desire that they are attracted to the godless life. b

CLINIAS: What other reason could there be, sir?

ATHENIAN: A reason which you two, living rather off the beaten track as you do, simply wouldn't appreciate. It will have completely passed you by.

CLINIAS: What are you talking about now?

ATHENIAN: A form of ignorance that causes no end of trouble, but which passes for the height of wisdom.

CLINIAS: How do you mean?

ATHENIAN: In Athens a number of written works are current which are
not found in your states (which are, I understand, too well run to tolerate c
them). The subject of these writings (some of which are in verse, others in prose) is theology. The most ancient accounts, after relating how the primitive substances—the sky and so on—came into being, pass rapidly

on to a description of the birth of the gods and the details of how once
born they subsequently treated each other. On some subjects, the antiquity
of these works makes them difficult to criticize, whatever their influence—
good or bad—on their audience; but when it comes to the respect and
d attention due to parents, I for one shall never recommend them either as
a good influence or as a statement of the honest truth. Still, there's no
need to bother with this old material: we may freely allow it to be arranged
and recounted in any way the gods find amusing. But the principles of
our modern pundits do need to be denounced as a pernicious influence.
Just look at the effects of their arguments! When you and I present our
proofs for the existence of gods and adduce what you adduced—sun,
moon, stars and earth—and argue they are gods and divine beings, the
e proselytes of these clever fellows will say that these things are just earth
and stones, and are incapable of caring for human affairs, however much
our plausible rhetoric has managed to dress them up.

CLINIAS: Even if it were unique, sir, that theory you've just described
would make trouble. But as similar doctrines in fact exist in their thousands,
the situation is even worse.

ATHENIAN: What now, then? What's our reply? What must we do? It's
as though we were on trial before a bench of godless judges, defending
887 ourselves on a charge arising out of our legislation. 'It's monstrous,' they
say to us, 'that you should pass laws asserting that gods exist.' Shall we
defend ourselves? Or shall we ignore them and get back to our legislation,
so that the mere preface doesn't turn out longer than the actual code? You
see, if we're going to postpone passing the appropriate legislation until
we've proved properly to those with a taste for impiety all the points they
insisted we had to cover, so that they feel uneasy and begin to find their
views going sour on them, our explanation will be anything but brief.

b CLINIAS: Even so, sir, as we've often said in the comparatively short time
we've been talking, there's no reason at the moment to prefer a brief
explanation to a full one: after all, no one's 'breathing down our neck' (as
they say). It would be an awful farce, if we appeared to be putting brevity
first and quality second. It's vital that somehow or other we should make
out a plausible case for supposing that gods do exist, that they are good,
and that they respect justice more than men do. Such a demonstration
would constitute just about the best and finest preamble our penal code
c could have. So let's overcome our reluctance and unhurriedly exert what
powers of persuasion we have in this field, devoting ourselves wholeheart-
edly to a full exposition of our case.

ATHENIAN: How keen and insistent you are! I take it you're suggesting
we should now offer up a prayer for the success of our exposition, which
we certainly can't delay any longer.

Well now, how *can* one argue for the existence of gods without getting
angry? You see, one inevitably gets irritable and annoyed with these people
d who have put us to the trouble, and continue to put us to the trouble, of
composing these explanations. If only they believed the stories which they

had as babes and sucklings from their nurses and mothers! These almost literally 'charming' stories were told partly for amusement, partly in full earnest; the children heard them related in prayer at sacrifices, and saw acted representations of them—a part of the ceremony a child always loves to see and hear; and they saw their own parents praying with the utmost seriousness for themselves and their families in the firm conviction that their prayers and supplications were addressed to gods who really did e
exist. At the rising and setting of the sun and moon the children saw and heard Greeks and foreigners, in happiness and misery alike, all prostrate at their devotions; far from supposing gods to be a myth, the worshippers believed their existence to be so sure as to be beyond suspicion. When some people contemptuously brush aside all this evidence without a single good reason to support them (as even a half-wit can see) and oblige us to 888
deliver this address—well, how could one possibly admonish them and at the same time teach them the basic fact about gods, their existence, without using the rough edge of one's tongue? Still, we must make the best of it: we don't want both sides maddened at once, they by their greed for pleasure, we by our anger at their condition. So our address to men with such a depraved outlook should be calm, and run as follows. Let's use honeyed words and abate our anger, and pretend we're addressing just one representative individual.

'Now then, my lad, you're still young, and as time goes on you'll come b
to adopt opinions diametrically opposed to those you hold now. Why not wait till later on to make up your mind about these important matters? The most important of all, however lightly you take it at the moment, is to get the right ideas about the gods and so live a good life:—otherwise you'll live a bad one. In this connection, I want first to make a crucial and irrefutable point. It's this: you're not unique. Neither you nor your friends are the first to have held this opinion about the gods. It's an illness from which the world is never free, though the number of sufferers varies from time to time. I've met a great many of them, and let me assure you that c
none of them who have been convinced early in life that gods do not exist have ever retained that belief into old age. However, it is true that some men (but not many) do persist in laboring under the impression either that although the gods exist they are indifferent to human affairs, or alternatively that they are not indifferent but can easily be won over by prayers and sacrifices. Be guided by me: you'll only see this business in its truest light if you wait to gather your information from all sources, d
particularly the legislator, and then see which theory represents the truth. In the meantime, don't venture any impiety where gods are concerned. You may take it that it will be up to your lawgiver, now and in the future, to try to enlighten you on precisely these topics.'

CLINIAS: So far, sir, that's very well said.

ATHENIAN: Certainly, Megillus and Clinias, but what an amazing doctrine we've got involved in, without noticing it!

CLINIAS: What doctrine do you mean?

e ATHENIAN: I mean the one which many people regard as the highest truth of all.

CLINIAS: Please be more explicit.

ATHENIAN: Some people, I believe, account for all things which have come to exist, all things which are coming into existence now, and all things which will do so in the future, by attributing them either to nature, art, or chance.

CLINIAS: Isn't that satisfactory?

889 ATHENIAN: Oh, I expect they've got it more or less right—they're clever fellows. Still, let's keep track of them, and see what's really implied in the theories of that school of thought.

CLINIAS: By all means.

ATHENIAN: The facts show—so they claim—that the greatest and finest things in the world are the products of nature and chance, the creations of art being comparatively trivial. The works of nature, they say, are grand and primary, and constitute a ready-made source for all the minor works constructed and fashioned by art—*art*efacts, as they're generally called.

CLINIAS: How do you mean?

b ATHENIAN: I'll put it more precisely. They maintain that fire, water, earth and air owe their existence to nature and chance, and in no case to art, and that it is by means of these entirely inanimate substances[2] that the secondary physical bodies—the earth, sun, moon and stars—have been produced. These substances moved at random, each impelled by virtue of its own inherent properties, which depended on various suitable amalgamations of hot and cold, dry and wet, soft and hard, and all other haphazard combinations that inevitably resulted when the opposites were
c mixed. This is the process to which all the heavens and everything that is in them owe their birth, and the consequent establishment of the four seasons led to the appearance of all plants and living creatures. The cause of all this, they say, was neither intelligent planning, nor a deity, nor art, but—as we've explained—nature and chance. Art, the brain-child of these living creatures, arose later, the mortal child of mortal beings; it has pro-
d duced, at a late stage, various amusing trifles that are hardly real at all—mere insubstantial images of the same order as the arts themselves (I mean for instance the productions of the arts of painting and music, and all their ancillary skills). But if there are in fact some techniques that produce worthwhile results, they are those that *co-operate* with nature, like medicine and farming and physical training. This school of thought maintains that government, in particular, has very little to do with nature, and is largely
e a matter of art; similarly legislation is never a natural process but is based on technique, and its enactments are quite artificial.

CLINIAS: What are you driving at?

ATHENIAN: My dear fellow, the first thing these people say about the gods is that they are artificial concepts corresponding to nothing in nature;

2. Or possibly, 'by these entirely inanimate agencies' (i.e., nature and chance).

they are legal fictions, which moreover vary very widely according to the
different conventions people agree on when they produce a legal code. In
particular, goodness according to nature and goodness according to the
law are two different things, and there is no natural standard of justice at
all. On the contrary, men are always wrangling about their moral standards
and altering them, and every change introduced becomes binding from
the moment it's made, regardless of the fact that it is entirely artificial, 890
and based on convention, not nature in the slightest degree. All this, my
friends, is the theme of experts—as our young people regard them—who
in their prose and poetry maintain that anything one can get away with
by force is absolutely justified. This is why we experience outbreaks of
impiety among the young, who assume that the kind of gods the law tells
them to believe in do not exist; this is why we get treasonable efforts to
convert people to the 'true natural life', which is essentially nothing but
a life of conquest over others, not one of service to your neighbor as the
law enjoins.

CLINIAS: What a pernicious doctrine you've explained, sir! It must be b
the ruin of the younger generation, both in the state at large and in private families.

ATHENIAN: That's very true, Clinias. So what do you think the legislator
ought to do, faced with such a long-established thesis as this? Is he simply
to stand up in public and threaten all the citizens with punishment if they
don't admit the existence of gods and mentally accept the law's description
of them? He could make the same threat about their notions of beauty
and justice and all such vital concepts, as well as about anything that
encourages virtue or vice; he could demand that the citizens' belief and c
actions should accord with his written instructions, and insist that anyone
not showing the proper obedience to the laws must be punished either by
death, or by a whipping and imprisonment, deprivation of civic rights, or
by being sent into exile a poorer man. But what about *persuading* them?
When he establishes a legal code for his people, shouldn't he try to talk
them into being as amenable as he can make them?

CLINIAS: Certainly, sir. If even limited persuasion can be applied in this d
field, no legislator of even moderate ability should shrink from making
the effort. On the contrary, he should argue 'till the cows come home', as
the saying is, to back up the old doctrine that the gods exist, and to support
the other arguments you ran through just now. In particular, he should
defend law itself and art as either part of nature or existing by reason of
some no less powerful agency—being in fact, to tell the truth, creations
of reason. That, I think, is the point you're making, and I agree.

ATHENIAN: Really, Clinias, you *are* enthusiastic! But when these themes e
are presented as you suggest, in addresses composed for a popular audience, aren't they found rather difficult to understand? And don't the addresses tend to go on for ever?

CLINIAS: Well, sir, we put up with one long discussion, about inebriation
in the cause of culture, so surely we can tolerate another, about theology

and so forth. And of course this helps intelligent legislation tremendously,
891 because legal instructions, once written down, remain fixed and permanent,
ready to stand up to scrutiny forever. So there's no reason for alarm if at first they make difficult listening, because your slow learner will be able to go back again and again and examine them. Nor does their length, provided they're useful, justify any man in committing what seems to me, at least, an impiety: I mean refusing to facilitate these explanations as best he can.

Megillus: Yes, sir, I entirely approve of what Clinias says.

b Athenian: As well you may, Megillus, and we must do as he suggests.
Of course, if this sort of argument had not been disseminated so widely over pretty well the entire human race, there would be no call for arguments to prove the existence of gods. But in present circumstances we've no choice. When the most important laws are being trampled under foot by scoundrels, whose duty is it to rush to their defense, if not the legislator's?

Megillus: Nobody's.

c Athenian: Now then, Clinias, you must take your share in the explana-
tion, so tell me your opinion again. I assume the upholder of this doctrine thinks of fire and water, earth and air as being the first of all substances, and this is precisely what he means by the term 'nature'; soul, he thinks, was derived from them, at a later stage. No, I do more than 'assume': I'd say he argues the point explicitly.

Clinias: True.

Athenian: Now then, by heaven, haven't we discovered the fountain-head, so to speak, of the senseless opinions of all those who have ever undertaken investigation into nature? Scrutinize carefully every stage in
d their argument, because it will be crucial if we can show that these people
who have embraced impious doctrines and lead others on are using fallacious arguments rather than cogent ones—which I think is in fact the case.

Clinias: You're right, but try to explain their error.

Athenian: Well, it looks as if we have to embark on a rather unfamiliar line of argument.

Clinias: Don't hesitate, sir. I realize you think we'll be straying outside legislation if we attempt such an explanation, but if this is the only way
e to reach agreement that the beings currently described as gods in our law
are properly so described, then this, my dear sir, is the kind of explanation we must give.

Athenian: So it looks as if I must now argue along rather unfamiliar lines. Well then, the doctrine which produces an impious soul also 'produces', in a sense, the soul itself, in that it denies the priority of what was in fact the first cause of the birth and destruction of all things, and regards it as a later creation. Conversely, it asserts that what actually came later, came first. That's the source of the mistake these people have made about the real nature of the gods.

892 Clinias: So far, the point escapes me.

Athenian: It's the *soul*, my good friend, that nearly everybody seems to have misunderstood, not realizing its nature and power. Quite apart

from the other points about it, people are particularly ignorant about its
birth. It is one of the *first* creations, born long before all physical things,
and is the chief cause of all their alterations and transformations. Now if
that's true, anything closely related to soul will necessarily have been
created before material things, won't it, since soul itself is older than matter? b

Clinias: Necessarily.

Athenian: Opinion, diligence, reason, art and law will be prior to roughness and smoothness, heaviness and lightness. In particular, the grand and primary works and creations, precisely *because* they come in the category 'primary', will be attributable to art. Natural things, and nature herself—to use the mistaken terminology of our opponents—will be secondary products from art and reason.

Clinias: Why do you say 'mistaken'? c

Athenian: When they use the term 'nature', they mean the process by which the primary substances were created. But if it can be shown that soul came first, not fire or air, and that it was one of the first things to be created, it will be quite correct to say that soul is preeminently natural. This is true, provided you can demonstrate that soul is older than matter, but not otherwise.

Clinias: Very true.

Athenian: So this is precisely the point we have to tackle next? d

Clinias: Of course.

Athenian: It's an extremely tricky argument, and we old men must be
careful not to be taken in by its freshness and novelty, so that it eludes
our grasp and makes us look like ridiculous fools whose ambitious ideas
lead to failure even in little things. Just consider. Imagine the three of us
had to cross a river in spate, and I were the younger and had plenty of
experience of currents. Suppose I said, 'I ought to try first on my own e
account, and leave you two in safety while I see if the river is fordable
for you two older men as well, or if not, just how bad it is. If it turns out
to be fordable, I'll then call you and put my experience at your disposal
in helping you to cross; but if in the event it cannot be crossed by old men
like yourselves, then the only risk has been mine.' Wouldn't that strike
you as fair enough? The situation is the same now: the argument ahead
runs too deep, and men as weak as you will probably get out of your
depth. I want to prevent you novices in answering from being dazed and
dizzied by a stream of questions, which would put you in an undignified 893
and humiliating position you'd find most unpleasant. So this is what I
think I'd better do now: first I'll ask questions of myself, while you listen
in safety; then I'll go over the answers again and in this way work through
the whole argument until the soul has been thoroughly dealt with and its
priority to matter proved.

Clinias: We think that's a splendid idea, sir. Please act on your suggestion.

Athenian: Come then, if ever we needed to call upon the help of God, b
it's now. Let's take it the gods have been most pressingly invoked to assist
the proof of their own existence, and let's rely on their help as if it were

a rope steadying us as we enter the deep waters of our present theme.
Now when I'm under interrogation on this sort of topic, and such questions
as the following are put to me, the safest replies seem to be these. Suppose
someone asks 'Sir, do all things stand still, and does nothing move? Or is
precisely the opposite true? Or do some things move, while others are
c motionless?' My reply will be 'I suppose some move and others remain
at rest.' 'So surely there must be some *space* in which the stationary objects
remain at rest, and those in motion move?' 'Of course.' 'Some of them,
presumably, will do so in one location, others in several?' 'Do you mean',
we shall reply, 'that "moving in one location" is the action of objects which
are able to keep their centers immobile? For instance, there are circles
which are said to "stay put" even though as a whole they are revolving.'
'Yes.' 'And we appreciate that when a disk revolves like that, points near
and far from the center describe circles of different radii in the same time;
d their motion varies according to these radii and is proportionately quick
or slow. This motion gives rise to all sorts of wonderful phenomena,
because these points simultaneously traverse circles of large and small
circumference at proportionately high or low speeds—an effect one might
have expected to be impossible.' 'You're quite right.' 'When you speak of
motion in many locations I suppose you're referring to objects that are
always leaving one spot and moving on to another. Sometimes their motion
involves only one point of contact with their successive situations, some-
e times several, as in rolling.

'From time to time objects meet; a moving one colliding with a stationary
one disintegrates, but if it meets other objects traveling in the opposite
direction they coalesce into a single intermediate substance, half one and
half the other.' 'Yes, I agree to your statement of the case.' 'Further, such
combination leads to an increase in bulk, while their separation leads to
diminution—so long as the existing states of the objects remain unimpaired;
but if either combination or separation entails the abolition of the existing
state, the objects concerned are destroyed.

894 'Now, what conditions are always present when anything is produced?
Clearly, an initial impulse grows and reaches the second stage and then
the third stage out of the second, finally (at the third stage) presenting
percipient beings with something to perceive. This then is the process of
change and alteration to which everything owes its birth. A thing exists
as such so long as it is stable, but when it changes its essential state it is
completely destroyed.'

So, my friends, haven't we now classified and numbered all forms of
b motion, except two?

CLINIAS: Which two?

ATHENIAN: My dear chap, they are the two which constitute the real purpose of every question we've asked.

CLINIAS: Try to be more explicit.

ATHENIAN: What we really had in view was soul, wasn't it?

CLINIAS: Certainly.

ATHENIAN: The one kind of motion is that which is permanently capable of moving other things but not itself; the other is permanently capable of moving *both* itself *and* other things by processes of combination and separation, increase and diminution, generation and destruction. Let these stand as two further distinct types in our complete list of motions. c

CLINIAS: Agreed.

ATHENIAN: So we shall put ninth the kind which always imparts motion to something else and is itself changed by another thing. Then[3] there's the motion that moves both itself and other things, suitable for all active and passive processes and accurately termed the source of change and motion in all things that exist. I suppose we'll call that the tenth.

CLINIAS: Certainly.

ATHENIAN: Now which of our (roughly) ten motions should we be justified in singling out as the most powerful and radically effective? d

CLINIAS: We can't resist the conclusion that the motion which can generate itself is infinitely superior, and all the others are inferior to it.

ATHENIAN: Well said! So shouldn't we correct one or two inaccuracies in the points we've just made?

CLINIAS: What sort of inaccuracy do you mean?

ATHENIAN: It wasn't quite right to call that motion the 'tenth'.

CLINIAS: Why not?

ATHENIAN: It can be shown to be first, in ancestry as well as in power; the next kind—although oddly enough a moment ago we called it 'ninth'— e
we'll put second.

CLINIAS: What are you getting at?

ATHENIAN: This: when we find one thing producing a change in another, and that in turn affecting something else, and so forth, will there ever be, in such a sequence, an original cause of change? How could anything whose motion is transmitted to it from something else be the *first* thing to effect an alteration? It's impossible. In reality, when something which has set itself moving effects an alteration in something, and that in turn effects something else, so that the motion is transmitted to thousands upon thousands of things one after another, the entire sequence of their 895
movements must surely spring from some initial principle, which can hardly be anything except the change effected by self-generated motion.

CLINIAS: You've put it admirably, and your point must be allowed.

ATHENIAN: Now let's put the point in a different way, and once again answer our own questions: 'Suppose the whole universe were somehow to coalesce and come to a standstill—the theory which most of our philosopher-fellows are actually bold enough to maintain—which of the motions we have enumerated would inevitably be the first to arise in it?' 'Self- b
generating motion, surely, because no antecedent impulse can ever be transmitted from something else in a situation where no antecedent impulse exists. Self-generating motion, then, is the source of all motions, and

3. Inserting *te* after *heautēn* in c4.

the primary force in both stationary and moving objects, and we shan't be able to avoid the conclusion that it is the most ancient and the most potent of all changes, whereas the change which is produced by something else and is in turn transmitted to other objects, comes second.'

Clinias: You're absolutely right.

c Athenian: So now we've reached this point in our discussion, here's another question we should answer.

Clinias: What?

Athenian: If we ever saw this phenomenon—self-generating motion—arise in an object made of earth, water or fire (alone or in combination) how should we describe that object's condition?

Clinias: Of course, what you're really asking me is this: when an object moves itself, are we to say that it is 'alive'?

Athenian: That's right.

Clinias: It emphatically is alive.

Athenian: Well then, when we see that a thing has a soul, the situation is exactly the same, isn't it? We have to admit that it is alive.

Clinias: Yes, exactly the same.

d Athenian: Now, for heaven's sake, hold on a minute. I suppose you'd be prepared to recognize three elements in any given thing?

Clinias: What do you mean?

Athenian: The first point is what the object actually *is*, the second is the definition of this, and the third is the name. And in addition there are two questions to be asked about every existing thing.

Clinias: Two?

Athenian: Sometimes we put forward the mere name and want to know the definition, and sometimes we put forward the definition and ask for the name.

Clinias: I take it the point we want to make at the moment is this.

Athenian: What?

e Clinias: In general, things can be divided into two, and this is true of some numbers as well. Such a number has the *name* 'even' and its *definition* is 'a number divisible into two equal parts'.

Athenian: Yes, that's the sort of thing I mean. So surely, in either case—whether we provide the name and ask for the definition or give the definition and ask for the name—we're referring to the same object? When we *call* it 'even' and *define* it as 'a number divisible into two', it's the same thing we're talking about.

Clinias: It certainly is.

896 Athenian: So what's the definition of the thing we call the soul? Surely we can do nothing but use our formula of a moment ago: 'motion capable of moving itself'.

Clinias: Do you mean that the entity which we all *call* 'soul' is precisely that which is *defined* by the expression 'self-generating motion'?

Athenian: I do. And if this is true, are we still dissatisfied? Haven't we got ourselves a satisfactory proof that soul is identical with the original

source of the generation and motion of all past, present and future things and their contraries? After all, it has been shown to be the cause of all
change and motion in everything. b

CLINIAS: Dissatisfied? No! On the contrary, it has been proved up to the hilt that soul, being the source of motion, is the most ancient thing there is.

ATHENIAN: But when one thing is put in motion by another, it is never thereby endowed with the power of independent self-movement. Such derived motion will therefore come second, or as far down the list as you fancy relegating it, being a mere change in matter that quite literally 'has no soul'.

CLINIAS: Correctly argued.

ATHENIAN: So it was an equally correct, final and complete statement of
the truth, when we said that soul is prior to matter, and that matter c
came later and takes second place. Soul is the master, and matter its natural subject.

CLINIAS: That is indeed absolutely true.

ATHENIAN: The next step is to remember our earlier admission that if soul were shown to be older than matter, the spiritual order of things would be older than the material.

CLINIAS: Certainly.

ATHENIAN: So habits, customs, will, calculation, right opinion, diligence d
and memory will be prior creations to material length, breadth, depth and strength, if (as is true) soul is prior to matter.

CLINIAS: Unavoidably.

ATHENIAN: And the next unavoidable admission, seeing that we are going to posit soul as the cause of *all* things, will be that it is the cause of good and evil, beauty and ugliness, justice and injustice and all the opposites.

CLINIAS: Of course.

ATHENIAN: And surely it's necessary to assert that as soul resides and e
keeps control anywhere where anything is moved, it controls the heavens as well.

CLINIAS: Naturally.

ATHENIAN: One soul, or more than one? I'll answer for you both: more than one. At any rate, we must not assume fewer than two: that which does good, and that which has the opposite capacity.

CLINIAS: That's absolutely right.

ATHENIAN: Very well, then. So soul, by virtue of its own motions, stirs into movement everything in the heavens and on earth and in the sea.
The names of the motions of soul are: wish, reflection, diligence, counsel, 897
opinion true and false, joy and grief, cheerfulness and fear, love and hate. Soul also uses all related or initiating motions which take over the secondary movements of matter and stimulate everything to increase or diminish, separate or combine, with the accompanying heat and cold, heaviness and lightness, roughness and smoothness, white and black, bitter and sweet.

These are the instruments soul uses, whether it cleaves to divine reason
b (soul itself being, if the truth were told, a divinity), and guides everything to an appropriate and successful conclusion, or allies itself with unreason and produces completely opposite results. Shall we agree this is the case, or do we still suspect that the truth may be different?

Clinias: By no means.

Athenian: Well then, what kind of soul may we say has gained control of the heavens and earth and their entire cycle of movement? Is it the rational and supremely virtuous kind, or that which has neither advantage?
c Would you like our reply to run like this?

Clinias: How?

Athenian: 'If, my fine fellow' (we should say) 'the whole course and movement of the heavens and all that is in them reflect the motion and revolution and calculation of reason, and operate in a corresponding fashion, then clearly we have to admit that it is the best kind of soul that cares for the entire universe and directs it along the best path.'

Clinias: True.

Athenian: 'If however these things move in an unbalanced and disorga-
d nized way, we must say the evil kind of soul is in charge of them.'

Clinias: That too is true.

Athenian: 'So what is the nature of rational motion?' Now this, my friends, is a question to which it is difficult to give an answer that will make sense, so you're justified here in calling me in to help with your reply.

Clinias: Good.

Athenian: Still, in answering this question we mustn't assume that mortal eyes will ever be able to look upon reason and get to know it adequately: let's not produce darkness at noon, so to speak, by looking at
e the sun direct. We can save our sight by looking at an *image* of the object we're asking about.

Clinias: How do you mean?

Athenian: What about selecting from our list of ten motions the one which reason resembles, and taking that as our image? I'll join you in recalling it, and then we'll give a joint answer to the question.

Clinias: Yes, that's probably your best method of explanation.

Athenian: Do we still remember at any rate this from the list of points we made earlier, that all things are either in motion or at rest?

Clinias: Yes, we do.

Athenian: And some of those in motion move in a single location, others
898 in a succession of locations?

Clinias: That is so.

Athenian: Of these two motions, that taking place in a single location necessarily implies continuous revolution round a central point, just like wheels being turned on a lathe; and this kind of motion bears the closest possible affinity and likeness to the cyclical movement of reason.

Clinias: What do you mean?

ATHENIAN: Take reason on the one hand, and motion in a single location on the other. If we were to point out that in both cases the motion was determined by a single plan and procedure and that it was (a) regular, (b) b
uniform, (c) always at the same point in space, (d) around a fixed center, (e) in the same position relative to other objects, and were to illustrate both by the example of a sphere being turned on a lathe, then no one could ever show us up for incompetent makers of verbal images.

CLINIAS: You're quite right.

ATHENIAN: Now consider the motion that is never uniform or regular or at the same point in space or round the same center or in the same relative position or in a single location, and is neither planned nor organized nor systematic. Won't that motion be associated with every kind of unreason?

CLINIAS: Absolutely true, it will.

ATHENIAN: So now there's no difficulty in saying right out that since we c
find that the entire cycle of events is to be attributed to soul, the heavens that we see revolving must necessarily be driven round—we have to say—because they are arranged and directed *either* by the best kind of soul *or* by the other sort.

CLINIAS: Well, sir, judging from what has been said, I think it would be rank blasphemy to deny that their revolution is produced by one or more souls blessed with perfect virtue.

ATHENIAN: You've proved a most attentive listener, Clinias. Now attend
to this further point. d

CLINIAS: What?

ATHENIAN: If, in principle, soul drives round the sun, moon and the other heavenly bodies, does it not impel each individually?

CLINIAS: Of course.

ATHENIAN: Let's take a single example: our results will then obviously apply to all the other heavenly bodies.

CLINIAS: And your example is . . .?

ATHENIAN: . . . the sun. Everyone can see its body, but no one can see its soul—not that you could see the soul of any other creature, living or dying. Nevertheless, there are good grounds for believing that we are in fact held in the embrace of some such thing though it is totally below the level of our bodily senses, and is perceptible by reason alone. So by reason e
and understanding let's get hold of a new point about the soul.

CLINIAS: What?

ATHENIAN: If soul drives the sun, we shan't go far wrong if we say that it operates in one of three ways.

CLINIAS: And what are they?

ATHENIAN: Either (a) the soul resides within this visible spherical body and carries it wherever it goes, just as *our* soul takes us around from one place to another, or (b) it acquires its own body of fire or air of some kind 899
(as certain people maintain), and impels the sun by the external contact

of body with body, or (c) it is entirely immaterial, but guides the sun along its path by virtue of possessing some other prodigious and wonderful powers.

CLINIAS: Yes, it must necessarily be by one of these methods that the soul manages the universe.

ATHENIAN: Now, just wait a minute. Whether we find that it is by stationing itself in the sun and driving it like a chariot, or by moving it from outside, or by some other means, that this soul provides us all with light, every single one of us is bound to regard it as a god. Isn't that right?

b CLINIAS: Yes, one would be absolutely stupid not to.

ATHENIAN: Now consider all the stars and the moon and the years and the months and all the seasons: what can we do except repeat the same story? A soul or souls—and perfectly virtuous souls at that—have been shown to be the cause of all these phenomena, and whether it is by their living presence in matter that they direct all the heavens, or by some other means, we shall insist that these souls are gods. Can anybody admit all this and still put up with people who deny that 'everything is full of gods'?[4]

c CLINIAS: No sir, nobody could be so mad.

ATHENIAN: Now then, Megillus and Clinias, let's delimit the courses of action open to anyone who has so far refused to believe in gods, and get rid of him.

CLINIAS: You mean . . .

ATHENIAN: . . . *either* he should demonstrate to us that we're wrong to posit soul as the first cause to which everything owes its birth, and that our subsequent deductions were equally mistaken, *or*, if he can't put a better case than ours, he should let himself be persuaded by us and live the rest of his life a believer in gods. So let's review the thesis we argued
d for the existence of gods against the non-believers: was it cogent or feeble?

CLINIAS: Feeble, sir? Not in the least.

ATHENIAN: Very well. So far as atheists are concerned, we may regard our case as complete. Next we have to use some gentle persuasion on the man who believes in gods but thinks they are unconcerned about human affairs. 'My splendid fellow,' we'll say, 'your belief in the existence of gods probably springs from a kind of family tie between you and the gods that draws you to your natural kin and makes you honor them and recognize their existence. What drives you to impiety is the good fortune of scoundrels
e and criminals in private and public life—which in reality is not good fortune at all, although it is highly admired as such by popular opinion and its misplaced enthusiasms: poetry and literature of every kind invest it with a pernicious glamour. Or perhaps you observe men reaching the
900 end of their lives, full of years and honor, leaving behind them their children's children, and your present disquiet is because you've discovered

4. A remark attributed to Thales (*c.* 600 B.C.), traditionally the first philosopher.

(either from hearsay or personal observation) a few of the many ghastly acts of impiety which (you notice) are the very means by which some of these people have risen from humble beginnings to supreme power and dictatorships. The result is that although by virtue of your kinship with the gods you'd clearly be reluctant to lay such things at their door, your mental confusion and your inability to find fault with them has brought b
you to your present predicament where you believe they exist, but despise and neglect human affairs. Now, we want to prevent your thoughts from becoming more impious than they are already: let's see if argument will ward off the disease while it is still in its early stages. We must also try to make use of the original thesis we argued so exhaustively against the absolute atheist, by linking the next step in the exposition on to it.' So you, Clinias and Megillus, must do what you did before: take the young man's c
place and answer on his behalf. If any difficulty crops up in the argument, I'll take over from you two as I did just now, and conduct you across the river.

CLINIAS: Good idea. You play your part, and we'll carry out your suggestions to the best of our ability.

ATHENIAN: Still, perhaps it won't be too difficult to show our friend that gods are just as attentive to details as to important matters—more so, in fact. You see, he was here a moment ago and heard that their special job— d
an expression of their perfect virtue—is to watch over the universe.

CLINIAS: Yes, he certainly did hear that said.

ATHENIAN: The next thing is for our opponents to join us in asking this question: what particular virtue have we in mind when we agree that the gods are good? Now then: don't we regard moderation and the possession of reason as a mark of virtue, and their opposites as marks of vice?

CLINIAS: We do.

ATHENIAN: What about courage and cowardice? Are we agreed they e
come under virtue and vice respectively?

CLINIAS: Certainly.

ATHENIAN: And we'll label the one set of qualities 'disgraceful' and the other 'admirable'?

CLINIAS: Yes, we must.

ATHENIAN: And if the base qualities are characteristic of anyone, they are characteristic of us; the gods, we shall say, are *not* affected by them, either radically or slightly.

CLINIAS: No one would disagree with that either.

ATHENIAN: Well, then, shall we regard neglect and idleness and riotous living as part of the soul's virtue? Or what's your view?

CLINIAS: Really!

ATHENIAN: As part of vice, then?

CLINIAS: Yes.

ATHENIAN: So it's the opposite qualities that will be ascribed to virtue? 901

CLINIAS: Right.

Athenian: Very well then. In our view all idle and thoughtless bons vivants will be just the kind of people the poet said were 'like nothing so much as stingless drones'.[5]

Clinias: Very apt, that.

Athenian: So we mustn't say that God has precisely the sort of character he himself detests, and we mustn't allow any attempt to maintain such a view.

Clinias: Of course not; it would be intolerable.

b Athenian: Take someone who has the special job of looking after some particular sphere of action, and who is preoccupied with his major duties to the neglect of the small. Could we possibly commend him, except for reasons that would ring quite hollow? Let's consider the point in this light: doesn't this sort of conduct—divine or human—fall into two categories?

Clinias: Two categories, do we say?

Athenian: *Either* a man thinks it makes no difference to his job as a whole if he neglects the details, *or* important though they are, he nevertheless lives
c in idleness and self-indulgence and neglects them. Or is there some other possible reason for his neglecting them? (Of course, if it is simply *impossible* to look after everything, and a god or some poor mortal fails to take care of something when he has not the strength and therefore the ability, no question of positive neglect of either major or minor duties will arise.)

Clinias: No, of course not.

Athenian: Now let our two opponents answer the questions of the three
d of us. They both admit gods exist, but one thinks they can be bought off, the other that they are careless about details. 'First of all, do you both admit that the gods know and see and hear everything, and that nothing within the range of our senses or intellect can escape them? Is this your position, or what?

Clinias: 'It is.'

Athenian: 'And also, that they can do anything which is within the power of mortals and immortals?'

Clinias: Yes, of course they'll agree to that too.

e Athenian: Further, the five of us have already agreed that the gods are good—supremely so, in fact.

Clinias: Emphatically.

Athenian: So surely, given they're the sort of beings we've admitted, it's absolutely impossible to agree that they do anything out of sloth and self-indulgence. Among us mortals, you see, laziness springs from cowardice, and sloth from laziness and self-indulgence.

Clinias: That's very true.

Athenian: Then no god neglects anything because of sloth and laziness, because no god, presumably, suffers from cowardice.

Clinias: You're quite right.

5. *Works and Days* 304.

ATHENIAN: Now if in fact they do neglect the tiny details of the universe, 902
the remaining possibilities are surely these: *either* they neglect them because they know that no such detail needs their attention, *or*—well, what other explanation could there be, except a lack of knowledge?

CLINIAS: None.

ATHENIAN: So, my dearest sir, are we to interpret you as saying that the gods are ignorant, and display negligence where it is necessary to be solicitous, because they don't *know*? Or alternatively that they realize the necessity, but do what the most wretched of men are said to do, namely fail in their duty because they are somehow overcome by temptation or pain, even though they know that there are better options than the one b
they've in fact chosen?

CLINIAS: Indeed not.

ATHENIAN: Now surely human life has something to do with the world of the soul, and man himself is the most god-fearing of all living creatures, isn't he?

CLINIAS: I dare say.

ATHENIAN: And we regard all mortal creatures as possessions of gods, like the universe as a whole.

CLINIAS: Of course.

ATHENIAN: So whether you argue these possessions count for little or much in the sight of the gods, in neither case would it be proper for our c
owners to neglect us, seeing how very solicitous and good they are. You see, there's another point we ought to consider here.

CLINIAS: What?

ATHENIAN: It's a point about perception and physical strength. Aren't they essentially at opposite poles, so far as ease and difficulty are concerned?

CLINIAS: What do you mean?

ATHENIAN: Although little things are more difficult to see or hear than big, they are much easier, when there are only a few of them, to carry or control or look after.

CLINIAS: Yes, much easier. d

ATHENIAN: Take a doctor who has been given the entire body to treat. Will he ever get good results if he neglects the individual limbs and tiny parts, in spite of being willing and able to look after the major organs?

CLINIAS: No, never.

ATHENIAN: Nor yet will helmsmen or generals or householders, nor 'statesmen' or anybody of that ilk, succeed in major day-to-day matters if they neglect occasional details. You know how even masons say the big e
stones don't lie well without the small ones.

CLINIAS: Of course.

ATHENIAN: So let's not treat God as less skilled than a mortal craftsman, who applies the same expertise to all the jobs in his own line whether they're big or small, and gets more finished and perfect results the better he is at his work. We must not suppose that God, who is supremely wise,

903 and willing and able to superintend the world, looks to major matters but—like a faint-hearted lazybones who throws up his hands at hard work—neglects the minor, which we established were in fact *easier* to look after.

CLINIAS: No sir, we should never entertain such notions about gods. It's a point of view that would be absolutely impious and untrue.

ATHENIAN: Well, it looks to me as if we've given a pretty complete answer to this fellow who's always going on about the negligence of heaven.

CLINIAS: Yes, we have.

b ATHENIAN: At any rate, our thesis has forced him to admit he was wrong. But I still think we need to find a form of words to *charm* him into agreement.

CLINIAS: Well, my friend, what do you suggest?

ATHENIAN: What we say to the young man should serve to convince him of this thesis: 'The supervisor of the universe has arranged everything with an eye to its preservation and excellence, and its individual parts play appropriate active or passive roles according to their various capacities. These parts, down to the smallest details of their active and passive functions, have each been put under the control of ruling powers that have
c perfected the minutest constituents of the universe. Now then, you perverse fellow, one such part—a mere speck that nevertheless constantly contributes to the good of the whole—is you, you who have forgotten that nothing is created except to provide the entire universe with a life of prosperity. You forget that creation is not for your benefit: *you* exist for the sake of the universe. Every doctor, you see, and every skilled craftsman always works for the sake of some end-product as a whole; he handles his materials so that they will give the best results in general, and makes
d the parts contribute to the good of the whole, not vice versa. But you're grumbling because you don't appreciate that your position is best not only for the universe but for you too, thanks to your common origin. And since a soul is allied with different bodies at different times, and perpetually undergoes all sorts of changes, either self-imposed or produced by some other soul, the divine checkers-player has nothing else to do except promote a soul with a promising character to a better situation, and relegate one that is deteriorating to an inferior, as is appropriate in each case, so that
e they all meet the fate they deserve.'

CLINIAS: How do you mean?

ATHENIAN: I fancy I could explain how easy it could be for gods to control the universe. Suppose that in one's constant efforts to serve its interests one were to mold all that is in it by *transforming* everything (by turning fire into water permeated by soul, for instance), instead of producing variety from a basic unity or unity from variety, then after the first or
904 second or third stage of creation everything would be arranged in an infinite number of perpetually changing patterns.[6] But in fact the supervisor of the universe finds his task remarkably easy.

6. Deleting *mē* in e4.

CLINIAS: Again, what do you mean?

ATHENIAN: This. Our King saw (a) that all actions are a function of soul
and involve a great deal of virtue and a great deal of vice, (b) that the
combination of body and soul, while not an eternal creation like the gods
sanctioned by law, is nevertheless indestructible (because living beings
could never have been created if one of these two constituent factors
had been destroyed), (c) that one of them—the good element in soul—is b
naturally beneficial, while the bad element naturally does harm. Seeing
all this he contrived a place for each constituent where it would most
easily and effectively ensure the triumph of virtue and the defeat of vice
throughout the universe. With this grand purpose in view he has worked
out what sort of position, in what regions, should be assigned to a soul
to match its changes of character; but he left it to the individual's acts of
will to determine the *direction* of these changes. You see, the way we react c
to particular circumstances is almost invariably determined by our desires
and our psychological state.

CLINIAS: Likely enough.

ATHENIAN: So all things that contain soul change, the cause of their
change lying within themselves, and as they change they move according
to the ordinance and law of destiny. Small changes in unimportant aspects
of character entail small horizontal changes of position in space, while a
substantial decline into injustice sets the soul on the path to the depths of d
the so-called "under"world, which men call "Hades" and similar names,
and which haunts and terrifies them both during their lives and when
they have been sundered from their bodies. Take a soul that becomes
particularly full of vice or virtue as a result of its own acts of will and the
powerful influence of social intercourse. If companionship with divine
virtue has made it exceptionally divine, it experiences an exceptional
change of location, being conducted by a holy path to some superior place
elsewhere. Alternatively, opposite characteristics will send it off to live in e
the opposite region. And in spite of your belief that the gods neglect you,
my lad, or rather young man,

*This is the sentence of the gods that dwell upon Olympus*[7]

—to go to join worse souls as you grow worse and better souls as you
grow better, and alike in life and all the deaths you suffer to do and be
done by according to the standards that birds of a feather naturally apply 905
among themselves. Neither you nor anyone else who has got into trouble
will ever be able to run fast enough to boast that he has escaped this
sentence—a sentence to which the judges have attached special importance,
and which should take every possible care to avoid. Make yourself ever
so small and hide in the depths of the earth, or soar high into the sky: this

7. *Odyssey* xix.43.

sentence will be ever at your heels, and either while you're still alive on
b earth or after you've descended into Hades or been taken to some even
more remote place, you'll pay the proper penalty of your crimes. You'll
find the same is true of those whom you imagine have emerged from
misery to happiness because you've seen them rise from a humble position
to high estate by acts of impiety, or some similar wickedness. These actions,
it seemed to you, were like a mirror which reflected the gods' total lack
of concern. But you didn't appreciate how the role of the gods contributes
to the total scheme of things. What a bold fellow you must be, if you think
c you've no need of such knowledge! Yet without it no one will ever catch
so much as a glimmer of the truth or be able to offer a reasoned account
of happiness or misery in life. So if Clinias here and this whole group of
old men convince you that you don't really understand what you're saying
about the gods, then the divine assistance will be with you. But it may be
that you need some further explanation, so if you have any sense you'll
d listen while we address our third opponent.

Now as far as I'm concerned, we've proved, not too inadequately, that
gods exist and care for mankind. However, there remains the view that
they can be bought off by the gifts of sinners. No one should ever assent
to this thesis, and we must fight to the last ditch to refute it.

CLINIAS: Well said. Let's do as you suggest.

ATHENIAN: Look—in the name of the gods themselves!—*how* would they
e be bought off, supposing they ever were? What would they have to be?
What sort of being would do this? Well, if they are going to run the entire
universe forever, presumably they'll have to be rulers.

CLINIAS: True.

ATHENIAN: Now then, what sort of ruler do the gods in fact resemble?
Or rather, what rulers resemble them? Let's compare small instances with
great, and see what rulers will serve our purpose. What about drivers of
competing teams of horses, or steersmen of boats in a race? Would they
be suitable parallels? Or we might compare the gods to commanders of
armies. Again, it could be that they're analogous to doctors concerned
906 to defend the body in the war against disease, or to farmers anxiously
anticipating the seasons that usually discourage the growth of their crops,
or to shepherds. Now since we've agreed among ourselves that the universe
is full of many good things and many bad as well, and that the latter
outnumber the former, we maintain that the battle we have on our hands
is never finished, and demands tremendous vigilance. However, gods and
spirits are fighting on our side, the gods and spirits whose chattels we
b are. What ruins us is injustice and senseless aggression; what protects us
is justice and sensible moderation—virtues that are part of the spiritual
characteristics of the gods, although one can find them quite clearly residing
among us too, albeit on a small scale. Now there are some souls living on
earth in possession of ill-gotten gains, who in their obviously brutish way
throw themselves before the souls of their guardians (whether watch-dogs,
shepherds, or masters of the utmost grandeur) and by wheedling words

and winning entreaties try to persuade them of the truth of the line put about by scoundrels—that they have the right to feather their nest with impunity at mankind's expense. But I suppose our view is that this vice c we've named—acquisitiveness—is what is called 'disease' when it appears in flesh and blood, and 'plague' when brought by the seasons or at intervals of years; while if it occurs in the state and society, the same vice turns up under yet another name: 'injustice'.

CLINIAS: Certainly.

ATHENIAN: Thus anyone who argues that gods are always indulgent to d the unjust man and the criminal, provided they're given a share in the loot, must in effect be prepared to say that if wolves, for instance, were to give watch-dogs a small part of their prey, the dogs would be appeased by the gift and turn a blind eye to the plundering of the flock. Isn't this what people are really suggesting when they say that gods can be squared?

CLINIAS: It certainly is.

ATHENIAN: So consider all those guardians we instanced a moment ago. Can one compare gods to any of them, without making oneself ridiculous? What about steersmen who are turned from their course 'by libations and e burnt offerings',[8] and wreck both the ship and its crew?

CLINIAS: Of course not.

ATHENIAN: And presumably they are not to be compared to a charioteer lined up at the starting point who has been bribed by a gift to throw the race and let others win.

CLINIAS: No sir, to describe the gods like that would be a scandalous comparison.

ATHENIAN: Nor, of course, do they stand comparison with generals or doctors or farmers, or herdsmen, or dogs beguiled by wolves.

CLINIAS: What blasphemy! The very idea! 907

ATHENIAN: Now aren't all the gods the most supreme guardians of all, and don't they look after our supreme interests?

CLINIAS: Very much so.

ATHENIAN: So are we really going to say that these guardians of the most valuable interests, distinguished as they are for their personal skill in guarding, are inferior to dogs, or the mere man in the street, who'll never abandon justice, in spite of the gifts that the unjust immorally press upon him?

CLINIAS: Of course not. That's an intolerable thing to say. There's no sort b of impiety that men won't commit, but anyone who persists in this doctrine bids fair to be condemned—and with every justification—as the worst and most impious of the impious.

ATHENIAN: Can we now say that our three theses—that the gods exist, that they are concerned for us, and that they are absolutely above being corrupted into flouting justice—have been adequately proved?

CLINIAS: Certainly, and we endorse these arguments of yours.

8. *Iliad* ix.500.

c ATHENIAN: Still, I fancy that being so anxious to get the better of these
scoundrels, we've put our case rather polemically. But what prompted
this desire to come out on top, my dear Clinias, was a fear that the rogues
should think that victory in argument was a license to do as they please
and act on any and every theological belief they happen to hold. Hence
our anxiety to speak with some force. However, if we've made even a
small contribution to persuading those fellows to hate themselves and
d cherish the opposite kind of character, then this preface of ours to the law
of impiety will have been well worth composing.

CLINIAS: Well, there is that hope. But even without those results, the lawgiver will not be at fault for having discussed such a topic.

ATHENIAN: Now then, after the preface we'll have a form of words that
convey the purpose of our laws—a general promulgation to all the ungodly
that they should abandon their present habits in favor of a life of piety.
Then in cases of disobedience the following law of impiety should apply:
e Anyone who comes across a case of impiety of word or deed should go
to the aid of the law by alerting the authorities. The first officials to be
notified should bring the matter, in due legal form, before the court appointed to try this category of case.

58. If an official who hears of the incident fails to perform this duty, *he must* himself be liable to a charge of impiety at the hands of anyone who wishes to champion the cause of the laws.

When verdicts of 'guilty' are returned, the court is to assess a separate
penalty for each impious act of each offender. Imprisonment is to apply
908 in all cases. (The state will have three prisons: (1) a public one near the
market-place for the general run of offenders, where large numbers may
be kept in safe custody, (2) one called the 'reform center', near the place
where the Nocturnal Council[9] assembles, and (3) another in the heart of
the countryside, in a solitary spot where the terrain is at its wildest; and
the title of this prison is somehow to convey the notion of 'punishment'.)

Now since impiety has three causes, which we've already described,
b and each is divided into two kinds, there will be six categories of religious
offenders worth distinguishing; and the punishment imposed on each
should vary in kind and degree. Consider first a complete atheist: he
may have a naturally just character and be the sort of person who hates
scoundrels, and because of his loathing of injustice is not tempted to
commit it; he may flee the unjust and feel fondness for the just. Alterna-
c tively, besides believing that all things are 'empty of' gods, he may be a
prey to an uncontrollable urge to experience pleasure and avoid pain, and
he may have a retentive memory and be capable of shrewd insights. Both
these people suffer from a common failing, atheism, but in terms of the
harm they do to others the former is much less dangerous than the latter.

9. See 961 ff.

The former will talk with a complete lack of inhibition about gods and sacrifices and oaths, and by poking fun at other people will probably, if he continues unpunished, make converts to his own views. The latter holds the same opinions but has what are called 'natural gifts': full of cunning d
and guile, he's the sort of fellow who'll make a diviner and go in for all sorts of legerdemain; sometimes he'll turn into a dictator or a demagogue or a general, or a plotter in secret rites; and he's the man who invents the tricks of the so-called 'sophists'. So there can be many different types of atheist, but for the purpose of legislation they need to be divided into two e
groups. The dissembling atheist deserves to die for his sins not just once or twice but many times, whereas the other kind needs simply admonition combined with incarceration. The idea that gods take no notice of the world similarly produces two more categories, and the belief that they can be squared another two. So much for our distinctions.

59. (a) Those who have simply fallen victim to foolishness and who do not have a bad character and disposition
*should be sent* to the reform center by the judge in accordance with the 909
law for a term of not less than five years, and during this period no citizen must come into contact with them except the members of the Nocturnal Council, who should pay visits to admonish them and ensure their spiritual salvation.
(b) When his imprisonment is over, a prisoner who appears to be enjoying mental health should go and live with sensible people; but if appearances turn out to have been deceptive, and he is reconvicted on a similar charge, *he should be* punished by death.

There are others, however, who in addition to not recognizing the existence of gods, or believing they are unconcerned about the world or can be bought off, become subhuman. They take everybody for fools, and many a man they delude during his life; and then by saying after his death that b
they can conjure up his spirit, and by promising to influence the gods through the alleged magic powers of sacrifices and prayers and charms, they try to wreck completely whole homes and states for filthy lucre.

60. If one of these people is found guilty,
*the court* must sentence him to imprisonment as prescribed by law in the prison in the center of the country; no free man is to visit him at c
any time, and slaves must hand him his ration of food fixed by the Guardians of the Laws. When he dies the body must be cast out over the borders of the state unburied.

61. If any free man lends a hand in burying him,
*he must* be liable to a charge of impiety at the hands of anyone who cares to prosecute.

If the prisoner leaves children suitable for citizenship, the guardians of orphans must look after them too, from the day of their father's conviction, no less than ordinary orphans. d

All these offenders must be covered by one general law, which by forbidding illegal religious practices will cause most of them to sin less in word and deed against religion, and which in particular will do something to enlighten them. The following comprehensive law should be enacted to deal with all these cases.

No one is to possess a shrine in his own private home. When a man
takes it into his head to offer sacrifice, he is to go to the public shrines in
order to do so, and he should hand over his offerings to the priests and
e priestesses responsible for consecrating them; then he, and anyone else he
may wish to participate, should join in the prayers. The grounds for these
stipulations are as follows. To establish gods and temples is not easy; it's
a job that needs to be very carefully pondered if it is to be done properly.
Yet look at what people usually do—all women in particular, invalids of
every sort, men in danger or any kind of distress, or conversely when they
have just won a measure of prosperity: they dedicate the first thing that
910 comes to hand, they swear to offer sacrifice, and promise to found shrines
for gods and spirits and children of gods. And the terror they feel when
they see apparitions, either in dreams or awake—a terror which recurs
later when they recollect a whole series of visions—drives them to seek a
remedy for each individually, with the result that on open spaces or any
other spot where such an incident has occurred they found the altars and
shrines that fill every home and village. The law now stated must be observed
not only for all these reasons but also in order to deter the impious from
managing to conduct these activities too in secret, by establishing shrines
b and altars in private houses, calculating to win the favor of the gods on the
quiet by sacrifices and prayers. This would make their wickedness infinitely
worse, and bring the reproach of heaven both on themselves and on the virtuous people who tolerate them, so that, by a sort of rough justice, the whole
state would catch the infection of their impiety. Still, God won't blame the
legislator, because this is the law to be enacted:

c The possession of shrines in private houses is forbidden. If a man is proved to possess and worship at shrines other than the public ones, and the injustice committed is not an act of serious impiety (whether the possessor is a man or a woman), anyone who notices the fact must lay information before the Guardians of the Laws, who should give orders for the removal of the private shrines to public temples.

62. (a) If the culprits disobey,
*they must* be punished until they carry out the removal.
(b) But if a man is proved guilty of a serious act of impiety typical of an adult, and not just the peccadillo of a child, either by establishing a shrine on private land or by sacrificing on public land to gods not included in the pantheon of the state,
d *he must* be punished by death for sacrificing with impure hands.

The Guardians of the Laws, after deciding whether the crime was a childish peccadillo or not, must then take the matter straight to court, and exact from the culprits the penalty for their impiety.

# Book XI

ATHENIAN: The next subject needing to be reduced to due order will be 913
our transactions with each other. I suppose something like this will serve as a general rule. Ideally, no one should touch my property or tamper with it, unless I have given him some sort of permission; and if I am sensible I shall treat the property of others with the same respect.

Let's take as our first example treasure which someone who was not one of my ancestors stored away for himself and his family. I should never pray to the gods to come across such a thing; and if I do, I must not disturb b
it nor tell the diviners, as they are called, who (I shall find) can always invent some reason for advising one to remove something deposited in the ground. The financial benefit I'd get from removing it could never rival what I'd gain by way of virtue and moral rectitude by leaving it alone; by preferring to have justice in my soul rather than money in my pocket, I'd get—treasure for treasure—the better bargain, and for a better part of myself, too.

'Hands off immovables'[1] is aptly applied to a great many situations, and this is one of them. And we should put our trust in the traditional view c
of such conduct—that it injures our descendants. Suppose a man takes no thought for his children and becomes indifferent to the legislator, and removes what neither he himself nor his father nor any of his fathers before him deposited, without the consent of the depositor; suppose he thus undermines the finest law there is, that simple rule of thumb, formulated as it was by a man of great nobility,[2] 'Don't pick up what you didn't put down'—well, when a man treats these *two* legislators[3] so contemptuously d
and picks up something he had not put down (and sometimes no bagatelle, either, but a huge treasure trove), what penalty should he suffer? God knows the penalty of heaven; but the first person to notice such an occurrence in the city should report it to the City-Wardens; if somewhere in the city's market, to the Market-Wardens; and if in some place in the country, he should inform the Country-Wardens and their Chiefs. On 914
receiving the information the state should send to Delphi and in submission to the oracles of the god do whatever he ordains about the objects and the person who removed them. If the informant is a free man, he should acquire a reputation for virtue, but

63. (a) if a free man fails to inform,
*he must* get a reputation for vice.

If the informant is a slave, then as a reward he will deservedly be presented with freedom by the state, which will give[4] his master what he is worth, but

1. Cf. 842e and note.
2. Solon.
3. Solon and the Magnesian legislator.
4. Reading *apodidousēs* in a8.

(b) if a slave fails to inform,
*he must* be punished by death.

b The natural thing to do next is to apply this same rule to all objects, important or trivial. If a man leaves some piece of his own property somewhere, deliberately or inadvertently, anyone who finds it should let it be, on the assumption that such things are under the protection of the goddess of the wayside, to whom they are consecrated by law.

64. If in defiance of this rule someone picks up an object of no great value and takes it home, and
(a) he is a slave,
*he should* be soundly beaten by any passer-by who is not less than thirty years of age;
c (b) if he is a free man,
*in addition to* being thought ungentlemanly and lawless, he must pay the person who left the article ten times its value.

If one man accuses another of being in possession of some piece of his
own property, whether valuable or not, and the accused person admits
he has it but denies that it belongs to the complainant, the latter should—
if the object has been registered with the authorities according to law—
summon the person in possession of it before the authorities, and the
d possessor must produce it; then if on being presented for inspection it
proves to have been recorded in the registers as the property of one of
the disputants, the owner must take it and depart; but if it belongs to some
other party not present, then whichever disputant furnishes a credit-worthy
guarantor should exercise the absent party's right of removal and take the
article away on his behalf for delivery into his possession. If on the other
hand the article in dispute has not been registered with the authorities, it
must be left with the three oldest officials pending settlement of the case;
e and if it is an animal that is thus kept in safe custody, the loser of the suit
must pay the officials for its keep. The officials are to settle the case within
three days.

Anyone who wishes—provided he's in his right mind—may seize his own slave, and (within the permitted limits) treat him as he likes. He may also arrest a runaway slave, in order to stop him escaping, on behalf of a relative or friend. If anyone demands the release of someone who is being taken for a slave and arrested, the captor must let him go, but the releaser must furnish three credit-worthy sureties. On these terms and on no other the man may be released.

65. If a man secures a release except on these conditions, he must be liable to a charge of violence and if convicted,
915 *he must* pay to the captor twice the damages claimed in the suit.

Freedmen too may be arrested if they fail to perform their services to their manumittor, or perform them inadequately. (The services are these: three

times a month a freedman must proceed to the home of his manumittor
and offer to do anything lawful and practicable; and as regards marrying
he must do whatever his former master thinks right.) He must not grow
more wealthy than his manumittor; if he does, the excess must become b
the property of the master. The freedman must not stay in the state longer
than twenty years, but like the other aliens[5] he must then take all his
property and leave, unless he has gained permission from the authorities
and his manumittor to remain. If a freedman or one of the other aliens
acquires property in excess of the limit allowed the third property-class,[6]
then within thirty days of this event he must pack up and be off, without c
any right to ask the authorities to extend his stay.

66. If a freedman disobeys these regulations and is taken to court and convicted,
*he must* be punished by death and his property confiscated by the state.

Such cases should be tried in the tribal courts, unless the litigants have
previously settled their charges against each other before their neighbors—
that is, judges they have chosen themselves.

If a man formally seizes as his own any animal or some other piece of d
property of any other man[7] the person in possession must return it to the
warrantor or donor, provided the latter is suable and solvent, or to the
person who validly transferred it to him by some other procedure. If he
received it from a citizen or a resident alien, he must do so within thirty
days; but if he took delivery from a complete alien, he must return it
within the five months of which the third shall be the month in which the
summer solstice occurs.

When one person makes an exchange with another by buying or selling,
the transfer must be made by handing over the article in the appointed
part of the market-place (and nowhere else), and by receiving the price e
on the nail; no payment for delivery later or sale on credit is to be allowed.
If a man exchanges one thing for another in any other place or under any
other arrangement, trusting to the honesty of the other party to the exchange, he must do so on the understanding that when sales are made
other than under the rules now stated the law does not permit him to sue.
(Anyone may collect contributions to clubs on a friendly basis, but if some
disagreement arises over the collection he must do so on the understanding
that in this business no one under any circumstances will be allowed to
go to law.)

A seller of an article who receives a price of fifty drachmas or more
must be obliged to remain in the state for ten days, and the buyer (in view
of the complaints that people are apt to make in this connection, and so 916

5. See 850a ff.
6. See 744a ff. and 754d ff.
7. Reading *autou* in d1.

that, if necessary, restitution may be made according to law) must be informed of his address. Here are the rules under which legal restitution may be demanded or refused. If someone sells a slave suffering from consumption or stone or strangury or the so-called 'sacred' disease[8] or some other mental or physical complaint that is chronic and difficult to cure and which the ordinary man could not diagnose, and if the purchase was made by a doctor or trainer, or if the facts were pointed out before the time of sale, the buyer shall have no right to return him to the vendor.
b But if a layman is sold such a slave by a professional, the purchaser may return him within six months, except in the case of the 'sacred' disease, when the period for restitution is to be extended to a year. The case should be heard before a bench of three doctors appointed by joint nomination of the parties, and if the vendor loses he must pay twice the selling price.
c If a layman sells to a layman there should be a right of restitution and a hearing as in the previous instance, but the loser should pay only the simple price. If the slave is a murderer, and both buyer and seller are aware of the fact, there shall be no right of restitution for the purchase; but if the buyer acted in ignorance he shall have a right of restitution as soon as he realizes the situation, and the case should be tried before the five youngest Guardians of the Laws; if the vendor is judged to have known the facts, he must purify the house of the buyer under the Expounders' rules
d and pay him three times the price.

Anyone exchanging money for money or for anything else, animate or inanimate, should always give and receive full value as the law directs. Let's do as we did in other parts of our legislation and allow ourselves a preface dealing with the whole range of crimes that arise in this connection.

Everyone should think of adulteration as essentially the same sort of thing as lying and deceit—which in fact people commonly describe as
e quite respectable. But they are wrong to defend this sort of conduct as 'frequently justified, on appropriate occasions', because what they mean by the 'appropriate' place and occasion they leave vague and indefinite, and their dictum does nothing but harm both to themselves and to others. Now a legislator cannot afford to leave this vague: he must always lay down precise limits, however wide or narrow they may be. So let's define some limits now: a man must tell no lie, commit no deceit, and do no
917 fraud in word or deed when he calls upon the gods, unless he wants to be thoroughly loathed by them—as anyone is who snaps his fingers at them and swears false oaths, or (though they find this less offensive) tells lies in the presence of his superior. Now the 'superiors' of bad men are the good, and of the young their elders (usually)—which means that parents are the superiors of their offspring, men are (of course) the superiors of women and children, and rulers of their subjects. All these people in positions of authority deserve the respect of us all, and the authorities of the state deserve it in particular. This is in fact what prompted these

8. Epilepsy.

remarks. Anyone who is so lacking in respect for men and reverence for the gods as to pull off some swindle of the market-place by swearing oaths and calling heaven to witness (even though the rules and warnings of the Market-Wardens stare him in the face), is a liar and a cheat. So in view of the low level of religious purity and holiness most of us generally achieve, let me emphasize what a good habit it is to think twice before taking the names of the gods in vain. b

If any cases of disobedience arise, the following law should be invoked: the seller of any article in the market must never name two prices for his goods, but only one, and if he doesn't get it, he will (quite rightly) remove his wares without raising or lowering his price that day; and he must not push anything he has for sale, or take an oath on its quality. c

67. If a man disobeys these regulations,
*any citizen* passing by, provided he is not less than thirty years of age, should punish the taker of the oath and beat him with impunity.

68. If the passer-by ignores these instructions and disobeys them,
*he must* be liable to the reproach of having betrayed the laws.

If a man proves to be beyond persuasion by our present address and sells a faulty article, the passer-by who has the knowledge and ability to expose him should prove his case before the authorities, and, if a slave or resident alien, may then take the faulty article for himself; a citizen, however, should dedicate it to the gods of the marketplace. d

69. If a citizen fails to expose the offender,
*he should* be pronounced a rogue, as he has cheated the gods.

70. Anyone discovered selling such adulterated merchandise,
*apart from* being deprived of it, must be whipped (one lash for every drachma of the asking price of the object he was selling), after a herald has announced in the market-place the reason why the culprit is going to be flogged. e

The Market-Wardens and the Guardians of the Laws, having ascertained from experts the details of the adulterations and malpractices of sellers, should record in writing rules which specify what vendors must and must not do; these regulations should then be inscribed on a pillar and displayed in front of the Market-Wardens' office for the information of those who 918 transact business in the market-place. (As for the City-Wardens, we have already given an adequate description of their duties, but if it seems some additional rules are needed, the wardens should consult the Guardians of the Laws, write out what they think missing, and record both the new and the old rules of their office on a pillar in front of their quarters.)

Hard on the heels of tricks of adulteration come the practices of retail trade. First we should give a word of advice on the whole subject, then lay down legislation for it. The natural function in the state of retail trading b in general is not to do harm, but quite the opposite. When goods of any

kind are distributed disproportionately and unequally, anyone who makes
the distribution equal and even cannot fail to do good. It needs to be stated
that this redistribution, in which money too plays an effective role, is
precisely the purpose the trader is meant to serve. Hired laborers, inn-
keepers and other workmen of varying degrees of respectability all perform
c the function of satisfying the needs of the community by ensuring an even
distribution of goods. Why then is trading thought to be such a low and
disreputable occupation? Why has it come to be so abused? Let's see if
we can discover the reason, so that we can use our legislation to reform
at any rate some branches of commerce, even if not the whole institution.
This looks like an important task that calls for exceptional resource.

CLINIAS: How do you mean?

ATHENIAN: My dear Clinias, only a small part of mankind—a few highly-
d educated men of rare natural talent—is able to steel itself to moderation
when assailed by various needs and desires; given the chance to get a lot
of money, it's a rare bird that's sober enough to prefer a modest competence
to wealth. Most people's inclinations are at the opposite pole: their demands
are always violent demands, and they brush aside the opportunity of
modest gain in favor of insatiable profiteering. That's why all branches of
retailing, trade and inn-keeping suffer from abuse and extreme unpopular-
e ity. Now here's something I'm determined to mention, ludicrous though
it is; it'll never happen, and Heaven help us if it did. But just picture to
yourselves some eminently virtuous men forced for a time to go in for
inn-keeping or retailing or some similar occupation, or some eminently
virtuous women similarly forced by some stroke of fate to take up that
kind of life. We'd soon realize how desirable and pleasing each of these
trades really is, and if they were carried on according to honest standards
we'd value them all as highly as we do our mother or our nurse. But what
happens? A man goes off to some remote point on a road running through
919 the middle of nowhere and sets up his establishment to sell provisions;
he receives the weary traveler with welcome lodging—peace and quiet
for the victim of violent storms, cool refreshment for the sufferer from
stifling heat—but then instead of greeting them as friends and offering
them in addition to his hospitality some gifts as a token of goodwill, he
treats them like so many enemy prisoners that have fallen into his hands,
and holds them up to ransom for a monstrously steep and iniquitous sum.
b It's these and similar swindles, which are practiced in all branches of the
trade, that have given the occupation of helping the worn-out traveler
such a bad name, and in every case the legislator has to find a remedy.
The old saying is quite right: it's difficult to fight against two enemies,
especially when they are fundamentally different (as with diseases, for
instance, and there are a lot of other examples). Our present battle is a
case in point: it is a battle against two foes, wealth and poverty—wealth
that corrupts our souls by luxury, poverty that drives us by distress into
c losing all sense of shame. So what remedy for this disease will be open
to an enlightened community? First, it should keep its trading class as

small as possible; second, trade should be made over to a class of people
whose corruption will not harm the state unduly; third, some means must
be found to prevent those engaging in such activities from slipping too
easily into an utterly shameless and small-minded way of life. d

After these remarks, our law on the subject should run like this, with
Heaven's blessing: God is now re-establishing and re-founding Magnesia,
and no inhabitant who holds one of the 5040 hearths must ever, willingly
or otherwise, become a retailer or a wholesaler, or perform any service
whatever for private individuals who are not his equals in status, with
the exception of those services that a free man will naturally render to his
father and mother and remoter ancestors, and to all free persons older e
than himself. Of course, it is not easy to lay down in a law precisely what
is consistent with the dignity of a free man and what is not, and the point
will have to be determined by those who have won distinctions for their
aversion to the latter and devotion to the former. Anyone who by some
trick goes in for retail trading in a way forbidden to a gentleman should
be indicted by anyone who wishes before a court of judges with a high
reputation for virtue, on a charge of disgracing his clan.

71. If he is judged to be sullying his paternal hearth by following an unworthy calling,
*he must* be imprisoned for a year and so be taught to refrain from such conduct.

72. If he does not then refrain, 920
*he must* be imprisoned for two years, and the period of imprisonment must be doubled indefinitely on each subsequent conviction.

Now for a second law: anyone who intends to go in for retail trading must
be either a resident alien or a temporary visitor. Thirdly, as a third law,
such people must behave with as much virtue and as little vice as possible
while they share in the life of the state. To that end, the Guardians of the
Laws must not simply be regarded as guardians of those whom it is
easy to keep from wickedness and crime thanks to their good birth and b
education. There are those who do not enjoy such advantages, and need
more careful supervision, because they engage in pursuits which are very
powerful inducements to vice. So since retail trading is an occupation of
great variety and embraces many cognate activities, the Guardians of the
Laws must hold a meeting about it, or at any rate about such branches of
it as they have concluded are unavoidable and essential to the state, after c
the others have been eliminated; and just as we ordered in the case of
adulteration—a closely connected matter—experts in each branch should
be in attendance. The meeting must see what ratio of expenditure to receipts
will give the retailer a decent profit, and the ratio arrived at must be
recorded in writing, put on display, and then imposed on the various
traders by the Market-Wardens, City-Wardens and Country-Wardens.

Perhaps thus retail trade will benefit the population at large and do minimum harm to those members of society who engage in it.

d If a man fails to fulfill an agreed contract—unless he had contracted to do something forbidden by law or decree, or gave his consent under some iniquitous pressure, or was involuntarily prevented from fulfilling his contract because of some unlooked-for accident—an action for such an unfulfilled agreement should be brought in the tribal courts, if the parties have not previously been able to reconcile their differences before arbitrators (their neighbors, that is).

The class of craftsmen who have enriched our lives by their arts and skills will have Athena and Hephaestus as its patrons, while Ares and
e Athena will be patrons of those who protect the products of these craftsmen by skills of a different order—the techniques of defense. (The consecration of this latter class to these gods is perfectly justified, in that both classes are in the continuous service of land and people, the latter by taking the lead in the struggles of war, the former by producing tools and goods in return for pay.) So if they respect their divine ancestors, they will think it a disgrace to break their word in a professional matter.

921 73. If one of the craftsmen culpably fails to complete his work within the stipulated time, out of disrespect for the god from whom he wins his bread, fondly thinking that he can count on the indulgence of the divinity with whom he has some personal relationship,
(a) *first he* will pay a penalty to the god,
(b) *and secondly,* under the provisions of the law applicable to his case, he must owe the price of the works of which he has cheated his employer, and perform his task all over again within the stipulated period, free of charge.

And the law will give the contractor for a work the same advice as it gave
b a seller, not to take advantage by setting too high a price on his services, but to name their actual value without further ado. The contractor has precisely the same duty, because as a craftsman he knows what the job is worth. In a state of gentlemen a workman must never use his craft, which is at bottom accurate and straightforward, to take 'craft' advantage of laymen, and anyone who is thus imposed upon shall be able to sue the culprit. But if anyone lets a contract to a workman and fails to pay him
c the price stipulated in a valid legal agreement, and snaps his fingers at those partners in our social framework, Zeus the patron of the state, and Athena, so that his delight at being in pocket wrecks the fundamental bonds of society, then the following law, with the backing of the gods, must reinforce the cohesion of the state:

74. (a) If a man takes delivery of a piece of work and fails to pay for it within the agreed time,
*he must* be charged double;
(b) if a whole year elapses,

*then* notwithstanding the rule that loans in general do not bear interest, he must pay an obol per drachma[9] for every month in arrear. d

Actions in these cases should be brought before the tribal courts.

Now that we have broached the subject of craftsmen in general, we ought in all fairness to glance at those whose job it is to keep us safe in war, such as generals and other experts in military techniques. These persons are just as much craftsmen as ordinary workmen, though of a different kind, so when one of them undertakes some public task, voluntarily or under orders, and performs it well, the law will never tire of praising anyone who pays him the honor he deserves—honor being in effect a e
military man's pay. But if anyone receives the benefit of some splendid military action and fails to pay that price, the law will censure him. For the benefit of the military, then, let us enact following regulation-cum-commendation, by way of advising rather than compelling the people at large. Those fine men who safeguard the whole state either by exploits of 922
valor or by military expertise must be accorded honor—but honor of the second rank, because the highest honor should be given first and foremost to those who have proved conspicuously conscientious in respecting the written regulations of the good legislator.

ATHENIAN: We've now pretty well completed our provisions for the most important agreements that men make with each other, with the exception of those relating to orphans and the care and attention due to them from their guardians. So now we've more or less provided for the first topic, here's the next thing on which we are obliged to impose some sort of b
order. All our regulations must start from two basic facts: (a) people at the point of death like to settle their affairs by a will, (b) sometimes, by chance, they die intestate. What a difficult and contentious business it is, Clinias! That's what I had in mind when I said we were 'obliged' to deal with it: to leave it unregulated is quite out of the question. If you allow a will unchallengeable validity whatever condition a man near the end of c
his life may have been in when he drew it up, he might make any number of mutually inconsistent provisions that contradicted not only the spirit of the laws but also the inclinations of those who survive him, and indeed his own earlier intentions before he set out to make his will. After all, most of us, when we think death is at hand, just go to pieces and can't think straight.

CLINIAS: How do you mean, sir?

ATHENIAN: When a man is about to die, Clinias, he becomes refractory, and keeps harping on a principle that spreads alarm and despondency among legislators.

CLINIAS: How's that?

9. I.e., 200 per cent per annum (6 obols = 1 drachma). Cf. 742c for the rule that loans do not bear interest.

Athenian: In his anxiety for complete authority he's apt to express
d himself with some warmth.

Clinias: To what effect?

Athenian: 'Ye gods!' says he, 'it's a fine thing if I'm not going to be allowed to give—or not give—my own property to anyone I please! Why shouldn't I give more to one man and less to another depending on whether they have shown themselves good or bad friends to me? My illnesses, my old age and all my other various misfortunes have sorted them out well enough.'

Clinias: Well, sir, don't you think that's well said?

e Athenian: Clinias, my view is that the ancient lawgivers were too easy-going, and legislated on the basis of a superficial and inadequate appreciation of the human condition.

Clinias: How do you mean?

Athenian: My dear fellow, because they feared the line of argument I have mentioned, they passed the law allowing a man to dispose of his
923 own property in his will exactly as he pleases. But when people have come to death's door in your state, you and I will make a rather more appropriate response:

'Friends, you "creatures of a day" in more senses than one, it's difficult for you in your present circumstances to know the truth about your own property and also "know yourselves," as the Delphic inscription puts it. Therefore, I, as legislator, rule that neither you nor this property of yours
b belongs to yourselves, but to your whole clan, ancestors and descendants alike; and your clan and its property in turn belong, even more absolutely, to the state. That being so, I should be reluctant to tolerate someone worming himself into your good graces when you are smitten with illness or old age, and wheedling you into making a will that is not for the best. I shall legislate with a view to nothing except the interest of your clan and the entire state, relegating (as is only right) that of the individual to second place. So as you go on your journey, which is the way of all flesh, show restraint and goodwill towards us: we will look after your affairs for the future and guard your interests with the utmost care, down to the
c smallest detail.'

Let that stand by way of preamble and consolation for both the living and the dying, Clinias. Here's the actual law:

Anyone who settles his property by writing a will should first, if he has had children, write down the name of that son who in his opinion deserves to be his heir, and he should also record precisely which, if any, of his other children he offers for adoption by someone else. If, however, he is still
d left with one of his sons not adopted into an estate, who will presumably be dispatched by law to a colony,[10] the father should be permitted to present him with as much of his property as he likes, apart from the family estate and all its associated equipment; and if there is more than one son in that

10. Cf. 740e.

position, his father is to distribute his property among them—excluding
the estate—in whatever proportion he pleases. But he should not distribute
any part of his property to any son who has a home. He should treat a
daughter analogously: if she is promised in marriage, he should not let e
her share his goods, but only if she is not promised. If subsequent to the
will one of the sons or daughters is discovered to have come into possession
of an estate in Magnesia, he or she should abandon his or her legacy to
the testator's heir. If the testator is leaving no male offspring but only
female, he should select whichever of his daughters he pleases and in his
will provide someone to be a husband for her and a son for himself, and
record this person as his heir. And here's another disaster a man should
allow for when drawing up his will: if his son (his own or adopted) dies
in infancy before he can reach man's estate, the will should specify in
writing a child who is to take his place—and who, one hopes, will have 924
better luck. When a man who has no children at all writes a will, he may
reserve one tenth of his acquired property and give it to anyone he wishes;
all the rest he should leave to his adopted heir, so that in making him his
son with the blessing of the law he gains his goodwill by treating him
fairly. When a man's children need guardians, and the deceased has made
a will and stated in writing the number of guardians he wants his children
to have and who they should be (provided they are ready and willing to
undertake the office), the choice of guardians put on record in this way b
should be binding. But if a man dies absolutely intestate or without select-
ing guardians, then the two nearest relatives on the father's side and the
two nearest on the mother's, together with one of the deceased's friends,
must be authorized to act as guardians; and the Guardians of the Laws
should appoint them for any orphan who stands in such need. Everything
to do with guardianship and orphans should be the concern of the fifteen
eldest Guardians of the Laws, who should divide themselves by seniority c
into groups of three, one group to act one year and another the next, until
the five terms of office have been completed in rotation; and so far as
possible there should be no gaps in the sequence.

When a man dies absolutely intestate and leaves children in need of
guardians, these same laws must be brought into operation to relieve their
distress. But if he meets with some unforeseen accident and leaves just
daughters, he must forgive the lawgiver if he arranges the giving of them d
in marriage with an eye on only two out of three possible considerations:
close kinship, and the security of the estate. The third point, which a father
would have taken into account—namely to select from among the entire
citizen body someone whose character and habits qualify him to be his
own son and his daughter's bridegroom—these considerations, I say, will
have to be passed over, because it's impracticable to weigh them. So here's e
how the best law we can manage in such a field should run. If a man fails
to make a will, and leaves only daughters, then on his death (a) a brother
on his father's side (or, if without an estate of his own, a brother on his
mother's side) should take the daughter and the estate of the deceased.

(b) If there is a brother's son available, but no brother, then if the parties
are of a similar age the same procedure is to apply. In the absence of all
these, (c) a sister's son is to benefit under the same regulations. (d) Next
in line is to be the brother of the deceased's father, next (e) that brother's
son, and finally (f) the son of the sister of the deceased's father. And in
all cases where a man leaves only female offspring, the succession is to
925 pass through the family according to the same rules of kinship, through
brothers and brothers' and sisters' sons, the males in any one generation
always taking precedence over the females. As for age, the assessor must
determine the propriety or otherwise of the marriage by inspection, view-
ing the males naked and the females stripped down to the navel. If the
family suffers from such a dearth of relatives that not even a grandson
either of the deceased's brother or of the son of the deceased's grandfather
exists, then in consultation with her guardians the girl may single out of
her own free choice any other citizen, provided he does not object, who
b should then become the deceased's heir and the daughter's bridegroom.
However, 'flexibility above all': sometimes suitable candidates from within
the state itself may be in unusually short supply, so if a girl is hard put
to it to find a husband among her compatriots, and has in view someone
who has been dispatched to a colony whom she would like to inherit her
father's property, then if the man is related to her, he should enter into
the estate under the provisions of the law; if he is not of her clan, then
provided there are no near kin living in the state, he shall be entitled by
c virtue of the choice of the daughter of the deceased and that of her guard-
ians to marry her and return to his homeland to take over the establishment
of the intestate father.

When a man dies intestate and leaves neither male nor female issue,
the situation should in general be met by the foregoing law, and a man
and a woman from the clan should 'go in harness' and enter into the
deserted establishment with full title to the estate. The order of precedence
d on the female side is to be: (a) the deceased's sister, (b) his brother's
daughter, (c) the sister's son, (d) the sister of the deceased's father, (e) the
daughter of the father's brother, and (f) the daughter of the father's sister.
A woman from this list should set up home with a man from the other
list according to the degrees of kinship and the demands of religion[11] for
which we made provision earlier.

But let's not forget the severity of such laws. It can sometimes be hard
for a near relative of the deceased to be instructed to marry his kinswoman,
by a law that to all appearances takes no account of the thousands of social
e difficulties that deter people from obeying such instructions in a willing
spirit, so that they invariably prefer to put up with anything rather than
comply—I mean difficulties like physical or mental illnesses or defects in
the man or woman one is told to marry. I dare say some people imagine
the lawgiver is not bothered about these things at all, but they're wrong.

11. See 741a–e.

So in the interests of the lawgiver and those for whom he legislates, let's compose a sort of impartial preamble begging those who are subject to the legislator's orders to forgive him if in his concern for the common good he finds it hardly possible to cope with the personal inconvenience 926
experienced by individuals; and the people for whom the lawgiver's regulations are intended should also be forgiven for their occasional understandable inability to carry out the orders which, in all ignorance, he gives them.

CLINIAS: Well then, sir, what would be the most reasonable way of dealing with such cases?

ATHENIAN: It is essential, Clinias, to choose people to arbitrate between laws of that sort and the persons affected by their provisions.

CLINIAS: How do you mean?

ATHENIAN: Sometimes a nephew with a wealthy father might be reluctant to take his uncle's daughter because he fancies his chances and is bent on b
making a better marriage; in another case a man would have no choice but to disobey the law because the instructions devised by the lawgiver would lead to untold trouble—as for instance if they tried to compel him to marry someone suffering from lunacy or some other terrible physical or mental defect that would make the life of the partner not worth living. This policy should be embodied in a law with the following provisions:

If in practice people attack the established laws about wills on any point c
whatever, but especially where a marriage is concerned, and swear that if the legislator were alive and present in person he would never have forced them to either of the courses to which they are in fact being forced (to marry this man or that woman), but one of the relatives or a guardian takes the opposite line, then we must remember that the fifteen Guardians of the Laws have been bequeathed to orphan boys and girls by the legislator to act as their fathers and arbitrate on their behalf; so litigants on any of these matters must go to them to get disputes settled, and carry out their d
decisions as binding. But if a litigant believes that this is too great an authority to be vested in the Guardians of the Laws, he should take them before the court of the Select Judges and get a decision on the points at issue.

75. If he loses the day,
*the lawgiver* should visit him with censure and disgrace, a punishment which any sensible person will regard as more severe than a huge fine.

The effect of this will be to give our orphan children a sort of second birth. e
We have already described the training and education they should all receive after their first; after this second and parentless birth we have to see that these children who have had the ill luck to be bereaved and made orphans are to be pitied as little as possible for their misfortune. In the first place, the Guardians of the Laws—substitute parents at least as good as the original ones—should lay down rules for them; in particular, we instruct the three Guardians on duty for the year to look after them as though they were their own children; and for the guidance of these officials and the guardians we shall compose a suitable preamble on the education

927 of orphans. And luckily enough, I fancy, we have described already how after death the souls of the departed enjoy certain powers which they use to take an interest in human affairs.[12] The stories which tell of these things are true, but long, so one should trust to the ancient and widely disseminated common traditions on the point, and also take the legislator's word for it that the doctrine is true—unless, of course, one believes them to be arrant fools. Now if this is really the way of things, a guardian should
b fear, in the first place, the gods above, who are aware how deprived orphans are, and secondly the souls of the departed, whose natural instinct is to watch with particular care over their own children, showing benevolence to people who respect them and hostility to those who treat them badly. And he should also fear the reactions of those who, full of years and honor, are still living, because in a state which thrives under good
c laws their grandchildren will show them glad and tender affection, and old men have sharp eyes and ears for such things: if you do the right thing by an orphan, they'll be kind to you, whereas they'll soon show you their displeasure if you take advantage of an orphan's exposed position, because they regard orphans as a supreme and sacred trust. A guardian or official with even the slightest sense has a duty to give close attention to all these warnings, and take great care over the training and education of orphans, helping them in every possible way, just as if he were contributing to the good of his own self and family.

A man who complies with the preface to the law and refrains from any ill-treatment of an orphan will be spared first-hand experience of the
d legislator's fury against such actions, but

> 76. if a man refuses to comply, and harms a child deprived of its father or mother,
> *he must* pay double the damages that he would have to pay for a crime committed against a child with both parents living.

But do we really *need* precise rules to control a guardian's treatment of an orphan, and an official's supervision of a guardian? They already possess a pattern of how to bring up free-born children, in the education they themselves give up their own, and in the way they manage their private
e possessions—and of course the rules they have to guide them on those matters are pretty exact. If they were not, it would be reasonable to lay down rules of guardianship as a special and separate category, and make an orphan's life different from that of ordinary children by working out a detailed régime of its own. But in fact in our state being an orphan doesn't differ very much from living under one's own father, although in
928 public esteem, and the amount of attention the children get, orphanhood is usually much less desirable. That is why in dealing with this topic—rules about orphans—the law has gone to such lengths in encouraging

12. See 865d–e.

and threatening. And here's the sort of threat that will come in very handy indeed. Anyone acting as a guardian of a boy or girl, and any Guardian of the Laws who supervises that guardian by virtue of being appointed to control him, must show this child who has had the misfortune of bereavement no less affection than his own children, and be just as zealously concerned for his ward's property as he is for his own—more so, in fact; and everyone who acts as a guardian will have just that one law to observe b
on the subject of orphans. But

77. if this law is contravened in such respects,
(a) *a guardian* should be punished by his official,
(b) *an official* should be summoned before the court of Select Judges by the guardian and punished by a fine of twice the damages as estimated by the court.

If a guardian is suspected by the relatives or indeed by any other citizen of neglect or malpractice, he should be summoned before the same court.

78. *He must* be fined four times the sum he is found to have taken, half c
the fine going to the child and half to the successful prosecutor.

If once he has grown up an orphan concludes that he was badly treated by his guardian, he may bring a suit for incompetent guardianship, provided he does so within five years of its expiry.

79. (a) If a guardian is found guilty,
*the court* is to estimate what he is to suffer or pay;
(b) if an official is found guilty of injuring the orphan
(i) through negligence,
*the court* must assess how much he is to pay to the child; d
(ii) by criminal conduct,
*then in* addition to paying the sum assessed, he must be ejected from the office of Guardian of the Laws,

and the government must supply the state and country with a fresh Guardian of the Laws to take his place.

The bitterness with which fathers quarrel with their children and children with their fathers is often excessive. A father is apt to think that the legislator ought to give him legal authority, if he wishes, to make a public proclamation through a herald that under the provisions of the law his e
son is his son no longer; for their part, sons believe that if they have a father whose suffering from disease or old age has become a disgrace, they are entitled to prosecute him on a charge of lunacy. Such disputes are usually found where men's characters are irredeemably corrupt, because when the corruption is confined to one party—as when the son is corrupt but not the father, or the other way round—the bad feeling is not sufficient to lead to trouble. Now in any other state a child repudiated by his father would not necessarily find himself a stateless person, but in the case of Magnesia, to which these laws will apply, a man disowned by his

929 father will be obliged to migrate to another country, because the 5040 homes cannot be increased even by one. Consequently before this punishment can be legally inflicted on him, he must be repudiated not only by his father but by the entire clan. Procedure in such cases is to be governed by some such law as this: anyone who has the extreme misfortune to want—justifiably or not—to expel from the clan the child he has fathered and reared, must not be allowed to do so casually and on the spur of the
b moment. First of all he must assemble all the relatives on his own side and all the relatives of the son on the mother's side, as far as cousins in each case, and accuse his son before them, explaining why he deserves to be drummed out of the clan by its united action. The son shall have the right of reply, to argue that none of these penalties is called for. If the father carries his point, and wins the vote of more than half the relatives
c (he himself and the mother and the accused son being excluded from the voting, as well as those males and females who are not yet of adult age), then by this procedure and on these terms he shall be entitled to repudiate his son, but in no other way whatever. If some other citizen wishes to adopt the repudiated son, no law is to stop him (a young man's character is by nature bound to change frequently enough in the course of his life), but if after ten years no one has been moved to adopt the disowned person,
d the supervisors of surplus children intended for the colony[13] must take him too under their wing so that he may be suitably established in the same colony as the others.

Now suppose illness or old age or a cantankerous temper or all three make a man more wayward than old men usually are, unbeknown to all except his immediate circle; and suppose he squanders the family resources on the grounds that he can do as he likes with his own property, so that his son is driven to distraction but hesitates to bring a charge of lunacy.
e This is the law the son must observe. First of all he must go to the eldest Guardians of the Laws and explain his father's misfortune, and they, after due investigation, must advise him whether to bring the charge or not. If they advise that he should, they must come forward as witnesses for the prosecution and plead on his behalf.

80. If the case is proved,
*the father* must lose all authority to manage his own affairs, even in trivialities, and be treated like a child for the rest of his days.

Whenever a man and his wife find it impossible to get on with each other because of an unfortunate incompatibility of temperament, the case must
930 come under the control of ten men—middle-aged Guardians of the Laws—and ten of the women in charge of marriage, of the same age. Any arrangements they make which reconcile the couple should stand, but if feelings are too exacerbated for that they must do their best to find each some

13. Cf. 740e.

other congenial partner. It's quite likely that the existing partners are people of rough temper, so one should try to fit them in harness with mates of a more phlegmatic and gentle disposition. And when the quarreling couple have no children or only a few, the procreation of children must be kept in view in the setting up of the new homes; where sufficient children b
already exist, the divorce and the remarriages should facilitate companionship and mutual help in the evening of life.

If a wife dies and leaves male and female children, we'll lay down a law advising, though not compelling, the husband to bring up his existing children without importing a stepmother; but if there are no children, he must be obliged to remarry so as to beget sufficient children for his home and for the state. If the husband dies, leaving an adequate number of c
children, their mother should remain in her position and bring them up; but if it is judged that she is too young to live unmarried without injuring her health, her relatives should report the facts to the women in charge of marriages and do whatever seems advisable to both sides; and if there have been no children born as yet, they should bear that in mind too. (The minimum acceptable number of children is to be fixed by law as one of each sex.) d

Whenever there is no dispute about the parentage of a child, but a ruling is required as to which parent it should follow, the offspring of intercourse between a slave woman and a slave or a free man or a freedman should become the absolute property of the woman's owner; if a free woman has intercourse with a slave, the issue should belong to his master. If a free man has a child by his own slave woman, or a free woman by her own slave, and the facts are crystal clear, the female officials are to send the e
free woman's child along with its father to another country, and the Guardians of the Laws must similarly send away the free man's child with its mother.

No god or any man with his wits about him will ever advise anyone to neglect his parents. On the contrary, we should be quick to appreciate how very relevant the following preface on the subject of worshipping gods will be to the respect or disrespect in which we hold our father and mother.

Time-honored cult observances all over the world fall into two categories.
Man exalts some of the gods because he can see them with his own eyes, 931
others he represents, by setting up statues of them, and believes that his worship of these inanimate 'gods' ensures him the abundant gratitude and benevolence of their real and living counterparts. This means that no one who has living in his house his father or mother, or their mothers and fathers, treasures old and frail, must ever forget that so long as he possesses such a 'shrine' at his hearth and looks after it properly, no other objects of worship will ever do him as much good.

CLINIAS: What do you mean by 'properly'? b

ATHENIAN: I'll tell you. After all, my friends, such themes are worth a hearing.

CLINIAS: Tell us, then.

ATHENIAN: Our version of the story of Oedipus is that when he was insulted by his sons he called down a curse on them—and you know how people have never stopped relating how the gods heard and answered his prayer. And Amyntor fell into a rage with his son Phoenix and cursed him; Theseus did the same to Hippolytus, and there are thousands of
c similar cases, which all go to show that the gods take the parents' side against the children: no man, you'll find, can curse anyone as effectively as a parent can curse his child; and that's absolutely right. So if it is true that the gods listen to the prayers of fathers or mothers who have been wantonly insulted by their children, isn't it reasonable to suppose that when by contrast the respect we show our parents delights them so much that they pray hard to heaven for a blessing on their children, the gods will be just as ready to listen as before, and grant us it? If not, they'd be conferring blessings unjustly—which we maintain is a peculiarly inappro-
d priate thing for a god to do.

CLINIAS: Very much so.

ATHENIAN: So as we said just now, we must reckon that the most precious object of worship a man can have is his father or grandfather, weak with age, or his mother in a similar condition, because when he honors and respects them God is delighted—if he weren't, he wouldn't listen to their prayers. These 'living shrines', in the shape of our forefathers, affect us
e far more wonderfully than lifeless ones, because when we look after them they invariably join their prayers to ours, whereas if we insult them, they oppose us. As ordinary statues do neither of these things, a man who treats his father and grandfather and so on as they deserve will have objects of worship that are much more effective than any others in winning him the favor of heaven.

CLINIAS: Excellently put.

ATHENIAN: Anyone with his wits about him holds the prayers of his parents in fear and respect, knowing that the cases in which such prayers have been brought to pass have been many and frequent. This being the
932 way of things, a good man will regard his elderly forebears as a veritable god-send, right up till they breathe their last; and when they pass on, they will be sorely missed by the next generation,[14] and be a terror to the wicked. Let everyone be convinced by this argument and do their parents all the honor enjoined by law.

But if even so a man gets the reputation of being deaf to such prefaces, then the right law to pass to deal with him will run as follows.

b If anyone in this state of ours looks after his parents less diligently than he should and fails to carry out their wishes in all respects with more indulgence than he shows to those of his sons and descendants in general, and indeed to his own desires too, the neglected parent must report the fact, either in person or by messenger, to the three most senior Guardians

14. Reading *neois* in a3.

of the Laws and three of the women in charge of marriages. These officials must take the matter in hand, and provided the offender is still a young man under the age of thirty, chastise him with a whipping and imprisonment. (In c
the case of a woman, the same chastisement may be inflicted until she is forty.) Older persons, if they persist in neglecting (and perhaps actually ill-treating) their parents, should be summoned before a court consisting of the 101 most elderly citizens of the state.

81. If a man is found guilty,
*the court* is to assess what penalty or fine is to be exacted, and absolutely no fine or penalty that a man can pay must be excluded from consideration.

If ill-treatment prevents a parent from complaining, any free man who d
discovers the situation should alert the authorities.

82. If he does not,
*he must* be regarded as a scoundrel and be liable to a suit for damage at the hands of anyone who wishes.

If the informant is a slave, he should be given his freedom; if he belongs to the criminal or his victim, he must be released by the authorities; and if he belongs to some other citizen, the public treasury is to see that the owner is reimbursed. Official action must be taken to stop anyone injuring him in revenge for giving information.

We have already dealt with *fatal* injuries inflicted by the use of drugs, e
but we have not yet discussed any of the less harmful cases of voluntary and premeditated injury, inflicted by giving food or drink or by applying ointments. Full treatment of the question is hindered by the fact that so far as human beings are concerned, poisoning is of two kinds. First there is the sort we have just explicitly mentioned: the injury a body suffers from some physical substance by natural processes. The other kind is a 933
matter of spells and charms and 'enchantments': not only are the victims persuaded that they are being seriously injured by people with magic influence, but even the perpetrators themselves are convinced that it really is in their power to inflict injury by these methods. It is not easy to know the truth about these and similar practices, and even if one were to find out, it would be difficult to convince others; and it is just not worth the b
effort to try to persuade people whose heads are full of mutual suspicion, that even if they do sometimes catch sight of a molded waxen figure in a doorway or at a junction of three roads or on their parents' grave, they should ignore it every time, because they cannot be sure these things work. All this means that our law about drugs must be a double law, reflecting the two methods by which poisoning may be attempted. But first, by c
entreaty, exhortation and advice, we'll explain that no such thing should ever be attempted, that one should not alarm and terrify the common man, like an impressionable child, and that legislators and judges should not be put to the necessity of curing men of such fears. We shall point out for

a start that unless the person who tries to use poison happens to be a diviner or soothsayer, he acts in ignorance of how his spells will turn out, and unless he happens to be an expert in medicine, he acts in ignorance of the effect he will have on the body. So the wording of our law about
d the use of poisons should be as follows:

83. (a) If a doctor poisons a man without doing either him or any member of his household fatal injury, or injures his cattle or bees (fatally or otherwise), and is found guilty on a charge of poisoning,
*he must be punished* by death.
(b) If the culprit is a layman,
*the court* is to decide the proper penalty or fine to be inflicted in his case.

84. (a) If a diviner or soothsayer is deemed to be in effect injuring
e someone, by spells or incantations or charms or any other poison of that kind whatever,[15]
*he must die.*
(b) If someone with no knowledge of divination is found guilty of this kind of poisoning,[16]
*the same* procedure is to be followed as with the other laymen [83.(b)]—that is, the court is to decide what it thinks is the appropriate penalty or fine for him to pay.

When one man harms another by theft or violence and the damage is extensive, the indemnity he pays to the injured party should be large, but smaller if the damage is comparatively trivial. The cardinal rule should be that in every case the sum is to vary in proportion to the damage done, so that the loss is made good. And each offender is to pay an additional
934 penalty appropriate to his crime, to encourage him to reform. Thus if a man has been led to do wrong by the folly of someone else, being over-persuaded because of his youth or some similar reason, his penalty should tend to be light; but it is to be heavier when his offense is due to his own folly and inability to control his feelings of pleasure and pain—as when he has fallen victim to cowardice and fear, or some deep-rooted jealousy or lust or fury. This additional penalty is to be inflicted not because of the crime (what's done can't be undone), but for the sake of the future: we
b hope that the offender himself and those that observe his punishment will either be brought to loathe injustice unreservedly or at any rate recover appreciably from this disastrous disease. All these reasons and considerations make it necessary for the law to aim, like a good archer, at a penalty that will both reflect the magnitude of the crime and fully indemnify the victim. The judge has the same aim, and when he is faced by his legal duty of assessing what penalty or fine the defendant must pay, he must
c follow closely in the legislator's footsteps; and the latter must turn himself

15. Reading *haistisinoun* in e1.

16. Reading *ōn tēs* in e3.

into a sort of artist and sketch some specimen measures consistent with his written prescriptions. That, Clinias and Megillus, is the job to which we must now devote our best efforts; we have to describe what type of penalty is called for in all categories of theft and violence—granted, of course, that the gods and children of gods are prepared to see us legislate in this field.

Lunatics must not be allowed to appear in public; their relations must keep them in custody in private houses by whatever means they can improvise. d

85. If they fail to do so,
*they must* pay a fine: one hundred drachmas for a member of the highest property-class (whether it is a slave or a free man that he fails to keep an eye on), eighty for a member of the second class, sixty for the third, and forty for the lowest.

There are several kinds of madness, brought on by several causes. The cases we have just mentioned are the result of illness, but there are some people with an unfortunate natural irritability, made worse by poor discipline, who in any trivial quarrel will shout their heads off in mutual abuse. Such a thing is highly improper in a well-run state. So this single law e
should apply to all cases of defamation: no one is to defame anybody. If you are having an argument you should listen to your opponent's case, and put your own to him and the audience, without making any defamatory remarks at all. When men take to damning and cursing each other and to calling one another rude names in the shrill tones of women, these 935
mere words, empty though they are, soon lead to real hatreds and quarrels of the most serious kind. In gratifying his ugly emotion, anger, and in thus disgracefully stoking the fires of his fury, the speaker drives back into primitive savagery a side of his character that was once civilized by education, and such a splenetic life makes him no better than a wild beast; bitter indeed, he finds, are the pleasures of anger. Besides, on such occasions all men are usually quick to resort to ridicule of their opponents, and no one who has indulged that habit has ever acquired the slightest sense of b
responsibility or remained faithful to many of his principles. That is why no one must ever breathe a word of ridicule in a temple or at a public sacrifice or at the games or in the marketplace or in court or in any public gathering, and the relevant official must always punish such offenses.

86. If he fails to do so,
*he must* be disqualified from competing for awards of merit, as being a c
man who disregards the laws and fails to perform the duties imposed upon him by the legislator.

87. If in other localities someone fails to refrain from abusive language, whether he resorts to it first or by way of reply,
*the passer-by,* provided he is older than the offender, should lend his

support to the law and eject by force this fellow who has shown such indulgence to anger, that bad companion.

88. If the passer-by fails to do so,
*he must* be liable to the appointed penalty.

The view we are putting forward now is that when a man is embroiled in a slanging-match he is incapable of carrying on the dispute without
d trying to make funny remarks, and when such conduct is motivated by anger we censure it. Well then, what does this imply? That we are prepared to tolerate a comedian's eagerness to raise a laugh against people, provided that when he sets about ridiculing our citizens in his comedies, he is not inspired by anger? Or shall we divide comedy into two kinds, according to whether it is *good-natured* or not? Then we could allow the playful
e comedian to joke about something, without anger, but forbid, as we've indicated, anyone whatever to do so if he is in deadly earnest and shows animosity. We must certainly insist on this stipulation about anger; but we still have to lay down by law who ought to receive permission for ridicule and who not. No composer of comedies, or of songs or iambic verse, must ever be allowed to ridicule either by description or by impersonation any citizen whatever, with or without rancor. Anyone who disobeys this rule must be ejected from the country that same day by the presidents of the games.

936 89. If the latter fail to take this action,
*they must* be fined three hundred drachmas, to be dedicated to the god in whose honor the festival is being held.

Those who have earlier[17] been licensed to compose verse against each other should be allowed to poke fun at people, not in savage earnest, but in a playful spirit and without rancor. The distinction between the two kinds must be left to the minister with overall responsibility for the education of the young; an author may put before the public anything the minister approves of, but if it is censored, the author must not perform it to anyone
b personally nor be found to have trained someone else to do so, whether a free man or a slave.

90. If he does,
*he must* get the reputation of being a scoundrel and an enemy of the laws.

It is not the starving tout court or the similarly afflicted who deserve sympathy, but the man who in spite of his moderation or some other virtue or progress towards it, nevertheless experiences some misfortune. That being so, it will be a matter for surprise if a virtuous person, whether slave or free, even if the state and society he lives in is run with only average skill, is ever so grossly neglected as to be reduced to abject poverty.

17. See 816e.

So the legislator will be quite safe if he lays down a law running more or
less like this. No one is to go begging in the state. Anyone who attempts c
to do so, and scrounges a living by never-ending importunities, must be expelled from the market by the Market-Wardens, from the city by the City-Wardens, and from the surrounding country conducted by the Country-Wardens across the border, so that the land may rid itself completely of such a creature.

If a slave man or woman damages any piece of someone else's property,
then provided the person who suffers the loss was not himself partly to d
blame because of inexperience or careless conduct, the slave's owner must either make good the damage in full, or hand over the actual offender. But if the owner counter-claims that the prosecution has been brought as a result of the injured person and the culprit putting their heads together to rob him of his slave, he must sue the allegedly injured party on a charge
of collusion. If he wins the day, he is to receive twice the value of the e
slave as assessed by the court.

91. If he loses,
*he must* both make good the damage and hand over the slave.

92. If a beast of burden or a horse or dog or some other animal damages a piece of a neighbor's property,
*its owner* is to pay for the damage on the same basis.

If anyone deliberately refuses to appear as a witness, the person who needs his evidence must serve a summons on him; and on being duly summoned the man is to present himself at the trial. If he knows something and is prepared to testify, he should give evidence accordingly; if he claims he knows nothing, he must swear an oath to three gods, Zeus, Apollo and
Themis, to the effect that quite definitely he has no information, and thus 937
be dismissed from the proceedings. If a man is summoned to give evidence and fails to answer the summons, he must be liable by law to a suit for damage. No juryman is to vote in a trial in which he has been put up as a witness and given evidence. A free woman is to be allowed to be a witness and to speak in support of a litigant, provided she is over forty years of age, and to bring prosecutions, provided she has no husband; but if she has a husband living, she must be limited to acting as a witness.
Slaves (male and female), and children, should be allowed to support a b
case by giving evidence, but only in a trial for murder and provided a credit-worthy surety is put up to guarantee their appearance at the trial if their evidence is objected to as false. If either disputant claims someone has borne false witness, he should enter an objection to all or part of the testimony before a verdict in the case is decided on. The objections, under the seal of both parties, should be placed in official custody and produced
at the trial for perjury. If anyone is convicted twice on this charge, he may c
not be *compelled* under any law to bear witness again; if he is convicted a third time, he must never be *allowed* to be a witness in the future; and if

he does have the face to give testimony on a further occasion after a third conviction, anyone who wishes should report him to the authorities, who should haul him before a court.

93. If he is found guilty,
*he must* be punished by death.

When a court decides to throw out evidence on the ground that the winning
d side has triumphed because certain witnesses have perjured themselves, and more than half the evidence is condemned, the suit lost on the strength of it should come up for retrial, and after due inquiry a ruling should be given that the false evidence was, or was not, the decisive influence on the verdict; and this ruling, whichever way it goes, will automatically settle the original action.

Although human life is graced by many fine institutions, most of them have their own evil genius, so to speak, which pollutes and corrupts them. Take justice, for instance, which has civilized so much of our behavior:
e how could it fail to be a blessing to human society? And granted justice is a blessing, can advocacy fail to be a blessing too? But valuable though they are, both these institutions have a bad name. There is a certain kind of immoral practice, grandly masquerading as a 'skill', which proceeds on the assumption that a technique exists—itself, in fact—of conducting one's own suits and pleading those of others,[18] which can win the day regardless of the rights and wrongs of the individual case; and that this skill itself
938 and the speeches composed with its help are available free—free, that is, to anyone offering a consideration in return. Now it is absolutely vital that this skill—if it really is a skill, and not just a knack born of casual trial and error—should not be allowed to grow up in our state if we can prevent it. The lawgiver will have nothing to say to those who obey his command that one should either listen to justice and not contradict her, or leave for some other country; but if anyone disobeys him, the law shall pronounce
b as follows: if anyone seems to be trying to misrepresent to the judges where the course of justice lies, and to enter one plea after another in support of either his own or someone else's case, when equity would call a halt, then anyone who wishes should indict him on a charge of perverse pleading or criminal advocacy. He should be tried in the court of select judges and if he is found guilty the court should decide whether it thinks his motive is avarice or pugnacity.

94. (a) If the court believes his motive is pugnacity,
*it must* determine how long he must refrain from prosecuting anyone or helping someone else to do so.
(b) If the motive appears to be avarice,
c (i) *a foreigner* must leave the country and never return, on pain of death;

18. Punctuating with the second dash after *autē* in e5 and a comma after *allōi* in e6.

(ii) *a citizen* must die, for letting a love of money become the obsession of his life.

95. If a man is convicted twice of committing such an offense through pugnacity,
*he must die.*

# Book XII

If a man passes himself off as an ambassador or herald of the state and 941
enters into unauthorized negotiations with a foreign power, or, when actually sent on such a mission, delivers a message other than the one with which he was sent—or contrariwise if he is shown to have misreported, in his capacity as an ambassador or herald, the communications which enemy or friendly states have given him, he must be open to prosecution for violating the law by impiety against the pronouncements and instructions of Hermes and Zeus.

96. If he is convicted,
*the penalty* or fine he must pay will have to be assessed. b

Theft of property is uncivilized, and robbery with violence an act of brazen insolence. The sons of Zeus take no pleasure in fraud and force, and none of them has ever committed either of these crimes. So no one who commits such an offense should be seduced into believing the lies of poets or other story-tellers: the thief or thug mustn't think 'There's no shame in this—after all, the gods do it themselves.' That is neither plausible nor true, and no one who breaks the law by such an act can possibly be a god or child of gods. The lawgiver is in a much better position to
understand these things than all the poets in the world. Anyone who is c
convinced by this doctrine of ours is a happy man, and long may he so continue; but anyone who refuses to listen should have some such law as this to contend with: all theft of public property, great or small, should attract the same punishment. The greed of the pilferer is just as great as any other thief's—it's only his efficiency that's inferior; whereas anyone
who makes off with some valuable object he did not deposit indulges his d
criminal tendencies to the full. In the eyes of the law, the one deserves a lighter penalty than the other not because of the amount of the theft, but because he is probably curable while the other is not. Thus

97. (a) if anyone successfully prosecutes in court a foreigner or slave on a charge of theft of some piece of public property,
*a decision* must be reached as to the fine or penalty he should pay in view of the fact that he can probably be cured.
(b) If a citizen, in spite of the education he will have enjoyed, is convicted 942
of plundering or attacking his fatherland, whether he is caught in the

act or not,
*he must* be punished by death, as being virtually beyond cure.

Military service is a subject on which we need to give a great deal of advice
and have a large number of regulations. The vital point is that no one, man
or woman, must ever be left without someone in charge of him; nobody must
get into the habit of acting alone and independently, either in sham fighting
b or the real thing, and in peace and war alike we must give our constant atten-
tion and obedience to our leader, submitting to his guidance even in tiny
details. When the order is given we should stand, march, exercise, wash,
feed, stay awake at night on duty as guards or messengers, and even in the
midst of dangers not pursue the enemy or yield without a sign from our
c commander. In short, we must condition ourselves to an instinctive rejection
of the very notion of doing anything without our companions; we must live
a life in which we never do anything, if possible, except by combined and
united action as members of a group. No better or more powerful or efficient
weapon exists for ensuring safety and final victory in war, and never will.
This is what we must practice in peacetime, right from childhood—the exer-
cise of authority over others and submission to them in turn. Freedom from
d control must be uncompromisingly eliminated from the life of all men, and
of all the animals under their domination.

In particular, all choruses should be calculated to encourage prowess in
the field, and for the same reason people must learn to put a brave and
cheerful face on it when they have to put up with poor food and drink,
extreme cold and heat, and rough bedding. Most important, they must
not ruin the natural powers of head and feet by wrapping them round
with artificial protection, so discouraging the spontaneous growth of the
e cap and shoes that nature provides. When these two extremities are in
sound condition they help to keep the whole body at the peak of efficiency,
whereas their ruin is its ruin too. The feet are the most willing servants
the body has, and the head is the organ of supreme control, the natural
seat of all the principal senses of the body.

943 That's the praise of military life that ought, in my view, to ring in a
young man's ears. Here are the regulations. When a man is called up, or
detailed for some special duty, he is obliged to perform his military service.
If he is a coward and fails to present himself, without the permission of
his commanders, a prosecution for failure to serve should be brought
before the military authorities after return from the field. Such cases must
be judged by the soldiers who have fought in the campaign; the various
categories (infantry, cavalry and the other branches of the armed forces)
should meet separately, infantrymen being brought before infantrymen,
b cavalrymen before cavalrymen, and the others before their own com-
rades similarly.

98. If a defendant is found guilty,
(a) *he must* in future be debarred from
(i) competing for any kind of military distinction,

(ii) bringing a charge against anyone else for refusing to perform military service, and
(b) *the court* must assess the additional penalty or fine he is to pay.

Afterwards, when the charges of refusal to serve have been decided, the commanders must reconvene each arm of the forces and in the presence of the candidates' fellow soldiers seek decisions on those applying for awards of distinction. Supporting statements by eye-witnesses and other c
evidence adduced by the candidates must not relate to any previous campaign, but only to the one they have just fought. The prize in each case is to be a wreath of olive, which the winner should take to the temple of whichever god of war he pleases and dedicate it, suitably inscribed, as life-long evidence that the first, second or third prize was awarded to him.

If a man does go on active service, but returns home before the command- d
ers withdraw the troops, he should be prosecuted on a charge of desertion before the same court as is concerned with refusal of service.

99. If he is found guilty,
*the same* penalties should apply as before [98].

Naturally, everyone who brings a prosecution ought to be very wary of inflicting an unjustified punishment, whether in cold blood or by accident. Justice is said—and well said—to be the daughter of Respect, and both e
are the natural scourges of falsehood. So in general we must be careful not to offend against justice, and particularly as regards the abandonment of weapons in the field: we mustn't reproach an enforced abandonment in mistake for an ignominious one, and so inflict penalties as undeserved as the victims are undeserving of them. Although it is by no means easy to tell the two cases apart, a rough and ready distinction must be attempted 944
in the legal code. We can explain the point with the help of a story. If Patroclus had pulled round after being carried to his tent without his weapons (as has happened in thousands of other cases)—the weapons which the poet tells us were presented to Peleus by the gods as a dowry when he married Thetis, and which had been taken by Hector—then it would have been open to all the scoundrels of the time to reproach the son of Menoetius for abandoning his arms.[1] Again, sometimes men have lost their weapons because of being thrown down from a height, or when b
at sea, or when suddenly caught up by a tremendous onrush of water during their struggles in a storm. There are countless similar circumstances one could plausibly adduce to excuse and palliate a disaster that positively invites denigration. So we must do our best to distinguish the more serious and reprehensible disasters from the other kind, and in a rough and ready way the distinction can be expressed by varying our expressions of rebuke. Thus 'he *abandoned* his shield' can sometimes be properly replaced by 'he

1. See *Iliad* xvi fin., xvii.125 ff., xviii.78 ff. In the Trojan war, Patroclus, son of Menoetius and companion of Achilles, while wearing the armor of Achilles' father Peleus, was killed by Hector.

c *lost* his weapons'. When you are robbed of your shield with some force, you have not 'abandoned' it in the same way as if you had thrown it away deliberately: the two cases are fundamentally different. The distinction should be written into the legal code in the following terms:

If a man finds the enemy at his heels and instead of turning round and defending himself with the weapons he has, deliberately lets them drop or throws them away, preferring a coward's life of shame to the glorious and blessed death of a hero, then there should certainly be a penalty for
d losing his weapons by abandonment. But when he has lost his weapons in the other way we've described the judge must not fail to take the fact into account. It is the criminal you need to punish, to reform him, not someone who's simply been unlucky—that's useless. So what will be the right penalty when someone has made good his escape by throwing away the weapons that could have protected him? Unfortunately, it's beyond the power of man to do the opposite of what people say some god did to Caeneus of Thessaly—that is, change him from a woman into a man. If only we could inflict the reverse transformation, from man to woman, that
e would be, in a sense, the most appropriate punishment for a man who has thrown away his shield. But what we *can* do is to reward him for saving his skin by giving him the closest possible approximation to such a penalty: we can make him spend the rest of his days in utter safety, so that he lives with his ghastly disgrace for as long as possible. Here's the law that will deal with such people:

100. If a man is convicted on a charge of shamefully dropping his weapons of war;
945 (a) *no general* or any other army officer must employ him as a soldier again, or appoint him to any position whatever;
(b) *and in addition* to being thus permitted, like the natural coward he is, to avoid the risks that only real men can run, the guilty man must also pay a sum of money: one thousand drachmas if he belongs to the highest property-class, five hundred if to the second, three hundred if
b to the third, and one hundred if to the lowest.[2]

101. If an officer disobeys and posts the coward again,
*the officer's* Scrutineer is to condemn him to pay the same fine: one thousand drachmas if he belongs to the highest property-class, five hundred if to the second, three hundred if to the third, and one hundred if to the fourth.

Well then, what will be the proper policy for us to adopt on the subject of Scrutineers? So far, we simply have a corps of officials, some appointed for a single year by the luck of the draw, others chosen from a preliminary slate of selected candidates to serve for several years. What if one of them proves so inadequate to the dignity and weight of his office that he gets 'out of true' and does something crooked? Who will be capable of making

2. In Plato's text the regulation called here 100(b) comes *after* 101.

a man like that go straight again? It is desperately difficult to find someone
of high moral standards to exercise authority over the authorities, so to c
speak, but try we must. So where are our god-like 'straighteners' to be
found? The point is this: a state has many crucial parts that prevent it
from disintegrating, just as a ship has its stays and bracing ropes and a
body its tendons and associated sinews. (Features of this kind are a very
widespread phenomenon, and in spite of the many different names we
give them in different contexts, they are basically the same sort of thing.)
Now the office of Scrutineer is the single most crucial factor determining
whether a state survives or disintegrates. If the Scrutineers are better men d
than the officials they scrutinize, and display irreproachable impartiality
and integrity, the entire state and country flourishes and prospers. But if
their investigation of the officials is conducted badly, then the sense of
justice that unites all the interests in the state is destroyed, with the result
that all the officials go their different ways and refuse to pull together any
longer; they fragment the state into lots of smaller states by filling it with e
the party-strife that so speedily wrecks it. That is why it is absolutely vital
that the moral standards of the Scrutineers should be exemplary. So let's
try to produce these officials by some such procedure as this:

Every year after the summer solstice the entire state should congregate
in a precinct dedicated jointly to Apollo and the Sun, in order to present
to the god three out of their number. Each citizen is to propose that person, 946
apart from himself, whom he believes to be perfect in every way; the
candidate is to be at least fifty years of age. This preliminary list should
be divided into two halves (on the assumption that the total is an even
number; if not, the person with the fewest votes should be excluded before
the division is made), and the half consisting of those with the most votes
should be selected to proceed to the next stage after the other half with
fewer votes have been eliminated. If some names receive the same number
of votes, so that the selected candidates are too numerous, the excess
should be removed by eliminating the youngest candidates. The selected
candidates that remain should be voted for again until only three are left, b
each with a different number of votes. If two of them, or all three, attract
equal support, then the decision should be left to chance and the gods of
good luck: the first, second and third choices must be determined by lot,
crowned with olive and given the rewards of their success. Next, a public
proclamation must be made to the effect that the state of the Magnesians,
now by the grace of God securely re-established, presents to the Sun-god
her three best men; and these, her choicest fruits, in accordance with the c
law of old, she consecrates for the term of their judicial office as a joint
gift to Apollo and the Sun. In the first year twelve such Scrutineers are to
be appointed, each to retain office till the age of seventy-five; thereafter
three more are to be added every year.

The Scrutineers are to divide all the officials into twelve groups and
look into their conduct by making all such inquiries as are consistent with
the dignity of a gentleman. During their period of office as Scrutineers
they are to live in the precinct of Apollo and the Sun where they were d

elected. When they have sat in judgment, either privately and individually,
or in association with colleagues, on those at the end of their term of office
in the service of the state, they must make known, by posting written
notice in the market-place, what penalty or fine in their opinion each
official ought to pay. Any official who refuses to admit that he has been
judged impartially should haul the Scrutineers before the Select Judges,
and if he is deemed innocent of the accusations he should accuse the
e Scrutineers themselves, if he so wishes. But

102. If he is convicted, and
(a) the Scrutineers had decided on death as his penalty,
*he must* die (a penalty which in the nature of the case cannot be increased); but
(b) if his penalty is one that it is possible to double,
*then double* he must pay.

Now we ought to hear about the scrutiny of the Scrutineers themselves.
What will it be, and how will it be organized?
947 During their lifetime these men, whom the whole state has thought fit
to dignify with the highest honors, should sit in the front seat at all the
festivals; moreover, when the Greeks assemble to perform sacrifices or see
spectacles together, or congregate for other sacred purposes, the leaders
of the delegations sent by the state should be chosen from the Scrutineers;
and the Scrutineers are to be the only citizens whose heads may be graced
by a crown of laurel. They should all be priests of Apollo and the Sun;
the chief priesthood should be an annual office, held by the Scrutineer
b who has come top of the list of those appointed that year—which must
be recorded under his name, so as to provide a framework for the calendar
for as long as the state endures.

After the death of a Scrutineer, his laying-out, his last journey and his
tomb must be on a grander scale than for ordinary citizens. All cloth used
must be white, dirges and laments must be banned, and a chorus of fifteen
girls and another of fifteen youths must stand one on each side of the bier
c and sing alternately a kind of hymn of praise to the dead priest, celebrating
his glory in song throughout the day. As dawn comes up the following
day the bier shall be taken to the tomb escorted by a hundred of the youths
who attend the gymnasia, chosen by the relatives of the dead man. In front
must go the young men who are as yet unmarried, each rigged out in his
own military equipment; the cavalry should bring their horses, the infantry
their weapons, and so on. Around the bier itself, towards the front, will be
d boys chanting the traditional strains, followed by girls, and women who
have finished bearing children. The Priests and Priestesses will bring up the
rear; they are of course banned from other funerals, but provided the oracle
at Delphi also approves, they shall attend this one, as it will not defile them.
The Scrutineer's tomb shall be an oblong crypt built of choice[3] stone of the
most indestructible kind obtainable; in this, on benches of stone set side by

3. Reading *protimōn* in d7.

side, they will lay him who has gone to his reward. On top of the tomb they e
will pile a circular mound, and plant a sacred grove of trees around it—except on one side, to allow for the indefinite extension of the tomb, where more earth will have to be piled up to cover subsequent burials. Every year the citizens will hold competitions in the Scrutineers' honor, one athletic, one equestrian, and one of the arts. All these honors will be bestowed on Scrutineers whose conduct has borne scrutiny.

If a Scrutineer relies on his election to protect him and goes to the bad, thus showing he's only too human after all, the law will order a charge to be brought against him by anyone who feels inclined to prosecute.
The trial should be held in court according to the following procedure. 948
Guardians of the Laws, and all the Scrutineers, active or retired, must sit in conjunction with the court of the Select Judges, and the charge brought by the prosecutor against the defendant must be to the effect that 'so-and-so is a disgrace to his distinctions and his office.'

103. If the defendant is convicted,
*he must* be ejected from his office, denied the special tomb, and stripped of the honors he has already received.

104. If the prosecutor fails to win one fifth of the votes,
*he must* pay a fine of twelve hundred drachmas if he belongs to the
highest property-class, eight hundred if to the second, six hundred if to b
the third, and two hundred if to the lowest.

Rhadamanthus should be admired for the way in which, according to report, he decided the suits that came before him. He realized that his contemporaries were absolutely convinced of the existence of gods—and not surprisingly, as most people alive then were actually descended from them, and this is traditionally true of Rhadamanthus himself. I suppose it was because he thought that no mere man should be given the task of judging, but only gods, that he managed to make his judgments so swift and straightforward. Whatever the subject of dispute, he made the litigants
take an oath, a device which enabled him to get through his list of cases c
rapidly and without making mistakes. Nowadays, however, some people (as we remarked) don't believe in gods at all, while others believe they are not concerned about mankind; and there are others—the worst and most numerous category—who hold that in return for a miserable sacrifice here and a little flattery there, the gods will help them to steal enormous sums of money and rescue them from all sorts of heavy penalties. So in the modern world the legal procedure used by Rhadamanthus will hardly
do. The climate of opinion about the gods has changed, so the law must d
change too, and a legislator who knows his business ought to abolish the oaths sworn by each side in a lawsuit. When a man brings a charge against someone, he should put his accusations in writing without taking an oath; the defendant should similarly write out his denial and hand it to the officials unsworn. It would be dreadful, you see, to know quite well, in view of the frequent lawsuits that occur in the state, that although pretty

e nearly half our citizens[4] have perjured themselves, they go on mixing with
each other at common meals and other public and private gatherings
without the slightest qualms.

There should therefore be a law requiring a juryman to take an oath
before setting about his job. The law should also apply to anyone who
votes in the election of officials to public positions: he must do so either
949 under oath or with a ballot-pebble he has obtained from a temple; so too
should the judge of a chorus or any other artistic performance, and also
the supervisor or umpire of any athletic or equestrian competition—and
indeed the judge in any matter where there is nothing to 'gain' (as it seems
to human eyes) from perjury. But whenever there is clearly much to be
'gained' from denials and oaths to back them up, then the question at
issue between the disputants must be judged at a trial in which oaths are
*not* taken.

And more generally, the presiding officials at a trial are not to give a
b man a hearing if he tries to win belief by swearing oaths, or imprecating
himself or his family, or by grovelling appeals for clemency, or effeminate
wailing, but only if he states his lawful claims, and listens to those of the
other side, with decency and decorum. Otherwise, the officials will ignore
his remarks as irrelevant and instruct him to return to the issue before
the court.

c However, aliens should be entitled, as at present, to offer and accept
binding oaths from each other, if they so wish—after all, they're not going
to grow old in the state, nor, as a rule, build a nest in it to produce others
entitled to live in the country and behave in the same way as themselves.
And whenever an alien prosecutes an alien, the trial should be held under
the same rules.

Sometimes a free man may defy the state in something not serious
enough to deserve a whipping or imprisonment or death—by refusing to
take part in a chorus or procession, for instance, or some public ceremony,
d or to pay some contribution for such communal purposes as a sacrifice in
time of peace, or a special levy in war. The first thing to be done in all
these cases is to assess the damages; then the culprit is to give a pledge
to those officials who have the duty of exacting it under the law of the
land. If he still refuses to obey even after the seizure of the pledge, it
should be sold and the proceeds confiscated by the state. If a more severe
punishment is called for, the official concerned shall impose the appropriate
e fine on this stubborn fellow and haul him through the courts until he's
prepared to do as he's told.

A state which does not go in for trading and whose only source of wealth is the soil is obliged to have some settled policy regarding the foreign travel of its own citizens and the admission of aliens from abroad. The legislator, who has to give advice on these problems, must start by being as persuasive as he can.

4. Alternatively, 'half the litigants'.

In the nature of the case, contact between state and state produces a
medley of all sorts of characters, because the unfamiliar customs of the 950
visitors rub off on to their hosts—and this, in a healthy society living under
sound laws, is an absolute disaster. Most states, however, are not well run
at all, so it makes no difference to them if their citizens fraternize with
foreigners by welcoming them into the state and by going for trips abroad
themselves whenever they feel like it and wherever their wanderlust takes
them, whatever their age. On the other hand a policy of complete exclusion
and complete refusal to go abroad is just not feasible, and in any case the
rest of the world would think us churlish and uncivilized: we'd get the b
reputation of being a truculent and surly people who have 'Deportations
of Aliens', as the term is—and a brutal one it is, too. Whether the figure
you cut in the eyes of others is good or bad, you should never underestimate
its importance. You see, people in general don't fall so far short of real
goodness that they can't recognize virtue and vice when they see it in
others; even wicked people have an uncanny instinct that usually enables
even an absolute villain to understand and describe accurately enough c
what distinguishes a good man from a bad. That is why most states find
it an excellent precept to value their good standing with the rest of the
world. But the soundest and most important rule is this: if you mean to
be perfect, you should seek to live in good repute only if you are really
good in the first place, but not otherwise. And so it will be entirely right
and proper if the state we are now founding in Crete wins among men a
brilliant and glorious reputation for virtue, and if things go according to
plan there is every reason to expect that, out of all the states and countries d
which look upon the Sun and the other gods, Magnesia will be one of the
few that are well administered.

So what should we do about the admission of aliens and our own
journeys to places in foreign countries? First of all, no young person under
forty is ever to be allowed to travel abroad under any circumstances; nor
is anyone to be allowed to go for private reasons, but only on some public
business, as a herald or ambassador or as an observer of one sort or another.
(Of course, absence abroad on miliary service in wartime doesn't deserve e
to be mentioned in the same breath: it's not one of those journeys which
are 'for diplomatic reasons'!) We must send representatives to take part
in the sacrifices and games held at Delphi in honor of Apollo and at
Olympia in honor of Zeus, and to Nemea and the Isthmus; and we must
send as many representatives as we can, the finest and noblest of our
citizens, who will do credit to our state in these sacred gatherings of peace, 951
and win it renown to match that of her armies on the field of battle. And
when they return, they will tell the younger generation that the social and
political customs of the rest of the world don't measure up to their own.

But there are other kinds of observers who should be dispatched, provided the Guardians of the Laws give permission. If any citizen would like to spend rather longer surveying at his leisure the life lived by foreigners, no law should prevent him, because no state will ever be able to live at a

properly advanced level of civilization if it keeps itself to itself and never
b comes into contact with all the vices and virtues of mankind; nor will it be able to preserve its laws intact if it just gets used to them without grasping their raison d'être. In the mass of mankind you'll invariably find a number—though only a small number—of geniuses with whom it is worth anything to associate, and they crop up just as often in badly-ruled
c states as in the well-ruled. So the citizen of a well-run state, provided he's incorruptible, should go out and range over land and sea to track them down, so that he can see to the strengthening of the customs of his country that are soundly based, and the refurbishing of any that are defective. Without this observation and research a state will never stay at the peak of perfection; nor will it if the observers are incompetent.

CLINIAS: So how can we ensure that both these requirements are met?

ATHENIAN: Like this. In the first place, anyone who goes observing for us in this fashion must be over fifty; and since the Guardians of the Laws are going to send him abroad as a specimen Magnesian, he must be one of those citizens who have gained a good reputation generally, and particu-
d larly in war; and on passing sixty he must go off observing no longer. When he has spent as many of his ten years as he pleases making his observations, he should come home and present himself before the council which muses on legislation. (This council,[5] which should consist partly of young men and partly of old, must have a strict rule to meet daily from dawn until the sun is well up in the sky. Its membership is to be: (1) those Priests who have won high distinction, (2) the ten Guardians of the Laws
e who are currently the most senior, (3) the Minister of Education for the time being, together with his predecessors in office. No member should attend alone: each is to bring a young man of his own choice, aged between thirty and forty. The discussion at their meetings must always center round
952 their own state, the problems of legislation, and any other important point relevant to such topics that they may discover from external sources. They must be particularly concerned with those studies which promise, if pursued, to further their researches by throwing light on legislative problems that would otherwise remain difficult and obscure. Whichever of these studies are sanctioned by the older members should be pursued with all diligence by the younger. If one of the protégés invited to attend is judged to be inadequate, the whole council is to censure the man who
b invited him; but any that get a good name should be fostered and watched with particular care by the state at large, and if they do what's wanted of them, they are to be specially honored, but if they turn out worse than most other young men they should suffer correspondingly worse disgrace.) To this council, then, the observer of foreign customs must proceed as soon as he gets back. If he has come across people who were able to give him some information about any problems of legislation or teaching or education, or if he actually comes back with some discoveries of his own,

5. Apparently the 'Nocturnal' council, which has not yet been announced: see 960b ff.

he should make his report to a full meeting of the council. If he seems to c
be not a whit better or worse for his journey, he should be congratulated at any rate for his energy; if he is thought to have become appreciably better, even higher recognition should be given him during his lifetime, and after his death he must be paid appropriate honors by authority of the assembled council. But if it seems that he has returned corrupted, this self-styled 'expert' must talk to no one, young or old, and provided he obeys the authorities he may live as a private person; but if not, and

105. he is convicted in court of meddling in some educational or legal question, d
*he must die.*

106. If none of the authorities takes him to court when that is what he deserves,
*it should* count as a black mark against them when distinctions are awarded.

So much for the way foreign travel should be undertaken and the sort of persons who should venture on it. But what about our duty to welcome foreign visitors? There are four categories of them worth discussing. Those
in the first turn up every year without fail, usually in summer, with the e
regularity of migrating birds. Most of them are on business trips in search of profit, and throughout the summer they 'wing' their way like so many birds across the sea to foreign parts. They must be received at trading posts and harbors and in public buildings outside but not far from the state by officials appointed for the purpose, who should (a) take good care
that none of this category of visitor introduces any novel custom, (b) 953
handle with proper impartiality the lawsuits that affect them, and (c) keep intercourse with them down to the unavoidable minimum. The second type are 'observers' in the most basic sense: they come to see the sights, and to listen, too, at festivals of the arts. All such visitors should be received in hospitable lodgings near temples, by whose priests and custodians they are to be looked after and attended to. Then, when they have stayed for a reasonable length of time, and seen and heard what they came to see and hear, they should take their leave without having inflicted or suffered
any harm. If anyone injures them, or they injure anyone else, the Priests b
are to act as judges, provided no more than fifty drachmas are involved. If the claim is for a greater sum, the trial must be held before the Market-Wardens.

The third type of visitor, who arrives from another country on some matter of state, should be received at public expense, and by no one except Generals, Cavalry-Commanders and Company-Commanders. Together with the executive for the time being, the official by whom he is put up
and entertained should have the sole responsibility for him. c

Sometimes, though rarely, a fourth kind of visitor arrives. If ever a counterpart to our own observers comes from a foreign country, we shall

first of all require that he should be not less than fifty years old, and in
addition he should profess to be coming to view something whose excel-
lence surpasses that of anything in the rest of the world, or to report on
some such feature to another state. Such a man may dispense with invita-
d tions, and present himself at the doors of the wise and rich, because that
is the class of man he is himself. In the full confidence that he is the right
sort of guest for such a distinguished host, he should go to the home of
(say) the Minister of Education, or of someone who has won an award for
virtue. He should spend his time in the company of one or other of these,
and after an exchange of information take his leave, duly honored as a
friend by friends with fitting presents and tokens of esteem.

These are the laws that should govern the reception of all our visitors
e from abroad, of either sex, and the dispatch of our own people to other
countries. We must show respect for Zeus the God of Strangers, and not
keep aliens at arm's length by uncongenial food and offensive sacrifices
(like the sons of Old Father Nile do nowadays), or by uncivilized proclama-
tions.

Anyone who stands surety should do so in precise terms, by specifying
all the details of the agreement in a written contract, before not less than
three witnesses if the sum involved is less than one thousand drachmas,
954 and not less than five in the case of greater sums. (Also, a warrantor[6] is
surety for a vendor who is insolvent or cannot be sued, and is to have the
same liability in law.)

When a man wants to search someone else's premises, he should do so
clad in only his tunic,[7] without a belt, and after swearing to the gods
specified by law that he really does expect to find what he's looking for.
The other party is to open up his home, including all its sealed and unsealed
property, to be searched; if he refuses permission to search to anyone
b requesting it, the party thus hindered must go to law, giving his estimate
of the value of the object he is looking for.

107. If the defendant is convicted,
*he must* pay double the estimated value as damages.

If the owner of the house happens to be away, the residents must make
unsealed property available for search; sealed property should be counter-
sealed by the searcher, who should then post anyone he likes to guard it
for a period of five days. If the householder stays away for longer than
that, the other party should fetch the City-Wardens and make the search,
opening up sealed property as well and sealing it up again afterwards in
c the same way in the presence of the household and the City-Wardens.

Now for cases when title is in dispute. After a certain period has elapsed,
it must be no longer possible to challenge the rights of the person in

6. The vendor from whom the vendor bought the object in question.

7. Deleting ē in a5.

possession. In Magnesia, of course, dispute about land or houses is out of the question. But as for other possessions, if a man has used something openly in town or market-place or temple, and no one has tried to recover it and claimed to have been looking for it all the time the other man has obviously made no attempt at concealment, then provided the ownership of the one party and the search of the other have continued for a year, d
after the expiry of that period no claim for recovery is to be permitted. If a man uses an object openly, not indeed in town or market-place, but in the countryside, and no one confronts him with a claim to it for five years, then on the expiry of that period no one is to be allowed to attempt repossession. If the article is used in a man's town house, the time limit is to be three years; if it is kept in a building in the country, ten years; and if it is used abroad, then there is to be no time limit for recovery at e
all, however long the claimant may take to find it.

Sometimes a man may forcibly prevent a litigant or witness from appearing at a trial. If he prevents a slave, his own or another's, the suit should be null and void.

108. If he prevents a free man,
*he must* be imprisoned for a year and be liable to a suit for kidnapping 955
at the hands of anyone who cares to prosecute, and the suit will be null in any case.

If a man forcibly prevents a rival competitor from participating in an athletic or cultural or any other contest, anyone who wishes should report the fact to the supervisors of the games, who should set the would-be contestant free to enter the competition. If they prove unable to do so, and the man responsible for the competitor's absence wins, the prize should be awarded to the person prevented from competing, and he should be b
recorded as the winner in any temple he pleases.

109. The person who has hindered him must not be allowed to make any dedication or record relating to that contest, and he must be liable to a prosecution for damages whether he wins or loses.

110. If a man receives stolen goods, knowing them to be stolen,
*he must* suffer the same penalty as the thief.

111. The penalty for harboring an exile should be death.

Everyone is to have the same friends and enemies as the state.

112. (a) If a man makes a private peace or wages private war with c
anyone without the backing of the state,
*he too must* be punished by death.

If any sectional interest in the state makes peace or war with any parties on its own account, the Generals must haul those responsible for the affairs before a court.

(b) If the defendants are convicted,
*death should* be the penalty.

Members of the public service should perform their duties without taking bribes. Such a practice must never be extenuated by an approving reference to maxims like 'One good turn deserves another'. It is not easy for an
d official to reach his decisions impartially and stick to them, and the safest thing he can do is to listen to the law and obey its command to take no gifts for his services.

113. If a man disobeys and is convicted in court,
*the only penalty* permitted is to be death.

Now to deal with payments to the public treasury. For a variety of reasons, an assessment must be made of each man's property, and the members of the tribes must make a written return of the year's produce to the Country-Wardens. The treasury will thus be able to use whichever
e of the two methods of exacting payment it finds convenient—that is, every year the authorities will decide to levy a proportion *either* of the sum total of the individual assessments *or* of the revenues accruing that particular year. (Payment for the common meals should be excluded from the calculations.)

The offerings a reasonable man makes to the gods should be on a correspondingly reasonable scale. As the earth and every household's hearth are already sacred to all the gods, no one should consecrate them a second time. The gold and silver that you find in temples and private
956 houses in other states encourage jealousy; ivory, taken as it is from a lifeless body, is an unclean offering; and iron and bronze are instruments of war. A man may offer at the public temples any objects he likes made of wood or stone, provided that in either case it consists of no more than a single piece; if he offers woven material, it should not exceed what one woman can produce in a month. In general, and particularly in the case of woven material, white is the color appropriate to the gods; dyes must not be
b employed, except for military decorations. The gifts the gods find most acceptable are birds and pictures, provided they do not take a painter more than a single day to complete. All this should serve as a pattern for all our other offerings.

Now that we have described the nature and number of the parts into which the whole state is divided, and done what we can to frame laws for all the most important agreements men make, we're left with the question of legal procedure. The court of first resort will consist of judges—arbitrators, in fact, but 'judges' is really a more appropriate title—chosen
c by agreement between prosecutor and defendant. If the case is not settled in the first court, the litigants should go and contest it again before the second (composed of villagers and tribesmen, duly divided into twelve groups), but at the risk of an enhanced penalty: if the defendant loses for the second time, he must be mulcted an additional fifth of the penalty

previously assessed and recorded. If he is still aggrieved with his judges
and wants to fight the case for the third time, he must take it to the Select d
Judges, and if he is defeated again, he is to pay one and a half times the
original penalty. As for the prosecutor, if he is not prepared to lie down
under defeat in the first court, and goes before the second, he should be
awarded the extra fifth of the penalty if he wins, but be fined that amount
if he loses. If the litigants refuse to acquiesce in the earlier decision and
go before the third court, and the defendant loses, he must pay one and
a half times the penalty as already stated; if the prosecutor loses, he must
be fined one half of it. e

But what about the balloting for jurors, and the procedure for making
up the juries? What about the appointment of attendants for the various
officials, the fixing of times at which the various formalities should be
completed, voting methods, adjournments, and all the other similar ines-
capable details of legal procedure, such as putting cases early or late in
the calendar, the enforcement of attendance and of replies to interrogation,
and suchlike? Well, we've made the point before, but the truth is all the
better for being stated two or even three times. All these minor rules are 957
perfectly easy to invent, and the senior legislator may skip them and leave
it to his young successor to fill in the gaps. But although that will be
reasonable enough in the case of the courts that are appointed privately,
the common public courts, and those that the various officials need to use in
the performance of their duties, need a rather different approach. Sensible
people in several states have framed a good many decent regulations which
our Guardians of the Laws should adapt for the state that we are now b
founding. The Guardians should examine them and touch them up after
trying them out in practice, until they think they have licked each single
one into shape; then they should finalize them, ratify them as immutable,
and render them lifelong obedience. Then there is the question of the
silence of the judges, and the restraint or otherwise of their language, as
well as all the other details in which our standards of justice and goodness
and decorum differ from those you find in such variety in other states.
We've already had something to say on this topic, and we shall have more
to say towards the end. The judge who wants to act with proper judicial c
impartiality should bear all these points in mind and get hold of books in
which to study the subject. The study of laws, provided they are good
laws, is unsurpassed for its power to improve the student. (It can't be an
accident that the name of this god-given and wonderful institution, law,
is so suggestive of reason.)[8] And other compositions, such as eulogies or
censures in verse or prose, in the latter case either taking written form or
being simply spoken during our day-to-day contacts when we indulge in d
contentious argument or (sometimes thoughtlessly) express our agree-
ment—all these will be measured against a clear criterion: the writings of
the legislator, which the good judge will treasure as a kind of antidote

8. *Nomos* ('law') suggests *nous* ('reason').

against the others, so as to ensure his own moral health and that of the state. He will confirm and strengthen the virtuous in the paths of righteous-
e ness, and do his best to banish ignorance and incontinence and cowardice and indeed every sort of injustice from the hearts of those criminals whose outlook can be cured. However—and this is a point that deserves constant
958 repetition—when a man's soul is unalterably fixed in that condition by decree of fate, our erudite judges and their advisers will deserve the commendation of the whole state if they cure him by imposing the penalty of death.

When the suits for the year have been finally decided, the following laws must apply to the execution of judgment. First of all, immediately after the voting in each case, and by proclamation of a herald in the hearing of the judges, the official who has pronounced sentence should assign all
b the property of the convicted party, except the minimum he must retain, to the successful prosecutor. If after the expiry of the month following that in which the case was tried the loser has not settled the business with the victor to the satisfaction of both, the official who gave judgment must at the request of the victorious party hand over the goods of the loser. If the latter lacks the means to pay, and the deficiency amounts to a drachma or more, he must not be allowed to prosecute other people (they however,
c being entitled to prosecute *him*), until he has paid his debt in full to his opponent. If someone who has received an adverse verdict obstructs the bench that condemned him, the officials thus obstructed should haul him before the court of the Guardians of the Laws.

114. If he is convicted on such a charge,
*he must* be punished by death,

on the grounds that his conduct is wrecking the entire state and its laws.

Now here's the next point. A man is born and brought up, and begets and rears his own children in turn; he deals fairly in his business transac-
d tions, paying the penalty if he has done anyone injury and exacting one if others have wronged him; and finally, as destiny decrees, after an old age spent in obedience to the laws, the course of nature will bring him to the end of his life. So what should we do when a man or woman has died? First, we must bow to the absolute authority of the Expounders' instructions about the sacred rites to be observed in honor of the nether gods and those of this world. No tomb, whether its mound is large or small, should be constructed anywhere on land that can be farmed; graves
e must take up space only where nature has made the ground good for nothing except the reception and concealment of the bodies of the dead with minimum detriment to the living, because no one, alive or dead, must ever rob the living of any land which—thanks to the natural fertility of Mother Earth—will grow food for the human race. The soil must not be piled higher than five men can manage by working for five days. Stone slabs must not be made bigger than they need to be to accommodate a

eulogy of the deceased's career of not more than the usual four hexameters. 959
The laying-out at home should not last longer than is necessary to confirm that the person really is dead and not just in a faint; in average cases, it will be reasonable for the body to be taken to the tomb after two days.

We should, of course, trust whatever the legislator tells us, but especially his doctrine that the soul has an absolute superiority over the body, and that while I am alive I have nothing to thank for my individuality except my soul, whereas my body is just the likeness of myself that I carry round
with me. This means we are quite right when we say a corpse 'looks like' b
the deceased. Our real self—our immortal soul, as it is called—departs, as the ancestral law declares, to the gods below to give an account of itself. To the wicked, this is a terrifying doctrine, but a good man will welcome it. And once he's dead, there's not a great deal we can do to help a man: all his relatives should have helped him while he was still in the land of
the living, so that he could have passed his life in all possible justice and c
holiness; and then after death he could have escaped the penalty visited on evil deeds in the life to come. This all goes to show that we should never squander our last penny, on the fanciful assumption that this lump of flesh being buried really is our own son or brother or whoever it is we mournfully think we are burying. We ought to realize that in fact he has departed in final consummation of his destiny, and that it is our duty to make the best of what we have and spend only a moderate sum on the
body, which we may now think of as a kind of altar to the gods below, d
now deserted by its spirit; and as for what is meant by 'moderate' in this matter, the most respectable ideas will be those of the legislator. The law, then, should specify a reasonable level of expenditure as follows. In the case of a member of the highest property-class, the whole funeral should not cost more than five hundred drachmas; three hundred may be spent on a member of the second class, two hundred on a member of the third, and one hundred on a member of the fourth.

The Guardians of the Laws will have to shoulder a great many burdens
and responsibilities, but their overriding duty will be to devote their lives e
to the care of children and adults and indeed persons of all ages. In particular, when a man is nearing his end his household should invite one Guardian to take charge of him, and if the funeral arrangements pass off decorously and without extravagance, this Guardian-in-charge will get the credit, but if not, then the blame will be at his door. The laying-out and other matters should take place according to usage, but usage must be modified by the following directions of our legislator-statesman. 'Tasteless
though it is to forbid or instruct people to weep over the dead, dirges 960
should be forbidden; and cries of mourning should be allowed only inside the house. The mourners must not bring the corpse on to the open street nor make their procession a noisy one, and they must be outside the city by day-break.' So much for the regulations on the subject. The person who obeys them will never be punished, but

115. if a man disobeys a single Guardian of the Laws,
*he must* be punished by them all with whatever penalty recommends itself to their united judgment.

b The other methods of burying the dead, and the kind of criminals to
whom we deny burial, such as parricides, temple-robbers and all similar
categories, have already been specified and provided for in the legal code.[9]
And that means, I suppose, that we have pretty well come to the end of
our legislation.

ATHENIAN: However, even when you have achieved or gained or founded
something, you have never quite finished. Only when you have ensured
complete and perpetual security for your creation can you reckon to have
done everything that ought to have been done. Until then, it's a case of
c 'unfinished business'.

CLINIAS: Well said, sir—but what's the particular point you had in mind in saying that? Could you be a little clearer?

ATHENIAN: Well, you know, Clinias, a lot of old expressions are extraordinarily apt. I'm thinking particularly of the names of the Fates.

CLINIAS: What names?

ATHENIAN: Lachesis for the first, Clotho for the second, and Atropos for
the third fulfiller of destiny[10]—the last so called from her likeness to a
d woman making the threads on her spindle irreversible.[11] That is precisely
the situation we want to see in our state and its citizens—not merely
physical health and soundness, but the rule of law in their souls and (more
important than all that) the preservation of the laws themselves. In fact,
it seems to me that the service we've still not done for the laws is to
discover how to build into them a resistance to being reversed.

CLINIAS: That's serious, because I don't suppose there's a way of giving anything that sort of property.

e ATHENIAN: But there is. I see that quite clearly now.

CLINIAS: Well then, we mustn't abandon our task till we've achieved this for the legal code we've expounded. It would be silly to waste our labor on something by failing to construct it on a firm foundation.

ATHENIAN: You're right to encourage me, and you'll find me as keen as you are.

CLINIAS: Splendid! So what is this safety device for our political system and legal code going to be, according to you? And how can we construct it?

961 ATHENIAN: We said[12] that we ought to have in the state a council with
the following range of membership. The ten Guardians of the Laws who
are currently the eldest were to convene together with all persons who
had won awards of distinction and the travelers who had gone abroad to

9. 717e–718a, 872e ff., 908e ff., and 947b ff.

10. Respectively 'the Distributor of Lots', 'the Spinner', and 'the Inflexible One'.

11. Reading *atraktōi* in c9.

12. 951d–952d.

see if they could discover any special method of keeping a legal code intact. When these observers got back safe and sound, they were to be accepted as suitable associates of the council, provided they had first passed the scrutiny of its members. In addition, each member had to bring a young man of at least thirty years of age, but only after selecting him as b
particularly well qualified by natural abilities and education; on these terms the young man was to be introduced to the other members of the council, and if they approved of him, he was to join them; if not, they were not to breathe a word to anyone about the fact that he was considered, least of all to the rejected candidate himself. The council was to meet before dawn, when people are least beset by other business, public or private. That was more or less the description we gave earlier, wasn't it? c

CLINIAS: Certainly it was.

ATHENIAN: So I'm going to resume the subject of this council, and here's the point I want to make about it. I maintain that if one were to lower it as a sort of 'anchor' for the whole state, then provided conditions were suitable, it would keep safe everything we wanted it to.

CLINIAS: How so?

ATHENIAN: Now at this crucial moment, we must strain every muscle to get things right.

CLINIAS: That's a fine sentiment. Now do what you have in mind.

ATHENIAN: The question we have to ask about anything, Clinias, is this: d
what is it that has the special power of keeping it safe in each of its activities? In a living creature, for instance, this is the natural function of the soul and the head, in particular.

CLINIAS: Again, what's your point?

ATHENIAN: Well, when these two are functioning satisfactorily, they ensure the animal's safety, don't they?

CLINIAS: How so?

ATHENIAN: Because no matter what else is true of either, the soul is the seat of reason and the head enjoys the faculties of sight and hearing. In short, the combination of reason with the highest senses constitutes a single faculty that would have every right to be called the salvation of the animal concerned.

CLINIAS: That's likely enough, I suppose.

ATHENIAN: Of course it is. But *how* do reason and the senses combine to e
ensure the safety of a ship, in fair weather or foul? Isn't it because captain and crew interpret sense-data by reason, *as embodied in* the expertise captains have, that they keep themselves and the whole ship safe?

CLINIAS: Naturally.

ATHENIAN: We've no need to multiply examples, but take a general in command of his army, or any doctor tending a human body. What will they each aim at, on the assumption that they intend, as they should, to preserve their charges safe and sound? Won't the general aim at victory 962
and control over the enemy, and won't doctors and their attendants aim to keep the body in a healthy condition?

CLINIAS: Of course.

ATHENIAN: Now consider a doctor who can't recognize the state of the body we've just called 'health', or a general who doesn't know what's meant by 'victory' and the other terms we reviewed. Could either of them possibly be judged to have a rational knowledge of his field?

CLINIAS: Of course not.

ATHENIAN: And if the ruler of a *state* were obviously ignorant of the
b target at which a statesman should aim, would he really deserve his title 'ruler'? Would he be capable of ensuring the safety of an institution whose purpose he entirely failed to appreciate?

CLINIAS: Certainly not.

ATHENIAN: Well then, in the present circumstances, if our settlement of this territory is to be finished off properly, it looks as if we shall have to provide it with some constituent that understands (a) this target we have mentioned—the target, whatever we find it is, of the statesman, (b) how to hit it, and (c) which laws (above all) and which persons have helpful advice to give and which not. If a state lacks some such constituent, no
c one will be surprised to see it staggering from one irrational and senseless expedient to another in all its affairs.

CLINIAS: That's true.

ATHENIAN: So is there any institution or constituent part of our state qualified and prepared to function as an organ of protection? Can we name one?

CLINIAS: No, sir, not with much assurance, anyway. But if guess I must, I think your remarks point to the Council you said just now had to convene during the night.

d ATHENIAN: You've caught my meaning splendidly, Clinias. As the drift of our present argument shows, that body must possess virtue in all its completeness, which means above all that it will *not* take erratic aim at one target after another but keep its eye on one single target and shoot all its arrows at that.

CLINIAS: Certainly.

ATHENIAN: Now we can see why it is hardly surprising that rules and regulations fluctuate so much from state to state: it is because legislation has a different aim in each. Nor is it surprising that in most cases you find that some people think of justice as nothing but the subjection of the state
e to the rule of this or that type of person without regard to their vice or virtue, while others think of it as the opportunity to become rich, no matter whether they are thereby enslaved or not; others again are bent hell for leather on a life of 'freedom'. Some legislators keep both ends in view, and their laws have the dual purpose of securing control over other states *and* freedom for their own. The cleverest legislators of all (as they like to think of themselves), so far from aiming at one single end, look not only to these but all others like them, simply because they cannot identify any supremely valuable end to which all others ought, in their view, to contribute.

CLINIAS: Well then, sir, the line we took so long ago was the right one. 963
We said that every detail of our legislation ought to have a *single* end in view, and the proper name to call it was, I think we agreed, 'virtue'.[13]

ATHENIAN: Yes.

CLINIAS: And I think we maintained that the virtues were four.

ATHENIAN: Indeed we did.

CLINIAS: The leading one, to which not only the other three but everything else should be orientated, was reason.

ATHENIAN: You take the point admirably, Clinias. Now follow the rest of the argument. As far as the captain, doctor and general are concerned, b
we have already indicated that their intellect aims at some appropriate single end. Now it is the turn of the statesman's reason to be investigated. Let's personify it and ask it the following question: "My good sir, what aim do *you* have in view? What's your single overriding purpose? The intelligent doctor can identify his accurately enough, so can't you, with all your superior wisdom (as I suppose you'd claim), identify yours?" Or can you two, Clinias and Megillus, answer for him and tell me precisely what your notion of his aim is, just as I've often given you detailed accounts c
of the notions of many other people on their behalf?

CLINIAS: No, sir, we certainly cannot.

ATHENIAN: What about replying, 'I think he should make every effort to get an overall understanding of his aim, as well as see it in its various contexts'?

CLINIAS: What contexts, for example?

ATHENIAN: Well, when we said there were four species of virtue, obviously the very fact that there were four meant that each had to be thought of as somehow distinct from the others.

CLINIAS: Surely.

ATHENIAN: Yet in fact we call them all by a single name. We say courage is virtue, wisdom is virtue, and the other two similarly, on the ground that really they are not several things but just one—virtue. d

CLINIAS: Very true.

ATHENIAN: It's not hard to explain how these two 'virtues' and the rest *differ* from each other and how each has acquired a different name. The real problem is this: why, precisely, have we described both of them (as well as the others) by this *common* term 'virtue'?

CLINIAS: What do you mean?

ATHENIAN: My point is perfectly easy to explain. Shall we let one of us ask the questions, and the other answer them?

CLINIAS: Again, what do you mean?

ATHENIAN: Here's the question for you to put to me: "Why is it that after e
calling both by the single term 'virtue', in the next breath we speak of two 'virtues', courage and wisdom?" I'll tell you why. One of them, courage, copes with fear, and is found in wild animals as well as human

13. See 630d–e.

beings, notably in the characters of very young children. The soul, you see, becomes courageous by a purely natural process, without the aid of reason. By contrast, in this absence of reason a wise and sensible soul is out of the question. That is true now, has always been true, and always will be true; the two processes are fundamentally different.

CLINIAS: That's true.

964 ATHENIAN: So there's your explanation of why there are two different virtues. Now it's your turn: you tell me why they are one and the same thing. Your job, you understand, is to tell me why the four of them nevertheless form a unity; and when you have demonstrated that unity, ask me to show you again in what sense they are four.

Next after that we ought to ask ourselves what constitutes adequate knowledge of any object that has a name and a definition: is it enough to know only the name and not the definition? On the contrary, if a man is worth his salt, wouldn't it be a disgrace in him not to understand all these
b points about a topic so grand and so important?

CLINIAS: Presumably it would.

ATHENIAN: And as for a giver or guardian of laws, and indeed anyone who thinks of his own virtue as superior to the rest of the world's, and has won awards for his achievement, *is* there anything more important than the qualities we are now discussing—courage, restraint, justice and wisdom?

CLINIAS: Of course not.

ATHENIAN: So in such circumstances what role should the expounders, teachers and lawgivers—the guardians of the rest of the community—
c play when a criminal needs enlightenment and instruction, or perhaps correction and punishment? Should they not prove better than anyone else at giving him a full explanation and description of the effects of virtue and vice? Or is some poet-visitor to the state, or some self-styled 'educationalist', going to put up a better show than the winner of the palm for every kind of virtue? Where there are no efficient and articulate guardians with an adequate understanding of virtue, it will be hardly
d surprising if the state, precisely because it is unguarded, meets the fate of so many states nowadays.

CLINIAS: No, hardly surprising at all, I suppose.

ATHENIAN: Well then, shall we carry out these proposals, or what? Shall we make sure our guardians are more highly qualified than the man in the street to explain what virtue is, and to put it into practice? How else could our state function like the head and sense of a wise man, now that it possesses within itself something analogous to protect it?

CLINIAS: Where is this resemblance, sir? How do we draw such a comparison?

e ATHENIAN: Obviously the state itself corresponds to the trunk, and the junior guardians, chosen for their natural gifts and the acuteness of their mental vision, live as it were at the summit and survey the whole state; they store up in their memory all the sensations they receive while on
965 guard, and act as reporters for their elder colleagues of everything that

takes place in the state; and the old men—we could compare them to the intellect, for their high wisdom in so many vital questions—take advantage of the assistance and advice of their juniors in debating policy, so that the joint efforts of both ranks effectively ensure the safety of the entire state. Now is this the sort of organization we want to see, or some other? Should the state, in fact, keep all its citizens on the same level, without giving some a more specialized training and education than others?

Clinias: My dear sir! That's quite impracticable.

Athenian: Then we have to pass on to a more advanced education than b
the one we described earlier.

Clinias: Perhaps so.

Athenian: What about the education we touched on a moment ago? Would that answer our needs?

Clinias: Certainly it would.

Athenian: Didn't we say that a really skilled craftsman or guardian in any field must be able not merely to see the many individual instances of a thing, but also to win through to a knowledge of the single central concept, and when he's understood that, put the various details in their proper place in the overall picture?

Clinias: We did, and rightly.

Athenian: So what better tool can there be for a penetrating investigation c
of a concept than an ability to look beyond the many dissimilar instances to the single notion?

Clinias: Probably none.

Athenian: 'Probably!' No, my dear fellow, this is most *certainly* the surest method we can follow, no matter who we are.

Clinias: I trust you, sir, and I agree, so let's carry on with the discussion on that basis.

Athenian: So it looks as if we have to compel the guardians of our
divine foundation to get an exact idea of the common element in all the d
four virtues—that factor which, though single, is to be found in courage, restraint, justice and wisdom, and thus in our view deserves the general title 'virtue'. This element, my friends, if only we have the will, is what we must grip until we can explain adequately the essence of what we have to contemplate, whether it is a single entity, a composite whole, or both, or whatever. If this point eludes us, can we ever expect to attain
virtue—when we can't say whether it comprises a great number of things e
or just four, or whether it is a unity? Never—not if we believe our own advice, anyway, and we'll have to ensure the growth of virtue in the state by some other means. But if in the circumstances we decide we ought to abandon the attempt entirely, abandon it we must.

Clinias: No, sir, in the name of the gods of hospitality, we must never abandon such a project: you seem to us to be absolutely right. So now then: how is one to tackle the problem?

Athenian: Let's postpone the question of method. The first thing we 966
have to settle and decide among ourselves is whether the attempt should be made at all.

Clinias: Indeed it should, if possible.

Athenian: Well then, do we take the same line about goodness and beauty? Should the guardians know no more than that both these terms are a plurality, or should they understand the senses in which they are unities?

Clinias: It looks as if they are more or less obliged to comprehend that too—how they are unities.

b Athenian: But what if they understood the point, but couldn't find the words to demonstrate it?

Clinias: How absurd! That's the condition of a slave.

Athenian: Well then, isn't our doctrine going to be the same about all serious questions? If our guardians are going to be *genuine* guardians of the laws they must have *genuine* knowledge of their real nature; they must be articulate enough to explain the real difference between good actions and bad, and capable of sticking to the distinction in practice.

Clinias: Naturally.

c Athenian: And surely one of the finest fields of knowledge is theology, on which we've already lavished a great deal of attention. It's supremely important to appreciate—so far as it's given to man to know these things —the existence of the gods and the obvious extent of their power. The man in the street may be forgiven if he simply follows the voice of the law, but if any intended guardian fails to work hard to master every theological proof there is, we must certainly not grant *him* the same indulgence; in other words, we must never choose as a Guardian of the Laws
d anyone who is not preternaturally gifted or has not worked hard at theology, or allow him to be awarded distinctions for virtue.

Clinias: It's fair enough, as you say, that the idle or incompetent in this business should never be allowed to get anywhere near such honors.

Athenian: Now we know, don't we, that among the arguments we've already discussed, there are two in particular which encourage belief in the gods?

Clinias: Which two are they?

Athenian: One is the point we made about the soul, when we argued that
e it is far older and far more divine than all those things whose movements have sprung up and provided the impulse which has plunged it into a perpetual stream of existence. Another argument was based on the systematic motion of the heavenly bodies and the other objects under the control of reason, which is responsible for the order in the universe. No one who has contemplated all this with a careful and expert eye has in fact ever degenerated into
967 such ungodliness as to reach the position that most people would expect him to reach. They suppose that if a man goes in for such things as astronomy and the essential associated disciplines, and sees events apparently happening by necessity rather than because they are directed by the intention of a benevolent will, he'll turn into an atheist.

Clinias: Well, what would happen, in fact?

Athenian: Today, as I said, the situation is quite different from the time when thinkers regarded these bodies as inanimate. Even then, men were
b overcome with wonder at them, and those who studied them really closely

got an inkling of the accepted doctrines of today, that such remarkably
accurate predictions about their behavior would never have been possible
if they were inanimate, and therefore irrational; and even in those days
there were some[14] who had the hardihood to stick their neck out and assert
it was reason that imposed regularity and order on the heavens. However,
these same thinkers went sadly astray over the soul's natural priority to
matter: regarding soul as a recent creation, they turned the universe upside c
down, so to speak, and their own theories to boot. They concluded from
the evidence of their eyes that all the bodies that move across the heavens
were mere collections of stone and earth and many other kinds of inanimate
matter—inanimate matter which nevertheless initiated a chain of causation
responsible for all the order in the universe. These views brought down on
the philosophers' heads a great many accusations of atheism, and provoked
a lot of hostility; poets, in particular, joined in the chorus of abuse and
among other inanities compared the philosophers to bitches baying at the d
moon. But today, as I said, the situation is fundamentally different.

CLINIAS: How so?

ATHENIAN: No mortal can ever attain a truly religious outlook without
risk of relapse unless he grasps the two doctrines we're now discussing:
first, that the soul is far older than any created thing, and that it is immortal
and controls the entire world of matter; and second (a doctrine we've
expounded often enough before) that reason is the supreme power among
the heavenly bodies. He also has to master the essential preliminary studies, e
survey with the eye of a philosopher what they have in common, and use
them to frame consistent rules of moral action; and finally, when a reasoned
explanation is possible, he must be able to provide it. No one who is unable 968
to acquire these insights and rise above the level of the ordinary virtues
will ever be good enough to govern an entire state, but only to assist
government carried on by others. And that means, Clinias and Megillus,
that we now have to consider whether we are going to add yet another
law to the code we've already expounded, to the effect that the Nocturnal
Council of the Authorities, duly primed by the course of studies we've
described, shall be constituted the legal protector of the safety of the state.
Or is there some alternative course for us to take? b

CLINIAS: Oh, but my dear sir, there's no question of refusing to add this
law, if we can manage it, even if our success is only partial.

ATHENIAN: Then let's make every effort to win the struggle. I've had a
lot of experience of such projects and have studied the field for a long
time, so I'll be more than happy to help you—and perhaps I shall find
others to join me.

CLINIAS: Well, sir, we must certainly stick to the path on which—it is
hardly an exaggeration to say—God himself is guiding us. But the question
to which we need an answer at the moment is this: what will be the correct
procedure on our part? c

14. Presumably Anaxagoras (mid fifth century) in particular. Cf. *Phaedo* 97b ff.

ATHENIAN: Megillus and Clinias, it is impossible to lay down the council's activities until it has been established. Its curriculum must be decided by those who have already mastered the necessary branches of knowledge—and only previous instruction and plenty of intimate discussion will settle such matters as that.

CLINIAS: How so? How are we supposed to understand *that* remark?

d ATHENIAN: First of all, of course, we shall have to compile a list of
candidates qualified for the office of guardian by age, intellectual attain-
ments, moral character and way of life. Then there's the question of what
they have to learn. It is difficult to find out this for oneself, and it is not
easy either to discover somebody else who has already done so and learn
from him. Quite apart from that, it will be a waste of time to produce
written regulations about the order in which the various subjects should
be tackled and how long should be spent on each, because even the stu-
e dents, until they have thoroughly absorbed a subject, won't realize why
it comes at just that point in the curriculum. So although it would be a
mistake to treat all these details as inviolable secrets, it would be fair
to say that they ought not to be divulged beforehand, because advance
disclosure throws no light at all on the questions we're discussing.

CLINIAS: Well then, sir, if that's the case, what are we to do?

ATHENIAN: My friends, we must 'chance our arm', as the saying is. If
we are prepared to stake the whole constitution on a throw of 'three sixes'
969 or 'three ones', then that's what we'll have to do, and I'll shoulder part
of the risk by giving a full explanation of my views on training and
education, which we've now started to discuss all over again. However,
the risk is enormous and unique. So I bid you, Clinias, take the business
in hand: establish the state of the Magnesians (or whatever other name
God adopts for it), and if you're successful you'll win enormous fame; at
b any rate you'll never lose a reputation for courage that will dwarf all your
successors'. And if, my good companions, if this wonderful council of ours
can be formed, then the state must be entrusted to it, and practically no
modern legislator will want to oppose us. We thought of our combined
metaphor of head and intellect, which we mentioned a moment ago, as
idealistic dreaming[15]—but it will all come true, provided the council mem-
c bers are rigorously selected, properly educated, and after the completion
of their studies lodged in the citadel of the country and made into guardians
whose powers of protection we have never seen excelled in our lives before.

MEGILLUS: My dear Clinias, judging from what we've heard said, either we'll have to abandon the project of founding the state or refuse to let our visitor leave us, and by entreaties and every ruse we can think of enroll him as a partner in the foundation of the state.

d CLINIAS: You're quite right, Megillus. That's what I'm going to do. May
I enlist your help too?

MEGILLUS: You may indeed.

15. See 961d and 964e–965a.

# EPINOMIS

*As its name indicates,* Epinomis *is an addition or appendix to the* Laws *(*Nomoi *in Greek). Clinias, Megillus, and the Athenian visitor reconvene at some unspecified time after their conversation in the* Laws. *Their purpose is to discuss the nature of wisdom—the copestone of human fulfillment and happiness—and, more particularly, the studies by which it is to be attained. Instruction in these must be given to the members of the governing Council of their proposed new city of Magnesia, charged as the Council is with knowing in detail the overall aim of law and how to maintain in perpetuity laws and practices that achieve it. At the end of the* Laws, *it was agreed that these matters could not usefully be explained in advance; the thing to do was actually to establish a city having the right laws, educate and select a Council, and leave to them the further legislation about their successors' education. Now, going back on that, the Athenian agrees to explain what the necessary studies are and to legislate about them. It turns out, surprisingly perhaps, that though certain preliminary studies are also needed, wisdom is constituted solely by the knowledge of astronomy—of the single, mathematically unified system of the constant movements of the heavenly bodies (assumed, of course, to be rotating round the earth). Knowing that, the Council members will know the principle of order needed to organize correctly the whole of human life, both individually and socio-politically.*

*This discrepancy (and there are others) already suggests that Plato was not the author of this work. This is generally accepted in current scholarship. There is ancient testimony that its author was in fact Philip of Opus, who is also said to have 'transcribed' the* Laws, *presumably from wax tablets in which Plato left the work at his death because he was still revising it. If so, it presents one of the first 'Platonisms', very close to Plato's own time, carrying forward the 'spirit' of Plato's work while giving selective and distorting emphases to various elements within it.*

*J.M.C.*

CLINIAS: My friend, all three of us—you, I and Megillus here—have 973
come to do what we agreed: to consider what account we ought to give in explaining the nature of wisdom, as well as to discuss the course of

Translated by Richard D. McKirahan, Jr. Text: L. Tarán, *Academica: Plato, Philip of Opus, and the Pseudo-Platonic Epinomis,* American Philosophical Society, Philadelphia, 1975.

studies that we say makes a person who engages in thought as wise as a
b human can be. And rightly so, since although we have set out in detail
everything else that has to do with legislation, we have neither stated nor
discovered the most important thing: what a mortal must learn in order
to be wise. We must not abandon this now, since to do so would be to
leave largely unachieved the goal of our labors, which was to make things
clear from start to finish.

ATHENIAN VISITOR: That is a good idea, Clinias, but I fear you are about
c to hear an account that is strange, though yet in a way not strange: the
human race is, as a rule, neither blessed nor happy. Many people, through
their experience in life, offer this same account. Pay attention then and
consider closely whether you find that I too, following them, am correct
on this point. I claim that people cannot become blessed and happy; there
are but a few exceptions to this rule. (I limit this claim to the duration of
our lives. Those who strive to live as nobly as they can during their life
and at their end to die a noble death have a good hope of attaining after
d they die everything for which they have striven.) I am not saying anything
clever, but only what we all know in some way, both Greeks and foreigners:
from the start the terms of life are harsh for every living thing. First we
have to go through the stage of being embryos. Then we have to be born
974 and then be brought up and educated, and we all agree that every one of
these stages involves countless pains. In fact, if we don't count hardships,
but only what everyone would consider tolerable, the time involved turns
out to be quite brief—a period round about the middle of a person's life,
which is thought to provide a kind of breathing-space. But then old age
quickly overtakes us and tends to make anyone who takes his whole life
into account unwilling ever to go through life again, unless he is full of
childish thoughts.

b What proof do I have of this? That what we are now investigating points
in this direction. We are investigating how to become wise, as if this
capacity were found in everyone. But it takes to its heels whenever anyone
achieves any expertise in any of the so-called arts or branches of wisdom
or in any of the other fields usually considered to be sciences—which
suggests that none of them deserves the title of wisdom about these human
concerns. On the other hand, while the soul is strongly convinced and
c divines that it is somehow its nature to have wisdom, it is wholly unable
to find out what this is, and when and how it is attained. In these circum-
stances, isn't our difficulty about wisdom entirely appropriate, and our
investigation as well? This turns out to be a larger project than any of us
expect who are capable of examining themselves and others intelligently
and consistently through arguments of all kinds and sorts. Shall we not
agree that this is so?

d CLINIAS: Perhaps we shall, my friend, since over time we have come to
share your hope that we may reach the full truth in these matters.

ATHENIAN: First we must go through all the other subjects that are called
sciences but that do not make those who understand and possess them

wise. After getting these out of the way, we will try to identify the ones we need, and then learn them.

To begin, let us consider how it is that the sciences that have to do with the first needs of a mortal race are most necessary and truly first, but also e
how it happens that those who have knowledge of them, though in early times they were considered wise, nowadays are not reputed for wisdom, but rather are reproached for such knowledge. We shall identify them and 975
show that virtually everyone with an ambition for a reputation of having developed into as good a person as possible avoids them in order to acquire wisdom and practice it.

First there is the knowledge that has to do with animals' eating one another. The story goes that this is what has made it customary to eat some kinds of animals while entirely keeping us from eating others. May the men of former times be kindly to us, as indeed they are; but let the first persons we leave aside be the experts at the knowledge just mentioned. b
Next, the production of barley meal and wheat flour, in combination with the knowledge of how to use them for nourishment, though it is a noble and excellent pursuit, will never succeed in making anyone completely wise, since this very thing—labelling production as wisdom—would lead to disgust at the products themselves. Nor will cultivation of the entire earth make anyone completely wise: it is clearly not by art but by a natural capacity we have from God that we have all put our hands to working the earth. Moreover, neither will the "weaving together" of dwellings, or construction as a whole, or the art of making all kinds of furnishings and implements, which includes bronze-working, building, molding and c
weaving, as well as the manufacture of all instruments. This knowledge has practical utility for the masses, but it is not because it is thought to confer virtue that it is called knowledge. Nor does the art of hunting in all its various forms make anyone noble and wise, though it has come to have many forms and involves great skill. Nor do prophetic inspiration or the ability to interpret divine messages have this effect in the least. The prophet only knows what he says; he does not understand if it is true.

We now see that these arts enable us to possess the necessities of life, d
but that none of them makes anyone wise. Next in order is a kind of play, which is mostly imitative and in no way serious. Its practitioners make use of many instruments and many bodily gestures—and not wholly becoming ones at that. This includes skills that employ words, all the arts of the Muses, and the genres of visual representation, which are responsible for producing many varied figures in many media, both wet and dry. But the imitative art makes no one wise in any of these things, even those who practice their craft with the utmost seriousness.

Now that all these subjects have been dealt with, the next group turns e
out to be kinds of defense, which come in many different forms and which benefit many people. The chief and most widespread of these, the art of war, which is known as military strategy, has the highest reputation for utility, but requires the greatest amount of good luck and is granted to

976 people through courage more than wisdom. The art called medicine too
is surely a defense, in this case against all the ravages the climate inflicts
upon animals through cold, unseasonable heat, and other things of the
sort. But none of these arts is distinguished for wisdom of the truest
sort. They lack measure, are carried along by opinion, and proceed by
guesswork. We will also call both sea-captains and sailors defenders, but
no one should encourage us by proclaiming any single one of these men
b wise. No one could know the anger or friendship of the wind, even though
the art of sailing would find this knowledge most agreeable. Nor are those
men wise who claim to be defenders in lawsuits by virtue of their speaking
ability. Their attention to people's characters is based on memory and rote
acquaintance with opinion, and they stray wide of the truth about what
is genuinely just.

As a candidate for the reputation of wisdom there still remains a certain
strange ability, which most would call not wisdom, but a natural gift. Some
c people easily learn whatever they are learning and accurately remember a
great number of things, and some can call to mind what is useful for each
person—what would be fitting if it were to take place—and quickly bring
it about. When we notice such people, some will regard all these traits as
a natural gift, while others will call them wisdom and still others a natural
agility of mind. But no intelligent person will ever be willing to call anyone
genuinely wise for having any of them.

But surely there must turn out to be some science whose possession
makes a wise person genuinely wise and not merely wise by reputation.
d Let us see, then. We are tackling an extremely difficult subject—to discover
a different science from the ones we have discussed, one which may be
both genuinely and plausibly called wisdom, and which will make its
possessor neither vulgar nor foolish, but a wise and good citizen of his
city, a just ruler and subject, and in tune with himself and the world as
well. First let us identify this science. Of all the sciences that now exist,
which one would render humans the most unintelligent and senseless of
living things if it completely disappeared from the human race or had not
e been developed? In point of fact, it is not at all hard to identify. If we
compare, so to speak, one science with another, we will see that the one
that has given the gift of number would have this effect upon the entire
mortal race.

It is God himself, I believe, and not some good fortune that saves us by
making us this gift. But I must say which god I mean, though it will seem
977 strange, though yet in a way not strange. How can we keep from believing
that what causes all things that are good for us is also the cause of the
good that is by far the greatest, namely, wisdom? So, Megillus and Clinias,
what god am I speaking of with such solemnity? Uranus (i.e., the heaven),
the god whom above all others it is most just to pray to and to honor, as
all the other divinities and gods do. We will unanimously agree that he
has been the cause of all other good things for us. But we declare that he
is really the one who gave us number too, and he will continue to give
b it, supposing that we are willing to follow him closely. If we come to

contemplate him in the right way—whether we prefer to call him Cosmos or Olympus or Heaven [Uranus]—let us call him as we like, but let us notice carefully how by decorating himself and making the stars revolve in himself through all their orbits, he brings about the seasons and provides nourishment for all. Together with the entirety of number, he also furnishes, we would insist, everything else that involves intelligence and everything that is good. But this is the greatest thing, for a person to receive from him the gift of numbers and go on to examine fully the entire revolution of the heavens.

Next, let us return to a point made a little while ago and recall that we c
were very right to observe that if the human race were deprived of number, we would never come to be intelligent in anything. We would be animals unable to give a rational account, and our soul would never obtain the whole of virtue. An animal that does not know two and three or odd and even, one that is completely ignorant of number, could never give an account of the things it has grasped by the only means available to it—
perception and memory. But while nothing prevents it from possessing d
the remainder of virtue—courage and moderation—no one deprived of the ability to give a true account can ever become wise, and anyone lacking wisdom, which is the greatest part of all virtue, can never become completely good or, in consequence, happy. Thus it is altogether necessary to employ number as a basis, though why this is necessary would require a still longer account than all I have said. But we will also be right in stating the present point, that regarding the achievements attributed to the other
arts, the ones we recently surveyed when we allowed all the arts to exist, e
not a single one remains. They are all completely eliminated when we take away the science of number.

If we reflect upon the arts, we might well suppose that there are a few purposes for which the human race needs numbers—although even this concession is important. Further, if we contemplate the divine and the mortal elements in the generated world, we will discover reverence for
the divine and also number in its true nature. But even so, not every one 978
of us will yet understand either how great a power intimate knowledge of the whole of number can confer upon us (since in addition to what I have mentioned, all musical phenomena clearly require movement and sounds that are based on number), or—the most important thing—that number causes all good things. We must also understand well that it causes no evil that may occur. By contrast, movement that is irrational, disorderly, unseemly, unrhythmical and inharmonious is wholly lacking in number,
as is everything that shares in any evil. This is how anyone who is going b
to die happy must think. And as regards justice, goodness, beauty, and all such things, without knowledge no one who has attained true opinion will ever give a numerical account that is at all likely to persuade either himself or anyone else.

Now let us go on to take up this very topic, number. How did we learn
to count? How did we come to have the concepts of one and two? The c
Universe has endowed us with the natural capacity to have concepts,

whereas many other living things lack even the capacity to learn from the
Father how to count. With us humans, the first thing God caused to dwell
in us was the capability to understand what we are shown, and then he
proceeded to show us, and he still does. And of the things he shows us,
taken one by one, what can we behold more beautiful than the day? Later,
d when we come to see the night, everything appears different to our vision.
Since Heaven never stops making these bodies ply their course night after
night and day after day, he never stops teaching humans one and two,
until even the slowest person learns well enough to count. For each of us
who sees them will also form the concepts of three, four, and many. Out
of these many, God made a unit by constructing a moon which goes
through its course sometimes appearing larger and sometimes smaller,
e thus always revealing each day as different until fifteen days and nights
have passed. This *is* a period, if one is willing to treat the entire cycle as
a unit. As a result, even the stupidest of the animals God has endowed
with the ability to learn is able to learn it. Every living being that can has
become quite knowledgeable in numbers this far [i.e., up to fifteen] and
979 in these numbers, by considering each thing individually. Next, for the
purpose of reckoning on each occasion all things in relation to one another
as numbers[1] and also for a purpose which I regard as greater—after creating
the moon, waxing and waning as we said, God established months in
relation to the year, and so all the living beings who could began to
comprehend number in relation to number, with the blessing of Good
Fortune. Thanks to these celestial events we have crops, the earth bears
food for all living things, and the winds that blow and the rains that fall
b are not violent or without measure. If on the contrary anything turns out
for the worse, we must not blame God, but humans, for not rightly managing their own lives.

Now in our inquiry about Laws we found that the other things that are
best for humans are easy to know, and that we are all competent both to
understand what we are told and to act on that basis, as long as we know
what is likely to be advantageous and the reverse. Indeed, we found then
c and we still maintain that none of the other pursuits is particularly difficult,
but how to become good people is an extremely difficult problem. Also,
to acquire everything else that is good—property in the right amount and
a body of the right sort—is, as the saying goes, both possible and not
difficult. Further, everyone will grant that the soul should be good, and
as to how it should be good, everyone says it must be just, moderate,
brave, and wise as well. But when it comes to the precise form of wisdom
d it must have, as we have recently shown in detail, there is no longer any
agreement, at least among the many. But as a matter of fact we have just
now discovered over and above all the former kinds of wisdom one that
is by no means insignificant, at least in that anyone who masters the
material we have outlined is guaranteed a reputation for wisdom. But are

1. Thus extending the concept of number to include ratios.

those who know these things really wise and good? This is precisely what requires a satisfactory account.

Clinias: How right you were, my friend, to say that you were setting out to say important things on important subjects!

Athenian: Indeed, they are not trivial, Clinias. But—and this is even e
more difficult—I am attempting to say things that are wholly and universally true.

Clinias: I agree completely. But even so, please don't get weary of telling me your ideas.

Athenian: Of course, but don't you two get tired of listening, either.

Clinias: Don't worry—and I am speaking on behalf of the two of us.

Athenian: Very well. We must begin from the beginning. In the first 980
place, it appears that above all we must find a single name, if we can, for this thing we hold to be wisdom. If we simply cannot do this, our second objective will be to determine what and how many kinds of wisdom a person must know in order to be wise according to our account.

Clinias: Please go on.

Athenian: The next point is that no one can blame the lawgiver for fashioning an account of the gods that is finer and better than those given up to now, engaging, so to speak, in noble play and honoring the gods, and b
for him to pass his whole life celebrating them with hymns of happiness.

Clinias: Well said, my friend! I hope that this is the goal of your laws, that people will sing hymns to the gods and live purer lives, and then meet with the end that is at once best and finest.

Athenian: What are we saying, then, Clinias? Does it seem that by singing hymns to the gods we are honoring them greatly, praying that we will be led to say the finest and best things about them? Is this what you mean, or something else?

Clinias: Precisely that. But pray to the gods with confidence and state c
the account that it occurs to you to offer about the fine things that concern the gods and goddesses.

Athenian: This will happen if God himself guides me. Only please join in my prayer.

Clinias: Please go on to the next point.

Athenian: Since people in the past have failed badly in describing the generation of gods and living things, it appears that I must begin by constructing an account based on my previous one, taking up again my d
attack on impious accounts,[2] and declaring that there are gods who care for all things, great and small, who are inexorable in matters of justice. I suppose you remember, Clinias, since you have even received a written record. What we said then was quite true. The most important point was that as a whole, soul is older than any body. Do you recall? You surely must remember. For what is superior, older and more godlike is obviously e
so in relation to what is inferior, younger and less honorable, and what

2. *Laws* x; for the point noted just below, see 891e ff., 896a ff.

rules or leads is in every way older than what is ruled or led. Let us accept
981 this point, then, that soul is older than body. But if this is so, the first step
in our first account of generation will be more plausible. Let us take it,
then, that the beginning of our beginning is more seemly and that we are
taking exactly the right steps in approaching the most important part of
wisdom, the generation of gods.

Clinias: Anyone must grant that we are stating these matters the best we can.

Athenian: Next, when a soul and a body come together to form a single structure and produce a single form, do we assert that this is most truly said to be a living thing, in virtue of its nature?

Clinias: Yes.

b Athenian: So this kind of thing is most correctly called a living being?

Clinias: Indeed.

Athenian: We must identify solid bodies, five in number on the most
plausible account, from which the things that are finest and best can be
fashioned. The remaining kind of entity, all of it, has but a single form,
for soul, the truly most divine type of entity, is the only thing that could
possibly have no body or be without any color at all. This is the only entity
c naturally suited for fashioning and creating, while body, we maintain, is
suited for being fashioned, for becoming, and being seen. The former type
(let us say it again, since it should not be stated just once) is naturally
suited to be invisible, and intelligent and intelligible as well, sharing in
memory and calculation that involves the vicissitudes of odd and even.
There being five bodies, then, we declare that they are fire, water, air,
earth, and ether, and that each of the many and varied kinds of living
things is brought to perfection with one of these playing the chief role.

But we need to learn this for each kind individually, as follows. As the
d first kind we discuss, let us take up the earthy one. This includes all
humans, and in addition all living things with many legs and those with
none, and all that move and the ones that are stationary, held fast by roots.
What makes this a single kind, we should believe, is the fact that although
all kinds of living beings are composed of all the five bodies, the greatest
part of this kind is made of earth with its solid nature.

We ought further to suppose there is a second, different kind of living
thing that comes to be and moreover is visible. Its largest portion is fire,
e but it has portions of earth and air along with small amounts of all the
rest. This is why we should declare that from these bodies arise visible
living things of all kinds. We must further suppose that the kinds of living
things in the heavens—which is what we should claim the divine stars to
be—have come to be, endowed with the finest body and the best and
happiest soul. But as to their destiny, which might be either of two sorts,
we must allow opinion a role. Either they are all entirely and of absolute
982 necessity indestructible, immortal and divine, or else each of them is con-
tent to possess such a vast length of life that they could never possibly
demand more.

To repeat, let us first suppose that these are two kinds of living things,
that both are visible, the one made entirely, as it might seem, of fire, the
other of earth, and that the earthy kind moves in disorder, while the one
of fire moves in perfect order. Now what moves in disorder (which is
exactly how the kind of living things around us behaves for the most part)
we ought to consider unintelligent. But if something has an orderly path b
in the heavens we should treat that as powerful evidence of its intelligence.
For if it always proceeds in its course uniformly and without variation,
and always acts and is affected in the same way, it gives ample evidence
of intelligent life. The necessity of the soul that possesses intelligence is
far the most powerful of all necessities. For it is a ruler, not a subject, and
so ordains its decrees. When a soul reaches the best decision in accordance c
with the best intelligence, the result, which is truly to its mind, is perfectly
unalterable. Not even adamant could ever be mightier or more unalterable.
Truly, three Fates hold fast whatever has been decided through the best
counsel by each and all of the gods, and guarantee that it is brought to
pass. Humans should admit as evidence of the intelligence of the stars
and this entire movement of theirs, the fact that they always do the same
things, because they are doing what was decided an astonishingly long
time ago and do not change their decision back and forth, sometimes doing d
one thing and at others doing something else, wandering and changing
their orbits. This opinion of ours is the exact opposite of what most people
believe—that because they do the same things uniformly they do not
possess soul. The crowd has followed the fools in supposing that the
human race is intelligent and alive because it undergoes change, whereas
the divine is unintelligent because it remains in the same orbits. But in
fact anyone could have adopted views that are finer, better and acceptable, e
and could have understood that whatever always operates uniformly,
without variation, and through the same causes is for that very reason to
be regarded as intelligent. Such a person could also understand that this
is the nature of the stars, the finest of all things to behold, and further that
moving through their march and dance, the finest and most magnificent
dance there is, they bring to pass what all living things need.

In fact, we are right to say they possess soul. First, consider their size. 983
They are not as small as they appear; the mass of each is inconceivably
large. This point should be accepted with confidence since it is based on
adequate proofs. For we can correctly reason that the sun is larger than
the earth, and indeed, all the moving stars have an amazing size. How
can any being cause so vast a mass to revolve always in the same period?
I declare that God is the cause and that it could never be otherwise. For b
nothing could ever come to be alive except through God, as we have
shown. And since God is capable of this, it is perfectly easy for him first
to make any body and any mass of material into a living being and then
make it move however he thinks best. I hope the single account I am now
stating may hold true for them all. Unless a soul is attached to each of
them or even *in* each, earth, heaven and all the stars and all the masses made c

of these things cannot move with such precision in their annual, monthly and daily courses, making all that takes place turn out good for us all.

Since man is so sorry a thing, it is important to avoid speaking nonsense and to be clear in what we say. If anyone is going to identify as causes certain bodies in rushing movement, or kinds of matter or anything of the sort, he will not succeed in saying anything clear. As for the account we
d have given, we really must take it up again, to see whether it is reasonable or wholly deficient. We hold first that there are two kinds of entities, soul and body, and many individuals of each kind, each one different from others of its kind and from those of the other kind, and there is no third kind of entity found in anything. Second, that soul is superior to body: we shall hold that the former is intelligent, the latter not, the one rules, the other is ruled, the one is the cause of everything, the other the cause of nothing that takes place. And so it is the height of folly and absurdity
e to say that the things in the heavens have arisen through the agency of anything else and are not the products of both soul and body, as we hold. If our theories about all the celestial beings are to win out, and if it is to appear convincing that they are all divine, we must suppose them to be one of two things. Either they are themselves gods and it is perfectly correct to celebrate them in hymns, or we must suppose them to be likenesses of
984 gods, something like images of them, made by the gods themselves, for their creators were not unintelligent or of little worth. As we have declared, we must suppose them to be one of these two things, and once we do this, we must honor them above all images. Assuredly no other image will ever appear more beautiful or more widely shared by all humans than these, let alone established in better locations or surpassing them in
b purity, awe, and their whole manner of life, since they have been made superior in all these ways.

Concerning the gods let us go no further. Now that we have identified the two kinds of living things that are visible to us, of which we declare that one is immortal, while all the other, the earthy kind, is mortal, let us try with the greatest accuracy that plausible opinion permits to describe the three intermediate kinds which fall in between the two already discussed. After fire let us take up ether. We may suppose that soul fashions
c living things out of it which (like the other kinds of living things) are for the most part characterized by that substance, but which also possess smaller amounts of the other kinds in order to bond them together. After ether, soul fashions a different kind of living things out of air, and a third out of water. After creating them all, it is plausible that soul filled the entire heaven with living things, employing each according to its character, since all share in life. These are the second, third, fourth and fifth kinds
d of living things, beginning from the visible gods and ending up with us humans.

As to the gods—Zeus, Hera and all the rest—we may legislate as we like, the same law holding for each, and we must treat this principle as

firmly established. But as to the first gods, those that are visible, greatest,
most honored, and most sharply seeing everywhere, we must declare that
these are the stars together with all the celestial phenomena we perceive.
After them and next in order beneath them are *daimons.* The kind made of e
air, which occupies the third, middle, position, is responsible for mediation
between gods and humans, and should be highly honored in our prayers
for bringing words of good tiding. Both these kinds of living beings—the
one made of ether and the next in order, the one made of air—are wholly
imperceptible. Even when they are close by we cannot see them. They
have a wonderful intelligence, being of kinds that learn quickly and have 985
good memories, and we should say that they know all our thoughts and
both love those of us who are noble and good and hate those who are
extremely evil, since already with these kinds we are discussing beings
that experience pain. (By contrast, God, who enjoys the perfection of divine
nature, is removed from pain and pleasure, and is entirely occupied in
thinking and knowing.) Since the heaven is completely filled with living b
beings, we should say that they communicate with one another and with
the highest gods about all humans and all other things. They do so through
the movements of the middle ranks of living beings, which are wafted
lightly towards the earth and also towards the whole heaven. It would be
correct to represent the fifth kind of living thing, that made of water, as
a demigod made of that substance, sometimes seen, sometimes hidden
and invisible, provoking wonder through its dim appearance. c

These five kinds of beings really are living things, and some of them
have had various types of encounters with humans, whether through
dreams in sleep or in audible communications through divine voices or
prophecies to certain people whether healthy or ill or even at the point of
death. The resulting beliefs affect both individuals and communities and
have been the origin of many religious rites for many people and will be
in the future as well. Anyone who legislates on all these matters and has
even the least intelligence will never dare to make innovations and turn
his own city towards a piety which lacks any clear foundation. On the d
other hand, in his complete lack of knowledge he will not forbid what
ancestral law has declared about sacrifices, since it is impossible for mortals
to have knowledge about such things.

On the same reasoning, the worst people are those that do not dare to
declare to us the gods that really do appear to us, or to reveal them as
being other gods, ones who do not receive worship or the honors they are
due. But in fact, this is exactly what is taking place. It is as if at some point e
one of us had seen a sun or a moon coming into existence and looking
down at us all, and through some inability failed to report it, and further
was not eager to do his part to bring them from their dishonored state
into a place of honor and make them conspicuous, and also to institute
festivals and sacrifices for them and to determine their periods of longer
or, in several cases, shorter years, setting apart a time for each of them. 986

Wouldn't such a person himself, as well as anyone else who was aware of the situation, agree that it would be right to call him evil?

CLINIAS: Absolutely so, my friend, most evil.

ATHENIAN: But, my dear Clinias, I want you to know that this is precisely my situation now.

CLINIAS: What do you mean?

ATHENIAN: There are eight powers [i.e., orbits] of the celestial beings, that are brothers of one another. I myself have observed them. This is no
b special accomplishment; others can do it easily too. Three of them are the ones we mentioned a little while ago:[3] those belonging to the sun, to the moon, and to all the stars. But there are five more. Now regarding all these orbits and the beings which move in them (whether they move of their own accord or proceed in their courses borne on chariots), none of us must ever rashly suppose that some of them are gods and others are not or that some are legitimate while others are what it is wrong for any of us even
c to utter. Instead, we must declare and assert that they are all brothers and have brothers' shares. We must not attribute the year to one of them and the month to another, while refusing to assign to the rest any share or any time in which it completes its own orbit, contributing to the perfection of the visible cosmos established by the most divine law of all.

Anyone who is happy began by being struck with awe at this cosmos, and then conceived a passion for learning all that a mortal can, believing
d that this is how to live the best and most fortunate life and that when he dies he will go to places where virtue is at home. Further, once he is really and truly initiated and has achieved perfect unity and a share of the one true wisdom, he continues for the rest of his days as an observer of the fairest things that sight can see.

e The next thing is to say how many and who these gods are. For we must make it clear that we never go back on our word. In fact, I insist with certainty on just the following. I repeat that they are eight, and of the eight, three have been discussed and five still remain. The fourth orbit and period of revolution and the fifth as well are nearly equal in speed to the sun, neither faster nor slower overall. Of these three, the one with sufficient intelligence must be the leader. These three orbits belong to the sun, the morning star, and a third body which I cannot call by name since its name is not known. The reason is that the first person to observe them
987 was a foreigner. Egypt and Syria have a marvelously beautiful summer season. In consequence it was an ancient practice there that led people to reflect on these matters for the first time. They were always observing the entire totality of the visible stars, as it were, since their part of the world has no clouds or rain. From there, after being closely examined for thousands of years, in fact an infinite time, this knowledge spread everywhere including Greece. Therefore we must be bold and enact this into law. It is clearly not for people of intelligence to hold some divine things in dishonor and

3. 978c–979a.

others in honor. As to why they have not got names, this is the reason b
that should be given. Instead, they have taken as their appellations the names of [the traditional] gods. The morning star, which is also the evening star, is accounted as Aphrodite's star [i.e., Venus], a name highly appropriate for a Syrian law-giver to choose. The star that more or less accompanies both the sun and Aphrodite's is Hermes' [Mercury]. We have yet to speak of three more orbits that move to the right[4] like the moon and the sun. But we should mention one, the eighth, which above all should be called the cosmos. It moves in the opposite direction to all the others and carries them, as should be obvious even to humans who know a little
about these things. But all that we know well we must tell, and we are c
telling it. For to anyone with even a small amount of understanding that is correct and divine, what is genuinely wisdom appears to be somewhat along these lines. Of the remaining three stars, one is particularly slow, and some call it by the name "Cronus' " [Saturn]. The next slowest we should call Zeus' [Jupiter], and the next one Ares' [Mars]; this one has the
reddest color of them all. None of this is hard to comprehend if someone d
explains it, but once a person learns it, we say, he must believe it.

Every Greek ought to bear in mind that the location we Greeks possess is absolutely best for virtue. Its merit is that it is intermediate between winter and summer. Since our summer is inferior to the summer in those other places, as we said, we were late in coming to observe the ordering of these gods. But let us take it for granted that whatever Greeks receive
from foreigners they improve in the end—a point that we must suppose e
holds for the present subject in particular. In fact, it is difficult to find out
all these things for certain, but there is high and good hope that even 988
though the tradition about all these gods and also their worship have come from abroad, the Greeks, on account of their forms of education, the oracles from Delphi, and their whole legally codified system of worship, will succeed in worshiping them better and in a real sense more justly.

Let no Greek ever fear that being mortal we should never concern ourselves with the divine. We should have quite the opposite thought; the
divine [i.e., the cosmos] is never without intelligence nor is it at all ignorant b
of human nature, but it knows that if it teaches we will follow along and learn what we are taught. And of course it knows that the very thing that it teaches us and that we learn is number and how to count. If it did not know this it would be the least intelligent thing of all. It would really not "know itself," as the proverb goes, if it were angry at those who are able to learn and did not instead rejoice without envy along with the ones who become good through God's help.

Now it makes much good sense that when humans first had thoughts c
about how the gods came to be and what they were like and what deeds they did once they came to be, what they said was not acceptable or pleasing to sensible people. Nor were the later accounts, in which fire,

4. I.e., from West to East.

water and the other bodies were declared oldest and the wonderful soul
younger, and which also maintained that that motion was superior and
more valuable which belongs to body and which body produces in itself
by heat, cold, and all things of that sort, and that the soul does not move
d both body and soul itself. But now, when we say that it is no surprise that
if a soul comes to be in a body it causes both the body and itself to move
and revolve, on no account does our soul disbelieve that it has the capacity
to make any weight revolve, no matter how large. Therefore, since as we
now claim, soul is the cause of the whole cosmos, and all good things
have causes that are good, while evil things have different causes, which
e are evil, it is no wonder that soul is the cause of every orbit and motion,
and the best kind of soul causes orbits and motions that tend toward the
good, while the opposite kind of soul causes those that tend toward the
opposite. It follows that the good must always have defeated and must
always defeat the evil.

All that we have said is in accord with Justice, who takes vengeance on
the unholy. Consequently, getting back to the object of our investigation,
989 we cannot but believe that the good person, at least, is wise. But as for
the wisdom for which we have long been searching, let us see whether
we can discover any discipline or art such that ignorance of it would make
us lack all judgment about justice. In fact, I think we can. Let me say what
it is. I shall try to make clear to you how it dawned upon me as I searched
high and low. The cause of our failure is that we do not practice the most
b important part of virtue in the right way. What I just said seems to me to
indicate this strongly. For no one will ever persuade us that there is a
more important part of virtue for mortals than reverence towards the gods,
although it must be admitted that through ignorance of the worst kind
this quality has been absent from the people with the best natures.

Such natures hardly ever occur, but if they do they are an outstanding
benefit. For a soul that possesses both quickness and slowness in a mild
and moderate degree will tend to be good-natured. It will be inclined
towards courage, readily induced to moderation, and—the most important
c feature in such cases—since it will be good at learning and remembering,
it can greatly enjoy these activities, and so will have a love of learning.
These are not easily produced, but when they are born and are nurtured
and trained in the necessary way, it is absolutely right for such people to
be able to hold the inferior majority in subjection by thinking, doing and
saying all that concerns the gods in the right ways at the right times, not
hypocritically performing sacrifices and purification rites for violations
d against gods and humans, but in truth honoring virtue. In fact, honoring
virtue is the single most important thing for the entire city. Now we hold
that this segment of the population is by nature best suited to authority and
is capable of learning the noblest and finest studies, if anyone will teach them.
But no one could do so unless God leads the way. Indeed, if someone were
to teach, but not in the right way, it would be better not to learn. Even so, it

follows from what I am now saying that people with this kind of nature, the
best, must learn these things and that I must tell them to.

I must try, then, to give a detailed account of what those things are, e
what they are like, and how to learn them, given my ability as a speaker
and the ability of those who can hear me: what things a person is to learn 990
about reverence towards the gods and how he is to learn them. When you
hear what it is, you will find it strange. I say its name is astronomy, an
answer no one would ever expect through unfamiliarity with the subject.
People do not know that the true astronomer must be the wisest person.
I do not mean anyone practicing astronomy the way Hesiod did and
everyone else of that sort, by observing risings and settings of stars, but
the one who has observed seven of the eight circuits, each of them complet-
ing its own orbit in a way no one can easily contemplate who is not b
endowed with an extraordinary nature. We have now said what we must
learn. We shall go on to state, as we say, how we must and should learn
it. My first point is the following.

The moon completes its circuit most quickly, bringing the month [the
new moon] and before it the full moon. Next we must attain knowledge
of the sun, which brings the solstices as it completes its entire circuit, and
then the planets that accompany it [i.e., Venus and Mercury]. To avoid
repeating ourselves many times about the same things, since the remaining c
orbits which we discussed earlier are not easy to understand, we should
make continuous efforts in preparing for this knowledge the people whose
natures can understand it, to teach them many preliminary subjects and
accustom them to learning when they are boys and youths. For this reason
they need to study mathematics.

First and foremost is the study of numbers in their own right, as opposed
to numbers that possess bodies. This is the study of the entire nature and
properties of odd and even—all that number contributes to the nature of
existing things. After learning this, next in order is what goes by the d
extremely silly name of geometry [literally, "earth measurement"]. In fact,
it is absolutely clear that this subject is the assimilation by reference to
plane surfaces of numbers that are not by nature similar to one another.
That this miracle is of divine, not human origin should be obvious to
anyone who can understand it. After this is the study of numbers with
three factors, which are similar in virtue of their nature as solids. Another
art, called stereometry by those acquainted with it, assimilates numbers e
that are dissimilar. But what people who look into these matters and
understand them find divine and miraculous is how nature as a whole
molds sorts and kinds according to each proportion, with reference to the
power that is always based on the double and the power opposite to this 991
[the half]. The first sequence of the double is the one carried out in
numbers in the ratio one to two [i.e., the sequence 1, 2, 4, . . .]. The sequence
determined by squares [sc. of these numbers: the sequence 1, 4, 16, . . .] is
the double of this. Double of *this* is the one [the sequence 1, 8, 64, . . .] that

reaches what is solid and tangible, after proceeding from one to eight.[5] The sequence that gives the mean of the double involves both the mean that exceeds the smaller and is exceeded by the larger by an equal amount [i.e., the arithmetic mean], and the mean that exceeds one of the extremes by the same fraction of that extreme as the fraction of the other extreme by which it is exceeded by that extreme [i.e., the harmonic mean].
b (The means of 6 in relation to 12 are determined by the ratios 3:2 and 4:3.)[6] The sequence based on both of these means has been granted to the human race by the blessed choir of the Muses and has bestowed upon us the use of concord and symmetry to promote play in the form of rhythm and harmony.

Let us take it that all these things are as we have said. But what is the point of learning them? To ascertain this we must refer to the divine element in the generated world, which consists of the finest and most divine sort of visible things God has permitted humans to observe. No
c one who has observed them can ever claim to have learned them in any easy way that does not involve the sciences that I just described. In addition, in all our discussions we must fit the individual to the species by asking questions and refuting errors. This method is the first and finest touchstone for humans to use, whereas all the tests that are not genuine but pretend to be so involve everyone in totally useless labor. We must also have an
d accurate knowledge of how time brings to pass all celestial events precisely. If we do, then everyone who has confidence in the truth of our account that soul is both older and more divine than body should believe that the saying "all things are full of gods" is entirely right and sufficient, and further that we are never slighted through the forgetfulness or neglect of our superiors.

In all these studies, though, the following point must be kept in mind: anyone who comprehends each of them through the right method is greatly benefited in doing so; otherwise, it is better to call on God for help. The
e right method is this—I must say this much at least. To the person who learns in the right way it will be revealed that every diagram and complex system of numbers, and every structure of harmony and the uniform pattern of the revolution of the stars are a single thing applying to all these phenomena. And it *will* be revealed to anyone who learns correctly, as we
992 say, fixing his eye on unity. To one who studies these subjects in this way, there will be revealed a single natural bond that links them all. But anyone who is going to pursue these studies in any other way must "call on Good

5. This last sequence, formed by cubing the numbers in the first sequence, represents three dimensions, the "solid and tangible." (Likewise, the first and second sequences represent one and two dimensions, respectively.) In reaching it, we have passed through the previous two sequences; that is, the generation of three dimensions presupposes that of one and two dimensions.

6. The arithmetic mean of 6 and 12 is 9, the harmonic mean is 8, and 9:6 = 3:2 and 8:6 = 4:3; also 12:9 = 4:3 and 12:8 = 3:2.

Fortune for help," as we say too. For without them, no one in cities will ever become happy. This is the right way, this is the upbringing, these are the studies. Whether they are difficult, whether they are easy, this is the way we must proceed.

It is not right to neglect the gods once it is obvious that our story about them all has been told in the right way and blessed by Good Fortune. b
Anyone who has grasped all these things in this way I say is truly the wisest. I maintain also, both in jest and in earnest, that when any of these people fulfills his destiny by dying (if indeed he still exists in death), he will no longer be affected by a multitude of perceptions as he is now but will participate in a destiny of unity. Having become one from many, he will be happy, most wise, and blessed—whether in his blessed state he dwells on continents or islands [the Isles of the Blest]—and he will enjoy c
this fortune forever. And whether he lives his life engaging in these pursuits in private or in public, the gods will grant him to experience the same things in the same way. But as to what we asserted at the outset, the identical account is now at hand again, and it is genuinely true—that with but a few exceptions, humans are incapable of becoming perfectly blessed and happy. This has been stated correctly. Only those who are by nature godlike and moderate, who also possess the rest of virtue, and have under- d
stood all the subjects connected with the blessed science [astronomy] (and we have stated what these are) have obtained and possess all the gifts of the divinity in adequate measure.

In private we say and in public we enact into law that the highest offices must be bestowed upon those individuals who have mastered these studies in the right way, with much labor, and have arrived at the fullness of old age. The others must obey them and speak in praise of all gods and goddesses. Now that we have come to know this wisdom well enough and have tested it, we are all bound, most rightly, to urge the Nocturnal e
Council to pursue it.

# LETTERS

*The biographer Diogenes Laertius tells us that Thrasyllus included in his edition of Plato thirteen letters alleging to have been written by him. These are the letters presented here, in Thrasyllus' numbering. Apart from two insignificant ones indicating no presumed date, they all profess to be from the last two decades of Plato's life. Most of them show him deeply and personally involved in the politics of Syracuse, the most important Greek city of Sicily, then engaged in a protracted struggle with Carthage to preserve Greek hegemony in the island, or at least its eastern half. The general Dionysius had established himself as 'tyrant' of the previously democratic Syracuse, being succeeded in 367/6 by his son Dionysius II, to whom* Letters *I, II, III, and XIII are addressed. Plato had visited the court of Dionysius I in about 387, and according to these* Letters *he had formed a close friendship there with the tyrant's young brother-in-law, Dion—later an influential figure in his government—of whose intellectual and moral qualities he held a high opinion. According to the account of* Letter *VII, by far the longest and most interesting of the series, Dion shared Plato's ideals of government—presumably those expressed in* Republic*. With the accession of the younger Dionysius, a young man who showed an interest in philosophical matters, Dion saw an opportunity, with the help of Plato's instruction in philosophy, to win Dionysius over to abandoning his tyranny for a rule of the 'best' laws under free institutions. Thus—still according to the* Letters*—Plato returned to Syracuse in 367 or 366 to carry out his and Dion's purpose of establishing there the magnanimous rule of a 'philosopher-king'. But Dionysius proved less tractable than Dion had expected; within four months, fearing him as a rival, he banished Dion to Greece, and Plato himself returned to Athens not long afterwards, the grand project a shambles. He came back a third time some four years later, at Dionysius' urging, in the hope at least of restoring Dion to Dionysius' good graces. At that too he failed. The rest of the story—Dion's successful expedition to take Syracuse in 357, effectively ending Dionysius' rule, and his eventual murder in 354 in the factional fighting that ensued—can be read in Plutarch's* Life of Dion.

*Are these letters, or any of them, genuine? We have no way of knowing for sure. We have no record of any Platonic letters existing before the end of the third century* B.C.*, some one hundred fifty years or more after the nominal date of composition. We know that many such 'letters' of famous personages originated as exercises in the schools of rhetoric in later times, and others were forged for various reasons. Our manuscripts report a doubt (perhaps going back to Thrasyllus) about* Letter *XII's authenticity, and from their content*

*others can hardly be by Plato.* Letter *VII, the least unlikely to have come from Plato's pen, contains much tantalizing information about Plato's views about philosophy which if genuine could be of some significance for working out his final positions. The author reiterates in bold language his commitment to Forms, and, drawing upon an elaborate theory about the means of arriving at philosophical truth and the defectiveness of language to express it, he explains why he would never write any philosophical treatise. If not by Plato,* Letter *VII must have been written about when it says it was—not long after Dion's death in 354—and by someone close enough to Plato to be confident of writing about philosophy in a way that could convince a discriminating audience that included Greek philosophers in Southern Italy that the author was indeed Plato.*

*J.M.C.*

# I

PLATO TO DIONYSIUS, WELFARE. 309

During all the time that I was with you administering your empire and enjoying your confidence above all others, you got the benefits and I the slanders. But I endured them, grievous as they were, because I knew that men would not think me a willing accomplice in any of your more barba-
rous acts. For all who are associated with you in your government are my b
witnesses, many of whom I myself have defended and saved from no little injury. And although I have held the highest authority and have protected your city on numerous occasions, you have deported me with less consideration than you ought to show in sending away a beggar who had been with you for the same length of time. I shall therefore in the future consult my own interests with less trust in mankind, and you, tyrant that you are, will live without friends.

The bearer of this letter, Bacchius, is bringing you the pretty gold that c
you gave for my departure. It was not enough for my traveling expenses, nor could I use it for any other need. The offer of it did you great dishonor, and its acceptance would do me almost as much, therefore I refuse it. No doubt it makes little difference to you whether you get or give such a trifle as this, so take it back and use it to serve some other friend as you have served me; I have had enough of your attentions.

A line of Euripides comes appropriately to my mind: "Thou'lt pray for d
such a helper at thy side."[1] Let me remind you also that most of the other tragic poets, when they bring in a tyrant who is being assassinated, make
him cry out: "O wretched me! for lack of friends I die." But no one has 310

Translated by Glenn R. Morrow.

1. Frg. 956.

ever portrayed him as dying for lack of money. And these other lines, too, make sense to sensible men:

> *It is not gold, though a shining rarity in mortals' hopeless life,*
> *Nor gems, nor silver couches, that brighten the eyes of men,*
> *Nor broad and self-sufficient fields laden with the harvest,*
> *But the approving thought of upright men.*

b Farewell. May you realize how much you have lost in me and so conduct yourself better toward others.

## II

PLATO TO DIONYSIUS, WELFARE.

Archedemus[1] tells me you think that not only I but my friends also should keep quiet about you and refrain from saying or doing anything to your discredit, Dion alone excepted. This very statement, that you except
c Dion, shows that I have no power over my friends; for if I could control you and Dion and the others as you suggest, it would be much better for us, I maintain, and for all the other Greeks. As it is, I am conspicuous in showing willingness to follow my own precept. But I say this without implying that there is any truth in the reports of Cratistolus and Polyxenus,
d one of whom told you, I hear, that while at Olympia he heard many of my companions speak ill of you. He must have much sharper hearing than I, for I heard nothing of the sort. But this is what you must do, I think, in the future; whenever you hear anything like this said of one of us, write and inquire of me, and I will tell you the truth without shame or hesitation.

So far as the relations between you and me are concerned the situation
e is this. We are both known to practically every Greek, and our connection with each other is no secret. Remember, too, that it will be no secret to future generations, for those who hear of it will be as great in number as our friendship has been long continued and open. What do I mean by saying this now? Let me begin with a general truth. It is a law of nature that wisdom and great power go together; they exert a mutual attraction and are forever seeking to be united. And men love to converse with one another about them, and to listen to what the poets say. For example,
311 when men talk of Hiero and Pausanias the Lacedaemonian, they like to recall Simonides' connection with them and what he said and did. Likewise they usually celebrate together Periander of Corinth and Thales of Miletus, Pericles and Anaxagoras, and again Croesus and Solon, as wise men, with

1. See *Letters* III, 319a, and VII, 339a, 349d.

Cyrus, as ruler. In the same strain the poets couple Creon and Tiresias, b
Polyeidus and Minos, Agamemnon and Nestor, Odysseus and Palamedes. And our early ancestors, if I am not mistaken, linked Prometheus with Zeus in much the same manner. Of these men some are sung about as coming together in conflict, others for friendship; and some as being friends at one time and enemies at another, and agreeing in some things and
disagreeing in others. I say all this to show you that when we are dead, c
men will still talk about us, and we must have a care for their opinions. It is necessary, I think, that we should be concerned about the future, since it is the nature of an utterly slavish man to give it no thought, whereas men of superior virtue do everything in their power to have themselves well spoken of after they are dead. This very attitude is to me an indication that the dead have some perception of what is going on here; for superior
minds divine that this is so, while those of no account deny it; and of these d
two the intimations of good men are the more worthy of credence. It is my belief that the men whom I have mentioned above would be only too eager, if it were possible to rectify their associations with one another so as to have a better account given of them than is now current. This is still possible for us, please God; if there has been any fault in our past relations we can still correct it by our words and actions; for the account which will
be given of true philosophy, and the reputation that it will enjoy, will be e
better or worse, I say, according as we act nobly or basely. Indeed we can show no greater piety than to act always with this concern, nor greater impiety than to neglect it.

Shall I tell you then what we ought to do and what justice requires? When I came to Sicily my reputation was high among philosophers, and
I came to Syracuse to make you my witness, so that philosophy might 312
gain favor with the multitude. In this I failed ingloriously, as is well known. But I deny that the cause was what many persons might think. Instead, it is because you showed that you did not quite trust me, but desired to send me away and summon others to find out from them what my purposes were, apparently mistrusting me. Many people thereupon bruited it about
that you held me in contempt and were interested in other things. This, b
as you know, was the general report. Hear now what in consequence you ought to do, and this will answer your question how you and I should behave towards each other. If you feel nothing but contempt for philosophy, then let it alone; or if from your own studies or from the teachings of others you have found better doctrines than mine, give them your allegiance. But if, as I think, you favor my principles, then you ought to honor them and me in particular. Now, as at the beginning, if you lead I
will follow. If you honor me, I will honor you; if not, I will keep silent. c
Furthermore, if you take the lead in honoring me, you will get the reputation of honoring philosophy; and the very fact that you once were considering other philosophers will bring you commendation from many persons as being yourself a philosopher. But if I pay you honor without any honor

from you, it will look as if I had my eyes on your money, and we know that this attitude has an evil name among men. In short, if you honor me it will be a tribute to us both; if I honor you, it will bring us both disgrace.

d Enough of these matters. The sphere is not correct. Archedemus will explain it to you when he comes. And upon that other question of weightier and more sublime import about which you say you have difficulties, let him by all means enlighten you. According to his report, you say that the nature of "the first" has not been sufficiently explained. I must speak of this matter to you in enigmas, in order that if anything should happen to these tablets "in the recesses of the sea or land," whoever reads them may
e not understand our meaning. It is like this. Upon the king of all do all things turn; he is the end of all things and the cause of all good. Things of the second order turn upon the second principle, and those of the third order upon the third. Now the soul of man longs to understand what sort of things these principles are, and it looks toward the things that are akin
313 to itself, though none of them is adequate; clearly the king and the other principles mentioned are not of that sort. The soul thereupon asks, What then is the nature of these principles? This is the question, O son of Dionysius and Doris, that causes all the trouble; or rather, this it is that produces in the soul the pains of childbirth, from which she must be delivered, or she will never really attain truth. You yourself once told me, under the
b laurel trees in your garden, that you understood this matter, having found the answer yourself; and I replied that if you thought so, you had spared me many words. I said, however, that I had never met anyone who had discovered this truth, and that most of my own study was devoted to it. Perhaps you once heard something from someone and providentially started on the track of the answer, but then, thinking you had it safe, neglected to fix fast the proofs of it, which now dart here and there[2] about some object of your fancy, whereas the reality itself is quite different. You
c are not alone in this experience; I assure you that everyone at first hearing is affected in just this way, and though some have more difficulty than others, there is almost no one who escapes with but little effort.

Considering thus our past and our present circumstances, we can fairly say we have found the answer to the question in your letter about our relations toward each other. For now that you are conversing with other
d philosophers and are testing my doctrines, both by themselves and by comparing them with others, these teachings will take root this time, if your examination is sincere, and you will become attached both to them and to me.

Now how can this and all else that I have mentioned be brought about? It was quite proper of you to send Archedemus to me; do likewise in the future, for when he reaches you and gives you my answers you may still have difficulties. You will then send Archedemus back to me, if you are well advised, and he will return to you, like a good merchant. After you

2. Reading *a(i)ttousi* in b7.

have done this two or three times and have thoroughly examined the
answers I send to you, I shall be much surprised if the matters which are e
now troubling you do not appear in an altogether different light. So be
bold and inquire of me in this way; for you could not order, nor could
Archedemus secure for you, any nobler or diviner merchandise.

Only take care that these letters do not fall into the hands of uninstructed 314
men. Nothing, I dare say, could sound more ridiculous to the multitude
than these sayings, just as to gifted persons nothing could be more admira-
ble and inspiring. One must talk about them and hear them expounded
again and again, perhaps for many years, and even then their gold is with
the utmost difficulty separated and refined. The most surprising thing
about it is this: many a man of able understanding and tenacious memory b
has become old in the hearing of these doctrines and has told me that
after more than thirty years of hearing them expounded, after examining
them and testing them in every way, those points which at the beginning
seemed most doubtful he now thinks to be the clearest and most self-
evident of all, while the matters he then thought most credible are now
quite the contrary. Keep this in mind and take care that you have no
occasion in the future to feel remorse for now exposing these doctrines
unworthily. The best precaution is not to write them down, but to commit
them to memory; for it is impossible that things written should not become c
known to others. This is why I have never written on these subjects. There
is no writing of Plato's, nor will there ever be; those that are now called
so come from an idealized and youthful[3] Socrates. Farewell and heed my
warning; read this letter again and again, then burn it.

Enough of these matters. You were surprised that I sent Polyxenus to
you; but about him as well as Lycophron and the other men now at your d
court, I repeat the opinion that I have long had; you are far superior to
them in dialectic, both by natural aptitude and by your method of disputa-
tion; and none of them lets himself be defeated intentionally, as some
people suppose, but only because he cannot help it. You seem, however,
to have dealt with them quite fairly and rewarded them properly. But
enough, and more than enough, about such men. As for Philistion,[4] if you e
still need him, by all means keep him there; but if it is possible, release
him and let Speusippus have his services. Speusippus joins me in this
request, and Philistion also assured me that he would be glad to come to
Athens if you would let him go. You did well to release the man from the
rock quarries; and my petition about Hegesippus, the son of Ariston, and
his family is easy to grant, for you wrote me that if anyone ever tried to
do him or them an injury and you knew of it you would prevent it. The 315
truth should be told about Lysiclides; he is the only man who has come
from Sicily to Athens who has not given a distorted report of the relations

3. Alternatively, 'modernized'.

4. A doctor.

between us; he continues, as always, to put the best interpretation upon what happened.

## III

Plato to Dionysius, Greetings.

Is this the most appropriate way to address you, or should I wish you
b welfare, as I usually do in letters to my friends? You yourself, so I am told by those who were with you on the embassy to Delphi, addressed the god with this fawning expression, writing, they say,

Greetings to you! May you continue the pleasant life of the tyrant!

c For my part I should not address such an exhortation even to a man, far less to a god. To God it would be enjoining something contrary to nature, since the divine has its seat far removed from pleasure and pain; and as for man, pleasure and pain more often do harm, by breeding stupidity, forgetfulness, folly, and insolence in his soul. But enough from me on the subject of salutations; read this and make whatever use you please of it.

d Not a few persons have reported to me that you are telling it about among the ambassadors to your court that once, when I heard you announce your intention to resettle the Greek cities in Sicily and relieve Syracuse by changing your government from a tyranny to a kingship, I dissuaded you, you say, though you were very eager; but that now I am instructing Dion
e to do these very things, and thus we are using your own ideas to wrest your empire from you. You know best whether you gain anything by such tales; in any case you are doing me wrong in telling the exact opposite of what happened. I have been slandered enough by Philistides and numerous other persons before the mercenaries and the people of Syracuse, because I was living in the citadel; and those outside, if any mistake was made, blamed it all on me, saying that you obeyed me in all things. You yourself
316 know quite well that on political matters I willingly labored with you on only a few things at the beginning, when I thought I could do some good. Besides other minor matters, I did considerable work on the preambles to the laws, i.e., on those parts distinct from what you or someone else has added. For I hear that some of you have since been revising them; but which parts are mine and which yours will be obvious to anyone who is able to judge of my character.[1] But as I have just said, I don't need to be further misrepresented, either to the people of Syracuse or to anyone else whom these words of yours may influence; rather I need to be defended
b against those earlier charges as well as against these graver and more malicious ones that have since appeared. Since, then, I am accused on two counts, I must make a twofold defense and show, first, that it was reason-

1. Alternatively, "to recognize my style."

able of me to avoid taking part in your affairs of state, and secondly, that
it was not my advice that prevented you, as you say, and stood in your
way when you were going to resettle the Greek cities. So now hear first c
my defense on the former of these two points.

I came to Syracuse at the joint invitation of you and Dion. The latter
was an old and well-tried friend of mine, of mature age and settled charac-
ter; and these qualities, as any man with a grain of sense can see, were
absolutely necessary for advising upon problems as important as yours
were at that time. You, on the contrary, were quite young, with almost no
experience in the affairs with which you should have been acquainted,
and were quite unknown to me. Shortly after—whether it was a man, or d
God, or chance working through you that was responsible—Dion was
banished. Do you think that I could then co-operate with you in state
affairs, when I had lost my wise colleague and saw the foolish one left, a
ruler only in his own imagination, in reality being ruled by the crowd of
unscrupulous men around him? What was my duty under those condi-
tions? Was it not to do what I did, i.e., to let public affairs alone from that e
time on, protecting myself against the slanders of those who envied me,
and trying above all to make you [and Dion] friends again, if possible,
despite the differences that had arisen to separate you? You yourself can
testify that this is the end for which I never ceased to labor. Eventually,
though with difficulty, we came to an agreement. Since you had a war on
your hands, I was to take ship for home; but after peace had been brought 317
about, both Dion and I were to return to Syracuse and you were to summon
us. These are the facts of my first visit to Syracuse and my safe return home.

When peace had come you sent for me a second time, not, however, in
accordance with our agreement, for you invited me only, promising to
recall Dion later. On this account I refused to come, much to Dion's displea-
sure, for he thought it would be better for me to come as you commanded. b
A year later a trireme arrived with letters from you, the main import of
which was that if I would come, Dion's affairs would be settled in accor-
dance with my desires, but the contrary if I did not. I hesitate to say how
many letters at that time came from you and from others in Italy and
Sicily who wrote at your request, and to how many of my friends and c
acquaintances they were sent, all urging in the strongest terms that I accede
to your request and go. Thus it seemed to everyone, beginning with Dion,
that I ought to take ship without hesitation. I kept protesting to them that
I was old, and insisting that you would not be strong enough to resist
those who were slandering me and wished to make us enemies. For I saw
then as I see now that a great and swollen fortune, whether the possessor
be a private person or a monarch, generally produces an equally numerous d
and mighty progeny of talebearers and companions in shameless pleasures;
this is the worst result of wealth or power of any sort. Nevertheless I
dismissed all these thoughts and came to you, determined that no friend
of mine should ever be able to claim that he had lost all his goods when
they could have been saved by my efforts. Upon my arrival (you know,

e of course, all that happened thereafter) I demanded, in accordance with
the promises made in your letters, first that you recall Dion and make him
your friend—urging that friendship which, if you had then listened to me,
would probably have been better for you and for Syracuse and for the
rest of Greece than what we now have, or so my inner oracle tells me. In
the second place I asked that Dion's property be held by his family, instead
318 of being apportioned among the executors whose names I need not men-
tion. Furthermore, I thought that my presence with you made it more
rather than less obligatory upon you to continue the annual revenues
you had been sending to Dion. Failing in each of these requests, I asked
permission to depart. Your next move was to urge me to remain for the
year, saying that you would sell the whole of Dion's property and send
half the proceeds to Corinth, retaining the other half there in Syracuse for
b Dion's son. I could mention many promises that you made and did not
keep, but they are numerous and I must be brief. After you had sold all
his property and without Dion's consent (though you had said you would
not sell it without his consent), then, my fine friend, you put the colophon
on all your broken promises. You hit upon a scheme that was neither
honorable nor fitting, nor just nor advantageous, to frighten me into ignor-
ing what was going on so that I would not even ask for the dispatch of
c Dion's money. After you had banished Heraclides (an act which neither
I nor the people of Syracuse thought just), the fact that I had joined with
Theodotes and Eurybius in begging you not to do this you took as a
sufficient pretext and said that it had long been clear that I cared nothing
for you, but only for Dion and his friends and followers; and that now
when accusations had been made against Heraclides and Theodotes, who
d were friends of Dion, I was doing all in my power to keep them from
being punished.

But enough of our partnership in political affairs. If you noted in me
any other evidences of estrangement from you, you may rightly explain
them in the same way. What would you expect? Any reasonable man
would properly think me a knave if I had been seduced by the greatness
of your power to desert an old comrade and guest-friend in the distress
that you had brought him to (and a man in no way inferior to you, if I
e may say so) and had chosen you who were the cause of his wrongs, and
had fallen in with all your plans, evidently for the sake of money; for no
one would have thought there was any other reason for such a change in
me, if I had so changed. It is these events, brought about by you as I have
described, that are responsible for the estrangement and wolf-friendship
between us.

And now comes, almost as an immediate consequence of the foregoing,
my statement on the second point on which I said I should have to defend
319 myself. Attend carefully and see if you can detect any falsehood or untruth
in what I say. I declare that about twenty days before my departure from
Syracuse for home, when Archedemus and Aristocritus were with us in
the garden, you brought against me the same reproach that you now make,

that I cared more for Heraclides and all the rest than I did for you. In their presence you asked me whether I remembered advising you, when I first
arrived, to resettle the Greek cities. I admitted that I remembered it, and b
said I still thought that was the best policy. And I must remind you, Dionysius, of what was said immediately afterwards. I asked, as you remember, whether this was all my advice, or whether there was something more; and you replied, with considerable anger and derision, as you thought (whence it has come about that what you then derided is no longer a dream but a reality),[2] and said, with a very forced laugh, "I remember
well;[3] you told me to get an education, or leave all these projects alone." c
I replied that your memory was excellent. "And this education," you said, "was to be in geometry, was it not?" I refrained from giving the reply that occurred to me, fearing lest a little word might narrow my prospect of sailing home, to which I was then looking forward with confidence.

Now the reason for all I have said is this: don't slander me by saying that
I would not allow you to resettle the Greek cities destroyed by barbarians, or d
to relieve the people of Syracuse by changing your tyranny into a kingship. No lie you could possibly tell about me would be less appropriate; and there is more and even clearer evidence that I could submit for examination, if ever there should be a competent inquiry into the matter, that it was I who urged you to these projects and you who refused to undertake them. And it is not hard to show that they were the best things that could have been done for you and the people of Syracuse and all Sicily.

And now, my friend, if you deny that you have said any of these things e
that you said, that is all the justice I ask; but if you agree that you said them, then follow the wise example of Stesichorus, imitate his recantation, and change your lies to truth.

## IV

Plato to Dion of Syracuse, Welfare.

I think my good will towards your enterprise has been evident from 320
the beginning, as well as my earnest desire to see it brought to completion,
for no other reason than admiration for noble deeds. For I deem it right b
that the men who really possess virtue and exemplify it in their conduct should receive the glory that is due them. All has gone well so far, thank God, but the greatest contest lies ahead. Strength, courage, and cleverness are qualities in which others also may win distinction; but to be

2. Dionysius' contempt for the ideal of a philosophical ruler, it is implied, brought about the victory of Dion and the triumph (or so it seemed at the time) of Plato's political ideals.

3. Accepting the emendation *eu memnēmai* in c1, and taking it as a part of the tyrant's reply.

preeminent above others in truthfulness, justice, high-mindedness, and
c the grace of conduct which these virtues express—this is what would by
general consent be expected of those who profess to honor these traits of
character. What I say is obvious; nevertheless we must keep reminding
ourselves that these men (you know whom I mean) ought to stand out so
that the rest of mankind will be as children in comparison. We must make
it manifest that we are really the sort of men we say we are, particularly
d since, by God's help, it can easily be done. Other men have to travel far
and wide if they are to become known; but the events of which you are
the center are such that the whole world, to speak somewhat boastfully,
has its eyes upon one place, and upon you especially in that place. You
are the object of universal interest; make ready, then, to eclipse Lycurgus
and Cyrus and anyone else deemed preeminent in character and statesman-
ship, especially since many people (indeed most people) here are saying
e that with Dionysius out of the way your cause will in all likelihood come
to ruin through your ambitions and those of Heraclides, Theodotes, and
the other notables. May no such dissension arise; but if it does, you must
321 show that you can heal it and all will be well. You will no doubt smile at
my saying this, for you are yourself aware of the danger. But I have noticed
that competitors in the games are spurred on by the shouts of the children,
and still more by those of their friends, when they think that the cheering
springs from sincerity and good will. Be you then the contestants, and
write us when we can help you.

b Matters here are almost the same as when you were with us. Write us
also what you have done or are doing, since we hear many reports but
know nothing surely. Letters have just now come to Lacedaemon and
Aegina from Theodotes and Heraclides, but as I said, though we hear
many rumors from the people here,[1] we know nothing. Remember that
some persons think you are not sufficiently obliging; don't forget that one
c must please men if one would do anything with them, whereas self-will
is fit only for solitude. Good luck!

## V

PLATO TO PERDICCAS,[2] WELFARE.

I have advised Euphraeus, as you wrote me, to look studiously after
your interests, and it is right that I should give you also the proverbial
"holy counsel" of a friend on the various matters you mention, and
d particularly as to the use you should now make of Euphraeus. The man
can be of service to you in many ways, but most of all in supplying what
you now lack, for you are young and there are not many who can counsel

1. Accepting the emendation *akouontes per tōn tēide* in b4–5.

2. Perdiccas III, elder brother of Philip and king of Macedon from 364 to 359.

young men about it. Constitutions, like species of animals, have each their
own language—democracy one, oligarchy another, and monarchy still
another. Many persons would say they know these languages, but for the e
most part, and with rare exceptions, they fall short of understanding them.
The constitution that speaks its own language to gods and men, and suits
its actions to its words, always prospers and survives; but it goes to ruin
if it imitates another. Now in this Euphraeus can perhaps be of most use
to you, though he will be a manly aid in other respects as well; I believe 322
that he can search out the words appropriate to monarchy as well as any
man in your service. Use him, then, for this, and you will not only profit
yourself but confer upon him a very great benefit.

If anyone hears this and says, "Plato apparently claims to know what
is good for a democracy, but though he is at liberty to speak in the assembly
and give it his best advice, he has never yet stood up and said a word,"
you can answer by saying, "Plato was born late in the life of his native
city, and he found the demos advanced in years and habituated by former b
advisers to many practices incompatible with the advice he would give.
Nothing would be sweeter to him than to give advice to the demos as to
a father, if he did not think he would be risking danger in vain and
accomplish nothing. He would do the same about advising me, I know.
If we seemed to him incurable, he would bid us a long farewell and refrain
from advising about me or my affairs." Good luck! c

# VI

PLATO TO HERMIAS AND ERASTUS AND CORISCUS,[1] WELFARE.

It is evident to me that some god has graciously and generously prepared
good luck for you, if you receive his gift properly. For you are living as
neighbors to one another and each of you needs what the others can best d
supply. Hermias should know that his power for all purposes has its
greatest support not in the number of his horses or other equipment of
war, nor in the gold he adds to his treasury, but in steadfast friends of
solid character. And to Erastus and Coriscus I say, "old as I am," that they
need to supplement their knowledge of the Ideas—that noble doctrine—
with the knowledge and capacity to protect themselves against wicked e
and unjust men. They are inexperienced, since they have spent a great
part of their lives with us, among men of moderation and good will; this
is why I said they need some power to protect them, that they may not
be forced to neglect the true wisdom and concern themselves more than
is fitting with that which is worldly and necessary. Now this power that

1. Hermias was tyrant of Atarneus and Assos in the Troad; Erastus and Coriscus were members of the Academy.

they need Hermias apparently possesses, both as a natural gift (so far as one
323 may judge without knowing him), and as an art perfected by experience.
What is the point of these remarks? To you, Hermias, since I have known
Erastus and Coriscus longer than you have, I solemnly declare and bear
witness that you will not easily find more trustworthy characters than
these neighbors of yours, and I therefore advise you to make it a matter
of central importance to attach yourself to them by every honorable means.
Coriscus and Erastus in their turn I advise to hold fast to Hermias and to
b try to develop this mutual alliance into a bond of friendship. If ever any
one of you should seem to be weakening this union (for nothing human
is altogether secure), send a letter to me and my friends declaring the
grievance; for unless the injury be very grave, I believe your sense of justice
and your respect for us will make the words that we may send more
efficacious than any incantation would be in binding up the wound and
causing you to grow together again into friendship and fellowship as
c before. If all of us, you and we alike, according to our several abilities and
opportunities, apply our wisdom to the preservation of this bond, the
prophecies I have just uttered will come true. What will happen if we do
not, I will not say, for I am prophesying only what is good, and I declare
that with God's help we shall bring all these things to a good issue.

Let this letter be read, if possible, by all three of you gathered together,
otherwise by twos, and as often as you can in common. Adopt it as a just
d and binding law and covenant, taking a solemn oath—in gentlemanly
earnest, but with the playfulness that is the sister of solemnity—in the
name of the divine letter of all things present and to come, and in the
name of the lordly father of this governor and cause, whom we shall all
some day clearly know, in so far as the blessed are able to know him, if
we truly live the life of philosophy.

## VII

Plato to the Friends and Followers of Dion, Welfare.

You have written me that I must consider your aims as identical with
those that Dion had, and you therefore urge me to co-operate with you
324 as much as I can, both in word and in deed. My answer is that if your
views and purposes are really the same as his, I agree to join with you; if
not, I shall have to consider the matter further. What his principles and
ambitions were I can tell you, I may say, not from conjecture, but from
certain knowledge. For when I first came to Syracuse, being then about
forty years of age, Dion was of the age that Hipparinus is now; and it was
b then that he came to the opinions which he continued to hold until the
end; the Syracusans, he thought, ought to be free and live under the best
of laws. It would not then be surprising if some divine power should bring
Hipparinus also to the same mind that Dion had about government. To

learn the way in which these convictions come about is instructive to
young and old alike; and since the present occasion seems appropriate, I
will try to describe how they originated in my own case.

When I was a young man I had the same ambition as many others: I
thought of entering public life as soon as I came of age. And certain
happenings in public affairs favored me, as follows. The constitution we c
then had, being anathema to many, was overthrown; and a new govern-
ment was set up consisting of fifty-one men, two groups—one of eleven
and another of ten—to police the market place and perform other necessary
duties in the city and the Piraeus respectively, and above them thirty other d
officers with absolute powers. Some of these men happened to be relatives
and acquaintances of mine, and they invited me to join them at once in
what seemed to be a proper undertaking. My attitude toward them is not
surprising, because I was young. I thought that they were going to lead
the city out of the unjust life she had been living and establish her in the
path of justice, so that I watched them eagerly to see what they would do.
But as I watched them they showed in a short time that the preceding
constitution had been a precious thing. Among their other deeds they e
named Socrates, an older friend of mine whom I should not hesitate to
call the justest man of that time, as one of a group sent to arrest a certain
citizen[1] who was to be put to death illegally, planning thereby to make 325
Socrates willy-nilly a party to their actions. But he refused, risking the
utmost danger rather than be an associate in their impious deeds. When
I saw all this and other like things of no little consequence, I was appalled
and drew back from that reign of injustice.[2] Not long afterwards the rule
of the Thirty was overthrown and with it the entire constitution; and once
more I felt the desire, though this time less strongly, to take part in public b
and political affairs. Now many deplorable things occurred during those
troubled days, and it is not surprising that under cover of the revolution
too many old enmities were avenged; but in general those who returned
from exile[3] acted with great restraint. By some chance, however, certain
powerful persons brought into court this same friend Socrates, preferring
against him a most shameless accusation, and one which he, of all men, c
least deserved. For the prosecutors charged him with impiety, and the
jury condemned and put to death the very man who, at the time when
his accusers were themselves in misfortune and exile, had refused to have
a part in the unjust arrest of one of their friends.

The more I reflected upon what was happening, upon what kind of men
were active in politics, and upon the state of our laws and customs, and
the older I grew, the more I realized how difficult it is to manage a city's
affairs rightly. For I saw it was impossible to do anything without friends d

1. Leon of Salamis. See *Apology* 32c–d.
2. Alternatively, "from those evil men."
3. Supporters of the democracy.

and loyal followers; and to find such men ready to hand would be a piece
of sheer good luck, since our city was no longer guided by the customs
and practices of our fathers, while to train up new ones was anything
but easy. And the corruption of our written laws and our customs was
e proceeding at such amazing speed that whereas at first I had been full of
zeal for public life, when I noted these changes and saw how unstable
everything was, I became in the end quite dizzy; and though I did not
cease to reflect how an improvement could be brought about in our laws
326 and in the whole constitution, yet I refrained from action, waiting for the
proper time. At last I came to the conclusion that all existing states are
badly governed and the condition of their laws practically incurable, with-
out some miraculous remedy and the assistance of fortune; and I was
forced to say, in praise of true philosophy, that from her height alone was
it possible to discern what the nature of justice is, either in the state or in
b the individual, and that the ills of the human race would never end until
either those who are sincerely and truly lovers of wisdom come into
political power, or the rulers of our cities, by the grace of God, learn
true philosophy.

Such was the conviction I had when I arrived in Italy and Sicily for the
first time. When I arrived and saw what they call there the "happy life"—
a life filled with Italian and Syracusan banquets, with men gorging them-
selves twice a day and never sleeping alone at night, and following all the
c other customs that go with this way of living—I was profoundly displeased.
For no man under heaven who has cultivated such practices from his
youth could possibly grow up to be wise—so miraculous a temper is
against nature—or become temperate, or indeed acquire any other part of
virtue. Nor could any city enjoy tranquillity, no matter how good its laws,
d when its men think they must spend their all on excesses, and be easygoing
about everything except the feasts and the drinking bouts and the pleasures
of love that they pursue with professional zeal. These cities are always
changing into tyrannies, or oligarchies, or democracies, while the rulers
in them will not even hear mention of a just and equitable constitution.

These, plus the conviction previously mentioned, were my thoughts on
e coming to Syracuse—a coming which may have been mere coincidence,
but which seems to have been the work of some higher power laying then
the foundation for what has since come to pass with respect to Dion and
Syracuse; and for still further misfortunes, too, I fear, unless you now obey
327 the advice which I am giving for the second time. How can I say that my
coming to Sicily then was the beginning of it all? In my association with
Dion, who was then a young man, I imparted to him my ideas of what
was best for men and urged him to put them into practice; and in doing
so I was in a way contriving, though quite unwittingly, the destruction of
the tyranny that later came to pass. For Dion was in all things quick to
learn, especially in the matters upon which I talked with him; and he
listened with a zeal and attentiveness I had never encountered in any
b young man, and he resolved to spend the rest of his life differently from

most Italians and Sicilians, since he had come to love virtue more than
pleasure and luxury. For this reason his way of life was more than annoying
to those who guided themselves by the practices of tyranny, until the death
of Dionysius. After that event he conceived that these convictions which
he himself had got from proper instruction might arise in others besides c
himself; and observing that they were in fact making their appearance in
the minds of some, at least, of his associates, he thought that by the help
of the gods Dionysius himself might be counted among this number; and
if this should happen, it would mean an incalculably blessed life for the
tyrant himself and the other Syracusans. Furthermore, he thought that by
all means I should come to Syracuse as soon as possible and become a
partner in his plans, for he recalled our conversations together and how d
effectively they had aroused in him the desire for a life of nobility and
virtue. If now he could arouse this desire in Dionysius, as he was attempting
to do, he had high hopes of establishing throughout the land a true and
happy life, without the massacres and deaths and the other evils that have
come to pass. With this just purpose in mind Dion persuaded Dionysius
to send for me, and he himself wrote urging me by all means to come at e
once before certain others came in contact with Dionysius and diverted
him to a less worthy ideal of life. His petition, though too long to give in
full, was as follows: "What better opportunity can we expect," he said,
"than the situation which Providence has presented us with?" He men-
tioned the empire in Italy and Sicily, his own power in it, the youth of 328
Dionysius, and the eager interest he was showing in philosophy and cul-
ture; Dion's nephews and other relatives, he said, could be easily persuaded
to accept the life and doctrine that I have always taught, and would be a
very strong additional influence upon Dionysius; so that now, if ever,
might we confidently hope to accomplish that union, in the same persons,
of philosophers and rulers of great cities.

These and many other like arguments he addressed to me. For my own b
part I felt a certain anxiety, since one never knows how young men will
turn out, for their desires arise quickly and often change to their contraries;
but Dion's character, I knew, was steadfast by nature and he had already
reached middle age. Consequently I weighed the question and was uncer-
tain whether or not to yield to his urging and undertake the journey. What
tipped the scales eventually was the thought that if anyone ever was to
attempt to realize these principles of law and government, now was the c
time to try, since it was only necessary to win over a single man and I
should have accomplished all the good I dreamed of. This, then, was the
"bold" purpose I had in setting forth from home, and not what some
persons ascribed to me. Above all I was ashamed lest I appear to myself
as a pure theorist, unwilling to touch any practical task—and I saw that
I was in danger of betraying Dion's hospitality and friendship at a time d
of no little real danger to him. Suppose he should be killed or banished
by Dionysius and his other enemies and should come to me in his exile
and say, "Here I am, Plato, a fugitive, not because I lacked hoplites or

horsemen to ward off my enemies, but only for need of the persuasive words by which, as I well know, you are always able to turn young men towards goodness and justice and make them friends and comrades of
e one another. This weakness which you could have remedied is the cause of my being here in exile from Syracuse. But my own misfortune is a small part of your dishonor. You are always praising philosophy, and saying she is held in little esteem by the rest of mankind; but in betraying me now have you not, by neglecting this opportunity, also betrayed her? If
329 we had happened to be living in Megara you would certainly have come as a helper in answer to my call, or you would consider yourself the most trifling of men. And now do you think you can escape the charge of cowardice by pleading the length of the journey, the greatness of the voyage and its fatigue? Far from it." To words of this sort what respectable answer could I give? None. And so from motives as rational and just as
b is humanly possible I departed, giving up for those reasons my occupations here, which are not without dignity, to live under a tyranny seemingly unsuited both to my doctrines and to me. In so going I discharged my obligation to Zeus Xenios[4] and cleared myself of reproach from philosophy, which would have been dishonored if I had incurred disgrace through softness or cowardice.

When I arrived—to make the story short—I found the court of Dionysius full of faction and of malicious reports to the tyrant about Dion. I defended
c him as well as I could, but I was able to do very little; and about the fourth month Dionysius, charging Dion with plotting against the tyranny, had him put aboard a small vessel and exiled in disgrace. Thereupon we friends of Dion were all afraid that one of us might be accused and punished as an accomplice in Dion's conspiracy. About me there even went abroad in Syracuse a report that I had been put to death by Dionysius as the cause
d of all that had happened. But Dionysius, seeing how we all felt, and apprehensive lest our fears might lead to something even graver, treated us all kindly, and me especially he reassured, telling me to have no fear and earnestly begging me to remain; for there was no honor for him in my leaving, he said, but only in my remaining. For this reason he made a great pretense of begging me, but we know that the requests of tyrants are mingled with compulsion. He devised a means for preventing my
e departure by bringing me inside the citadel and lodging me there, whence no ship's captain would have dared to take me away without a messenger sent from Dionysius himself commanding him to do so, still less if Dionysius had forbidden it. Nor would any merchant or guard along the roads leading out of the country have let me pass alone, but would have taken me in charge at once and brought me back to Dionysius, especially since
330 another report had already got abroad, contrary to the earlier one, that Dionysius was wonderfully fond of Plato. What in fact was the situation? With the passage of time Dionysius, I must truly say, did become more

4. Zeus the protector of strangers, the guardian of the obligations of hospitality.

and more attached to me as he became more familiar with my manner
and character; but he wanted me to praise him more than I did Dion
and value his friendship more highly, and he was marvelously persistent
towards this end. How this could best have come about, if at all, was
through his becoming my disciple and associating with me in discourse b
about philosophy; but he shrank from this, for the intriguers had made him
fear that he would be entrapped, so that Dion would have accomplished his
purposes. I put up with all this, however, holding fast to the original
purpose for which I had come, hoping that he might somehow come to
desire the philosophic life; but I never overcame his resistance.

These, then, were the circumstances that account for my first visit to
Sicily and occupied the time of my sojourn there. Afterwards I came home, c
only to return again at the urgent summons of Dionysius. Why I returned
and what I did, with the explanation and justification of my actions, I will
go into later for the benefit of those who wonder what my purpose was
in going a second time. But in order that these incidental matters may not
usurp the chief place in my letter, I will first advise what is to be done in
the present circumstances. This, then, is what I have to say.

When one is advising a sick man who is living in a way injurious to his
health, must one not first of all tell him to change his way of life and give d
him further counsel only if he is willing to obey? If he is not, I think any
manly and self-respecting physician would break off counseling such a
man, whereas anyone who would put up with him is without spirit or
skill. So too with respect to a city: whether it be governed by one man or
many, if its constitution is properly ordered and rightly directed, it would
be sensible to give advice to its citizens concerning what would be to the e
city's advantage. But if it is a people who have wandered completely away
from right government and resolutely refuse to come back upon its track
and instruct their counselor to leave the constitution strictly alone, threaten- 331
ing him with death if he changes it, and order him instead to serve their
interests and desires and show them how they can henceforth satisfy them
in the quickest and easiest way—any man, I think, who would accept such
a role as adviser is without spirit, and he who refuses is the true man.
These are my principles; and whenever anyone consults me on a question
of importance in his life, such as the making of money, or the care of his b
body or soul, if it appears to me that he follows some plan in his daily
life or is willing to listen to reason on the matters he lays before me, I
advise him gladly and don't stop with merely discharging my duty. But
a man who does not consult me at all, or makes it clear that he will not
follow advice that is given him—to such a man I do not take it upon
myself to offer counsel; nor would I use constraint upon him, not even if
he were my own son. Upon a slave I might force my advice, compelling
him to follow it against his will; but to use compulsion upon a father or
mother is to me an impious act, unless their judgment has been impaired c
by disease. If they are fixed in a way of life that pleases them, though it
may not please me, I should not antagonize them by useless admonitions,

nor yet by flattery and complaisance encourage them in the satisfaction
of desires that I would die rather than embrace. This is the principle which
a wise man must follow in his relations towards his own city. Let him
d warn her, if he thinks her constitution is corrupt and there is a prospect
that his words will be listened to and not put him in danger of his life;
but let him not use violence upon his fatherland to bring about a change
of constitution. If what he thinks is best can only be accomplished by the
exile and slaughter of men, let him keep his peace and pray for the welfare
of himself and his city.

In this way, then, I venture to advise you, as Dion and I used to advise
Dionysius, first of all to make his daily life such as to give him the greatest
e possible mastery over himself and win him loyal friends and followers.
In so doing, we said, he might avoid his father's experience when, after
taking over many great cities in Sicily that had been laid waste by the
barbarians, he was unable at their resettlement to establish loyal govern-
ments in them. For he had no comrades to head these governments, neither
among foreigners, nor among his own brothers whom he had trained in
332 their youth (since they were younger than himself) and raised from private
to royal station and from poverty to great wealth. None of these was he
able, either by persuasion or by teaching, by benefits conferred or by ties
of kinship, to make an associate in his empire. In this respect he was seven
times weaker than Darius, who had neither brothers to rely upon, nor
persons trained by himself, but only those who helped him to overthrow
b the Mede and the Eunuch. He distributed among them seven provinces,
each one greater than all Sicily, and he found them to be loyal, for they
did not attack him or one another; and in so doing he set an example of
what a good lawgiver and king should be, for he established laws that
have kept the Persian empire to this day. We have another example in the
Athenians, who took over the protection of a number of Hellenic cities
threatened by barbarians. Though the Athenians had not themselves settled
these cities but took them over already established, yet they maintained
c their power over them for seventy years because of the friends they made
in each of them. But Dionysius, though he united all Sicily into a single
city (for he knew that he could trust no one), was scarcely able to survive,
for he was poor in friends and loyal followers, and the possession or lack
of these is the best indication of a man's virtue or vice.

This is the advice that Dion and I gave to Dionysius, since his father's
d neglect had resulted in his being without culture and unused to associations
appropriate to his position. We said that once embarked upon the course
just mentioned[5] he should induce others among his relatives and compan-
ions to become friends and partners in the pursuit of virtue; but above all
to become a friend to himself, for in this respect he was incredibly deficient.
We did not say it thus openly, for that would not have been safe, but
made veiled references to his weakness, striving by our words to show

5. Accepting the emendation *epi tauta* at d3, with no lacuna in d2.

him that everyone must do this who would save himself and the people
over whom he rules, whereas any other course will accomplish his ruin e
and theirs. Let him take the path we pointed out and perfect himself in
wisdom and self-control; then if he should resettle the deserted cities of
Sicily, and bind them together with such laws and constitutions as would
make them friendly to himself and to one another and a mutual help
against the barbarians, he would have an empire not twice but actually
many times as powerful as his father's had been; he would be ready to 333
inflict upon the Carthaginians a far heavier defeat than they had suffered
in the days of Gelon, instead of paying tribute to these barbarians as he
was doing at present under the agreement his father had made.

These were the words of exhortation we addressed to Dionysius—we
who were conspiring against him, according to the reports that were current
on all sides. These reports finally prevailed with Dionysius, as you know,
bringing exile to Dion and fear to us his friends. But—to jump to the end b
of the many events of this short time—when Dion returned from the
Peloponnesus and Athens he indeed taught Dionysius a lesson. And then
when he had delivered the people of Syracuse and twice restored their
city to them, they felt towards Dion exactly as Dionysius had. For at the
time when Dion was endeavoring to educate Dionysius and form him into
a king worthy of the office, making himself thus a partner in all Dionysius'
life, Dionysius was giving ear to the slanderers who said that Dion was
conspiring against the tyrant in all that he was doing. The studies he c
enjoined were obviously intended, they said, to bewitch the mind of Diony-
sius so that he would neglect his kingdom and entrust it to Dion, who
would then make it his own and treacherously banish Dionysius from
power. These suspicions against Dion prevailed then as they did later
when circulated among the Syracusans; but their triumph was an unnatural
one and puts to shame those who were the cause of it. What sort of triumph
it was you ought to hear, you who have asked for my help in the present
crisis. I, an Athenian citizen, a friend of Dion and his ally, came to the d
tyrant in order to bring about friendship, not war, between them; but the
slanderers worsted me in this contest. And when Dionysius tried by honors
and gifts to persuade me to take his side and affirm that his banishment
of Dion had been proper, he failed utterly, as you know. Later Dion came
home bringing with him two brothers from Athens, friends whom he had e
acquired not through philosophy, but by way of that facile comradeship
which is the basis of most friendship, and which is cultivated by hospitality
and mystic rites and initiation into secrets; because of these associations
and the service they had rendered Dion in returning to Syracuse, these
two men who came with him had become his comrades. But when they 334
arrived in Sicily and saw how Dion was being slandered among the people
of Syracuse whom he had liberated, and was being accused of plotting to
become a tyrant, not only did they betray their comrade and host, but
they became as it were his murderers, since they stood by with arms in
their hands to assist his assassins. The shame and impiety of their action

I mention only, without dwelling upon it; many others will make it their
b theme both now and in time to come. But I cannot pass over what is said
about Athens, that these men brought dishonor on their city. Remember
that he also was an Athenian who refused to betray this same Dion when
by doing so he could have had money and honors in abundance. He had
become Dion's friend not through vulgar fellowship, but through common
liberal culture; and this alone should a sensible man trust, rather than
kinship of soul or body. Therefore I say that these two who murdered
c Dion were not worthy of bringing their city into discredit, for they were
never men of any consequence.

I have said all this for the purpose of advising Dion's friends and rela-
tives; and to all that has been said I add the same advice and the same
doctrine that I have given twice before. Do not subject Sicily nor any other
state to the despotism of men, but to the rule of laws; this at least is my
doctrine. For despotic power benefits neither rulers nor subjects, but is
d an altogether deadly experience for themselves, their children, and their
children's children; and no one grasps at the prizes it offers except petty
and illiberal souls who know nothing of the divine and human goods that
are now and for all time good and just. This is the doctrine that I endeavored
to bring home, first to Dion, next to Dionysius, and now for the third time
do so to you. Listen to me then, in the name of Zeus the Savior, to whom
this third libation belongs. Consider Dionysius and Dion, of whom one
e was deaf to my teachings and now lives ignobly, and the other listened
to me and died nobly; for it is altogether noble and right to suffer whatever
may come while aiming at the highest for oneself or one's city. None of
us can avoid death, nor if any man could would he be happy, as people
think; for there is nothing worth mentioning that is either good or bad to
335 creatures without souls, but good and evil exist only for a soul, either
joined with a body or separated from it. And we must always firmly
believe the sacred and ancient words declaring to us that the soul is
immortal, and when it has separated from the body will go before its
judges and pay the utmost penalties. Therefore we must count it a lesser
evil to suffer great wrongs and injustices than to do them, though this is
b a saying that the avaricious man, who is poor in the goods of the soul,
will not give ear to; or if he does, laughs it into silence, as he thinks, and
goes about like a wild beast snatching from every quarter whatever he
thinks will furnish him meat or drink or the satisfaction of that slavish
and graceless pleasure incorrectly called after Aphrodite. He is blind and
does not see what defilement his plunderings involve, nor how great an
evil attaches to each wicked act—a defilement which the evildoer necessar-
ily drags with him as he goes up and down the earth and follows his
c dishonorable and utterly wretched path to the world below.

Now Dion had accepted this and other similar teachings of mine, and
I may rightly be as indignant at his murderers as at Dionysius. Both parties
have done infinite wrong to me and, I may say, to all mankind—the first
two in striking down a man whose purpose was to realize justice, the

other in refusing to have anything to do with justice, though he possessed
every resource for making it prevail throughout his domain. If in his empire d
there had been brought about a real union of philosophy and power, it
would have been an illustrious example to both Greeks and barbarians,
and all mankind would have been convinced of the truth that no city nor
individual can be happy except by living in company with wisdom under
the guidance of justice, either from personal achievement of these virtues
or from a right training and education received under God-fearing rulers.
This is the center of my grievance against Dionysius; the other injuries e
that he has done to me are trivial in comparison. And he who murdered
Dion has unknowingly produced the same result. For of Dion I know, as
surely as a man can know anything about his fellow men, that if he had
held the power he would not have been diverted from using it for the
following purposes. First of all, with regard to Syracuse,[6] his native city, 336
after having cleansed her of her servitude and put on her the garment of
freedom, he would have made every effort to adorn her citizens with the
best and most suitable laws. Then he would have turned with ardor to the
next task, that of resettling all Sicily and liberating her from the barbarians,
driving out some of them and subjugating others, a thing he could have
done more easily than Hiero. Such deeds accomplished by a man of justice
and courage and temperance and philosophy would have produced in the b
multitude the same respect for virtue which, if Dionysius had listened to
me, would have made its saving appearance, one may say, among all
mankind. But now some daemon or avenging deity has fallen upon us,
and through disrespect for law and the gods, and worst of all, through
the audacity of ignorance—that soil in which all ills are rooted and grow,
to produce in the end a bitter fruit for those who have planted them—
such ignorance has a second time overturned all our plans and brought
them to naught.

But on this our third trial let us avoid saying anything of ill omen. In c
spite of previous misfortunes, I advise you, the friends of Dion, to imitate
his love for his country and his sober way of living and to try to carry
out, under better auspices, these plans of his; and what they were you
have clearly heard me explain. If there is anyone in your number who is
incapable of living in the Dorian fashion like your fathers and follows the
"Sicilian life" of the slayers of Dion, do not ask his help nor imagine that d
he will act loyally or dependably. But summon others to help you in
resettling all Sicily and equalizing her laws. Summon them not only from
Sicily herself, but from the whole of the Peloponnesus; and do not fear
even Athens, for Athens also has citizens preeminent in virtue who abhor
the shameless audacity of those who slay their hosts. But if these projects
I have mentioned must be deferred, because you are now hard pressed
by the many and diverse factions daily sprouting in your midst, then e
anyone to whom the gods have given a modicum of right opinion must

6. Accepting the emendation *ē epi tode. Surakousas* in a1.

know that there can be no end to the evils of faction until the party that
has gained the victory in these battles and in the exiling and slaughtering
337 of fellow citizens forgets its wrongs and ceases trying to wreak vengeance
upon its enemies. If it controls itself and enacts laws for the common good,
considering its own interests no more than those of the vanquished, the
defeated party will be doubly constrained, by respect and by fear, to follow
the laws—by fear because the other party has demonstrated its superior
force, and by respect because it has shown that it is able and willing to
conquer its desires and serve the law instead. In no other way can a city
b that is rent by factions bring its disorders to an end, but it will continue
to be divided within itself by strife and enmity, hatred and distrust.

Whenever, then, the victors desire to save their city, they must enter
into counsel with themselves and first of all select the most eminent Greeks
they can discover—old men, with wives and children at home, descended
from a long line of illustrious ancestors and each of them possessing a
c fair amount of property (fifty such men will be enough for a city of ten
thousand)—and these they must induce, by personal entreaties and by all
the honors at their disposal, to leave home and come to their aid; and
when they have come they must direct them to make laws, binding them
upon oath to award no more to the victors than to the vanquished, but to
consider only the equal and common good of the whole city. And then
when the laws have been laid down everything depends upon this. If the
d victors show themselves more eager than the vanquished to obey the laws,
then everything will be safe, happiness will abound, and all these evils
will take their flight. But let no one who refuses to abide by these principles
call upon me or anyone else for support. These proposals are akin to those
that Dion and I tried to accomplish for the benefit of Syracuse, but second
best. The best were those that we earlier tried to effect with the aid of
Dionysius himself [goods to be common to all]. But fortune is mightier
e than men and shattered our plans. Now it is for you to try to bring them
about with better luck, and may divine favor attend your efforts.

This, then, is my advice and admonition, and the account of my first
visit to Dionysius. As to my later journey across the water, whoever is
interested can learn from what follows that it was a reasonable and proper
venture. The early part of my first stay in Syracuse passed as I have
338 described it above before giving my advice to the relatives and friends of
Dion. After the events described, I made every effort to persuade Dionysius
to let me depart, and we came to an agreement that when peace was
restored (war was then going on in Sicily) and when Dionysius had made
his empire more secure, he would recall both Dion and me. He also asked
b Dion to consider himself not as having been exiled, but only banished.[7]
On these conditions I promised that I would return. After peace was
restored he sent for me, but Dion he asked to wait another year; me,
however, he urged most strongly to come. Dion consented, and even

7. Banishment did not involve the confiscation of the condemned person's property.

entreated me to set sail; in fact there were many reports coming from Sicily that Dionysius had now once more conceived a great desire for philosophy, and this was why Dion persistently urged me not to disobey the summons. But as for me, though I knew that philosophy often affects young men in this way, yet it seemed to me safer, for the present at least, to say farewell c
to my plans and let Dion and Dionysius alone; and I offended both of them by replying that I was an old man, and that what they were doing now did not at all accord with the agreement we had made. Now it seems that after this, Archytas visited Dionysius (for before my departure I had established relations of friendship and hospitality between Archytas and his Tarentine friends and Dionysius), and that there were certain other d
persons who had learned something from Dion, and others who had learned from them; and being full of these half-understood doctrines, they were apparently trying to converse with Dionysius about them as if he had mastered all my thought. Now he is not without natural capacity for learning, and besides is extraordinarily vain; and no doubt he was pleased to have these questions addressed to him, and ashamed to have it discovered that he had learned nothing during my stay. For these reasons he e
came to desire a clearer understanding, and at the same time his ambition spurred him on. (Why he did not learn from me during my first visit, I have described above.) When, therefore, I had got safely home and had, as I have just said, disregarded his summons to return, Dionysius' chief ambition, I think, was to prevent anyone from supposing that I had refused to come to his court because I had a contempt for his nature and character 339
and was displeased with his way of living. I must tell the truth, and put up with it if anyone, after hearing what happened, despises my philosophy and esteems the tyrant's intelligence. Dionysius summoned me a third time, sending a trireme to ease the journey for me, and with it certain Sicilian acquaintances of mine, among them Archedemus, one of the associates of Archytas and a man whom, as he knew, I valued the most highly b
of all men in Sicily. These all brought me the same story of the marvelous progress Dionysius was making in philosophy. He knew of my feelings towards Dion and of Dion's desire to have me embark and go to Syracuse; so he wrote me a very lengthy letter, evidently composed with these facts in view. The beginning of it was about as follows: "Dionysius to Plato," then the customary salutations, and immediately afterwards, "If you come c
at once to Syracuse as we have requested, first of all the issues that concern Dion will be settled in whatever way you desire (for I know you will desire only what is fair and I agree to this); but if not, none of these questions, whether touching Dion's person or any other matter, will be settled to your liking." Such were his words; to give the rest of the letter would take too much space and would not be pertinent here. Other letters kept coming to me from Archytas and the Tarentines praising Dionysius' d
philosophy and saying that if I did not come now the friendship I had brought about between them and Dionysius, a friendship which was of no little importance to their state, would be broken off. Now when the

summons had taken on this character, with my friends in Sicily and Italy
pulling me and those at Athens almost pushing me away with their urging,
e the same consideration occurred to me as before, that I ought not to betray
my friends and followers in Tarentum. Besides, I thought, it is not an
unusual thing that a young man of native intelligence who has overheard
some talk of lofty matters should be seized by a love for an ideal of life.
I ought then to test the situation clearly to see on which side the truth lay,
and by no means to give up in advance and expose myself to the blame
340 that would rightly fall upon me if these reports should really be true. I
set off, therefore, under cover of this reasoning, though with many fears
and forebodings of evil, as can well be understood. "The third time to the
Savior," runs the proverb;[8] and my third journey at least confirmed its
truth, for by good luck I again came off safely; and next to God I thank
Dionysius for it, because there were many determined to destroy me, but
he prevented them and showed a certain respect for me and my position.

b When I arrived, I thought my first task was to prove whether Dionysius
was really on fire with philosophy, or whether the many reports that came
to Athens were without foundation. Now there is a certain way of putting
this to the test, a dignified way and quite appropriate to tyrants, especially
to those whose heads are full of half-understood doctrines, which I saw
at once upon my arrival was particularly the case with Dionysius. You
must picture to such men the extent of the undertaking, describing what
c sort of inquiry it is, with how many difficulties it is beset, and how much
labor it involves. For anyone who hears this, who is a true lover of wisdom,
with the divine quality that makes him akin to it and worthy of pursuing
it, thinks that he has heard of a marvelous quest that he must at once enter
upon with all earnestness, or life is not worth living; and from that time
forth he pushes himself and urges on his leader without ceasing, until he
has reached the end of the journey or has become capable of doing without
d a guide and finding the way himself. This is the state of mind in which
such a man lives; whatever his occupation may be, above everything and
always he holds fast to philosophy and to the daily discipline that best
makes him apt at learning and remembering, and capable of reasoning
soberly with himself; while for the opposite way of living he has a persistent
hatred. Those who are really not philosophers but have only a coating of
opinions, like men whose bodies are tanned by the sun, when they see
how much learning is required, and how great the labor, and how orderly
e their daily lives must be to suit the subject they are pursuing, conclude
that the task is too difficult for their powers; and rightly so, for they are
341 not equipped for this pursuit. But some of them persuade themselves that
they have already sufficiently heard the whole of it and need make no
further effort. Now this is a clear and infallible test to apply to those who
love ease and are incapable of strenuous labor, for none of them can ever

8. See 334d above.

blame his teacher, but only himself, if he is unable to put forth the efforts
that the task demands.

It was in this fashion that I then spoke to Dionysius. I did not explain
everything to him, nor did he ask me to, for he claimed to have already
a sufficient knowledge of many, and the most important, points because b
of what he had heard others say about them. Later, I hear, he wrote a
book on the matters we talked about, putting it forward as his own teaching,
not what he had learned from me. Whether this is true I do not know. I
know that certain others also have written on these same matters; but who
they are they themselves do not know. So much at least I can affirm with
confidence about any who have written or propose to write on these c
questions, pretending to a knowledge of the problems with which I am
concerned, whether they claim to have learned from me or from others
or to have made their discoveries for themselves: it is impossible, in my
opinion, that they can have learned anything at all about the subject. There
is no writing of mine about these matters, nor will there ever be one. For
this knowledge is not something that can be put into words like other
sciences; but after long-continued intercourse between teacher and pupil,
in joint pursuit of the subject, suddenly, like light flashing forth when a
fire is kindled, it is born in the soul and straighway nourishes itself. And d
this too I know: if these matters are to be expounded at all in books or
lectures, they would best come from me. Certainly I am harmed not least
of all if they are misrepresented. If I thought they could be put into written
words adequate for the multitude, what nobler work could I do in my life
than to compose something of such great benefit to mankind and bring
to light the nature of things for all to see? But I do not think that the e
"examination," as it is called, of these questions would be of any benefit
to men, except to a few, i.e., to those who could with a little guidance
discover the truth by themselves. Of the rest, some would be filled with
an ill-founded and quite unbecoming disdain, and some with an exagger-
ated and foolish elation, as if they had learned something grand.

Let me go into these matters at somewhat greater length, for perhaps 342
what I am saying will become clearer when I have done so. There is a
true doctrine that confutes anyone who has presumed to write anything
whatever on such subjects, a doctrine that I have often before expounded,
but it seems that it must now be said again. For every real being, there
are three things that are necessary if knowledge of it is to be acquired:
first, the name; second, the definition; third, the image; knowledge comes b
fourth, and in the fifth place we must put the object itself, the knowable
and truly real being. To understand what this means, take a particular
example, and think of all other objects as analogous to it. There is something
called a circle, and its name is this very word we have just used. Second,
there is its definition, composed of nouns and verbs. "The figure whose
extremities are everywhere equally distant from its center" is the definition
of precisely that to which the names "round," "circumference," and "circle"
apply. Third is what we draw or rub out, what is turned or destroyed; c

but the circle itself to which they all refer remains unaffected, because it
is different from them. In the fourth place are knowledge (*epistēmē*), reason
(*nous*), and right opinion (which are in our minds, not in words or bodily
shapes, and therefore must be taken together as something distinct both
from the circle itself and from the three things previously mentioned); of
d these, reason is nearest the fifth in kinship and likeness, while the others
are further away. The same thing is true of straight-lined as well as of
circular figures; of color; of the good, the beautiful, the just; of body in
general, whether artificial or natural; of fire, water, and all the elements;
of all living beings and qualities of souls; of all actions and affections. For
e in each case, whoever does not somehow grasp the four things mentioned
will never fully attain knowledge of the fifth.

These things, moreover, because of the weakness of language, are just
as much concerned with making clear the particular property of each object
343 as the being of it. On this account no sensible man will venture to express
his deepest thoughts in words, especially in a form which is unchangeable,
as is true of written outlines. Let us go back and study again the illustration
just given. Every circle that we make or draw in common life is full of
characteristics that contradict the "fifth," for it everywhere touches a
straight line, while the circle itself, we say, has in it not the slightest element
belonging to a contrary nature. And we say that their names are by no
b means fixed; there is no reason why what we call "circles" might not be
called "straight lines," and the straight lines "circles," and their natures
will be none the less fixed despite this exchange of names. Indeed the
same thing is true of the definition: since it is a combination of nouns and
verbs, there is nothing surely fixed about it. Much more might be said to
show that each of these four instruments is unclear, but the most important
point is what I said earlier: that of the two objects of search—the particular
c quality and the being of an object—the soul seeks to know not the quality
but the essence, whereas each of these four instruments presents to the
soul, in discourse and in examples, what she is not seeking, and thus
makes it easy to refute by sense perception anything that may be said or
pointed out, and fills everyone, so to speak, with perplexity and confusion.
Now in those matters in which, because of our defective training, we are
not accustomed to look for truth but are satisfied with the first image
suggested to us, we can ask and answer without making ourselves ridicu-
d lous to one another, being proficient in manipulating and testing these
four instruments. But when it is "the fifth" about which we are compelled
to answer questions or to make explanations, then anyone who wishes to
refute has the advantage, and can make the propounder of a doctrine,
whether in writing or speaking or in answering questions, seem to most
of his listeners completely ignorant of the matter on which he is trying to
speak or write. Those who are listening sometimes do not realize that it
is not the mind of the speaker or writer which is being refuted, but these
four instruments mentioned, each of which is by nature defective.

By the repeated use of all these instruments, ascending and descending e
to each in turn, it is barely possible for knowledge to be engendered of
an object naturally good, in a man naturally good; but if his nature is
defective, as is that of most men, for the acquisition of knowledge and the
so-called virtues, and if the qualities he has have been corrupted, then not 344
even Lynceus could make such a man see.[9] In short, neither quickness of
learning nor a good memory can make a man see when his nature is not
akin to the object, for this knowledge never takes root in an alien nature;
so that no man who is not naturally inclined and akin to justice and all
other forms of excellence, even though he may be quick at learning and
remembering this and that and other things, nor any man who, though
akin to justice, is slow at learning and forgetful, will ever attain the truth
that is attainable about virtue. Nor about vice, either, for these must be b
learned together, just as the truth and error about any part of being must
be learned together, through long and earnest labor, as I said at the beginning.
Only when all of these things—names, definitions, and visual and
other perceptions—have been rubbed against one another and tested, pupil
and teacher asking and answering questions in good will and without
envy—only then, when reason and knowledge are at the very extremity
of human effort, can they illuminate the nature of any object.[10]

For this reason anyone who is seriously studying high matters will be c
the last to write about them and thus expose his thought to the envy and
criticism of men. What I have said comes, in short, to this: whenever we
see a book, whether the laws of a legislator or a composition on any other
subject, we can be sure that if the author is really serious, this book does
not contain his best thoughts; they are stored away with the fairest of his
possessions. And if he has committed these serious thoughts to writing,
it is because men, not the gods, "have taken his wits away."[11] d

To anyone who has followed this discourse and digression it will be
clear that if Dionysius or anyone else—whether more or less able than
he—has written concerning the first and highest principles of nature, he
has not properly heard or understood anything of what he has written
about; otherwise he would have respected these principles as I do, and
would not have dared to give them this discordant and unseemly publicity.
Nor can he have written them down for the sake of remembrance; for
there is no danger of their being forgotten if the soul has once grasped e
them, since they are contained in the briefest of formulas. If he wrote them,
it was from unworthy ambition, either to have them regarded as his own
ideas, or to show that he had participated in an education of which he
was unworthy if he loved only the reputation that would come from having 345

9. Lynceus, one of the Argonauts, was proverbial for his keenness of vision.

10. Accepting the emendation *sunteinontōn* at b7.

11. *Iliad* vii.360.

shared in it. Now if Dionysius did indeed come to understand these matters
from our single conversation, how that happened, "God wot," as the
Thebans say. For as I said, I went through the matter with him once only,
never afterwards. Whoever cares to understand the course of subsequent
events should consider why it was that we did not go over the matter a
second or a third time, or even oftener. Was it that Dionysius, after this
b one hearing, thought he understood well enough and really did under-
stand, either because he had already found these principles himself or had
previously learned them from others? Or did he think that what I said
was of no value? Or, a third possibility, did he realize that this teaching
was beyond him, and that truly he would not be able to live in constant
pursuit of virtue and wisdom? If he thought my teachings of no value he
contradicts many witnesses who say the opposite and who are probably
much more capable judges of such matters than Dionysius. And if he had
already discovered or learned these doctrines and regarded them as fitted
c for educating a liberal mind, how—unless he is a very strange creature
indeed—could he have so lightly brought ignominy upon their teacher
and guardian? But this is what he did, as I shall now tell you.

Shortly after the above occurrence, although Dionysius had previously
allowed Dion to retain possession of his property and to enjoy its revenues,
he gave orders to Dion's stewards not to send anything more to the Pelo-
ponnesus, as if he had completely forgotten his letter, saying that this
property belonged not to Dion but to Dion's son, who was his nephew
d and under his legal guardianship. Matters then had come to this, in so
short a time. From this action I saw precisely the character of Dionysius'
desire for philosophy, and in spite of myself I was indignant, and with
good reason. It was summer at the time, and ships were leaving the port.
Though it was clear to me that I ought not to be more angry with Dionysius
than with myself and the others who had compelled me to come a third
e time to this strait of Scylla, "To measure again the length of deadly
Charybdis,"[12] yet I thought I ought to tell Dionysius that it was impossible
for me to remain after this scurvy treatment of Dion. He tried to placate
me and begged me to remain, thinking it would not go well with him if
I should set out immediately as the personal bearer of this news; but
when he could not persuade me, he said that he would himself make the
346 preparations for my departure. For in my anger I thought of going on
board one of the vessels ready to set sail and suffering the consequences,
whatever they might be, of being detained, since it was clearly evident
that I had done no wrong but was the victim of wrongdoing. Seeing that
nothing could induce me to remain, he devised a scheme for keeping me
until the ships could no longer leave port. The following day he came to
me with this persuasive speech: "Let us dispose of this matter of Dion
b and Dion's property which has been the cause of frequent disagreement
between you and me. For your sake I will do this for Dion. Let him have

12. *Odyssey* xii.428.

his property and live in the Peloponnesus, not as an exile, but as one permitted to return here as soon as he and I and you his friends have come to an understanding—all this upon condition that he is not to conspire against me; you and your relatives and the relatives of Dion here shall be sureties to me, and he shall give you pledges of good faith. Let the property he takes be deposited in the Peloponnesus and at Athens in the keeping of any persons you please, and let Dion enjoy the revenues from it, but c
be without power to dispose of the principal without your consent. For it will be a large sum and I have little faith that if he had this wealth at his disposal he would act justly towards me; but in you and your friends I have more confidence. See now whether these proposals please you, and if they do, stay for the year on these terms and when spring comes depart d
with this property. Dion, I know, will be very grateful to you if you do this for him."

I was angered when I heard this proposal, nevertheless I said I would consider the matter and bring him my opinion on it the following day. This then was agreed upon. Later, when I had got to my own quarters and was thinking the matter over, I found myself in great perplexity; but this was the dominant thought in my deliberations: "Beware! Dionysius e
may not intend to keep a single one of his promises; but what if he should write to Dion after I have gone, telling him what he has just said to me? And should persuade a number of Dion's friends to write also, intimating plausibly that it was not his refusal but mine that prevented his doing what he promised, and making me out altogether indifferent to Dion's interests? Besides this, if he does not want to see me go and, without issuing definite orders to any ship's captain, should let it be generally 347
known, as he easily could, that he was unwilling for me to sail, would any captain take me as a passenger, even if I could get out of the palace of Dionysius?" For besides the other disadvantages of my situation, I was living in the garden surrounding the palace, and the gatekeeper would not have let me out without an express command from Dionysius. "But if I remain for the year, I can write to Dion what my situation is and what I am doing; and then if Dionysius keeps any part of his promises, what I have done will not seem altogether ridiculous," for the property of Dion, b
if estimated rightly, was probably worth not less than a hundred talents. "On the other hand, if the contrary comes to pass,[13] as is most likely, I don't see what course I can then take. Nevertheless, it seems that I must probably hold out one more year and put these schemes of Dionysius to the test of events."

Having come to this decision, I told Dionysius the next day that I had decided to remain. "But," I said, "you must not think that I can bind Dion. c
Let us send him a joint letter explaining the agreement we have just made and ask whether its terms satisfy him, telling him that if he is not satisfied and wishes to modify them in any way to write us at once; and in the

13. Reading *apemphainonta* in b3.

meantime I ask that you take no new steps affecting him." These were my
words and these were the terms we agreed upon, almost exactly as I have
stated them. Now the boats had set sail and it was no longer possible for
d me to leave, when Dionysius mentioned to me that half the property should
be Dion's and half his son's. He said he was going to sell it and give me
half the proceeds to take to Dion; the other half he would keep here for
the son, for this was clearly the most equitable procedure. I was stunned
by this statement, but thought it foolish to make any further protest; yet
I did say that we should await the letter from Dion and advise him of
these new conditions. Immediately thereafter he sold the whole of Dion's
e property in the most audacious manner, selling it on whatever terms and
to whomever he pleased, and said not a word to me about it. And likewise
I refrained from saying anything more to him about Dion's affairs, for I
thought any further effort would be useless.

This then was the result of my efforts in aid of philosophy and my
friends. From this time on Dionysius and I lived, I like a bird looking out
348 of its cage and longing to fly away, he scheming how to frighten me[14]
without turning over any of Dion's property; yet before all Sicily we
professed to be friends.

Now Dionysius, contrary to the practice of his father, tried to reduce
the pay of his older mercenaries. The soldiers, infuriated, gathered in a
b mob and declared they would not permit it. He tried to hold out against
them by closing the gates of the citadel, but they straightway moved against
the walls, chanting a barbarian war cry; and this so frightened Dionysius
that he yielded and granted even more than they demanded to the peltasts
assembled there. Now a rumor quickly got about that Heraclides had been
the cause of all this disturbance. Upon hearing it, Heraclides took flight
and concealed himself; and Dionysius, being at a loss how to apprehend
c him, summoned Theodotes to the palace garden, where I happened to be
walking at the time. I do not know what else they talked about, for I could
not hear them; but I know and recall what Theodotes said to Dionysius
in my presence. "Plato," he said, "I am trying to persuade Dionysius here
that if I can bring Heraclides before us to answer the charges that have
just been made against him, and if in consequence it seems necessary for
him to leave Sicily, to let[15] him take his wife and child and sail to the
d Peloponnesus and live there, enjoying the revenue from his property so
long as he does no harm to Dionysius. I have already summoned him and
will do so now again, and one or the other of these messages should
bring him. And I ask and beseech Dionysius, if he should happen upon
Heraclides anywhere, either here or in the country, to do nothing more
e than banish him from the land during his present displeasure. Do you
consent to this?" he asked, turning to Dionysius. "I consent," he said;

14. See *Letter* III, 318b.

15. Reading *axioun* in c9.

"even if he should be found in your own house he will suffer nothing
beyond what you have said." The evening of the following day Eurybius
and Theodotes came to me in haste, greatly troubled. Theodotes spoke for
them. "Plato," he said, "you were a witness yesterday to the promise
Dionysius made to you and me about Heraclides?" "Indeed I was," I
replied. "But now," he continued, "there are peltasts running all about
trying to take Heraclides, and it is likely that he is somewhere near here.
You must with all speed go with us to Dionysius," he said. So we set out, 349
and when we came into his presence the two men stood weeping silently,
and I said: "They are afraid that you have changed your mind regarding
Heraclides and are acting contrary to what was agreed upon yesterday.
For it appears that he has taken refuge nearby." At this he became angry
and turned various colors, as is the way with an angry man. Falling before
him, Theodotes seized his hand and implored him, with tears in his eyes, b
not to do such a thing. "Cheer up, Theodotes," I interrupted, trying to
encourage him; "Dionysius will not presume to do anything contrary to
the promise he made yesterday." And Dionysius looked at me and, like
a true tyrant, "To you," he said, "I made no promise whatever." "By the
gods," I replied, "you at least made a promise, not to do what Theodotes
is now imploring you not to do." With these words I turned and went
out. After this Dionysius continued to hunt for Heraclides, while Theodotes
sent messengers warning him to flee; and though Tisias and a band of c
peltasts were sent in pursuit, Heraclides, it was reported, having a few
hours the start of them, got safely into Carthaginian territory.

After this, Dionysius conceived that my resistance to his long-standing
plot not to restore Dion's money could now be plausibly made the ground
for enmity toward me. His first step was to send me out of the citadel on
the pretext that the women were to hold a ten-day sacrifice in the garden d
where I dwelt, and directed me to live outside during this period at the
home of Archedemus. While I was there Theodotes sent for me and poured
out his complaints and his anger against Dionysius for what he had done.
When Dionysius heard that I had visited Theodotes he used this as another
pretext, similar to the earlier one, for quarreling with me. He sent to inquire e
whether I had in fact visited Theodotes at his invitation. "Certainly," I
replied. "Then he bade me say," said the messenger, "that you are not
doing right in always preferring Dion and Dion's friends to himself." After
this message he never again summoned me back to the palace, it being
now clear that I was the friend of Heraclides and Theodotes, and conse-
quently his enemy, and he knew also that I was not pleased at the complete
dissipation of Dion's goods. From that time on, then, I lived outside the 350
acropolis among the mercenaries. Some of the rowers in the fleet were
from Athens and fellow citizens of mine; they and others came to me with
the report that I had an evil name among the peltasts and that some of
them were threatening to kill me if they ever got hold of me. I began then
to plan the following means of escape. I sent letters to Archytas and my
other friends in Tarentum telling them of my plight, and they found some

pretext for an embassy from their city, dispatching Lamiscus, one of their
b number, with a thirty-oared vessel. When he arrived he besought Dionysius on my behalf, saying that I wished to depart and begging him not to prevent it. Dionysius complied and released me, giving me travel money; but for Dion's property I made no further demand, nor did anyone deliver it to me.

Upon my return to the Peloponnesus I encountered Dion among the spectators at Olympia and recounted to him what had occurred. Calling upon Zeus to witness, he straightway summoned me and my relatives
c and friends to prepare for vengeance against Dionysius, demanding satisfaction to me for breach of hospitality (these were his words and this is what he thought), and to himself for his unjust dismissal and exile. When I heard this I told him to call upon my friends, if they wished to help him. "But as for me," I said, "you and the others compelled me, in a way, to become a guest at the table and hearth of Dionysius and a participant in his sacrifices; and he perhaps believed, from the many reports circulated against me, that I was plotting with you against him and the tyranny—
d yet he did not put me to death, but respected my person. Nor am I any longer at the age for helping anyone carry on war, though I am with you if ever you desire one another's friendship and wish to accomplish something good. But as long as you are intent on harm, look elsewhere for your allies." I said this in disgust at my Sicilian "adventure" and its lack of success. But they did not listen to me; and in failing to heed my attempts at reconciliation they are themselves responsible for all the misfortunes that have come upon them. None of them would ever have
e occurred, humanly speaking, if Dionysius had restored his property to Dion or become fully reconciled with him, for I would have been willing and easily able to restrain Dion; but as it is they have attacked one another and brought about universal disaster.

351 Dion's purpose, however, with respect to his native city and to the power he sought for himself and his friends, was exactly what I should say any moderate man, myself or anyone else, ought to have; such a man would think of enjoying great power and honor only because he is conferring great benefits. I do not mean such benefits as are conferred by an impecunious agitator, lacking in self-control, the weak victim of his passions, who enriches himself and his partisans and his city by organizing plots and
b conspiracies, and puts to death the men of wealth on the pretext that they are enemies, and distributes their property, and charges his fellow conspirators and followers not to blame him if they are poor; nor do I mean the honors enjoyed by a man who "benefits" his city in this way, by dividing the goods of the few among the many by public decree, or who, as head of a great city ruling over many lesser ones, unjustly assigns
c the wealth of the smaller ones to his own city. Neither Dion nor anyone else in his right mind would seek power for these ends, power that would be a plague to himself and his family for all time; but rather would seek it for the purpose of creating, without murder or bloodshed, the best and

most just constitution and system of laws. This is what Dion was aiming at, preferring to be the victim of wickedness rather than the agent of it, though he endeavored to protect himself. In spite of all this he fell, just as he had come to the summit of triumph over his enemies. There is nothing surprising in what he experienced. For although a good man who d
is also prudent and sagacious cannot be altogether deceived about the character of wicked men, it would not be surprising if he should suffer the misfortune of the skilled captain who, though not unaware of the approach of a storm, may not foresee its extraordinary and unexpected violence, and be swamped by its force. This is the mistake that Dion made. Those who caused him to fall were men whom he well knew to be villains, but he did not suspect the depths of their ignorance and villainy and greed. e
By this error he is fallen, and Sicily is overwhelmed with grief.

The advice I have to offer you in the present state of affairs has mostly 352
been given, and let that suffice. Why I undertook the second voyage to Sicily I thought I ought to explain, because of the strange and improbable nature of these events. If then they appear more plausible as I have described them, and if it has been made evident that there were sufficient motives for what happened, this account will have properly accomplished its purpose.

# VIII

PLATO TO THE RELATIVES AND FRIENDS OF DION, WELFARE. b

What principles you must follow if you are really to fare well I will do my best to explain to you. And I hope that my advice will be of advantage not only to you (though to you, of course, first of all), but secondly to c
everyone in Syracuse, and thirdly even to your enemies and adversaries—except anyone of them who has done an unholy deed;[1] for such acts are irremediable and a man can never wash away their stain. Give your thought, then, to what I say.

Since the fall of the tyranny you have had nothing but dissension throughout all Sicily, one party desiring to get its power back, the other to make final the suppression of the tyranny. In such circumstances the d
multitude always think the right counsel is to recommend those measures that will do their enemies the most harm and their friends the most good. But it is by no means easy to do great harm to others without bringing many other evils upon oneself. We have a clear example of this close at hand. Only look at what has happened right here in Sicily, with one party attempting to act upon that principle and the other defending itself against their actions; the story of these events, if you should tell it to others, would e
give them many useful lessons, though of such instruction there is hardly

1. I.e., those who connived in the murder of Dion.

any need. On the other hand, a policy that would benefit all concerned, friends and foes alike, or do as little harm as possible to both—this is not easy to see, nor to carry out when it is seen; and to counsel such a policy, or attempt to explain it, seems like making a prayer. By all means, then
353 let it be a prayer—for the gods should be first in every man's words and thoughts—and may it be fulfillled when it declares unto us some such word as follows.

Now you and your enemies have been ruled almost continuously from the beginning of the war by a single family, a family that your ancestors put in power at a time when they were in the direst peril and there was imminent danger that all of Hellenic Sicily would be overrun by the Carthaginians and become barbarian territory. For then it was that to save Sicily they chose Dionysius, a young and brilliant warrior, to take charge
b of the military actions for which he had an aptitude, and Hipparinus as his elder and counselor, making them, as they say, "generals with full power."[2] Was it God and divine chance that saved the city? Or the valor of these leaders? Or both luck and leadership together with the efforts of the citizens? Think what you will; in any case, the city was saved for that
c generation. It is right that everyone should feel gratitude to these saviors for the qualities they displayed; and if in later times the tyrants misused in any way the gift the city had bestowed upon them, for these misdeeds they have in part paid the penalty and should make even further atonement. But what penalties would it necessarily be right to impose in the present state of their affairs? If you were able to get rid of them easily, and without great toil and danger, or if they could easily regain their power, there would be no occasion for offering the advice that I am going
d to give. As it is, however, both of your factions ought to reflect and call to mind how often each party has been in high hopes, and has thought almost always that it lacked only a little of being able to do what it liked, and that this little has repeatedly turned out to be the cause of great and innumerable disasters. The limit is never reached; but what seems to be the end of an old difficulty always involves the beginning of a new one, and in this endless round there is danger that both the tyrannical party
e and the democratic party will be completely destroyed; and eventually, if things take their natural course (which God forbid!), the whole of Sicily will have practically lost the Greek language and will have come under the empire and dominion of the Phoenicians or the Opici.

This is a prospect which should incite every Hellene to search for a remedy with all his might. If anyone has an apter or a better plan than the one I am going to offer, let him bring it forth and he will rightly be
354 called a loyal Hellene. What now appears best to me I will try to explain in all frankness and set it forth with just and impartial reasoning. I am speaking in the fashion of an arbitrator between two parties at law, the one a former tyrant, the other his former subject, and proffering to each

2. Accepting the correction *stratēgous* in b3.

of them my well-known counsel. Now, as always, I advise the tyrant to
shun his name and the reality it stands for, and to change his government
to a kingship if he can. That he can is shown by the action of that wise b
and good man, Lycurgus, who, seeing that his own relatives in Argos
and Messene were becoming tyrants instead of kings and in both cases
destroying both themselves and their cities, was filled with apprehension
both for his house and his native city, and instituted as a remedy the office
of the Elders and that of the Ephors as the saving bond of the kingly
power. By such means this kingship has been signally secure through all
these generations, since law became the lord and king of men, not men c
tyrants over the laws.

Now this is the point of my present recommendation to you all: let those
who are aiming at tyrannical power shun and flee from what senseless
and insatiate men call happiness; let them try to change into the form of
kings and subject themselves to kingly laws, thus acquiring the highest
honors from their willing subjects and from the laws. Likewise I advise
those who cherish the ways of freedom and shun the yoke of slavery as d
something evil, to beware lest by an excessive and ill-timed thirst for
freedom they fall into the affliction of their ancestors, the excessive anarchy
they experienced as a result of their unmeasured passion for liberty. For
the Sicilians before the reign of Dionysius and Hipparinus lived happily,
as they thought, faring sumptuously and ruling their rulers; they it was
who, without any legal judgment, stoned to death the ten generals who
preceded Dionysius, in order not to be subject to any master, not even e
justice and the law, but to be altogether and absolutely free. This is why
tyranny came upon them. Both servitude in excess and liberty in excess
are very great evils, but in due measure both are great goods. Due measure
is found in obedience to God, the absence of measure in obedience to men.
And the god of wise men is the law; of foolish men, pleasure.

Since this is so, I call upon the friends of Dion to say to all Syracusans 355
that what I advise is his and my joint counsel. I shall be the interpreter of
what he would say if he were alive and able to speak to you now. Well,
then, someone may say, what words does Dion's counsel contain for us
about our present situation? These:

"First of all, men of Syracuse, accept laws that you think will not arouse
your desires and turn your thoughts toward money-making and wealth. b
Of the three goods—soul, body, and wealth—your laws must give the
highest honor to the excellence of the soul, the second place to that of the
body, as subordinate to the excellence of the soul, and the third and lowest
rank to wealth, since it serves both body and soul. The sacred tradition
that ranks them in this order might rightly be made a positive law among c
you, since it makes truly happy those who live by it; whereas the doctrine
that the rich are the happy ones is a foolish saying of women and children,
a miserable doctrine in itself, bringing misery upon all who follow it. Put
to trial these words about law and you will see by the event that my advice
is sound; experience seems to be the truest test of any matter.

"Having received laws of this sort, then, since Sicily is in grave danger
d and neither you nor your adversaries are clearly superior in force, it would without question be just and expedient for all of you to strike a compromise—both for those of you who wish to avoid the rigor of absolute rule and for those who are bent on regaining their power. It was their ancestors, remember, who in their time saved the Hellenes from the barbarians and made it possible for us now to be discussing a constitution; for if the Greeks had been defeated then, there would be no opportunity for deliberation nor any basis for hope. So now let the one party have the freedom they desire, but under the government of a king; and let the other have their office,
e but let it be a responsible kingship, the laws punishing kings and citizens alike if they disobey.

"Now with a steadfast and wholehearted adherence to all these conditions, and with God's help, appoint [three] kings: first, my son, in double gratitude for my father's services and my own (as my father in his time
356 saved the city from the barbarians, I have twice freed it from tyrants, as you yourselves can bear witness); secondly, him who has the same name as my father and is the son of Dionysius, in gratitude for the help he has just rendered your cause, as well as because of his upright character; for though he is the son of a tyrant, he is voluntarily liberating the city and gaining for himself and his house undying honor in place of an ephemeral and unjust tyranny. Thirdly, invite him who is now head of the army of
b your enemies—Dionysius the son of Dionysius—to become king of the Syracusans as willing king of a willing city, if, through fear of misfortune and pity for his native city and its neglected temples and tombs, he shows himself willing to exchange his power for that of a king, in order that his city may not be completely ruined by this civil strife and fall a rich prize to the barbarians.

"Let these then be your kings, three in number. Whether you invest them with the authority of the Spartan kings or agree upon some more limited powers for them, install them in something like the following
c manner. I have already said this to you on a former occasion, but it is well that you hear it again. If the family of Dionysius and Hipparinus is willing to end the present disorders for the salvation of Sicily and gain enduring honors for themselves and their houses on these terms, then, as I have said, summon ambassadors with full authority to effect a reconciliation. Let these ambassadors be whoever and as many as they please, chosen from persons here, or abroad, or both. When they have come together, let
d them begin by drawing up laws and a constitution providing that the kings shall have authority over religious and all other matters appropriate to former benefactors of the city, but that matters of war and peace shall be under the control of five-and-thirty guardians of the laws ruling in conjunction with the assembly and council. There should be various courts of justice for various offenses, but offenses involving death or exile should be judged by the thirty-five, in conjunction with other select judges chosen each year from the officeholders of the preceding year (one from each

office, namely that officer who showed himself the best and justest); these e
should for the ensuing year judge all cases involving the death or imprison-
ment or exiling of citizens. But a king should not be permitted to act as judge
in such cases, since like a priest he is to remain undefiled by bloodshed or
imprisonment or exile. 357

"This is what I planned to accomplish for you when I was alive, and
this is still my earnest desire. If avenging deities in the guise of friends
had not prevented me, I should have carried out this plan, after conquering
my enemies with your help. Then, if everything had gone as I desired, I
should have resettled the rest of Sicily and driven out the barbarians that
now possess it, with the exception of those who made common cause with
us in fighting for freedom against the tyranny, and I should have restored to b
their ancient and ancestral homes the former inhabitants of those Hellenic
regions. So now I advise all parties to adopt these same purposes as your
common aids, and to work and summon everybody to work with you for
their realization, and to regard anyone who refuses as your common en-
emy. These aims are not impossible of accomplishment, for what is already
in two minds, and readily appears the most feasible to those who have
reflected upon it, can hardly be called impossible by any man of under-
standing. By the "two minds" I mean that of Hipparinus, the son of Diony- c
sius, and that of my own son; when these two have come to an agreement,
I think all others in Syracuse who care for their city will give their assent.

"Now offer honor and prayers to all the gods and to all other beings to
whom, with the gods, honor belongs, persuading and exhorting friends
and opponents gently but unceasingly, until the plans that I have just
described, like the dreams that God sends to waking men, have been d
brought to visible and happy realization."

# IX

Plato to Archytas of Tarentum,[1] Welfare.

Archippus and Philonides and their companions have come to me with
the letter you gave them and have brought me news of you. Their mission to e
the city they accomplished with no difficulty, since it was not a burdensome
matter. But as to you, they reported that you think it a heavy trial not to
be able to get free from the cares of public life. It is indeed one of the
sweetest things in life to follow one's own interests, especially when they 358
are such as you have chosen; practically everyone would agree. But this
also you must bear in mind, that none of us is born for himself alone; a
part of our existence belongs to our country, a part to our parents, a part
to our other friends, and a large part is given to the circumstances that

1. Pythagorean philosopher and mathematician, who was also a leading statesman of his native city, in southern Italy. Plato visited there shortly before 388 B.C.

command our lives. When our country calls us to public service it would,
b I think, be unnatural to refuse; especially since this means giving place to
unworthy men, who enter public life for motives other than the best.

Enough of this. As for Echecrates, I am taking care of him and will do so in the future, both for your sake and the sake of his father Phrynion as well as for the young man himself.

## X

PLATO TO ARISTODORUS, WELFARE.

c I hear from Dion that you are one of his most trusted followers and have been so from the beginning, manifesting the most philosophical of the philosophical virtues; for to be steadfast, loyal, and dependable—this, I say, is true philosophy; whereas all other learning, and all cleverness directed to any other end than this, I call—and I think rightly—mere ornaments. Farewell; hold fast to these virtues that you have thus far manifested.

## XI

d PLATO TO LAODAMAS, WELFARE.

I have written you before that the matters you have mentioned will all
be greatly advanced if you yourself can come to Athens; but since you
say that is impossible, the next best thing would be, as you write, that I
e or Socrates[1] should come to you, if we can. But Socrates is ill with strangury,
and it would be unseemly for me to come and not accomplish what you
summoned me for. For my part I have little hope that it can be done,
though to explain why would require another and longer letter giving all
the reasons; and besides, at my time of life I have not the bodily strength
for travel and for all the dangers that one encounters both by land and
by sea, and at present all the circumstances of travel are full of danger. I
can, however, give you and the leaders of your colony a piece of advice
359 which, when I have spoken it, "may seem trifling," to quote Hesiod, but
is hard to take. If they think[2] that a constitution can ever be well established
by the enactment of laws, of whatever sort they may be, without some
authority in the city to look after the daily life of the citizens and to insure
that both free men and slaves live in a temperate and manly fashion, they
are thinking wrongly. This could be done, however, if you have at hand
b men worthy of exercising such authority; but if you lack an educator, then

1. This is the younger Socrates, who figures as one of the personages in the *Statesman*.
2. Accepting the emendation *oiontai* in a3.

you have neither teachers nor learners, as I see it, and no course is left
but to pray to the gods. Indeed most cities in the past have been similarly
established and later attained good government under the force of circum-
stances brought on by war or other enterprises of the city, when a man
of nobility and character has appeared and exercised great power. In the
meantime you must and should ardently desire this to happen; but reflect
on what I have said and do not act lightly, thinking that success is within c
your grasp. Good luck!

## XII

PLATO TO ARCHYTAS OF TARENTUM,[1] WELFARE.

I am overjoyed at receiving the treatises that have come from you and
am filled with admiration for their author, who seemed to me a man d
worthy of his ancient ancestors. These ancestors are said to have been
Myrians, and to have been among the Trojans who emigrated under
Laomedon. Good men they were, according to the accepted legend. As to
the writings of mine about which you wrote, they are not yet completed,
but I am sending them to you as they are. We are agreed that they ought e
to be guarded, so I need not admonish you on that point.

(Some have contended that this letter is not Plato's.)[2]

## XIII

PLATO TO DIONYSIUS, TYRANT OF SYRACUSE, WELFARE. 360

Let this beginning of my letter be likewise a sign to you that it comes
from me.[3] Once when you were feasting the young men from Locri you
arose and came over to me (your couch being at some distance from mine)
and greeted me with a phrase that was both friendly and neatly turned,
as it seemed to me. The man lying next to me (and a fair youth he was) b
thought so too, for he said: "I suppose, Dionysius, that you have got much
wisdom from Plato?" "And much else besides," you said; "for from the
very minute I sent for him, and by the very fact that I had sent for him,
I was the gainer." So let us preserve this opinion and endeavor always to
increase our usefulness to one another. It is for this very purpose that I
am sending you some Pythagorean writings and some *Divisions,* and also
a man whom we thought, you remember, that both you and Archytas, if
Archytas comes to you, could use to advantage. His name is Helicon, his c

1. See note to 357d above.
2. This notation is found in our best manuscripts, and may go back to Thrasyllus.
3. Because of its salutation "Welfare," for the usual "Greetings": see *Letter* III, 315a.

family is of Cyzicus, and he is a disciple of Eudoxus[4] and well versed in
all that eminent man's doctrines. Moreover he has been associated with
one of the pupils of Isocrates and with Polyxenus, one of the followers of
Bryson. But, what is rarer with such men, he is pleasant to meet, seemingly
d not difficult, but easy and mild mannered. I put it thus cautiously, for it
is a man I am giving my opinion of; and though man has his good qualities,
he is, with rare exceptions and in the greater part of his actions, quite
changeable. I had my fears and doubts even about this man, so I not
only conversed with him myself but also made inquiry among his fellow
citizens, and nobody had anything to say against him. But look him over
yourself and be on your guard. Above all, if you can in any way find
leisure for it, take lessons from him as part of your studies in philosophy.
e If not, have him instruct someone else so that when you do have leisure
you can learn and thereby add to your character and your good name. In
this way I shall continue to be of help to you. But enough of this.

361 As for the things you wrote me to send you, I have had the Apollo
executed and Leptines is bringing it to you, the work of a good young
sculptor whose name is Leochares. There was another piece in his shop
that I thought very charming, and I therefore bought it to give to your
wife, for she looked after me, both in health and in sickness, in a manner
that did honor both to me and to you. Give it to her, then, if you think it
fitting. I am also sending twelve jars of sweet wine and two jars of honey
b for the children. I arrived too late for the fig harvest, and the myrtle berries
that were laid by have spoiled. We shall look after them better next time.
Leptines will tell you about the plants.

The money for these purchases and for certain payments to the city I
procured from Leptines, telling him (what I thought was quite proper as
well as true) that the money we spent in fitting out the Leucadian ship,
about sixteen minae, came from my funds. So I got this sum from him,
c have made use of it, and have sent these objects to you. Now hear how
it stands with respect to your funds here at Athens, and mine. I will make
use of your money, as I told you, just as I do that of my other friends; but
I am using it as sparingly as I can, and only so much as seems necessary
or just or proper, not to me only, but to your agent. My own situation is
this. Four daughters were left by my nieces (who died at the time when
d you bade me wear a crown, you remember, but I refused), one of marriage-
able age, another eight years old, another a little over three, and the other
not yet one. My friends and I must provide dowries for them, at least for
those who are married during my lifetime; the others we may leave out
of account. Nor need I provide for those whose fathers may become richer
than I am; but at present I am the wealthiest, and it was I who, with the
e help of Dion and other friends, provided dowries for their mothers. The
oldest of these girls is to marry Speusippus, whose sister's daughter she
is. For her I will require at most thirty minae; that is a reasonable wedding

4. Eudoxus of Cnidus, one of the foremost mathematicians of the fourth century, had moved his school from Cyzicus to Athens and merged it with the Academy.

portion for us to give. Moreover, if my mother should die I should need almost ten minae for building her tomb. These are about all my obligations at present. If any other private or public expense comes up because of my visit to you, I will endeavor to make the expenditure as little as possible; but what I cannot avoid will have to be at your charge, as I told you must 362
be the case.

Now a word regarding your funds at Athens and their expenditure. In the first place, if it should ever be necessary for me to fit out a chorus or anything of the sort, you have no guest-friend here who would advance the money, as we thought. Furthermore, if some matter of great importance to you should arise such that you would be benefited immediately if an expenditure were made but injured if it were not made or were delayed until word had come from you, the situation would be not only damaging but humiliating for you. I found this out myself when, wishing to send b
you some other and more costly articles that you had written for, I sent Erastus to Andromedes the Aeginetan, upon whom, as your guest-friend, you told me to draw if I needed money. He replied, as was only human and natural, that he had formerly advanced money for your father but had had difficulty in collecting it; so now he would give a small sum, but no more. And so I got it from Leptines, who deserves to be praised, not because he gave, but because he gave willingly; and in all else that he has done and said about you he has shown the quality of his friendship. I c
ought to report such things, as well as matters of an opposite sort, to show how I think this or that man is disposed towards you. And so I shall be frank with you about your money; since it is only right, and since moreover I can speak from experience of the men who surround you. Whenever your men bring in their reports, they hesitate to mention any matter that they think involves expense, for fear of your displeasure. You must there- d
fore compel them to form the habit of speaking about these things as well as other matters; for it is your duty to know everything, so far as possible, and pass judgment and not shrink from any facts. This will be the best of all ways of enhancing your authority. To make expenditures rightly and to repay debts properly is a good thing in many ways, and even furthers the acquisition of money, as you yourself will see more and more. Then do not allow those who profess to be looking out for your interests to give you a bad name; for there is no advantage nor honor in being known as difficult in money matters. e

And now I would say something about Dion. About the other matters at issue I can say nothing as yet, until the letters come which you say you are sending me; but on the subject which you forbade me to mention to him, though I have not mentioned nor spoken about it, I have tried to find out how he would take it if you carried out your design, and it seemed to me he would be not a little indignant. In every other respect Dion's attitude toward you, as shown in his words and actions, is quite temperate.

To Cratinus, the brother of Timotheus and my friend, let us give a hoplite 363
breastplate, one of the light kind for foot soldiers; and to the daughters of Cebes three full-length chitons, not the expensive Amorgian ones, but

linen ones of Sicilian make. You are probably familiar with the name of Cebes, for he figures in the Socratic writings as taking part with Simmias in a discussion with Socrates about the soul. He is an intimate friend and well disposed towards us all.

363b You no doubt recall the sign that distinguishes the letters I write that are seriously intended from those that are not. Still I would have you attend carefully and keep it in mind; for there are many who ask me to write whom it is not easy to refuse openly. Those that are seriously meant begin with "God"; those less seriously with "gods."

The ambassadors also asked me to write you, and quite properly; for they have everywhere been sounding your praises and mine, not least of
c all Philagrus, the one who had a sore hand, you remember. Philaedes, who has just returned from the Great King, also spoke of you. If it had not required too long a letter I should have written you what he said; but as it is you must ask Leptines.

If you send the breastplate or anything else that I have mentioned, and have no one you wish to send it by, give it to Tyrillus; for he is always traveling back and forth, and is a friend of mine, accomplished in philosophy and other matters. He is the son-in-law of Tison, who was civic magistrate at the time when I set sail.

Farewell, study your philosophy, and try to interest the other young
d men in it. Give my greetings to your fellow students of the spheres. Instruct Aristocritus and the rest that if any book or letter comes from me, they are to have it brought at once to your attention and to remind you to pay heed to its contents. And now do not neglect to repay Leptines the money he advanced, but do it promptly so that others, seeing your treatment of him, may be more willing to oblige you.

e Iatrocles, whom I set free at the same time as Myronides, is traveling with the things I am now sending you. Put him in your pay, since he bears you good will, and use him for any service you wish. Preserve this letter, or an abstract of it, and take it to heart.[5]

5. Accepting the deletion of *ho* in e5.

# DEFINITIONS

Definitions *is a dictionary of about 185 philosophically significant terms. Many intellectuals in ancient Greece developed definitions: mathematicians, natural philosophers, educators such as Prodicus, and also Socrates, who believed that knowing correct definitions of ethical ideas would make people morally better. But it was Plato who urged a systematic approach to definition by collection and division in his* Phaedrus *and practiced it in his* Sophist *and* Statesman. *The Academic enterprise of definition by division was satirized in a comedy of about 350* B.C., *in which members of Plato's Academy cogitated over the definition of 'pumpkin' (Epicrates, frg. 11 Edmonds). Diogenes the Cynic ridiculed the Academic definition of 'man' as 'featherless, two-footed animal' by plucking a chicken and saying, "Here's Plato's man!"*

*Many philosophers after Plato were also interested in definitions: his nephew and successor as head of the Academy, Speusippus, was credited with a work called* Definitions, *and in a list of Aristotle's works we find "*Definitions *(in thirteen books)" and "*Definitions prefixed to the Topics *(in seven books)." Theophrastus wrote three books of* Definitions, *and Chrysippus the Stoic wrote many large books of and about definitions. Certain similarities between definitions in the present collection and Aristotelian and Stoic definitions have inclined some scholars to regard* Definitions *as a late and eclectic work, but these similarities are perhaps better explained by the fact that Aristotle and the Stoics both made use of fourth-century Academic ideas in working out their own philosophical positions.*

*What we find in* Definitions *is probably a tiny selection of all the definitions formulated and discussed in Plato's Academy in the middle years of the fourth century. These definitions were used in dialectical discussions, of the kind familiar to us from Aristotle's* Topics *and* Sophistical Refutations. *The definition of 'man' at 415a as 'featherless, two-footed,* flat-fingernailed *animal' could be a response to Diogenes' chicken, and other definitions are probably dialectical as well. Some are drawn directly from Plato's dialogues, such as the definition of 'sophist' at 415c, from* Sophist *231d.*

*The individual definitions were probably coined by members of the Academy in the fourth century* B.C., *but we cannot know who edited them into the present collection. Indeed,* Definitions *seems to consist of two separate collections. The first collection is organized into the three branches of philosophy recognized by Plato's Academy and by the Stoics: philosophy of nature (411 a–c), ethics (411d–414a), philosophy of knowledge and language (414a–e). The second collection (from 'utility' at 414e onward) has no such internal*

*organization and contains independent definitions of many of the terms defined in the first collection. Certainly Plato is not to be regarded as the editor of all or part of* Definitions*, and the ascription to "Plato" probably signifies nothing more than "school of Plato." Some ancient scholars guessed at Speusippus as their author, probably incorrectly.*

*Since reference works and collections such as* Definitions *are not written in ordinary prose, they are especially liable to corruption in the course of transmission. That is why this translation involves a particularly high degree of guesswork, both about the text itself and about its proper construal. Some definitions have probably fallen out accidentally, and some may possibly have been interpolated by later ancient scribes and scholars.*

*D.S.H.*

411 ἀίδιον (*aïdion*), eternal: existent at all times, including past and present, without being destroyed.

θεός (*theos*), god: immortal living being, self-sufficient for happiness; eternal being, the cause of the nature of goodness.

γένεσις (*genesis*), becoming: change into being; coming to participate in being; passing into existence.

ἥλιος (*hēlios*), sun: the only celestial fire which is visible to the same people from dawn to
b dusk; the daylight star; the largest eternal living creature.

χρόνος (*chronos*), time: the motion of the sun, the measure of its course.

ἡμέρα (*hēmera*) day: the journey of the sun, from rising to setting; the light opposed to the night.

ἕως (*heōs*), dawn: the beginning of the day; first light of the sun.

μεσημβρία (*mesēmbria*), midday: the time at which the shadows of bodies are all at their shortest.

δείλη (*deilē*), sunset: the end of the day.

νύξ (*nux*), night: the darkness opposed to day; the absence of the sun.

τύχη (*tuchē*), luck: passage from the unclear to the unclear; spontaneous cause of a supernatural event. c

γῆρας (*gēras*), old age: deterioration of a living thing due to the passage of time.

πνεῦμα (*pneuma*), wind: movement of air in the region of the earth.

ἀήρ (*aēr*), air: the element to which every spatial motion is natural.

οὐρανός (*ouranos*), sky: the body which surrounds all perceptible things except the uppermost air itself.

ψυχή (*psuchē*), soul: that which moves itself; the cause of vital processes in living creatures.

δύναμις (*dunamis*), ability: that which produces results on account of itself.

ὄψις (*opsis*), vision: the state of being able to discern bodies.

ὀστοῦν (*ostoun*), bone: marrow hardened by heat.

Translated by D. S. Hutchinson.

στοιχεῖον (*stoicheion*), element: that which complex things are composed of and resolved into.

d ἀρετή (*aretē*), virtue: the best disposition; the state of a mortal creature which is in itself praiseworthy; the state on account of which its possessor is said to be good; the just observance of the laws; the disposition on account of which he who is so disposed[1] is said to be perfectly excellent; the state which produces faithfulness to law.

φρόνησις (*phronēsis*), practical wisdom: the ability which by itself is productive of human happiness; the knowledge of what is good and bad; the knowledge that produces happiness;[2] the disposition by which we judge what is to be done and what is not to be done.

δικαιοσύνη (*dikaiosunē*), justice: the unanimity of the soul with it-
e self, and the good discipline of the parts of the soul with respect to each other and concerning each other; the state that distributes to each person according to what is deserved; the state on account of which its possessor chooses what appears to him to be just; the state underlying a law-abiding way of life; social equality; the state of obedience to the laws.

σωφροσύνη (*sōphrosunē*), self-control: moderation of the soul concerning the desires and pleasures that normally occur in it; harmony and good discipline in the soul in respect of normal pleasures and pains; concord of the soul in respect of ruling and being ruled; normal personal independence; good discipline in the soul; rational agreement within the soul about what is 412
admirable and contemptible; the state by which its possessor chooses and is cautious about what he should.

ἀνδρεία (*andreia*), courage: the state of the soul which is unmoved by fear; military confidence; knowledge of the facts of warfare; self-restraint in the soul about what is fearful and terrible; boldness in obedience to wisdom; being intrepid in the face of death; the state which stands on guard over correct thinking in dangerous situations; force which counterbalances danger; force of fortitude in respect of virtue; calm in the soul about what correct thinking takes to be frightening or encouraging things; the preservation of fear- b
less[3] beliefs about the terrors and experience of warfare; the state which cleaves to the law.

ἐγκράτεια (*enkrateia*), self-restraint: the ability to endure pain; obedience to correct thinking; the unbeatable ability of the conceptions of correct thinking.

αὐτάρκεια (*autarkeia*), self-sufficiency: perfect possession of good things; the state in respect of which those who have it are masters of themselves.

1. Omitting *echon* in d3.
2. Reading *epistēmē poiētikē eudaimonias·* after *kakōn* in d6 (a misprint in Burnet).
3. Accepting the conjecture *adeilōn* for *adēlōn* in b1.

ἐπιείκεια (*epieikeia*), fairness: ceding one's rights and advantages; moderation in agreements; the good discipline of a rational soul in respect of what is
c admirable and contemptible.

καρτερία (*karteria*), fortitude: endurance of pain for the sake of what is admirable; endurance of labor for the sake of what is admirable.

θάρσος (*tharsos*), confidence: not foreseeing anything bad; being undisturbed by the presence of something bad.

ἀλυπία (*alupia*), painlessness: the state in respect of which we are not subject to suffering pain.

φιλοπονία (*philoponia*), industriousness: the state which accomplishes what one has proposed; voluntary fortitude; irreproachable state in respect of labor.

αἰδώς (*aidōs*), modesty: voluntarily drawing back from reckless behavior, according to what is right and seems best; voluntarily holding to what is best; being cautious to avoid justified
d criticism.

ἐλευθερία (*eleutheria*), freedom: being in control of one's life; having sole authority in all respects; power to do what one likes in life; being unsparing in using and possessing property.

ἐλευθεριότης (*eleutheriotēs*), liberality: the proper state in respect of money-making; appropriate expenditure[4] and saving of property.

πρᾳότης (*praiotēs*), even temper: suppression of the impulse caused by anger; an harmonious blend of the soul.

κοσμιότης (*kosmiotēs*), decorum: voluntary submission to what seems best; being disciplined in moving the body.

εὐδαιμονία (*eudaimonia*), success in life: the good composed of all goods; an ability which suffices for living well; perfection in respect of virtue; resources suffi- e
cient for a living creature.

μεγαλοπρέπεια (*megaloprepeia*), magnificence: being estimable, according to the correct reasoning of the most dignified of men.[5]

ἀγχίνοια (*anchinoia*), quick wit: talent of the soul which enables its possessor to hit upon what is necessary in each case; mental penetration.

χρηστότης (*chrēstotēs*), honesty: moral sincerity, together with intelligence; excellence of character.

καλοκαγαθία (*kalokagathia*), moral perfection: the state which decides to do the best things.

μεγαλοψυχία (*megalopsuchia*), magnanimity: nobility in dealing with events; magnificence of soul, together with reason.

φιλανθρωπία (*philanthrōpia*), love of humanity, or kindness: the easy-going character state of being friendly to people; the state of being helpful to people; the trait of gratefulness; memory, together with helpfulness.

εὐσέβεια (*eusebeia*), piety: justice concerning the gods; the ability
to serve the gods voluntarily; 413
the correct conception of the

4. Accepting the conjecture *proesis* for *prosthesis* in d4–5.

5. Accepting the conjecture *tou semnotatou* in e2–3.

honor due to gods; knowledge of the honor due to gods.

ἀγαθόν (*agathon*), good: that which is for its own sake.

ἀφοβία (*aphobia*), fearlessness: the state in which we are not subject to fear.

ἀπάθεια (*apatheia*), passionlessness: the state in which we are not subject to passions.

εἰρήνη (*eirēnē*), peace: a quiet period in respect of military conflict.

ῥᾳθυμία (*rāithumia*), laziness: inertia of the soul; having no passion in the spirited part.

δεινότης (*deinotēs*), cleverness: the disposition which enables its possessor to hit upon his particular objective.

φιλία (*philia*), friendship: agreeing about what is admirable and just; deciding on the same way of life; having the same views about moral decision and moral
b conduct; agreeing on a way of life; sharing on the basis of benevolence; sharing in rendering and accepting favors.

εὐγένεια (*eugeneia*), nobility: the virtue of a noble character; a soul well cultivated in words and deeds.

αἵρεσις (*hairesis*), selection: correct evaluation.

εὔνοια (*eunoia*), benevolence: kindliness of a man towards another.

οἰκειότης (*oikeiotēs*), kinship: sharing in the same descent.

ὁμόνοια (*homonoia*), agreement: sharing everything that is on one's mind;[6] harmony of thoughts and assumptions.

ἀγάπησις (*agapēsis*), contentment: welcoming everything.

πολιτική (*politikē*), political skill: the knowledge of what is admirable and useful; the knowledge of
how to produce justice in a city. c

ἑταιρία (*hetairia*), camaraderie: the friendship among people of the same age formed by keeping company with each other.

εὐβουλία (*euboulia*), good counsel: the inborn virtue of reasoning.

πίστις (*pistis*), faith: the conception[7] that things are as they appear to one; firmness of character.

ἀλήθεια (*alētheia*), truth, veracity: the correct state expressed in affirmation and denial; knowledge of truths.

βούλησις (*boulēsis*), will: wanting, based on correct reason; reasonable desire; natural desire, based on reason.

συμβούλευσις (*sumbouleusis*), consultation: advice to another person about conduct, how he should conduct himself.

εὐκαιρία (*eukairia*), good timing: hitting upon the right time to do something or have some-
thing done to one. d

εὐλάβεια (*eulabeia*), caution: being on guard against what is bad; being sure to be on guard.

τάξις (*taxis*), order: functional similarity in all the mutual elements of a whole; due proportion in a society; cause of all the mutual elements of a whole; due proportion in respect of learning.[8]

6. Accepting the conjecture *tōn en nōi ontōn* for *tōn ontōn* in b8.
7. Accepting a conjectural transposition of *orthē* from c4 to c6.
8. Reading *summetria pros to mathein* in d4.

πρόσεξις (*prosexis*), attention: the effort the soul makes to learn something.

εὐφυΐα (*euphuïa*), talent: speed in learning; good natural[9] inheritance; natural virtue.

εὐμάθεια (*eumatheia*), cleverness: the mental talent to learn quickly.

δίκη (*dikē*), judgment, trial: authoritative declaration about a disputed matter; dispute[10] about whether or not there has been
e injustice.

εὐνομία (*eunomia*), law-abidingness: obedience to good laws.

εὐφροσύνη (*euphrosunē*), cheerfulness: joy in doing what a temperate man does.

τιμή (*timē*), honor: the gift of good things given for virtuous deeds; the dignity conferred by virtue; dignified bearing; the cultivation of one's dignity.

προθυμία (*prothumia*), zeal: manifestation of an active will.

χάρις (*charis*), charity: voluntary beneficence; giving up something good which is of service at an opportune moment.

ὁμόνοια (*homonoia*), concord: opinion shared between those who govern and those who are governed about how to govern and be governed.

πολιτεία (*politeia*), republic: community of many men, self-sufficient for living successfully; community of many under the
414 rule of law.

πρόνοια (*pronoia*), foresight, providence: preparation for some future event.

βουλή (*boulē*), deliberation: investigation about what would be beneficial in the future.

νίκη (*nikē*), victory: ability triumphant in a competition.

εὐπορία (*euporia*), inventiveness: good judgment which triumphs over something said.

δωρεά (*dōrea*), gift: exchange of favors.

καιρός (*kairos*), opportunity: the ideal time for something beneficial; the time that contributes to obtaining something good.

μνήμη (*mnēmē*), memory: disposition of the soul which guards over the truth which resides in it.

ἔννοια (*ennoia*), reflection: intense thinking.

νόησις (*noēsis*), intuition: the starting point of knowledge.

ἁγνεία (*hagneia*), piety: caution about mistakes with respect to the gods; paying service, in a b
normal way, to the honor of a god.

μαντεία (*manteia*), divining: the knowledge which predicts events without proof.

μαντική (*mantikē*), divination: the knowledge which contemplates the present and future of mortal beings.

σοφία (*sophia*), wisdom: nonhypothetical knowledge; knowledge of what always exists; knowledge which contemplates the cause of beings.

φιλοσοφία (*philosophia*), philosophy: desire for the knowledge of what always exists; the state which contemplates the truth,

9. Reading *phuseōs* in d6.

10. Accepting the conjectural restoration *Dikē · apophasis . . . pragmatos· amphisbētēsis peri tou adikein ē mē.*

what makes it true; cultivation of the soul, based on correct reason.

ἐπιστήμη (*epistēmē*), knowledge: conception of the soul which cannot be dislodged by reason-
c ing; ability to conceive one or more things which cannot be dislodged by reasoning; true argument which cannot be dislodged by thinking.

δόξα (*doxa*), opinion: conception which is open to persuasion by reason; fluctuation in reasoning; the thinking which is led by reason to the false as well as the true.

αἴσθησις (*aisthēsis*), perception: fluctuation in the soul; movement of the mind via the body;[11] an announcement for the benefit of human beings, from which arises a non-rational ability in the soul to recognize things through the body.

ἕξις (*hexis*), state: disposition of the soul on account of which people are said to be of a
d certain sort.

φωνή (*phōnē*), voiced sound: an emission of thought through the mouth.

λόγος (*logos*), speech: voice articulated in letters capable of indicating each existing thing; linguistic sound compounded of nouns and verbs, without music.

ὄνομα (*onoma*), noun: uncompounded linguistic sound expressing both what is predicated in the essence and everything which is not said of a thing in its own right.

διάλεκτος (*dialektos*), language, linguistic expression: human sound with letters; a common sign which is expressive, without music.

συλλαβή (*sullabē*), syllable: articulation of the human voice that can be written.

ὅρος (*horos*), definition: something said, comprised of genus and
differentia. e

τεκμήριον (*tekmērion*), evidence: proof of the non-evident.

ἀπόδειξις (*apodeixis*), proof: true argument reasoning to a conclusion; argument that declares something through what is previously known.

στοιχεῖον φωνῆς (*stoicheion phōnēs*), element of voiced sound: uncompounded voiced sound, the reason that the other voiced sounds are voiced sounds.

ὠφέλιμον (*ōphelimon*), utility: what causes something to be well off; what causes good.

συμφέρον (*sumpheron*), beneficial: what conduces to the good.

ἀγαθόν (*agathon*), good: what causes the preservation of beings; the cause toward which everything tends, from which is derived what should be chosen.

σῶφρον (*sōphron*), self-controlled: being orderly in the soul.

δίκαιον (*dikaion*), just: prescription
of law which produces justice. 415

ἑκούσιον (*hekousion*), voluntary: what produces its own action; what is chosen for itself; what is achieved with thinking.

ἐλεύθερον (*eleutheron*), free: what rules itself.

11. Moving the semicolon from after *kinēsis* to after *sōmatos* in c5, and deleting *psuchēs*.

μέτριον (*metrion*), moderate: in between excess and insufficiency, satisfying the strictures of skill.
μέτρον (*metron*), measure: the mean between excess and insufficiency.
ἆθλον ἀρετῆς (*athlon aretēs*), prize of virtue: the reward worth choosing for its own sake.
ἀθανασία (*athanasia*), immortality: the eternal duration of a living substance.[12]
ὅσιον (*hosion*), holy: service to a god which is agreeable to the god.
ἑορτή (*heortē*), festival: time that is sacred by law.
ἄνθρωπος (*anthrōpos*), man: wingless, two-footed, flat-fingernailed animal; the only being capable of acquiring
b rational knowledge.
θυσία (*thusia*), sacrifice: offering of a victim to a god.
εὐχή (*euchē*), prayer: request by men to the gods for what is good or seems good.
βασιλεύς (*basileus*), king: an officer who is legally beyond accountability; an officer of a political organization.
ἀρχή (*archē*), command: being in charge of everything.
ἐξουσία (*exousia*), legal authority: discretionary power granted by law.
νομοθέτης (*nomothetēs*), lawgiver: the maker of the laws under which a city is to be governed.
νόμος (*nomos*), law: political judgment of many people, not limited to a certain time.
ὑπόθεσις (*hypothesis*), hypothesis: indemonstrable first principle; summary of the principal points in a discourse.
ψήφισμα (*psēphisma*), decree: political judgment limited to a
certain time. c
πολιτικός (*politikos*), statesman: one who knows how to organize a city.
πόλις (*polis*), city-state: the place of residence of a number of men who follow decisions made in common; a number of men being under the same law.
πόλεως ἀρετή (*poleōs aretē*), virtue of a city: the establishment of a good constitution.
πολεμική (*polemikē*), military skill: having experience of war.
συμμαχία (*summachia*), military alliance: community of warring parties.
σωτηρία (*sōtēria*), preservation: keeping safe and sound.
τύραννος (*turannos*), dictator: an officer of a city who rules according to his own ideas.
σοφιστής (*sophistēs*), sophist: paid hunter of rich and distinguished
young men. d
πλοῦτος (*ploutos*), wealth: having sufficient possessions to live happily; an abundance of property which conduces to happiness.
παρακαταθήκη (*parakatathēkē*), deposit: something given on trust.
κάθαρσις (*katharsis*), purification: the separation of the worse from the better.
νικᾶν (*nikan*), being victorious: prevailing in a conflict.
ἀγαθὸς ἄνθρωπος (*agathos anthrōpos*), good person: the sort of person who can achieve what is good for a human being.

12. Accepting the emendation *ousias empsuchou aïdios monē* in a8.

σώφρων (*sōphrōn*), self-controlled: person having moderate desires.

ἐγκρατής (*enkratēs*), self-restrained: one who overpowers the parts of the soul when they are contrary to right reason.

σπουδαῖος (*spoudaios*), excellent: he who is completely good; he who has the virtue proper to human
e beings.

σύννοια (*sunnoia*), worry: an irrational and disturbing thought.

δυσμαθία (*dusmathia*), stupidity: slowness in learning.

δεσποτεία (*despoteia*), rule over slaves: just authority which is accountable to nobody.

ἀφιλοσοφία (*aphilosophia*), lack of philosophy: the state whose possessor is a hater of argument.

φόβος (*phobos*), fear: consternation of the soul in expectation of something bad.

θυμός (*thumos*), passion: forceful impulse of the non-rational part of the soul, without being ordered by reasoning and thought.[13]

ἔκπληξις (*ekplēxis*), consternation: fear in the expectation of something bad.

κολακεία (*kolakeia*), flattery: keeping company for the sake of pleasure, without considering what is best; the state of socializing for pleasure in excess of what is moderate.

ὀργή (*orgē*), anger: the urging of the passionate part of the soul for vengeance.

ὕβρις (*hubris*), assault: injustice driving one to dishonor
416 someone.

ἀκρασία (*akrasia*), lack of self-restraint: the violent state, without correct reasoning, which is oriented towards what seems to be pleasant.

ὄκνος (*oknos*), laziness: running away from labor; cowardice which paralyzes impulses.

ἀρχή (*archē*), origin: first cause of being.

διαβολή (*diabolē*), slander: the alienation of friends by speech.

καιρός (*kairos*), opportunity: the time it is appropriate to do each thing or undergo it.

ἀδικία (*adikia*), injustice: the state of despising the laws.

ἔνδεια (*endeia*), poverty: being short of goods.

αἰσχύνη (*aischunē*), shame: fear in expectation of bad reputation.

ἀλαζονεία (*alazoneia*), pretentiousness: the state which makes those who lack a good or goods pretend to have it or them.

ἁμαρτία (*hamartia*), error: an action against correct reasoning.

φθόνος (*phthonos*), envy: being distressed by the goods of one's friends, either present or past.

ἀναισχυντία (*anaischuntia*), shamelessness: the state of the soul which endures dishonor for the sake of profit.

θρασύτης (*thrasutēs*), temerity: excessive boldness in face of dangers which one should not face.

φιλοτιμία (*philotimia*), vanity: the state of the soul which is lavish with every expense without thinking.

κακοφυΐα (*kakophuïa*), bad nature: badness in nature and an error of what is natural; disease of what is natural.

ἐλπίς (*elpis*), hope: the expectation of good.

13. Emending *nous taxeōs* to *kai nou taxeōs* in e6.

416 μανία (*mania*), madness: the state which is destructive of true conception.

λαλιά (*lalia*), talkativeness: irrational lack of self-restraint in speech.

ἐναντιότης (*enantiotēs*), contrariety: the greatest distance between objects of the same genus which fall under some difference.

ἀκούσιον (*akousion*), involuntary: what is accomplished without thinking.

παιδεία (*paideia*), education: the ability that is of service to the soul.

παίδευσις (*paideusis*), educating: bestowing education.

νομοθετική (*nomothetikē*), legislative skill: knowledge of how to produce a good city.

νουθέτησις (*nouthetēsis*), admonition: speech which blames with judgment; speech for the sake of keeping someone from a mistake.

βοήθεια (*boētheia*), help: the prevention of something bad, either present or about to happen.

κόλασις (*kolasis*), chastisement: treatment given to a soul concerning a past mistake.

δύναμις (*dunamis*), ability: superiority in word or deed; the state which makes its possessor be able; natural strength.

σῴζειν (*sōizein*), save: to keep safe and sound.

# ON JUSTICE

*Socrates discusses with a friend several disjointed questions about justice. He makes the following points: it is speech that decides what is just and unjust (though that does not answer the question what the just* is*); the same acts can be just or unjust, depending on the situation; justice is knowledge of the right time to do things; people who are unjust are unwillingly unjust. All these are familiar Socratic ideas, presented in an unusually bald and unattractive format.*

On Justice *verges on incoherence because of its brevity and abrupt transitions. One explanation might be that it is not an original work, but is excerpted or adapted from earlier Socratic literature. The argument that the same actions (even deceiving and stealing) are sometimes just and sometimes unjust, depending on the situation, is urged by Socrates in Xenophon,* Memoirs of Socrates *IV.ii.12–20, and Plato has Socrates use a similar argument for situational ethics (*Republic *331b–d). Xenophon often adapted earlier Socratic texts, in this case apparently the same text or texts as the author or compiler of* On Justice.

*That Socrates argued for the propriety of deceiving and stealing was one of the complaints urged by Polycrates in his* Accusation of Socrates*, written in 393/2* B.C. *(a speech now lost but whose contents can be partly inferred from the various replies it provoked, especially the* Apology *of Libanius, the fourth century* A.D. *teacher of rhetoric). If Polycrates was replying to a Socratic source excerpted or adapted by the author of* On Justice*, we can only guess which it was, but the most attractive possibility is a (now lost) dialogue by Antisthenes called* On Law *or* On Rightness and Justice.

*Plato's influence can be felt at one point only: when Socrates argues, apparently needlessly, that since people are unwillingly unjust their unjust conduct must also be unwilling, the author is insisting on a point that Plato felt he needed to insist on at the end of his life (*Laws *860c–e). If the dialogue was intended to support Plato's view, it can be dated to after the middle of the fourth century* B.C.*, perhaps well after.*

*Some manuscripts of* On Justice *list as speakers 'Socrates, Friend', others say 'Socrates, Anonymous', and one says 'Socrates, Clinias'; that Socrates is a speaker is clear from the dialogue itself, but the other three appellations are evidently guesses by later scholars. So it seems to have been transmitted during antiquity without any indication of who the speakers were. The same is true of the dialogue labeled* On Virtue*; these two dialogues also lack titles of a normal Platonic sort and may be among those said in ancient lists of Platonic works to*

*be 'without a heading'. In this translation, we have decided to call the unknown interlocutor 'Friend'.*

*D.S.H.*

372 Socrates: Can you tell us what the just is, or don't you think it's worthwhile to discuss this?

Friend: I think it would be very worthwhile.

Socrates: What is the just, then?

Friend: Well, what could it be, if not what's established as just by custom?

Socrates: That's not the way to answer. If you were to ask me what an eye is, I'd tell you it's what we see with; and if you demand that I prove it, I'll prove it. And if you ask me what "soul" is the name of, I'll tell you it's what we think with. And if, again, you ask me what voice is, I'll answer that it's what we converse with. In this same way, now tell me what the just is, by referring to how we use it, like I've now done with these other things.

Friend: I can't possibly answer you that way.

Socrates: Well, since you can't do it that way, would it perhaps be easier for us to discover it in this sort of way? Now, when we want to distinguish what's longer and what's shorter, with what do we examine them? Isn't it with a measuring-stick?

Friend: Yes.

373 Socrates: Besides the measuring-stick, what skill do we use? Isn't it skill in measuring?

Friend: Right, skill in measuring.

Socrates: And what about distinguishing what's light and what's heavy? Don't we do that with a scale?

Friend: Yes.

Socrates: Besides the scale, what skill do we use? Isn't it skill in weighing?

Friend: Definitely.

Socrates: Well, then, when we want to distinguish what's just and what's unjust, what instrument do we use to examine them? And, besides this instrument, what skill do we use in dealing with them? Or doesn't this way make it clear to you either?

Friend: No.

Socrates: Well, let's start again. Whenever we disagree about what's larger and what's smaller, who are the ones who decide between us? Aren't they the ones who measure?

Friend: Yes.

b Socrates: And whenever we disagree about number, about many and few, who are the ones who decide? Aren't they the ones who count?

Friend: Obviously.

Translated by Andrew S. Becker.

SOCRATES: Whenever we disagree with each other about what's just and what's unjust, to whom do we go? Who are those who decide between us in each case? Tell me.

FRIEND: Are you talking about judges, Socrates?

SOCRATES: Well done! Now go on and try to tell me this: What are the measurers doing when they decide about what's large and what's small? They're measuring, aren't they?

FRIEND: Yes.

SOCRATES: And when the weighers decide about what's heavy and what's light, aren't they weighing?

FRIEND: Of course they're weighing.

SOCRATES: And when the counters decide about many and few, they're counting, aren't they?

FRIEND: Yes.

SOCRATES: And when the judges decide about what's just and what's c
unjust, what are they doing? Answer me.

FRIEND: I can't.

SOCRATES: Say "they're speaking."

FRIEND: Yes.

SOCRATES: Then is it by speaking that they decide between us, whenever the judges decide about what's just and what's unjust?

FRIEND: Yes.

SOCRATES: And it was by measuring that the measurers decided about what's small and what's large, since it was with a measuring-stick that these things were decided.

FRIEND: That's right.

SOCRATES: Again, it was by weighing that the weighers decided about what's heavy and what's light, since it was with a scale that these things were decided.

FRIEND: It was.

SOCRATES: Again, it was by counting that the counters decided about d
many and few, since it was by number that these things were decided.

FRIEND: That's right.

SOCRATES: Yes, and, as we agreed a moment ago, it's by speaking that the judges decide between us about what's just and what's unjust, since it was with speech that these things were decided.

FRIEND: Well said, Socrates.

SOCRATES: Yes, because it was truly said: speech, as it seems, decides what's just and what's unjust.

FRIEND: It certainly seems so.

SOCRATES: What could the just and the unjust possibly be? Suppose someone asked us: "Since a measuring-stick, skill in measuring, and a measurer decide what's larger and what's smaller, what are "larger" and "smaller"?" We might tell him that "larger" is what exceeds and "smaller"
is what's exceeded. Or: "Since a scale, skill in weighing, and a weigher e
decide what's heavy and what's light, what are "heavy" and "light"?" We

might tell him that "heavy" is what sinks down in the balance, and "light" is what rises up. In this way, then, if someone should ask us: "Since speech, skill in judging, and a judge decide what's just and what's unjust for us, what could "just" and "unjust" possibly be?" How can we answer him? Are we still unable to tell him?

FRIEND: We're unable.

SOCRATES: Do you think people do unjustice willingly or unwillingly?
374 What I mean is this: Do you think that people act unjustly and are unjust willingly or unwillingly?

FRIEND: Willingly, I'd say, Socrates, for they're wicked.

SOCRATES: Then do you think that people are wicked and unjust willingly?

FRIEND: Definitely. Don't you?

SOCRATES: No, at least not if we're to trust the poet.

FRIEND: What poet?

SOCRATES: The one who said: "No one is willingly wicked, nor unwillingly blessed."[1]

FRIEND: But, you know, Socrates, the old saying holds true, that singers tell many lies.

b SOCRATES: But I'd be surprised if this singer lied about this. If you have the time, let's consider whether he tells the truth, or lies.

FRIEND: Well, I do have the time.

SOCRATES: Then which do you think is just, lying or telling the truth?

FRIEND: Telling the truth, obviously.

SOCRATES: Lying, then, is unjust?

FRIEND: Yes.

SOCRATES: And which do you think is just, deceiving or not deceiving?

FRIEND: Not deceiving, certainly.

SOCRATES: Deceiving, then, is unjust?

FRIEND: Yes.

SOCRATES: Well, then, which is just, harming or helping?

FRIEND: Helping.

SOCRATES: Harming, then, is unjust?

FRIEND: Yes.

c SOCRATES: So, telling the truth, not deceiving, and helping are just, but lying, harming, and deceiving are unjust.

FRIEND: Yes, by Zeus, definitely.

SOCRATES: Even in the case of enemies?

FRIEND: Certainly not!

SOCRATES: Then is harming enemies just, and helping them unjust?

FRIEND: Yes.

SOCRATES: And isn't harming enemies just, even if you deceive them?

FRIEND: It must be.

1. Epicharmus of Syracuse, an early comic poet (frg. 7).

Socrates: What about lying to deceive and harm them? Isn't this just?

Friend: Yes. d

Socrates: Well, then, you say that helping friends is just, don't you?

Friend: Definitely.

Socrates: By not deceiving them, or by deceiving them, if it's for their benefit?

Friend: Even deceiving them, by Zeus.

Socrates: But, while it's just to help people by deceiving them, certainly it's not just to help them by lying? What if we help them by lying?

Friend: It would be just even if we lied.

Socrates: Then, as it seems, both lying and telling the truth are just and unjust.

Friend: Yes.

Socrates: And not deceiving and deceiving are just and unjust.

Friend: I guess so.

Socrates: Both harming and helping are just and unjust.

Friend: Yes.

Socrates: So all these sorts of things, it appears, are both just and unjust. e

Friend: So it seems to me.

Socrates: Listen, then. I have a right and a left eye, don't I, just like other people?

Friend: Yes.

Socrates: A right and a left nostril?

Friend: Definitely.

Socrates: And a right and a left hand?

Friend: Yes.

Socrates: Although you call these by the same name, you say some are right and some are left. If I ask you which is which, wouldn't you be able to say that these on this side are right and these on the other are left?

Friend: Yes.

Socrates: Then let's get back to our point. Although you call those acts
by the same name, you say that some are just and some are unjust. Can 375
you say which are just and which are unjust?

Friend: Well, I suppose that each of these acts turns out to be just if and when we should do them, but unjust if we shouldn't.

Socrates: Good for you! Then does the person who does each of these acts, when he should, do what's just, while the person who does them, when he shouldn't, does what's unjust?

Friend: Yes.

Socrates: And isn't he himself just, the one who does what's just, but the one who does what's unjust is himself unjust?

Friend: That's right.

Socrates: Now, who can perform surgery and cauterize and reduce swelling, if and when he should?

Friend: A doctor.

375b SOCRATES: Because he knows how, or for some other reason?

FRIEND: Because he knows how.

SOCRATES: And who can cultivate and plow and plant when he should?

FRIEND: A farmer.

SOCRATES: Because he knows how, or because he doesn't?

FRIEND: Because he knows how.

SOCRATES: Isn't this true for the other cases as well? The one who knows how can do what he should, if and when he should, but the one who doesn't know how can't?

FRIEND: So it is.

SOCRATES: And what about lying and deceiving and giving help? Can the one who knows how do each of these acts when he should and at the right time, but the one who doesn't know how can't?

c FRIEND: That's true.

SOCRATES: But the person who does them when he should is just?

FRIEND: Yes.

SOCRATES: And he does them because of his knowledge.

FRIEND: How else?

SOCRATES: Then a just person is just because of his knowledge.

FRIEND: Yes.

SOCRATES: Isn't the unjust person unjust for the opposite reason?

FRIEND: So it seems.

SOCRATES: And the just person is just because of his wisdom.

FRIEND: Yes.

SOCRATES: The unjust person is unjust, then, because of his ignorance.

FRIEND: I guess so.

SOCRATES: So it looks like justice is what our ancestors handed down to us as wisdom, and injustice is what they handed down to us as ignorance.

d FRIEND: I guess so.

SOCRATES: Are people ignorant willingly or unwillingly?

FRIEND: Unwillingly.

SOCRATES: So they're also unjust unwillingly?

FRIEND: It seems so.

SOCRATES: Are unjust people wicked?

FRIEND: Yes.

SOCRATES: So they're wicked and unjust unwillingly?

FRIEND: Absolutely.

SOCRATES: And they act unjustly because they're unjust?

FRIEND: Yes.

SOCRATES: So, unwillingly?

FRIEND: Of course.

SOCRATES: Clearly what's done willingly doesn't happen unwillingly.

FRIEND: It couldn't.

SOCRATES: And acting unjustly comes about because there is injustice.

FRIEND: Yes.

SOCRATES: And injustice is unwilled.

FRIEND: Unwilled, yes.

SOCRATES: Then they act unjustly and are unjust and wicked unwillingly.

FRIEND: Unwillingly, it seems.

SOCRATES: Then in that case the singer didn't lie.

FRIEND: I guess not.

# ON VIRTUE

*How can a man become virtuous? If virtue can be taught, there must be teachers of it; yet there don't seem to be any—even the famous virtuous men of Athens failed to teach virtue to their own sons, let alone to anyone else. Nor is virtue a natural gift, for if it were there would be trainers dedicated to recognizing and fostering it, as with horse trainers and athletics coaches. The remaining alternative is that those who enjoy it have the gods to thank, not their nature, nor their educators.*

*Whole passages from Plato's* Meno *reappear, more or less unchanged, in this dry little dialogue: 377b–378c ≈* Meno *93d–94e. This apparent plagiarism offends the sensibilities of modern scholars, but surely the author had no wish to conceal the borrowings from* Meno*; on the contrary, his use of themes and passages from* Meno *and other well-known Platonic dialogues is a way of citing them and drawing support from authoritative sources for his thesis. That thesis was not common ground in Plato's Academy; Plato's own position was far more nuanced than our author's, and Xenocrates, a student of Plato and the third head of the Academy, wrote a work (now lost) affirming that* Virtue Can Be Transmitted*, perhaps in response to the question asked by Socrates in* Meno*, whether virtue can be taught. If the dialogue was part of a debate internal to the Old Academy, then it can be dated to the latter half of the fourth century* B.C.*, when Aristotle as well as Xenocrates addressed the question. Or else the dialogue may have been directed against the Stoics, who claimed that virtue can be taught and that its foundation lies in human nature; if so, it might date from the middle of the third century* B.C.*, a time when Arcesilaus, as head of the Academy, was placing new emphasis on Plato's written works and drawing skeptical and anti-Stoical lessons from them.*

*The view espoused at the end of* On Virtue*, that virtue comes about by divine allotment, not only echoes Socrates' comments at the end of Plato's* Meno*; it is of a piece with Plato's view that philosophers should rule and that their rule might come about by divine allotment (*Letter *VII 326a–b,* Republic *473c–d). Theological support for this view of god is given by Plato at* Laws *715e–716d. Aristotle also uses some of the imagery and expressions found at the end of* On Virtue *(*Eudemian Ethics *1246b37–1247a13 and 1248b3–7,* Nicomachean Ethics *1145a20–29,* Politics *1284a3–11).*

*Most manuscripts of* On Virtue *list as speakers 'Socrates, Friend', but two say 'Socrates, Meno', and one says 'Socrates, Hippotrophus [Horse-trainer]'; that Socrates is a speaker is clear from the dialogue itself, but the other three appellations are evidently guesses by later scholars. So it seems to have been*

*transmitted during antiquity without any indication of who the speakers were. The same is true of the dialogue labeled* On Justice; *these two dialogues also lack titles of a normal Platonic sort and may be among those said in ancient lists of Platonic works to be 'without a heading'. In this translation, we have decided to call the unknown interlocutor 'Friend'.*

*D.S.H.*

SOCRATES: Can virtue be taught? If not, do men become good by nature, or in some other way? 376

FRIEND: I can't give you an answer right now, Socrates. b

SOCRATES: Well now, let's consider it. Tell me, if someone wanted to become good with the virtue that makes expert chefs good, how would he do it?

FRIEND: By learning from good chefs, obviously.

SOCRATES: Good. Now if he wanted to become a good doctor, to whom would he go to become a good doctor?

FRIEND: That's obvious—to one of the good doctors.

SOCRATES: And if he wanted to become good with the virtue that makes c expert builders good?

FRIEND: To one of the builders.

SOCRATES: And if he had wanted to become good with the virtue that makes men wise and good, where must he go to learn it?

FRIEND: This virtue, too, if it *can* be learned, I suppose he'd have to learn from good men. Where else?

SOCRATES: Then tell me, who were the good men of our city? Let's consider if these are the ones who make men good.

FRIEND: Thucydides, Themistocles, Aristides, and Pericles. d

SOCRATES: Can we name a teacher for each of them?

FRIEND: No, we can't; I haven't heard of any.

SOCRATES: Well then, can we name a student, either a foreigner or a citizen, or anybody else, either free or slave, who is reputed to have become wise and good by associating with these men?

FRIEND: I haven't heard of anybody.

SOCRATES: Might they not have been too jealous to share their virtue with other men?

FRIEND: Maybe.

SOCRATES: Just as chefs, doctors and builders are jealous—that way they won't have any rivals. For it isn't profitable for them to have many rivals or to live among many similar professionals. Is it similarly unprofitable for good men to live among men like themselves?

FRIEND: Probably.

Translated by Mark Reuter.

Socrates: But aren't they just, as well as good?

Friend: Yes.

Socrates: Does it profit someone to live not among good, but among bad men?

Friend: I can't tell you.

Socrates: Well, can you tell me this—whether it's the business of good men to harm, and of bad men to help or *vice versa*?

Friend: *Vice versa*.

377 Socrates: The good, therefore, help, and the evil harm?

Friend: Yes.

Socrates: Is there anyone who wants to be harmed rather than be helped?

Friend: Of course not.

Socrates: Therefore, no one wants to live among bad rather than good men.

Friend: That's right.

Socrates: Therefore, no good man will be too jealous to make another man good and similar to himself.

Friend: Apparently not, according to that argument.

Socrates: Have you heard that Cleophantus was the son of Themistocles?

Friend: I've heard that.

Socrates: Isn't it obvious that Themistocles would not have begrudged his son becoming the best—Themistocles, a man who wouldn't have begrudged that to anyone, if he really was good, which he was, as we admit.

b Friend: Yes.

Socrates: Did you realize that Themistocles taught his son to be an expert horseman—he could ride standing upright on his horse, he could throw a javelin from this position, and he could perform many other remarkable feats—his father taught him and made him an expert in many other things that require good teachers. Haven't you heard that from the older generation?

Friend: I have.

c Socrates: So no one could criticize his son's natural ability as bad.

Friend: Not rightly, at least from what you say.

Socrates: What about this? Have you ever heard anyone—young or old—say that Cleophantus, the son of Themistocles, was a wise and good man in the way that his father was wise?

Friend: Never.

Socrates: Are we to suppose, then, that he wanted to teach his son those things, but he didn't want to make him better than any of his neighbors in the wisdom that he himself enjoyed, if virtue can indeed be taught?

d Friend: That isn't very likely.

Socrates: And yet he was just the sort of teacher of virtue that you suggested. But let's consider another man, Aristides, who raised Lysimachus. He gave his son the best Athenian education in matters which require teachers, but he made him no better than anyone else. Both you and I know this, for we've spent time with him.

Friend: Yes.

Socrates: And you know that Pericles, too, raised his sons Paralus and
Xanthippus—in fact, I think you were in love with one of them. As you e
know, he taught them horsemanship—and they were as good as any Athenian—the liberal arts, and athletic games; he brought them up to be as good as anyone at every skill for which there are teachers; and yet he didn't want to make them good men?

Friend: But perhaps they would have been, Socrates, if they hadn't died young.

Socrates: You're coming to the aid of your boyfriend, which is fair enough. But if virtue were teachable and if it were possible to make men good, Pericles would certainly have made his sons expert in his own virtue
rather than in the liberal arts or athletic games. But it doesn't seem to 378
be teachable, since Thucydides, as well, raised two sons, Melesias and Stephanus, and you cannot say about them what you said about the sons of Pericles, for you know very well that one lived to a ripe old age, and the other much longer. Indeed, their father taught them well, especially to be the finest wrestlers in Athens. He sent one to Xanthias and the other to Eudorus—weren't they supposed to be the finest wrestlers of the day?

Friend: Yes.

Socrates: So it's clear that he would never have taught his sons what b
he had to spend money on, when he could have made them good without spending anything—wouldn't he have taught them to be good, if it could be taught?

Friend: That seems likely.

Socrates: But perhaps Thucydides was a commoner, and he didn't have many friends among the Athenians and their allies? No, but he was from a great household, and he was able to do great things here in Athens and
in other Greek cities. So, if virtue could be taught, he would have found c
someone—either locally or abroad—who could have made his sons good, if he himself didn't have the time because of his political affairs. No, my friend, it looks as if virtue can't be taught.

Friend: No, probably not.

Socrates: Well then, if virtue isn't teachable, are men naturally good? If we examine this in the following way, perhaps we might find out. Now then, do we think that good horses have particular natures?

Friend: They do.

Socrates: And aren't there some men who have a skill by which they d
know the natures of the good horses, those physically fit for racing and mentally spirited or else lethargic?

Friend: Yes.

Socrates: What, then, is this skill? What name does it have?

Friend: Horsemanship.

Socrates: And likewise for hunting dogs, is there some skill by which men can discern the good and bad natures of the dogs?

Friend: There is.

SOCRATES: What is it?

FRIEND: Huntsmanship.

SOCRATES: And what about gold and silver? Do we think there are money-changers who separate the good coins from the bad by looking at them?

e FRIEND: There are.

SOCRATES: What do you call them?

FRIEND: Assayers.

SOCRATES: And again athletic coaches know by looking which traits of the human body are good or bad for each of the events, and in older or younger boys which are going to be their most valuable traits, where they have high hopes for them to succeed in what their bodies can perform well.

FRIEND: That's true.

SOCRATES: Which of these is more important for cities: good horses, good
379 dogs, and so on, or good men?

FRIEND: Good men.

SOCRATES: Well? Don't you think, if men had innate characters good for virtue, that people would make every effort to recognize them?

FRIEND: Very likely.

SOCRATES: Now can you tell me which skill is dedicated to, and capable of judging, the natural qualities of good men?

FRIEND: No, I can't.

SOCRATES: And yet it would surely be worth a great deal, as would those
b who possess it, for they could show us which of the young, while still boys, are going to be good. We would take them and guard them in the acropolis at public expense, like silver, only more carefully, so that no harm would come to them, from battle or any other danger. They would be stored up for the city as guards and benefactors when they came of age.

But really, I dare say that it's neither by nature nor by teaching that men become virtuous.

c FRIEND: How then do you suppose, Socrates, that they become virtuous, if it's neither by nature nor teaching? How else could they become good?

SOCRATES: I don't think it's very easy to explain this. My guess, however, is that the possession of virtue is very much a divine gift and that men become good just as the divine prophets and oracle-mongers do. For they become what they are neither by nature nor skill: it's through the inspiration of the gods that they become what they are. Likewise, good men announce
d to their cities the likely outcome of events and what is going to happen, by the inspiration of god, much better and much more clearly than the fortune-tellers. Even the women, I think, say that this sort of man is divine, and the Spartans, whenever they applaud someone in high style, say that he is divine. And often Homer uses this same compliment, as do other poets. Indeed, whenever a god wishes a city to become successful, he places good men in it, and whenever a city is slated to fail, the god takes the good men away from that city. So it seems that virtue is neither teachable nor natural, but comes by divine allotment to those who possess it.

# DEMODOCUS

*What has come down to us under the title* Demodocus *seems to be a combination of two separate works: a monologue (addressed to Demodocus) which argues against collective decision-making (part I), and a trilogy of dialogues which raise doubts about three elements of common sense (parts II–IV). The trilogy may have been among the Platonic works said in antiquity to be 'without a heading', together with* On Justice *and* On Virtue. *At some point a scribe seems to have attached the trilogy to the end of* Demodocus I *by accident, which caused all subsequent copies to have the expanded format.*

*In* Demodocus I, *Socrates refuses Demodocus' request to give advice on a matter soon to be discussed in a public meeting. He argues instead that the whole collective decision procedure (offering advice, listening to advice, and deciding the question by voting) is absurd. Both the content (which overlaps with that of* Sisyphus*) and the style of argument (which proceeds largely by dilemma) are Platonic enough, though the monologue form is unusual. The addressee, Demodocus, also appears in* Theages, *where he agrees with Socrates that advice is something sacred. The piece is probably later than mid-fourth century* B.C., *perhaps much later.*

*In* Demodocus II–IV, *the narrator (we are probably meant to assume that he is Socrates) reports three conversations, between unnamed third parties, which call into question certain principles of common sense; he is left in doubt about these principles, a doubt which the reader is expected to share. The common-sense principles are plausible, but arguments in the other direction are developed in order to balance their plausibility and leave the reader with an open mind. This is a technique practiced by adherents of the Academy under the sceptical philosopher Arcesilaus and after, which suggests that the dialogues are from the middle of the third century* B.C., *or later.*

*D.S.H.*

## I

You invite me,[1] Demodocus, to give you advice on the matters you are 380
meeting to discuss; but I am inclined rather to ask what is the point of your assembly and of the readiness of those who think to give you advice and of the vote which each of you intends to cast.

Translated by Jonathan Barnes.

1. The speaker is not named, but is apparently intended to be taken as Socrates.

Suppose, on the one hand, that it is impossible to give good and informed
advice on the matters you are meeting to discuss: then surely it is ridiculous
b to meet to discuss matters on which it is impossible to give good advice.
Suppose, on the other hand, that it *is* possible to give good and informed
advice on such matters: then surely it would be absurd if there were no
knowledge on the basis of which it is possible to give good and informed
advice on these matters—and if there *is* some knowledge on the basis of
which it is possible to give good advice about such matters, then there
must be some people who in fact know how to give good advice on such
matters; and if there *are* some people who know how to give advice on
c the matters you are meeting to discuss, then necessarily in your own case
either you know how to give advice on these matters, or you do not know
how to do so, or else some of you know and others do not know. Now if
you all know, why do you still need to meet to discuss the question? Each
one of you is competent to give advice. If none of you know, then how
can you discuss the question? And what will you gain from this assembly
d if you *cannot* discuss the question? If some of you know and others do
not know, and if the latter need advice, then—supposing that it is possible
for a man of sense to give advice to those who are uninformed—surely
*one* man is enough to give advice to those of you who lack knowledge?[2]
For presumably those who know how to give advice all give the same
advice, so that you ought to hear one man and then be done with it. But
this is not what you are actually doing: rather, you want to hear several
advisers. You are assuming that those who are undertaking to give you
advice do not know about the matters on which they are giving advice;
for if you assumed that your advisers did know, then you would be
381 satisfied when you had heard just one of them. Now it is surely absurd
to meet to hear people who do not know about these matters, with the
thought that you will thereby gain something.

This, then, is what perplexes me about your assembly. As for the readi-
ness of those who think to give you advice, there is the following perplexity.

Suppose that, although they are giving advice on the same matters, they
do not give the same advice: then how can all of them be giving sound
advice if they are not giving the advice given by someone who gives good
b advice? And is it not absurd for people to be ready to give advice on
matters about which they are uninformed? For if they are informed they
will not choose to give advice which is not good. But if they give the same
advice, why need they all give advice? It will be enough for one of them
to give this advice.[3] Now surely it is absurd to be ready to do something
which will gain nothing. Thus the readiness of those who are uninformed
c cannot fail to be absurd, given what it is; while men of sense will not be
ready in such a case, knowing as they do that any one of their number

2. Accepting two emendations in d4: adding *ouk* before *epistamenois;* changing *humin* to *humōn.*

3. Emending *ta auta* to *tauta* in b5.

will have the same effect if he gives advice as he ought to. Hence I am at a loss to discover how[4] the readiness of those who think to give you advice can be anything but ridiculous.

I am particularly perplexed to grasp the point of the votes which you intend to cast. Are you judging men who know how to give advice?—No more than one of them will give advice, nor will they give different advice on the same matters. Hence you will not need to cast any votes about them. Or[5] are you judging men who are uninformed and do not give the d
advice they should?—You ought not to allow such people, any more than madmen, to give advice. But if you are going to judge neither the informed nor the uninformed, then who *are* you judging?

In any case, why need other men give you advice at all if you are competent to judge such matters? And if you are not competent, what is the point of your votes? Surely it is ridiculous for you to meet to take advice, e
which implies that you need advice and are *not* yourselves competent, and then, having met, to think that you ought to vote, which implies that you *are* competent to judge. For it can hardly be the case that as individuals you are ignorant and yet having met you become wise; or that in private you are perplexed and yet having come to the same place you are no longer perplexed but become competent to see what you ought to do—all this without learning from anyone or finding things out for yourselves. This is the most extraordinary thing of all: given that you cannot see what 382
ought to be done, you will not be competent to judge anyone who gives you good advice on these matters. Nor will this adviser of yours, being just one man, say that he will teach you to see[6] what you ought to do and also to judge those who give you bad or good advice, given that he has so little time and you are so numerous—this would plainly be no less extraordinary than the previous supposition. But if neither the meeting nor your adviser makes you competent to judge, what is the use of your votes?

Surely your meeting is inconsistent with your voting and your voting b
with the readiness of your advisers? For your meeting implies that you are not competent but need advisers, while the casting of votes implies that you do not need advisers but *are* capable of judging and of giving advice. And the readiness of your advisers implies that they have knowledge, while your casting votes implies that the advisers do not have knowledge.

Moreover, suppose that, after you had voted and after he had given c
you advice on whatever you were voting about, someone were to ask whether you knew if the goal for the sake of which you intended to put into action what you had voted on would come about: I do not think that you would say that you did know. Again, if the goal for the sake of which

4. Replacing the question mark after *sumbouleuein* in c4 with a comma.
5. Accepting the emendations of *alla* to *ē* in d1, and *ē* to *alla* in d2.
6. Adding *kai sunoran* after *didaxein* in a3.

you intend to act were to come about, do you know that it would be in your interest? I do not think that either you or your adviser would say that you do. And if someone were to ask you further whether[7] you thought that any man knew anything of these matters, I do not think you would admit that you did.

d Now when the sort of matters about which you are giving advice are unclear to you, and when the voters and the advisers are uninformed, it stands to reason, as you yourselves will agree, that men often lose confidence and change their minds about whatever they took advice on and voted about. But such a thing ought not to happen to good men. For they know what the matters on which they are giving advice are like, and that those whom they have persuaded will surely attain[8] the goal for the sake of which they give advice, and that neither they nor those whom they
e have persuaded will ever change their minds.

Thus I thought that it was proper[9] for a sensible man to give advice on topics of this sort and not on the matters on which you invite me to give advice. For advice on the former topics ends in success, nonsense on the latter in failure.

## II

I witnessed a man upbraiding his companion because he believed the plaintiff when he had not heard the defendant but only the plaintiff. He said that he was doing something appalling: he was condemning the man
383 in advance[10] when he had neither witnessed the affair himself nor heard the man's friends who had witnessed it and whose words he might reasonably trust; and, without hearing both sides he had rashly trusted[11] the plaintiff. Justice required hearing the defendant, too, as well as the plaintiff, before giving praise or blame. How could anyone decide a case fairly or
b judge men properly if he had not heard both parties? As with purple, or with gold coins, so with arguments it was good to judge by comparison. And why was time allotted to both parties, or why did the jurors swear to hear both impartially, unless the lawgiver had thought that cases would be more justly and better judged by the jurors in this way?

"You seem to me not even to have heard the popular saying."

c "Which one?" he asked.

" 'O, never judge in a case until you have heard both the stories'.[12] This would hardly circulate so widely if it were not a right and proper saying.

7. Emending *de* to *d'ei* in c6, and replacing the question mark in c7 with a comma.
8. Emending *huparchei* to *huparxei* in d7.
9. Emending *axioun* to *axion* in e2.
10. Reading *prokatagignōskōn* in e9.
11. Emending *episteuse* to *pisteusas* in a3.
12. Hesiod, frg. 338 Merkelbach-West.

So I advise you," he said, "in the future not to blame or praise men so rashly."

His companion replied that it seemed quite clear to him that it would be absurd if it were impossible to tell whether one speaker was speaking truly or falsely and yet possible to tell whether two speakers were; or if d
it were impossible to learn from someone who spoke the truth and yet possible to be instructed in the same matters by the same man together with someone else who spoke falsely; or if one man who spoke correctly and truly could not make clear what he was saying and yet two men, one of whom spoke falsely and not correctly, could make clear what the man who spoke correctly could not make clear.

"I am perplexed," he said, "by the following point too: how will they ever make the matter clear? By being silent or by speaking? If they make it clear by being silent, then there will be no need to hear either, let alone both. If they both make it clear by speaking and yet certainly do not both e
speak together (each is required to speak in turn), how can they both make it clear at the same time? If they are both to make it clear at the same time, then they will speak at the same time—and this is not allowed. Hence if they make it clear by speaking, it can only be that each of them makes it clear by speaking, and that when each of them speaks, each of them then makes it clear. Hence one will speak first and the other second, and one will make it clear first and the other second. Yet if each in turn makes the same thing clear, why do you still need to hear the later speaker? The matter will already have been cleared up by the man who spoke first. 384
Moreover," he said, "if both make it clear, then surely each of them makes it clear. For if one of a pair does not make something clear, how could they both make it clear? But if each of them makes it clear, plainly the one who[13] speaks first will also make it clear first. So isn't it possible to tell how things stand after listening to him alone?"[14]

When I heard them I myself was perplexed and could not come to a judgment—though the others who were present said that the first man spoke the truth. So help me with the matter if you can:[15] when one man b
speaks can you assess what he says, or do you need his opponent too if you are to know whether he is telling the truth? Or is it unnecessary to hear both sides? What do you think?

## III

The other day someone was criticizing a man because he had been unwilling to trust him and lend him money. The man who was being criticized was defending himself, and someone else who was present asked the critic c

13. Adding *hos* before *erei* in a4.

14. Replacing the period in a5 with a question mark.

15. Placing a comma after *echeis* in b1.

whether it was the man who did not trust him and lend him money who was in the wrong. "Or haven't *you* gone wrong," he said, "in not persuading him to lend to you?"

"Where did I go wrong?," he replied.

"Who seems to you to go wrong," he said, "—someone who fails to get what he wanted or someone who gets it?"

"Someone who fails," he replied.

"And you failed," he said, "since you wanted the loan, whereas he wanted not to give it and didn't fail in that."

"Yes," he replied, "but, granted that he didn't give me the money, *where* did I go wrong?"

"Well," he said, "if you asked him for what you ought not to have
d asked, then surely you realize that you were in the wrong, whereas he, who did not give it, was in the right. And if you asked him for what you ought to have asked, then surely in failing to get it you must have gone wrong."

"Perhaps," he replied. "But surely he was wrong in not trusting me?"

"Well," he said, "if you had dealt with him as you should, you would not have gone wrong at all, would you?"

"No indeed."

"In fact, then, you didn't deal with him as you should."

"Apparently not," he said.

"So if he wasn't persuaded because you didn't deal with him as you
e should, how can you justly criticize him?"

"I can't say."

"And can't you say either that one needn't be considerate to people who behave badly?"

"I can certainly say that," he replied.

"But don't those who don't treat people as they should seem to you to behave badly?"

"They do," he replied.

"Then what did he do wrong if he wasn't considerate to you when you behaved badly?"

"Nothing at all, it seems," he said.

"Then why on earth," he said, "do men criticize one another in this way, blaming people they have not persuaded for not having been persuaded but never criticizing themselves in the least for not having per-
385 suaded them?"

Someone else who was present said: "Suppose you've behaved well to someone and helped him, and then when you ask him to behave in the same way to you he refuses—surely in these circumstances you might reasonably blame him?"

"The man you are asking to behave in the same way," he said, "is either able or unable to behave fairly towards you, isn't he? If he's not able to, surely you're not making a fair request in asking him to do what he's not able to do; and if he *is* able to, how did you fail to persuade such a man?
b How can it be fair for people to say such things?"

"Damn it," he replied, "he ought to criticize such conduct in order that in future he'll behave better towards him—and his other friends, too, who have heard his criticisms."

"Do you think that people behave better," he asked, "if they hear someone speaking properly and making proper requests or if they hear someone going wrong?"

"Someone speaking properly," he replied.

"But you thought that he was not making a proper request?"

"True," he said.

"Then surely people won't behave better when they hear such criticisms?"

"No, they won't," he replied.

"Then what is the point of such reproaches?" c

He said that he could not find an answer.

## IV

Someone was accusing a man of naïveté because he was quick to trust anyone who spoke to him.

"It's reasonable to trust your fellow citizens and your relations; but to trust men you've never seen or heard before, when you're well aware that most men are rogues and liars—that's no small sign of simplicity." d

One of those present said: "I thought that you would esteem someone who grasped things quickly, no matter what they were, rather than someone who did so slowly?"

"Indeed I do," the first man replied.

"Then why do you criticize him," he asked, "if he is quick to trust anyone who speaks the truth?"

"But I'm not criticizing him for that," he replied; "rather, it's because he's quick to trust people who don't tell the truth."

"But suppose he had taken longer to give his trust and hadn't trusted just anybody, and had then been deceived[16]—wouldn't you have criticized him all the more?"

"I would," he replied.

"Because he was slow to trust and didn't trust just anybody?" e

"Of course not," he replied.

"No," he said, "I'm sure you don't think it's right to criticize a man for that reason, but rather because he trusts people who say what's not trustworthy?"

"Yes indeed," he said.

"Do you think then," he said, "that it's *not* right to criticize him for being slow to trust people and for not trusting just anybody, but that it *is* right to criticize him for being quick to trust and for trusting just anybody?"

"No, I don't," he replied.

16. Accepting the emendation of *ēitiato* to *ēpatato* in d7.

"Then why are you criticizing him?" he asked.

"Because he's wrong to trust just anybody and to trust them quickly, before considering the question."

386 "But if he trusted them slowly before considering the question he wouldn't be wrong?"

"Of course he would," he replied "—in that case he'd be just as wrong. I think, rather, that he shouldn't trust just anybody."

"If you think that he shouldn't trust just anybody," he said, "then surely he shouldn't be quick to trust strangers? Rather, you think that he should first consider whether they're telling the truth?"

"I do," he replied.

"And if they're friends and relations, needn't he consider whether they're telling the truth?"

"I should say that he does need to," he replied.

"For perhaps even some of *these* people say what's not trustworthy?"

"Yes indeed," he replied.

b "Then why," he said, "is it reasonable to trust your friends and relations rather than just anybody?"

"I can't say," he replied.

"Again, if you should trust your relations[17] rather than just anybody, shouldn't you also think them more trustworthy[18] than just anybody?"

"Of course," he replied.

"Then if they're relations of some people and strangers to others, surely you'll have to think them more trustworthy than themselves?[19] For you shouldn't think that relations and strangers are equally trustworthy, or so you say."

"I can't accept that," he replied.

"Equally," he said, "some will trust[20] what they say and others will deem it untrustworthy, and neither party will be wrong."

"That too is absurd," he replied.

c "Again," he said, "if relations say the same thing as just anybody, surely what they say will be equally trustworthy or untrustworthy?"

"Necessarily so," he replied.

"Then shouldn't you give equal trust to anyone who says these things when he says them?"

"That's plausible," he replied.

While they argued in this way I was perplexed as to who on earth I should and shouldn't trust, and whether I should trust the trustworthy and people who know what they're talking about, or rather relations and acquaintances. What do you think about this?

17. Deleting *ou* in b2.

18. Accepting the emendation of *ouk apistous* to *ou kai pistous* in b3–4.

19. Accepting the emendation of *autōi* to *autōn* in b6.

20. Accepting the emendation of *pisteuousin* to *pisteusousin* in b10.

# SISYPHUS

*Are some people better than others at thinking about what course of action to follow? Sisyphus certainly assumes so. He stayed behind in Pharsalus a day longer than expected in order to meet with the governing authorities to help them in their deliberations. But Socrates is puzzled about what deliberation can really be, and he wonders how it differs from mere guesswork. By the end of the dialogue, it becomes clear that Sisyphus does not know the first thing about deliberating, and Socrates offers to delve into it again with him.*

*Sisyphus thinks that deliberating is trying to find out the best course of action. But Socrates argues that this cannot be right—if you are in a position to deliberate about something, you must already understand that subject, and if you understand it, you won't try to find it out; unlike inquiry, which presupposes ignorance, meaningful deliberation presupposes knowledge. Since the objects of deliberation are in the future and not yet in determinate existence, deliberation risks being a shot in the dark unless it is aimed at something definite. What target should it be aimed at? What kind of knowledge is presupposed? The dialogue does not tell us, but surely its author (probably a follower of Plato writing in mid-fourth-century* B.C.*) means to encourage his readers toward Platonic philosophy and its central target—Goodness itself. At roughly the same time, in his* Protrepticus, *or* Exhortation to Philosophy *(a work surviving only in fragments), Aristotle was also arguing that political judgment needs a foundation in speculative philosophy (B46–51).*

*Aristotle investigated the concept of deliberation in his lectures on ethics, where several passages indicate that this topic had been discussed in Plato's Academy, apparently in much the same terms as in* Sisyphus. *Of Plato's own works, the most relevant are* Meno, *which raises the paradox that one cannot try to find out either what one knows or what one doesn't know (80d–e), and* Euthydemus, *which mentions two related paradoxes in the course of illustrating the difference between mere logic-chopping and real philosophy (275e–277c).*

*We find in* Sisyphus *certain notable anachronisms which place it firmly in the fourth century* B.C.*—not the fifth, when Socrates actually lived. Sisyphus of Pharsalus in Thessaly was a contemporary of Plato, not of Socrates, and played a prominent role in local affairs. Stratonicus of Athens, whom the author gratuitously mentions at the beginning of the dialogue, was a renowned performing musician and teacher of the first third of the fourth century, whom Socrates could scarcely have known. And when Socrates asks, "Where is Callistratus?" (388c), he seems to refer to Callistratus of Aphidna, a prominent Athenian*

*politician who was on the run from a death sentence for several years after 362. So the author must have intended his dialogue to resonate with a contemporary mid-fourth-century audience. Plato's* Meno *suggests by certain biographical details that it is directed against the rival educational philosophy offered by Isocrates in Athens, and the same may well be true of* Sisyphus. *Isocrates undertook to make his students good at deliberating, without taking what he regarded as the useless detour of Platonic philosophy, and held that "likely opinion about useful things is far better than exact knowledge of useless things" (*Helen *5). Isocrates also declared, "I regard a man as wise whose opinions enable him to hit upon the best course in most cases" (*Antidosis *271), a conception of wise deliberation that is called into question in* Sisyphus.

*D.S.H.*

387b SOCRATES: We waited a long time for you yesterday as well, Sisyphus, before Stratonicus' show, so that you could join us in hearing a real master giving a performance full of splendid material, both in theory and in practice; but after we gave up thinking you were coming, we went to hear the man by ourselves.

SISYPHUS: Yes, that's absolutely right—some business arose, you see,
c which was fairly urgent, so I couldn't ignore it. Our authorities were in conference yesterday, so they required me to join their deliberations; and if the authorities summon any of us to join their deliberations, we citizens of Pharsalus are legally bound to comply.

SOCRATES: Well, it's a splendid thing to obey the law, and also to be considered a good deliberator by one's fellow citizens—as you yourself are considered to be one of the good deliberators in Pharsalus. Still, I'm not in a position to take issue with you about good deliberation, Sisyphus,
d at the moment; that, I think, would call for a lot of leisure and a long argument—but I'd like to propose a discussion with you about deliberation itself, first of all, about what it is.

What could deliberation itself be? Could you tell me that?—not how to do it well or badly or splendidly, but just what sort of thing deliberation itself is? Surely you could do that quite easily, being such a good deliberator yourself? I hope I'm not being too inquisitive by questioning you on the subject.

SISYPHUS: Can it really be that you don't know what deliberation is?

e SOCRATES: Indeed I don't, Sisyphus, at least if it differs at all from what's done by a man who lacks understanding on some matter calling for action, guessing his answer by divining or making it up: he says whatever comes

Translated by David Gallop.

into his head, just like people who play odds-and-evens; they have no idea, of course, whether they're holding an even or an odd number of things in their hands, yet when they say which it is, they hit upon the truth. Perhaps deliberation is also something like that: someone who has 388
no understanding of what he's deliberating about is just lucky in what he says, and hits upon the truth. If it's something like that, then I do know roughly what deliberation is; but if it's not like that, then I don't understand it at all.

SISYPHUS: But surely, it's not like being utterly and completely ignorant of some matter, but like being familiar with part of it, while not yet understanding the rest.

SOCRATES: Perhaps you mean that deliberation is—Heaven help me! I b
feel as if I'm almost divining your view about good deliberation—do you mean it's something like this? Someone is trying to find out what would be the best course of action to take, and doesn't yet clearly understand it, but is rather in the process of thought, as it were? Is that more or less what you mean?

SISYPHUS: Yes, it is.

SOCRATES: Which do people try to find out—matters which they know, or ones which they don't know?

SISYPHUS: Both.

SOCRATES: When you say that people try to find out both—things they do know as well as things they don't—perhaps you mean something like c
this: one might, for example, be acquainted with Callistratus—know who he was—yet not know where he was to be found.[1] Is that what you mean by trying to find out both?

SISYPHUS: Yes, it is.

SOCRATES: Now you wouldn't try to find out the former, knowing Callistratus, at least if you knew him?

SISYPHUS: Of course not.

SOCRATES: But you might try to find out where he was. d

SISYPHUS: Yes, I think you might.

SOCRATES: Nor, again, would you try to discover where the man was to be found, if you knew that; in that case, you would go and find him right away, wouldn't you?

SISYPHUS: Yes.

SOCRATES: Apparently, then, it isn't things which people know that they try to find out, but things they don't know.

But that argument may strike you as captious, Sisyphus, put forward not with a view to the truth of the matter, but merely as a debating point. If so, look at it this way, and see if you agree with what was just said. e
You know, don't you, what happens in geometry: the diagonal is unknown to geometers, yet there's no question whether it is or is not a diagonal—that's not what they're trying to find out at all—but rather, how long it

1. Accepting the deletion of *ouch hostis eiē ho Kallistratos* in c6.

is in relation to the sides of the areas it bisects. Isn't *that* what they're trying to find out about the diagonal?

Sisyphus: I believe so.

Socrates: And that *is* something unknown, isn't it?

Sisyphus: Absolutely.

Socrates: Or again, take the doubling of the cube. You know, don't you, that geometers try to find out, by reasoning, how big it is? As for the cube itself, they don't try to find out whether it's a cube or not. That much they know, don't they?

Sisyphus: Yes.

389 Socrates: Or again, consider the upper air. You surely know that what Anaxagoras and Empedocles and all the rest of the cosmologists are trying to find out is whether it's infinite or finite.

Sisyphus: Yes.

Socrates: But they don't ask whether it is air, do they now?

Sisyphus: Of course not.

Socrates: In all such cases, then, our conclusion is as follows: nobody can ever try to find out anything that he knows, only what he doesn't know. Would you agree with me about that?

Sisyphus: I would.

b Socrates: Now isn't this what deliberation seemed to us to be—somebody trying to find out the best course to follow in matters requiring him to take action?

Sisyphus: Yes.

Socrates: And we thought that deliberation was trying to find out something concerning practical matters, didn't we?

Sisyphus: Yes, of course.

Socrates: So now it's time for us to consider what it is that prevents people from finding out what they're trying to find out.

Sisyphus: I think it is.

c Socrates: And what should we say it is that prevents them, if not incomprehension?

Sisyphus: Let's look into it, for Heaven's sake.

Socrates: Absolutely!—we must let out every reef, as they say, and raise full cry.

So now let's examine the following question together: do you think it's possible for a man to deliberate about music if he has no knowledge of music, and knows neither how to play the cithara nor how to perform any other kind of music?

Sisyphus: No, I don't.

d Socrates: And what about military or nautical expertise? Would someone who knew neither of those subjects be able to deliberate at all about what he should do in either field? Would he be able to deliberate about how to command a force or captain a vessel if he lacked all knowledge of military or nautical matters?

Sisyphus: No.

Socrates: And would you expect the same to hold in all other fields? It is quite impossible for someone who doesn't understand something either to know or to deliberate about what he doesn't understand.

Sisyphus: I agree.

Socrates: But it *is* possible to try to find out what one doesn't know; isn't that right?

Sisyphus: Certainly. e

Socrates: Then trying to find out can no longer be identified with deliberating.

Sisyphus: Why not?

Socrates: Because what one tries to find out is evidently something one doesn't know, whereas apparently no human being can deliberate about what he doesn't know. Wasn't that what we just said?

Sisyphus: It certainly was.

Socrates: And isn't that what you Pharsalians were doing yesterday, trying to find out the best things for your city to do, yet not knowing them? Because if you knew them, you surely wouldn't still have been trying to find them out—just as we don't try to find out anything else we already know, do we?

Sisyphus: No, we don't.

Socrates: And if one doesn't know something, Sisyphus, which do you think one should do: try to find it out or learn it?

Sisyphus: Learn it, for Heaven's sake; that's what *I* think. 390

Socrates: And there you're right. But tell me, is it for the following reason that you think one should learn it rather than try to find it out? One can discover it more quickly and easily by learning it from those who understand it, than by trying to find it out on one's own, when one doesn't know it. Or is there some other reason?

Sisyphus: No, that is the reason.

Socrates: Well then, why did you people take the trouble to deliberate yesterday on matters you don't understand, and try to find out the best course of action for the city to take? Why weren't you learning those things, rather, from someone who understands them, so that you could take the b
best course of action for the city? Instead, it seems to me that you spent the whole day yesterday sitting there, making things up and divining about matters you didn't understand, instead of taking the trouble to learn them—I mean those who govern your city, including you.

Perhaps you'll say that I've been jesting at your expense merely for the sake of having a discussion, but that you think nothing has been seriously c
proved. Yet you'll certainly have to take this next point seriously, Sisyphus. Suppose it be granted that there is such a thing as deliberation; suppose it does not, as was discovered just now, prove identical with sheer incomprehension,[2] guesswork, or making things up, no different, but just using a grander name for it. In that case, don't you think there's a difference

2. Accepting the conjecture *anepistēmosunē* in c4.

between some people and others with respect to deliberating well or being good deliberators, just as some people differ from others in all other areas of expertise—as, for example, some carpenters differ from others, or some
d doctors from others, or some pipers from others, or as tradesmen in general differ from one another?[3] Just as those experts differ in their respective skills, don't you think the same applies to deliberating—that there's a difference between some people and others?

Sisyphus: Yes, I do.

Socrates: Now tell me, don't all those who deliberate either well or badly deliberate about things that are going to exist in the future?

Sisyphus: Certainly.

Socrates: And what's in the future doesn't exist yet. Isn't that right?

Sisyphus: Of course.

e Socrates: Because otherwise, presumably, it wouldn't *still* be going to exist in the future, but would exist already, wouldn't it?

Sisyphus: Yes.

Socrates: And if it doesn't exist yet, it hasn't yet[4] come into being either.

Sisyphus: No, it hasn't.

Socrates: But if it hasn't even yet come into being, then it doesn't yet possess any nature of its own either, does it?

Sisyphus: None at all.

Socrates: Then those who deliberate well and those who do it badly are all deliberating about matters that neither exist nor have come into being nor possess any nature, whenever they deliberate about what's in the future. Isn't that right?

Sisyphus: It does appear to be.

Socrates: Now do you think it's possible for anyone to hit upon the nonexistent either well or badly?

Sisyphus: What do you mean by that?

Socrates: I'll show you what I'm suggesting. Consider a number of
391 archers. How would you distinguish which of them was a good marksman and which was a poor one? That's not hard to tell, is it? You would presumably ask them to aim at some target.

Sisyphus: Certainly.

Socrates: And the one who most often succeeded in hitting the target you would judge the winner?

Sisyphus: I would.

Socrates: But if there were no target set up for them to aim at, and each
b just shot wherever he pleased, how could you distinguish between the good marksman and the poor one?

Sisyphus: I couldn't.

3. Placing a question-mark after *diapherousin* in 390d2, and a comma after *technais* in d3.

4. Conjecturing *oupō* for *houtōs* in e2.

SOCRATES: And wouldn't you also be at a loss to distinguish good deliberators from bad ones, if they didn't understand what they were deliberating about?

SISYPHUS: I would.

SOCRATES: And if those who deliberate are deliberating about matters in the future, they're deliberating about matters that don't exist, aren't they?

SISYPHUS: Absolutely.

SOCRATES: And it's impossible, isn't it, for anyone to hit upon the nonexistent. How do you think anyone could ever hit upon what doesn't exist? c

SISYPHUS: It can't be done.

SOCRATES: And since it's impossible to hit upon the nonexistent, no one who's deliberating about the nonexistent could actually hit upon it. For the future is something that doesn't exist, isn't it?

SISYPHUS: So I believe.

SOCRATES: Then since nobody can hit upon what's in the future, no human being can actually be good or bad at deliberation.

SISYPHUS: Apparently not.

SOCRATES: Nor can one person be either a better or a worse deliberator than another, if one cannot, in fact, be more or less successful at hitting upon the nonexistent.

SISYPHUS: Indeed not. d

SOCRATES: So what standard could people possibly have in mind when they call certain people good or bad deliberators? Don't you think, Sisyphus, that it would be worth delving into this again some time?

# HALCYON

*Socrates tells his devoted friend Chaerephon the legend of Halcyon, who was transformed by some heavenly power into a sea bird, the better to search for her much-beloved husband, who had drowned at sea. Chaerephon doubts the truth of the legend, but Socrates argues that his doubt is unfounded; we are ignorant of the limits of divine power, which is unimaginably greater than human power and has shown itself to be capable of tremendous things.*

*The topic and the setting of this lyrical little dialogue appear to be derived from a passage in Plato's* Phaedrus *where Socrates also interprets a legend about the transformation of human beings into animals (258e–259d). The association between cosmos, heaven, nature, and divine power is characteristic of Platonism in later times, as is the skeptical stress on the limits of human knowledge, and the affinity between human beings and other animals. The dialogue is elaborately cultivated, both in vocabulary and composition, and is a good example of the artificial style called 'Asiatic' by later critics. It was probably composed between 150* B.C. *and 50* A.D.

*The ending of* Halcyon *contains a sly allusion to the story of the two wives of Socrates, Xanthippe and Myrto, both of whom, he hopes, will be as devoted to him as Halcyon was to her husband. This story of the bigamy of Socrates goes back to the fourth century* B.C. *at least.*

*Although many manuscripts attribute* Halcyon *to Plato and an ancient book list records it as being among the works incorrectly ascribed to him, it has virtually disappeared from the Platonic corpus. This is because it was later attributed to Lucian, the second-century* A.D. *orator and dialogue writer, probably by Byzantine scholars who noticed similarities with the methods and themes of Lucian. When the corpus of Platonic works was established for modern times in the sixteenth-century edition of Henri Étienne (Stephanus),* Halcyon *was not printed, and it has normally not been printed in other modern editions of Plato. It is nowadays usually printed only in editions of the Lucianic corpus.*

*D.S.H.*

CHAEREPHON: Socrates, what was that voice that reached us from way 1
down along the beach, under the headland? It was so sweet to my ears! What creature can it be that makes that sound? Surely creatures that live in the sea are silent.

SOCRATES: It's a sort of sea bird, Chaerephon, called the halcyon, much given to lamenting and weeping. There is an ancient account about this bird, which was handed down as a myth by men of old. They say that it was once a woman, the daughter of Aeolus the son of Hellen, who ached with love and lamented the death of her wedded husband, Ceyx of Trachis, the son of Eosphorus the Dawn Star—a handsome son of a handsome father. And then, through some act of divine will, she grew wings like a bird and now flies about the sea searching for him, since she could not find him when she wandered all over the face of the earth.

CHAEREPHON: Is it Halcyon that you're referring to? I had never heard 2
the voice before; it really did strike me as something exotic. Anyway, the creature certainly does produce a mournful sound. About how big is it, Socrates?

SOCRATES: Not very large. Yet great is the honor she has been given by the gods because of her love for her husband. For it's when the halcyons are nesting that the cosmos brings us what are called the 'halcyon days' in mid-winter, days distinguished for their fair weather—today is an especially good example. Don't you see how bright the sky above is and how the whole sea is calm and tranquil, like a mirror, so to speak?

CHAEREPHON: You're right; today does seem to be a halcyon day, and yesterday was much like it. But by the gods, Socrates! How can we actually believe those ancient tales, that once upon a time birds turned into women or women into birds? All that sort of thing seems utterly impossible.

SOCRATES: Ah, my dear Chaerephon, we seem to be utterly short-sighted 3
judges of what is possible or impossible—we make our assessment according to the best of our human ability, which is unknowing, unreliable, and blind. Many things which are feasible seem, to us, not feasible, and many things which are attainable seem unattainable—often because of our inexperience, and often because of the childish folly in our minds. For in fact all human beings, even very old men, really do seem to be as foolish as children, since the span of our lives is small indeed, no longer than childhood when compared with all eternity. My good friend, how could people who know nothing about the powers of the gods and divinities, or of nature as a whole, possibly tell whether something like this is possible or impossible?

Did you notice, Chaerephon, how big a storm we had the day before yesterday? Someone pondering those lightning flashes and thunderbolts and the tremendous force of the winds might well be struck by fear; one might have thought the whole inhabited world was actually going to
collapse. But a little later there was an astounding restoration of fair weather 4

Translated by Brad Inwood. Text: M. D. MacLeod, *Luciani Opera* (Oxford, 1987), vol. IV.

which has lasted right up to the present moment. Do you think, then, that it is a greater and more laborious task to conjure up this kind of fair weather out of such an overwhelming storm and disturbance and to bring the entire cosmos into a state of calm, than it is to reshape a woman's form and turn it into a bird's? Even our little children who know how to model such things out of clay or wax can easily work them into all kinds of shapes, all out of the same material. Since the divinity possesses great power, incomparably greater than ours, perhaps all such things are actually very easy for it. After all, how much greater than yourself would you say that the whole of heaven is?

5 CHAEREPHON: Socrates, who among men could imagine or find words for anything of the sort? Even to say it is beyond human attainment.

SOCRATES: When we compare people with each other, do we not see that
there are vast differences in their abilities and inabilities? Adult men, when
compared to mere infants who are five or ten days old, have an amazing
superiority in their ability at virtually all the practical affairs of life, those
carried out by means of our sophisticated skills as well as those carried
out by means of the body and soul; these things cannot, as I said, even
6 cross the minds of young children. And how immeasurably superior is
the physical strength of one man grown to full size, compared to them,
for one man could easily vanquish thousands of such children; and it is
surely natural that in the initial stages of life men should be utterly helpless
and incapable of anything. When one person, as it seems, is so far superior
to another, how are we to suppose that the powers of the whole heaven
would appear, compared with our powers, to those who are capable of
grasping such matters? Perhaps indeed many people will think it plausible
that, just as the size of the cosmos surpasses the form of Socrates or
Chaerephon, so its power and wisdom and intelligence will to the same
degree surpass our condition.

7 For you and me and many others like us, many things are impossible
which are quite easy for others to do. For as long as they lack the knowledge,
it is more impossible that people who cannot play the flute should do so
or that the illiterate should read or write, than it is to make women out
of birds or birds out of women. Nature virtually tosses into a honeycomb
an animal which is footless and wingless; then she gives it feet and wings,
adorns it with all kinds of variegated and beautiful colors and so produces
a bee, wise producer of heavenly honey; and from mute and lifeless eggs
she shapes many species of winged, walking and water-dwelling animals,
8 using (as some say) the sacred arts of the vast aether. We are mortal and
utterly trivial, unable to see clearly either great or small matters and in
the dark about most of the things which happen to us; so we could not
possibly make any reliable claim about the mighty powers of the immortals,
whether as regards halcyons or as regards nightingales.[1]

1. Legend tells that Procne and Philomela were also turned into birds, one into a nightingale, the other into a swallow.

O bird of musical lamentations, I shall pass on to my children the far-famed myth about your songs just as I received it from my ancestors, and I shall sing frequently to my wives, Xanthippe and Myrto, of your piety and loving devotion to your husband, with special emphasis on the honor you received from the gods. Will you too do something like this, Chaerephon?

CHAEREPHON: That would certainly be appropriate, Socrates, and what you say is a double exhortation to the bond between husbands and wives.

SOCRATES: Well, now it's time to bid farewell to Halcyon, and go on to the city from Cape Phaleron.

CHAEREPHON: Certainly; let's do so.

# ERYXIAS

*Socrates falls into conversation with Erasistratus, and the talk turns to the topic of wealth and virtue. If the wealthiest person is whoever possesses what is of the greatest value, then those who possess the skill of practical wisdom must be the wealthiest, argues Socrates. Eryxias rejects this line of thinking, but when he asserts that it is good to be materially prosperous, he is defeated by Critias' argument that having money is not always a good thing. Socrates shows that Eryxias' common-sense ideas about money are confused; money has only conventional value and is no more useful, for providing ourselves with what our bodies need, than the skills which a teacher can communicate to others. In a subtle argument addressed to Critias, Socrates concludes that money cannot be considered useful at all, even when it is needed to obtain something of value. The final paradox: if money is useful, whoever has the most of it must be in the worst condition; if he wasn't in a very bad condition, he wouldn't need a lot of money and he wouldn't find it useful.*

*In between the arguments about wealth runs another theme, a discussion about the nature of philosophical argument: What is the difference between serious philosophical arguments and intellectual games? What is the difference between philosophical arguments and quarrels? Is it the argument or the speaker that carries credibility? Is philosophy a matter of personal commitment or a diverting performance?*

*Together these two themes constitute a meditation on the way of life embraced by Socrates and like-minded philosophers. Outwardly poor but inwardly rich, they support themselves by teaching others their wisdom, a wisdom that increases the value to them and their students of all that they come across and make use of in life. Their skill lies in their arguments, which they take seriously but not to the point of quarrelling, arguments to which they give credence and are personally committed.*

*Many of the ideas in* Eryxias *are Socratic commonplaces, and some have parallels in Plato. Socrates prayed, "May I consider the wise man rich. As for gold, let me have as much as a moderate man could bear and carry with him" (*Phaedrus *279c). It is better to know how to use things than to possess them, he argues in advocating philosophy in* Euthydemus*. But the influence of Plato on the unknown author of* Eryxias *is probably strongest in the dialogue's literary composition, which is as subtle as many of Plato's own 'Socratic' dialogues. Scholars have noticed parallels to Stoic and sceptic ideas in* Eryxias *and have tried to draw chronological conclusions. But the only secure evidence is the gymnasiarch of 399a, holder of an office that took that form at some date*

*between 337 and 318* B.C. *The dialogue must be of that date or later, and it may have been written in the Academy, which provided a fertile ground for the later development of Stoicism and scepticism.*

*D.S.H.*

I happened to be strolling about in the Stoa of Zeus the Liberator with 392 Eryxias, from the deme Stiria, when Critias and Erasistratus, the nephew of Phaeax (Erasistratus' son), came up to us. Erasistratus, it turned out, was just recently back from Sicily and other places nearby. When he came to me he said, "Greetings, Socrates." b

"The same to you," I replied. "Well now, anything worth reporting to us from Sicily?"

"Certainly. But would you care to sit down first? I walked from Megara yesterday and now I'm exhausted."

"By all means, if that's what you want."

"What would you like to hear first about the situation over there? What the Sicilians are up to, or what attitude they're taking towards our city? Personally, I think that in their feelings towards us they're like wasps. If you stir them up and get them angry just a little at a time they become c unmanageable; you have to drive them out by attacking their nest. That's what the Syracusans are like. Unless we make it our business to go to their city with a very large force, there's no chance they will ever submit to us. Half-measures can only make them angrier, and then they'll be extremely hard to deal with. In fact they've just now sent envoys to us, and I think they intend to trick our city somehow."

While we were talking the Syracusan envoys happened to pass by. d Erasistratus pointed to one of them and said, "That man over there, Socrates, is the wealthiest in all Sicily and Italy. He must be, since he has such an enormous amount of land at his disposal that he could easily farm a huge tract if he wanted to. This land of his is unlike any other, in Greece at any rate. And he also has plenty of the other things that make you wealthy—slaves, horses, gold, and silver."

When I saw that he was getting ready to babble on about the man's 393 possessions, I asked him, "But, Erasistratus, what sort of reputation does he have in Sicily?"

"People think that he's the wickedest of all the Sicilians and Italians, and he really is. He's even more wicked than he is wealthy, so if you wanted to ask any Sicilian who he thinks is the wickedest man, and who is the wealthiest, everyone will say the same thing: he is."

I thought that what Erasistratus was talking about was no small matter; on the contrary, it's what people consider to be of the very highest importance, namely virtue and wealth. So I asked him, "Who's wealthier, b

Translated by Mark Joyal.

a man who has one talent[1] of silver, or a man who has a field worth two talents?"

"The man with the field, I suppose."

"By the same argument, if someone had clothes or blankets or other things worth yet more than our Sicilian fellow's property, he would be wealthier." Erasistratus agreed. "And if someone were to give you a choice between these two, which would you want?"

c "I would choose the most valuable of them."

"Do you think that choice would make you wealthier?"

"I do."

"So as it stands we think that whoever possesses the most valuable things is the wealthiest person?"

"Yes."

"Then healthy people would be wealthier than sick people, since health is a more valuable possession than the sick man's property. Everyone, at
d any rate, would prefer to be healthy and possess little money than to be sick and possess the Great King's[2] fortune, since they obviously believe that health is more valuable. After all, nobody would ever choose in favor of health unless he thought it was preferable to wealth."

"Of course not."

"Again, if something else should seem more valuable than health, the one who possessed this would be the wealthiest person."

"Yes."

"And suppose someone were to come up to us now and ask, 'Can
e you tell me, Socrates, Eryxias, and Erasistratus, what the most valuable possession for a person is? Is it the thing whose possession would enable him to make the best decisions about how he could most effectively manage both his own affairs and those of his friends?' What would we say this thing is?"

"In my view, Socrates, prosperity is a person's most valuable possession."

"That's not a bad answer at all. But would we consider the most prosperous people in the world to be the most successful?"

"Yes, I believe so."

"And wouldn't the most successful people be the ones who make the fewest errors in handling their own affairs and those of others, while doing the most things right?"

"Exactly."

"So those who know what's bad and what's good, and what a person
394 should and shouldn't do, would have the greatest success and make the fewest errors?" Erasistratus accepted this too. "As it is, then, the same men are apparently the wisest, the most successful, the most prosperous, and the wealthiest, since it turns out that wisdom is the most valuable possession."

1. Accepting the emendation *talanton hen* in b2.

2. The king of Persia, proverbially wealthy.

"Yes."

Eryxias interrupted: "But Socrates, how could it be any advantage to
this person if he were wiser than Nestor but didn't have the things he b
needed for day to day living—food, drink, clothing, and other things of
that kind? What help could wisdom be? How could he be the wealthiest,
since he might as well be a beggar if he has none of the basic necessities?"

I thought that Eryxias made a lot of sense, and answered, "But would
this happen to the person who possessed wisdom but lacked these necessi-
ties? And if someone possessed the house of Poulytion, and it was full of c
gold and silver, would he need nothing?"

"Why yes! He might very well sell his possessions at once and obtain in exchange whatever he actually needed for his day to day existence, or even spend hard currency, in exchange for which he could acquire those items and then have a good supply of everything right away."

"True—provided that the other people actually wanted a house like
Poulytion's more than our friend's wisdom. And yet if they were the sort d
of people who put greater stock in the man's wisdom and what it produces,
the wise man would be able to sell it much more easily, if it was the case
that he needed and wanted to sell it and its products. Do people actually
feel such a powerful compulsion to have the use of a house, and does it
make such a great difference in a person's life to live in a house like
Poulytion's rather than in a small and humble dwelling, while the use of e
wisdom has little value, and it doesn't make much difference whether a
person is wise or ignorant in things that really matter? Do people despise
wisdom and refuse to pay for it, and are there many who need and want
to purchase the cypress wood in Poulytion's house and marble from Mt.
Pentelicon? At any rate, if a person were a navigator or a doctor skilled
at his profession, or were able to have a successful practice in some other
profession along those lines, he would be valued more highly than every
one of the greatest material possessions. And what about the person who
can offer good advice about how to achieve success, both for himself and
for someone else—wouldn't he be able to sell this skill, if that's what he
wanted to do?"

Eryxias broke in, looking annoyed as though someone had done some- 395
thing wrong to him: "If you had to tell the truth, Socrates, would you
really claim that you're wealthier than Callias, the son of Hipponicus?[3]
I'm sure you'd agree that you're no less intelligent in all the most important
things, indeed wiser; but that hasn't made you any wealthier."

"Maybe, Eryxias, you think these arguments we're now discussing are
just a game, since, as you suppose, they have no reality, like pieces in b
backgammon which you can move to gain an advantage over your oppo-
nents so that they have no move they can make to counter yours. Now
maybe with regard to wealth, too, you think that the true situation is no

3. One of the wealthiest men in Athens, noted for his lavish spending on the sophists. See *Apology* 20a; the events of *Protagoras* take place in his house.

more one way than another, and that some arguments are of the same
kind, no more true than false. If a person offered these arguments he could
get the better of his opponents in claiming that the wisest are in our view
c also the wealthiest, even though what he was saying was false while his
opponents were speaking the truth. Perhaps this isn't surprising; it's as if
two men were talking about letters: one claims that the name 'Socrates'
begins with an 'S,' the other that it begins with an 'A'; and the argument
that the name begins with an 'A' proves stronger than the argument that
it begins with an 'S'."

Eryxias cast a glance around at the people who were there, laughing
and blushing as though he had not been present at the earliest discussions,
d and said: "Socrates, I thought that our arguments shouldn't be the kind
that can't persuade any of the people here and provide some benefit to
them. Who in his right mind could ever be persuaded that the wisest are
the wealthiest? What we should be discussing, since we're talking about
wealth, is under what conditions it's an admirable thing to be wealthy
and under what conditions it's a disgraceful thing, and just what kind of
thing wealth is, whether it's good or bad."

e "All right, I'll be careful from now on; and thank you for your good
advice. But since you're introducing the problem, why don't you venture
to tell us yourself whether you consider it good or bad to be wealthy?—
especially since you don't think that our earlier arguments dealt with
this subject."

"Well then, I think it's good to be wealthy."

He wanted to go on speaking, but Critias interrupted and said: "Tell
me, Eryxias, *do* you consider it a good thing to be wealthy?"

"I certainly do. I'd be crazy if I didn't; and I'm sure the whole world
would agree with me about this."

396 "But I also think I could convince everybody that for some people, being
wealthy is a bad thing. Yet if it really were good, it wouldn't appear bad
to some of us."

Then I said to them: "If the two of you couldn't agree over who is the
greater authority on expert horsemanship, and I happened to know about
horses, I'd try to put a stop to your quarrel. After all, I'd be ashamed if I
were there and didn't do all I could to prevent your quarrelling; likewise
b if you couldn't agree about anything else at all and were likely to go away
as enemies instead of friends unless you came to an understanding. But
as it is your disagreement is over something which you're bound to deal
with throughout your whole life, and it makes a big difference whether
you should consider it useful or not. What's more, the Greeks don't think
it's any ordinary thing; they hold it in the highest regard—at any rate,
c that's why the first thing that fathers advise their sons to consider, as soon
as they think their sons have reached the age when they have their wits
about them, is how they will become wealthy, since a man who has posses-
sions is worth something, but one who doesn't is worthless. Now if this

is taken so seriously, and you see eye to eye on other things but differ over such an important matter—on top of that, not over whether wealth is black or white, or light or heavy, but whether it's good or bad—that you actually become the worst of enemies if you argue over what's good d
and what's bad, even though you're really the closest friends and relatives—well, as far as I can, I'm not going to ignore you while you're carrying on your argument. If I could explain the situation to you and put a stop to your dispute, I would. But in fact, since I can't do that, and since each of you thinks he can make the other agree with him, I'm ready to e
help you all I can to come to an agreement about wealth. So try to make us agree with you, Critias, as you had undertaken to do."

"As I intended, I'd like to ask Eryxias if he thinks there are just and unjust people."

"I most certainly do."

"Then do you think injustice is a good thing or a bad thing?"

"A bad thing."

"Do you think a man would be behaving unjustly or not if he were to pay money to commit adultery with his neighbor's wife, when in fact both the city and its laws forbid it?"

"To my mind he would be acting unjustly."

"So if the unjust man who wanted to do this were wealthy and able to spend money on it, he would commit the crime. But if he weren't wealthy 397
and didn't have the resources to spend, he simply wouldn't be able to carry out what he wanted; and then there'd be no crime at all. It follows that this man would be better off if he weren't wealthy, since he would have less chance of carrying out what he wanted when what he wanted was wrong.

"And here's something else: would you say that being sick is bad or good?"

"Bad."

"Now then, do you think that some people are weak-willed?"

"Yes." b

"Then if it were better for the weak-willed person's health to stay away from food, drink, and the other things that people regard as pleasurable, but he wasn't able to do this because of his weakness, would it be better for him if he didn't have the means to acquire them, rather than if he had a superabundance of what he needed? For in that case he wouldn't have the opportunity to go wrong, no matter how much he wanted to."

I was thinking that Critias had conducted this conversation so effectively that if it weren't for the embarrassment Eryxias was feeling in front of c
everyone there, he might very well have stood up and hit Critias. Eryxias thought that something important had been taken from him, since it had become apparent to him that his earlier opinions about wealth were wrong. I realized that he was feeling like this and was worried that it might lead to insults and antagonism, so I said: "Just a couple of days ago this very

argument was being used in the Lyceum by a wise man named Prodicus,
d from Ceos.[4] The people who were there thought he was talking such nonsense that he couldn't convince any of them that he was speaking the truth. As a matter of fact a very outspoken young man came up and sat beside Prodicus. He began to laugh and jeer at him and provoke him; he wanted Prodicus to explain what he was saying. What's more, his standing among the audience was much higher than Prodicus'."

Erasistratus said, "Would you like to give us a report of the conversation?"

e "By all means, provided I can remember it. I think it went something like this.

"The young man asked him in what respect he thought wealth was bad and in what respect good. Prodicus responded as you did just now: 'It's good for gentlemen, the people who know in what situations they should use their property; but it's bad for those who are wicked and ignorant. The situation is the same with everything else as well: the nature of the things people deal in inevitably reflects the people themselves. I think that Archilochus'[5] poem said it well: "Men's thoughts are like the things they encounter." '

398 " 'In that case,' the young man said, 'suppose someone were to make me skilled in the same thing that good men are skilled in. He's bound at the same time to make everything else good for me as well. Yet *that* wasn't the point of his efforts, since he was concentrating on the thing at which he has made me skilled rather than ignorant. It's as if someone now were to make me skilled in letters: he would necessarily make the other things that have to do with letters good for me; and likewise with music too. It's
b the same story when he makes me good: inevitably he's made the other things good for me too.'

"To these analogies Prodicus didn't offer his agreement, yet he went along with the young man's initial remark.

" 'Do you think,' the young man said, 'that doing good things is just like building a house, that it's the work of human hands? Or do things have to go on being the very same as they were at the outset, whether bad or good?'

"Prodicus, I think, was now suspicious about where their argument was
c headed. So to avoid being defeated by the young man in full view of everyone who was there—though he thought it made no difference if this happened while they were alone—he gave a very shrewd response, that doing good things is the work of human hands.

" 'Do you think,' the young man said, 'that excellence can be taught, or is it innate?'

4. A professional educator (sophist); see *Protagoras* 315d, 337a ff. The Lyceum was a public space just outside the walls of Athens.

5. Early seventh-century-B.C. composer of iambic and elegiac poems. The line quoted is in frg. 70 Edmonds (Loeb) *Elegy and Iambus*, vol. 2.

" 'I believe it can be taught,' Prodicus said.

" 'Do you think a person would be foolish if he supposed that by praying to the gods he could become skilled in letters or music or could gain some other expertise, which he could only possess by learning from another d
person or by finding it out for himself?'

" 'Yes, I do.'

" 'So, Prodicus,' the young man said, 'whenever you pray to the gods for success and good things, you're praying on those occasions for nothing other than to become a gentleman, since it's the case that things are actually good for gentlemen, but bad for mediocre people. But if excellence really can be taught, it would appear that you're praying for nothing other than to be taught what you don't know.'

"I told Prodicus that I thought he was under a serious delusion if it e
turned out that he was wrong in supposing that we receive from the gods what we pray for at the same time that we pray for it. 'Although you sometimes hurry to the Acropolis and pray to the gods and beg them to give you good things, you don't know that they can give you what you're begging for. It's the same as if you were to go to the doors of a schoolteacher and implore him to give you skill in letters without any effort on your part, so that after you had received it you too would immediately be able to do the work that a schoolteacher does.'

"While I was saying this Prodicus, annoyed that his prayers to the gods
might appear useless, began to go after the young man in order to defend 399
himself; he meant to offer the same arguments that you did a moment ago. But then the supervisor of the gymnasium came up and told him to leave. He thought that Prodicus' discussions weren't suitable for young ears, and if they weren't suitable, they must be wicked.

"The reason I've recounted this is so that you may observe how people feel about philosophy. If Prodicus were here arguing as he was, you would all think he was so mad that he should even be expelled from the gymna- b
sium, whereas just now you seem to have conducted your argument so extremely well, Critias, that you not only convinced everyone here but also made your opponent agree with you. It's clearly like the situation in lawcourts: if two people were to offer the same testimony—one with the reputation of a gentleman, the other of a wicked man—the jurors would remain unconvinced by the wicked man's testimony, but might possibly even do the opposite to what he wanted. But if the one who had the reputation of a gentleman were to say the same things, his words would c
be judged to be absolutely true. Perhaps the attitude your listeners have taken towards you and Prodicus is like this. They thought that Prodicus was a sophist and a charlatan, but they think you are an important man who is involved in the affairs of our city.[6] They also believe that they should not concentrate on the argument itself but rather on the character of the people who are arguing."

6. Accepting the conjectural deletion of *kai* before *andra* in c4.

"Why, Socrates, *you* may not be serious about what you're saying, but in my opinion Critias is clearly on to something important."

d "Rest assured I'm absolutely serious. But since the two of you carried
on your discussion so effectively, why not put the final touch on it as
well?[7] I think there's something left for you to investigate, since there
seemed to be agreement at least on the point that wealth is good for some
and bad for others. All that's left now is to examine what wealth itself is;
unless you first determine this you won't even be able to reach an agree-
e ment on whether it's bad or good. I'm ready to give you as much help as
I can to complete your investigation, so it's up to the one who claims that
wealth is good to explain his position to us."

"My own opinion about wealth is no different from everyone else's: wealth is the possession of a lot of property. And I'm sure that Critias here also has the same opinion about wealth."

"In that case, then, you would *still* be left to consider what property is
in order to avoid the appearance a bit later of arguing about this all over
400 again. Let me illustrate this with the Carthaginians, who use the following
kind of currency. In a small piece of leather something roughly the size
of a stater[8] is tied up, but no one knows what this is except the people
who did the tying. Then when this is sealed they put it into circulation,
and the person who has the largest number of these is considered to
have the most property and to be the wealthiest. Yet if any Greek had a
tremendous amount of this currency, he wouldn't be any wealthier than
if he had a lot of pebbles which he took from the hill. In Lacedaemon they
b put iron into circulation according to weight, and what's more, the useless
kind.[9] The person who has a large weight of this kind of iron is considered
wealthy, yet elsewhere such a possession is worthless. In Ethiopia they
use engraved stones which a Lacedaemonian would find useless. And
among the Scythian nomads anyone who possessed the house of Poulytion
would be considered no wealthier than an owner of Mount Lycabettus
would be considered by us.

c "So clearly, each of these things cannot be property since some of the
people who possess them seem no wealthier because of it. Yet each of
them really is property for some people, and these people are wealthy
because of their possession of it; but for others neither is it property nor
does it make them wealthier. Likewise the same things are not beautiful
and ugly to everybody, but rather different things strike different people
in different ways.

d "If, then, we should wish to investigate why it is that houses are not
property in the eyes of the Scythians but they are to us, or why leather is
property to the Carthaginians but not to us, or why iron is property to

7. Accepting the emendation *epetelesaton* in d2.

8. A coin; the Athenian stater was 17.5 grams of silver.

9. Accepting the conjectural deletion of *tou sidērou* in b1.

the Lacedaemonians but not to us, wouldn't our findings be precisely like that? Let me elaborate. Suppose someone in Athens had a thousand talents in weight of the stones found in the marketplace. Since we have no use for these stones, is there any reason why we should consider him any wealthier because he has them?"

"Apparently not."

"But suppose he had the same weight of lychnite,[10] would we say that he was in fact very wealthy?"

"Of course." e

"Is it because the one thing is useful to us while the other is useless?"

"Yes."

"And that's also why among the Scythians houses are not property, because the Scythians have no use for a house; nor would a Scythian prefer the finest house over a heavy leather coat, since the one thing is useful to him while the other isn't. Again, we don't think that the Carthaginian coinage is property, since we couldn't possibly obtain from it what we need, as we do with silver; therefore it would be useless to us."

"Fair enough."

"It follows that everything that turns out to be useful to us is property, while everything useless is not."

In response to this Eryxias said: "How can that be, Socrates? When we're 401 dealing with one another don't we engage in talking and looking[11] and many other things? Would we consider these property? They *do* seem useful. But even so we haven't gained an impression of what property is. Everyone has pretty well agreed that something must be useful if it's going to be property, but since not all useful things are property, what kinds of useful things *are?*"

"What[12] if we were to pursue the question again through a comparison with drugs, which were invented for ending illnesses? Would we have a b better chance of finding what we're looking for, namely, what it is that we treat as property and for what purpose the possession of property was invented? Possibly that approach would make it clearer to us. Now it appears that everything which is property must also be useful, and that what we call property is a species of these useful things. Therefore what we still have to do is consider for what use property is useful to use. For instance, all things which we use for work are useful, of course, just as all c things that have life are animals, but of these animals we call one species man. Now suppose someone were to ask us what would have to be done away with so that we wouldn't need medicine or medical instruments. Our response would be, if illnesses were removed from the body and didn't occur at all, or if they were removed as soon as they did occur.

10. Parian marble; or else a red precious stone.

11. Accepting the emendation *blepein* in a2.

12. Assigning these two paragraphs to Socrates instead of Eryxias.

Therefore it seems that medicine is the science which is useful for removing illnesses.

d “But if someone were then to ask us what would have to be removed
so that we wouldn’t need property, would we have an answer? If we
don’t, let’s start over again along these lines: if a person could live without
food and drink, and not go hungry or thirsty, what need would he have
of these things, or of money or anything else to provide himself with them?”

“None, I suppose.”

“It’s the same with other things, too. If we had no need of the things
that we presently require to take care of our bodies, heat and cold for
e instance, and everything else too which the body lacks but requires, then
what passes for property would be useless to us, since no one would have
any need at all of the things for whose sake we want property. The result
for us would be satisfaction, as far as the persistent desires and needs of
the body are concerned. So if it’s to care for the body’s needs that the
possession of property is useful, and if these needs were taken out of our
way, we wouldn’t have any need for property, and property might not
even exist at all.”

“It looks like it.”

“Then the things which are useful for that business appear to us, I suppose, to be property.”

Eryxias agreed with this, but he was becoming seriously confused by the argument.

402 “What about this way of looking at it? Would we say that the same thing
can be sometimes useful, but sometimes useless, for one specific purpose?”

“No, I don’t think so. Instead, if we were to have any need of the thing for that one purpose, then I do think it’s useful, but if we don’t, then it isn’t.”

“So if we were able to make a gold statue without using fire, we wouldn’t
have any need of fire for that purpose. And if we didn’t have any need
b of fire, it wouldn’t be useful to us either. The same argument applies to
other things as well.”

“It seems so.”

“And so it would appear that whatever isn’t needed when something is being done is also not useful to us in that particular case.”

“That’s right.”

“Then if it should turn out one day that we were able to put an end to
the body’s needs so that it no longer had any, and we could do this without
silver, gold, and other things of that kind which we don’t actually use for
the body (in the way that we use food, drink, clothing, blankets and
houses), then it would appear that silver, gold, and other such things
c wouldn’t even be useful to us for this particular purpose, provided that
the body’s needs can one day be removed without using them.”

“You’re right.”

“Then it would appear that these things aren’t property to us either if they aren’t useful, though they would be things which enable us to obtain what is useful.”

"Socrates, I could never be convinced that gold, silver, and other things like them are not property, as you say. I'm *certainly* convinced that the things which are useless to us are not property, and that property ranks among the most useful things besides.[13] But I'm not persuaded that these d things are not actually useful to us for living, since we can obtain what we require by means of them."

"Come on then, what would we say to this? Are there any teachers of music, letters, or some other skill, who obtain what they require for themselves by receiving compensation in return for their teaching?"

"There are."

"So it's with this skill of theirs that these people can obtain what they e require, by receiving something in return for that skill in the same way that we receive things in return for gold and silver."

"Yes."

"But if it's with this that they obtain what they use for living, then it would actually be useful in itself for living. We did say, didn't we, that property is useful because with it we're able to obtain what we require for the body?"

"Yes we did."

"So if these skills are classified as useful for this purpose, then it appears they are property, for the same reason that gold and silver are property. It's clear too that those who possess these skills are wealthier. Yet a little earlier[14] we were having a lot of trouble accepting the argument that these are the wealthiest people. Based on the agreement we've just reached, 403 however, it would have to follow that the more skillful are sometimes wealthier. For instance, if someone were to ask us whether we thought a horse is useful to everybody, wouldn't you answer that it's useful to those who know how to use a horse, but not to those who don't?"

"I would."

"And by the same argument medicine also isn't useful to everybody, but only to the person who knows how to use it?"

"Yes."

"Is it the same with everything else too?"

"Apparently." b

"Then gold, silver, and the other things generally regarded as property would be useful only to the one who knows how they should be used?"

"Right."

"Now weren't we under the impression earlier[15] that it took a gentleman to know when and how to use each of these things?"

"We were."

13. Accepting the emendations *toutois* for *touto* and *ta chrēmata* for *chrēmata ta chrēsima* in d1.

14. 394a–395d.

15. 397e.

"Then these things would be useful only to gentlemen, since they're the ones who know how they should be used. But if these are useful only to them, then to them alone, it seems, would these things be property. It
c appears, moreover, that if someone were to take a person who knew nothing about riding a horse and who owned horses which were useless to him, and then made him knowledgeable about horses, he would have made him at the same time wealthier too, since he has taken what was previously useless to this man and made it useful. For by giving the man some knowledge he's instantly made him wealthy."

"It seems so."

"And yet I'm sure I could also swear on Critias' behalf that he's not convinced by any of these arguments."

d "I'm certainly not. In fact I'd be crazy if I were. But go on and finish your argument that the things generally accepted as money—silver, gold, and other such things—are not property. You can't imagine how much I admire these arguments of yours as I'm listening to you relate them right now."

"I think, Critias, that you enjoy listening to me in the same way that you enjoy listening to the rhapsodes who sing Homer's poems: you don't think a word of it is true. But come on, what would we say to this? Would
e you say that some things are useful for housebuilders when they are constructing a house?"

"Yes, I think so."

"Would we say that those things are useful which they use[16] for this construction—stones, bricks, boards, and that kind of thing? Or are these things also useful, the tools they used to build the house and with which they provided themselves with the boards and the stones, and likewise the tools for *these* tools?"

"I suppose that all the things involved in the operation are useful."

"Isn't this the case with all other activities? Not only are these things themselves useful which we use for each of our tasks, but also those by which we acquire these things and without which our work couldn't be done?"

"Exactly."

"Then likewise the things with which these last things were made, and
404 anything that came before them, and, again, the things with which these were made, and once more the things that preceded them, on and on endlessly—do all these things inevitably appear useful for the production of our work?"

"Yes, that might well be the case."

"Now what if a person possessed food, drink, clothing, and whatever else he's likely to use for his body, would he have any additional need for gold, silver, or anything else with which to acquire them, seeing that he already possesses them?"

16. Accepting the emendation *katachrōinto* in e4.

"I doubt it."

"Do you suppose a situation could occur when a man would need none b
of these things for the use of his body?"

"No, I don't."

"Now if these things were to appear useless for this purpose, wouldn't it follow that they can never appear useful? After all it was a basis of our discussion that things could not be sometimes useful, but sometimes useless, for one specific purpose."

"Well, in that respect, at least, our arguments may be in agreement: if these things should ever be useful for this purpose, they would never turn out also to be useless. As it is, for doing certain things . . . c

. . . some for doing wicked things, others for doing good things?"[17]

"Yes, I would say so."

"Can something wicked be useful for the purpose of doing something good?"

"No, I don't think so."

"Would we say that those acts are good which a person performs virtuously?"

"Yes."

"Can a person learn anything which is taught orally, if he's completely deprived of his ability to hear somebody else?"[18]

"No, by Zeus, I don't think so."

"So it would appear that hearing is to be classified as useful for virtue, d
since virtue can be taught through the sense of hearing and we make use of this sense for learning."

"Yes."

"Since medicine can put an end to a person's illness, it seems that sometimes medicine also may be classified as useful for virtue, if a person can acquire the sense of hearing through medicine."

"That may be so."

"And again, if we were to obtain medicine in exchange for property,
property would obviously be useful for virtue too." e

"Yes, that's quite true."

"Likewise also the means by which we obtain the property?"

"Absolutely."

"Do you suppose that a person could obtain money by wicked and disgraceful means, and in return get hold of the medical knowledge by which he would be able to hear after having been unable to hear, and that he could make use of that same ability for excellence or for other things of a similar kind?"

"I certainly think so."

17. Some words seem to have been lost in the transmission of the text. Possibly Critias claims that for doing certain things, certain items are always useful: then Socrates asks if some items can be useful for doing wicked things, others for doing good things.

18. Accepting the conjectural deletion of *ē* (and the comma before it) in c8.

"Surely nothing wicked could be useful for virtue."

"No, it couldn't."

"Then those things by which we obtain what is useful for one purpose
or another are not necessarily also useful for that same purpose. Otherwise
405 bad things would sometimes appear to be useful for a good purpose.
Perhaps this will make it clearer. If things are useful for one purpose or another, and this purpose couldn't come into existence unless those things existed beforehand, tell me, what would you say about that? Can ignorance be useful for knowledge, or sickness for health, or wickedness for virtue?"

"I don't think so."

"Yet on this we would agree, that knowledge can't belong to a person if ignorance didn't exist in him beforehand, that health can't belong to him if sickness didn't exist in him beforehand, and that excellence can't belong to him if wickedness didn't exist in him beforehand."

b "Yes, I suppose we would."

"Then it would appear that those things which are required for the creation of something else are not necessarily also useful for that thing. Otherwise it would seem that ignorance is useful for knowledge, sickness for health, and wickedness for virtue."

Critias was finding it very hard to go along with these arguments, that
not everything we had mentioned could be property. When I realized that
it would be—as the saying goes—as easy to persuade him as it is to boil
c a stone, I said: "Let's forget about those arguments, since we can't agree
whether or not useful things and property are the same. But what would
we say about this? Would we consider a person to be more prosperous
and better if his physical requirements and his requirements for day to
day living were extremely numerous, or if they were as few and simple
as possible? Maybe the best way to look at it would be to compare the
d person with himself by considering whether his condition is better when
he is sick or when he is healthy."

"We certainly don't have to consider *that* for very long."

"No doubt it's because everybody easily recognizes that the healthy person's condition is superior to the sick person's. Now then, in what circumstance would we have a greater need for all kinds of things, when we're ill or when we're healthy?"

"When we're ill."

e "So it's when we're in the worst condition that we have the most power-
ful and most numerous desires and needs, as far as physical pleasures
are concerned?"

"Yes."

"And just as a person is in the best condition when he himself has the fewest requirements of that kind, can the same reasoning apply to two people, where one's desires and needs are powerful and numerous, while the other's are few and gentle? For example, consider anybody at all who is a gambler, or a drunkard, or else a glutton—all such conditions amount to nothing but desires."

"Exactly."

"But all these desires are nothing but the need for something; and those who have the greatest needs are in a worse condition than those who have no needs at all or as few as possible." 406

"As far as I'm concerned, people like that are certainly in a very bad state; the more they need the worse off they are."

"And so do we think that things can't be useful for some purpose unless we need them for that purpose?"

"That's right."

"Then if we suppose that these things are useful for taking care of the body's needs, mustn't we also require them for this purpose?"

"I think so."

"So the person who possesses the largest number of useful things for this purpose would also appear to *require* the largest number of things for this purpose, since he's bound to require all the things that are useful."

"That's how it seems to me."

"According to this argument, at least, it appears that those who have a lot of property must also need many of the things required to take care of the body, since property was seen as useful for this purpose. So the wealthiest people would necessarily appear to us to be in the worst condition, since they are in need of the greatest number of these things."

# AXIOCHUS

*Axiochus has come close to dying and was shaken by the experience, despite being familiar with arguments that used to make him laugh at death and at those who feared it. Socrates is summoned to his bedside to administer his usual consolations, of which he has a wide selection. Eventually some of them have the desired effect, and Axiochus welcomes the prospect of death as the release of his divine soul to a better place. He collects his thoughts, and Socrates goes on his way.*

*This dialogue is an unconventional version of a very conventional genre—the consolation letter. Typical examples include Seneca's* Consolation for Marcia *and* Consolation for Polybius *and Plutarch's* Consolation for His Wife. *The Plutarchean* Consolation for Apollonius *is a sort of treasury of consolation arguments, and there are echoes and reflections of the genre in Cicero's* Tusculan Disputations *I and III, as well as in many other ancient sources, indicating its continuous popularity from at least the third century* B.C. *to the end of the pagan world, before being adapted by Christian writers. Every philosophical school produced arguments of consolation, especially Stoicism, and many letters of consolation freely borrowed arguments from all possible sources, whether or not the ideas were mutually consistent.*

*It should therefore come as no surprise to see Socrates urging on Axiochus a wide variety of mutually incompatible consolations, including rhetorical and Cynic commonplaces as well as Epicurean, Stoic, and Platonic arguments. Some authors of this genre seem to have been less concerned with whether the arguments were true than with whether they were reassuring: "there are also some authors of consolation letters who combine all these kinds of consolation—for one man is moved by one sort, another by another—like the way I threw them all together in my* Consolation, *for my soul was in a fever and I tried everything to cure it" (Cicero,* Tusculan Disputations *III.76).*

*The strategy of* Axiochus *seems to be derived from Plato's* Apology, *where Socrates says that death is either a permanent loss of consciousness or a transition to somewhere else. The arguments which are effective for Axiochus are Stoic (370b–d) and Platonic (371a–372a); "whether above or below, Axiochus, you ought to be happy, if you have lived piously." But the Cynic harangues and commonplaces (366d–369b) seem to make little impression, and the Epicurean arguments (365d–e and 369b–370b) are quite over his head.*

*What makes* Axiochus *unconventional is that it is not a letter addressed to someone who has been bereaved, but a dialogue with somebody who is about to lose his own life, a situation in which the problematic emotion is not grief but*

*fear. The author, probably a Platonist writing between 100* B.C. *and 50* A.D.*, has borrowed characters from earlier Socratic writings to clothe the* consolatio *in the guise of a Socratic dialogue.*

*D.S.H.*

While I was on my way to the Cynosarges and getting near the Ilisus, 364
I heard the voice of someone shouting, "Socrates, Socrates!" When I turned
around to find out where it was coming from, I saw Clinias the son of
Axiochus, running toward the Callirhoe,[1] together with Damon the musi-
cian, and Charmides the son of Glaucon.[2] (Damon was Clinias' music
teacher; Charmides and Clinias were companions, and in love with one
another.) So I decided to turn off the main road to meet up with them b
and get together as quickly as possible. With tears in his eyes, Clinias said:

"Socrates, now's your chance to show off the wisdom they're always
saying you have! My father has been unwell for a while,[3] and is near the
end of his life; and he's miserable on his deathbed, even though he used
to laugh at people who had a phobia about death, and tease them a little. c
So come and reassure him in your usual way, so that he may meet his
fate without complaining, and so that I and the rest of the family can also
perform the proper rituals."

"Well, Clinias, you won't find me refusing such a reasonable request,
especially since what you ask involves religion. Let's go; if that's the
situation, speed is essential."

"Just seeing you, Socrates, will revive him; in fact he's often before
managed to rally from this condition."

After hurrying along the wall to the Itonian gates—he lived near the gates d
by the Amazon column—we found that Axiochus had already collected his 365
senses and was strong in body, though weak in spirit, very much in need
of consolation, sobbing and groaning, again and again, as well as weeping
and clapping his hands. I looked down at him and said:

"Axiochus, what's all this? Where's your former self-confidence, and
your constant praise of manly virtues, and that unshakable courage of
yours? You're like a feeble athlete who put on a brave show in training
exercises and lost the actual contest! Consider who you are—a man of b
such an advanced age, who listens to reason, and, if nothing else, an
Athenian!—don't you realize that life is a kind of sojourn in a foreign land
(indeed, that's a commonplace, on everybody's lips), and that those who

Translated by Jackson P. Hershbell.

1. The Cynosarges was a gymnasium outside the Athenian city wall; the Ilisus was a river in whose stream bed was a spring called Callirhoe.

2. Axiochus was the uncle of the famous Alcibiades; Clinias and Charmides, both remarkably handsome young men, appear in *Euthydemus* and *Charmides*, respectively, as members of the Socratic circle.

3. Accepting the conjectural deletion of *aiphnidiou*.

have led a decent life should go to meet their fate cheerfully, almost singing a paean of praise? Being so faint-hearted and unwilling to be torn from life is childish and inappropriate for someone old enough to think for himself."

c "True enough, Socrates, I think you're right. And yet, somehow or other, now that I'm very close to that awful moment, all those powerful and impressive arguments mysteriously lose their strength and I can't take them seriously; and a certain fear remains which assails my mind in various forms: that I will lose this light of day and these good things, and will lie somewhere or other, unseen and forgotten, rotting, and turning into maggots and wild beasts."

"In your distraction, Axiochus, you're confusing sensibility with insensi-
d bility, without realizing it. What you say and do involves internal self-contradiction; you don't realize that you're simultaneously upset by your loss of sensations and pained by your decay and the loss of your pleasures—as if by dying you entered into another life, instead of lapsing into the utter insensibility that existed before your birth. Just as during the government of Draco or Cleisthenes there was nothing bad at all that concerned you (because you did not exist then for it to concern you), nor will anything
e bad happen to you after your death (because you will not exist later for it to concern you).

"Away, then, with all such nonsense! Keep this in mind: once the compound is dissolved and the soul has been settled in its proper place, the body which remains, being earthly and irrational, is not the human person. For each of us is a soul, an immortal living being locked up in a mortal
366 prison; and Nature has fashioned this tent for suffering—its pleasures are superficial, fleeting, and mixed with many pains; but its pains are undiluted, long-lasting, and without any share of pleasure. And while the soul is forced to share with the sense organs their diseases and inflammations and the other internal ills of the body (since it is distributed among its pores), it longs for its native heavenly aether, nay, thirsts after it, striving
b upwards in hopes of feasting and dancing there. Thus being released from life is a transition from something bad to something good."

"Well, Socrates, if you think that living is bad, why do you remain alive? Especially since you puzzle your brain about these things and you're much cleverer than most of us."

"Axiochus, you don't give a true account of me; you think, like most Athenians, that just because I'm an inquirer I'm also an expert on something. I wish I knew these ordinary things, so far am I from knowing the
c extraordinary ones! My remarks are but echoes of the wise Prodicus,[4] some purchased for half a drachma, others for two, and still others for four. (That fellow teaches nobody for free and is always repeating the saying of Epicharmus:[5] "One hand washes the other"—give something and take

4. Prodicus of Ceos was a philosopher and teacher; see *Protagoras* 315d, 337a ff.

5. A fifth-century-B.C. comic poet.

something.) Anyway, just recently he gave a performance at the house of Callias son of Hipponicus,[6] in which he denounced living, so much so that I came within a hair's-breadth of writing it off; and since then, Axiochus, my soul has wanted to die."

"What did he have to say?"

"I'll tell you what I remember: What part of a lifetime is without its d
portion of misery? Doesn't the baby begin his life in pain, and cry from
the first moment of birth? Certainly he lacks no occasion for suffering;
hunger and thirst and cold and heat and hard knocks distress him, and
he can't yet say what the problem is; crying is his only way of expressing
discomfort. When he reaches the age of seven, after having endured much
physical pain, he is set upon by tyrannical tutors, teachers, and trainers; e
and as he grows older there are scholars, mathematicians and military
instructors, all a great crowd of despots. When he is enrollled among the
Ephebes there is the Commander, and fear of beatings; then comes the 367
Lyceum and the Academy and the gymnasium-masters with their canings
and excessive punishments; and his entire youth[7] is spent under Supervisors of Young Men and the Committee for Young Men of the Council of the Areopagus.[8]

"After he's free of all that, worries immediately steal upon him, and considerations about his career in life present themselves to him. And the earlier troubles seem like child's play, the bogey-men of babies, so to speak, compared with the later ones: military campaigns, wounds, and constant battles.

"Then old age creeps upon you unawares, into which flows everything b
in nature that is mortal and life-threatening. And unless you repay your life quickly, like a debt, nature stands by like a money-lender, taking security, sight from one man, hearing from another, and often both. And if you survive that, you'll be paralyzed, mutilated, crippled. Some people are physically in their prime in great old age—and their old minds enter a second childhood.

"And that is why[9] the gods, who understand the human condition, give c
a quick release from life to those[10] they hold in highest regard. For example, Agamedes and Trophonius, who built the temple of the Pythian god, after praying for the best thing that might happen to them, fell asleep and never woke up. And there were also the sons of the Argive priestess,[11] for whom

6. Callias was a wealthy Athenian noted for his patronage of philosophers (*Apology* 20a); the events in Plato's *Protagoras* and Xenophon's *Symposium* take place in his house.

7. Reading *chronos* in a2.

8. Ephebes were members of an Athenian military college established in the late fourth century B.C.

9. Reading *dia* for *kai* before *touto* in b7.

10. Omitting *kai* in c1.

11. Omitting *Hēras* in c5.

their mother likewise prayed for some reward from Hera for their piety, since when the team of mules was late they yoked themselves to the cart and took her to the temple; that night after their mother's prayer they passed away.

d "It would take too long to go through the works of the poets, who prophesy with inspired voices the events of life while deploring life itself. I shall quote only one of them, the most important one, who said,

> *Such is the way the gods spun life for unfortunate mortals,*
> *that we live in unhappiness,*

and,

> *Since among all creatures that breathe on earth and crawl on it*
> *there is not anywhere a thing more dismal than man is.*

e "And what does he say about Amphiaraus?

368 *Whom Zeus of the aegis loved in his heart, as did Apollo,*
*with every favor, but he never came to the doorsill of old age.*[12]

"And he who bids us,[13] 'Sing a dirge for the newly born; he faces so much misery'—what do you think of that? But I'll stop now, so as not to break my promise and lengthen my speech by mentioning other examples.

"What pursuit or trade has anyone ever chosen without criticizing it
b and chafing at its conditions? Shall we discuss the jobs of tradesmen and laborers, toiling from dawn to dusk, barely able to provide for their needs, deploring their lot and spoiling all their sleepless nights with lamentation and tears? Well, shall we talk about the job of the merchant, who sails through so many perils and is, as Bias has shown, neither among the dead nor the living: terrestrial man throws himself into the sea as if he were
c amphibious, and is entirely at the mercy of chance. Well, is farming a pleasant occupation? Really! Isn't it just one big blister, as they say, which always finds an excuse for pain? Now it's drought, now it's too much rain, now it's blight, now it's too much heat or frost, that makes the farmer weep.

"Well, how about highly respected politics? (I'm skipping over many cases.) How many dreadful things is it dragged through, feverishly quivering and throbbing, sometimes with joy, sometimes with painful failure,
d worse than a thousand deaths? How could anyone be happy living for the masses, when he is whistled for and lashed, like the electorate's pet

12. *Iliad* xxiv.525–26 and xvii.446–47 and *Odyssey* xv.245–46, respectively (translations by R. Lattimore).

13. Euripides, in his lost play *Cresphontes* (frg. 452 Dindorf).

horse, driven from office, jeered, fined, and killed?[14] Well then, Mr. Politician Axiochus, how did Miltiades die? How did Themistocles die? How did Ephialtes die?[15] How did the ten commanders recently die, when I refused to refer the question to the people?[16] I didn't think it was proper for me to preside over a mad mob, yet on the next day the party of Theramenes and Callixenus suborned the presiding officers of the meeting and secured a condemnation against the men without a trial. Indeed, you 369
and Euryptolemus were the only ones to defend them, of the thirty thousand citizens in the Assembly."

"That's quite right, Socrates, and since then I've had enough of the speaker's platform, and I think that nothing is more irksome than politics. That's clear to everyone involved. You speak, of course, as a distant observer, but those of us who go through the experience know it perfectly well. The electorate, my dear Socrates, is an ungrateful, fickle, cruel, malicious, and boorish thing: a club, so to speak, of violent fools, drawn from the rabble in the street. And he who associates himself with it is even b
more contemptible by far."

"Well, Axiochus, since you regard the most reputable calling of all as more to be rejected than all the others, what are we to think of life's other pursuits? Shall we not escape from them?

"Once I also heard Prodicus say that death concerns neither the living nor those who have passed away."

"What do you mean, Socrates?"

"As far as the living are concerned, death does not exist; and the dead do not exist. Therefore death is of no concern to you now, for you are not dead, nor, if something should happen to you, will it concern you, for you c
will not exist. To be upset for Axiochus, about what neither does nor will concern Axiochus, is pointless distress, just as if you were to be upset about Scylla, or the Centaur, which, as far as you're concerned, neither exist now, nor will exist later, after your death. What is fearful exists for those who exist; how could it exist for those who don't?"

"You've taken those clever ideas from the nonsense that everybody's d
talking nowadays, like all this tomfoolery dreamed up for youngsters. But it distresses me to be deprived of the goods of life, even if you marshal arguments more persuasive than those, Socrates. My mind doesn't understand them and is distracted by the fancy talk; they go in one ear and out the other; they make for a splendid parade of words, but they miss the mark. My suffering is not relieved by ingenuity; it's satisfied only by what e
can come down to my level."

"That's because, Axiochus, you're confusing the perception of fresh evils with the deprivation of goods, without realizing it, forgetting that you

14. Omitting *eleoumenon* in d4.

15. Three fifth-century-B.C. leaders under the Athenian democracy.

16. The naval commanders at Arginusae were illegally prosecuted en masse; cf. Xenophon, *Memoirs of Socrates* I.1.18, and Plato, *Apology* 32a–c.

370 will have died. What distresses someone who is deprived of good things
is having them replaced by bad things, and someone who doesn't exist
cannot even conceive of the deprivation. How could anyone feel distress
whose condition provides no awareness of anything distressing? If you
hadn't started out, Axiochus, by ignorantly supposing, somehow or other,
that the dead also have some sensation, you could never have been alarmed
by death. But in fact you refute yourself; because you're afraid to be
deprived of your soul, you invest this deprivation with a soul of its own;
and you dread the absence of perception, but you think you will perceptu-
ally grasp this perception that is not to be.

b "As well as many other fine arguments for the immortality of the soul,
a mortal nature would surely not have risen to such lofty accomplishments
that it disdains the physical superiority of wild animals, traverses the seas,
builds cities, establishes governments, and looks up at the heavens and
sees the revolutions of the stars, the courses of sun and moon, their risings
and settings, their eclipses and swift restorations, the twin equinoxes and
c solstices, and Pleiades storms, summer winds, torrential downpours, and
the violent course of tornadoes, and establishes for all eternity a calendar
of the states of the universe, unless there really were some divine spirit
in the soul which gives it comprehension and insight into such vast subjects.

"And so, Axiochus, you pass away, not into death, but into immortality,
nor will you have good things taken from you, but a purer enjoyment of
d them, nor pleasures mixed with the mortal body, but entirely undiluted
by pains. For once you are released from this prison cell, you will set forth
yonder, to a place free from all struggle, grief, and old age, a tranquil
life untroubled by anything bad, resting in undisturbed peace, surveying
Nature and practicing philosophy, not for a crowd of spectators, but in
the bountiful midst of Truth."

e "Your argument has converted me to the opposite point of view. I no
longer have any fear of death—I almost long for it, if I may imitate the
orators and use a hyperbole. I have traveled[17] the upper regions for ages
past and shall complete the eternal and divine circuit. I was being weak,
but I've got a grip on myself and become a new man."

371 "Then perhaps you'd like another argument, which was related to me
by Gobryas, a Persian sage: he said that his grandfather Gobryas (who,
when Xerxes made his crossing, was sent to Delos to guard the island
sanctuary where two deities were born) learned from some bronze tablets,
which Opis and Hecaërge had brought from the Hyperboreans, that the
soul, after its release from the body, goes to the Place Unseen, to a dwelling
beneath the earth. Here the palace of Pluto is not inferior to the court of
b Zeus, since the earth occupies the center of the universe and the vault of
heaven is spherical, and half of this sphere fell to the celestial gods, and
the other half to the gods under the earth, some of them brothers, others
children of brothers. The gates on the way to Pluto's palace are protected

17. Accepting the emendation *meteōroporō* or *-polō* in e3.

by iron bolts and bars. When the gates swing open, the river Acheron,
and then the river Cocytus, receives those who are to be ferried across to
Minos and Rhadamanthus, in what is called the Plain of Truth. There sit c
judges who interrogate everyone who arrives about what kind of life he
has lived and what sorts of activities he engaged in while he dwelled in
his body. It is impossible to lie.

"Now those who were inspired by a good daemon during their lifetimes
go to reside in a place for the pious, where the ungrudging seasons teem
with fruits of every kind, where fountains of pure water flow, where all
sorts of meadows bloom with many kinds of flowers, with philosophers
discoursing, poets performing, dances in rings, musical concerts, delightful d
drinking-parties and self-furnished feasts, undiluted freedom from pain
and a rich diet of pleasure; nor does fierce cold or heat ever occur, but
through it wafts a temperate breeze, infused with the gentle rays of the sun.

"There is a certain place of honor for those who are initiated, and there
they perform their sacred rites. Why should you not be the first in line
for this privilege, you who are 'kin to the gods'? Legend tells us that e
Heracles and Dionysus, before their descents into the realm of Hades, were
initiated in this world, and supplied by the Eleusinian goddess[18] with
courage for their journeys yonder.

"But those who have wasted their lives in wickedness are led by the
Erinyes to Erebus and Chaos through Tartarus, where there is a place for
the impious, and the ceaseless water-fetching of the Danaids, the thirst of
Tantalus, the entrails of Tityus eternally devoured and regenerated, and
the never-resting stone of Sisyphus, whose end of toil is a new beginning. 372
Here, too, are people being licked clean by wild beasts, set on fire constantly
by the Avengers, and, tortured with every kind of torture, consumed by
everlasting punishment.

"That is what I heard from Gobryas, but you must decide for yourself, Axiochus. I am moved by argument, and I know only this for sure: every soul is immortal, and also, when removed from this place, free from pain. So whether above or below, Axiochus, you ought to be happy, if you have lived piously."

"I'm too embarrassed to say anything to you, Socrates. I'm so far from fearing death that now I actually passionately desire it. That's how much I've been affected by this argument, as well as by the one about the heavens. Now I despise life, since I'm moving to a better home.

"And now I'd like to go over what you've said, quietly and by myself. But after midday, Socrates, please visit me."

"I will do what you ask. And now I'll go back to my walk to the Cynosarges, where I was going when I was summoned here."

18. Demeter, whose cult at Eleusis was the most important of the Greek mystery cults; those initiated there were promised a happy survival in the underworld after death.

# EPIGRAMS

*Before Socrates enticed him into philosophy—so an ancient tradition goes—Plato was active for a time as a composer of tragedies and dithyrambs (Dionysian choral songs). If that is true, nothing of his work in those genres survives. Even apart from his sometimes very poetical prose, for example in Socrates' second speech of* Phaedrus, *we do, however, have evidence of Plato's work as a poet. A number of "epigrams" attributed to him—poems suitable for inscription on a funerary monument or for other dedicatory purposes—survive in one or both of two collections of short Greek poems dating from medieval times, the "Palatine" and "Planudean" Anthologies. The edition of J. M. Edmonds, which we follow, prints seventeen poems from these sources, plus an eighteenth—in praise of the comic poet Aristophanes—that Olympiodorus (sixth century* A.D. *neo-Platonist philosopher) quotes as Plato's (as does Thomas Magister in his* Life of Aristophanes*). The first ten poems are also quoted as Plato's work in Diogenes Laertius' life of Plato, and many of the eighteen are quoted under Plato's name by one or more additional ancient authors. They are all in the form of elegiac couplets (a dactyllic hexameter, the meter of the Homeric epics, followed by a dactyllic pentameter), mostly a single couplet each (but numbers 4, 5, 7, 11, and 13 are double couplets, and 3 consists of three).*

*The first two poems are addressed to a young man, as it seems a student of astronomy, named Astēr (or perhaps only affectionately so called by his admirer)—a Greek word for 'star'. Diogenes Laertius reports that the third was actually inscribed on the tomb at Syracuse of its dedicatee, Plato's friend and associate in Syracusan political affairs, Dion (prominent in so many of the Platonic* Letters*). The* Anthologies *also give other attributions than to Plato in the case of some four of these poems, and Plato's authorship has reasonably been doubted in other cases as well. It is odd to find Plato in numbers 4 and 6 speaking in erotic terms of Agathon and Phaedrus as desirable youths—these are historical persons appearing as characters in Plato's dialogues on eros, but they were two decades Plato's senior; and one notes that the object of the poet's affection in number 8, Xanthippe, has the same name as Socrates' wife. Nonetheless, there seems no reason to doubt that some of these poems—above all number 3, and perhaps others, including especially 1, 2, and 7—are actually by him.*

*For ease of identification we add for each poem (except the last) its position in Hermann Beckby's edition of the* Anthologia Graeca *(Munich, 1957).*

*J.M.C.*

1

You gaze at the stars, my Star; would that I were Heaven, that I might look at you with many eyes!

*Greek Anthology* vii 669

2

Even as you shone once the Star of Morning among the living, so in death you shine now the Star of Evening among the dead.

*Greek Anthology* vii 670

3

The Fates decreed tears to Hecuba and the women of Troy right from their birth;[1] but for you, Dion, the gods spilled your widespread hopes upon the ground after you had triumphed in the doing of noble deeds. And so in your spacious homeland you lie honored by your fellow citizens, O Dion, you who made my heart mad with love.

*Greek Anthology* vii 99

4

Now, when I have but whispered that Alexis is beautiful, he is the observed of all observers. O my heart, why show dogs a bone? You'll be sorry for it afterwards: was it not so that we lost Phaedrus?

*Greek Anthology* vii 100

5

My mistress is Archeanassa of Colophon, on whose very wrinkles there is bitter love. Hapless are all you who met such beauty on its first voyage; through what a burning did you pass!

*Greek Anthology* vii 217

6

When I kiss Agathon my soul is on my lips, where it comes, poor thing, hoping to cross over.

*Greek Anthology* v 78

Translated by J. M. Edmonds, revised by John M. Cooper. Text: *Elegy and Iambus* (Harvard University Press, Loeb Classical Library, 1931), vol. II.

1. Reading *tote* in line 2.

## 7

I throw the apple at you, and if you are willing to love me, take it and share your girlhood with me; but if your thoughts are what I pray they are not, even then take it, and consider how short-lived is beauty.[2]

*Greek Anthology* v 79

## 8

I am an apple; one who loves you throws me at you. Say yes, Xanthippe; we fade, both you and I.

*Greek Anthology* v 80

## 9

We are Eretrians of Euboea,[3] but we lie near Susa, alas, how far from home!

*Greek Anthology* vii 259

## 10

A man who found some gold left a noose, and the one who did not find the gold he had left tied on the noose he found.

*Greek Anthology* ix 44

## 11

I, Laïs, who laughed so disdainfully at Greece and once kept a swarm of young lovers at my door, dedicate this mirror to the Paphian[4]—for I do not wish to see me as I am, and cannot see me as I was.

*Greek Anthology* vi 1

## 12

This man was pleasing to foreigners and dear to his fellow citizens—Pindar, servant of the melodious Muses.

*Greek Anthology* vii 35

2. The apple was dear to Aphrodite; to throw an apple at someone was to declare one's love; to catch and hold it, to show one's acceptance.

3. They were deported to Susa, King Darius' capital, by the Persians in 490 B.C. See also no. 13.

4. I.e., Aphrodite; the poem was inscribed on a mirror for dedication by Laïs to her.

## 13

We once left the sounding waves of the Aegean to lie here amidst the plains of Ecbatana. Fare thee well, renowned Eretria, our former country. Fare thee well, Athens, Euboea's neighbor. Fare thee well, dear Sea.

*Greek Anthology* vii 256

## 14

I am the tomb of a ship's captain; the tomb opposite is a farmer's: for beneath the land and beneath the sea is the same place of Death.

*Greek Anthology* vii 265

## 15

Sailors, be safe, by sea and on land; I would have you know that the tomb you pass is a shipwrecked man's.

*Greek Anthology* vii 269

## 16

Some say there are nine Muses. How thoughtless! Look at Sappho of Lesbos; she makes a tenth.

*Greek Anthology* ix 506

## 17

When Cypris saw Cypris at Cnidus, "Alas!" said she; "where did Praxiteles see me naked?"[5]

*Greek Anthology* xvi 162

## 18

The Graces, seeking for themselves a shrine that would not fall, found the soul of Aristophanes.

5. Cypris is Aphrodite, of whom there was a famous nude statue by Praxiteles at Cnidus.

# PLATO

## COMPLETE WORKS

EDITED BY JOHN M. COOPER

ASSOCIATE EDITOR D. S. HUTCHINSON

Outstanding translations by leading contemporary scholars—many commissioned especially for this volume—are presented here in the first single edition to include the entire surviving corpus of works attributed to Plato in antiquity. In his introductory essay, John Cooper gives an account of his presentation of these works, discusses questions surrounding the chronology of their composition, comments on the dialogue form in which Plato wrote, and offers guidance on approaching the reading and study of Plato's works. Also included are concise introductions by Cooper and Hutchinson to each translation, meticulous annotation, and a comprehensive index.

John M. Cooper is Stuart Professor of Philosophy at Princeton University.

D. S. Hutchinson is Professor of Philosophy and Fellow of Trinity College at the University of Toronto.
